Note I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus “Rashdall, Universities of Europe, I, ix” refers the reader to the ninth chapter of the first volume of that work; “I, p. ix” would indicate the ninth page of the preface of the same volume.

Note II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to “Summa Theologica” (not to “Summa Philosophiae”). The divisions of the “Summa Theologica” are indicated by a system which may best be understood by the following example: “I-II, Q. vi. a. 7, ad 2um” refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

Note III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiastes is indicated by Eccles., to distinguish it from Ecclesiastes (Eccles.). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

United States .................................................................................. 178
Hereupon the emperor ordered Tournon to be imprisoned at Macao and sent some Jesuit missionaries to Rome to protest against the decree. Tournon died in prison shortly after being informed that he had been created cardinal on 1 August, 1707. Upon the announcement of his death at Rome, Clement XI highly praised him for his courage and loyalty to the Holy See and ordered the Holy Office to issue a Decree (25 Sept., 1710) approving the acts of the legate. Tournon’s remains were brought to Rome by his successor, Mezzabarba, and buried in the church of the Propaganda, 27 Sept., 1723.

MICHAEL OTT.

Tournon, Antoine, Dominican biographer and historian, b. at Graulhet, Tarascon, France, on 5 Sept., 1656; d. at Paris, 2 Sept., 1755. Of this author but little has been written, though the number and merit of his works have caused his name to become illustrious, particularly in his order. He was the son of a merchant, and seems to have joined the Dominicans at an early age. After the completion of his studies he taught philosophy and theology to the students of his province (Toulouse); but the later years of his life were devoted to biography, history, and apologetics.

From his pen we have twenty-nine volumes, dealing largely with the history of the Dominican Order and the biographical sketches of its notable men. His writings are valuable contributions to Dominican literature, and essential to students of Dominican history. Père Mortier, in his “Histoire des maîtres généraux de l’ordre des frères prêcheurs”, now in course of publication, has made generous use of his “Histoire des prêcheurs des Dominico”.

Tournon’s writings include his “Vie de saint Thomas d’Aquin” (considered his best work); “Vie de saint Dominique avec une hist. abrégée de ses premiers disciples”; “Hist. des hommes illustres de l’ordre de saint Dominique”; “De la providence, traité hist., dogmat. et métr.”; “La main de Dieu sur les incrédules, ou hist. abrégée des Israélites”; “Vie de saint Charles Borromée”; “La vérité vénérée en faveur de saint Thomas” and “Hist. générale de l’Amérique depuis sa découverte”, which is really an ecclesiastical history of the New World. MORTIER, Hist. des maîtres gén. de l’ordre des frères prêcheurs (5 vols., Paris, 1800-11); passim; HURTER, Nomenclator literarius, 31 (Innsbruck, 1895), 164-5.

VICTOR F. O’DANIEL.
Tours, Archdiocese of (Turroneps), comprises the Department of Indre-et-Loire, and was re-established by the Concordat of 1801 with the Dioceses of Angers, Nantes, Le Mans, Rennes, Vannes, St-Breuil, and Quimper as suffragans. The elevation to metropolitan rank of the Diocese of Reims in 1859, with the last three dioceses as suffragans, dismembered the Province of Tours. The Diocese of Laus, created in 835, is a suffragan of Tours. For the early ecclesiastical history of Tours we have an excellent document, the concluding chapter "De episcopis Turonensis" in Gregory of Tours's "History of the Franks".

Frontispiece of the Vivian Bible, IX Century
Abbot Vivian and the Monks of St. Martin's, at Tours, presenting the complete copy to Charles the Bald
Paris, Bibl. Nat. (MS. lat. 1, f. 423)

though Mgr Duchesne has shown that it requires some chronological corrections. The founder of the see was St. Gatianus; according to Gregory of Tours he was one of the seven apostles sent from Rome to Gaul in the middle of the third century. Two grottos cut in the hill above the Loire, opposite Tours, are held to have been the first sanctuaries where St. Gatianus celebrated the Liturgy. According to Mgr Duchesne the tradition of Tours furnished Gregory with only the name of Gatianus, accompanied perhaps by the length, fifty years, of his episcopate; it was by comparison with the "Passio S. Saturnii" of Toulouse that Gregory arrived at the date 250. Mgr Duchesne considers this date rather doubtful, but admits that the Church of Tours was founded in the time of Constantine.

After St. Gatianus, according to Mgr Duchesne's chronology, came St. Litorius, or Lidoire (537-71); the illustrious St. Martin (1 July, 372-8 May, 397); St. Price (397-411), who was accused to Celestine I of immorality and absolved by the pope, but who remained absent seventeen years from the episcopal city, which was governed by the intruded Bishop Armentius; St. Eustochius (411-61); St. Perpetus (461-91); St. Volusianus (491-98), deprived of his see by the Visigoths, exiled to Toulouse, and perhaps martyred; Verus (598-609), also deprived of his see at the command of Alaric; St. Baud (546-52), chancellor of Clovis I; St. Exaurinianus (556-73), who made at Poitiers the solemn transfer of the True Cross to the monastery founded by St. Radegonde; the historian Gregory (573-94) (see Gregory of Tours, Saint). After St. Gregory the history of the diocese for two centuries and a half is obscure and confused, but the study of various episcopal catalogues has made it possible for Mgr Duchesne to some degree to trace this period. The diocese under Louis the Pious, was by this prince appointed missus dominicus, or royal commissary, in 825.

Among subsequent bishops were: Raoul II (1066-1117), who despite the prohibition of Hugues, legate of the Holy See, had dealings with the excommunicated Philip I, and under whose episcopate Paschal II came to Tours (1107); Hildebert de Lavardin (1013-34); Etienne de Bourgane (1123-25), who founded the College of Tours at Paris; the jurisconsult Pierre Frétaud (1335-57); Jacques Gélu (1415-27), later Bishop of Embrun (see Gap, Diocese of); Philippe de Coctequis (1427-41), who, commissioned by Charles VII in 1429 to interrogate Joan of Arc, recognized her perfect sincerity, and who was made a cardinal by antipope Felix V.; Hélie de Boudeville (1458-82), in 1453; Robert de Lenoncourt (1481-1501), afterwards Archbishop of Reims; Dominic Carette, Cardinal of Final (1509-14); Alessandro Farnese (1553-54), cardinal in 1534; De Maille de Brezé (1564-97), who assisted the Cardinal of Lorraine at the Council of Trent and translated the homilies of St. Basil; Victor de Louvet (1641-76) had an active part in the religious renaissance of the seventeenth century; Boisélin de Cieé (1602-04), who under the old regime had been Archbishop of Aix and in 1820 was created cardinal; De Barral (1801-15); François Morlot (1843-57), cardinal in 1853, Archbishop of Paris at the time of his death; Joseph-Hippolyte Guibert (1857-71), later Cardinal of Paris, Archbishop of Paris; Guillaume-RENé Meignan (1884-90), cardinal in 1893, known by his exegetical works.

Tours was the capital of the Third Lorraine province. The ecclesiastical province of Tours must have been established under the episcopate of St. Martin. Fifty years later it was in regular operation, as is proved by, among other documents, the synodal epistle of the Councils of Paris and Amboise (1350).

(Concerning the prolonged efforts of the Breton Churches to emancipate themselves from the metropolises of Tours and the assistance given to this metropolis by royalty see Rennes, Archdiocese of.) About 480 the Visigoths were masters of Tours and it was in the Island of Amboise in 504 that the interview took place as a result of which the Frank Chlothar I took the Visigoth Alaric shared Gaul between them. But the Arianism of the Visigoths eventually ruined the Cathedrals of Tours and when in 507 Clovis and his army entered the Visigothic kingdom Tours opened its gates to him, and he received in that city the consular insignia sent by Emperor Anastasius. The Saracens threatened Tours several times under Charles Martel (732-749) and in 732. From 853 to 902 the Normans made frequent inroads, terminated by the victory of St. Martin le Beau. Henry II of England became Count of Touraine in the middle of the twelfth century and the English dominion was maintained at Tours until John Lackland renounced it in 1214.

In the Middle Ages Tours was composed of two cities, the Roman Caesarodunum and the present-mentioned Martinopolis. The name of Tours was strictly reserved to the ancient Caesarodunum, and the territory of Tours depended on the archbishops. Martinopolis, which rose around the monastery of St.Martin, took, in the tenth century, the name of Chateauneuf and for five centuries was an independent community. Under Louis XI the two agglomerations were united in one which retained the name of Tours.
CATHEDRAL OF ST. GATIAN, TOURS, XII-XV CENTURIES
cathedral of Tours, dedicated to St. Gatianus, dates from the thirteenth, fourteenth, and fifteenth centuries. The windows, which belong to the thirteenth, are among the most beautiful in France. The towers belong to the fifteenth and sixteenth centuries. The chapter of Tours is the oldest in France. It is said that it was established by St. Band, who gave the canons property quite distinct from that of the archdiocese. Simon de Brion, pope from 1251 to 1255 under the name of Martin IV, was canon and treasurer of the church of St. Martin of Tours.

The prestige of the Church of Tours was very great during the time of Clovis and of St. Martin. The Bald Adrian II designates it as the second in France. Philip Augustus in a letter to Léonard III says that he considers it one of the most beautiful jewels of his crown and that whosoever attacks this church attacks his own person. Kings John II, Charles VII, Charles VIII, and Henry III would never consent when they gave Tours in lieu that it should be separated from the Abbey, founded by the crown. It owed this prestige chiefly to the Basilica of St. Martin. This was first built by St. Perpetuus and dedicated in 472. It was there that Clovis was clothed with the purple robe and the chalices sent him with the title of consul by the Emperor Anastasius. As early as the sixth century St. Martin was a real religious centre. queen Clothilde died there, and the basilica of Tours is the same. Rudeclaire founded a small monastery, near which St. Gregory of Tours built the Church of the Holy Cross. Ingeltrude, daughter of Clotaire I, founded the monastery of Notre Dame-l’Étang-le-Ponts, St. Monegunde that of St-Pierre-le-Puellier. When Charlemagne, before setting out to recover the body of St. Martin assembled at Tours (800) the lords of his empire and divided his estates among his sons, his wife Luigarde died there, and was buried at St. Martin. He gave the Church vast possessions in France and Normandy. Abbot Ithier, his chancellor, founded with some monks from St-Martin the monastery of Cormery. Alcuin, who succeeded Ithier in 796 and was buried in the basilica of Tours, founded a school of calligraphy to which is due the preservation of many ancient works. At this school, directed after Alcuin by Fredegisus (804-34), Adalard (834-45), and Count Vivian (845-54), were copied and illustrated the celebrated Bible of Charles the Bald and the Gospels of Lothaire preserved at the Bibliothèque Nationale of Paris, the Virgin, of Tours, the Life of Boethius in the library of Ramberg, and the superb Gospels preserved in the library of Tours, written throughout in gold letters on white vellum, and on which the kings of France took the oath as abbots of St-Martin. The beautiful artistic labours of the canons were disturbed by the Norman invasions.

The body of St. Martin was transported by the canons to Auvergne in 853 to safeguard it against the invasions of the Northmen. Count Ingelger had to march with 6000 men against Auvergne in 854, before the body was restored. From 845 the abbots of St-Martin were laymen, namely the dukes of France, ancestors of Hugh Capet. When, in 957, Hugh Capet became King of France, he assumed the dignity of Abbot of St-Martin with the Crown of France in perpetuity. The Abbey of St-Martin had as honorary canons the Dukes of Burgundy, Anjou, Brittany, Vendôme, and Nevers, the Counts of Flanders, Dunois, the Earl of Douglas in Scotland, the Lords of Preuilly and Parthenay. From Clotville, doubtless until Philip Augustus, it enjoyed the right of coinage. Blessed Hervé, treasurer of the basilica, caused it to be rebuilt about 1000. It was in the abbey rebuilt by Hervé that Philip II, King of France, in 1092 arranged to meet Bertrude de Montfort, wife of Foulques le Réchin, and carried her off to the great scandal of the kingdom. Urban II, who came to Tours in 1096, refused to receive the excommunication inflicted on Philip and Bertrade. Paschal II in 1107, Calixtus II in 1119, Innocent II in 1129, and Alexander III in 1163 came thither to venerate the tomb of St. Martin. Richard Cœur de Lion in 1190 and John of Brienne in 1223 took there the pilgrims' staff prior to setting out on the crusade. Louis XI had great devotion to St. Martin. The day on which he learned in the basilica itself of the death of Charles the Bold he vowed to surround the tomb of the saint with a silver grating, the cost of which would to-day equal 2,148,000 francs. In 1522 Francis I seized this grating, despite the chapters and the people. The Revolution destroyed the Basilica of St. Martin. There are now only two large towers, but at the end of the nineteenth century Cardinal Meignan caused a new basilica to be erected on the site of the old one.

According to the legend, the Abbey of St. Julian arose around a church the building of which was ordered by Clovis after his victory of Vouillé over the Visigoths. It is historically certain that there were monks from Auvergne there in the sixth century, on whom Gregory of Tours imposed the Rule of St. Benedict and to whom he gave the relics of St. Julian of Brioude. The Northmen destroyed this first monastery; it was rebuilt about 872 by St. Otto, Abbot of Cluny, and Archbishop Theobold. The present Church of St. Julian is a beautiful monument of the thirteenth century.

The monastery of Marmoutier dates from St. Martin. Near the grottoes where St. Gatianus celebrated Mass he established some cells. The cell of St. Brice is still to be seen. Another grotto, known as the grotto of the Seven Cups, was inhabited by seven hermits, consisting of Abbot Marmoutier and six of his monks, on the same day after a fast. In the ninth century the Abbey of Marmoutier was ravaged by the Northmen, and out of 140 religious only 20 escaped massacre and were sheltered by the canons of St-Martin. Marmoutier was subsequently inhabited by a small colony of canons, and in 982 the abbey, which had fallen into some disorder, was restored by Mayeul, Abbot of Cluny, at the instance of Eudes I, Count of Blois and of Tours, who died a monk at Marmoutier. Urban II came to Marmoutier in 1096 and dedicated the newly-built basilica. Huband, canon of St-Martin and brother of the heresarch Berenger, gave to Marmoutier superb pieces of religious gold work in order to meet the prayers for Berenger, who died at the priory of St-Côme, which was dependent on Marmoutier. The fortune of the abbey was considerable, a popular saying reads:—

"De quelque côté que le vent vende, Marmoutier a cens et rente."

In the eleventh century 101 priories were founded dependent on Marmoutier, ten of them in England. Hugh I, Abbot of Marmoutier from 1210 to 1226, organized the estates of Meslay and Louroix, which were models of agricultural exploitation, and began the reconstruction of the basilica. The latter undertaking was hindered by the violent attacks made by the counts of Blois on the monks of Marmoutier. In 1253 St. Louis took the abbey under his protection. In 1262 it was pillaged by the Protestants and the Revolution destroyed the almshouse (L’orée gateway (Portail de la Croise) which remains standing dates from the thirteenth century. The origin of the town of Loches was the monastery founded by St. Ours about the beginning of the sixth century. He installed in the bed of the Indre a hand-mill which became a place of pilgrimage. Geoffroy Grisgonelle, the son of Anjou, founded the collegiate church to which he gave a girdle of the Blessed Virgin. Reopened in the twelfth century by the prior, Thomas Pacticus, this church still exists. In the dungeon of Loches, founded about 1000 by Foulques
Nerra, were imprisoned Cardinal in Balue and the historian Comines. The monastery founded by St. Maxime, disciple of St. Martin (d. shortly after 463), was the origin of a gathering of people who formed the town of Chimon.

Cardinal de Richelieu was born in 1556 at the castle of Richelieu in the diocese. He transformed it into an imposing château, built around it an entire city, which took the name of Château Richelieu and joined to his diocesan residence the village of Champigny. The Sainte Chapelle of Champigny was built in 1505 by the princely house of Bourbon-Montpensier to receive a thorn of the crown of Christ and one of the thirty pieces of silver paid to Judas. Urban VIII, who prior to his pontificate had said Mass there, later prevented its demolition; hence the preservation of this church at the beginning of the Renaissance is due to him. The church of Candé, built between 1175 and 1215 on the site where St. Martin died, is remarkable as a monument not only of religious but also of military architecture. At Tours in 1163 Alexander III excommunicated the antipope Victor and Frederick Barbarossa. It was at the château of Chinon in 1429 that Jean de Ar first saw Charles VII and gave him his coronation in his house at the time she sent to St-Catherine-de-Fierbois in the diocese to seek in the tomb of an ancient knight the sword of Charles Martel. In the fifteenth century Tours had a brilliant school of painting; unfortunately nothing remains of the paintings executed at Notre-Dame-la-Riche by Jehan Fouquet. The studio of the sculptor Michel Colombe built Tour; his masterpiece he hatched to Francis II, Brittany in the cathedral of Nantes. The tomb of the children of Charles VIII in the cathedral of Tours was the collective work of Colombe and his pupils and of some Italian decorators.

There are in Touraine a great many châteaux rich in historic memories, such as Plessis-les-Tours, the residence of Louis XI, Amboise, where was hatched the plot against the Dauphin under King Francis II; Chêneceaux, built by Francis I, the residence of Diane de Poitiers and later of Catherine de Medicis; Langeais, where Charles VIII wedded Anne of Brittany. Of the château of Chanteloup near Amboise, where the Due de Choiseul went into exile, there remains only the pagoda. A number of saints are honoured in the diocese. In the twelfth century St. Aignan of Tours was renowned. In the fourteenth century the abbey of Fontevraud (Flower), marty (fifth century); St. Ursus (Ours), founder of the Abbey of Sennevières, patron of the town of Loches, d. about 508; St. Leubatius (Lebuais), Abbot of Sennevières (sixth century); St. Schoel, abbot and abbot, d. in 579; St. Isidore (Libert), hermit of the groves of Marmoutier, d. in 593; St. Odor, first Abbot of Cluny, d. at Tours in 942; St. Averinus, deacon, companion in exile of St. Thomas Becket, d. in Touraine about 1189; Bl. Jeanne-Marie de Maillé, d. in 1414 after having spent her widowhood in the practice of a rigorous ascetic life near the Basilica of St. Martin. Among the natives of the diocese we may mention the poet painter writer Rabais (1493-1553), b. at Chimon; the philosopher Desartes (1596-1650), b. at La Haye-Desartes; the Abbe de Marolles (1600-81), b. at Genillé, celebrated for his translations, and whose collection of prints formed the basis of that of the Bibliothèque Nationale in Paris; Saint-Martin, called the unknown philosopher (1743-1933), b. at Amboise; the poet Alfred de Vigny (1857-1863), b. at Loches; Balzac (1790-1850), b. at Tours.

The chief places of pilgrimage in the diocese besides the grottoes of Marmoutier, are: Notre-Dame-la-Riche, a sanctuary erected on the site of a church dating from the third century, and where the founder St. Gatianus is venerated; Notre-Dame-de-Loches; St. Christopher and St. Giles at St-Christophe, a pilgrimage dating from the ninth century; the pilgrimage to the Holy Face, established by M. Dupont, "the Holy Man of Tours", who founded the Priests of the Holy Face, canonically erected on 8 December, 1876, to administer the chapel. Before the application of the law of 1901 there were in the diocese Jesuits, Lazarists, and various orders of teaching brothers. Several orders of women had their origin in the diocese, the chief being: The Sisters of the Presentation of the Holy Virgin who have a convent at Sauville, in the diocese of Chartres under Mother Marie Ponssepin, and in 1813 transported to La Brette near Tours; the Sisters of the Sacred Hearts of Jesus and Mary, teaching, founded in 1805 by the Abbé Guénin, rector of Notre-Dame-la-Riche, with mother-house at Tours; the Sisters of the Third Order of Discalced, founded in 1829 by Father Martin, teaching, with its mother-house at Bourguel. The religious congregations were directing in the diocese at the end of the nineteenth century 5 founding asym, 36 infant schools, 3 special houses for sick children, 5 orphanages for boys, 7 for girls, 1 house of retreat, 1 house of refuge, 18 hospitals or hospices, 2 dispensaries, 3 houses of religious for the care of the sick in their homes, 4 hospices, 6 retreats for religious, and 8 hospitals and retreats. In the year 1911 the Archdiocese of Tours numbered 337,916 inhabitants, 23 deaconries, 37 first class parishes, and 254 successor parishes.

Toussaint, Charles-François, French Benedictine, and member of the Congregation of St-Maur, b. at Repas in the Diocese of Sezze, France, 13 October, 1700; d. at St-Denis, 1 July, 1754. He belonged to a family of monks. On 4 July, 1714, he became an order at Jumièges. After finishing the philosophical and theological course at the Abbey of Fécamp he was sent to the monastery of Bonne-Nouvelle at Rouen to learn Hebrew and Greek. At the same time he studied Italian, English, German, and Dutch, in order to be able to understand the writers in these languages. He was said to be a very first-rate person until 1729 and then only at the express command of his superior. He always said Mass with much trepidation and only after long preparation. In 1730 he entered the Abbey of St-Ouen at Rouen, went later to St-Germain-des-Prés and Blanes-Manteaux, and died while taking a milk-eure at St-Denis. He had worn out his body by fasts and ascetic practices. His writings were very rarely published, as he inclined to Jansenism. As a scholar he made himself an honoured name. He worked for twenty years with a fellow-member of the order, Tassin, on an edition of the works of St. Theodore of Studium which was never printed, for a publisher could not be found. Another common undertaking of the two is the "Notices de l'Académie des Inscriptions et Belles-Lettres", in which they treated more fully and thoroughly the subjects taken up in Mabillon's great work "De re diplomatica". The publication of Toussaint and Tassin is of permanent value. The last four volumes were edited by Tassin alone after Toussain's death. Of general interest among Toussain's personal writings are: "Lettres de l'Abbe Thuringer" (2 vols., 1733), a collection of the writings of the Fathers on the persecutions of the first eight
centuries; and “L’autorité des miracles dans l’Église” (no date), in which he expounds the opinion of St. Augustine. Tassin testifies that he was zealous in his duties, modest, and sincerely religious.

KLEEMENS LÜFFLER.

Toutée, Antoine-Augustin, a French Benedictine of the Maurist Congregation, b. at Riom, Department of Puy-de-Dôme, 13 Dec., 1677; d. at the Abbey of St-Germain-des-Prés, 25 Dec., 1718. He studied the humanities at the Abbey of Vendôme, 29 Oct., 1698, and was ordained priest in December, 1702. He taught philosophy at Vendôme from 1702 to 1704 and theology at St-Benoît-sur-Loire from 1704 to 1708 and at St-Denis from 1708 to 1712. He then withdrew to St-Germain-des-Prés to prepare a new Greek edition and Latin translation of the works of St. Cyril of Jerusalem. This was issued after his death by Pujol, Paris, 1731, 2 vols. under the title: “St. Cyrilli Hierosolimit. opera quæ extant omnium et ejus nominis circumcultur; ad miss. cod. castigata” (Paris, 1731). It was preceded by three learned dissertations on the life, writings, and doctrine of St. Cyril, and was at the time the standard edition.

MICHAEL OTT.

Tower of Babel is the name of the building mentioned in Gen., xi, 9-19.

1. History of the Tower.—The descendants of Noe had migrated from the “east” (Armenia) first southward along the course of the Tigris, then westward across the Tigris into “a plain in the land of Sennaar.” As their growing number forced them to live in localities more and more distant from their patriarchal homes, “they said: Come, let us make a city and a tower, the top whereof may reach to heaven; and let us make our nation famous before we be scattered abroad upon the face of the whole earth.” The work was soon undertaken under way; “and they had brick instead of stones, and slime (asphalt) instead of mortar.” But God confounded their tongue, so that they did not understand one another’s speech, and thus scattered them from that place into all lands, and they ceased to build the city. This is the Biblical account of the Tower of Babel. Thus far the Babylonian Tower has been discovered which can be placed clearly as the subject. Authorities like George Smith, Chal Bosewagen, and Sayce believed that they had discovered a reference to the Tower of Babel; but Frd. Delitzch pointed out that the translation of the precise words which determine the meaning of the text is most uncertain (Smith-Delitzch, “Chaldæische Genesis”, 1876, 120-122). Oppert finds the Tower of Babel in a text of Nabuchodonosor; but this opinion is hardly more than a theory (cf. “The Cuneiform Inscriptions of Western Asia”, I, p. 38, col. 2, line 62; p. 41, col. 1, l. 27, col. 2, l. 15; Nikol, “Genesis and Keilschrifftorschung”, 188 sq.; Bezd., “Nimre und Babylon”, 128; Jeremias, “Das alte Testament im Lichte des alten Orients”, 2nd ed., Leipzig, 1906, 286; Kaufen, “Assyrien und Babylonien”, 89). A more probable reference to the history of Berosus as it is handed down to us in two variations by Abydenus and Alexander Polyhistor respectively (“Histor. græc. frg.”, ed. Didot, II, 512; IV, 282; Euseb., “Chron.”, I, 18, in P. G., XIX, 123; “Prep. evang.”, IX, 14, in P. G., XXI, 760). Special interest attaches to this reference, since Berosus is now supposed to have drawn his material from the Oratory of Babylonian sources.

11. Site of the Tower of Babel.—Both the inspired writer of Genesis and Berosus place the Tower of Babel somewhere in Babylon. But there are three principal opinions as to its precise position in the city. (1) Pietro della Valle (“Viaggi descritti”, Rome, 1650) located the tower in the north of the city, on the left bank of the Euphrates, where now lie the ruins called Babil. Schrader also defends the same opinion in Richém’s “Handwörterbuch der biblischen Alterthümer” (1, 138), while in “The Cuneiform Inscriptions of Western Asia” he leaves to his reader the choice between Babil and the temple of Borsippa. The position of Babil within the limits of the ancient Babylon agrees with the Biblical location of the tower; the name Babil itself may be regarded as a traditional relic of the name Babel interpreted by the inspired writer as referring to the confusion of tongues. (2) Rawlinson (Smith-Sayce, “Chaldaean account of the Genesis”, 1880, pp. 74, 171) places the tower on the ruins of Tell-Arameh, regarded by Oppert as the remnants of the hanging gardens. These ruins are situated on the same side of the Euphrates as those of Babil, and also within the ancient city. The excavations of the German Orientgesellschaft have laid bare on this spot the ancient national sanctuary Esagila, sacred to Marduk-Bel, with the documentary testimony that the top of the building had been made to reach Heaven. This agrees with the description of the Tower of Babel as found in Gen., xi, 4: “the top whereof may reach to heaven.” To this locality belongs also the tower of Etemenanki, or house of the foundation of Heaven and earth, which is composed of six gigantic steps. (3) Sayce (Lectures on the Religion of the Ancient Babylonians, pp. 112-3, 405-7), Oppert (“Expédition en Miscopatinie”, I, 200-16; “Etudes assyriennes”, pp. 91-132), and others follow the more common opinion which identifies the tower of Babil with the ruins of the Birs-Nimrud, in Borsippa, situated on the right side of the Euphrates, some seven or eight miles from the ruins of the city proper. They are the ruins of the temple Ezida, sacred to Neba, which according to the above-quoted inscription of Nabuchodonosor, was repaired and completed by that king; for it had been left incomplete by the Empire of the Medes and Persians, whose far distant days are too vague to form the basis of an apodictic argument. The Babylonian Talhum (Buxtorf, “Lexicon talhuminum”, col. 313) connects Borsippa with the confusion of tongues; but a long period elapsed from the time of the compositi-
tion of Gen., xi, to the time of the Babylonian Talmud.

Besides, the Biblical account seems to imply that the tower was within the city limits, while it is hardly probable that the city limits extended to Borsippa in very ancient times. The historical character of the tower is not impaired by our inability to point out its location with certainty.

From the Tower of Babel.—The form of the tower must have resembled the constructions which to-day exist only in a ruined condition in Babylon; the more ancient pyramids of Egypt present a vestige of the same form. Cubic blocks of masonry, decreasing in size, are piled one on top of the other, thus forming separate stories; an inclined plane or stairway leads from one story to the other. The towers of Ur and Ararat contained only two or three stories, but that of Birs-Nimrud numbered seven, not counting the high platform on which the building was erected. Each story was painted in its own peculiar colour according to the planet to which it was dedicated.

Generally the corners of these towers faced the four points of the compass, while in Egypt the position was that of the pyramids. On top of these constructions there was a sanctuary, so that they served both as temples and observatories. Their interior consisted of sun-dried clay, but the outer walls were coated with fire-baked brick. The asphalt peculiar to the Babylonian neighbourhood served as mortar; all these details are in keeping with the traditions of this ancient nation. We may even maintain that every Babylonian city possessed such a tower, or zikkurat, (meaning "pointed") according to Schrader, "raised on high," according to Haupt, "memorial," according to Vigouroux), no complete specimen has been preserved to us. The Tower of Khorsabad is perhaps the best preserved, but Assyrian inscriptions are not sufficient to establish its connection with this construction. The only indication of the time at which the Tower of Babel was erected, we find in the name of Phalg (Gen., xi, 10-17), the grand-nephew of Heber; this places the date somewhere between 101 and 570 years after the Flood. The limits are so unsatisfactory, because the Greek version differs in its numbers from the Massoretic text.

Besides the chief towers, there were others in the country, see RAWLINSON, The Five Great Monarchies, ii. (London, 1862-7, 1878), 534-5; SCHRADER-WHITEHOUSE, The Cuneiform Inscriptions and the Old Testament, London, 1885-8, 196-14; BREDAUX, Genesis, 2nd ed. (Freiburg, 1899), 129. For critical view, see SKINNER, Genesis (New York, 1910), 225 sqq.

Tracy, Alexandre de Proville, Marquis de, a viceroy of New France, b. in France, 1605, of noble parents; d. there in 1670. A soldier from youth, he had prove his valour in many battles and won the rank of general of the troops. The war was no less prudent and wise as a negotiator and organizer. Entrusted by Louis XIV with a most extensive mission and jurisdiction over all the French possessions in the New World, he first redeemed Cayenne from the Dutch, restored order in the Antilles, and reached Quebec in 1665. He had been preceded by the Carignan regiment which had distinguished itself against the Micmacs in 1664 and was entitled to bear the royal colours. With the concurrence of Courcelles, the newly-appointed governor, and Talon, the famous intendant, he inaugurated a glorious period in the history of New France. To secure peace for the colony war was decided against the Agniers, and in spite of his advanced age Tracy commanded the expedition against these Indians. He had ordered the construction of three forts on the Richelieu River, including those of Sorel and Chambly. The enemies had fled from their villages, which were de-

strayed, and Tracy returned with nearly all his men. The humiliated Agniers sued for peace and asked for missionaries to instruct them in the Faith. Tracy with his two associates then devoted himself to the organization of the courts of justice and to the promotion of agriculture and industry. During his administration were inspected the first horse seen in Canada. Tracy's noble and conciliatory conduct endeared him to the colonists and won the respect both of the aborigines and of the authorities of New York. His administration was marked by two chief events full of promise for the prosperity of the colony: the abolition of the monopoly of the West India company, which had replaced that of New France, and the construction of the settlement of Quebec which lasted eighteen years and facilitated several brilliant discoveries in the interior of the country.

LIONEL LINDSAY.

Tradition and Living Magisterium.—The word tradition (Greek παράδοσις) in the ecclesiastical sense is the only one in which it is used here—refers sometimes to the thing (doctrine, account, or custom) transmitted from one generation to another, sometimes to the organ or mode of the transmission (συμμετροτροπία, παράδοσις, διάκονος, διευθύνησις). In the first sense it is used when there are questions of oral or written tradition, in the second sense when the Christ was born on 25 December; in the second sense tradition relates that on the road to Calvary a pious woman wiped the face of Jesus. In theological language, which in many circumstances has become current, there is still greater precision and this in countless directions. At first there was question only of traditions of Christ's discourses or actions. Later arose questions of oral as distinct from written tradition, in the sense that a given doctrine or institution is not directly dependent on Holy Scripture as its source but only on the oral teaching of Christ or the Apostles. Finally with regard to the organ of tradition it must be an official organ, a magisterium, or teaching authority.

Readers new to this aspect there are several points of controversy between Catholics and every body of Protestants. Is all revealed truth consigned to Holy Scripture? or can it, must it, be admitted that Christ gave to His Apostles to be transmitted to His Church, that the Apostles received either from the very lips of Jesus or from inspiration or Revelation, divine instructions which they transmit to the Church, and which are not committed to the inspired writings? Must it be admitted that Christ instituted His Church as the official and authentic organ to transmit and explain in virtue of Divine authority the Revelation made to men? The Protestant principle is: The Bible and nothing but the Bible; the Bible, according to, the Word of God. There are two kinds of truth, the Bible and other revealed truths save the truths contained in the Bible; according to them the Bible is the sole rule of faith: by it and by it alone should all dogmatic questions be solved; it is the only binding authority. Catholics, on the other hand, hold that there may be, that there is in fact, and that there must of necessity be certain revealed truths apart from those contained in the Bible; they hold furthermore that Jesus Christ has established in fact, and that to adapt the means to the end He should have established, a living organ as much to transmit Scripture and written Revelation as to place revealed truth within reach of everyone always and everywhere. Such are in this respect the two main sources of controversy between Catholics and so-called orthodox Protestants (as distinguished from liberal Protestants, who admit neither supernatural Revelation nor the authority of the Bible). The other differences are connected with these or
follow from them, as also the differences between different Protestant sects—according as they are more or less faithful to the Protestant principle, they recede from or approach the Catholic position. Of the Christian sects of the East there are not the same fundamental differences, since both sides admit the Divine institution and Divine authority of the Church with the more or less living and explicit sense of its infallibility and indefectibility and its other teaching prerogatives, but there are contentions concerning the bearings of the one all, that organ of reference of the teaching body, the infallibility of the pope, and the existence and nature of dogmatical development in the transmission of revealed truth. Nevertheless the theology of tradition does not consist altogether in controversy and discussions with adversaries. Many questions arise in this respect for every Catholic who wishes to give an exact account of his belief and the principles he professes: What is the precise relation between oral tradition and the revealed truths in the Bible and that between the living magisterium and the inspired Scriptures? May new truths enter the current of tradition, and what is the part of the magisterium with regard to revelations which God may yet make? How may the Catholic's statement that the Church has the key to the molding of its faith and is it to recognize a Divine tradition or revealed truth? What is its proper role with regard to tradition? Where and how are revealed truths preserved and transmitted? What befalls the deposit of tradition in its transmission through the ages? These and similar questions are treated elsewhere in the Catholic Encyclopaedia, but here may be gathered together to reference to tradition and to the living magisterium inasmuch as it is the organ of preservation and transmission of traditional and revealed truth.

The following are the points to be treated: I. The existence of Divine traditions not contained in Holy Scripture, and the Divine institution of the living magisterium to receive and transmit revealed truth and the prerogative of this magisterium; II. The relation of Scripture to the living magisterium, and of the living magisterium to Scripture; III. The proper mode of existence of revealed truth in the mind of the Church and the way to recognize this truth; IV. The organization and exercise of the living magisterium, such as a bond of union in the transmission of revealed truth; its limits, and modes of action; V. The identity of revealed truth in the varieties of formulas, systematization, and dogmatical development; the identity of faith in the Church and through the varieties of theology. A full treatment of these questions would require a lengthy development; here only a brief outline can be given, the reader being referred to special works for a fuller explanation.

I. Divine traditions not contained in Holy Scripture; institution of the living magisterium; its prerogatives.—Luther's attacks on the Church were at first directed only against doctrinal details, but the very authority of the Church was involved in the dispute. Luther would dare not explicitly deny while appealing to ecclesiastical tradition and the sense of the Church either for the determination of the canon or for the interpretation of some passages of Holy Scripture, even while making a rule of interpretation in Biblical matters, did not pronounce explicitly concerning the teaching authority, contenting itself with saying that revealed truth is found in the sacred books and in the unwritten traditions coming from God through the Apostles; these were the sources from which it would draw. The Council, as is evident, held that there are Divine traditions not contained in Holy Scripture, revelations made to the Apostles either orally by Jesus Christ or by the inspiration of the Holy Ghost and transmitted by the Apostles to the Church.

Holy Scripture is therefore not the only theological source of the Revelation made by God to His Church. Side by side with Scripture there is tradition, side by side with Scripture and tradition there is the Revelation. This granted, it is impossible to be satisfied with the Bible alone for the solution of all dogmatical questions. Such was the first field of controversy between Catholic theologians and the Reformers. The designation of unwritten Divine traditions was not always given all the clearness desirable, especially in early times; however Catholic controversy soon proved to the Protestants that to be logical and consistent they must admit unwritten traditions as revealed. Otherwise by what right did they rest on Sunday and not on Saturday? How could they regard infant baptism as valid, or baptism by immersion? How could they permit the taking of oaths, since according to Scripture they were not at all? The Quakers were more logical in refusing all oaths, the Anabaptists in re-baptizing adults, the Subbattarians in resting on Saturday. But none were so consistent as not to be open to criticism on some point. Where is it indicated in the Bible that the Bible is the sole source of faith? Going further, the Catholic controversies showed their opponents that this very Bible, to which alone they wished to refer, they could not have the authentic canon nor even a sufficient guarantee without an authority other than that of the Bible. Calvin parried the blow by having recourse to a certain taste to which the Divine word would manifest itself as such in the same way that honey is recognized by the palate. And this fact was accepted by the Catholics, who recognized that no human authority was acceptable in this matter. But this was a very subjective criterion and one calling for caution. The Protestants dared not adhere to it. They came eventually, after rejecting the Divine tradition received from the Apostles by the infallible Church, to rest their faith in the Bible without any divine authority to warrant them, especially insufficient under the circumstances, since it opened up all manner of doubts and prepared the way for Biblical rationalism. There is not, in fact, any sufficient guarantee for the canon of the Scriptures, for the total inspiration or inerrancy of the Bible, save in a Divine testimony which, not being contained in the Holy Books with sufficient clearness of purpose and narrative, nor being sufficiently recognizable to the scrutiny of a scholar who is only a scholar, does not reach us with the necessary warrant it would bear if brought by a Divinely assisted authority, as is, according to Catholics, the authority of the living magisterium of the Church. Such is the way in which Catholics demonstrate to Protestants that the Bible should be interpreted only in fact Divine traditions not contained in Holy Writ.

In a similar way they show that they cannot dispense with a teaching authority, a Divinely authorized living magistracy for the solution of controversies arising among themselves and of which the Bible itself was often the occasion. Indeed experience has proved that even in those controversies that eventually resolved themselves into no more than a difference of opinion, they were incapable of determining what the Church taught or should teach, as was said by one of the earliest reforming sectarians: "The liber est in quo queritis sua dogmata quaeque, invent et pariter dogmata quaeque sunt." One man found the Real Presence, another a purely symbolic presence, another some sort of efficacious presence. The exercise of free inquiry with regard to Biblical texts led to endless disputes, to doctrinal

anarchy, and eventually to the denial of all dogma. These disputes, anarchy, and denial could not be according to the Divine intention. Hence the necessity of a competent authority to solve controversies and interpret the Bible. To say that the Bible was perfectly clear and sufficient to all was obviously a retort born of desperation, a defiance of experience and common sense. Catholics refuted it without difficulty, and their position was amply justified when the Protestants began compromising themselves with the civil power, rejecting the doctrinal authority of the ecclesiastical magistracy only to fall under that of princes.

Moreover it was enough to look at the Bible, to read it without prejudice to see that the economy of the Christian preaching was above all one of oral teaching. Christ preached, He did not write. In His preaching He appealed to the Bible but He was not satisfied with the mere reading of it. He explained and interpreted it, Hé made use of it in His teaching, but He did not substitute it for His teaching. There is the example of the mysterious traveller who explained to the disciples of Emmaus what had reference to Him in the Scriptures to convince them that Christ had to suffer and thus enter into His glory. And as He preached, He had to be the interpreter of the Bible. He did not commission them to write but to teach, and it was by oral teaching and preaching that they instructed the nations and brought them to the Faith. If some of them wrote and did so under Divine inspiration it is manifest that this was as it were incidentally. They did not write for the sake of writing, but to supplement, to explain, to interpret, to solve practical questions, etc. St. Paul, who of all the Apostles wrote the most, did not dream of writing everything nor of replacing his oral teaching by his writings. Finally, the same texts which show us Christ instituting His Church and the Apostles founding Churches and spreading Christ's doctrine throughout the world, show also the Church instituted as a teaching authority; the Apostles claimed for themselves this authority, sending others as they had been sent by Christ and as Christ had been sent by God, always with power to teach and to impose doctrine as well as to govern the Church and to baptize. Whoever believed them would be saved; whoever rejected them would be condemned. It is the living Church and not Scripture that St. Paul indicates as the pillar and the unshakable ground of truth. And the inference of texts and facts is only what is exacted by the nature of things. A book although Divine and inspired is not intended to support itself. If it is obscure—and what unpurged person will deny that there are obscurities in the Bible?—it must be interpreted. And even if it is clear it does not carry with it the guarantee of its Divinity, its authenticity, or its value. Someone must bring it within reach and no matter what be done the believer cannot believe in the Bible nor find in it the object of his faith until he has previously made an act of faith in the interpretations of those who believe in the Bible and in God's authority to interpret it. Now, authority for authority, is it not better to have recourse to that of the Church than to that of the first conqueror? Liberal Protestants, such as M. Auguste Sabatier, have been the first to recognize that, if there must be a religion of authority, the Catholic system with the splendid organization of its living magisterium is far superior to the Protestant system, which rests everything on the authority of a book.

The prerogatives of this teaching authority are made sufficiently clear by the texts and they are to a certain extent implied in the very institution. The Church, according to St. Paul's Epistle to Timothy, is the pillar and ground of truth; the Apostles and consequently their successors have the right to impose their doctrine; whoever refuses to believe them shall be condemned, whoever rejects anything is shipwrecked in the Faith. This authority is therefore not an unstable authority, but one which is explicitly and implicitly, directly by the promise of the Saviour: "Behold I am with you all days even to the consummation of the world." Briefly the Church continues Christ in its mission to teach as in its mission to sanctify; its power is the same as that which He received from His Father and, as He came full of the glory and power of the grace of God, the Church is likewise an institution of truth as it is an institution of grace.

This doctrine was intended to be spread throughout the world despite so many obstacles of every kind, and the accomplishment of the task required miracles. So did Christ give to His Apostles the miraculous power which guaranteed their teaching. As He Himself confirmed His words by His works and manifested they also should present with their doctrine unexceptionable motives for credibility. Their miracles were the Divine seals of their mission and their Apostolate. The Divine seal has always been stamped on the teaching authority. It is not necessary that every missionary should work miracles, the Church herself is an ever-living miracle, bearing always witness to the superhuman character of God's mission. The Church would be no more than a human organism if it were not for the God that is with her.

II. The relation of Scripture to the living magisterium, and of the living magisterium to Scripture.—This relation is the same as that between the Gospel and the Apostolic preaching. Christ made use of the Bible, He appealed to it as to an irrefragable authority. He explained and interpreted it, He gave it to the Church for use by the Church, and the Church, in turn, is to give the Bible and guaranteeing its authority; the Christian doctrine concerning the Bible had to be explained to the faithful themselves, and the guarantee of this doctrine demonstrated. The Bible had been committed to the care of the living magisterium. It was the Church's part to guard the Bible, to present it to the faithful in an authoritative and edited form; it was for her to make known the nature and value of the Divine Book by declaring what she knew regarding its inspiration and inerrancy, it was for her to supply the key by explaining why and how it had been inspired, how it contained Revelation, how the proper object of that Revelation was not merely human instruction but a religious instruction concerning the supernatural destiny and the means to attain it, how, the Old Testament being a preparation and announcement of the Messiah and the new dispensation, there might be found beneath the husk of the letter typical meanings, figures, and prophecies. It was for the Church in consequence to determine the authentic canon, to specify the special places and meanings for the books of the Bible, to permit or to prevent in case of doubt as to the exact sense of a given book or text, and even when necessary to safeguard the historical, prophetic, or apologetic value of a given text or passage, to pronounce in certain questions of authenticity, chronology, exegesis, or translation, either to reject an opinion compromising the authority of the book or to protect the prestige of its doctrine or to tamper with a given body of revealed truth contained in a given text. It was above all for the Church to circulate the Divine Book by inquiring its doctrine, adapting and explaining it, by offering it and drawing from it nourishment where with to nourish souls, briefly by supplementing the book, making use of it, and assisting others to make use of it. This is the debt of Scripture to the living magisterium.
On the other hand the living magisterium owes much to Scripture. Then it finds the word of God, not merely words to speak, as it was expressed under Divine agency by the inspired author; while oral tradition, although faithfully transmitting revealed truth with the Divine assistance, nevertheless transmits it only in human formulas. Scripture gives us beyond doubt to a certain extent a human expression of the truth which it presents, since this truth is developed in and by a human mind acting in a human manner, but also to a certain extent Divine, since this human development takes place wholly under the action of God. So also with due proportion it may be said of the inspired word what Christ said of His: It is spirit and life. In a sense differing from the Protestant sense which sometimes goes so far as to deny the Bible or to treat it as a mere human document, and which led the Swiss historian, Baur, to say that the Church "does not know the Book," the Magisterium of the Church is nothing but the sum and substance of the words and deeds which are presented to us in the Bible more directly than in oral teaching. The latter, moreover, ever faithful to the recommendations which St. Paul made to his disciple Timothy, does not fail to have recourse to Biblical sources for its instruction and to draw thence the heavenly doctrine, to take thence with the doctrine a sure, ever-young, and ever-living expression of the truth, adequate to its clearness of perception, and its adaptability of human formulas to divine realities. In the hands of masters Scripture may become a sharp offensive and defensive weapon against error and heresy. When a controversy arises recourse is had first to the Bible. Frequently when decisive texts are found the case is rapidly and authoritatively decided. The same holds good, even, with much less reason, of the dogmatic confessions of the Church, the expression of which, if they lack an independent and absolute value, have an ad hominem force, or value, through the authority of the authentic interpreter, whose very thought, if it is not, or is not clearly, in Scripture, nevertheless stands forth with a distinctness or new clearness in this manipulation of Scripture, by this canonical writer.

Manifestly there is no question here of a meaning which is not in Scripture and which the magisterium reads into it by imposing it as the Biblical meaning. This individual writers may do and have sometimes done, for they are not infallible as individuals, but not the authentic magisterium. There is question only of a living magisterium striving, explaining, arguing, and persuading, if you will. The only thing which, if they lack an independent and absolute value, have an ad hominem force, or value, through the authority of the authentic interpreter, whose very thought, if it is not, or is not clearly, in Scripture, nevertheless stands forth with a distinctness or new clearness in this manipulation of Scripture, by this canonical writer.

of all. The existence of tradition in the Church must be regarded as living in the spirit and the heart, thence translating itself into acts, and expressing itself in words or writings; but here we must not have in mind individual sentiment, but the common sentiment of the Church, the sense or sentiment of the faithful, that is, of all who live by its life and are in communion of thought with the Church at all times. The living idea is the idea of all, it is the idea of individuals, not merely inasmuch as they are individuals, but inasmuch as they form part of the same social body. This sentiment of the Church is peculiar in this, that it is itself under the influence of grace. Hence it follows that it is not subject, like that of other human groups, to continual change. The Spirit of God always living in His Church upholds the sense of revealed truth ever living therein.

Documents of all kinds (writings, monuments, etc.) are in the hands of masters, as of the faithful, a means of finding or recognizing the revealed truth confided to the Church under the direction of the Church. Therefore when, in addition to the living magisterium of the Church a relation similar, proportionately speaking, to that already outlined between Scripture and the living magisterium. In them is found the traditional thought expressed according to varieties of environments and circumstances, no longer in an inspired language, as is the case with Scripture, but in the language of the circumstances under which the Church's teaching was conveyed and transmitted and which are to be considered in the imperfections and shortcomings of human thought. Nevertheless the more the documents are the exact expression of the living thought of the Church the more they thereby possess the value and authority which belong to that thought because they are so much the better expression of tradition in the form of ideas or words, and no longer the entrance of the Church or are closely connected to the imperfections and shortcomings of human thought. Nevertheless, the more the documents are the exact expression of the living thought of the Church the more they thereby possess the value and authority which belong to that thought because they are so much the better expression of tradition in the form of ideas or words, and the Church is closely connected to the imperfections and shortcomings of human thought.

IV. The organization and exercise of the living magisterium; its precise role in the defence and transmission of the Church's teaching. — Closer study of the living magisterium will enable us to better understand the splendid organism created by God and, gradually developed that it might preserve, transmit, and bring within the reach of all, even revealed truth, ever the same, but adapted to every variety of time, circumstances, and environment. Hence we find her doctrine and rule of faith in these venerable monuments; the formulas may have grown old, but the truth which they express is always her present thought.

The Church as a social body, it is also a social body that the episcopate exercises its mission to teach. Doctrinal infallibility has been guaranteed to the episcopal body and to the head of that body as it was guaranteed to the Apostles, with this difference, however, between the Apostles and the bishops that each Apostle was personally infallible in virtue of his extraordinary mission as founder and the plenitude of the Holy Spirit, while the head of the body of bishops is not so, save in proportion as he teaches in communion and concerted with the entire episcopal body. At the head of this episcopal body is the supreme authority of the Roman pontiff, the successor of St. Peter in his primacy as he is his successor in his see. As supreme authority in the teaching body, which is infallible, he himself is infallible. The episcopal body is infallible also, but only in union with its head, from whom moreover it may not separate, since to do so would be to separate from the body of the Church. The authority of the pope may be exercised without the co-operation of the bishops, and this even in infallible decisions which both bishops and faithful are bound to receive with the same sub-
The authority of the bishops may be exercised in two ways: now each bishop teaches the flock committed to him, again the bishops assemble in council to draw up together and pass doctrinal or disciplinary decrees. When all the bishops of the Catholic world (this totality is to be understood as morally speaking; it suffices for the whole Church to be represented) and the people of God assembled in council the council is called ecumenical. The doctrinal decrees of an ecumenical council, once they are approved by the pope, are infallible as are the ex cathedra definitions of the sovereign pontiff. Although the bishops, taken individually, are not infallible, their teaching partakes in the infallibility of the Church and as such are not subject to the judgment of the episcopal body, that is according as they express not their personal ideas, but the very thought of the Church.

Beside the sovereign pontiff are the Roman Congregations, many of which are especially concerned with doctrinal questions. Some of them, such as the Congregation of the Index, are not so concerned save in matters concerning the reading of certain books, regarded as dangerous to faith or morals, if not by the very doctrine which they contain, at least by their way of expressing it or by their unseaslonableness. Other congregations, that of the Inquisition, for example, have a more directly doctrinal authority. This authority is never infallible; it is necessary for the unity of the Church that the faith should be taught both within and outside the Church. Nevertheless this interior submission does not necessarily bear on the absolute truth or falsity of the doctrine concerned in the decree; it may only bear on the safety or danger of a certain teaching or opinion, the decree itself usually having in view only the moral qualification of the doctrine. The decree itself must be the same, whether the bishops have all those who teach by their authority or under their surveillance; pastors and curates, professors in ecclesiastical establishments, in a word, all who teach or explain Christian doctrine.

Theological teaching in all its forms (in seminaries, universities, etc.) gives valuable assistance as a whole to the teaching authority and to all who teach under that authority. The study of theology is a means of acquiring the knowledge which usually assists them to discern truth or falsehood in doctrinal matters; they have drawn thence what they themselves are to provide. Theologians as such do not form a part of the teaching Church, but as professional expositors of revealed truth they study it so thoroughly as to be able to illumine it with all the lights of philosophy, history, etc. They are, as it were, the natural consultants of the teaching authority, to furnish it with the necessary information and data; they thereby prepare and sometimes in an even more direct manner by their reports, their written consultations, their projects or schemes, and their preparations for the actions of the official documents which the teaching authority comprehensively develops and publishes authoritatively. On the other hand, their scientific works are useful for the instruction of those who should spread and popularize the doctrine, put it in circulation, and adapt it to all by speech or writings of every kind. It is evident what marvellous unity is attained on this point alone in the Church, that the doctrine represented is descended from above, distributed through a thousand different channels, finally comes pure and undiluted to the most lowly and the most ignorant.

This multifarious work, of scientific exposition as well as of popularization and propaganda, is likewise assisted by the countless written forms of religious teaching and by the other activities which have the character of doctrinal security, approved as they are by the teaching authority and aiming only to set forth with clearness and precision the teaching common in the Church. Thus the child who learns his catechism may, provided he is informed of it, take cognizance that the doctrine presented to him is not the personal opinion of the volunteer catechist or of the priest who communicates it to him. The catechism is the same in all the parishes of a diocese: apart from a few differences of detail which have no bearing on doctrine all the catechisms of a country are alike; the differences between one country and another are scarcely perceptible. It is truly the mind of the Church received from God or Christ and transmitted by the Apostles to the Christian society which thus reaches even little children by the voice of the catechist, or the savage by that of the missionary. This diffusion of the same truth throughout the world among the diverse peoples is a marvel which by itself forces the recognition that God is with His Church. St. Irenaeus in his time was in admiration of it and he expressed his admiration in language of such brilliancy and poetry as is seldom to be met with in the venerable Bishop of Lyons. The outer and visible cause on which the Church's visible existence is based, the office of teachers have been chosen from among the faithful and they first of all are obliged to believe what they teach to the faith of others. Moreover they usually propose to the belief of the faithful only the truths of which the latter have already made more or less explicit profession. Sometimes it is even by confounding as it were the Church with the Church, still more by scrutinizing the monuments of the past, that masters and theologians discover that such and such a doctrine, perhaps in dispute, belongs nevertheless to the traditional deposit. More than one among the faithful may be unconscious of personal belief in it, but if he is in union of thought with the Church he believes in the splendid organization of the living magisterium. This magisterium was not instituted to receive new truths, but to guard, transmit, propagate, and preserve revealed truth from every admixture of error, and to cause it to prevail. Moreover the magisterium should not be considered as external to the community of the faithful. Those who teach are more truly the masters of errors and religious writers, not those who have led others astray, but those who have been led astray. Throughout the Church, still more by scrutinizing the monuments of the past, that masters and theologians discover that such and such a doctrine, perhaps in dispute, belongs nevertheless to the traditional deposit. More than one among the faithful may be unconscious of personal belief in it, but if he is in union of thought with the Church he believes in the splendid organization of the living magisterium. This magisterium was not instituted to receive new truths, but to guard, transmit, propagate, and preserve revealed truth from every admixture of error, and to cause it to prevail. Moreover the magisterium should not be considered as external to the community of the faithful. Those who teach are more truly the masters of errors and religious writers, not those who have led others astray, but those who have been led astray.
ogy. But the fact remains that scientific hypothesis, science which seeks itself, and philosophy which develops itself sometimes seen in opposition to revealed truth. In this case the teaching Church has the right, in order to preserve traditional truth, to condemn the author and heresy of such hypotheses, which, although not direct denials, nevertheless endanger it or rather expose some souls to the loss of it. Authority has need to be prudent in these condemnations and it is well known that the cases are very rare when it may be asserted with any appearance of justification that it has not been sufficiently so, but its right to interfere is more necessary when the one who admits the Divine institution of the magisterium.

There are then between purely prolate facts and opinions and revealed truths mixed facts and opinions which by their nature belong to the human order, but which are in intimate contact and close connexion with supernatural truth. These facts are called dogmatic facts and these opinions theological opinions. In very virtue of its mission the teaching authority has jurisdiction over these facts and opinions; it is even a positive truth, if not a revealed truth, that dogmatic facts and theological opinions may also like dogmatic truths themselves be the object of an infallible decision. The Church is no less infallible in maintaining that the five famous propositions are in danger of being condemned heretical. A distinction must be made between dogmatic traditions or revealed truths, pious traditions, liturgical customs, and the accounts of supernatural manifestations or revelations which circulate in the world of Christian piety. When the Church intervenes in order to pronounce in these matters it is never to condemn them, if we may so say, to give them an authority of faith; in such cases it claims only to preserve them against temerarious attacks, to pronounce that they contain nothing contrary to faith or morals, and to recognize in them a human value sufficient for piety to nourish itself therewith freely and without danger.

The identity of revealed truth in the varieties of formulas, systematication, and dogmatic development; the identity of faith in the Church and through the variations of theology.—The saying of Sully Prudhomme is well known: "How is it that this which is so complicated (the 'Summa' of St. Thomas) has proceeded from what was so simple (the Gospel)?" In fact when we read a theological treatise or the propositions of Pius X they seem at first glance very different from the Holy Scripture or the Apostles' Creed. On closer study we become aware that the differences are not irreconcilable; despite appearances the "Summa" and the anti-Modernist earth are naturally linked with the Scripture and the faith of the first Christians. To grasp thoroughly the identity of revealed truth such as was believed in the early centuries with the dogmas which we now profess, it is necessary to study thoroughly the process of dogmatic expression in the complete history of dogma and theology. It is sufficient here to indicate its general outlines and characteristics. That which was shown in Scripture or the earliest Church, in the Gentiles and in the East, the Person of Jesus Christ has been formulated in abstract terms (one person, two natures) or in concrete formulas (my Father and I are one); men passed constantly from the implicit seen or received to the explicit reasoned and reflected upon; they analyzed the complex data; compared the separate elements, built up a system of the self-revelled truths; they cleared up the analogies of faith and the light of reason points which were still obscure and fused them into a whole, in whose parts the data of Divine Revelation and those of human knowledge were sometimes difficult to distinguish. Briefly all this led to a work of transposition, analysis, and synthesis, of deduction and induction, of the elaboration of the revealed matter by theology. In the course of this work the formulas have changed, the Divine realities have become tinged with the colours of human thought, revealed truths have been mingled with those of science and philosophy, but the heavenly doctrine has remained the same throughout the varieties of formulas, systematication, and dogmatic expression. It is seen at different angles and to a certain extent with other eyes, but it is the same truth which was presented to the first Christians and which is presented to us today.

To this identity of revealed truth corresponds the identity of faith. What the first Christians believed we still believe; what we believe to-day they believed more or less explicitly, in a more or less conscious way. Since the deposit of Revelation has remained the same, the same also, in substance, has remained the taking possession of the deposit by the living faith. Each of the faithful has not at times nor has he always explicit consciousness of all that he believes, but his implicit belief always contains what he one day makes explicit in the profession of faith. Certain truths, which may be called fundamental, have always been explicitly professed in the Church, either by word or action; others which may be called secondary remain hidden to some, as regards their precise detail, in a more general truth where faith did not discern them at the first glance. In the first case at a given time uncertainties may have existed, controversies have arisen, heresies cropped up. But the mind of the Church, the Catholic sense, has not hesitated as to what was essential, there has been the teaching of the Church, in some cases he has even been the teaching of the truth with which heretics have reproached it; these might have seen and they who had eyes to see did see. On these points disputes have never arisen among the faithful; there have sometimes been very sharp disputes, but they had to do with misunderstandings or bare only on details of expression.

As regards truths such as the dogma of the Immaculate Conception, there have been uncertainties and controversies over the very substance of the subjects involved. The revealed truth was indeed in the deposit of truth in the Church, but it was not formulated in explicit terms nor even in clearly equivalent terms; it was enveloped in a more general truth (that of the all-holiness of Mary) and might be understood in a more or less absolute sense (exemption from all actual sin, exemption even from original sin). On the other hand, this truth (the exemption of Mary from original sin) may seem in at least apparent conflict with other certain truths (universality of original sin, redemption of all by Christ). It will be readily understood that in these cases, when the question is put explicitly for the first time, the faithful have hesitated. It is even natural that the theologians should show more hesitation than the other faithful. More aware of the apparent opposition between the new opinion and the ancient truth, they may legitimately resist, while awaiting fuller light, what may seem to the others the intimation of the heart often made prompt and more enlightened than reasoning and reflected thought, shrank from all restriction and could not suffer, according to the expression of St. Augustine, that there should be question of any sin whatsoever in connexion with Mary. Little by little the feeling of the faithful won the day. Not, as has been said, be-
cause the theologians, powerless to struggle against a blind sentiment, had themselves to follow the movement, but because their perceptions, quickened by the faithful and by their own instinct of faith, grew more considerate of the sentiment of the faithful and eventually examined the new opinion more closely in order to make sure that, far from contradicting any dogma, it proceeded with equal certitude from truths and corresponded as a whole to the analogy of faith and rational fitness. Finally scrutinizing with fresh care the deposit of revelation, they there discovered the pious opinion, hitherto concealed, as far as they were concerned, in the more general formula, and, not satisfied to hold it as true, they declared it revealed and orthodox. What had been attempted and succeeded, after long discussions, explicit faith in the same truth thenceforth shining in the sight of all. There have been no new data, but there has been under the impulse of grace and sentiment and the effort of theology a more distinct and clear insight into what the ancient data contained. When the Church defined the Immaculate Conception it defined both actually in the explicit faith of the faithful, what had always been implicitly in that faith. The same is true of all similar cases, save for accidental differences of circumstances. In recognizing a new truth the Church thereby recognizes that it already possessed that truth.

There is, therefore, in the Church progress of dogmas, progress in theology, progress to a certain extent of faith itself, but this progress does not consist in the addition of fresh information nor the change of a notion. What is believed has always been believed, but in time it is more commonly and thoroughly understood and explicitly expressed. Thus, thanks to the living magisterium and ecclesiastical teaching, the Church moves on in the direction of truth, and the action of the Holy Ghost simultaneously directing master and faithful, traditional truth lives and develops in the Church, always the same, at once ancient and new; ancient, for the first Christians already beheld it to a certain extent; new, because we see it with our own eyes and in harmony with our present ideas. Such is the notion of tradition in the double meaning of the word. It is Divine truth coming down to us in the mind of the Church and it is the guardianship and transmission of this Divine truth by the organ of the living magisterium, by ecclesiastical teaching, by the profession of it made by all in the Christian life.

Position is scarcely more than a broad summary of the following book: BAULY, De Marienverdierted Traditione (Paris, 1906). The same work contains an ample bibliography of the various articles treating the subject of tradition which will suffice. Among patristic documents the chief are: ST. Irenaeus, Conta Haereses, especially III, iv; in P. L., VII, 543-57; cf. Mallet, 4, 3; TERTULLIAN, De prescriptae hereticorum (P. L., II, 9-74); ORIGEN, De principiis, praef. (P. L., XI, 115-120); ST. AUGUSTINE, Contra Haereses, especially praef. and praef. (P. L., XXXI, 69-112); IDEM, De eucharistia cumptibus (P. L., XXXI, 309-73); IDEM, De Trinitate (P. L., III, 635-37); cf. BOSSEY, Defension Traditionis, etc. (Paris, 1894), et seq. Many texts of the Fathers on this subject have been collected in the Encyclical letter of REEVERD (Freiburg, 1911). Index Thesalurgiae, s. v. Traditione, etc. 78-88.

The chief official documents of the ecclesiastical magisterium on the question are collected in Die Lehre vom dogmatischen Erbe und von Tradition, etc. (Freiburg, 1911). Index Systematicae, s. v. Traditione, etc. 78-88.

soning by the testimony of the senses, feelings, and reason of all other men; their universal agreement is the rule of certitude. Hence, to avoid scepticism, we must begin with an act of faith preceding all reflection, since reflection pre-supposes the knowledge of some truth. This act of faith must have its criterion and rule in the common consent or agreement of all the men of good will.

Lamennais concludes, "the law of human nature, outside of which there is no certitude, no language, no society, no life" (cf. Défense de l'Essai sur l'in-différence, xi).

The Mitigated Traditionalists make a distinction between the order of acquisition (ordo acquisitionis) and the order of demonstration (ordo demonstrativi). The knowledge of metaphysical truths, they say, is absolutely necessary to man in order to act reasonably. It must then be acquired by the child through teaching or tradition before he can use his reason. And this tradition can have its source only in a primitive revelation. Hence, in the order of acquisition, faith is the necessary foundation of natural reason, which is received by faith, human reason is able, through reflection, to demonstrate the reasoningness of this act of faith, and thus, in the order of demonstration, science precedes faith (cf. Ubaghs, "Logique seu Philosophiae rationalis elementa," 6th ed., Louvain, 1860). When replaced in its historical surroundings, Traditionalism has clearly appeared as the most perfect among the rationalism of the philosophers of the eighteenth century and the anarchic individualism of the French Revolution. Against these errors it pointed out and emphasized the weakness of human reason, the influence of society, education, and tradition on the development of human life and institutions. The reaction was extreme, and handed in the opposite err.

Criticism.—Since Traditionalism, in its fundamental principles, is a kind of Fideism, it falls under the condemnation pronounced by the Church and under the refutation furnished by reason and philosophy against Fideism. We may, however, advance certain criticisms touching the characteristic elements of the Traditionalist system; it is evident that faith, authority, whatever it be the way or agency in which it is presented to us, cannot of itself be the supreme criterion or rule of certitude. For, in order to be a rule of certitude, it must first be known as valid, competent, and legitimate, and reason must have ascertained this before it is entitled to our assent (cf. St. Thomas, "De regno," ad. 6). Then, in the psychological problem of the relations between thought and expression, and even admitting with de Bonald that the primitive elements of thought and language were originally given directly by God to man, we are not forced to conclude logically with him that our first act is an act of faith. Our first act should rather be an act of reason, acknowledging by natural reflection the credibility of the truth revealed by God. Lamennais's criterion of universal reason or consent is open to the same objections. First, how could universal consent or general reason, which is nothing more than the collection of individual judgments or of individual reasons, give certitude, when each of these individual judgments is only matter of opinion or each of these individual reasons is a product of judgment, fallible? Again, how could we in practice apply such a criterion; that is, how could we ascertain the universality of such a judgment in the whole human race, even if only moral universality were required? Moreover, what would be, in this system, the criterion of truth, concerning matters in which the human mind is more or less a creative and experimental agent, of which it is generally incompetent? But above all, in order to give a firm and unassailable assent to the teaching of universal consent, we must first have ascertained the reasonableness and legitimacy of its claims to our assent; that is, reason must ultimately precede faith; otherwise our assent would not be reasonable.

Mitigated or Semi-Traditionalism, in spite of its apparent differences, is substantially identical with pure Traditionalism, and falls under the same criticism, since religious truths are declared to be given to man directly by Revelation, and by him antecedently to any act of his reason. Moreover, there is no real foundation for the essential distinction between the orders of invention and demonstration, which is supposed to distinguish Semi-Traditionalism from pure Traditionalism. The difference between these two orders is only accidental. It concerns only whether it is easier to demonstrate an absolutely known truth than to discover it for the first time; but the faculties and process used in both operations are essentially the same, since to demonstrate a truth already known is simply to reproduce, under the guidance of this knowledge, the operation performed and to take again the path followed in its first discovery (cf. and Thomas, "Semi-Tradi-
tionalism and absolute Traditionalism, then, rest upon the same fundamental error, namely, that ultimately faith precedes reason. Let us point out, however, the partial truth contained in Traditionalism. Against Individualism and Rationalism, it rightly insisted upon the social character of man, and rightly maintained that human reason is the intellectual, moral, and religious development of man. Rightly also it recalled to the human mind the necessity of respect for tradition, for the experience and teaching it can secure a true and solid progress. Universal consent may indeed be, in certain conditions, a criterion of truth. In many circumstances, it may furnish sufficient foundation for the more or less confirmation of the truth already discovered; but it can never be the supreme criterion and rule of truth. Unless we admit that our reason is of itself capable of knowing with certainty some fundamental truths, we logically end in scepticism—the ruin of both human knowledge and faith. The true doctrine, as taught by the Catholic Church and confirmed by psychology and history, is that man is physically and practically able to know with certainty some fundamental truths of the natural, moral, and religious order, but that, although he has the physical power, he remains in the conditions of the present life, morally and practically incapable of knowing sufficiently all the truths of the moral and religious order without the help of Divine Revelation (cf. Zoglia, Summa philosophiae (Rome, 1786), i, Logica, pt. ii, bk. iii, a. 3. Mercier, Catechisme geneial (4th ed., Louvain, 1800), bk. iii, i, a. 1. George M. Sauvé.

Traducianism (tradux, a shoot or sprout, and more specifically a vine branch made to take root so as to propagate the vine), in general the doctrine that, in the process of generation, the human spiritual soul is transmitted to the offspring by the parents. When a distinction is made between the terms Tradi-
cism and Generationism, the former denotes the materialistic doctrine of the transmission of the soul by the organic process of generation, while the latter applies to the doctrine according to which the soul of the offspring originates from the parental soul in some mysterious way analogous to that in which the organism originates from the parent's organism. Traducianism is opposed to Creationism (q. v.) or the doctrine that every soul is created by God. Semi-Traducianism (q. v.) admit that the first human soul originated by creation. They differ only as to the mode of origin of subsequent souls. In the early centuries of the Christian Church, the
Fathers who touch upon this question defend the immediate creation of the soul. Tertullian, Apollinaris, and a few other heretics advocated Traductionism, but the sects to which (under the name of Pelagianism) that "the majority of Oriental writers think that, as the body is born of the body, so the soul is born of the soul" seems exaggerated, as no other writer of prominence is found to advocate Generationism as certain. Saint Gregory of Nyssa, Macarius, Rufinus, Nemesius, although their views on this point are not always clear, is a strong advocate of the theory of Homogenesis. Some Fathers hesitated between Generationism and Creationism, thinking that the former offers a better, if not the only, explanation of the transmission of original sin. Among them Saint Augustine is the most important. Creationism is held as certain by the Scholastics, with the exception of Hugh of Saint-Victor and Alexander of Hales, who reserve it merely as more probable. In recent times Generationism has been rejected by all Catholic theologians. Exceptions are Froeschammer who defends Generationism and gives to the generation of the soul from the parents the name of secondary creation; Klee and Ubaghs who leave the question undecided; Hermes who favours Generationism; Gregorius who advocates Regularism, and Robert of Occam who asserts that the sensitive soul is generated by the parents, and becomes spiritual when God illuminates it and manifests to it the idea of being which is the foundation of the whole intellectual life.

From the philosophical point of view, the reasons alleged in favour of Generationism have little or no weight. The germ perfectly generated is only the first offspring even if the soul comes from God, for the generative process is the condition of the union of body and soul which constitutes the human being. A murderer really kills a man, although he does not destroy his soul. Nor is man inferior to animals because they generate complete living organisms, since the different faculties of the animal or the vegetable organism is attributed to the whole body, and the end of the generative process is to produce a new whole entity.

Since the soul is immaterial and indivisible, no spiritual germ can be detached from the parental soul (cf. St. Thomas, "Contra gentes," II, c. 86; "Sum. theol." I, Q. x, a. 2, Q. exviii, a. 2, etc.). As to the power of creation, it is the prerogative of God alone (see CREATION, VI).

Theologically, corporeal Traductionism is heretical because it goes directly against the spirituality of the soul. As to Generationism, it is certainly opposed to the general attitude of the Church. Froeschammer's book, "Ueber den Ursprung der menschlichen Seele," was condemned in 1587, and Ubaghs's opinion expressed in his "Anthropologia philosophique" is considered to be "not a part of God, but created from nothing." (Denzinger, 348).

Among the errors which the Armenians must reject, Benedict XII mentions the doctrine that the soul originates from the soul of the father (Denzinger, 533). Hence, although there are no strict definitions condemning Generationism as heretical, it is certainly opposed to the doctrine of the Church, and could not be held without tenuity.
and Pontus. In this territory he found many Christians and requested instructions from Trajan (Ep. 96). In his reply (Ep. 97) Trajan considers the confession of Christianity as a crime worthy of death, but forbids a systematic search for Christians and the acceptance of anonymous denunciations. Whoever shows by sacrificing to the gods that he is not a Christian is to be released.

Several decisions have been taken against Christians in this place also. The most distinguished martyrs under Trajan were Ignatius, Bishop of Antioch, and Simeon, Bishop of Jerusalem. Legend names many others, but there was no actual persecution on a large scale and the position of the Christians was in general satisfactory.

**KLEMMENS LÖFFLER**

**Trajanopolis**, titular metropolitan see of Rhodope. The city owes its foundation or restoration to Trajan. Le Quien (Oriens Christ., I, 1193-96) mentions a great many of its bishops: Theodorus, persecuted by the Arians in the fourth century; Synedtius, the friend of St. John Chrysostom; Peter, present at the Council of Ephesus in 431; Basilius at that of Chalcedon in 451; Ambantius in 521; Eleusius in 553; Cudumenes about 1270; Germanus in 1392. In 1564 Gabriel is called Metropolitan of Trajanopolis, that is of Maronia, which proves that Trajanopolis was then destroyed and that the title of metropolitan had passed to the neighbouring city of Maronia. About 640 Trajanopolis had two suffragan sees (Gelzer, "Ungedruckte... Texte der Notiti e episcopatum", 542); at the beginning of the tenth century, seven (Gelzer, op. cit., 558). St. Gregorius, a martyr of the second century, venerated on 13 May, was born in the town; it is mentioned by Villehardouin (ed. Wailly, 382, 565): it was captured and pillaged in 1206 by Joannita, King of the Bulgarians (George Apostolita, "Hist.", XIII). It is still mentioned in Neehoras (Anecdota of Boissoneade, V, 279), in John Cantauczenus (Hist., I, 38; II, 13; III, 67), in George Pamychers (ad ann. 1276, V, 6), etc. The site of Trajanopolis was discovered by Viqueneau and Dumont on the right bank near the mouth of the Maritsa, not far from Oroumdjik.

**Viqueneau**, Voyages dans la Turquie d'Europe: description du pays, et d'edifices de la T. II, 297; Dumont, Arch. des missions slav. (III, Paris, 1876), 174; Meller, Paléographie liturgique, 887; Smith, Dict. of Greek and RomanGeo., s. v.

**S. Vailhé**

**Trajanopolis**, a titular see of Phrygia Paestiana, suffragan of Laodicea. The only geographer who speaks of Trajanopolis is Ptolemy (V, 2, 14, 15), who wrongly places this city in Greater Mysia. It was founded about 109 by the Grimenothyraxes, who obtained permission from Hadrian to give the place the name of his predecessor. It had its own coins. Hierocles (Synecedesmus, 668, 13) calls it Tranopolis, and this abridged form is found in the "Notiti e episcopatum", which speaks of the see up to the thirteenth century among the suffragans of Laodicea. Le Quien (Oriens Christianus, I, 503) names seven bishops of Trajanopolis: John, present at the Council of Constantinople under the Patriarch Germanus, 439; John, at the Council of Constantinople under Menas, 539; Asignius, at the Council of Constantinople, 553; Theomas, at the Council in Trullo, 692; Philip, at Nice, 787; Eustathius, at Constantinople, 879. Another, doubtless more ancient than the preceding, Demetrios, is known from one inscription (C. I. G., 9265). Trajanopolis has been variously identified; the latest identification is Radet ("En Phrygie", Paris, 1885), who locates it at Tzarki Keui, about thirty miles from Ghiouar Euren. However, Ramsay (Asia Minor, 149; Cities and Bishops of Phrygia, 365) continues to identify Trajanopolis with Ghiouar Euren.

**S. PÉTRIDES**

**Tralles**, a titular see, suffragan of Ephesus in Asia Minor. It was founded, it is said, by the Argians and Thracians, and is situated on one of the slopes of MountMessogis in the valley of the Meander; it was one of the most populous and richest cities of Lydia. Abd-Attas had a palace or "Saray" in this place; the local god was Zeus Larasios, but Apollo Pythius and other divinities were also worshipped.

Tralles was destroyed by an earthquake but was rebuilt by Augustus and took the name of Cæsarea. Christianity was introduced at a very early date. In his famous letter to the Church at Tralles, St. Ignatius of Antioch says that their bishop, Polycrates, visited them. The local god was Zeus Larasios, but Apollo Pythius and other divinities were also worshipped.

**Trani and Barletta**, Diocese of (Tranen. et Bar.-), in Italy. The city of Trani is situated on the Adriatic in a fertile plain, producing cereals, wine, and...
oil, which are exported in great quantities. For a long time, however, the port has lost the importance it had in the time of the Norman and Angevins who fortified it. The fishing industry is extensive. The cathedral, in Byzantine style, was built by Canon Nicola di Trani in 1143; its bronze gates by Barisanlo date from that period. Outside the city, on a peninsula, stands the old Benedectine Abbey of S. Maria de Colonna, containing a marble relief of Christ in Majesty. Trani is built on the site of the ancient Turinum. It grew in importance under the Byzantines and was taken several times by the dukes of Benevento. In 810 and 1009 it fell into the hands of the Saracens. In the tenth and eleventh centuries it was a republic, recognizing the nominal sovereignty of Byzantium. The city, which had been transferred from Capua to Trani in 1063 by the consuls of Trani is, after the "Tavole di Amalfi", the oldest maritime commercial code of the Middle Ages. Trani resisted the Norman invasions energetically, but in 1073 it had to open its gates to Pierre d'Hauteville, who assumed the title of Count of Trani. In the twelfth century, in league with Bar, Troia, and Meli, it attempted to regain its ancient freedom. For instance, in 1147 Roger of Sicily, who two years later it had to capitulate. Frederick II constructed a fortress there and made it one of the royal residences. In the Neapolitan wars Trani became a place of the greatest importance, especially during the struggle between the Angevines and the Angevins. From 1197 to 1209 it was held by Byzantium. The latter re-established a second and a third jurisdiction there. In 1467 the populace rebelled against the nobles; in 1799 the people opposed the republic, and the city in consequence was sacked by the revolutionaries and the French. The legend of St. Magnus relates that there was at Trani about the middle of the third century a bishop, Redemptus, who laid the foundation of the cathedral. The first driver was laid by Bishop Favorini (143). The church was enlarged by Byzantines. In 1358 Trani was an important fortress and the bishops were later independent. In 1552 the united dioceses were incorporated with Nazareth and in 1590 the See of Nazareth (Barletta) was united with Trani, the archbishop of which had been appointed in 1418 perpetual administrator of the ancient See of Biseglicia, the scene of the glorious martyrdom of Saints Pancratius and Sergius, whose bodies repose in the cathedral. The names of fifty bishops of Byzantine origin are recorded in the diocese since the twelfth century. The united dioceses contain 19 parishes; 98,000 inhabitants; 110 priests; 1 house of religious (men); 15 convents of nuns; 2 schools for girls.

Transcendentalism.—The term transcendent and transcendental are used in various senses, all of which, as a rule, have antithetical reference in some way to experience or the empirical order.

(1) For the Scholastics, the categories are the highest class of things that are and are spoken of. The transcendent are those that are independent of experience, being, which are wider than the categories, and, going beyond them, are said to transcend them. In a metaphysical sense transcendental is opposed to the Scholastics and others to immanent; thus, the doctrine of Divine Transcendence is opposed to the doctrine of Divine Immanence in the Pantheistic sense. Here, however, there is no reference to experience.

(2) In the loosest sense of the word any philosophy or theology which lays stress on the intuitive, the mystical, the ultra-empirical, is said to be transcendentalism. Thus, it is common to refer to the New England School of Transcendentalism, of which mention is made further on.

In a strict sense of the word, transcendentalism refers to a celebrated distinction made by Kant. Though he is not consistent in the use of the terms transcendental and transcendentalism, Kant understands by transcendental what lies beyond the limits of experience, and by transcendental he understands the non-empirical or a priori elements in our knowledge, which do not come from experience but are immediately applied to the data or contents of knowledge furnished by experience. The distinction is somewhat subtle. Yet, it may be made clear by an example. Within the limits of experience we learn the uniform sequence of acorn and oak, heat and expansion, cold and contraction, etc., and we give the antecedent as the cause of the consequent. If, now, we go beyond the limits of experience, we find that every effort has its cause.” Kant, as has been said, does not always adhere to this distinction. We may, then, understand
 transcendent and transcendental to refer to those elements or factors in our knowledge which do not come from experience, but are known a priori. Empirical philosophy, therefore, proceeds by experience alone and adhering to the realm of experience in obedience to Hume's maxim, "Tis impossible to go beyond experience." Transcendental philosophy, on the contrary, goes beyond experience, and considers that philosophical speculation is concerned chiefly, if not solely, with those things which lie beyond experience.

(4) Kant himself was convinced that, for the theoretical reason, the transcendentality, the thing-in-itself, is unknown and unknowable. Therefore, he defined the task of philosophy to consist in the examination of knowledge for the purpose of determining the a priori elements, in the systematic enumeration of the transcendental forms, and, finally, in the determination of the rules for their legitimate application to the data of experience. Ultra-empirical reality, he taught, is to be known only by the practical reason. Thus, his philosophy is critical transcendentalism. Thus, too, he left to his successors the task of bridging over the chasm between the theoretical and the practical reason. This task they accomplished in various ways, eliminating transcendentalism from the true heart of the transcendental idealism, but maintaining, on the other hand, different transcendentalisms in place of the critical transcendentalism of Kant.

(5) Fichte introduced Egotistic Transcendentalism. The subject, he taught, or the ego, has a practical as well as a theoretical side. To develop its practical side, he introduced the absolute idea and right of consciousness and right of inherence as opposed to the subject, is eliminated, because it is a creation of the ego, and, therefore, all transcendental reality is contained in self. I am I, the original identity of self with itself, is the expression of the highest metaphysical truth.

(6) Hegel, addressing himself to the same task, developed Transcendental Idealism. He brought to the problems of philosophy a highly spiritual imaginativeness and a scientific insight into nature which were lacking in Kant, the critic of knowledge, and Fichte, the teacher of romantic personalism. He taught that the transcendental reality is neither subject nor object, but an Absolute which is so independent, and so ideational, that it is not to be explained, for it is the spirit. Yet the Absolute is, in a sense, potentiality both the one and the other. For, from it, by gravity, light, and organization, is derived spirit, which6hums in nature, but reaches consciousness of self in the highest natural organization, man. There is here a hint of development which was brought out explicity by Hegel.

(7) Hegel introduced Idealistic Transcendentalism. He taught that reality is not an unknowable thing in itself, nor the subject merely, nor an absolute of indifference, but an absolute Idea, Spirit, or Concept (Begriff), whose essence is development (das Werden), and which becomes in succession object and subject, nature and spirit, being and essence, the soul, law, the natural, art, and philosophy.

In all these various meanings there is preserved a generic resemblance to the original signification of the term transcendentalism. The transcendentalists one and all, dwell in the regions beyond experience, and, if they do not condemn experience as untrustworthy, at least they value experience only in so far as it is elevated, sublimated, and transformed, by the application to it of transcendental principles. The fundamental epistemological error of Kant, that whatever is universal and necessary cannot come from experience, runs all through the transcendentalist philosophy, and it is on epistemological grounds that the transcendentalists are to be met. This was the stand taken in Catholic circles, and there, with few exceptions, the doctrines of the transcendentalists met with a hostile reception. The exceptions were Franz Baader (1764-1841), Johann Friesschammer (1782-1851), and Anton Rieger (1783-1861), who introduced in their attempt to reconcile Catholic dogma with modern philosophical opinion, were influenced by the transcendentalists and overturned the boundaries of orthodoxy. It may without unfairness be laid to the charge of the German transcendentalists that their disregard for experience and common sense is largely responsible for the decline into which metaphysics has fallen in recent years.

New England transcendentalism, sometimes called the Concord School of Philosophy, looks to William Ellery Channing (1780-1812) as its founder. Its principal representatives are Amos Bronson Alcott (1799-1888), Ralph Waldo Emerson (1803-1882), and Henry David Thoreau (1817-1862). This movement was primarily a reaction against the formalism of Calvinistic theology. Its sociological and economic theories were tested in the transcendentalism of the early nineteenth century, and the names just mentioned and those of several other distinguished Americans were associated.

William Turner.

Transcendentalism, a rectangular space inserted between the apse and naves in the early Christian basilica. It sprang from the need of procuring sufficient space for the increased number of clergy and for the proper celebration of the service. The length of the transept equals the width of the nave, as in Santa Maria Maggiore and Santa Croce at Rome, or it exceeds this breadth more or less, so that the transept extends beyond the walls of the nave. The transept, though, is not peculiar to the Roman basilica, as was for a long time believed; it is also to be found in the churches of Asia Minor, as at Sagalassos, Bithynia, and the other naves are directly united with the transept, were to be found in Asia Minor and Sicily, even in the early era, a number of churches of a second form. These were formerly considered to belong to the medieval period, because they were not fully developed until the Middle Ages. This is the cross-shaped or cruciform church, over the origin of which violent literary controversy raged for a long time. In the cruciform design the transept is organically developed from the structure. It contains three squares which in height and breadth correspond to that of the main nave. Beyond the central square, called the bay, and connected with it is a fourth square, the choir, and beyond, and connected with the choir by a third square, is the central square of the church is produced. The transept generally terminates towards the north and south in a straight line. Still there are a number of churches, especially in Germany, that end in a semicircular or triple conch shape. Strzyzowski thinks he has found the model for the cruciform church in the Roman imperial palace; thus form of transept is found in as early a church as that of the Virgin at Bethlehem erected by Constantine.
numerous chapels, as at Santa Croce at Florence. The prototype of this design can also be proved to have existed in the East and the districts under its influence. The doubling of the transept, however, seems to have been peculiar to Western architecture; this type of transept appeared both in the Romanesque and in the Gothic periods, although the manner of producing it varied greatly. Many Romanesque churches are constructed at the west end and the same plan is found in many churches that have not been disturbed in Gothic architecture, excepting that in England some of the great cathedrals have a second, short transept added to the east choir, as at Salisbury. Gothic architecture also emphasized the choir by giving it in the large cathedrals three aisles; in this way very beautiful vistas are produced. In the effort to gain large-irregular spaces the architects of the Renaissance and the Baroque periods enlarged the transept and covered the bay with a cupola which caused the transept to dominate the entire structure.

Gratz, Opus Francigenum (Stuttgart, 1878); Steenwyk, Kleinschmidt, Transfiguration (Leipzig, 1903).

BEDA KLEINSCHMIDT.

Transfiguration.—The Transfiguration of Christ is the culminating point of His public life, as His Baptism is its starting-point, and His Ascension its end. Moreover, this glorious event has been related in detail by St. Matthew (xvii, 1-6), St. Mark (ix, 1-8), and St. Luke (ix, 28-36), while St. Peter (II Pet., i, 16-18) and St. John (i, 14), two of the prophetic 

BARNABAS MEISTERMANN.

Transfiguration of Christ, Feast of, 6 August, double second class, celebrated to commemorate the manifestation of the Divine glory recorded by St. Matthew (xvii). The Armenian bishop Gregory Arsharuni (about 690) ascribes the origin of this feast to St. Gregory the Illuminator (d. 335). He, who, he says, witnessed it for a parchment in Acroterion and the Tachtarch (rock) Haman, retained the old appellation of the feast, because Christ opened His glory like a rose on Mount Thabor. It is not found however in the two ancient Armenian calendars printed by Cenacle (Armenian Ritual, 527 sq.). It probably originated, in the fourth or fifth century, in place of some pagan nature-feast, somewhere in the highlands of Asia. The Armenians at present keep it for three days as one of the five great feasts of the year (seventh Sunday after Pentecost); it is preceded by a fast of six days. Also in the Syrian Church it is a feast of the first class. In the Greek Church it has a vigil and an octave. The Latin Church was slow in adopting this feast; it is not mentioned before 530 (Martyrology of St. Bede). The celebrated Church of St. Blaise at Marseilles was consecrated by the Second Council of Orange (537); it was adopted in the liturgy about the tenth century in many dioceses, and was celebrated mostly on 6 Aug.: in Gaul and England, 27 July; at Meissen, 17 March: at Halberstadt, 3 Sept., etc. (Græfendex, "Zeitrechnung," II, 226; Eichner, "Missale R. Italieum"). In 1536 Callixtus III extended the feast to the Universal Church in manuscript of the ninth century granted by him to the Cathedral of Ripatransone, 6 Aug., 1436. Callixtus himself composed the Office. It is the titular feast of the Lateran Basilica at Rome; as such it was raised to a double second class for the Universal Church, 1 Nov., 1911. On this day the pope at Mass uses new wine or presses a bunch of ripe grapes into the chalice; raisins are also blessed at Rome (Hampson, "Cal. mediæ ævi," II, 174). The Greeks and Russians bless grapes and other fruit.
On 13 Jan., 1911, the northern portion of the Vicariate of the Transvaal, including the two districts of Zoutpansberg and Waterberg, lying between 24° and 23° S. lat., and between 28° and 32° E. long., was erected into a prefecture Apostolic, under the title of Prefecture Apostolic of the Northern Transvaal, and entrusted with the care of the faithful in the vicinity of Rustenburg. The Very Rev. Father Lanslots, O.S.B., was prefect Apostolic. The missionaries number at the present 6 fathers and 3 lay brothers, all of whom are natives of Belgium. Through the erection of the new prefecture Apostolic, the boundaries of the Vicariate of the Transvaal have been altered. They are at present delimited by the rivers Limpus, Long, and 27° S. lat. (north of the Orange River Colony) and 28° S. lat. (west of the same Colony).

There are at present (1911) in the Vicariate of the Transvaal: 27 priests (13 of whom are Oblates, 12 secular, 2 military chaplains); and 1 Oblate lay brother and 29 Marist Brothers, who conduct a very prosperous school for the Emperor Donostia, and a large and beautiful monastery, a refuge, a hospital, and a home for children and aged, and are under the management of various religious congregations, viz., the Sisters of the Holy Family; Sisters of Nazareth House; Dominican Sisters; Sisters of the Good Shepherd; Sisters of Mercy; Ursuline Sisters; and Sisters of Loreto, making a total number of 147 Sisters for the whites and 97 for the blacks.

At the beginning of the Christian era what is now Transylvania was inhabited by Dacians, a Thracian people. In the second half of the first century King Decebalus united the various tribes of the Dacians into a homogeneous kingdom. He maintained his independence in successful battles against the Romans and the Huns. At the death of the Emperor Aurelian the country was divided between the Emperors Constantine and Julian.

In 583 the Magyars, who were then called 'Erdély' (Erdely) by the Latin authors, entered Transylvania, and by their constant migrations kept the Hungarians out of this region.

By the treaty of Trianon in 1920, Transylvania was ceded to Hungary, with the exception of the district of Kolozsvar, which remains a part of Rumania.
German character, for Saxons had settled also in
Buzău. The manufacturing German towns that sprang up in the district became centres of a
flourishing civilization and the main prop of the
Hungarian authority. The Magyars in Transylvania
were ruled by a voivode, while the Germans formed
a separate nation who were governed by the Count
of Saxony. A third nation, the Szeklers in Sük-
land, apparently a branch of the Magyars, had a go-
governing of their own. The Wallachians or
Rumanians \(\text{[Btaci),}\) who had settled in various parts
of the country, were not on a political equality with
the others: they appear chiefly as tenants of the
great Hungarian landowners.

As one of the frontier bulwarks of Hungary,
Transylvania was often obliged to defend itself
against incursions of these tribes. Thus it
had to contend against the Kumanis and Tatars who
traversed, in the sixteenth century, almost the whole
of eastern Europe, plundering and burning as they
went, and who in the years 1540–42 devastated
the whole of Transylvania. The country also, for
more than a century, resisted successfully the attacks
of the Turks, who, from the sixteenth century, usually
forced their way into Transylvania along the rivers
danube and Maros. The numerous fortified castles
of the country, the fortified churches, and the church
strongholds, that are a peculiar feature of Transyl-
vania, belong chiefly to this period of the incursions
of the Tatars and Turks. The devastation wrought
by the Tatars, and that of the sixteenth century, actually
led to a revolt of the peasants and a union of the
three nations. This union was formed in 1437 for
the common protection and defence of the country,
utterly neglected by the Hungarian government.
Even at this early date the alliance led to the growth
of the idea of separation from the mother-country.
This took place in the sixteenth century, and was
due chiefly to the successful attempts of the Turks. In 1526
the Hungarian King Louis II, a member of the Jagel-
lon dynasty, was killed in the battle against the Turks at Mohács.
A part of the Hungarian nobility
elected the Aethude Ferdinand I, brother of the
Emperor Charles V, as King of Hungary, on account
of a treaty of succession made by Waldislaus, father
of the Turks, who ruled the sixteenth century, and
who had a great number of his subjects in
Zápolya, Count of Zips. During the struggle be-
tween these two parties the Turks conquered almost
the whole of Hungary, with the exception of the
northern and extreme western sections. Transyl-
vania now separated from Hungary, at this time under
the rule of the Habsburgs, and John Zápolya made it
an independent principality, although under Turkish
suzerainty.

The separation from the rest of the empire of
the Habsburgs was greatly aided by religious discord.
On account of the active intercourse between the
Holy Roman Empire and the Germans, in particular,
of Transylvania, the writings of Luther and the other
Reformers were circulated in Transylvania as early as
1521, and spread rapidly among the nobility and the
clerics, and the latter, whose teaching was also
particularly among the nobility, who meant to seize the lands
belonging to the Church. Zápolya’s revolt against
Ferdinand, the secularizing in 1556 of the Diocese
of Weissenburg by the nobles, and the lack of priests,
all were of advantage to Protestantism. In 1544 the
whole Saxon nation decided to adopt the Augsb
Confession, which in 1557 was founded on a pact
with the Catholic Church. From the year 1554 the
. teachings of Calvin also gained ground in Transyl-
vania, and in 1561 Calvinism received full recogni-
tion and was placed on a parity with the two other
denominations. During the reign of John Sigismund,
son of John Zápolya, the doctrines of Socinus also
spread in Transylvania, and the adherents of these
teachings, the Unitarians, were granted the free
exercise of their religion in 1571. In addition, there
were also Anabaptists and other sects in the country.
Consequently the Catholic Faith declined more and
more, its members became the minority of the popula-
tion, and were robbed of nearly all their Church
lands. The exercise of the Catholic worship was
forbidden in a large part of the land, and the
diocese was only nominally filled for over a century and a
half. In 1579 Prince Christophor Bithóthy called in
the Jesuits for the protection of the Catholic Faith,
but they were driven away in 1588, and all their
later attempts to return were frustrated by force.
The period of the Turkish suzerainty over Transyl-
vania lasted for a century and a half. During this
era the country was nominally a constitutionally
ruled principality, for the prince had the adminis-
tration of all civil and religious matters in his
personal capacity, and the people were not legally
the nobility governed, as they had the right to
the free election of a successor after the death of
the ruling prince. Yet this right was often illusory
on account of the pressure exercised by the Turks.
A number of the princes of this era gained reputation
by the part they took in European affairs. Among
these were: John Sigismund (1547–71; Duke of Saxony),
Stephen Bithóthy (1571–77), afterwards King
of Poland; Sigmond Bithóthy (1581–1602), Bethlen
Gabor (1625–29), the two rulers named George
Rákóczy (1630–61), who were allies of France in the
Thirty Years War, and Michael I Ápáy (1662–90).
The feeling constantly grew in Transylvania that
the supremacy of the Turks, who repeatedly carried
on the internal and external wars of the country,
and the loss of its independence, was dishonourable.
This and the influence of a strong party in
favour of the Habsburgs, which had always existed
in the country, led several times to the union
of Transylvania with the Austrian monarchy, as in the
years 1551–56, and 1598–1602. The final connexion
with Austria was brought about by the successful
campaign of the Habsburgs under Leopold I against
the Turks in 1683, and the reconquest of Hungary
by Austria in 1684–85. Transylvania was separated from Turkey and the oath of loyalty to
Leopold I as King of Hungary was confirmed by
several treaties between the emperor and the Transyl-
vanian estates, the most important of which was the
Leopoldine Diploma of 1691. This diploma
recognized all the rights of the three
political nations of Transylvania and confirmed the
former liberties of the four confessions recognized
in Transylvania. In 1697 Prince Michael II Ápáy
renounced all his rights for a pension and the title of
a prince of the empire, while the Porte withdrew all
claims to Transylvania in the Peace of Karlowitz
(1699). In this way done. In 1715 Maria Theresa
won for the Hungarian Crown and the Habsburg
dynasty. The Hungarian revolt under Francis II
Rákóczy threatened the loss of Transylvania again,
as his adherents proclaimed him ruler of the prin-
cipality (1704), but after a few years the revolt was
suppressed.

Under the rule of Austria the country was made a
separate crown land. The ruler of Austria who was
Prince of Transylvania did not reside in the country,
consequently, the Transylvanian Royal Chancellery
\([\text{Exzella Cancellaria regis Transsylvaniae Aulicae}]\)
was formed at Vienna as the chief authority for the exer-
cise of the princely rights. Its head was a chancel-
lor and the orders of the chancellery were imperative
upwards, the royal command being treasur-
ored to the public service. The chancellery,
which had been established at
Hermannstadt in 1713, and which was moved to
Klausenburg in 1790. This board directed the
administration of the country, supervised the churches
and schools, and formed the supreme court. Laws
were issued by the ruler in conjunction with a Diet
consisting of entire persons of the country.

In 1745 Maria Theresa raised the principality to the rank of a grand prin-
cipality, by which nothing, in reality, was changed.
In 1715 the Catholic Diocese of Transylvania was re-established with its see at Karlsruhe. Thus for a century and a half Transylvania formed a distinct crown land of the Austrian monarchy, and was independent of Hungary. This arrangement was fundamentally changed by the Hungarian Revolution of 1848-49. As early as the decade 1830-40, the desire for the union of Transylvania with Hungary was constantly and increasingly expressed in Hungary. These efforts failed, however, on account of the opposition of the Saxons, who fought energetically for political independence from Hungary and numerical self-administration. Nevertheless, despite the opposition of the Saxons, the union with revolutionary Hungary was proclaimed in the Transylvania Diet on 30 May, 1848, and thus Transylvania became involved in the defection from the Habsburg dynasty. After the suppression of the revolt with the aid of Russia the supremacy of the Austrian Crown was absolute in Transylvania, as in Hungary, during the years 1849-60, after which the country received the right of self-administration of the crown and the house of Transylvania was formally re-established at Vienna. By the treaty of adjustment between Austria and Hungary in 1867 the Magyar efforts for the control of Transylvania met with complete success. Its independence as a crown province was annulled and it was united with Hungary. The Transylvanian chancellor at Vienna and the supreme court at Karlsruhe were abolished, the Transylvania Diet was dissolved, the municipal independence of the Saxons was destroyed, and in 1876 the country was divided into fifteen counties. Since then Transylvania has been nothing more than a Hungarian province and the non-Hungarian part of the population, the Germans and Rumanians, are at the mercy of an arbitrary Magyarization by the Hungarian government.

The area of Transylvania is 21,578 sq. m.; in 1900 its population was 2,476,998. Of this number, as regards religion, 32.9 per cent were Catholics of the Latin Rite; 20.2 per cent Uniates of the Greek and Armenian Rites; 30.3 per cent Orthodox Greeks; 11.7 per cent members of the Reformed Church; 9 per cent Lutherans; 26 per cent Unitarians; 2.1 per cent Jews. According to nationalities, 32.9 per cent were Magyars; 9.5 per cent, German; 56.5 per cent, Rumanians; 11 per cent, Serbs; the remainder were mainly Gypsies or Armenians. There exists for the Catholics of the Latin Rite the Diocese of Transylvania with its see at Karlsruhe. Since 1887 the bishop has been Gustav Karl, Count Maj-1th von Szekely, a member of the Hungarian House of Lords. The cathedral chapter consists of ten members, of whom 3 are appointed by the king, and 7 by the bishop. In 1912 the diocese contained: 16 archdeaconries, 229 parishes, 308 secular priests, 226 regular priests, 354,115 Catholics, 2 houses of Minorites with 29 members; 24 houses of Franciscans with 153 members; 1 of the Parishes with 44 members; 1 of Mechatist monks with 2 members; 9 of Franciscan nuns with 187 sisters, 3 of Sisters of Mercy with 56 sisters; 1 of Ursuline nuns with 37 sisters. There are 229 parish churches and 2,200 dependent churches. The Unitarian Catholics have the Archdiocese of Alba Julia Fogaras and its sufragans the Dioceses of Kosice and Hermannstadt. The Orthodox Greeks are under the direction of the Oriental Greek Rumanian Archdiocese at Hermannstadt. The Reformed, or Protestants of the Helvetic Confession, are under the bishop at Klausenburg; the Lutherans are under the bishop at Hermannstadt; the Unitarians have a representative consistory at Klausenburg.

JOSEPH LINS.

Transylvania (or Erdely), Diocese of (Transylvaniensis), in Hungary, suffragan of Kalocsa-Békéscsaba. The foundation of the see is attributed to King St. Stephen, but it was probably established by King St. Ladislaus, patron of Transylvania, Simon, (1103-13) was the first bishop. The first episcopal palace is at Gyula-Fehérvár (Alba Julia) in Alba-Chek. The original limits of the diocese varied somewhat from the present boundaries, as they included the County of Máramaros, while the provostship of Szeben was exempt and some parts of the Székler country were subject to the Bishop of Miskolc in Hungary. The bishopric received its diocesan title of Bela IV, Charles Robert, Louis I., and Sigismunt. The diocese suffered greatly during the reign of Bela IV from the Tatar invasion, and during the civil disturbances under his successors, but re-
covered very quickly in the fourteenth century. The see was again impropelled by the advance of the Turks, but its decay did not set in until the sixteenth century, and was caused by the progress of Lutheranism, in consequence of which the exempt provostship of Szeben ceased to exist, and by internal disturbances in Transylvania. It flourished again under Cardinal Martiniuzi, but after his assassination in 1531 it decayed rapidly. The advent of Protestantism led, in 1556, to the secularization of the see, which was, however, re-established by Prince Stephen Bathory. After the coming of the Jesuits the Catholic Faith flourished again, but only while the house of Bathory continued to rule. Bishop Demetrias Napoleon was forced to leave the see, and in 1601 the cathedral of Gyula-Fehérvár, which had been founded in the thirteenth century, was taken and held by the Protestants until the eighteenth century, the Catholics not regaining possession of it until the reign of Charles 11.

When the Principality of Transylvania lost its independence, the decrees against the Catholic Church were withdrawn, but the bishopric and chapter were not re-established until 1715. The succession to the see had been kept regularly till 1713, but the bishops resided abroad. The exempt provostship of Szeben was incorporated in the bishopric, which was completely restored under Maria Theresa in 1771. Of the bishops, who filled the see after 1713, the following may be mentioned: Ignatius Count Batthyány (1750-98), who founded the library at Gyula-Fehérvár, after him: Alexander Badman (1816-19), later Archbishop of Gran; Louis Haynald (1852-64), afterwards Archbishop of Kalocsa. Count Gustavus Majflith has occupied the episcopal see since 1897. The diocese contains: 16 archdeaconries; 10 titular abbeys; 2 titular provostships; 229 parishes; 398 secular priests; 226 regular clergy; 30 monasteries of men and 17 convents of nuns; the Catholics number 354,145. There are 103 parishes. The chapter consists of 10 active members and of 6 titular canons. Catholics are to a certain extent autonomous, i.e. certain church and school matters are managed by mixed boards, partly clerical, partly lay. This autonomy dates back to the time of the Reformation; it ceased in 1767 with the establishment of the Catholic cathedral by Maria Theresa, and was re-established as late as 1873. The control is exercised by the general assembly of the Catholic estates and a managing committee.

Trapani. Diocese of (Triapenensis), in Sicily, suffragan of Palermo. The city is the capital of a Sicilian province situated on a tongue of land at the most western part of the island, shaped like a reaping-hook, hence the ancient name Drepam (reaping-hook). It has a good harbour with exports of wine, oil, fruits, fish (especially tunny-fish), salt, and ornaments of coral, alabaster, and mother-of-pearl, which are extensively manufactured. The cathedral, exteriorly resembling a fortress, contains paintings by Careca and Vandyke (Crucifixion), and a statue of the Dead Christ in another altar by Tartaglia. Other churches are: San Michele, with a carved statue and the sanctuary of the Annunziata outside the city, with a colossal statue of the Madonna, attributed to Nicolò Pisanio. In the Jesuit church, called “Nazionale”, are precious pictures by Morrealese, Spagnoletto, and Marabiti. The ancient college, now a lyceum, contains the Far-dellona Gallery, with valuable paintings by Reni, Luca Giordano, Caravaggio, Salvador Rosa, Guercino, etc. Trapani is the birthplace of Carrera and Errante the painters, Ximenes the mathematician.

Scarlatti the musician, and the Carmelite St. Alberto degli Abbati. Excavations have proved that the shore about Trapani was inhabited during the Stone Age. Drepam must have been founded by the Greeks, but fell under the sway of the Carthaginians. Hannibal fortified the port against the Romans, who in 250 suffered a severe defeat near by, at the hands of the Adherbal. In the vicinity is Mons Eryx (now San Giuliano), with a magnificent temple of Venus and many votive offerings. Under the Romans the temple fell into decay, but was restored by Theodorus, Trapani was sacked by the Moors in 1077. In 1282, Peter of Aragon landed there to begin the capture of the island. In 1314 it was besieged by Robert, King of Naples. Charles V fortified it. The city boasts of having received the Gospel from St. Paul; it is not known to have had any bishop before the

THE CATHEDRAL. MONTE S. GIULIANO. XII Century

Arab conquest of Sicily; certainly it was subject to the See of Mazara from the Norman Conquest till 1141. Its first bishop was the Redemptorist Vincenzo M. Marolda.

Trapezopolis, a titular see in Phrygia Paratiana, suffragan to Laodicea. Trapezopolis was a town of
The Abbey of La Trappe
From a print published in 1795

not be said that there is an Order of Trappists; though if one were to speak of Trappist monks, he would be understood to refer to monks of the Order of Reformed Cistercians, as distinguished from the Order of Cistercians of the Common Observance (see Cistercians and La Trappe). The primitive authorities of the Cistercians had fallen into desuetude in practically the entire order principally through the introduction of commendatory abbeys, political disturbances, and human inconstancy; and though many and very praiseworthy attempts at their restoration had been made in France, Spain, Germany, Italy, Portugal, etc., yet these were but local, or at most, national in extent. That of de Rancé, however, was destined by Divine Providence to be more enduring and of wider scope than any other. Although the Abbey of La Trappe flourished exceedingly, even after the death of its venerated reformer, as evidenced by more than 300 professions between the years 1714 and 1790, yet the spirit of materialism and sensualism rampant in the seventeenth and eighteenth centuries, did not permit the rapid extension of the reform outside its walls; it did not even allow the entire severity of ancient Citeaux to be introduced at La Trappe, though this reform was the most thorough and perfect of the many attempts that had then been made. Consequently it founded but a small number of monasteries; these were: Buon-Seluzzo, near Florence (1705), and St. Victor at Rome (1700); Casamari in the Papal States, was obliged to adopt the Constitutions of de Rancé (1717), but for nearly a century there was no further expansion. It was from the time of these earliest foundations that they who embraced de Rancé’s reform were called Trappists. Too much credit cannot be given to these noble bands of monks, who by their lives demonstrated to a corrupt world that man could have a higher ambition than the gratification of the more natural instincts of this ephemeral life.

At the time of the Revolution, when the monastery of La Trappe, in common with all others, was ordered to be confiscated by the Government, the people of the neighbourhood petitioned that an exception be made in their favour, and the Trappists themselves, gratified by an act of public piety, addressed a deputation to the National Assembly and the king considered the matter for nearly a year, but finally decided that they should be despoiled like the others. Dom Augustine de Lestrangé (b. 1751; d. 1827, see LESTRANGE), vicar-general of the Archdiocese of Vienna, had entered La Trappe (1750) in order to escape the burden of the episcopate. He it was whom God had raised up to preserve the Trappists when so direly threatened with extinction; he resolved, therefore, to extricate himself for the welfare of his order. Having been elected superior of those who were of the same mind, and with the permission of his higher superiors, he left La Trappe 26 April, 1791, with twenty-four religious, and established a monastery at Val-Sainte, created a new congregation of Trappists, and had the monks of the Cistercian Order thus much to suffer besides the rigour of their rule, for their monastery (which had formerly belonged to the Carthusians) was an unroofed ruin; they were in want of the very necessities of life, not even having the meagre requirements they were accustomed to.

In France the Revolution was taking its course. On 10 June 1792, the commissioners of the Government arrived at La Trappe, took the sacred vessels and vestments, as well as everything movable, and obliged the eighty-nine religious yet remaining to abandon their abbey and find a home as best they could; some in other monasteries, and others in charitable families of the neighbourhood. At Val-Sainte, whilst celebrating the feast of St. Stephen, the religious resolved to put into practice the exact and literal observance of the Rule of St. Benedict, and three days afterwards, 19 July, they began the new reform: establishing the order of exercises prescribed by the holy patriarch, as well as all the primitive fasts, together with the first usages of Citeaux; even making their rule still more severe in many points. They entered upon their new life; having filled the church and promised the recitation of the Divine Office and prayer for the nation and the king; they chose a new superior, who was the first to be invested with the title of Prior. This new order of religious was consecrated by the archbishop of Sens on 21 July, 1794, Pius VI encouraged these religious by a special Brief, and authorized the erection of Val-Sainte into an abbey and mother-house of the Congregation of Trappists. Dom Augustine was elected abbot, 27 Nov. of this year, and given supreme authority over the abbey and congregation. This state of quiet and prosperity lasted but six years. When the French invaded Switzerland (1793) they destroyed the possessions in that country; the monasteries of La Trappe and Aiguebelette in the pocket of Dom Augustine, who divided the community of Val-Sainte between them. Other monasteries were re-established from time to time, as the number of religious increased and as they were able to purchase the buildings.

From 1813 N.-D. de l’Éternité, near Darfelde, West-
The first part regards the government of the order; the supreme power residing in the general chapter, which is composed of all the abbots (actually in office), titular prior or superiors of houses, and meets each year under the presidency of the abbot-general, who is elected by themselves for life. During the term of the general chapter is not in session the order is directed, in urgent cases, by the abbot-general with the assistance of a council composed of five definitors, also elected by the general chapter, but for a term of five years. The abbot-general is titular Abbot of Citeaux, and must reside at Rome. The order is not divided

The Abbey of La Trappe
From a photograph

into provinces, nor is there an officer similar to a provincial. Each monastery is autonomous and maintains its own novitiates; its abbot or titular prior appointing all local subordinate superiors, and having full administration in both spiritual and temporal affairs. Nevertheless each monastery has the duty of visiting all the houses it has founded, either once each year, or once every two years, according to distance, and then rendering a report of its material and spiritual well-being to the next subsequent general chapter. The abbot of such a monastery is called the father-immediate, and the houses thus subject are termed "daughter-houses" or filiations. It is especially prescribed that all houses be dedicated to the Blessed Virgin.

The second part is concerned with monastic observances; which must be uniform in all the monasteries of the order. The Divine Office must be sung or recited in choir according to the directions of the breviary, Missal, Roman Pontifical, and Rubrics, no matter how few may be the number of religious in a particular house; the canonical Office is always preceded (except at Compline, when it is followed) by the Office of the Blessed Virgin; and on all feasts throughout the year Vespers and Lauds are followed by the Office of the Dead. Mass and the day Offices are always sung with the Gregorian Chant; Matins and Lauds also are sung on Sundays and the more solemn feasts. Mental prayer, one-half hour in the morning, and fifteen minutes in the evening, is of obligation, but of counsel much more frequently. Confession must be made once each week, and daily Holy Communion is strongly commended. Out of the time of Divine Office, before which nothing is to be said, and after which the monks are not engaged in manual labor, the monks devote themselves to prayer, study, or pious reading, for there is never any time granted for recreation; these exercises always take place in common, never in private rooms. The hour for rising is 2 a.m. on weekdays, 1:30 on Sundays, and 1 on the more solemn feasts, whilst the hour for retiring is at 7 p.m. in winter, and 8 in summer; in this latter season the monks have a sesse given after dinner, so that the religious have seven hours' sleep in the course of the day; about seven hours also are devoted to the Divine Office and Mass, one hour to meals, four hours to study and
private prayers and five hours to manual labour; in winter there are only about four hours devoted to manual labour, the extra hours thus deducted being given to study.

The monks are obliged to live by the labour of their hands, so the task appointed for manual labour is seriously undertaken, and is of such a nature as to render them self-supporting, such as cultivation of the land, cattle-rising, etc. Dinner is partaken of at 11 a.m. in winter, at 11 a.m. and at 12 a.m. on fast days, with supper or collation in the evening. Food consists of bread, vegetables, and fruits; milk and cheese may also be given except in Advent, Lent, and all Fridays out of Paschal time. Flesh-meat, fish, and eggs are forbidden at all times, except to the sick. All sleep is in a common dormitory, the beds being divided by each one, with a pillow and curtain; the bed to consist of mattress and pillow stuffed with straw, and sufficient covering. The monks are obliged to sleep in their regular clothing; which consists of ordinary underwear, a habit of white, and a scapular of black wool, with a leathern cinature; the cowl, of the same material as the habit, is worn over all. Enclosures, according to canons, is expressly forbidden, since never allowed for the religious to speak amongst themselves, though the one in charge of a work or employment may give necessary directions; and all have the right of conversing with the superiors at any time, except during the night hours, called the 'great silence'.

*Studia*. Before ordination to the priesthood (and all religious orders) destined for the Holy See, the monk must pass a satisfactory examination before the abbot, in the curriculum prescribed by the order and the Decrees of the Holy See; and afterwards all are obliged to participate in conferences on theology and Sacred Scriptures at least once each month. Students preparing for ordination are granted extra time, during the time spent there, and the presence of their study. The third part deals with the reception of subjects. The greatest care is insisted on to see that the postulants are of good character, honest birth, and without encumbrances of any kind; also that they have pursued the course of studies prescribed by the Holy See; they must have attained at least their fifteenth year. The novitiate is of two years' duration, during which time the candidate is familiarized with the religious life, but he can leave, or the superior may send him away, if he is unable or unwilling to conform to the spirit of his vocation. The time of probation completed, the subject is voted for, and if accepted, makes simple, but perpetual vows; these are followed by solemn vows at the end of three, or in special cases, five years. A third vow, that of chastity, is afterward made. These must be at least seventeen years of age when received; they are then postulants for two years, novices for two more, after which they may be admitted to simple, though perpetual, vows, then after six years more they may make solemn vows. They do not recite the Divine Office, but have special prayers appointed for them, and may form their own prayers for the recitation of the Divine Office. They are not obliged to follow special studies, but are engaged in manual labour for a somewhat longer time than the choir religious; their habit is nearly the same as that of those in the choir, but brown in colour. They are religious in the full sense of the word, and participate in all the graces and privileges of the order, except that they have neither the power nor the voice in the management of the affairs of the order.

It may be well to here deny a few customs that have been attributed, by ignorance, to the order. The monks do not salute one another by the "memori mori," nor do they dig a part of their grave each day; in meeting each other they salute by an inclination of the head, and graves are dug only after a brother is ready to be placed in it. (For statistics see *Cistercians*.)

**Trasilla and Emilianda.** Saints, aunts of St. Gregory the Great, Virgins in the sixth century, given in the Roman Martyrology, the former on 24 Dec., the latter on 5 Jan. St. Gregory ("Hom.", XXXVIII, 15, on the Gospel of St. Matthew, and "Lab. Dial."). IV, 16 relates that his father, the Senator Gordan, had three sisters who vowed themselves to God and led a life of virginity, fasting, and prayer in their own house at the time of San Romon. They were Trasilla (Tarsilla, Tharsilla, Thrasilla), Emilianda, and Gordiana. Gordiana, led on at first by the words and example of her sisters, did not persevere but returned to the vanities of the world. After many years in the service of God, St. Felix III, an ancestor, appeared to Trasilla and bade her enter her abode of glory. On the eve of Christmas she died, seeing Jesus beckoning. A few days later she appeared to Emilianda, who had followed well in her footsteps, and invited her to the celebration of Epiphany in heaven. Tradition says that their relics and those of their mother, St. Silvia, are in the Oratory of St. Andrew on the Celian Hill.

**Treason.** Accusations of a false representation concerning the Elizabethan persecution of English and Irish Catholics from 1570 onwards is the statement that the victims devoted to imprisonment, torture, and death suffered not for their religious belief but for treason against the queen and her government. This view, officially promulgated by Elizabeth's lord high treasurer, William Cecil, Lord Burghley, in 1583, was constantly reiterated by the Catholics in the course of their controversial works, and has thence made its way into popular manuals of history. At the present day it frequently reappears as one of the stock accusations brought against the Church by Anglican controversialists of various types. The simple fact that in very many instances those condemned to death ostensibly for treason, if they would attend Anglican worship, showed conclusively that the martyrs did in fact suffer for religion; but at this epoch religion and politics were so inextricably confused that this explanation, though valid in the case of individual martyrs, does not suffice to meet the general accusation. As a recent Anglican historian writes, "The vexed question of the Catholics who fled for their faith implies an antithesis which had little meaning in that age of mingled politics and religion" (A. F. Pollard, "Political History of England", VI, 377). Everything centres round the excommunication of Elizabeth by St. Pius V, 25 February, 1570. This act created a situation full of perplexity for English Catholics. It only undermined the northern ears in 1569, for when they rose they had reason to believe that the excommunication had already taken place. Harassed as they...
were, the Catholics would take no steps in defence of their rights till the pope declared that Elizabeth's misgovernment had so infringed the spiritual liberty of her subjects as to absolve them from their allegiance. Once this declaration was made a number of Catholic pamphleteers, under the influence of Mendoza and others who under the influence of Mendoza and others were implicated in plots against Elizabeth which were undoubtedly treasonable from the Government's point of view. But they might well have urged that in so assailing the royal power they were doing no more against Elizabeth than Bellingbroke had done against Henry VI; and it may be that Henry IV nor Henry VII are usually branded as "traitors".

The subsequent cases of Pym and Hampden, not to mention the successful revolutionary parties of 1648, show that success or failure is often made the real test between treason and rebellion. That a certain party of English Catholics contended for the establishment of their religion, and by their rebellion against the Government refused to act in compliance with the wishes of the people, was not disputed, but justified rebellion ceases to be treason and may be the noblest patriotism. Thus Allen with many of the exiles of Douai and Louvain, and Persons with many of the Jesuits, saw in the rule of Elizabeth a greater danger to the highest interests of England than had previously been threatened in cases where history had justified the measure of the Government that had sanctioned this view. Moreover, such exercise of papal prerogative was one of the recognized principles of the Middle Ages—throughout which it had served to protect the rights of the people. This became evident later, when, after the decline of papal power, the autocratic power of the European sovereigns greatly increased and always at the expense of the people. Nevertheless, it remains true that in the eyes of Elizabeth and her ministers such opposition was nothing less than high treason. But a large number of English Catholics refused to go so far as rebellion. The historian already quoted admits that the opposition which relied on a cowardly treasonable method was "traitors who aimed at nothing" (Hanst). Elizabeth he says of the rank and file of English Catholics: "They tried to ignore their painful dilemma between two forms of allegiance, for both of which they had deep respect" (p. 370). As Lingard writes: "among the English Catholics (the bull) served only to breed doubts, dissensions, and dismay. Many contended that it had been issued by an interested and worldly pontiff, which would tend to alienate the natives till it should be carried into actual execution—some foreign power; all agreed that it was in their regard an imputation and cruel expedient, which rendered them liable to the suspicion of disloyalty, and afforded their enemies a pretence to brand them with the name of traitors" (Ibid., 225).

The terrible strain of this dilemma was relieved by the next pope, Gregory XIII, who, on 14 April, 1589, issued a declaration that though Elizabeth and her abettors remained subject to the excommunication, it was not to bind Catholics to their detriment. The large majority of English Catholics who contended for religious rights and who engaged in rebellions for that reason never gave the Government the least ground for suspecting their loyalty; but they persisted in the practice of their religion, which was made possible only by the coming of the seminary priests. With regard to these priests, who entered England at the risk of their lives to preserve the Catholic religion and to give facilities for Mass and the sacraments, there could be no presumption of treason by the ancient laws of England. But in the panic which followed the Northern Rising, Parliament had passed a statute (13 Eliz. c. 2) declaring it to be high treason to put into effect any papal Bull of absolution, to absolve or reconcile any person to the Catholic Church, to be absolved or reconciled, or to procure or publish any papal Bull or writing whatsoever. Thus for the first time purely religious acts were declared by Parliament to be treasonable, a position which no Catholic could admit. It is clear that persons who were so actuated as to bring the people into open rebellion were guilty of treason and not for treason. Elizabeth's Government, however, for its own purposes refused to make any distinction between Catholics who had been engaged in open opposition to the queen and those who were forced by conscience to ignore the provisions of this statute of 1571. These two classes, really distinct, were purposely treated alike, as they had been treated as one for controversial purposes. For when the reports of so many bloody executions for religion began to horrify Europe, the queen's ministers adopted the defence that their severity was not exercised against Catholics as such, but as traitors guilty of treason against their sovereign.

This view was put forward seriously in a pamphlet by Lord Burghley, which was not only published in English but translated into Latin and other languages for foreign circulation. The very title of this work indicates its scope: "The Execution of Justice in England for maintenance of public and Christian peace, against certain disturbers of sedition and adherents to the treasonable and seditious practices of the Catholics of England. A declaration of the false persecution of them for questions of religion, as is falsely reported, and published by the traitors and fosterers of their treasons." This pamphlet, which was issued on 17 December, 1583, may briefly be summarized. Attention is first drawn to late rebellions in England and Ireland which had been suppressed by the queen's power. Whereupon some of the defeated rebels fled into foreign countries and there alleged that they were suffering for religion. Great stress is laid upon the Bull of excommunication; and all Catholics living abroad are represented as engaged in seditious practices with a view to carrying the Bull into effect. The seminaries are exhibited merely as foundations established to assist in this disloyal view. The pamphlet proceeds to declare that some of these "sowers of sedition" have been taken, convicted, and executed "not being dealt withal upon questions of religion, but justly condemned as traitors." They were so condemned "by the ancient laws of the realm made 200 years past". Moreover, if they retracted their treasonable opinions their lives were spared. As "the foreign traitors continue sending of persons to move sedition in the realm" who click their real object of enforcing the Bull under the pretext of religion and who "labour to bring the realm into a war external and domestic", it becomes the duty of the queen and her ministers to repeal the Act of 1583 and bring in another high treasonable statute. And inasmuch as before the excommunication no one had been charged with capital crimes on the ground of religion, and brings everything back to the question of the Bull. "And if then it be inquired for what cause these others have of late suffered death it is truly to be answered as afore is often remembered that none at all are impeached for treason to the danger of their life but such as do obstinately maintain the contents of the Pope's Bull aforesaid, which do import that her Majesty is not the lawful Queen of England, the first and highest point of treason, and that all her subjects are discharged of their oaths and obedience, another high point of treason, and all warranted
to disobey her and her laws, a third and very large point of treason.”

A fourth point is taken from the refusal of the Catholics to disavow the pope’s proceedings in Ireland. After many other points—some of an historical nature—refusal to abandon foreign princes—the writer anticipates the objection that many sufferings had been imputed to simple priests and unarmed scholars. He says: “Many are traitors though they have no armour nor weapon.” Such people are like spies, “necessary accessories and adherents proper to further and continue all rebellions and wars. . . .” The very causes final of these rebellions and wars have been to depose her Majesty from her crown, and to end causes imputed to religion. “They have not merely been occasions of conscience to be conscience without all pretence or surmise of any old treasons or statutes for the same.” He defends Campion and the other martyrs from the imputation of treason, points to the oppression of the Government and the prudent attitude of the Catholics with regard to the Bull; he explains the doctrine of the excommunication and the like. Hence the advantages of a supreme authority to decide between princes and people in causes involving questions of deprivation; defends the pope’s action in Ireland and concludes by showing “that the separation of the prince and realm from the unity of the Church and See Apostolic and fall from Catholic religion is the only cause of all the present fears and dangers to which we seemeth to stand in. And that they unjustly attribute the same to the Pope’s Holiness or Catholics and untruly call them the enemies of the Realm.”

In the following year, 1585, the Government took another step forward in their policy of drawing religious and indifferent acts into the political net. This was the statute 27 Eliz. c. 2, by which it was made high treason to publish any opinion that the pope was not to be in England, and felony for anyone to harbour or relieve them. Even so biased an historian as David Hume realized the injustice of this measure, of which he says: “In the subsequent part of the queen’s reign the law was sometimes executed by the capital punishment of priests; and though the partisans of that prince asserted that they were punished for treason, the case was not, in my opinion, so clear. The accusation must only be understood in this sense, that the law was enacted on account of the treasonable views and attempts of the sect, not that every individual who suffered the penalty of the law was convicted of treason” (Hist. of Eng., sub an. 1584). The martyrs themselves constantly protested against this accusation, and at their trial pleaded for the scaffold. In very many instances they were offered a free pardon if they would attend the Protestant church, and some priests unfortunately yielded to the temptation. But the fact of the offer being made sufficiently shows that religion, not treason, was the ground of their offence. This is notably the case with regard to Blessed Thomas Percy who had been the leader of the Northern Rising and who yet was offered his liberty on the price of conformity. There are three beatified martyrs directly connected with the excommunication, Felton, Storey, and Woodward, who for that reason stand in a class apart from the other martyrs; their cases have received special treatment by Father Pollen, S. J. (Camm’s “Lives of the English Martyrs”, II, xvi-xxi). It may not be amiss to state that so careful is the Holy See in such questions that the cause of beatification of James Laborne has been postponed for more careful consideration simply because of certain words he uttered about the queen. With regard to all the other martyrs there is no difficulty in showing that they died for their religion, and that the accusation of treason in their regard is false and unfounded.

Trebizond, Diocese of (Trapezuntaia), an Armenian Catholic diocese. The city owes its ancient name to the fact that it was built on the shores of the Black Sea in the form of a trapeze. It was a Greek colony from Sinopos, established in the eighth century, and built a colony from Trapezus, in Arcadia, as Xenophon relates, who was received here with enthusiasm during the retreat of the Ten Thousand. After having formed a part of the Kingdom of Armenia, and then of that of Pontus, it fell into the hands of the Romans, and was declared a free city by Pompey. The Emperor Hadrian adorned it and dedicated it in 125 B.C. in order to cover it with a marvellous wall, creating its artificial harbour. Under Valerian the Goths took and pillaged it; its inhabitants were slain or sent as slaves to the Cimmerian Bosporus. Justinian raised it from its ruins and thenceforth it became rich in monuments, especially churches and monasteries. In 1204 when Constantinople fell into the hands of the Franks, a prince of the Comneni, who in 1185 sought safety in Iberia, proclaimed himself Emperor of Trebizond under the name of Alexis, and founded a Greek empire, the rival of that of Nicaea. The new state comprised nearly all of the ancient Pontus Polemoniacus and stretched eastward as far as the River Phasis. It was in perpetual conflict with the Seljuk Turks and, as well as with the Greeks of Nicaea and Constantinople, the Italian republics, and especially the Genoese. During the two centuries and a half in which it succeeded in subsisting the Empire of Trebizond contributed greatly to the development of Christian civilization and Greek literature in those distant parts, until then almost unknown. It was cut off from Constantinople by a tumultuous and tumultuous battle by the troops of Mohammed II, and its last emperor, David, was exiled to the vicinity of Serre, in Macedonia. He was soon obliged to choose between embracing Islam or forfeiting his life; he kept the faith and was executed together with six of his children. The seventh fled to the Peloponnesus where he founded the Convent of Morea. From 1201 to 1462 Trebizond had had, in all, twenty emperors.

At present Trebizond is the capital of the vilayet of the same name, bounded by those of Sivas and Erzeroum, the Black Sea, and Asiatic Russia, which after the war of 1877 absorbed a part of its territory. The vilayet measures 3,148 square miles, of which 1,165 are mountainous; its area is 11,275 sq. miles. Its total population may be estimated at 900,000. The city itself has 50,000 inhabitants, among whom are 12,000 Greeks, 10,000 Armenians, some Jews, and a few hundred Catholics. The remainder are Turkish Mussulmans, Lazis, Circassians, and African. Trebizond has a citadel, at least 40 mosques, 100 Greek churches, some of which have preserved ancient paintings, several Armenian churches, etc.; it carries on an active trade with Persia, Russia, and European countries by way of the Black Sea. Close to the city are several Greek mon-
astries still inhabited, and which played a certain part in Byzantine history.

The first traces of Christianity at Trebizond are found under Diocletian when St. Eugenius, still the patron of the city, St. Causius, and their companions were martyred. Among the saints of whom mention is still made are the Bishop St. Basil, tenth century (feast, 20th October), and St. Flawian Gabas, murdered about A.D. 1208 (feast, 2 October). At first merely a suffragan of Neocaesarea in Pontus Polemoniaceus, Trebizond became the metropolitan see of Lazica when the ancient metropolis, Phasis, was lost by the Byzantine Empire. At the end of the ninth century it had seven suffragans, which number continued to increase. The emperors of Trebizond professed the theory that even their subjects were privies to the church of their diocese, the patriarch of Constantinople, with whom the church of Trebizond was in communion. In 1434, and 1617; from disastrous fires in 1413, 1431, and 1617; and from famines, 1372, 1377, 1464, 1505, 1553, and 1782. At the Reformation most of the nuns were Poles, as were the majority until the eighteenth century. The Abbey of Trebizond suffered so greatly during the Thirty Years War that the nuns fled to Poland, as they did again in 1672, when the Turks threatened the city. The last abbess, Dominica von Giller, died on 17 August, 1810, and on 11 November, 1810, the abbey was suppressed and secularized. The building, which was very extensive, was sold later and turned into a cloth factory. The monastery is now the property of the Trebizond Sisters of St. Charles Borromeo and a hospital is conducted by the sisters. The present church, a basilica with pillars in the late Romanesque style, to which Baroque additions were made, is now the parish church. The grave of St. Hedwig is in the chapel of St. Hedwig to the right of the high altar. The grave of Duke Henry I, her husband, is in front of the altar.

**TREDWAY.**

_Tredway, Lady Mary_ (called “Lady” Tredway), b. 1585; d. at Oxford, 1677; daughter of Sir Walter Tredway, of Buckley Park, Northamptonshire; her mother was Elizabeth Weyman. In July, 1616, Lady Tredway entered the novitiate of theCanonesses Regular of the Lateran of Notre-Dame-de-Béanche at Sin, near Douai (where she was probably educated), and in Oct., 1617, made her solemn profession. In 1631 she and Miles Pinkney, better known as Father Carre, a priest of the English College at Antwerp, conceived the project of opening a house for canonesses for English subjects only at Douai. The idea was approved by the authorities at home and abroad, and in 1634 it was decided to open this English convenant at Paris. Dr. Smith, Bishop of Chalcedon, then in exile in Paris, helped them so generously that he may be counted a co-founder. He blessed Lady Tredway as abbess, and the Convent of Notre-Dame-de-Béanche was permanently established in the Rue des Fosses in 1639. Father Carre and Lady Tredway were also practically the founders of the Seminary of St. Gregory for training priests for the English Mission. A pension for English ladies and a school were attached to the convenant, of which Lady Tredway held the office of abbess till 1661, when she was compelled to resign. Since her death the superiors have held the title of prioress. For forty-one years

Tregian, Anthony, professor, b. in Cornwall, 1545; d. at Liège, 25 Sept., 1600. He was son of Thomas Tregian of Wivelgen, Cornwall, and Catharine Arundell; and inherited property worth three thousand pounds a year, the whole of which was confiscated by Elizabeth because he had harboured Blessed Cuthbert Mayne (q.v.). Previously he had resided at Court in order to help the persecuted Catholics, and he is said by his biographer to have incurred the queen’s displeasure by refusing her improper advances. After suffering imprisonment at Windsor and in various London prisons for twenty-eight years, he was liberated by James I, who banished him. Having visited Donai he retired to Madrid, where the King of Spain assigned him a pension. Seventeen years after death his body was found incorrupt, and many miracles are stated to have been wrought by his intercession. He married Mary, daughter of Charles, seventh Lord Stourton, by whom he had eighteen children.

EDWIN BURTON.

Tremithus, titular see, suffragan of Salamis in Cyprus. The city is mentioned by Ptolemy (Geog. V. viii. 6), Hierocles (ed. Burchardt, 708, 7), George of Cyprus (ed. Gelzer, 1109), and other geographers. Among its bishops were: St. Spyridon, a shepherd and married, present at the Council of Nicaea in 325, and whose cult is popular in the East (Anal. bolland., XXVI, 239); St. Arcadius and St. Nestor, venerated 11 Feb. or 7 March; Theopompus, at the Second Ecumenical Council in 381; Theodore, at the Sixth Ecumenical Council in 681, and who wrote a biography of St. John Chrysostom (P. G. XLVII, 516-887); George, at the Second Council of Nicaea in 787; Spyridon in 1081, when the see was temporarily restored, and Gregory Conon was bishop here in 1191 by Richard Coeur de Lion who afterwards took possession of Cyprus. The city was then destroyed and survives only in the Greek village of Trimitrissia in the district of Chrysocho.

S. VAILHÉ.

Trent, Council of.—The nineteenth ecumenical council opened at Trent on 13 Dec., 1545, and closed there on 1 Dec., 1563. Its main object was the definitive determination of the doctrines of the Church in answer to the heresies of the Protestants; a further object was the execution of a thorough reform of the inner life of the Church by removing the numerous abuses that had developed in it.

I. CONVOCATION AND OPENING.—On 28 Nov., 1548, Luther had appealed from the pope to a general council because he was convinced that he would be condemned at Rome for his heretical doctrines. The Diet held at Nuremberg in 1523 demanded a "free Christian council" to be convoked by German princes; and at the Diet held in the same city in 1524 a demand was made for a German national council to regulate temporarily the questions in dispute, and for a general council to settle definitely the accusations against Rome, and the religious disputes. Owing to the feeling prevalent in Germany the demand was very dangerous. Rome positively rejected the German national council, but did not absolutely object to holding a general council. Emperor Charles V forbade the national council, but notified Clement VII through his ambassadors that he considered the calling of a general council expedient and proposed the city of Trent as the place of assembly. In the years directly succeeding this, the unfortunate dispute between emperor and pope prevented any further negotiations concerning a council. Nothing was done until 1529 when the papal ambassador, Pio della Mirandola, declared at the Diet of Speyer that the pope and the emperor both wished in the struggle against the Turks, to urge the restoration of peace among Christian rulers, and to convene a general council to meet the following summer. Charles and Clement VII met at Bologna in 1530, and the pope agreed to call a council, if necessary. The cardinal legate, Lorenzo Campeggio, opposed a council in the absence of the Church. He proposed an Italian city, preferably Rome, as the place of assembly. The emperor, however, distrusted the pope, believing that Clement did not really desire a council. Meanwhile, the Protestant princes did not agree to abandon their doctrines. Clement constantly raised difficulties in regard to a council, although Charles, in many letters, most of them written after the Diet of Speyer, repeatedly urged him to the calling of one as the sole means of composing the religious disputes. Meanwhile the Protestant princes refused to withdraw from the position they had taken up. Francis I of France, sought to frustrate the convoking of the council with his consent, provided the Protestants were willing to restore earlier conditions until the decision of the council. Charles’s proposition met the approval of the Catholic princes who, however, wished the assembly to meet in the emperor’s city. The emperor again proposed Rome; the pope at the synod of Bologna on 28 Nov., 1531, it had been unanimously agreed in a consistory that a council should be called. At Bologna in 1532, the emperor and the pope discussed the question of a council again and decided that it should meet as soon as the approval of all Christian princes had been obtained for the plan. Suitable Briefs addressed to the rulers were drawn up and commissioned to go to Germany, France, and England. The answer of the French king was unsatisfactory. Both he and Henry VIII of England avoided a definitive reply, and the German Protestant rejections of the conditions proposed by the pope.

The next pope, Paul III (1534-49), as Cardinal Alessandro Farnese, strongly favoured the convening of a council, and had, during the concile, urged the calling of one. When, after his election, he first met the cardinals, 17 October, 1534, he spoke of the necessity of a general council, and
repeated this opinion at the first consistory (13 November). He summoned distinguished prelates to Rome to discuss the matter with them. Representatives of Charles V and Ferdinand I also labourd to hasten the council. The majority of the cardinals, however, opposed the immediate calling of a council, and it was resolved to notify the princes of the papal decision to hold another assembly. Numbers were too divided for this purpose to France, Spain, and the German king. Ferdinand, Vergerio, nuncio to Ferdinand, was also to apprise the German electors and the most distinguished of the remaining ruling princes personally of the impending proclamation of the council. He executed his commission with zeal, although he frequently met with resistance and delay. The question of the place of meeting was a source of much difficulty, as Rome insisted that the council should meet in an Italian city. The Protestant rulers, meeting at Smalkald in December, 1535, rejected the proposed council. In this they were supported by Kings Henry VIII and Francis I. At the same time the latter sent assurances to the emperor that he considered the council as serviceable for the extermination of heresy, carrying on, as regards the holding of a council, the double intrigue he always pursued in reference to German Protestantism. The visit of Charles V to Rome in 1536 led to a complete agreement between him and the pope concerning the council. On 2 June, Paul III had announced his decision, and bishops, and abbots to assemble at Mantua on 23 May, 1537, for a general council. Cardinal legates were sent with an invitation to the council to the emperor, the King of the Romans, the King of France, while a number of other nuncios carried the invitation to the other Christian countries. The Netherlands, however, insisted on a papal bull to persuade the German ruling princes to take part. The Protestant rulers received the ambassador most ungraciously; at Smalkald they refused the invitation curtly, although in 1530 they had demanded a council. Francis I took advantage of the war that had broken out between himself and Charles in 1536 to declare the journey of the French bishops to the college of cardinals. Morone worked in Germany as legate for the council, and the pope agreed to hold it at Trent. After further consultations at Rome, Paul III convoked on 22 May, 1542, an ecclesiastical council to meet at Trent on 1 Nov. of the same year. The Protestants made violent attacks on the council, and Francis I opposed it energetically, not even venturing to mention the Bull of convocation to be published in his kingdom.

The German Catholic princes and King Sigismund of Poland consented to the convocation. Charles V, enraged at the neutral position of the pope in the war that was threatening between himself and Francis I, as well as with the wording of the Bull, wrote a memorandum letter to the pope in which certain propositions were made for the council at Trent, by special papal commissioners, and three cardinals were appointed later as conciliar legates. The conduct, however, of Francis I and of the emperor again prevented the opening of the council. A few Italian and German bishops appeared at Trent. The pope was president of the council, Cardinal del Monte, had with Charles V at Brescia in June, yet matters were not advanced. The strained relations which appeared anew between pope and emperor, and the war between Charles V and Francis I, led to another prorogation (6 July, 1543). After the Peace of Creepy (17 Sept., 1544) a redaction was effected between Paul III and Charles V, and Francis I had promised his co-operation and declared in favour of Trent as the place of meeting, as did the emperor. On 19 Nov., 1544, the Bull "Lactare Turinii" was issued, by which the council was again convoked to meet at Trent on 15 March, 1545. Cardinals Giovanni del Monte, Marcello Cervini, and Reginald Pole were appointed in February, 1544, as the papal commissioners, and declared in favour of Trent. As in March only a few bishops had come to Trent, the date of opening had to be deferred again. The emperor, however, desired a speedy opening, consequently 13 December, 1545, was appointed as the date of the first formal session. This was held in the choir of the cathedral of Trent after the first president of the council, Cardinal del Monte, had celebrated the Mass of the Holy Ghost. When the Bull of convocation and the Bull appointing the conciliar legates were read, Cardinal del Monte declared the ecclesiastical council opened, and appointed 7 January as the date of the second session. Besides the three presiding legates there were present: Cardinal Madruzza, Bishop of Trent, four archbishops, twenty-four bishops, five generals, and nine canons, who had been summoned as consultors.

II. Order of Business.—In the work of accomplishing its great task the council had to contend with many difficulties, but the first weeks were occupied mainly with settling the order of business of the assembly. After long discussion it was agreed that the matters to be taken into consideration by the members of the council were to be proposed by the cardinal legates; after they had been drawn up by a commission of consultors (congregatio theologorum consultorum) they were to be discussed thoroughly in preparatory sessions of special congregations of prelates for dogmatic questions, and similar congregations for legal questions (congregatio praetorium theologorum and congregatio praetorium canonistarum). Originally the fathers of the council were divided into three congregations for discussion of the subjects, but this was soon done away with as too cumbersome. The whole agenda which was at first made ready was debated in detail in the general congregation (congregatio generalis) and the final form of the decrees was settled on. These general congregations were held in the same hall, but the work of the plenary, the consultors, and the smaller sessions were delegated to the cassations, the secretaries, and thelegates.
gations were composed of all bishops, generals of orders, and abbots who were entitled to a vote, the proxies of absent members entitled to a vote, and the representatives of other rulers. The cases resulting from such exhaustive debates were then brought forward in the formal sessions and votes were taken upon them. On 18 December the legates laid seventeen articles before the general congregation as regards the order of procedure in the subjects to be discussed. This led to a number of difficulties. The main one was whether dogmatic questions or the rules of clerical life should be debated first. It was finally decided that both subjects should be debated simultaneously. Thus after the promulgation in the sessions of the decrees concerning the dogmas of the Church followed a similar promulgation of those on discipline and Church reform. The question was also raised whether the generals of orders and abbots were members of the council entitled to a vote. Opinions varied greatly on this point. Still, after long discussion the decision was reached that one vote for the entire order belonged to each general of an order, and that the three Benedictine abbots sent by the pope to represent the entire order were entitled to only one vote.

Various differences of opinion appeared during the preparatory discussion of the decree to be laid before the second session determining the title to be given to the council; the question was whether there should be added to the title “Holy Council of Trent” (Scribundt tempore synuous) the words “representing the Church universal” (universalem ecclsem representantes). According to the bishop of Bologna, a number of members of the council desired the latter form. However, such a title, although justified in itself, appeared dangerous to the legates and other members of the council on account of its bearing on the Councils of Constance and Basle, as it might be taken to express the superiority of the ecclesiastical council over the pope. Therefore instead of this phrase “aecumona et generalis” was proposed and accepted by nearly all the bishops. Only three bishops who raised the question unsuccessfully several times later persisted in wanting the formula “universalem ecclsem representantes”. A further point was in reference to the proxies of absent bishops, namely, whether these were to be voted to by the vote of the absent bishop. Opponents of this view were not allowed a vote; Paul III granted to those German bishops who could not leave their dioceses on account of the religious troubles, and to them alone, representation by proxies. In 1562, when the council met again, Pius IV withdrew this permission. Other regulations were also passed, in regard to the right of the members to draw the revenues of their dioceses during the session of the council, and concerning the mode of life of the members. At a later date, during the third period of the council, various modifications were made in these decisions. Thus the theologians of the council, who had grown in the meantime into a large body, were divided into six classes, each of which received a number of the decrees of the council. The additional deputations also were often appointed for special questions. The entire regulation of the debates was a very prudent one, and offered every guarantee for an absolutely objective and exhaustive discussion in all their bearings of the questions brought up for debate. A regular courier service was maintained between Rome and Trent, so that the pope was fully informed in regard to the debates at the council.

III. The Work and Sessions.—A. First Period at Trent.—Among the fathers of the council and the theologians who had been summoned to Trent were a number of important men. The legates who presided at the council were equal to their difficult task; Paccio of Jacen, Campeggio of Feltre, and the Bishop of Fiesole already mentioned were especially conspicuous among the bishops who were present at the early sessions; Girolamo Scippano, General of the Franciscans, and the two learned Dominicans, Ambrogio Catarino and Donome Soto, should be mentioned. After the formal opening session (13 December, 1545), the various questions pertaining to the order of business were debated; neither in the second session (7 January, 1546), during which the deliberations of the heads of the orders; of the theologians, the two learned Dominicans, Ambrogio Catarino and Donome Soto, should be mentioned. After the formal opening session (13 December, 1545), the various questions pertaining to the order of business were debated; neither in the second session (7 January, 1546), during which the deliberations of the heads of the orders, of the theologians, the two learned Dominicans, Ambrogio Catarino and Donome Soto, should be mentioned. brought up for debate one of the fundamental questions which had to be discussed with reference to the heretics of the sixteenth century, and which in itself presented great difficulties. The imperial party sought to block the discussion of the entire matter and one of the fathers was anxious on account of the approaching war of Charles V against the Protestant princes, and there was fresh dissension between the emperor and the pope. However, the debates on the question were prosecuted with the greatest zeal; animated, at times even stormy, discussions took place; the debate of the next general session had transferred jurisdiction and the bishops; and forty-four other congregations were held for the debate of the important subjects of justification and the obligation of residence, before the matters were ready for the final decision. At the sixth regular session on 13 January, 1547, was promulgated the masterly decree on justification (De justificatione), which consisted of thirty-nine chapters.

The legates proposed to the general congregation as the subject-matter for the following session, the doctrine of the Church as to the sacraments, and for the disciplinary question a series of ordinances respecting both the appointment and official activities of bishops, and of ecclesiastical benefices or offices. These decrees make the sixth session one of the most important in the history of the council.

These decrees make the sixth session one of the most important in the history of the council.

The legates proposed to the general congregation as the subject-matter for the following session, the doctrine of the Church as to the sacraments, and for the disciplinary question a series of ordinances respecting both the appointment and official activities of bishops, and of ecclesiastical benefices or offices. These decrees make the sixth session one of the most important in the history of the council.

These decrees make the sixth session one of the most important in the history of the council.
tained nine chapters on the dogma of the Church respecting the Sacredness of Penance and three chapters on extreme unction. To the chapters on penance were attached teachings on this point, and four canons condemning heresies to the chapters on unction. The decree on reform treated the discipline of the clergy and various matters respecting ecclesiastical benefices. In the meantime, ambassadors from several Protestant princes and cities reached Trent. They made various demands, one of the cardinal legates was sent to them contrary to the Augsburg Confession should be recalled; that debates on questions in dispute between Catholics and Protestants should be deferred; that the subordination of the pope to an ecumenical council should be defined; and other propositions which the council could not accept. Since the close of the last sessions, the theologians and the general chapters had been occupied in numerous assemblies with the dogma of the Holy Sacrifice of the Mass and of the ordination of priests, as well as with plans for new reformatory decrees. At the fifteenth session (25 January, 1562), in order to make some advances to the ambassadors of the Protestants, the decisions in regard to the subjects under consideration were passed like the safe-conduct, such as the cardinals desired, was drawn up for them. Besides the three papal legates and Cardinal Madruzzo, there were present at Trent ten archbishops and fifty-four bishops, most of them from the countries ruled by the emperor. On account of the treacherous attack made by Mauricius of Saxony on Charles V, the city of Trent and the members of the council were placed in danger; consequently, at the sixteenth session (23 April, 1562), a decree suspending the council for two years was promulgated. However, a considerably longer period of time elapsed before it could resume its sessions.

D. Third Period at Trent.—Julius III did not live to call the council together again. He was followed by Marcellus II (1555), a former cardinal legate at Trent. Marcellus continued the earlier assemblies for two days after his election. His successor, the austere Paul IV (1555—9), energetically carried out internal reforms both in Rome and in the other parts of the Church; but he did not seriously consider reconvening the council. Plus IV (1559—65) announced to the cardinals shortly after his election his intention of reopening the council, which was declined. He, however, occasioned a great deal of difficultly by his attempt to appoint, as his nephew, the Cardinal Archbishop of Milan, Charles Borromeo, to complete the important work and to bring its decisions into customary usage in the Church. Great difficulties were raised once more on various sides. The Emperor Ferdinand desired the council, but wished it to be held in some German city, and not at Trent; moreover he desired it to meet not as a continuation of the earlier assembly, but as a new council. The King of France also desired the assembling of a new council, but he did not wish it at Trent. The Protestants of Germany worked in every way against the assembling of the Council. After long negotiations Ferdinand, the Kings of Spain and Portugal, Catholic Switzerland, and Venice, sent a letter to Pope Paul IV on 9 Nov., 1560, the Bull “Ad ecclcsiae regimen”, by which the council was ordered to meet again at Trent at Easter, 1561, was published. Notwithstanding all the efforts of the papal nuncios, Delino and commendone, the German Protestants persisted in their opposition. Cardinal Ercole Gonzaga was appointed president of the earlier council; he was to be assisted by the cardinal legates Stanislaus Hosius, Jacobus Puteus (du Puy), Hieronymus Seripando, Luigi Simonetta, and Marcus Sittus of Altemps. As the bishops made their appearance very slowly, the opening of the council was delayed. Finally, on 18 Jan., 1562, the seventeenth session was held; it proclaimed the revocation of the suspension of the council and appointed the date for the next session. There were present, besides the four cardinal legates, one cardinal, three patriarchs, eleven archbishops, five hundred bishops, four princes, and thirty-two orders; in addition thirty-four theologians were in attendance. The ambassadors of the princes were a source of much trouble to the presidents of the council and made demands which were in part impossible. The Protestant continued to clamorize the assembly. Emperor Ferdinand wished to bring the discussion of dogmatic questions to a close.

At the eighteenth session (25 Feb., 1562) the only matters decided were the publication of a decree concerning the drawing up of a list of forbidden books and an agreement as to a safe-conduct for Protestants. At the next two sessions, the nineteenth on 14 May, and the twentieth on 4 June, 1562, only decree prolonging the suspension was pronounced. The number of members had, it is true, increased; the ambassadors of Catholic rulers had arrived at Trent, but some princes continued to raise obstacles both as to the character of the council and the place of meeting. Emperor Ferdinand sent an exhaustive plan of church reform which contained many articles impossible to accept. The legates, however, continued to press the public draft of the decree on Holy Communion, which treated especially the question of Communion under both species, as well as drafts of several disciplinary decrees. These questions were subjected to the usual discussions. At the twenty-first session (16 July, 1562) the decree on Communion under both species was abolished, but the question of the divine nature of the elements of the Mass was promulgated in four chapters and four canons. A decree upon reformation in nine chapters was also promulgated; it treated ordination to the priesthood, the revenues of canons, the founding of new parishes, and the collectors of alms. Articles on the Sacrifice of the Mass were now laid before the congregations for discussion; in the following months there were long and dramatic discussions on the character of the twenty-second session, which was not held until 17 Sept., 1562, four decrees were promulgated: the first contained the dogma of the Church on the Sacrifice of the Mass (in nine chapters and nine canons); the second directed the suppression of abuses in the offering of the Holy Sacrifice; a third (in eleven chapters) decreed that all the members of the clergy, the requirements necessary before eclesiastical offices could be assumed, wills, the administration of religious foundations; the fourth treated the granting of the cup to the laity at Communion, which was left to the discretion of the pope. The council had hardly ever been in so difficult a position as that in which it now found itself. The secular rulers made contradictory and, in part, impossible demands. At the same time warm debates were held by the fathers on the duties of residence and the relation of the bishops to the pope. The French bishops who arrived on 13 November made several dubious propositions. Cardinals Gonzaga and Seripando, who were of the number of cardinal legates, also left, and the cardinals, who were the most prominent, and in the general council theIon. Finally, on 15 July, 1563, the twenty-third session was held. It promulgated the decree on the Sacrament of Orders and on the ecclesiastical hierarchy (in four chapters and eight canons), and a decree on reform (in eighteen chapters). This disciplinary decree treated the obligation of residence, the conferring of the different grades of ordination, and the education of young clerics (seminarists).
The decrees which were proclaimed to the Church at this session were the result of long and arduous debates, in which 235 members entitled to a vote took part. Disputes now arose once more as to whether the council should be speedily terminated or should be carried on longer. In the meantime the congregations debated the draft of the decree on the Sacraments. At the fourth session (11 Nov., 1563) there were promulgated a dogmatic decree (with twelve canons) on marriage as a sacrament and a reformatory decree (in ten chapters), which treated the various conditions requisite for contracting of a valid marriage. A general decree on reform (in twenty-one chapters) was also published which treated the various questions connected with the administration of ecclesiastical offices.

The desire for the closing of the council grew stronger among all connected with it, and it was decided to close it as speedily as possible. A number of questions had been discussed preliminarily and were now ready for final definition. Consequently in the twenty-fifth and final session, which occupied two days (22 Dec., 1563), the following decrees were approved and promulgated: on 3 December a dogmatic decree on the veneration and invocation of the saints, and on the relics and images of the same; a decree on reform (in twenty-two chapters) concerning monks and nuns; a decree on reform, treating of the mode of life of cardinals and bishops, certificates of fitness for ecclesiastical offices, the administration of ecclesiastical benefices, the suppression of concubinage among the clergy, and the life of the clergy in general. On 1 December the following were promulgated: a dogmatic decree on indulgences, on fasts and feast days; a further decree on the preparation by the pope of editions of the Missal, the Breviary, and a catechism, and of a list of forbidden books. It was also declared that no secular power had been placed at a disadvantage by the rank accorded to its ambassadors, and the secular rulers were called upon to accept the decisions of the council and to execute them. Finally, the decrees passed by the council during the pontificates of Paul III and Julius III were read and proclaimed to be binding.

After the fathers had agreed to lay the decisions before the pope for confirmation, the president, Cardinal Marone, declared the council to be closed. The decrees were subscribed by two hundred and fifteen fathers of the council, consisting of four cardinals, two cardinals, three patriarchs, twenty-five archbishops, one hundred and sixty-seven bishops, seven abbots, seven generals of orders, and also by nineteen proxies for thirty-three absent prelates. The decrees were confirmed on 26 Jan., 1564, by Pius IV in the Bull "Benedictus Deus", and were accepted by the popes in confirmation.

The Ecumenical Council of Trent has proved to be of the greatest importance for the development of the inner life of the Church. No council has ever had to accomplish its task under more serious difficulties, none has had so many questions of the greatest importance to decide. The assembly proved to the world that notwithstanding repeated apostasy in church life there still existed in it an abundance of religious force and of loyal championship of the unchanging principles of Christianity. Although unfortunately the council through no fault of the fathers assembled, was not able to heal the religious differences of western Europe, yet the infallible Divine truth was clearly proclaimed in opposition to the false dogmas of the day, and the way for a firm foundation was laid for the overthrow of heresy and the carrying out of genuine internal reform in the Church.

Trent (TRIDENTUM), Diocese of (TRIDENTINA), suffragan of Salzburg. Trent became universally known through the famous general council held there from 1515 to 1563. At an earlier date, however, it had a certain historical importance. In 1515, Pius IV,
its territory became subject to the Romans. As early as 381 there appeared at the Council of Aquileia Ambrosianus, Bishop of Trent. While Arianism and the barbarian invasions elsewhere smothered the seed of the Gospel, it grew in Trent under the care and protection of St. Vigilius. Bishop Valerian of Aquileia had consecrated the youthful Vigilius, while the great Ambrose of Milan had instructed him as to his duties in length, fatherly epistles. Vigilius came to his end prematurely; he was stoned to death when barely forty years of age.

In the sixth century during the Three Chapters controversy of the Provinces of Milan and Aquileia ceased in schism even after Pope Vigilius and Pelagius I had recognized the decrees of the Council of Constantinople; through the patriarchate of Aquileia the bishops of Trent also persisted in the schism. Placed between Germany and Italy, Trent was exposed to the influences of both. Ecclesiastically it remained subject to Aquileia until 1734, but in political affairs it could not withstand the power of the Sile and Saxonic kings and emperors. Under the first Frankish king, Bishop Ulrich II became an independent prince of the empire, with the powers and privileges of a duke. In consideration of imperial favour the bishop was allowed to reside with Henry IV and Frederick I during the great struggle between the Church and the Empire, but in such a skilful manner as to avoid in any case of capture with the pope. Bishop Adelbert is even revered as a saint, although he sided with the antipope Victor IV, who had been chosen by the emperor; in those times of confusion it was often difficult to find the right path. He died a martyr in defence of the rights of his see (1177). Under Innocent III, Friedrich von Wanga raised Trent to the height of power and influence. He was a great temporal and ecclesiastical ruler. He used every means to kindle and strengthen the religious spirit, and began the building of the splendid Romanesque cathedral. He died at Acre in 1218 during the Fourth Crusade.

The untimely death of Meinhard III, son of Margaret of Tyrol, brought Trent under the rule of Austria in 1363. In 1399 Rudolph IV concluded a treaty with Bishop Albrecht II of Ortenburg, by virtue of which Rudolph became the real sovereign of the diocese. The bishop promised in his own name and in that of his successors to acknowledge the duke and his heirs as lords, and to render assistance to them against their enemies. Thereafter Trent ceased to be an independent principality, and became a part of the Tyrol. Ortenburg's successor was George I of Liechtenstein, who endeavoured to regain its independence for the see. His efforts involved him in several wars, terminated only by his death in 1419. More than once during these wars he was taken prisoner, while the duke was excommunicated and the see interdicted. The war of succession between the Holy Roman Emperor and the Tyrolian princes, as well as the war with Emperor Sigismund of the year 1475, the little child, then about 20 months old, son of a gardener, was missed by its parents. On the evening of Easter Sunday the body was found in a ditch. Several Jews, who were accused of the murder, were cruelly tortured.

The sixteenth century was a time of trouble and worry for the Church in the Tyrol. In the towns the Lutherans, in the villages and among the remnant of the Anabaptists, multiplied. After many ineffectual efforts, the sovereign, bishops, and several monastic orders combined their authority, and a new order set in, which reached its climax in the Council of Trent. At the time of the council Cardinal Christoph von Madrutz was prince-bishop. He was succeeded by three members of his house, and in the mansion house of Madrutz died out. The decrees of the council were executed but slowly. In 1593 Cardinal Ludwig von Madrutz founded the seminary, which later was conducted by the Somaschi. The Jesuits came to Trent in 1622.

Peter Vigil, Count of Thun, governed the see during the Jesuitic reforms, with which he was in sympathy. He abolished some of the monasteries in his territory, interfered with the constitutions of the various orders, and also closed some churches. When the Patriarchate of Aquileia ceased to exist in 1751, Trent became exempt. During the administration of Bishop Emanuel Maria Count of Thun, it ceased to be an independent ecclesiastical principality (1803). The Bavarian Government insisted on the following: (1) priests were to be ordained only after an examination at the university; (2) the bishops were to order their clergy to obey all orders of the Government in connexion with the ecclesiastical police; (3) when filling benefices a list of three names was to be presented by the bishop to the Government or by the Government to the bishop; (4) the exercise of the jurisdiction with other bishops was forbidden. Bishop Emanuel replied that he would remain true to his oath to support and defend the privileges of the Church, and that he would rather suffer all the consequences which might arise from his refusal than act against his conscience. He was expelled in 1807 and crossed the frontier into Salzburg at Reichenhals. He could only return after the Tyrolese had freed themselves of the Bavarian yoke. After the Peace of Vienna negotiations were begun relative to the circumscription of the dioceses of the Tyrol, and were concluded in 1825. Trent was made a suffragan of Salzburg, and the bishops, instead of being chosen by the chapter, were appointed by the emperor. The 155th Bishop of Trent was Johann Heinrich Tzietzer. He died on 12 March, 1860, and his canonization is already under way. The diocese numbers 602,000 Catholics, 1072 priests, 817 male religious, and 1527 nuns.

XII (Mantua, 1850); Kurze Geschichte des Bistums und der Bischöfe von Trent (Bozen, 1852).

C. WOLFGANGEBER.
Trenton, Diocese of (Trentonensis), created 15 July, 1851, suffragan of New York, comprises Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Hunterdon, Mercer, Middlesex, Monmouth, Ocean, Salem, Somerset, and Warren counties in the State of New Jersey, 1,814 square miles, and an area, of about 5,756 square miles. From 1808 to 1853 the territory now occupied by the Diocese of Trenton covered the lower sections of what was then known as East and West Jersey, the former belonging to the jurisdiction of New York and the latter to Philadelphia. In 1853 the Diocese of Newark was formed, comprised of the counties of Bergen, Hudson, Essex, and Union, and Bishop James Roosevelt Bayley, afterwards Archbishop of Baltimore. The Diocese of Trenton lies between New York and Philadelphia and has within its confines all the sea coast from Sandy Hook to Cape May Point, whereon thirty churches have been built to accommodate the summer visitors to the Jersey coast. The first Mass said within its territory was celebrated at Woodbridge, about 1672, and the city of Trenton, in 1814, witnessed the formation of the first congregation and the erection of the first church.

The first bishop was the Right Rev. Michael Joseph O'Farrell (b. at Limerick, Ireland, 2 December, 1832; d. 2 April, 1894). Bishop O'Farrell completed his classics and philosophy at All Hallows College, Dublin, 1848, where he made his theological course. He became a Sulpician and was ordained in his native city by the Most Rev. Dr. Ryan, 18 Aug., 1855. His superiors sent him to Montreal, Canada, where he taught dogmatic theology at the Grand Seminary. He left the Congregation of St.-Sulpice and was made rector of Our Lady's Church, New York City. He took up the work of organizing the new Diocese of Trenton with fifty-one priests, sixty-nine churches, and a Catholic population of about forty thousand. Soon new parishes and missions were formed, an orphan asylum was opened at New Brunswick, and a home for the aged at Beverly. At the Third Council of Baltimore Bishop O'Farrell was considered one of the most eloquent speakers in the American hierarchy. He wrote pastoral letters on Christian marriage and Christian education. His remains were at first interred in the cathedral cemetery, Trenton, but in 1905 were transferred to a vault in the chapel of St. Michael's Orphan Asylum, Hopewell, New Jersey.

Bishop O'Farrell was succeeded by his chancellor and vicar-general, the Right Rev. James Augustus McFaul (b. near Larne, Co. Antrim, Ireland, 6 June, 1850), the second and present Bishop of Trenton. The latter went with his parents to America when a few months old. The family dwelt for several years in New York City and then moved to Bound Brook, New Jersey. Bishop McFaul made his collegiate course at St. Vincent's, Beauty, Pennsylvania, and at St. Francis Xavier's, New York City, his theological studies being made at Seton Hall, South Orange, New Jersey. He was ordained on 26 May, 1877, and, when the See of Trenton was erected, was appointed an assistant priest at St. Mary's church, Trenton, which Bishop O'Farrell selected as his cathedral. He was made rector of St. Peter's Church, New York City. He was made successor, by whom he was held in great confidence and by whom he was appointed pastor of the Church of St. Mary, Star of the Sea, Long Branch. In October, 1890, he returned to the cathedral to be its rector and to assist the bishop. He was made secretary and chancellor, and on 1 November, 1892, was appointed vicar-general. On the death of Bishop O'Farrell he acted as administrator of the diocese, and on 20 July, of the same year, was raised to the episcopate, being consecrated in St. Mary's Cathedral (18 Oct., 1891) by Archbishop Corrigan, from whom, when Bishop of Newark, he received all his other orders. Being familiar with the diocese he soon placed it on a splendid financial basis, and erected many churches, schools, and institutions, among which are: the orphan asylum, at Hopewell; the home for the aged, at Lawrenceville; and Mount Placid, Mary's College for young ladies at Plumfield. Bishop McFaul is organizer of the American Federation of Catholic Societies, which has a membership of about two million.

Among the most widely known of Bishop McFaul's works are his pastoral letters, "The Christian Home", "The Christian School", and "Some Modern Prob- lems", as well as Mary's College, for young ladies at Plumfield, and "Tuberculosis". His address on "The American Universities", delivered in New York City, June, 1900, revealed to the American people the fact that the professors of several of these institutions were advancing ideas in conflict with morality and the established standards of right and wrong. In May, 1911, he delivered an address on the Press before several thousand newspaper men, in St. Patrick's Cathedral, New York City.

In the Diocese of Trenton there are many nationalities, and the Gospel is preached in the following languages: English, German, Italian, Polish, Hungarian, Slovak, Lithuanian, and Rumanian.

The religious communities in the diocese are: many Franciscans, Dominicans, Fathers of the Pious Society of Missions, Dominicans, Brothers of the Sacred Heart, and Brothers of the Christian Schools (summer only); women—Sisters of Mercy, Sisters of Charity, Sisters of the Third Order of St. Francis, Sisters of St. Francis, Mission Helpers of the Sacred Heart, Franciscan Sisters of the Perpetual Rosary; Sisters of St. Dominic, Gray Nuns, Poor Clares, Felician Sisters, School Sisters of Notre-Dame, Franciscan Sisters of Christian Charity, Pious Teachers (Pii Filippini), Sisters of the Precious Blood.

Generalstatistics (1911): Bishop, 1; secular priests, 167; regular, 23; churches with resident priest, 121; missions with churches, 39; stations, 81; chapels, 13; religious orders, 39; parishes, 20,364; schools, 2,363; nuns, 350; college for young ladies, 1, students, 97; parishes with parochial schools, 44, pupils, 12,263; Sunday-schools, 153; teachers, 600, pupils, 20,361; orphan asylums, 2, orphans, 313; total number of young people under Catholic care, 13,103; hospitals, 3, patients, 1,000, days-treatment, 5,215; lodging-houses, 22, inmates, 100; Catholic population, about 150,000.

James J. Powers.

Tresham, Sir Thomas, Knight Bachelor (in or before 1521), Grand Prior of England in the Order of Knights Hospitallers of St. John of Jerusalem (1557); date of birth unknown; d. 8 March, 1558-9. The eldest son of John Tresham of Rushen, Northamp- tonsire, and Elizabeth, daughter of Sir James Harrington, of Hornby, Lancashire, he married (1) Anne, daughter of William, Sir, of Parr, of Burton, by whom he had two sons and (2) Letitia, relict of Sir Robert Lee, who predeceased him without issue. He was chosen sheriff of Northamptonshire in 1524, 1539, 1515, and 1555, and returned as member for the county in 1541 and twice in 1554. He constantly served on commissions of the peace, of good delivery, ofoyer and terminer, of sewers, and the like, and was appointed special commissioner in 1527 to search for grain, in 1539 to inquire into Wolsey's possessions, and in 1537 to inquire into the Lincolnshire rebellion. In 1539 he was one of the knights appointed to receive Anne of Cleves at Calais. In 1540 he had
licent to impark the Lyveden estate in Aldwinkle St. Peter's parish, where the "New Bield" erected by his grandson still stands. In this year, though his main estates were in Northamptonshire, he had a house with twenty-nine household servants in Wolston, Dorsetshire. In 1541 he supplied men for the king's army in France, and a little later was one of the commissioners to collect the "benevolence" for the defence of the realm. In 1546 he was appointed assessor to the "Contribution Commission", and was summoned to Court to meet the French ambassador. In 1549 he assisted in suppressing the Norfolk rising, and received £272, 19s. 6d. for his services. He proclaimed Queen Mary at Northampton on 18 July, 1553, and accompanied her on her entry into London. He was one of those appointed on 3 August, 1553, "to stay the assemblies in Royston and other places of Cambridgeshire". In April, 1554, he conveyed a prisoner from Peterborough to be examined by the Pravy Council in London. In May, 1554, he was one of the custodians of the Earl of Devonshire.

Although by Royal Charter dated 2 April, 1557, he was named grand prior, it was not till 20 November that the order was re-established in England with four knights under him, and he was solemnly invested. In the meantime Sir Richard Shelley had been made turepoche at Malta. The order was endowed by the Queen with lands to the yearly value of £1436. He sat in the House of Lords in January, 1557-8, and sent his proxy to the first parliament of Queen Elizabeth. He was buried at Rush ton with great pomp on 16 March, 1558-9.

John B. Wainwright.

Trèves. See Trier, Diocese of.

Treviso. Diocese of (Trevisiuna), in Venetia (Northern Italy). The capital is surrounded by the River Sile; its environs are the favourite summer resort of the Venetian nobility. The cathedral, erected in 1141, was transformed in 1487 by Tullio and Pietro Lombardo, and modernised in 1758 with five cupolas; the entrance portal dates from 1633. It contains sculptures and paintings by the brothers Bregno and by Antonio Lombardo; paintings by Paris Bordone, Titian, and Francesco di Giovenale; frescoes by Seitz, Porcellone, etc.; and the tombs of Canon Mulechistro and the Bishop Zanetti. The Church of S. Nicolò, designed in Gothic style by Frà Niccolò da Siena, was erected by Benedict XI, who presented it to the Dominicans. It now belongs to the monastery which occupies the ancient convent of Santa Maria Madalena; it has paintings by Paolo Veronese. Among the civil buildings is the Palazzo dei Trecento (1184) containing the Galleria Comunale with pictures by Lotto, Tintoretto, Bordone, Bellini. Natives of Treviso were: the painters Paris Bordone, Pier Maria and Girolamo Pennacchi; the historian Odorigo Rinaldi (Raynaldus), continuous of Baronius; the jurist Bartolommeo Zuccato; the Carmelites Francesco Turchi, mathematician and architect; and the poet Venantius Fortunatus.

Natives of Treviso were: the painters Paris Bordone, Pier Maria and Girolamo Pennacchi; the historian Odorigo Rinaldi (Raynaldus), continuous of Baronius; the jurist Bartolommeo Zuccato; the Carmelites Francesco Turchi, mathematician and architect; and the poet Venantius Fortunatus.

Tirvisium was an ancient city of the Veneti, which became Roman in 183 B. C. and was a strong-
The bishops of Treviso who participated in the schism of the Three Chapters were: Felix (see above); Rusticus, present at the Council of Murano (588); and Felix II, who signed the petition to the Emperor Maurice. In 905 Bishop Adelbert received from King Berengar the temporal jurisdiction of the city, which extended to Rozo (906–1001) and Rolando who adhered to the schism of Treviso, and who, to escape from the tyranny of Exzello and Alberto Rico, O.M. (1255), was imprisoned for preaching against him. Successful bishops were: Loto Gambaruta (1394), exiled by the Florentines from his archbishopric of Pisa; Giovanni Benedetto, O.P. (1418), who reformed many canons of his order and conciliary priests; Ludovico Barbo (1437), Abbot of Guanella, and, later, cardinal; Ercole Barbaro (1443), a learned and zealous prelate; Cardinal Pietro Rialto, O.M. (1471): Fra Giovanni Daciari (1478), formerly general of the Franciscans, who restored the cathedral and reorganized the revenues of the bishopric, leaving many piaric foundations; Nicolò Franco (1486), papal nuncio in various countries, who, because he allowed a seminarist to be elected pope, was exiled, and later, in 1510, was exiled for a second time. In 1494 the Council of Trent, summoned by Sixtus IV, met, and practically nothing resulted. After Pope Leo X, who had died in 1521, was succeeded by Adrian VI, Bonaventura, O.P., was created cardinal. His successor, Cardinal Fernando de Aragon, was later replaced by the Spanish Pope Paul IV, who, in 1555, abolished the See of Treviso with the creation of the Diocese of Padua. In 1568, the last Bishop of Treviso, Giovanni Battista Camisani, who died a prisoner in Venice, was succeeded by the Bishop of Verona, who had been appointed to the Primatial See by Pope Sisto V. The last Bishop of Treviso, Giovanni Battista Camisani, was succeeded by the Bishop of Verona, who had been appointed to the Primatial See by Pope Sisto V. The last Bishop of Treviso, Giovanni Battista Camisani, was succeeded by the Bishop of Verona, who had been appointed to the Primatial See by Pope Sisto V.
unit gradually waned, and at length the tribal names came to be little more than geographical expressions. On the other hand, veneration for the ancient tribes as social organizations with their religious and family traditions seems to have increased as time went on, and not only after the exile but also in the New Testament times we find much care displayed in recording the particular tribe or even family to which various persons are said to belong. The descendants of kings and other noted Old Testament personages could, of course, name their tribe, but in the case of more obscure individuals it is likely that the tribal indication is inferred from the fact of family residence in a particular district of Palestine.

James F. Driscoll

Tricarico, Diocese of (Tricaricensis), in the Province of Potenza in the Basilicata (Southern Italy), near the River Ferrola. In 1691 it was almost destroyed by earthquake. The cathedral was erected in 968 by Polyceutus, Patriarch of Constantinople. The names of the bishops, then of the Greek Bishop, are lost, but the Norman conquest the first was Arnoldo (1008); others were: the theologians Palmieri di Gagliuso (1253) and Fra Nicolo; Cardinal Pier Luigi Caraffa (1624), who restored the cathedral and founded the seminary. From 1805 to 1819 the see remained vacant. The diocese is suffragan of the metropolitan See of Acerenza and MATERA; it has 25 parishes, 36,540 souls, 150 secular and regular clergy, one educational institution for boys and one for girls.

U. Benigni

Tricassin, Charles Joseph, one of the greatest theologians of the Capuchin Order, b. at Troyes; d. in 1681. There is but little positive information about his life. By continued study he acquired a profound knowledge of the writings of Augustine, and explained and defended with success his doctrine of grace against the Jansenists. Tricassin's writings were violently attacked; they were exhaustively both the Augustinian and the Jansenist. The controversy, undertaken at the request of St. Bonaventure. They comprise in the main: "De predestinazione hominum ad gloriam" (Paris, 1669 and 1673), to which was added "Supplementum Augustinianum" (1673), the work being intended to prove predetermination for foreknown merits; "De indifferenti lapi mis arbitrio sub gratia et consupercueuctia" (Paris, 1673); "De praestantissima graecius Leirius" (1679), a work on the twenty-fourth and twenty-fifth books of the New Testament; "De necessaria ad salutem gratia omnibus et singulis data" (Paris, 1673), proof of the sufficient grace for every individual, with special emphasis upon difficult passages in Augustine's writings on which a full understanding of his doctrine depends; "De natura pecorum originalis" (Paris, 1677); "De carmen bosorum oleri" (1679), a proof of the virtue of the hope of eternal life and of the fear of hell; a "Supplementum" (Paris, 1679) shows that this attribution in connexion with the Sacrament of Penance is sufficient according to Augustine and the Council of Trent. Tricassin also published a commentary to several of Augustine's works to prove that Augustine called the Pelagians heretical teachers, because they denied the necessity of grace for all men. Tricassin published at Paris in 1678 a French translation with explanations and illustrations of Augustine's books, "De gratia et libero arbitrio," "De correctione et gratia," and also a treatise to prove that the Cartesian philosophy was contrary to faith. The importance of the author and his writings is best shown by the fact that the Jansenists bought up his books and burned them because they could not answer them.

Bernardus a Bononia, Bibliotheca Scriptorum Capucinorum (revised and enlarged, Venice, 1747), 60-61; Hutter, Nomenclator, IV (Innsbruck, 1910), 449-50.

Father Odorick

Tricca, titular see, suffragan of Larissa in Thessaly. It was an ancient city of Thessaly, near the River Peneus and on the River Lethes which devastated it in 1907. It was mentioned in Homer (IIiad, 11, 270, 200) as the home of Anticleia, daughter of Pelias, and of Polyeuctos, sons of Escaulapius and physicians of the Greek army. It possessed the oldest known temple of Escaulapius, which was discovered in 1902, with a hospital for pilgrims. Tricca is mentioned by other writers, but not in connexion with important events. It was a suffragan of Larissa at a early date and remained so until 1907, when the see of Thessaly was annexed to the Kingdom of Greece. Since then the see, which bears the names of Tricca and Stagai, is dependent on the Holy Synod of Athens. Socrates (V, 22), Sozomenes (V, 12), and Neophorus Callistus (XII, 34) say that Heliodorus, probably the same as the author of the Ethiopian women or of Theagenes and Charicles (third century A.D.), wrote a commentary on the Acts of the Apostles, the Epistle of St. Paul, and the Catholic Epistles (for the works published in his name are not his), lived at the end of the sixth century. He was an Origenist and Monophysite, who wrote a commentary on the Apocalypse (Pétridès, "Géographie de la Tricca", see entry under "Tricca", 1892), and in "Echos d'Orient", VI, 307-10; Le Quien, "Oriens christi.", I, 117-20. Some Latin titular bishops of the fifteenth and sixteenth centuries are also known (Eubel, "Hierarchia catholica medii aevi", II, 250; III, 338). Tricca, now Tricca, is the capital of the name of the same name and has 28,000 inhabitants: Greeks, Turks, and Jews.

S. Vaillé

Trichinopoly, Diocese of (Trichinopolitana), in India, suffragan of Bombay, comprises the south-east portion of the peninsula as far as the Western Ghauts, by which it is separated from the dioceses of Verapoly and Quilon; bounded on the north by the Dioceses of Kumbakonam and Coimbatore, on the north-east by a portion of the Diocese of Saint Thomas of Mylapur, on the east and south by the sea. In order to facilitate administration the diocese is divided into three districts, northern, central, and southern, each under a superior having his residence at Trichinopoly. Trichinopoly, and Kumbakonam, the last of which the dioceses are again subdivided into parishes or sections, of which there are in all fifty-two. The Catholic population, according to the census of 1907, is 245,255, who are served by 60 priests of the Toulousse province of the Society of Jesus (41 European and 19 native) and 19 native secular priests, helped by 156 catechists. Besides these, 570 native priests engaged chiefly in mission work at Trichinopoly, Shencagoum, Palamcottah, etc. A novitiate, juniorate, and scholasticate of the Society is established at Shencagoum. There is a congregation of Brothers of the Sacred Heart (native lay brothers) engaged in catechetical work and teaching at Palamcottah, Madura, Panchampatti, and Trichinopoly, and also orders of nuns engaged chiefly in educational work at Trichinopoly, Shencagoum, Palamcottah, etc. A novitiate, juniorate, and scholasticate of the Society is established at Shencagoum. There is a congregation of Brothers of the Sacred Heart (native lay brothers) engaged in catechetical work and teaching at Palamcottah, Madura, Panchampatti, and Trichinopoly, and also orders of nuns engaged chiefly in educational work at Trichinopoly, Shencagoum, Palamcottah, etc. A novitiate, juniorate, and scholasticate of the Society is established at Shencagoum. There is a congregation of Brothers of the Sacred Heart (native lay brothers) engaged in catechetical work and teaching at Palamcottah, Madura, Panchampatti, and Trichinopoly, and also orders of nuns engaged chiefly in educational work at Trichinopoly, Shencagoum, Palamcottah, etc. A novitiate, juniorate, and scholasticate of the Society is established at Shencagoum.
tion) belong to the padiroo jurisdiction of the Diocese of Saint Thomas of Mylapur.

History.—The present diocese comprises a large portion of the ancient Madura mission, so that down to the year 1836 its history will be found under MADURA MISSION. In that year the district was once more entrusted to the Society of Jesus, and its first vicar Apostolic was appointed 1847. In 1888, on the establishment of the hierarchy, the vicariate became a diocese suffragan of Pondicherry; but in 1893 it was made suffragan of Bombay, as it still remains. Succession of prelates: Alexis Cano, S.J., vicar Apostolic 1847, became first bishop in 1857; John Mary Barth, S.J., in 1890, resigned it to be succeeded in 1893 by the late Mr. Edward J. Willoughby, and John Marshall, S.J., was named his successor from 1900. Educational institutions for boys: St. Joseph's College, Trichinopoly, first opened in 1846, transferred to Trichinopoly in 1888, with about 1500 pupils, prepares students for the degree of M. A. in Madras University; boarding-house for native Catholic boys; ecclesiastical seminary and press; boys' high secondary school for European and Eurasians and seven primary schools for natives, with total of 600 pupils, all at Trichinopoly; St. Xavier's High School, Palamcottah, with boarding-house and St. Anthony's primary school; St. Xavier's High School, Tuticorin; St. Mary's High School, Madura; lower secondary schools at Palamcottah, Damakulam, and Madras schools at Trichinopoly, Trichiyakulam, and Aditakulam; training schools for teachers at the same places; primary schools in the diocese number 260, with 11,027 pupils. For girls: St. Joseph's High School and lower secondary school, Trichinopoly, for European and Eurasian girls, both under Daughtresses of the Cross; secondary schools for native girls (Trichinopoly) under Sisters of Our Lady of Seven Dolours, also training schools for mistresses; lower secondary schools at Palamcottah, Madura, Tuticorin, Vadanakanulam, Mannapad, Satankulam; primary schools at Dindigul, Sarakani, and several other villages; industrial school (Tuticorin) under Daughtresses of the Cross; various institutions of charitable institutions for children born of pagan parents at Trichinopoly, Madura, and Aditakulam, and one for girls at Palamcottah; dispensaries in five places; asylums for native widows at Trichinopoly, Sarakani, Maditakulam, and for Brahman widows at Trichinopoly; St. Mary's, a settlement in Trichinopoly for Brahman converts, opened in 1898, has (1912) 15 resident students and was for men and women in places, besides associations of voluntary catechists who give their leisure time to teaching on Sundays and feasts; St. Joseph's College Press, which publishes the "Tamil Messenger of the S. Heart," the "Morning Star," devotional books, etc. There are over 100 sodalities in the diocese.

TRICHUR, VICARIATE APOTOLIC OF (TRICHUR), in India, one of the three vicariates of the Syro-Malabar Rite, bounded on the north by the diocese of Maki, east by the diocese of Comor- bate, south by the Vicariate of Ernakulam, and on the west by the Indian Ocean. According to the census of 1900 the Catholics of the Syrian Rite in the vicariate numbered 91,986, having 63 churches and 26 chapels served by 66 native secular priests. There are three sovereign military religious orders: monks at Elburthou, Amapadar, and Paratti, containing about 20 professed and 11 lay brothers, besides a number of novices; also four convents for Carmelite nuns with 31 professed besides novices, postulants, and lay sisters. There are in the vicariate 2 high schools, 2 lower secondary schools, and 181 elementary schools, the number of children under training being 19,083. A seminary at Trichur prepares candidates for Puthenpooly or Kandy. The vicar Apostolic (John Menachery, appointed 1860) resides at Trichur. Writing in 1907 Basset trace the history of the Christians of the Syro-Malabar Rite see Thomas, Christians. They remained under the jurisdiction partly of Verapoly, partly of Cranganore, till 1887, when on the establishment of the hierarchy, the churches of the Syrian Rite were separated from those of the Latin Rite and placed under two vicars Apostolici of Trichur and Kottayam respectively. Later on, in 1896, a new division was made and three vicariates established, viz. of Trichur, Ernakulam, and Changanacherry. These three vicariates cover the same ground as the Archdiocese of Verapoly; the Archbishops of Verapoly exercising territorial jurisdiction over all Christians of the Syrian Rite, while the vicars Apostolic hold personal and quasi-territorial jurisdiction over all of the Syrian Rite. The vicariates are nominally classed as belonging to the province of Verapoly, but without the usual ecclesiastical connection.

(See CHANGANACHERY, VICARIATE APOTOLIC OF; VERAPOLY, ARCHDIOCESE OF; DAMO, DIOCESE OF; EASTERN CHURCHES; THOMAS, CHRISTIANS.)

Malabar Catholic Directory, 1902.

ERNEST R. HILL.

Trichur, VICARIATE APOTOLIC OF (TRICHUR), in India, one of the three vicariates of the Syro-Malabar Rite, bounded on the north by the diocese of Mangalore, east by the diocese of Comor- bate, south by the Vicariate of Ernakulam, and on the west by the Indian Ocean. According to the census of 1900 the Catholics of the Syrian Rite in the vicariate numbered 91,986, having 63 churches and 26 chapels served by 66 native secular priests. There are three sovereign military religious orders: monks at Elburthou, Amapadar, and Paratti, containing about 20 professed and 11 lay brothers, besides a number of novices; also four convents for Carmelite nuns with 31 professed besides novices, postulants, and lay sisters. ERNEST R. HILL.

Tricomiabar, titolar see, suffragan of Cæsarea in Palestine Prima. It is mentioned in George of Cyprus (Descriptio orbis romanii, ed. Gruter, 1024) and, according to the other cities preceding or following its name, would seem to have been situated in southern Palestine. Malalus (Chronographia, V, in P. G., XCVIII, 236) relates an ancient legend regarding Tricomiabar which he calls Nyssas and confounds with Sylphopolis. According to his account it was the site of a famous temple of Artemis. It was never a Greek see, and Le Quien (Oriens Christ., III, 677) is at fault in his complaint of being unable to find any bishops. The Roman Curia, taking the "Descriptio orbis romanii" of George of Cyprus, a civil document, form a "Notitia episcopatum," has made Tricomiabar a titular see. It is now a Mussulman village called Delamouch el Ham, and as such is an integral part of the district of Beirun and Bet-Dhibrin. It must not be confused with another Tricomiabar in Arabia which was the camping place of the equites promoti Hierocleri.

S. VALETHÉ.

Triduum (three days), a time frequently chosen for prayer or for other devout practices, whether by individuals in private, or in public by congregations or special organizations in parishes, in religious communities, seminaries, or schools. The form of prayer or devotion depends upon the occasion or purpose of the triduum. The three days usually precede some feast, and the feast then determines the choice of the pious exercises. In liturgical usage there is a triduum of ceremonies and prayers in Holy Week; the Rogation Days (q. v.); the three days of fasts prior to the feast of the Ascension, and the feasts of Easter and Pentecost, with the first two days of their octaves. The triduum is ecclesiologically linked with the commemoration in honour of the Holy Trinity, of the Holy Eucharist, and of St. Joseph. The first of these, instituted by Pius IX, 8 August, 1857, may be made at any time of the year in public or private, and partial or plenary indulgences are attached to it on the usual conditions. The second, also indulged, was instituted by Pius X, 10 April, 1907, for the punishment of sins, during frequent Communion. The time for it is Friday, Saturday, and Sunday after the feast of Corpus Christi, though the bishops may designate any other
more convenient time of the year. Each day there should be a sermon on the Holy Eucharist and Benediction of the Blessed Sacrament, and on Sunday there should be besides a sermon on the Gospel and on the Holy Eucharist, at the parochial Mass. This triduum is specially for cathedral churches, though the bishops may also require other churches to have it. The prayer, “O Most Sweet Jesus” (Dolcissimo Jesu) as given in the “Raccolta,” is appointed for reading during Benediction. The triduum in honour of St. Joseph, prior to his feast on 19 March, was recommended by Leo XIII in the Encyclical “Quampium plures” (15 August, 1889), with the prayer, “To thee, O blessed Joseph.” The most frequent occasions for a triduum are: when children are preparing for their first Communion; among pupils in schools at the end of the school session; among the parishes at the same time; and in religious communities for those who are to renew their vows yearly or every six months. The exercises of this triduum are mainly meditations or instructions disposing the hearers to a devout reception of the sacraments of penance and of Holy Communion and to betterment of life.

JOHN J. WYNNE.

Trier, Diocese of (Trevisensis), suffragan of Cologne, includes in the Prussian province of the Rhine the governmental department of Trier, the electoral districts of Cochem and Koblenz, and the governmental department of Coblenz with the exception of ten such districts that belong to the Archdiocese of Cologne; it also includes the Principality of Birkenfeld belonging to the Grand Duchy of Oldenburg (see map to article GERMANY). The diocese is divided into 46 deaneries, each administered by a dean; and 28 pastorates, each comprising 28 parishes administered by vicars, 200 chaplains and curates, 122 ecclesiastics in other positions (administration and schools), 65 priests either retired or on leave of absence, 105 clergy belonging to the orders, 1,239,700 Catholics, and 1,000 persons of other faiths. The number of priests in the country districts is nearly entirely Catholic; in the mining and manufacturing districts on the Saar, as well as on the Hunsrück and in the valley of the Nahe River, the Catholic faith is not so predominant. The cathedral chapter has the right to elect the bishop; besides the bishop there is also an auxiliary bishop. The deanery consists of a provost, a dean (the auxiliary bishop), 8 cathedral canons, 4 honorary canons; 6 curates are also attached to the cathedral. The educational institutions of the diocese for the clergy are the episcopal seminary for priests at Trier, which has a regent, 7 clerical professors, and 220 students, and the gymnasia seminaries for boys at Trier and Prüm.

Since the close of the Kulturkampf of the religious orders have prospered greatly, and in 1911 there were in the diocese: a Benedictine Abbey at Maria-Laach containing 26 fathers, 90 brothers; a Franciscan monastery on the Apollinarisberg at Remagen, 9 fathers, 8 brothers; 2 houses of the Capuchins, 18 fathers, 12 brothers; 1 house of the Oblates, 5 fathers, 21 brothers; 2 houses of the Paulines, 9 fathers, 21 brothers; 1 house of the Redemptorists, 9 fathers, 8 brothers; 1 house of the White Fathers, 5 fathers, 5 brothers; 1 house of the Fathers of the Divine Word, 21 fathers, 50 brothers; 126 Brothers of Charity in 1 houses, and 141 Brothers of St. Francis in 7 houses. The female orders and congregations in the diocese in 1911 were: Benedictine Nuns of the Perpetual Adoration, 1 house with 37 sisters; Sisters of St. Charles Borromeo, 71 houses with 500 sisters; Servants of the Sacred Heart of Jesus, 4 houses, 41 sisters; Servants of Maids of Christ, 30 houses, 193 sisters; Dominican Nuns, 2 houses, 69 sisters; Sisters of St. Francis from the mother-houses at Aachen, Hôrfužen, Olpe, and Walsdbreith, 94 houses, 476 sisters; Capuchin Nuns, 1 house, 10 sisters; Sisters of St. Clement, 1 house, 6 sisters; Nuns of the Visitation, 1 house, 50 sisters; Sisters of the Holy Spirit, 47 houses, 300 sisters; Sisters of the Love of the Good Shepherd, 2 houses, 125 sisters; Sisters of the Poor Child Jesus, 1 house, 9 sisters; Sisters of St. Joseph, 1 house, 20 sisters; Ursuline Nuns, 5 houses, 220 Sisters; Sisters of St. Vincent de Paul, 7 houses, 30 sisters. The most important church of the diocese is the cathedral, the oldest church of a Christian bishop on German soil. This church is an Assumption Cathedral, was begun in the Roman era and was a church as early as the fourth century. In the course of time other parts were added which belong to all forms of architecture, although the Romanesque style preponderates. The cathedral contains the remains of twenty-five archbishops and electors as well as those of the last four bishops of Trier. The most precious of its numerous treasures in the Holy Coat of Christ, which, according to legend, was given to the Church of Trier by St. Helena. Two exhibitions of this venerable relic are worthy of special note; that of 1841, connected with the rise of the sect of German Catholics, and the one held in 1891, which attracted over two million pilgrims. Other noted churches in Trier are: the three churches and one oratory of the Romans, the collegiate churches and monastic churches of the former Benedictine Abbey of St. Matthias, and the collegiate churches and monastic church of an Apostle in Germany; it is much visited by pilgrims. Other noted churches of the diocese are: the churches of St. Castor and Our Lady at Coblenz, the abbey church of Maria-Laach, the old monasteries of Prüm, Münstermfeld, and Merzig; the Church of St. Maria at Oberweil, the Gothic churches ofAndernach, Boppard, Remagen, Sinzig, and the Great Church of St. Paul, which was built in the eleventh century.

History.—The beginnings of the see of Trier are obscure. From the time of the Diocletian reorganization of the divisions of the empire, Trier was the capital of Belgica Prima, the chief city of Gaul, and frequently the residence of the emperors. There were Christians among its population as early as the second century, and there are doubtless ancient remains of an Apostle in Germany; it is much visited by pilgrims. Other noted churches of the diocese are: the churches of St. Castor and Our Lady at Coblenz, the abbey church of Maria-Laach, the old monasteries of Prüm, Münstermfeld, and Merzig; the Church of St. Maria at Oberweil, the Gothic churches of Andernach, Boppard, Remagen, Sinzig, and the Great Church of St. Paul, which was built in the eleventh century.

to the Church of St. Peter at Trier. In 816 Louis the Pious confirmed to Archbishop Betti (814-47) the privileges of protection and immunity granted by his father. At the partition of the Frankish Empire at Verdun in 843, Trier fell to the East-Frankish Empire. However, after the death of Louis the Child, the lords of Lorraine separated from the East-Frankish Kingdom and became vassals of the West-Frankish ruler, King Charles the Simple, until 962. While Frederick I, Emperor, and Archbishop Ratbod (883-915) received in 898 complete immunity from all state taxes for the entire episcopal territory from the King of Lorraine and Burgundy, Swentibold, son of Emperor Arnulf. He obtained from Louis the Child the district and city of Trier, the right to have a mint and to impose customs-duities; from Charles the Simple he gained the right to conduct the election of the Bishop of Trier. In this way the secular possessions of the bishops of Trier, which had sprung from the valuable donations of the Merovingian and Carolingian rulers, were raised to a secular principality. Archbishop Ratbod (951-56), brother-in-law of King Henry I, was confirmed by Otto I in all the temporal rights gained by his predecessor.

Archbishop Poppo (1016-47), son of Margrave Leopold of Austria, did much to enlarge the territory owned by the church of Trier. During the strife over Investiture, Engelbert of Ortenburg (1062-1100) and Bruno of Laufen (1102-24) belonged to the imperial party. Albero of Montreuil (1131-52) had, as Archbishop of Metz, opposed the Investiture during his administration; the cathedral school of Trier reached its highest fame. From about 1100 the Archbishop of Trier was the Arch-Chancellor of Gaul, for the German emperor, and thus became the possessor of an imperial office and an Elector of the German king and emperor. As the archbishops of Trier were among the leading spiritual princes of the empire, they became involved in the struggles between pope and emperor. While Hiflin (1192-69) was a partisan of Frederick Barbarossa, Arnold I (1169-83) made successful efforts to bring about a reconciliation between the emperor and pope (1177). John I (1190-1212) was excommunicated by Innocent III on account of his adherence to King Philip of Swabia; Bishop John in conjunction with Archbishop Betti renewed the partition of Lothair's empire at Aachen in 870, it fell to the East-Frankish kingdom which later became the German Empire. However, after the death of Louis the Child, the lords of Lorraine separated from the East-Frankish Kingdom and became vassals of the West-Frankish ruler, King Charles the Simple, until 962. John I (1190-1212) was excommunicated by Innocent III on account of his adherence to King Philip of Swabia; Bishop John in conjunction with Archbishop Betti renewed the partition of Lothair's empire at Aachen in 870, it fell to the East-Frankish kingdom which later became the German Empire. However, after the death of Louis the Child, the lords of Lorraine separated from the East-Frankish Kingdom and became vassals of the West-Frankish ruler, King Charles the Simple, until 962. While Frederick I, Emperor, and Archbishop Ratbod (883-915) received in 898 complete immunity from all state taxes for the entire episcopal territory from the King of Lorraine and Burgundy, Swentibold, son of Emperor Arnulf. He obtained from Louis the Child the district and city of Trier, the right to have a mint and to impose customs-duities; from Charles the Simple he gained the right to conduct the election of the Bishop of Trier. In this way the secular possessions of the bishops of Trier, which had sprung from the valuable donations of the Merovingian and Carolingian rulers, were raised to a secular principality. Archbishop Ratbod (951-56), brother-in-law of King Henry I, was confirmed by Otto I in all the temporal rights gained by his predecessor.

Richard von Greifenhau (1511-31) vigorously opposed the Reformation, still he could not prevent the new doctrine from gaining a foothold in the district of the Hunsrück, and in that on the right bank of the Rhine. He defeated the attacks of Franz von Sickingen upon the city of Trier, as well as the efforts of that city to become independent of the bishop. In 1512 he exhibited the Holy Coat for the first time and spent the donations of the pilgrims on the cathedral. John von Metternich (1530-40) attempted reforms which were frustrated by his death. John IV von Hagen (1511-17) sent a representative to the Council of Trent and began earnest measures of reform. John V von Isenburg (1517-56) attended the council himself, but was recalled home by the incuriosity of Margrave Albrecht of Brandenburg-Ansbach into the archdiocese, which the margrave devastated terribly. John VI von der Leyen (1556-67) was able to regain Trier, but could not prevent the French from taking possession of his three suffragan dioceses, Metz, Toul, and Verdun. He checked the further spread of the new doctrines by calling the Jesuits into his diocese (1561). James III von Eltz (1567-81) and John VII von Schelenburg (1584-99) carried out in their possessions the reformatory decisions of the Council of Trent. The former secured the administration of the Abbey of Prüm, whereby the secular possessions of the archdiocese reached their final extent; the latter established two seminaries at Coblenz and Trier. Lohmar von Metternich (1599-1623) joined the Catholic Church in order to secure the stability
of the Catholic Church in Germany. In this way his see became involved in the Thirty Years War. His successor, Philip Christian von Solms-Steinach, was for several years a prisoner in the city of Lübeck and then from 1652 went into exile in France, and permitted the French to garrison the fortress of Ehrenbreitstein. When he made advances to the Swedes he was captured by the Spanish troops in 1635 under suspicion of heresy, and was kept a prisoner at Vienna until 1645. In the struggle between the imperial troops and the French the archdiocese was often the scene of suffering, but it was never taken by force. Caspararius (1652–72) had scarcely repaired the damage done by the Thirty Years War by an excellent administration, when the marauding wars of Louis XIV of France brought fresh misery upon the country. John Hugo von Orsbeck (1670–1711) refused to recognize the siege of some of his territories and their incorporation into France by Louis XIV through what was called the “reunification,” neither would he take the oath of loyalty to Louis. Consequently, during the years 1681–97 large parts of the see were garrisoned by French troops.

During the long period of peace in the eighteenth century the archdiocese had excellent rulers. Francis Louis von PfaU-Neuburg (1716–29) gave particular attention to the organization of the administrative districts, and by securing a stable, not degrading university by establishing new professorships. Francis George von Schönhorn (1729–50) encouraged learned studies and founded a university library and building. The archdiocese of Trier was also remarkable for the reputation by improving the schools and reforming the monasteries, but, on the other hand, influenced by the ideas of the Enlightenment, he supported Febronianism, shared in the labours of the Congress of Emis (v., and also was involved in the dispute about the nunneries (see Nuncio). After the outbreak of the French Revolution the territories of Trier, especially Coblenz, became the gathering place of the French émigrés. In 1794 Trier and Coblenz were besieged by the French. In 1797, by the Peace of Campo-Formio, the part of the archdiocese on the left bank of the Rhine was ceded to France; in 1797 the university was suppressed. In 1801 the Peace of Lunéville gave to France, in addition, the fortress of Ehrenbreitstein and the diocese of Trier, which was secularized in 1803, the section of the archdiocese on the right bank of the Rhine was also secularized and the greater part of it was incorporated into Nassau. Clemens Wenceslaus renounced his rights in return for an annual pension of 100,000 gulden and withdrew to the Diocese of Augsburg. An ecclesiastical administration, which lasted until 1824, was established in Ehrenbreitstein for the part of the former archdiocese on the right bank of the Rhine. The French Diocese of Trier was established in 1801 for the section of the former archdiocese which had been ceded to France. It embraced hardly a third of the old diocese and was made suffragan to Mainz. Its first and only bishop was Charles Manny (1811–19).

The Catholic Church of Prussia in 1821, Trier was revived as a simple diocese by the Bull "De salute animarum," made suffragan to Cologne, and received about its present territory. In 1821 it contained 531 parishes with 550,000 Catholics.

The first bishop of the new diocese was Joseph von Hommer (1821–30). The election of his successor, Wilhelm Matthias von Arnhold, which was renewed in 1826, was not recognized by the Government until Frederick William IV ascended the throne. Arnhold did a great deal for the reawakening of Catholic consciousness in Germany. The exhibition of the Holy Coat, which he brought about in 1844, led to the founding of the sect called German Catholics. He was succeeded by a zealous Prelate (1843–67), formerly chaplain general of the Prussian Police, followed by Matthias Eberhard (1867–76), who enjoys the honours of a Confessor of the Faith. Eberhard was one of the first to suffer by the Kulturkampf which broke out in Prussia. After being repeatedly condemned to pay heavy fines he was sentenced on 6 March, 1876, to ten months imprisonment. Trier was one of the dioceses that suffered the most during the Kulturkampf. The number of its parishes robbed of their parish priests amounted to 197, while nearly 294,000 Catholics lacked regular spiritual care. After the death of the bishop on 30 May, 1876, the see was vacant for five years and had to be secretly administered by an Apostolic Delegate. Finally in 1881, through the personality of the new apostolic administrator, a vicar general of the Prussian Government, and Michal Felix Korum (cathedral canon and parish priest of the minster at Strasburg) was appointed Bishop of Trier by the pope, consecrated at Rome on 19 August, and enthroned on 25 September. Up to the present day the bishop has sought to repair the damage inflicted upon his diocese by the Kulturkampf, thus securing to the people of Trier a religious and social life. He has founded religious institutions for education and, promoted the establishment of numerous houses of the orders. The exhibition of the Holy Coat in 1891 which he carried out was the occasion for impressive demonstrations of Catholic faith and life in Germany (cf. Korum, "Die Böderer und Grundlagen der Ausstellung 1891 zugetragen haben," Trier, 1894).

A complete bibliography is to be found in Marx, Trevisanum, Literaturkunde zur Geschichte der Trierer Lande (Trier, 1899). Most important works are: Brouwer and Markert, Antiquitates et annales Trevisanum libri XXV (Leipzig, 1670–71); Hitzer, Hist. Trevisanis diplomatica et pragmatica (Augsburg and Nuremberg, 1838); Ideem, Geschichte der Trierer Lande, ii. 1840–59 (Koblenz, 1865); Ideem, Geschichte der Evangelischen Kirche in der Rheinprovinz, i. 61–71 (Koblenz, 1867–68); Ideem, Geschichte der Evangelischen Kirche (Koblenz, 1867–68); Ideem, Geschichte der Evangelischen Kirche in der mittelrheinischen Territorien, ed. Zeyer, Esteler, and Gore (Koblenz, 1860–74); de Lorenzi, Beiträge zur Geschichte, nutzlicher Pfarrer der Diözese Trier (1857); Korum, Geschichte der Trierer Geschichtsquellen (1859); Ideem, Urkunden u. Be- zeugnisse zur Geschichte der Rheinlande aus dem mittelalterlichen Archiv (4 vols., Bonn, 1902–07); Schmir, Eidesen illustra (Bonn, 1882–92); Zeyl, Die Reformation in Trier 1550–1667, i. 1859; von Schrotter, Die Manesch von Trier, ii. 1890; Bastigny, Die Geschichte der Trierer Domkapitel im Mittelalter (Paderborn, 1910); Ewald, Die Siegel der Erzbischöfe von Trier (Bonn, 1910); Gugeler, A ein Архивarchivologie von Wilmow- sky, Der Domturi (1874); Ideem, Die Grabstätten der Erzbischöfe von Trier (1876); Beissel, Gesch. der Trierer Kirche (Trier, 1880); Kaiser, Die Stadthalle. Neukirchen, d. Kaiser- und u. in Mittelalter (Leipzig, 1911); von Schlesing, Trier (Leipzig, 1880); Tech, Gesch. der Domkommune in Trier, part ii. (1882); Beach, Gesch. der Demarkommune in Trier (Gießen, 1893); Triersche Almanach (Trier, 1895—), and its supplementary numbers (Trier, 1893—); Westdutsche Zeitung für Gesch. u. Kunst, Trier, 1882—, with supplementary numbers.

5. Town Hall, Capodistria.
astronomer, and was appointed assistant to the director of the Vienna Observatory, Father Max Bell, whom he succeeded in 1792. He occupied this post during the remainder of his life. Triesnecker was thoroughly grounded in the science of mathematics and its applications to astronomy; and the accuracy of his observations, which in spite of ill-health he pursued till an advanced age, was universally recognized. He not only tried to instruct himself with great pains and regularity, but he always scrutinized the observations of the most famous astronomers of his time. His "Novae motuam lunarium tabulce" were published separately in 1802. Other astronomical investigations may be found in "Zach's monatliche Correspondenz," in "Commentarii soc. reg. Götting." and in Bode's "Astron. Jahrbuch." In geography he determined or corrected the longitude and latitude of various places from the best available data. The results of this labour are embodied in the periodicals referred to above, the "Transactions of the Royal Soc. of Bohemia," and Zach's "Allgemeine geographische Ephemeriden." He completed Father Metzbug's triangulation of Lower Austria, using it as a basis for the production of a new map of that country, and assisted in the general triangulation of Galicia. The erection of the "New Observatory" of Vienna (which afterwards gave place to the new structure on the "Türkenschanz") was Triesnecker's work. He was a member of the scientific associations of Breslau, Göttingen, Munich, St. Petersburg, and Prague.

Trient, Pierre Joseph. See Charity, Congregation of the Brothers of; Charity, Sisters of, of Jesus and Mary.

Trient-Capo d'Istria, Diocese of (Triestina et Constantinopolitana), suffragan of Görz-Gradiska, exists as a triple see since 1821, when Cittanova (Emona) and Capodistria (Eugia, Capris, Justimolinos) were united to Triest, and its present name was assigned it. The first bishop of Triest, consecrated between 1803 and 1805, was the first Bishop of Triest; since then it exhibits a long line of eighty-seven bishops. Despite their human character and great abilities, however, these bishops only in rare instances attained to eminence, owing to the small size of their diocese, which was subject to Aquilea, and to the rivalry between Aquilea and Venice, the bishopric of which was subsequently divided into two parts: the bishop of Triest-Capo d'Istria inherited the title of Bishop of Aquilea, while its suffragan, Zenobio de' Pecorodini, later Pope Pius II. Petrus Bonomo, a secretary of Frederick IV and Maximilian I, became Bishop of Triest in 1502, and was known as pater concili in the fifth Lateran Council (1512). Giovanni Bogarino, teacher of Archdeacon Charles of Styria, was bishop from 1591. Joseph II abolished the Diocese of Triest in 1758, transferring the see to Gradiska. His brother, Joseph II, divided Gradiska into the Dioceses of Gorz and Triest, re-establishing Triest in 1761 and appointing as its bishop, Sigismund Anton, Count of Hohenwart and tutor of his children. Other attempts were made to suppress the see, but the emperor decreed its preservation, and von Busel was appointed bishop. After his death (1683) the dispute was referred to the disorders caused by Napoleon. Emperor Franz finally appointed Leonard as Bishop of Triest. At the Synod of Vienna in 1849, Bartholomew Legat was present; he defended, with considerable fervour, the views of the minority in the Vatican Council. In 1900 Bishop Franz X. Nagl was appointed coadjutor cum jure succesionis to the ninety-year-old Cardinal Prince-Archbishop Anton Grauhca of Vienna. The see numbers 409,800 Catholics with 291 priests, 81 male religious and 11 parishes.

COLESTIN WOLESHEBUCHE.

Trincomalee, Diocese of (Trincomaliensis), in Ceylon, suffragan of Colombo, was created in 1893 by a division of the diocese of Jaffna. The diocese comprises the whole of the eastern province as well as the district of Tanankaduwa. Out of a total population of 156,241, the Catholics number 8753, with 28 churches and chapels served by 13 fathers and two lay brothers of the Belgian province of the Society of Jesus, with two missionaries Apostolic. Candidates for the priesthood are sent to Kandy seminary. There are fifty-five schools with 2723 pupils, and one convent of the Sisters of St. Joseph of Chiny with five nuns who conduct an orphanage attached to the convent. The bishop is Charles Lauquei, S. J. (consecrated 1887), who resides at Trincomalee.

ERNST R. HULL.

Trinità di Cava dei Tirreni, Abbey of, in the province of Salerno. It stands in a gorge of the Finestra Hills, near Cava dei Tirreni, and was founded in 980 by Alphius Pappacarbo, a noble of Salerno who became a Clunia monk. Urban II endowed this monastery with many privileges, making it immediately subject to the Holy See, with jurisdiction over the surrounding territory. In 1099 the Abbey of Santa Maria in Cava del Rio made it a diocese, but in 1513 Leo X erected the Diocese of Cava, detaching that city from the abbey's jurisdiction. About the same time the Cluniacs were replaced by Cassinese monks. This monastery, an abbey nubilus, possesses a very rich store of public and private documents, which date back to the eighth century. The church is devoted to the cult of St. Benedict, and is one of the principal basilicas of the Benedictines. The church is famous for its organ. In 1893 the cult of the first four abbots (Alphius, Leo, Petrus, and Constabilis) was sanctioned. There are 18 parishes with 68 priests, regular and secular, and 28,000 faithful, subject to the abbacy.

U. BENIGNI.

Trinitarians, Order of — The redemption of captives has always been regarded in the Church as a work of mercy, as is abundantly testified by many lives of saints who devoted themselves to this task. The period of the Crusades, when so many Christians were in danger of falling into the hands of infidels, witnessed the rise of several religious orders vowed exclusively to this pious work. In the thirteenth century there is mention of an order of Montjau, founded for the purpose in Spain, but its existence was brief, as it was established in 1189 and united in 1221 with the Order of Calatrava. Another Spanish order prospered better; this was founded in the thirteenth century by St. Peter Nolacco under the title of Our Lady of Mercy (la Merced), whence the name Mercedarians. It soon spread to Italy from Aragon, and has still several houses at Rome, in Sicily, in the Levant, and the old Spanish colonies. Finally, the Order of Trinitarians, which exists to the present day, had at first no other object,
TRINITARIANS

as is recalled by the primitive title: "Ordo S. Trinitatis et de redempione captivorum." Its founder, St. John of Matha, a native of Provence and a doctor of the University of Paris, conceived the project under the inspiration of a pious solitary, St. Felix of Valois, in a hermitage called Cerfroid, which subsequently became the chief house of the order. Innocent III, though little in favour of new orders, granted his approbation to this enterprise in a Bull of 17 December, 1198.

The primitive rule, which has been in turns mitigated or restored, enacted that each house should comprise seven monks, one of whom, ordained priest, should have the revenues of the house should be divided into three parts, one for the monks, one for the support of the poor, and one for the ransom of captives; finally it forbade the monks when journeying to use a horse, either through humility, or because horses were forbidden to Christians in the Mussulman countries, whether the friars had to go; hence their popular name of "Friars of the Ass".

In France the Trinitarians were as much favoured by the kings as by the popes. St. Louis installed a house of their order in his château of Fontainebleau. He chose Trinitarians as his chaplains, and was accompanied by them on his crusades. Their convent in Paris is dedicated to St. Mathurin; hence they are also known in France as the Frères de Mathurin of Paris. From this house, when an eclipsed Cerfroid, the cradle of the Trinitarians, and eventually became the residence of the general, also called grand minister, of the order. Towards the end of the twelfth century the order had 250 houses throughout Christendom, where its beneficent work was manifested by the return of liberated captives. This won for it many alms in lands subject to the third of war which were free from ransoms. But the chief source was collections, and to make these fruitful it was not considered enough to attach indulgences to the almsdeed, recourse was had to theatrical demonstrations to touch hearts and open purses. The misfortunes of the unhappy captives in the Mussulman countries were the readiest subject for descriptions, sermons, and even tableaux. In Spain these alms-quests were made solemnly: the religious on their mules were preceded by trumpeters and cymbal-players, and a herald proclaimed the redemption by inviting families to make known their kinsfolk in captivity and the alms destined for their ransom.

From the fourteenth century the Trinitarians had lay assistants, i.e., charitable collectors, authorized by letter patent to solicit alms for the order in their respective towns; these were called marguilliers. There were also confraternities of the Holy Trinity, chiefly in towns where the order had no convent; these consisted of lay tertiaries who wore the seapulcher of the order, were associated in its spiritual favours, and devoted a portion of their income to its works. In fact the order did not consider itself as relieved to meet the needs of their work. The funds being collected, the ransorners to the number of three or four set sail from Provence or Spain with objects to alleviate the lot of the captives or coax their jailers. Their destination was usually the Barbary States, especially in the sixteenth century when the corsairs of Tunis, Algiers, and Morocco had become the scourge of the Mediterranean and plundered their chief means of existence. The Mercedarians went chiefly to Morocco, while the Trinitarians went preferably to Tunis or Algiers. There began their trials. They had to confront the dangers of the journey, the endemic diseases of the African coast, exposed to the outrages of the natives, sometimes to outbursts of Mussulman fanaticism, which sometimes settled among the captives. The most delicate part of the task lay in the choice of captives among the solicitations with which the monks were besieged and the negotiations for settling the ransom-price between the corsairs and the Trinitarians, between the exactions of the former and the limited resources of the latter. When the sum was not sufficient, the Trinitarians were held as hostages in the place of the captives until the arrival of fresh funds. The choice of captives was made according to the funds; ransom was first paid for the natives of the regions which had contributed to the redemption. Sometimes certain captives were previously indicated by their family who paid the ransom. When the captives returned to Europe, the Trinitarians had them go in procession from town to town amid scenery intended to impress the imaginations in justification of the funds which had been assiduously raised from the populations. The number of those ransomed during the three centuries is estimated at 90,000. The most famous of these was Cervantes (ransomed in 1580), who at his death was buried among the Trinitarians at Madrid in the habit of a Trinitarian tertiary.

Despite the large sums which passed through their hands, the Trinitarians had to struggle constantly with poverty. They had to defy the expenses of numerous hospitals, as well as to administer parochial charges. They suffered greatly in France during the English invasion of the fifteenth century and the wars of religion of the sixteenth. Moreover, there were conflicts between the Mercedarians, who had spread from Spain to France, and the Trinitarians, who had spread in France from the same source, each striving after the right to collect and receive legacies; attempts at fusion failed, and their rivalry gave rise to numerous suits in both countries and to a whole controversial literature. Their poverty resulted in a relaxation of the rules which had often to be revised, and in divisions in the order. While one party followed the mitigated rule, there was a reform party that kept to the primitive observance. Thus arose the first schism in 1578 at Pontoise, which in 1633 succeeded in entering the mother-house at Cerfroid.

About the same time the Trinitarians of Spain formed a schism by separating from the Trinitarians of France under Father Juan Bautista of the Immaculate Conception; the latter added the Congregation of "Discalced Trinitarians of Spain". This rule spread to Italy and Austria (1690), where the ransom of captives was much esteemed during the constant wars with the Turks. Hence the three congregations, which gave rise to regrettable dissensions. The Discalced also went to France, where they were suppressed by a Bull of Clement XII (1771), thus following the example of observing the mitigated and the reformed rule was terminated by uniting without fusing them under a common general. At this time also they began to lay claim in France to the title by which they have since been known: Canon Regular of the Holy Trinity. The Revolution in 1789 suppressed them in all the territories to which they had spread. Joseph II had already suppressed them in 1784 in Austria and the Low Countries. They have retained a few houses in Italy, Spain, and the Spanish colonies. At Rome, where their convent of St. Thomas was united with the chapter of St. Peter in 1587, the Trinitarians protested many times unsuccessfully against this spoliation, when on the occasion of the seventh centenary of the foundation of the order by St. Peter's voluntary restoration. But their chief house is the Basilica of St. John Chrysogonus which was given to them by Pius IX in 1856.

There have always been nunns attached to the hospitals of the order, but they do not seem to have formed an integral part of it. The true Trinitarian Nunnery was founded by Maria of the Nativity, who in 1612 and they still have convents at Madrid and in other cities. They form part of the discalced congregation.

The Trinitarians wear a white habit, with a cross of which the upright is red and the cross-bar blue.
Trinity, The Blessed.—This article is divided as follows: I. Dogma of the Trinity; II. Proof of the Doctrine from Scripture; III. Proof of the Doctrine from Tradition; IV. The Trinity as a Mystery; V. The Doctrine as Interpreted in Greek Theology; VI. The Doctrine as Interpreted in Latin Theology.

I. The Dogma of the Trinity.—The Trinity is the term employed to signify the central doctrine of the Church, as taught after the Council of Nicaea of the Godhead there are Three Persons, the Father, the Son, and the Holy Spirit, these Three Persons being truly distinct one from another. Thus, in the words of the Athanasian Creed: “the Father is God, the Son is God, and the Holy Spirit is God, and yet there are not three Gods but one God.” In this Trinity, according to the former account, the Father is the first in an eternal generation, and the Holy Spirit proceeds by an eternal procession from the Father and the Son. Yet, notwithstanding this distinction as to origin, the Persons are co-eternal and co-equal: all alike are uncreated and omnipotent. This, the Church teaches, is the revelation regarding God’s nature with which He has endowed men in order to deliver to the world; and which she proposes to man as the foundation of her whole dogmatic system.

In Scripture there is as yet no single term by which the Three Divine Persons are denoted together. The word τρίας (of which the Latin trinitas is a translation) is first found in Theophilus of Antioch about A.D. 130. He speaks of the “Trinity of God” (John III, 3), His “One Godhead” (Phil., I, 14, 15). The term may, of course, have been in use before his time. Shortly afterwards it appears in its Latin form of trinitas in Tertullian (“De pud.”, c. xxi, P. G. II, 1026). In the next century the word is in general use. It is found in many passages of Origen (“In Ps. xvii.”, 15), P. of Pseudo-Clementine, etc., etc. The first creed in which it appears is that of Origen’s pupil, Gregory Thaumaturgus. In his Exegetes ΤΗΣ ΠΙΣΤΕΩΣ, composed between 200 and 270, he writes: “There is therefore nothing created, nothing subject to another in the Trinity: nor is thereught that has been added as though it once had not existed, but had entered afterwards. He who is the Son is the Son of the Father, the Son of the Son, the Father of the Son, nor the Son without the Spirit: and this same Trinity is immutable and unalterable forever” (P. G. X, 986).

It is manifest that a dogma so mysterious presupposes a Divine revelation. When the fact of revelation, understood in its full sense as the speech of God to man, is no longer admitted, the rejection of the doctrine follows as a necessary consequence. For this reason it has no place in the Liberal Protestantism of to-day. The writers of this school contend that the doctrine of the Trinity, as professed by the Church, is not contained in the New Testament, but that it was first formulated in the second century and received final approbation in the fourth, as a result of the teaching of Jesus Christ, the Son of God, and the asceticism of the early Christians. Many of the Fathers of the Church, and later, in recent times, have been led by the demands of the age to apply the more extreme theories of comparative religion to the doctrine of the Trinity, and to account for it by an imaginary law of nature compelling men to group the objects of their worship in threes (cf. Soderblom, “Vater, Sohn und Geist”, Tübingen, 1900). It seems needless to give more than a reference to these extravagant views, which serious thinkers of every school reject as destitute of foundation.

II. Proof of Doctrine from Scripture.—A. New Testament.—The evidence from the Gospels is summed up in the baptismal commission of Matt., xxviii, 19. He points to the central doctrine of the Evangelists that Christ only made the great truth known to the Twelve step by step. First He taught them to recognize in Himself the Eternal Son of God. When His ministry was drawing to a close, He promised that the Father would send another Divine Person, the Holy Spirit, in His place. This “baptizing them in the name of the Father, and of the Son, and of the Holy Ghost” (Matt., xxviii, 19). The force of this passage is decisive. That “the Father” and “the Son” are distinct Persons follows from the terms themselves, which is amply innumerable passages of the New Testament. In the same series, the being connected one with the other by the conjunctions “and . . . and”, is evidence that we have here a Third Person co-ordinate with the Father and the Son, and excludes altogether the supposition that the Apostles understood the Holy Spirit not as a distinct Person, but to the God viewed in three persons. Yet, the phrase “in the name” affirms alike the Godhead of the Persons and their unity of nature. Among the Jews and in the Apostolic Church the Divine name was representative of God. He who had a right to use it was invested with vast authority; for he wielded the supernatural powers of Him whose name he employed. It is incredible that the phrase “in the name” of the Father and the Son were not all the Persons mentioned equally Divine. Moreover, the use of the singular, “name”, and not the plural, shows that these Three Persons are that One Omnipotent God to whom the Apostles believed. Indeed, the unity of God is so fundamental a tenet alike of the Hebrew and of the Christian religion, that the division of the Godhead from the Godhead, the Father, the Son, and the Holy Spirit, in the New Testament, that any explanation inconsistent with this doctrine would be altogether inadmissible. The supernatural appearance at the baptism of Christ is often cited as an explicit revelation of Trinitarian doctrine, given at the very commencement of the Ministry. This, it seems to us, is a mistake. It is not the manifestation of the Three Divine Persons. Yet, apart from Christ’s subsequent teaching, the doxological sense of the scene would hardly have been understood. Moreover, the Gospel narratives appear to signify that none but Christ and the Baptist were privileged to see the Mystic Dove, and hear the words attesting the Divine Sonship of the Messias.

Besides these passages there are many others in the Gospels which refer to one or other of the Three Persons in particular, and clearly express the separate personality and Divinity of each. In regard to the First Person it will not be necessary to give special citations; those which declare that Jesus Christ is God the Son, affirm thereby also the separate personality and Divinity of the Son. The judgment of the world was a distinctly Divine, and not a Messianic, prerogative. (2) In the parable of the wicked husbandsmen, He describes Himself as the son of the householder, while the Prophets, one
and all, are represented as the servants (Matt., xxi, 33 sqq.). (3) He is the Lord of Angels, who execute His commands (Matt., xxiv, 31). (4) He approves the confession of Peter when he recognizes Him, not as Messias—a step long since taken by all the Apostles—but explicitly as the Son of God; and He declares the knowledge due to a special revelation from the Father (Matt., xvi, 16, 17). (5) Finally, before Caiaphas He not merely declares Himself to be the Messiah, but in reply to a second and distinct question affirms His claim to be the Son of God. He is instantly declared by the high priest to be guilty of blasphemy, an offence which could not have been committed by Him had His claim to be simply the Messiah (Luke, xxii, 66-71).

St. John's testimony is yet more explicit than that of the Synoptists. He expressly asserts that the very purpose of His Gospel is to establish the Divinity of Jesus Christ (John, xx, 31). In the prologue he identifies Him with the Word, the only-begotten of the Father. He is from all eternity, and exists with God, Who is God (John, i, 14-18). The immaculate of the Son in the Father and of the Father in the Son is declared in Christ's words to St. Philip: "Do you not believe, that I am in the Father, and the Father in Me?" (xv, 10), and in other passages no less explicit (xv, 7; xvi, 15; xvii, 21). The oneness of the Father and their person is so close that even the things however He [the Father] doth, these the Son also doth in like manner" (v, 19. Cf. x, 38); and to the Son no less than to the Father belongs the Divine attribute of conferring life on whom He will (v, 21). In x, 29, Christ expressly states His unity of essence with the Father: "That which my Father hath given me, is greater than all . . . I and the Father are one." The same is more explicitly expressed by St. John "This expression of which I am the source", can, having regard to the context, have no other meaning than the Divine Nature, possessed in its fullness by the Son as by the Father.

Rationalist critics lay great stress upon the text: "The Father is greater than I" (xiv, 28). They argue that this suffices to establish that the author of the Gospel held from the start certain views, and the exposition in this sense certain texts in which the Son declares His dependence on the Father (v, 19; vii, 28). In point of fact the doctrine of the Incarnation involves that, in regard of His human nature, the Son should be less than the Father. No argument against Catholic doctrine can, therefore, be drawn from this text. So, too, the passages referring to the dependence of the Son upon the Father nowhere express what is essential to Trinitarian dogma, viz., that the Father is the supreme source from Whom the Divine Nature and perfections flow to the Son. (On the essential difference between St. John's doctrine as to the Person of Christ and the Logos doctrine of the Alexandrine Philo, to which many Rationalists have recourse, see above.)

In regard to the Third Person of the Blessed Trinity, the passages which can be cited from the Synoptists as attesting His distinct personality are few. The words of Gabriel (Luke, i, 35), having regard to the use of the term, "the Spirit", in the Old Testament, to signify God as operative in His creatures, can hardly be said to contain a definite revelation of the real independence of the Holy Spirit from the Father, though they indicate that St. John (xii, 26) could postulate the existence of such teaching as we find in the discourses in the Cenacle reported by St. John (xiv-xvi). We have in these chapters the necessary preparation for the baptismal commission.

In them the Apostles are instructed not only as to the personality of the Spirit, but as to His office towards the Church. His work is to teach them whatsoever He shall hear (xvi, 13), to bring back to their minds the teaching of Christ (xiv, 26), to convince the world of sin (xvi, 8). It is evident that, were the Spirit not a Person, Christ could not have spoken of His presence with the Apostles as comparable to His own presence with them (xiv, 16, 17). Again, were He not a Divine Person it could not have been expedient for the Apostles that Christ should leave them, and the Paraclete take His place (xiv, 7). Moreover, notwithstanding the greater freedom of the word ἐμφάνισθη in His regard is the masculine ἐμφάνισθη. The distinction of the Holy Spirit from the Father and from the Son is involved in the express statements that He proceeds from the Father and is sent by the Son (xiv, 26; cf. xiv, 16, 26). Nevertheless, He is One with Them: His presence with the Disciples is at the same time the presence of the Son (xiv, 17, 18), while the presence of the Son is the presence of the Father (xiv, 23). In the remaining New Testament writings numerous passages attest how clear and definite was the belief of the Apostolic Church in the three Divine Persons. In certain texts the co-ordination of Father, Son, and Holy Ghost is so interwoven that it is impossible to find the meaning of the writer. Thus in II Cor., xiii, 13, St. Paul writes: "The grace of our Lord Jesus Christ, and the charity of God, and the communication of the Holy Ghost be with you all." Here the construction shows that the Apostles are speaking of three distinct Persons. Moreover, since the names God and Holy Ghost are alike Divine names, it follows that God and Holy Ghost have the meaning of the writer. So also, in I Cor., xii, 4-11: "There are diversities of graces, but the same Spirit; and there are diversities of ministries, but the same Lord: and there are diversities of operations, but the same God, who worketh all [of them] in all [persons]". (Cf. also Eph., iv, 4-6; I Pet., i, 2, 3.)

Besides the New Testament passages such as these, where there is express mention of the Three Persons, the teaching of the New Testament regarding Christ and the Holy Spirit is free from all ambiguity. In regard to Christ, the Apostles employ modes of speech which, to men brought up in the Hebrew faith, necessarily signified belief in His Divinity. Elsewhere, for instance, the use of the Doxology in previous and subsequent passages to that in which He calls Himself "the glory for ever and ever" (cf. I Par., xvi, 36; xxxix, 11; Ps. cii, 31; xvii, 2), is an expression of praise offered to God alone. In the New Testament we find it addressed not alone to God the Father, but to Jesus Christ (II Tim., iv, 18; II Pet., iii, 18; Apoc., i, 6; Heb., xiii, 21), and to God the Father and Christ together (Apostles' Creed, A.D. 381). Not less convincing is the use of the title Lord (Κύριος). This term represents the Hebrew Adonai, just as God (Θεός) represents Elohim. The two are equally Divine names (cf. I Cor., vii, 4). In the Apostolic writings Θεός may almost be said to be treated as a proper name of God the Father, and Κύριος of the Son (cf. e.g. I Cor., xiii, 5, 6); in only a few passages is it used to give the title and dignity which it is generally conceded He is the Lord (Cf. I Cor., iii, 7, 18; or of Christ. The Apostles from time to time apply to Christ passages of the Old Testament in which Κύριος is used, e.g. I Cor., x, 9 (Num., xxi, 7), Heb., i, 10-12 (Ps. ci, 26-28); and they use such expressions as "the fear of the Lord" (Acts, ix, 31; II Cor., v, 11; Eph., v, 21), "call upon the name of the Lord" (Acts, ii, 21; or xv, 14), "name of the Father, the Son, and the Holy Ghost" (I Cor., iii, 6). Not less convincing is the use of the title Lord (Κύριος) in reference to the Apostles, by St. Paul, in the Testaments of the fourteen persons described in the Testaments of the Four Sons of Levi (I, 12). We may observe that in I, 12, "The Holy Ghost shall teach you in the same hour what you must say" (Matt., x, 20, and Luke, xiv, 49). In. his personality is clearly implied. These passages, in which the Apostles describe in what manner the Guidance and the Spirit is to guide them, give us the true explanation of what the Holy Ghost is and what He is to do. The personification, which is implicit in such language, is justified and further enlarged upon in the discourses in the Cenacle reported by St. John (xiv-xvi). We have in these chapters the necessary preparation for the baptismal commission.
texts in which St. Paul affirms that in Christ dwells the plentitude of the Godhead (Col., ii, 9), that before His Incarnation He possessed the essential nature of God (Phil., ii, 6), that He is "over all things, God blessed for ever" (Rom., ix, 6), tell us nothing that is not implied by the many other passages of His Epistles.

The doctrine as to the Holy Spirit is equally clear. That His distinct personality was fully recognized is shown by many passages. Thus He reveals His commands to the Church's ministers: "As they were ministering to the Lord and fasting, the Holy Ghost said to them: Separate me Saul and Barnabas (Acts, xiv, iii);" He called them on their missionary journey: "They attempted to go into Bithynia, and the Spirit of Jesus suffered them not" (Acts, xvi, 7; cf. Acts, v, 3; xv, 28; Rom., xv, 30). Divine attributes are affirmed of Him. He possesses omniscience and reveals to the Church mysteries known only to God (I Cor., ii, 10); it is He who distributes charismata (I Cor., xii, 11): He is the giver of supernatural gifts (I Cor., iii, 6); He dwells in the Church and in the souls of individual men as in His temple (Rom., viii, 9-11; I Cor., iii, 16, vi, 19). The work of justification and sanctification is attributed to Him (I Cor., vi, 11; Rom., xv, 16), just as in other passages the same operations are attributed to Christ (I Cor., i, 2; Gal., ii, 17).

Thus it will appear that the Christian doctrine as a whole is expressly taught in the New Testament. The Divinity of the Three Persons is asserted or implied in passages too numerous to count. The unity of essence is not merely postulated by the strict monothelmism of men nurtured in the religion of Israel, to whom "subordinate deities" would have been incomprehensible, as was evident in the baptismal commission of Matt., xxviii, 19, and, in regard to the Father and the Son, expressly asserted in John, x, 38. That the Persons are co-eternal and coequal is a mere corollary from this. In regard to the Divine processions, the doctrine of the first procession is contained in the very terms Father and Son; the procession of the Holy Spirit from the Father and Son is taught in the discourse of the Lord reported by St. John (xiv-xvii) (see Holy Ghost).

B. Old Testament.—The early Fathers were persuaded that indications of the doctrine of the Trinity must exist in the Old Testament and they found such indications in not a few passages. Many of them now appear open to question. But even if the doctrine is not evident in the Old Testament as a whole, it is evident that it had been made known even to the Patriarchs. They regarded it as certain that the Divine messenger of Gen., xvi, 7, xvii, xxvi, 17, xxxi, 11; Ex., iii, 2, was God the Son; for reasons to be mentioned below (III. B.) they considered it evident that God the Father could not have thus manifested Himself (cf. Justin, "Dial.", iv, 10; Iren., "Adv. haer.", IV, xx, 7-11; Tertullian, "Adv. Prax.", 15-16; Theoph., "Adv. Autol.", ii, 22; Novat., "De Trin.", 18, 25, etc.). They held that, when the inspired writers speak of "the Spirit of the Lord", the reference was to the Third Person of the Trinity: and one or two (Iren., "Adv. haer.", ii, xxx, 9; Theophilus, "Adv. Aut.", II, 15; Hieron., "Or. teol.", 4; Epiphanius, "Knowl.") state Wisdom of the Sapiential books, not with St. Paul, of the Son (Heb., i, 3; cf. Wisdom, vii, 25, 26), but of the Holy Spirit. But in others of the Fathers is found what would appear to be the sounder view, viz., that no distinct intimation of the doctrine was given under the Old Covenant. (Cf. Greg. Naz., "Or. teol.", 4; Epiphanius, "Knowl.", 73, "Hær.", 75; Basil, "Adv. Eunom.", II, 22; Cyril Alex., "In Joann.", xii, 20).

Some of these, however, admitted that a knowledge of the mystery was granted to the Prophets and saints of the Old Dispensation (Ephip., "Hær.", viii, 5; Cyril Alex., "Con. Julian.", I, P. G., LXXVI, 532-40). It may be readily conceded that the way is prepared for the revelation in some of the prophecies. The names Emmanuel (Isa., vii, 14) and God the Mighty (Isa., ix, 6) affirmed of the Messiah make mention of the Divine Nature of the promised deliverer. Yet it must be seen whether any preparation is necessary to render the full meaning of the passages clear. Even these exalted titles did not lead the Jews to recognize that the Saviour to come was to be none other than God Himself. The Septuagint translators did not even venture to render the words nimphoi, "the Mighty" literally, but gave us, in their place, "the angel of the Most High." The theological preparation of preparation is to be found in the doctrine of the Sapiential books regarding the Divine Wisdom. In Prov., viii, Wisdom appears personified, and in a manner which suggests that the sacred author was not employing a mere metaphor, but had before his mind a real person (cf. verses 22, 23). Similar teaching is found in the Septuagint. But in this Wisdom is declared to utter in "the assembly of the Most High", i. e., in the presence of the angels. This phrase certainly supposes Wisdom to be conceived as a person. The nature of the personality is left obscure; but we are told that the whole earth is Wisdom's kingdom, that she finds her delight in all the works of God, but that Israel is in a special manner her portion and her inheritance (Ezech., xxiv, 8-13).

In the Book of the Wisdom of Solomon we find a still further advance. Here Wisdom is clearly distinguished from Jehovah: "She is ... a certain pure emanation of the glory of the almighty God. She is brightness of eternal light, and the unsearchable mirror of God's knowledge, and the clearest image of his goodness" (Wis., vi, 25, 26, cf. Hebrews, i, 3). She is, moreover, described as "the worker of all things" (παθέων τερατός, vii, 21), an expression indicating that the creation is in some manner attributable to her. Yet in later Judaism this exalted doctrine suffered eclipse, and seems to have passed into oblivion. Nor indeed do we feel that the passage, even though it manifests some knowledge of a second personality in the Godhead, constitutes a revelation of the Trinity. For nowhere in the Old Testament do we find any clear indication of a Third Person. Mention is often made of the Spirit of the Lord, but there is nothing to show that the Spirit was viewed as distinct from the Father, and that the term was employed to signify God considered in His working, whether in the universe or in the soul of man. The matter seems to be correctly summed up by Epiphanius, when he says: "The One Godhead is above all declared by Moses, and the twofold personality (of Father and Son) is strenuously asserted by the Prophets. The Trinity is made known by the Gospel" ("Hær.", lxxxiv, P. G., XLII, 493).

III. PROOF OF THE DOCTRINE FROM TRADITION.—A. In this section we shall show that the doctrine of the Blessed Trinity has from the earliest times been taught by the Catholic Church and professed by her members. As none deny this for any period subsequent to the Arian and Macedonian controversy it will be enough to consider the faith of the first three centuries only. An argument of very great weight is provided in the liturgical forms of the Church. The highest probative force must necessarily attach to these, since they express not the private opinion of a single individual, but the public belief of the whole body of the faithful. Nor can it be objected that the notions of Christians on the subject were vague and confused, and that their liturgical forms reflect this frame of mind. On such a point vagueness was impossible. Any Christian might be called on to seal with his blood his belief that there is but One God. The
answer of Saint Maximus (c. a. d. 250) to the command of the proconsul that he should sacrifice to the gods, "I offer no sacrifice save to the One true God" (Ruinart, ed. 1713, p. 157), is typical of many such replies in the Acts of the martyrs. It is out of the question to suppose that men who were prepared to give their lives on behalf of this fundamental truth were in point of fact so great confusion in regard to it that they were unaware whether their creed was monotheistic, dytheistic, or tritheistic. Moreover, we know that their instruction regarding the doctrines of their religion was well. Thus Flavian, Bishop of Antioch, writing to Justin, "I will not tolerate any doctrine that ever the unlettered were thoroughly familiar with the truths of faith (cf. Justin, "Apol.", I, 60, P. G., VI, 419; Irenaeus, "Adv. haer.", III, iv, n. 2, P. G., VII, 856).

(1) We may notice first the heptasymmetrical formula, which all acknowledge to be primitive. It has already been shown that the words as prescribed by Christ (Matt., xxvi, 19) clearly express the Godhead of the Three Persons as well as their distinction, but another consideration may here be added. Baptism, with its formal renunciation of Satan and his works, was understood to be the rejection of the idolatry of paganism and the solemn consecration of the baptized to the one true God (Tert., "De spect.", iv, P. L., I, 635; Justin, "Apol.", I, P. G., 432). And it was as if the Church in this act vested the members over them of the Father, Son, and Holy Spirit. The supposition that they regarded the Second and Third Persons as created beings, and were in fact consecrating themselves to the service of creatures, is manifestly absurd. St. Hippolytus has expressed the faith of the Church in the clearest terms: "He who descends into this laver of baptism, and who with all One and unites himself to Christ, renounces the enemy, and confesses that Christ is God . . . he returns from the font a son of God and a coheir of Christ. To Whom with all the holy, the good and life-giving Spirit be glory and power, now and always, forever and ever. Amen" ("Serm. in Theoph.", n. 101, P. L., xxvii, 19).

(2) The witness of the dogmatics is no less striking. The form now universal, "Glory be to the Father, and to the Son, and to the Holy Ghost!" so clearly expresses the Trinitarian dogma that the Arians found it necessary to deny that it had been in use previous to the time of Flavian of Antioch (Philostorgius, "Hist. ecc.", III, xiii, P. G., LXV, 565). There is meantime the great controversy over another form, viz. "Glory to the Father, through the Son, in the Holy Spirit", had been more common (cf. I Clement, 58, 59; Justin, "Apol.", I, 67). This latter form is indeed perfectly consistent with Trinitarian belief; it, however, expresses not the coequality of the Three Persons, but their operation in regard to man. We live in the Spirit, and through Him we are made partakers in Christ (Gal., v, 25; Rom., vii, 9); and it is through Christ, as His members, that we are worthy to offer praise to God (Heb., xiii, 15). But there are many passages in the ante-Nicene Fathers which show that the form, "Glory be to the Father and to the Son", and to (with) the Holy Spirit", was also in use. In the narrative of the Holy Spirit, common to the Gospels, the Father is confessed with the Holy Spirit. "With Whom to Thee and the Holy Spirit be glory now and for the ages to come" (Matt. S. Polyc., n. 14; cf. n. 22). Clement of Alexandria bids men "give thanks and praise to the only Father and Son, to the Son and Father with the Holy Spirit" (Pebd., III, xii, P. G., VIII, 680). St. Hippolytus closes his work against Noetus with this words: "To Him be glory now and for the ages to come!" (Contra Noet., n. 18, P. G., X, 830). Denis of Alexandria uses almost the same words: "To God the Father and to His Son Jesus Christ with the Holy Spirit be honour and glory forever and ever, Amen" (in St. Basil, "De Spiritu Sancto", xxix, n. 72, P. G., XXXII, 202). St. Basil further tells us that it was an innumerable custom among Christians when they lit the evening lamp to give glory to God with prayer: Αληθής Πνεύμα τού Θεού καὶ τού Χριστού καὶ τού Σαιτιστοῦ ἁγίου ("We praise the Father, the Son, and the Holy Spirit of God", ibid., c. 205). (3) The doctrine of the Trinity is formally taught in every class of ecclesiastical writing. From among the apologists we may note Justin, "Apol.", I, vi; Irenaeus, "Adv. her.", I, xxii, IV, xx, 1-6. In these passages he rejects the Gnostic figment that the world was created by gods who had emanated from God, but were not himself. Justin establishes the doctrine that the substance of the Word and the Spirit by whom God created all things. Clement of Alexandria professes the doctrine in "Predag.", I, vi (P. G., VIII, 300), and somewhat later Gregory Thaumaturgus, as we have already seen, lays it down in the most express terms in his creed (P. G., X, 186).

(4) Yet further even the Church's doctrine is furnished by a comparison of her teaching with that of heretical sects. The controversy with the Sabellians in the third century proves conclusively that she would not tolerate any deviation from Trinitarian doctrine. Noetus of Sirmium, the originator of the error, was condemned by a local synod, c. a. d. 200, Sabellius, who propagated the same idea at more explicit a point, was also condemned by St. Callistus. It is notorious that the sect made no appeal to tradition: it found Trinitarianism in possession wherever it appeared—at Sirmium, at Rome, in Africa, in Egypt. On the other hand, St. Hippolytus, who combats it in the "Contra Noetum", claims Apostolic tradition for the doctrine of the Trinity. The Catholic Church believes the Apostles, in accordance with the tradition of the Apostles, that God the Word came down from heaven to the holy Virgin Mary . . . to save man.

Somewhat later (c. a. d. 260) Denis of Alexandria found that the error was widespread in the Libyan Pentapolis, and he addressed a dogmatic letter against it to two bishops, Euphranor and Ammonius. In this, in order to emphasize the distinction between the Persons, he termed the Son πρωτος του Θεου and used other expressions capable of suggesting that the Son is to be reckoned among creatures. He was accused of heresy against St. Dionysius of Rome, who held a council and addressed to him a letter dealing with the true Catholic doctrine on the point. The Bishop of Nicæa replied with a defence of his orthodoxy entitled Ἐλεύθερος καὶ ἀδιαλείπτως, in which he corrected whatever had been erroneous in his expressions. He expressly professes his belief in the consubstantiality of the Son, using the very term, θυματαιος, which afterwards became the touchstone of orthodoxy at Nicæa (P. G., XXV, 53). The story of the controversy is conclusive as to the doctrinal standard of the Church. It shows us that she was firm in rejecting on the one hand any confusion of the Persons and on the other hand any denial of their consubstantiality.

The information we possess regarding another heresy—that of Montanus—supplies us with further
proof that the doctrine of the Trinity was the Church's teaching in A.D. 150. Tertullian affirms in the clearest terms that what he held as to the Trinity when a Catholic he still holds as a Montanist ("Adv. Prax.", ii, P. L., ii, 156); and in the same work he explicitly teaches the Divinity of the Three Persons, their distinction, the eternity of God the Son (op. cit., xxvi, P. L., ii, 156), and the same way asserts the orthodoxy of the Montanists on this subject (Hier., lxviii). Now it is not to be supposed that the Montanists had accepted any novel teaching from the Catholic Church since their secession in the middle of the second century. Hence, inasmuch as there was full agreement between the two bodies in regard to the Trinity, it has henceforth been considered that Tertullian's views were an article of faith at a time when the Apostolic tradition was far too recent for any error to have arisen on a point so vital.

B. Notwithstanding the force of the arguments we have just summarized, a vigorous controversy has been carried on from the end of the seventeenth century to the present day regarding the Trinitarian doctrine of the ante-Nicene Fathers. The Socinian writers of the seventeenth century (e. g. Sand, "Nucleus historico ecclesiastici", Amsterdam, 1668) asserted that the language of the early Fathers in many passages of their works shows that they agreed not with Athanasius, but with Arius. Petavius, who was a leader of the Trinitarians in England, vigorously took the less favourable view that they teach the following points inconsistent with the post-Nicene belief of the Church: (1) That the Son even as regards His Divine Nature is inferior and not equal to the Father; (2) that the Son alone appeared in the theophanies of the Old Testament, inasmuch as the Father of the Son is essentially invisible, the Son, however, being visibly sent; (3) that the Son is a created being; (4) that the generation of the Son is not eternal, but took place in time.

We shall examine these four points in order. (1) In proof of the assertion that many of the Fathers deny the equality of the Son with the Father, passages are cited from Justin (Apol., i, xiii, xxxii), Irenæus (Adv. Haer., iii, c. 1, 5, 14; "Strom.", vii, p. C. G., ix, 410), Hippolytus (Con. Noet., n. 14), Origen (Con. Cels., viii, xv). Thus Irenæus (loc. cit.) says: "He commanded, and they were created. Whom did He command? His Word, by whom, says the Scripture, the heavens were established. And Origen, loc. cit., says: "We must regard the Father as the not less than the Father, but inferior to Him. And this belief we ground on the saying of Jesus Himself: 'The Father who sent me is greater than I.'" Now in regard to these passages it must be borne in mind that there are two ways of considering the Trinity. We may view the Three Persons in so far as they are equally possessed of the Divine Nature; or we may consider the Son and the Spirit as being derived from the Father. Who is the sole source of Godhead, and from Whom They receive all They have and are? The former mode of considering them has been the more common since the Arian heresy. The latter, however, was more frequent previously to that period. Under this aspect, the Father, as being the sole source of all, transcends the Son more than the Spirit. Athanasius, Basil, Gregory Nazianzus, Gregory of Nyssa, and the Fathers of the Council of Sardica, in their synodical letter, all treat our Lord's words, "The Father is greater than I", as having reference to His Godhead (cf. Petavius, "De Trin.", ii, 7, vi, 11). From this point of view it may be said that in the creation of the world the Father commanded, the Son obeyed. The expression is not one which would have been employed by Latin writers who insist that creation and all God's works proceed from Him as One and not from the Persons as distinct from each other. But this truth was unfamiliar to the early Fathers.

(2) Justin ( Dial., n. 60), Irenæus (Adv. Haer., iv, xx, nn. 7, 11), Tertullian ("C. Marc.", ii, 27; "Adv. Prax.", 15, 16), Novatian (De Trin., xviii, xxv), Theophils (Adv. Autol., ii, xxi) are accused of teaching that the theophanies were incompatible with the essential nature of the Father, and hence incompatible with that of the Son. In this case also the difficulty is largely removed if it be remembered that these writers regarded all the Divine operations as proceeding from the Three Persons as such, and not from the Godhead viewed as one. Now Revelation teaches us that in the work of the creation and redemption the Father was visibly engaged. We have not merely His purpose through the Son. Through Him He made the world; through Him He redeemed it; through Him He will judge it. Hence it was believed by these writers, having regard to the present disposition of Providence, the theophanies could only have been the work of the Son. Moreover, in Col. i, 13, the effect of the operation of the Son is termed "the image of the invisible God" (ἀργαὶ τῶν ὄντων ἢ ἢμερῶν). This expression they seem to have taken with strict literalness. The function of an αἰρετος is to manifest what is itself hidden (cf. St. John Damascene, "De imagini", iii, n. 17). Hence they held that the work of revealing the Father belongs by nature to the Second Person of the Trinity, and concluded that the theophanies were His. (3) Expressions which appear to contain the statement that the Son was created are found in Clement of Alexandria (Strom., v, xiv, p. G., IX, 131; vii, v, P. G., ix, 280), Tatian (Orat., vi), Tertullian ("Adv. Prax.", vi; "Adv. Hermog.", xviii, xx), Origen (In Joam., i, n. 22). Clement speaks of Wisdom as the revelation of "the Father" (πατρικῶν θεότητας), and Tatian terms the Word the "first-begotten work" (ἐγερμος πατρικῶν) of the Father. Yet the meaning of these authors is clear. In Col., i, 16, St. Paul says that all things were created in the Son. This was understood to signify that creation took place according to exemplar ideas predetermined by God and exemplified in the Son, so that it might be said that the Father created the Word, this term being used in place of the more accurate generated, inasmuch as the exemplar ideas of creation were communicated by the Father to the Son. Or, again, the actual creation of the world might be termed the creation of the Word, since it takes place according to the ideas already existing in the Word. The context invariably shows that the passages must be understood in one or another of these senses. The expression is undoubtedly very harsh, and it certainly would never have been employed but for the verse, Prov., viii, 22, which is rendered in the Septuagint and the old Latin versions, "The Lord created [ἐφέτευε] me, whom are the beginning of His ways." As the passage was understood to mean that the Son, at the creation of the world, gave rise to the question how it could be said that Wisdom was created (Origen, "Prince", i, ii, n. 3, P. G., XI, 131). It is further to be remembered that accurate terminology in regard to the relations between the Three Persons was the fruit of the controversies which sprang up in the fourth century. The writers of 300 who had not seen the controversy with Arianism, and employed expressions which in the light of subsequent errors are seen to be not merely inaccurate, but dangerous.
(4) Greater difficulty is perhaps presented by a series of passages which appear to assert that prior to the Creation of the world the Word was not a distinct hypostasis from the Father. These are found in Justin (C. Tryphon, xli), Tatian (Con. Gracor, y), Athenagoras (Legat, x), Theophilos (Ad Autol., II, x, 22); Hippolytus (Con. Nect., x); Tertullian ("Adv. Prax.", v-vii; "Adv. Hermogenem", xviii). Thus Theophilos writes (op. cit., n. 22): "What else is this voice [heard in Paradise] but the Word of God Who is also His Son? . . . For before and without and in all the World [τὸ λόγον προφθοράκιον], the firstborn of all creation, not, however, Himself being left without Reason (ὁ λόγος), but having been gotten Reason, and ever holding converse with Reason". Expressions such as these are undoubtedly due to the influence of the Stoic philosophy: the "ὁ λόγος ἐνδιάθεος καὶ λόγος προφθοράκιον" were current conceptions of that school. It is evident that these apologists were seeking to explain the Christian Faith to their pagan readers in terms with which the latter were familiar. Some Catholic writers have maintained that the influence of their Stoic training did lead some of them into Subordinationism, although the Church herself was never involved in the error (see Logos). Yet it does not seem necessary to adopt this conclusion. If the point of view of the writers be borne in mind, the expressions, strange as they are, will be seen not to be incompatible with orthodoxy both as regards Prov., viii, 22, and Col., i, 15, as distinctly teaching that there is a sense in which the Word, begotten before all worlds, may rightly be said to have been begotten also in time. This temporal generation they conceived to be none other than the act of creation. They viewed this as the complement of the eternal generation, mass as much as it expressed the mediation of those creative ideas which from all eternity the Father has communicated to the Eternal Word. Since, in the very same works which contain these perplexing expressions, other passages are found teaching explicitly the eternity of the Son, it appears most natural to interpret them in this sense. It should further be remembered that throughout this early period the view of the relation of the Divine Persons to each other, invariably regarded them in connexion with the cosmogony. Only later, in the Nicene epoch, did they learn to preclude from the question of creation and deal with the threefold Personality exclusively from the point of view of the Divine life of the Godhead. When that stage was reached, expressions such as these became impossible (cf. d’Ales, "Tertullien", 82-90).

IV. THE TRINITY AS A MYSTERY.—The Vatican Council has explained the meaning to be attributed to the term mystery in theology. It lays down that a mystery is a truth which we are not merely incapable of discovering apart from Divine Revelation, but which, once revealed, man’s mind is incapable of free speculation, so to speak, by a kind of darkness" (Const., "De fide, cath." iv). In other words, our understanding of it remains only partial, even after we have accepted it as part of the Divine message. Through analogies and types we can form a representative concept expressive of what is revealed, but we cannot attain that fuller knowledge which supposes that the various elements of the concept are clearly grasped and their reciprocal compatibility manifest. As regards the vindication of a mystery, the office of the natural reason is solely to show that it contains no intrinsic impossibility, that any objection urged against it on the score that it violates the laws of thought is invalid. More than this it cannot do.

The Vatican Council further defined that the doctrine of the Trinity is of the number of these. Indeed, of all revealed truths this is the most impenetrable to reason. Hence, to declare this to be no mystery would be a virtual denial of the canon in question. Moreover, our Lord’s words, Matt., xi, 27, "No one knoweth the Son, but the Father", seem to declare that the mystery of the Trinity is a truth entirely beyond the scope of any created intellect. The Fathers supply many passages in which the incomprehensibility of the Divine Nature is affirmed. St. Jerome says, in a well-known phrase: "The true profession of the mystery of the Trinity is to own that we do not comprehend it" (De mysterio Trinitatis recta confessio est ignorantia scientiae. "Proem ad I. xviii in Isai.", P. L., XXIV, 627).

The controversy with the Eunomians, who declared that the Divine Essence was fully expressed in the absolutely simple notion of "the Innascible" (ἀναστάτος), and that this was fully comprehensible by the human mind, led many of the Greek Fathers to insist on the incomprehensibility of the Divine Nature, more especially in the case of the Second Person, in whose case (cf. e.g., St. Basil, "In Eunom.", I, n. 14, P. G., XXIX, 544; St. Cyril of Jerusalem, "Cat.", VI, P. G., XXXIII, 545; St. John Damascene, "Fid. orth.", I., ii, P. G., XCIV, 794, etc., etc.).

At a later date, however, some famous names are to be found defending a contrary opinion. Anseim, the early 5th-century writer, as we have seen earlier Prov., viii, 22, and Col., i, 15, as distinctly teaching that there is a sense in which the Word, begotten before all worlds, may rightly be said to have been begotten also in time. This temporal generation they conceived to be none other than the act of creation. They viewed this as the complement of the eternal generation, mass as much as it expressed the mediation of those creative ideas which from all eternity the Father has communicated to the Eternal Word. Since, in the very same works which contain these perplexing expressions, other passages are found teaching explicitly the eternity of the Son, it appears most natural to interpret them in this sense. It should further be remembered that throughout this early period the view of the relation of the Divine Persons to each other, invariably regarded them in connexion with the cosmogony. Only later, in the Nicene epoch, did they learn to preclude from the question of creation and deal with the threefold Personality exclusively from the point of view of the Divine life of the Godhead. When that stage was reached, expressions such as these became impossible (cf. d’Ales, "Tertullien", 82-90).

V. THE DOCTRINE AS INTERPRETED IN GREEK THEOLOGY.—A. Nature and Personality.—The Greek Fathers approached the problem of Trinitarian doctrine in a way which did not differ so essentially from that which, since the days of St. Augustine, has become traditional in Latin theology. In Latin theology thought fixed first on the Nature and only subsequently on the Persons. Personality is viewed as being, so to speak, the final complement of the Nature: the Nature is regarded as logically prior to
the Personality. Hence, because God's Nature is one, He is known to us as One God before He can be known as Three Persons. And when theologians speak of God without special mention of a Person, they conceive Him under this aspect. This is entirely different from the Greek point of view. Greek thought fixed primarily on the three distinct persons: the Father, to Whom, as the source and origin of all, the name of God (Θεός) more especially belongs; the Son, proceeding from the Father by an eternal generation, and therefore rightly termed God also; and the Divine Spirit, proceeding from the Father and the Son, has a logogenia, a special relationship to the Nature. Just as human nature is something which the individual man possesses, and which can only be conceived as belonging to and dependent on the individual, so the Divine Nature is something which belongs to the Persons and cannot be conceived independently of them.

The contrast appears strikingly in regard to the question of creation. In all Western theological tradition that creation, like all God's external works, proceeds from Him as One; the separate Personalsities do not enter into consideration. The Greeks invariably speak as though, in all the Divine works, each Person exercises a separate office. Irenaeus replies to the Gnostics, who held that the world was created by three separate persons, by affirming that God is the one Creator, and that He made all things by His Word and His Wisdom, the Son and the Spirit (Adv. her., I, xxii; II, iv, 4, 5, xxx, 9; IV, xx, 1). A formula often found among the Greek Fathers is that all things are from the Father and are effected by the Son in the Spirit (Athanasius, “De Trin. dial.”, n. 38; Cyril of Alexandria, “De Trin. dial.”, VI, P. G., LXXV, 1053). Thus, too, Hippolytus (Con. Noet., x) says that God has fashioned all things by His Word and His Wisdom, creating them by His Word, adorning them by His Wisdom (παντα γάρ τα γεγενέσθαι διὰ Λόγου καὶ Σοφίας τεχνησθαι, ἀγγελούν κέριν ὡς κοσμοῦν). The Nicene Creed still preserves for us this point of view, and we still profess our belief “in one God the Father Almighty, Creator of heaven and earth . . . and in one Lord Jesus Christ . . . by Whom all things were made . . . and in the Holy Ghost.”

The Divine Unity.—The Greek Fathers did not neglect to safeguard the doctrine of the Divine Unity, though manifestly their standpoint requires a different treatment from that employed in the West. The consubstantiality of the Persons is asserted by St. Irenaeus when he tells us that God created the world by His Son and His Spirit, “His two hands” (Adv. her., IV, xx, 1). The purport of the phrase is evidently to indicate that the Second and Third Persons are not substantially distinct from the First. A more philosophical description is the doctrine of the Recapitulation (συγκεκαλομένου). This seems to be first found in the correspondence between St. Denis of Alexandria and St. Dionysius of Rome. The former writes: “We thus [i.e., by the twofold procession] extend the Monad [the First Person] to the Trinity, and the Trinity to the Monads, παντίσχος διά διάσπασμα, καὶ τὸ Τριάδος πάντων ἀφύτων ἀπὸ τῶν Μονάδων συγκεκαλομένων.”—P. G., XXV, 504). Here the consubstantiality is affirmed on the ground that the Son and Spirit, proceeding from the Father who are nevertheless not separated from Him; while they again, with all their perfections, can be regarded as contained within Him.

This doctrine supposes a point of view very different from that with which we are now familiar. The Greek Fathers regarded the Son as the Wisdom and Power of the Father (1 Cor. i, 21) in a formal sense, and in like manner, the Spirit as His Sanctity. Apart from the Son the Father would be without His Wisdom; apart from the Spirit He would be without His Sanctity. Thus the Son and the Spirit are termed “Powers” (Ποιμαντές) of the Father. But while in creatures the powers and faculties are subject to accidental perfections, in the Godhead they are subject to the Father (P. G., XLIv, 1160; John Damascene, “De fide orthodoxa.”, III, xiv, P. G., XCIV, 1040). Here we see an important advance in the doctrine of the Godhead. For, as we have noted, the earlier Fathers invariably conceived the Three Persons as each exercising a distinct and separate function.

Finally, we have the doctrine of Circuminsession (πεπεράσθες). By this is signified the reciprocal existence and concomitance of the Three Persons. The term πεπεράσθες is first used by St. John Damascene. Yet the doctrine is found much earlier. Thus St. Cyril of Alexandria says that the Son is called the Word and Wisdom of the Father “because of the reciprocal inherence of the one in the other” (14, παντες ἀναλωμενες ὑμενας αὐτὸς ὑμας ὑμας ὑμας ὑμας).—P. G., LXXIII, 81). St. John Damascene assigns a twofold basis for this existence of the Persons. In some passages he explains it by the doctrine already mentioned, that the Son and the Spirit are διαδοχοι of the Father (cf. “De recta sententia.”, P. G., XCIV, 1424). Thus understood, the Circuminsession is a corollary of the doctrine of Recapitulation. He also understands it as signifying the identity of Essence, will, and action in the Persons. Wherever these are peculiar to the individual, as is the case in all creatures, there, he tells us, we have separate existence (πεπερασθές διδοι). In the Godhead the essence, will, and action are but one. Hence we have a perfect per se, and not separate, Circuminsession (πεπερασθές) (Fed. orth., i, viii, P. G., XCIV, 828). Here, then, the Circuminsession has its basis in the Homoiosia.

It is easy to see that the Greek system was less well adapted to meet the exigencies of the Arian and Macedonian heresies than was that subsequently developed by St. Augustine. Indeed the controversies of the fourth century brought some of the Greek Fathers notably nearer to the positions of Latin theology. We have seen that they were led to affirm the action of the Three Persons to be but one. Didymus even employs expressions which seem to show that he,
like the Latins, conceived the Nature as logically antecedent to the Persons. He understands the term God as signifying the whole Trinity, and not, as do the other Greeks, the Father alone: "When we pray, whether we say, 'Kyrie eleison', or 'O God aid us', we do not miss our mark: for we include the whole of the Blessed Trinity in one Godhead" (De Trin., 11, iii, P. G., XXXIX, 750).

C. Mediate and Immediate Procession.—The doctrine that the Spirit is the image of the Son, as the Son is the image of the Father, is generally attributed to St. Gregory Thaumaturgus in his Creed (P. G., X, 986). It is assumed by St. Athanasius as an indisputable premise in his controversy with the Macedonians (Ad Serap., 1, xxii, 35; ii, iv, v). It is implied in the comparisons employed both by him (Ad Serap., I, xix) and by St. Gregory Nazianzen (Orat. xxxi, 31, 32), of the Three Divine Persons to the sun, the ray, the light; and to the source, the spring, and the stream. We find it also in St. Cyril of Alexandria ("Thesaurus assert.," 33, P. G., LXXV, 572), St. John Damascene ("Fid. orth.", I, 13, P. G., XCIV, 856), etc. This supposes that the procession of the Son from the Father is immediate; that of the Spirit from the Father is mediately. He proceeds from the Father through the Son. So also St. Cyril and others. It is the view of those who used these expressions conceived the Divine Procession as taking place, so to speak, along a straight line (P. G., CLXI, 224). On the other hand, in Western theology the symbolic diagram of the Trinity has ever been the triangle, the relations of the Three Persons one to another being precisely similar. The point is worth noting, for this diversification of symbolic presentation leads inevitably to very different expressions of the same dogmatic truth. It is plain that these Fathers would have rejected no less firmly than the Latins the later Photian heresy that the Holy Spirit proceeds from the Father alone. (For this question the reader is referred to Holy Scripture.)

I. The Son.—The Greek theology of the Divine Generation differs in certain particulars from the Latin. Most Western theologians base their theory on the name, Logos, given by St. John to the Second Person. This they understand in the sense of "concept" ("verbum mentale"), and hold that the Divine Generation is analogous to the act by which the created intellect produces its concept. Among the Fathers who write on this subject is St. Cyril. The doctrine of the manner of the Divine Generation to be altogether beyond our comprehension. We know by revelation that God has a Son; and various other terms besides Son employed regarding Him in Scripture, such as Word, Brightness of His glory, etc., show us that His Sonship must be conceived as free from any relation to material generation. More we know not (of St. Gregory Nazianzen, "Orat. xxxii,", § 8, P. G., XXXVI, 84; Cyril of Jerusalem, "Cat.", xi, 19; John Damascene, "Fid. orth.", I, viii, P. G., XCIV, 820). One explanation only can be given, namely, that the perfection we call fecundity must needs be found in God the Absolutely Perfect (St. John Dam., "Fid. orth.", I, viii, P. G., XCIV, 820). One might indeed it would seem that the greater majority of the Greek Fathers understood Νόει not of the mental thought, but of the utter word ("Dion. Alex.", P. G., XXXV, 513; Athanasius, ibid.; Cyril of Alexandria, "De Trin.", II, P. G., LXXV, 765). They did not see in the term a revelation that the Son is begotten by way of intellectual procession, but viewed it as a metaphor intended to exclude the supposition of material associations of parentage (Gregory of Nyssa, "C. Eunom.", IV, P. G., XIX, 621; Greg. Nazianzen, "Orat. xxi,", § 20, P. G., XXXVI, 129; Basil, "Hom. xvi", P. G., XXXI, 477; Cyril of Alexandria, "Thesaurus assert.," vi, P. G., LXXV, 76).

We have already adverted to the view that the Son is the Wisdom and Power of the Father in the full and formal sense, as it appears from the time of Origen to that of St. John Damascene (Origen apud Athan., "De deor. Nic.", § 27, P. G., XXV, 466; Athanasius, "Con. Arianos", I, § 19, P. G., XXVI, 52; Cyril of Alexandria, "Thesaurus", P. G., LXXV, 44; John Damascene, "Fid. orth.", I, xii, P. G., XCIV, 849). It is based on the Platonic philosophy accepted by the Alexandrians. Against the Aristotelian view, however, the Aristotleanism of the Scholastic theologians. In Aristotelian philosophy perfection is always conceived statically. No action, transient or immanent, can proceed from any agent unless that agent, as statically conceived, possesses whatever perfection is contained in the action. The Alexandrine standpoint was other than this. To them perfection must be in dynamic activity. God, as the supreme perfection, is from all eternity self-moving, ever adorning Himself with His own attributes; they issue from Him and, being Divine, are not accidents, but subsistent realities. To these thinkers, therefore, there was no inadmissibility in the supposition that God is wise with the Wisdom which is the result of His own immanent activity, because this wisdom is possessed by God. He is the Son. The arguments of the Greek Fathers frequently presuppose this philosophy as their basis; and unless it be clearly grasped, reasoning which on their premises is conclusive will appear to us invalid and fallacious. Thus it is sometimes urged as a reason for rejecting Arianism that, if there were a time when the Son was not, then really received God, the wisdom and power of God—a conclusion from which even Arians would shrink.

E. The Holy Spirit.—A point which in Western theology gives occasion for some discussion is the question as to why the Third Person of the Blessed Trinity is termed the Holy Spirit. St. Augustine suggests that it is because He proceeds from both the Father and the Son, and hence is applicable to both (De Trin., xv, n. 37). To the Greek Fathers, who developed the theology of the Spirit in the light of the philosophical principles which we have just noticed, the question presented no difficulty. His name, they held, reveals to us His distinctive character as the Third Person, just as the names Father and Son manifest the most characteristic features of the Persons (cf. Gregory Thaum., "Eth. fid.", P. G., X, 985; Basil, "Ep. cexiv", 4, P. G., XXXIII, 789; Gregory Naz., "Or. xxv", 16, P. G., XXXV, 1221). He is ο ἁγιο-πνευματος, the hypostatic holiness of God, the holiness by which God is holy. Just as the Son is the Wisdom and Power by which God is wise and powerful, so the Spirit is the Holiness by which He is holy. Had there ever been a time, as the Macedonians dared to say, when the Holy Spirit was not, then at that time God would have not been holy (Gregory Naz., "Orat. xxxi", 4, P. G., XXXVI, 138).

On the other hand, τινος was often understood in the light of John, xx, 22, where Christ, appearing to the Apostles, breathed on them and said, "Receive ye the Holy Ghost." He breathes of Christ (John Damascene, "Fid. orth.", I, viii), breathed by Him into us, and dwelling in us as the breath of life by which we enjoy the supernatural life of God's children (Cyril of Alexandria, "Thesaurus", P. G., LXXV, 544, etc., cf. Petav., "De Trin.", V, viii). The office of the Holy Spirit in thus elevating us to the supernatural splendor is, however, conceived in a manner somewhat different from that of Western theologians. According to Western doctrine, God bestows on man sanctifying grace, and consequent on that gift the Three Persons come to His soul. In Greek theology the order is reversed: the Holy Spirit does not come to us because we have received
sanctifying grace; but it is through His presence we receive the gift. He is the seal, Himself impressing on us the Divine image. That Divine image is indeed realized in us, but the seal must be present to secure the continued existence of the impression. Apart from Him it is not found (Origen, "In Jean. ii", vi, 14, 5. 129; Didymus, "De Spiritu Sancto," x, 11, P. C., XXXIX, 1040-13; Athanasius "Ep. ad. Scarp.", III, iii, P. C., XXXVI, 629). This union with the Holy Spirit constitutes our deification (τὸ ὁμοιωμα). Inasmuch as He is the image of Christ, He imprints the likeness of Christ upon us; since Christ is the image of the Father, we too receive the likeness of the Father. This does not depart from the main lines which He laid down, although in the Golden Age of Scholasticism His system was developed, its details completed, and its terminology perfected. It received its final and classical form from St. Thomas Aquinas. But it is necessary first to indicate in what consisted the transition effected by St. Augustine. This may be shown in certain ways.

(1) He views the Divine Nature as prior to the Personals. Deus is for him not God the Father, but the Trinity. This was a step of the first importance, safeguarding as it did alike the unity of God and the equality of the Persons in a manner which the Greek system could never do. As we have seen, one of the great difficulties of the Greeks, Origen and John Chrysostom as this standpoint; and it is possible that Augustine may have derived this method of viewing the mystery from him. But to make it the basis for the whole treatment of the doctrine was the work of Augustine's genius.

(2) He insists that every external operation of God is to be traced to the Trinity, and cannot be attributed to one Person alone (see Holy Ghost). The Greek Fathers had, as we have seen, been led to affirm that the action (διανοια) of the Three Persons was one, and one alone. But the doctrine of appropriation was unknown to them, and thus the value of this conclusion was obscured by a traditional theology implying the distinct activities of Father, Son, and Holy Spirit.

(3) By indicating the analogy between the two processes within the Godhead and the internal acts of thought and will in the human mind (De Trin., IX, iii, 3; X, xi, 17), he became the founder of the psychological theory of the Trinity, which, with a very few exceptions, was accepted by every subsequent thinker.

In the following exposition of the Latin doctrines, we shall follow St. Thomas Aquinas, whose treatment of the doctrine is now universally accepted by Catholic theologians. It should be observed, however, that this is not the only form in which the psychological theory has been proposed. Thus Richard of St. Victor, Alexander of Hales, and St. Bonaventure, while adhering in the main to Western tradition, were more influenced by Greek thought, and gave us a system differing somewhat from that of St. Thomas.

A. The Son.—Among the terms employed in Scrip-
by which God loves; but in loving Himself God breathes forth this subsistent term. He is Hypostatic Love. Here, however, it is necessary to safeguard a point of revealed doctrine. It is of faith that the process of the Holy Spirit is not generation. The Son is "the only begotten of the Father" (John, i, 14). And the Athanasian Creed expressly lays it down that the Holy Ghost is "from the Father and the Son, begotten, not created, but proceeding". If the immanent act of the intellect is rightly termed generation, on what grounds can that name be denied to the act of the will? The answers given in reply to this difficulty by St. Thomas, Richard of St. Victor, and Alexander of Hales are very different. It will be sufficient here to note St. Thomas's solution. He tells us that nature is not necessarily involved in the production of a term in the likeness of the thing conceived. This is not so in regard to the act of the will. Here the primary result is simply to attract the subject to the object of his love. This difference in the acts explains why the name generation is applicable only to the act of the intellect. Generation is essentially the production of an object by the will, and no process which is not essentially of that character can claim the name.

The doctrine of the procession of the Holy Spirit by means of the act of the Divine will is due entirely to Augustine. It is nowhere found among the Greeks, who simply declare the procession of the Spirit to be beyond our comprehension; nor is it found in the Latins before his time. His mental attitude was, as early as "De fide et scholio" (A.D. 393) (P. G., XL, 191); and in the "De Trinitate" (A.D. 415) develops it at length. His teaching was accepted by the West. The Scholastics seek for Scriptural support for it in the name Holy Spirit. This must, they argue, be, like the names Father and Son, a name expressive of a relational category within the Godhead proper to the Person who bears that name. Attraction of this sort applied to the person or thing, signifies that the being of which it is affirmed is devoted to God. It follows therefore that, when applied to a Divine Person as designating the relation uniting Him to the other Persons, it must signify that the process determining His origin is one which of its nature involves devotion to God. In other words, the Person in which which God is love. The argument is ingenious, but hardly convincing; and the same may be said of a somewhat similar piece of reasoning regarding the name Spirit (I, q. xxxvi, a. 1). The Latin theory is a noble effort of the human reason to penetrate the verities which revelation has left veiled in mystery. It harmonizes, as we have said, with all the truths of faith. It is admirably adapted to lead us to a fuller comprehension of the fundamental doctrine of the Christian religion. But more than this must not be claimed for it. It does not possess the sanction of revelation.

C. The Divine Relations.—The existence of relations in the Godhead may be immediately inferred from the doctrine of processionals, and as such is a truth of faith. Where it has become the real process and the principle and the term are really related. Hence, both the generation of the Son and the procession of the Holy Spirit must involve the existence of real and objective relations. This part of Trinitarian doctrine was familiar to the Greek Fathers. In answer to the Eunomian objection, that consubstantiality rendered any distinction between Persons impossible, Gregory of Nyssa replies: "Though we hold that the nature [in the Three Persons] is not different, we do not deny the difference arising in regard of the source and that which proceeds from the source [τοις κατά αυτοις τοις ανεστάτοις καθότι]; but in this alone do we admit that one Person differs from another" ("Quod non sunt tres dii", P. G., XLV, 134. Cf. Greg. Naz., "Or. theod.", V, ix, P. G., XXXVI, 141; John Damascene, "F.O.", I, viii, P. G., XCIV, 528). Augustine also insists that of the ten Aristotelian categories two, substance and relation, are found in God ("De Trin.", V, v, P. L., XLII, 913). But it was at the hands of the Scholastic theologians that the question received its full development. The results to which they were led, though not to be reckoned as part of the dogmas, were found to throw great light upon the mystery, and to be of vast service in the solution of some of the objections urged against it.

From the fact that there are two processionals in the Godhead, each involving both a principle and a term, it follows that there must be four relations, two of origination (paternitas and spiratio) and two of procession (processionis and substansia), what constitute the distinction between the Divine Persons. They cannot be distinguished by any absolute attribute, for every absolute attribute must belong to the infinite Divine Nature and this is common to the Three Persons. Whatever distinction there is must be in the relations alone. This conclusion is held as absolutely certain by all theologians. Aquinas derived the Marcinus-Polyzoa-Scholastic theory of the Persons of St. Gregory of Nyssa, it was clearly enunciated by St. Anselm ("De process. Sp. S.", ii, P. L., CLVIII, 288) and received ecclesiastical sanction in the "Decretum pro Jacobitis" in the form: "[In divinis] omnium sunt unum ubi non obviatur relationis oppositorius." Since this is so, it is manifest that the four relations suppose four persons. The person relation between spiration on the one hand and either paternity or filiation on the other. Hence the attribute of spiration is found in conjunction with each of these, and in virtue of it they are each distinguished from procession. As they share one and the same Divine Nature, so they possess the same virtus spirations, and thereby constitute a single original property of the Holy Spirit.

Inasmuch as the relations, and they alone, are distinct realities in the Godhead, it follows that the Divine Persons are none other than these relations. The Father is the Divine Paternity, the Son the Divine Filiation, the Holy Spirit the Divine Procession. Here it must be borne in mind that the relations are not names, but attributes. Hence these abstract terms might suggest whatever is in God must needs be subsistent. He is the Supreme Substance, transcending the divisions of the Aristotelian categories. Hence, at one and the same time He is both substance and relation. (How it is that there should be in God real relations, though it is altogether impossible that quantity or number should be found in aum, is a question involving a discussion regarding the metaphysics of relations, which would be out of place in an article such as the present. A lucid treatment may be found in Bilhot, "De Deo uno et trino", 3rd ed., 380 sqq.)

It will be seen that the doctrine of the Divine relations provides an answer to the objection that the doctrine of the Trinity rests on two things which are identical with the same thing are identical one with another. We reply that the axiom is perfectly true in regard to absolute entities, to which alone it refers. But in the dogma of the Trinity when we affirm that the Father and Son are alike identical with the Divine Essence, we are affirming that the Supreme Infinite Substance is identical not to itself, but with each of two relations. These relations, in virtue of their nature as correlatives, are necessarily opposed the one to the other, and therefore different. Again it is said that if there are Three Persons in the Godhead none can be infinite, for each must lack something which the others possess. We reply that a relation, viewed purely as such, is not like quantity or quality, an intrinsic perfection. When we affirm a
relation of anything, we affirm that it regards something other than itself. The whole perfection of the Godhead is contained in the one infinite Divine Essence. The Father is that Essence as it eternally regards the Son and the Spirit; the Son is that Essence as it eternally regards the Father and the Spirit; the Holy Spirit is that Essence as it eternally regards the Father and the Son. But the eternal regard by which each of the Three Persons is constituted is not an addition to the infinite perfection of the Godhead.

The theory of relations also indicates the solution to a difficulty near the Father propounded by anti-Trinitarians. It is urged that since there are Three Persons there must be three self-consciousnesses; but the Divine mind ex hypothesi is one, and therefore can possess but one self-consciousness; in other words, the dogma contains an irreconcilable contradiction (cf. Ménégoz, "Étude sur la Trinité", 5). This whole objection rests on a petitio præcepti; for it takes for granted the identification of person and of mind with self-consciousness. This identification is rejected by Catholic philosophers as altogether misleading. Neither person nor mind is self-consciousness; though a person must needs possess self-consciousness, and consciousness attests the existence of mind (see Personality). Granted that in the eternal relations transcended, there are three relations which are subsistent realities, distinguished one from another in virtue of their relative opposition, then it will follow that the same mind will have a three-fold consciousness, knowing itself in three ways in accordance with its three modes of existence. It is impossible to establish that, in regard of the infinite mind, such a suggestion is a contradiction.

The question was raised by the Scholastics: In what sense are we to understand the Divine act of generation? As we conceive things, the relations of paternity and filiation are due to an act by which the Son proceeds from the Father, the relations of spora- tion and procession, to an act by which the Father and Son breathe forth the Holy Spirit. The fathers answer that the acts are identical with the relations of generation and procession; only the mode of expression on our part is different (l, q. xli, a. 1, ad 2am). This is due to the fact that the forms alike of our thought and our language are moulded upon the material world in which we live. In this world origin is everywhere due to the effect of a change by an agent. We call the effecting of the change action, and its reception passion. Thus, action and passion are different from the permanent relations consequent on them. But in the Godhead origination is eternal: it is not the result of change. Hence the term signifying action denotes not the production of the relation, but purely the relation of the Originator and the Originated. The terminology is unavoidable because the limitations of our experience force us to represent this relation as due to an act. Indeed throughout this whole subject we are hampered by the imperfection of human language as an instrument wherein to express verities higher than the facts of the world. When, for instance, we say that the Father and the Son regard the Holy Spirit, we seem to suggest that these are forms inherent in Him as in a subject. We know, indeed, that in the Divine Persons there can be no composition: they are absolutely simple. Yet we are forced to speak thus; for the one Personality, notwithstanding its simplicity, is related to both the others, and by different relations. We cannot express this save by attributing to Him filiation and procession (1 Q xxiii, a. 2).

D. Divine Mission.—It has been seen that every action of God in regard of the created world proceeds from the Three Persons indifferently. In what sense, then, are we to understand such texts as "God sent... his Son into the world" (John, iii, 17), and "the Paraclete cometh, whom I will send you from the Father" (John, xx, 26)? What is meant by the mission of the Son and of the Holy Spirit? To this it is answered that mission supposes two conditions: (1) That the person sent should be properly distinct from the one who sent him and (2) that the person sent should come to be at the place indicated. The procession, however, may take place in various ways—by command, or counsel, or even origin. Thus we say that a king sends a messenger, and that a tree sends forth buds. The second condition, too, is satisfied either if the person sent must come to be at the place where previously he was not, or if, although he was already there, he came to be there in a new manner. Though God the Son was already present in the world by reason of His Godhead, His Incarnation made Him present there in a new way. In virtue of this new presence and of His procession from the Father, He is rightly said to have been sent into the world. So, too, in regard of the mission of the Holy Spirit. The gift of grace renders the Blessed Trinity present to the soul in a new manner, viz., as the object of direct, though inchoative, knowledge and as the object of experimental love. By reason of this new mode of presence common to the whole Trinity, the Second and the Third Persons, inasmuch as each receives the divine Nature, if we come to be at the place of a procession, may be said to be sent into the soul.

Among the very numerous patristic works on this subject, the following call for special mention: St. Arius of Alexandria, Quaestiones Controversiae; St. Gregory Nazianzen, Orations I de Theologia; Dionysius the Areopagite, De Coelestibus, De Mundi Gens, De Tatiana, De Rerum Principiis, De Trinitatibus, De Trinitate, De Trinitate, De Spiritu Sancto, De Deo Patre, De Deo Filio, De Deo Spiritu Sancto contra Marcum Ephesinum. Among these Patristic Writers were: Pseudo-Dionysius, De Trinitate (Vienne, 1721); Thomas Aquinas, De Veritate, De Trinitate, De Trinitate (Paris, 1895); Franzelin, De Deo Trino (Rome, 1896); G. Baronius, Historiae de legum et sacrosanctum sacrosanctam, (Paris, 1891); H. de Courcel, Etudes sur la Trinité (Paris, 1892); Lindworth, De origine et finibus et Trinitatis, (Paris, 1897), Rulle, L'origine et les effets de la Trinité (Paris, 1894); B. Menke, De origine et finibus et Trinitatis (Paris, 1894); H. de Courcel, Etudes sur la Trinité (Paris, 1892); Lindworth, De origine et finibus et Trinitatis, (Paris, 1897).

Among recent Protestant writers should be mentioned: Ryal, Deinse Fides Nostra (Oxford, 1843), A. M. Donner, Doctrine of the Person of Christ (translation) (Edinburgh, 1891).

G. H. Joyce.

Trinity College, an institution for the higher education of Catholic women, located at Washington, D. C., and empowered under the terms of its charter (1897) to confer degrees. The college originated in the desire of the Sisters of Notre Dame de Namur, who had been thirty-five years established in the city of Washington, to open a select day-school in the suburb of Brookland. Before requesting the necessary ecclesiastical sanction, it was proposed to them by the authorities of the Catholic University to make the new school a college equal in efficiency to the women's colleges already established in the United States. Cardinal Gibbons, chancellor of the university, heartily endorsed their project and replied, "That such an institution, working in union with, though entirely independent of, the Catholic University, will do incalculable good in the cause of higher education" (5 April, 1897). Sister Julia, then provincial superior of the Sisters of Notre Dame, secured a tract of thirty-three acres lying between Michigan and Lincoln Avenues, Brookland. The cornerstone was laid on St. Patrick's Day, 1898. The Hall of the building was dedicated by Cardinal Gibbons, on 22 November, 1900, and the structure was completed in 1910. It contains residence halls for two hundred students, lecture rooms, laboratories,
a museum, a library of 12,000 volumes, and a temporary chapel. The O'Connor Art Gallery and Auditorium is specially provided by the generosity of Judge and Mrs. M. P. O'Connor of San José, California, houses a large and valuable collection of paintings, water colors, mosaics, photographs, and statuary, which was opened to visitors on 31 May, 1901, in the presence of the donors. The Ohalan Social Hall contains some rare old paintings, a bequest to the college, in 1857, by Miss Amanda Dolahan of Philadelphia. The administration of the college is in the hands of an advisory board, of which Cardinal Gibbons is president, and the members comprise the rector, and vice-rector of the Catholic University, the provincial superior of the Sisters of Notre Dame, the president of the college, who is also the superior of the community, and the president of the auxiliary board of regents. The auxiliary board of regents and its associate boards draw their members from all parts of the United States, being composed of Catholic ladies who can help the cause of higher education by their influence and example. The college has no endowment. By the liberality of friends, seventeen scholarships have been established. The faculty of Trinity College is composed of six professors from the Catholic University in the departments of philosophy, education, teleology, economics, and sociology, and seventeen Sisters of Notre Dame in the departments of religion, Sacred Scripture, ancient and modern languages, English, history, logic, mathematics, the physical sciences, music, and art. The college opened its courses on 7 November, 1900, with twenty-two students in the Freshman class and has grown only by promise and admission. For 1911-12, 160 were registered. Admission is by examination according to the requirements of the College Entrance Examination Board; no specialists are received; and there is no preparatory department. The number of degrees conferred (1901-1912) is 160, viz.: master of arts, 8; bachelor of arts, 130; bachelor of letters, 20; bachelor of science, 2.

C., 1911); McDermott, Trinity College and the Higher Education in The Catholic World (June, 1904); Howe, Trinity College in Donahoe's Magazine (October, 1906).

SISTER OF NOTRE DAME.

Trinity Sunday is the first Sunday after Pentecost, instituted to honor the Most Holy Trinity. In the early Church no special Office or day was assigned for the Holy Trinity. When the Arian heresy was spreading the Fathers prepared an Office with canticles, responses, a Preface, and hymns, to be recited on Sundays. In the Sacramentary of St. Gregory the Great (P. L., LXVIII, 106) there are prayers and the Preface of the Trinity. The Micrologus (P. L., CL, 1020), written during the pontificate of Gregory VII (Nilles, II, 400), call the Sunday after Pentecost a Dominica veneris, with no special Office, but added that in some places they recited the Office of the Holy Trinity composed by Bishop Stephen of Liège (903-20). By others the Office was said on the Sunday before Advent. Alexander II (1061-1073), not 111 (Nilles, I, c.), refused a petition for a special feast on the plea that such a feast was not customary in the Roman Church which, during the pontificate of the Holy Trinity by the Glory Patri, etc., he did not forbid the celebration where it already existed. John XXII (1316-1334) ordered the feast for the entire Church on the first Sunday after Pentecost. A new Office had been made by the Franciscan John Pecham, Canon of Lyons, later Archbishop of Canterbury (d. 1292). The feast was raised to a double of the second class but was raised to the dignity of a principal class, 24 July, 1911, by Pius X (Aeta Ap. Sedis, III, 351). The Greeks have no special feast. Since it was after the first great Pentecost that the doctrine of the Trinity was proclaimed to the world, the feast becomingly follows that of Pentecost.

Nilles, Kd. mon. (Innsbruck, 1857); Bisten, Denkwürdigkeiten (London, 1901), 116; Buder, Geschichten der Täufer (Freiburg, 1895), 298. Francis Mershman.

Triple-Candlestick, a name given along with several others (e.g., reed, auliculum, lumen Christi) to a church ornament used only in the office of Holy Saturday. The three candles of which it is composed are placed successively, being successively lighted, as the sacred ministers proceed up the church, the fire consecrated in the porch, and at each lighting thefile the deacon sings the acclamation "Lumen Christi", the assistant deacon reflecting and answering "Deo gratias". As this ceremony is fully discussed under the heading Lumen Christi (and cf. Fire, Liturgical Use of) it will be sufficient to say a word here about the material instrument used for the purpose. Both the rubrics of the Missal and the "Sacramentale Episcoporum" seem to assume that the so-called candlestick is not a permanent piece of furniture, but merely an arrangement of three candles temporarily attached to a reed or wand, such a reed for example as is used by the acolytes to light the candles with. "Preparatur arundo cum tribus candelis in summata positis" (Car. Eps., II, xxvii, 1). In practice, however, we often find a brass candlestick constructed for the purpose with a long handle. Barbier de Montault (Traité pratique, etc.) says that the Missal rubric (arundo cum tribus candelis in summata illius triangulo distinctis) that one of the three candles should stand higher than the other, so that the three flames may form a triangle in the vertical plane. A triple and double candlestick are used by bishops of the Greek Church to bless the people with, and an elaborate symbolism is attached to this rite.

Thurston, Lent and Holy Week (London, 1904).

Herbert Thurston.

Tripoli, Prefecture Apostolic or.—Tripolitania, one of the nations of Barbary. It lies in North Africa along the Mediterranean, from 6° to 22° E. long., and from 27° to 33° N. lat., between Egypt on the east, Tunisia on the west, the desert on the south, and the sea on the north. Its area cannot be precisely determined, but equals at least 305,641 sq. miles. The boundary of some portions are ill-defined. Shortly after the outbreak of hostilities between the Italians
TRIPOLI

and Turks, the Anglo-Egyptian Government, at the request of the Sultan of Turkey, occupied the Bay of Sollum with the adjacent territory, and thus annexed to Egypt 219 miles of coast-line, with a depth as yet undefined, in the Delta of the Nile, and declared the chief ports of the Gulf of Matta (1530-51); but in 1551 the renegade Sinan Pasha and Dragut took possession of them, and annexed the whole province to the Ottoman Empire.

In 1714 Ahmed Bey, called the Great, achieved independence and founded the dynasty of Karamanis, a descendant of whom, Hassun Pasha, has just been removed by the Bey of Tripoli. In the treaty of Paris, the request of the Tripoliots themselves, who were being molested by the tribe Oule-Simias, the Porte restored its ancient rights, landed troops, and made the country a vilayet immediately subject to Constantinople. In 1840 the Turks added it to Fezzan, the Phazzania of the Romans, and the present sanjak of Murzuk, which had been independent under the Beni-Khattab, now subordinated to the Sultans of Kamein (twelfth to fourteenth century), then to those of Morocco (sixteenth century), finally paying tribute to the Beys of Tripoli. In recent years they have likewise extended their dominion to the oases of Ghadames, Rhat, etc., and sought to link their territory directly with Tripoli and the other Mussulman States of Central Africa. At the Convention of 21 March, 1889, determined the zones of influence in the country of these two nations, consequently terminating the victorious progress of the Val of Tripoli.

Besides the vilayet of Tripoli, Tripolitana is represented by the autonomous sanjak of Benghazì, district subject to Constantine. The region consists of the ancient Cyrenaica, lying between Egypt and the Gulf of the Greater Syrtis. Cyrenaica, later the plateau of Barca, consisted chiefly of five Greek cities forming the Pentapolis Lybica, the alternative name of the region. These were Cyrene, now Grenneh, four leagues inland; Barca, which gave its name to the whole physical region of the interior; the Gulf of the sea; Tënechia, later Arsinöe and now Tërra; Hesperides, later Berenice, or Benghazì; Apollonia, now Marsa Sussa, which served as a port for Cyrene. In the direction of Egypt there were other cities on the coast, Polemantis (Tolmeita), Nanasthumus (Marsa-al-Khalah), Dernis (Dernah), Aylius, etc. On the Egyptian side the frontier was marked by Greater Chenemos (Raqefet), on the western side the Phulienes at the eastern corner of the Greater Syrtis. In the south Cyrenaica included, at least theoretically, Phazzania, or modern Fezzan, and the oasis of Auliga. The sanjak of Benghazì, formed in 1879, is very little known, apart from some points on the coast where European travellers have been able to penetrate. It measures possibly 63,302 square miles, exclusive of the desert region, and has about 300,000 inhabitants. The country is divided into two districts, that on the coast, which is incredibly fertile, though poorly cultivated, and that of the plateaux, a very poor region, at an average height of 1040 feet, and inhabited chiefly by nomad bedouins. Beyond these lies the desert of the Northern Croatic, which by the Shalah to the Senoussi, a Mussulman sect very hostile to Christianity, and whose religious influence is felt throughout Africa and a portion of Arabia.

Consequent upon an ultimatum based upon trivial reasons, Italy declared war against Turkey 27 Sept., 1911, and declared its intention of taking possession of Tripoli and Cyrenaica. By a decree of 5 Nov. following, King Victor Emmanuel III proclaimed the annexation of these two provinces and their dependencies to the Kingdom of Italy. It only remained to take possession of the country. At present after more than seven months of war, and although they have put in the field an army of 100,000 men, the Italians now occupy only five points on a coast 1212 miles in
Tripoli (Tripolitana), a Maronite and Melchite diocese, in Syria. The primitive name of the town is not known; Dhomre (Revue biblique, 1908, 508 sqq.) suggests that it is identical with Shii-ga-in mentioned in the *El Amarnette* tablet. Two centuries after the visit of the Emperor Marcianus, whose feast is observed on 18 June (Analecta bollandiana, XIX, 9-12). The see, which was in the Province of Tyre and the Patriarchate of Antioch, had a bishop, Heliadus, in 325; other bishops were: the Arian Theodosius; Commodus, who was present at the Council of Ephesus in 431; and Theodorus, at that of Chalcedon in 451 (Le Quien, "Oriens christianus," 221-24). After an earthquake Tripoli was restored by Emperor Marcianus about the middle of the fifth century, to be captured by the Arabs in 635, when it became a powerful centre of the Shiite religion, resisting all attacks by the Byzantines. It then had a university and a library of more than 100,000 volumes; the latter was burned on the arrival of the Crusaders. During the time of St. Gilbert, who was unable to capture the city, built on a neighbouring hill the stronghold which still exists and compelled the inhabitants to pay him tribute. In 1100 the city was captured, made a countship, and given to Bertrand, Raymond's son, and to his descendants. The latter owned it until 1269, when it was taken from them by Sultan Qalaun. In 1320 it was captured by the Nawar of Damascus. The Turks finally captured Tripoli and still retain possession of it. In 1697 the Maronite prince Youmies was martyred there for the Faith, and in 1711 the Sikhuan Duahan-Shahid.
Trisagion. See Agios O Theos.

Trissino, Giangiorgetto, Italian poet and scholar, b. of a patrician family in Venice in 1478; d. at Rome, 8 December, 1550. He had there a good humanistic training, studying Greek at the noted Demetrius Chaleondylas at Milan and philosophy under Niccolò da Ubaldo at Ferrara. His culture recommended him to the humanist Leo X, who in 1513 sent him to Germany as his ambassador. In 1515 the Emperor Clement VII showed him special favour, and employed him as ambassador. In 1522 the Emperor Charles V made him a count palatine. In spite of the banishment from Venice pronounced upon him in 1509 because his family had favoured the plans of Maximilian, he was held in honour throughout Italy. Wherever he abode his home was a centre for gatherings of the world's learned men of the time. His family life was far from happy, apparently through little fault of his own. In the history of modern European literature Trissino occupies a prominent place because of his tragedy “Sophonisba” (1515; recent ed., Bologna, 1884), the first tragedy in Italian to show deference to the classic canons of Aristotle regu- larity, he disapproved of the general freedom of the elizibarves characters as written by Ariosto. In his own composition the “Italia liberata dai Goti” (1547-8), dealing with the campaigns of Belisarius in Italy, he sought to show that it was possible to write in the vernacular an epic in accordance with the classic precepts. The result is a cold and colourless composition.

He was one of the many who have engaged in the discussion as to what is true literary Italian. Following the lead of Dante, he espoused in his “Castellino” the indefensible theory that the language is a courtly one made up of contributions from the three different centres in Italy, instead of believing as it is, fundamentally of Tuscan origin. For clearness he proposed that in writing Italian certain new characters (derived from the Greek alphabet) be adopted to show the difference between open and close e and o and voiced and voiceless s and z. This wise proposition was ignored. “I Simulini” (1518) is a verse elegy on the death of the lyric poet of the “Men- achini” of Plautus, “I Ritratti” (1521) which is a composite portrait of feminine beauty, and the “Poetica”, which contains his summing up of the Aristotelian principles of literary composition, made up the rest of his important writings. An edition of his collected works was published by Maffei at Verona in 1729.

J. D. M. Ford.

Tritheists (TRITHETES), heretics who divide the Substance of the Blessed Trinity.

(1) Those who are usually meant by the name were a section of the Monophysites, who had great influence in the second half of the sixth century, but have left no traces save a few scanty notices in John of Ephesus, Photius, Leontius, etc. Their founder is said to have been a certain John Asenianus, head of a Monophysite school at Antioch. But the principal writer was John Philoponus, the great Aristotelian commentator. The leaders were two bishops, Conon of Tarsus and Eugenius of Seleucia in Isauria, who were deposed by their comprovincials and took refuge at Constantinople. There they found a powerful convert and protector in Athanasius the Monk, a grandson of the Empress Theodora. Philoponus dedicated to him a book on the Trinity, and pleaded his infirmities when he was summoned by Justinian to the Court to give an account of his teaching. But Conon and Eugenius had to dispute in the reign of Justin II (565-78) in the presence of the Catholic patriarch, John Scholasticus (565-77), with two champions of the moderate Monophysite views, Stephen and Theodosius. They were banished to Palestine, and Philoponus wrote a book against John Scholasticus, who had given his verdict in favour of his adversaries. But he developed a theory of his own as to the Resurrection (see Hetero- cularism) on account of which Conon and Eugenius wrote a treatise against him in collaboration with Theocritus, the founder of the Agnoce, in which they declared his views to be altogether unchristian. The two bishops together with a deprived bishop named Theonas proceeded to consecrate bishops for the sect, which they established in Corinth and Athens, in Roman Africa, in the Arabian Patriarchate, while their agents travelled through Syria and Cilicia, Isauria and Cappadocia, converting whole districts, and ordaining priests and deacons in cities, villages, and monasteries. Eugenius died in Pamphylia; Conon returned to Constantinople. We are assured by Levitius that it was the Aristotelianism of Philoponus which made him teach that there are in the Holy Trinity three partial substances (μακρό ουσια, δωρα θεωριας, δωρα φρονοι) and one common. The genesis of the heresy has been explained (for the first time) under Monophysites, where an account of Philoponus’ writings and those of Stephen Gobaris, another member of the sect, will be found.

(2) In the Middle Ages Roscellin of Compiègne,
the founder of Nominalism, argued, just like Philoponus, that unless the Three Persons are tres res, then the father must have been incarnate. He was refuted by St. Anselm.

(3) Among Catholic writers, Pierre Faydit, who was expelled from the Oratory at Paris in 1671 for disobedience and died in 1709, fell into the error of Trithemius in his "Éclaircissements sur la doctrine et l'histoire ecclésiastiques des deux premiers siècles" (Paris, 1696), in which he tried to make out that the earliest Fathers were Trithemists. He was replied to by the Premonstratensian Abbot Louis-Charles Hugo ("Apologie du système des Saints Pères sur la Trinité," Luxemburg, 1699). A canon of Trèves named Ocubis, who was infected with the doctrines of the "Enlightenment", similarly attributed to the Fathers his own view of three similar natures in the Trinity, calling the numerical unity of God an invention of the Scholastics. His book, "Opuscula de Deo Uno et Trino" (Mainz, 1789), was condemned by Pius VII in a Brief of 14 July, 1804.

(4) Among Protestants, Heinrich Nicolaus (d. 1690), a professor at Dantz and at Elbing (not to be confounded with the elsewhere mentioned), is worth mention. The best known is William Sherlock, Dean of St. Paul's, whose "Vindication of the Doctrine of the Trinity" (London, 1690) against the Socinians was attacked by Robert South in "Animadversions on Dr. Sherlock's Vindication" (1693). Sherlock's work is said to have made William Manning a Socian and Thomas Epimly an Arian, and the dispute was ridiculed in a skit entitled "The Battle Royal" (1694), which was translated into Latin at Cambridge. Joseph Bingham, author of the "Antiquities", preached at Oxford in 1695 a sermon which was considered to represent the Fathers as Trithemists, and it was condemned by the Hebdomadal Council as falsa, impia et harreteca, the scholar being driven from Oxford.

For bibliography see Monophysites.

JOHN CHAPMAN.

Trithemius, John, a famous scholar and Benedictine abbot, b. at Trittenheim on the Moselle, 1 February, 1402; d. at Würzburg, 15 December, 1516.

The abbot himself,

"Nepiachus",
gives an account of his youth, which was a time of hardship and suffering owing to the harsh treatment of his stepfather, who allowed the talented boy to grow up in complete ignorance till the age of fifteen, when he learned reading and writing as well as the rudiments of Latin in a remarkably short time. But as his persecution at home did not cease, he ran away, and after a painful journey succeeded in reaching Würzburg, where the well-known humanist, Jacob Wimpheling, was teaching; here the ambitious youth pursued his classical studies till 1452. In order to revisit his home he determined to make an excursion to the neighbourhood of Trèves accompanied by a comrade; it was January and the young men travelled afoot. A short visit to the monastery of Sponheim was to prove of decisive importance for the young Trithemius; hardly had the travellers taken leave of the abbot of Treviso and returned to the monastery, than a movement of the Holy Spirit was felt there. At the invitation of the prior, Henry of Holzhausen, who had quickly discerned the talents of his young guest, Trithemius remained in Sponheim; eight days later he received the habit of the order and made his vows in the same year, 8 December. His life in the monastery was exemplary; he commanded the respect of his brethren, and that of his superiors.

The proof of the remark which he was held by all was the fact that although he was the youngest member of the community, and had not yet been ordained, he was elected abbot at the age of twenty-two, during the second year of his life in the order. His election was a great blessing for Sponheim. With youthful vigour and a firm hand he undertook the direction of the monastic community. He first turned his attention to the material needs of his community, then set himself to the much more difficult task of restoring its discipline. Above all, his own example, not only in the conscientious observance of the rules of the order, but also in the tireless pursuit of scientific studies, brought about the happiness and prosperity of the community.

In order to promote effectively scientific research, he procured a rich collection of books which comprised the most important works in all branches of human knowledge; in this way he built up the world-renowned library of Sponheim for the enriching of which he laboured unceasingly for twenty-three years till the collection numbered about 2000 volumes, known throughout the entire world.

The attractive personality of the abbot also helped to spread the fame of the monastery. Among his friends he numbered, not only the most learned men of his time, such as Celtes, Reuchlin, and John of Dalberg, but also many princes—including the Emperor Maximilian—who held him in high esteem.

His reputation extended in the world. The greater became the number of malcontents in the monastery who opposed the abbot's discipline. Finally he resigned as head of his beloved abbey, which he had ruled for twenty-three years, and which he had brought to such a flourishing condition that after his departure the monastery sank into its former insignificance.

The Order of St. Benedict was indebted to his energetic abbot for his zealous promotion of the Bursfeld Congregation, for his encouragement of learning in the order, and for his earnest furtherance of monastic discipline. "The great abbot", says one of his biographers, "was equally worthy of respect as a man, as a religious, and as a writer." More than eighty works only part have appeared in print. The greater number of these are ascetical writings which treat of the religious life and were published by John Busrens, S.J., under the title "Joannis Trithemii opera et spiritualia" (Mainz, 1604); they are among the best works of devotional literature produced at the time. Marquard Freber published a part of his historical works as "Joannis Trithemii,"
Trithemius, Jerome:

"S. Janssen.-S. Diet. Hardt, works; chronicle count irarious ^m^ntant. Memory, Seneca. Velfcrius family. CO, Abbot an interest. Annates folio of Diocese the libraries, first one residence. Jews interested in learning; title Surely to rich. Annatrs first ser., forgery, Kloster the Diocese the of the classics, by who is noted with his books who had left with Carpus (II Tim., iv, 13). St. Ignatius of Antioch stopped at Troes before going to Rome (Ad Philad., xi, 2; Ad Smyrn., XII, 1). Several of his bishops are known: Marinus in 325, Nicomius in 314, Sylvanus at the beginning of the fourth century; Proclus in 431, Leo in 587. Peter friend of the patriarch Ignatius, and Michael, his adversary, in the ninth century. In the tenth century Troes is given as a suffragan of Cyzicus and distinct from the famous Ilum (Gelzer, "Ungedruckte, . Texte der Notitiae episcopatuum," 552; Idem, "Georgii Cyripi descriptio orbis romanii," 64); it is not known when the city was destroyed and the dioce was disappeared. To-day day is Eski-Stambul in the sanjak of Bigha.

Trocades (TROCMADA), titular see of Galatia Secunda, suffragan of Pessinus. No geographer or historian mentions a city of this name; Hierocles (Synecemus, 698, i) gives "regio Trocamada", instead of Peressoussad, referring, doubtless, to the Galatian name of some tribe on the left bank of the Sangarius; its principal centre was probably in the present village of Kaimé, about twenty-four miles east of Eski Shehr, a vilayet of Brousse. All the Notitiae episcopatuum " up to the thirteenth century mention the see, though it is arranged under "Pessinus"; the two most recent (thirteenth century) call it Arstvoi; perhaps it should be Astartou, from St. Plotinus, venerated there. The official lists of the Roman Curia give Trocamade. Le Quien (Oriens christianus, I, 493), gives Trocamade. From these erroneous forms arises a confusion of the name with the Galatian tribe of the same name. The last named author gives a list of the known bishops; Caryaeus presented his metropolitan at the Rubric Synod of Ephesus (149), and was represented by a priest at the Council of Chalcedon (451); Theodore, present at the Council of Constantinople (681); Leo, at Nicea (787); Constantine at the Photian Council of Constantinople (879). Cyrus, said to have assisted at the Council of Nicea (325), is mentioned in the authentic lists of bishops present at that council.

S. PÉTRIDES.

Troia. See LUCERA, Diocese of.

Trokelow, Throwlow, or Thoralow, John de, a monastic chronicler still living in 1330, but the dates of whose birth and death are unknown. He was a Benedictine monk of St. Albans who in 1291 was living in the dependent priory of Tynemouth, North-
umberland. The prior and monks endeavoured to sever connexion with St. Albans and to obtain independence by presenting the advowson to the king; but Abbot John of Berkhamsted resisted this arrangement, visited Tynemouth, and sent Trokelow with other monks as prisoners back to St. Alban's. There Trokelow wrote his "Annales" including the period 1259 to 1296 and a useful account of the reign of Edward II, from 1307 to 1323, after which date his chronicle was continued by Henry de Blaneford. A reference made by Trokelow to the execution of Mortimer shows that he was writing after 1330.

EDWIN BURTON.

Trondhjem (Nidaros), Ancient See of.—In Norway it was the kings who introduced Christianity, which first became known to the people during their martial expeditions (Harenbrocher, "Kirchengeschichte", 1879, II, 721). The work of Christianization begun by Haakon the Good (d. 981) (Maurer, "Die Bekehrung des norwegischen Stammes", Munich, 1855, i. 168) was carried on by Olaf Trygveson (d. 1002) and Olaf Haraldson (St. Olaf, d. 1030). Both were converted vikings, and their families had been baptized at Andover, England, by Bishop Aelfhean of Winchester, and the latter at Rouen by Archbishop Robert (Bang, "De norges kirkes historie under katholikisme", Christiania, 1887, 44, 50). In 997 Olaf Trygvesson founded at the mouth of the River Nid the city of Nidaros, afterwards called Trondhjem, where he built a royal palace and a church; he laboured to spread the truths of Christianity in Norway, the Orkney and Shetland Islands, the Faroe Islands, Iceland, and Greenland (Maurer, op. cit., i, iii, 462). King Olaf Haraldson created an episcopal see at Nidaros, installing the monk Grimkrill as bishop. Moreover, many English and German bishops and priests laboured in Norway, and by degrees Christianity softened the rough instincts of the people. The Norwegian bishops were at first dependent on the Archbishop of Hamburg-Bremen, and afterwards on the Archbishop of Lund, Primate of Scandinavia. As the Norwegians nevertheless wanted an archbishop of their own, Eugene III, resolving to create a metropolitain see at Trondhjem, sent thither as legate (1151) Cardinal Nicholai of Alkano (Nicholas Breakspeare). Afterwards Adrian IV. The legate installed Jon Birgerson, previously Bishop of Stavanger, as Archbishop of Trondhjem. The bishops of Oslo (bishop 1073), Bergen (about 1060), Stavanger (1130), Harar (1151), the Orkneys (1070), Iceland (Skalholt, 1056; Holar, 1105), and Greenland became suffragans.

The Archbishop Birgerson was succeeded by Eystein (Beatius Augustinus, 1178-88), previously royal secretary and treasurer, a man of brilliant intellect, strong will, and deep piety (Daane, "Norges Helgener", Christiania, 1879, 170-6). Such a man was then needed to defend the liberty of the Church against the encroachments of King Sverre, who wished to make the Church a mere tool of the temporal power. The archbishop was compelled to flee from Norway to England. It is true that he was able to return and that a sort of reconciliation took place later between him and the king, but on Eystein's death Sverre renewed his attacks, and Archbishop Eystein had to leave the country and take refuge with Archbishop Abalson of Lund. At last, when Sverre attacked the papal legate, Innocent III laid the king and his partisans under interdict (Balty, "Epp. Innocentii III", Paris, 1852, i, 226, 227). King Haraldson (1020-57) of Sverre, hastened to make peace with the Church, whose liberty had been preserved by the unflinching attitude of the pope and his archbishops. What would have happened, asks the Protestant ecclesiastical historian of Norway, Dr. A. Chr. Bang, "if the Church, deprived of all liberty, had become the submissive slave of absolute royalty?" What influence would it have exercised at a time when its chief mission was to act as the educator of the people and as the necessary counterpoise to defend the liberty of the people against the brutal whims of the secular lords? And what would have happened when a century later royalty left the country? After that time the Church was in reality the sole centre about which was grouped the national life of the country.

To regulate ecclesiastical affairs, which had suffered during the struggles with Sverre, Innocent IV in 1247 sent Cardinal William of Sabina as legate to Norway. He intervened against certain encroachments on the part of the bishops, reformed various abuses, and abolished the ordeal by hot iron. Owing in great part to the law of Neustria to come and the fact that it was closely linked with the supreme head of Christendom at Rome, secular priests, Benedictines, Cistereans, Augustinians, Dominicans, and Franciscans worked together for the prosperity of the Church. Archbishops Ellif Ortin (d. 1352), Paul Baardson (d. 1346), and Arne Vade (d. 1349) showed especially remarkable zeal. Provincial councils were held, at which bishops deliberated with the king and encouraged Christian education and morality (Bang, op. cit., 297).

Nidaros (Trondhjem), the metropolis of the ecclesiastical province, was also the capital of Norway. The residence of the kings until 1217, it remained until the troubles of the Reformation the heart and centre of local national life. There was situated the tomb of St. Olaf, and around the patron of Norway, "Rex perpetuus Norvegiae", the national and ecclesiastical life of the country was centred. Pilgrims flocked from all quarters to the tomb. The feast of St. Olaf on 29 July was a day of reunion for "all the nations of the Northern seas, Norwegians, Swedes, Goths, Cimis, and Swabians;" and the" ("Adami gesta pontificum Hannamurbegusium", Hanover, 1876, II, 82), in the cathedral of Nidaros, where the reliquary of St. Olaf rested near the altar. Built in Roman style by King Olaf Kyre (d. 1093), the dome had been enlarged by Archbishop Eystein in Gothic style. It was finished only in 1248 by Archbishop Sigurd Sim. Although several of its several domes was restored each time until the storms of the Reformation. Then Archbishop Eric Walkendorff was exiled (1521), and his successor, Olaf Engelbertsen, who had been the instrument of the royal will in the introduction of Lutheranism, had also, as a partisan of Christian II, to fly from Christian III (1537). The valuable relics of St. Olaf and St. Augustine (Eystein) were taken away, but at Copenhagen, and melted. The bones of St. Olaf were
buried in the cathedral, and the place forgotten. But when Norway regained its liberty and resumed its place among independent nations (1814), the memory of the glory of its ancestors awoke. It was resolved to give the church buildings once more renewed, although not in possession of the religion which created it. But new churches have arisen in the city of St. Olaf, bearing witness that the Catholic Faith still lives in Scandinavia in spite of all its trials.

GUSTAF ARNFELT.

Trope.—Definition and Description.—A trope in the liturgico-hymnological sense is a collective name which, since about the middle of the Middle Ages or a little later, has been applied to texts of great variety (in both poetry and prose) written for the purpose of amplifying and embellishing an independently complete liturgical text (e. g. the Introit, the Kyrie, Gloria, Gradual, or other parts of the Mass or of the Office sung by the choir). These additions are closely attached to the official liturgical text, but in no way do they change the的本质ual character of it; they are entwined in it, augmenting, and elucidating it; they are, as it were, a more or less poetical commentary that is woven into the liturgical text, forming with it a complete unit. Thus in France and England, instead of the liturgical text "Sanctus, Sanctus, Sanctus, Dominus Deus Sabaoth", the lines sung were:

1. Sanctus, sanctus, sanctus, quern sancta omnia;
2. Sanctus, sanctus, sanctus, et sanctum Deum Sabaoth, quibus gloria sit in saecula.

The most accurate definition, applicable to all the different kinds of tropes, is the following: A trope is an interpolation in a liturgical text, or the embellishment brought about by interpolation (i. e. by introductions, insertions, or additions). Herein lies the difference between the trope and the closely related Sequence or Prose. The Sequence also is an embellishment of the liturgy, an insertion between liturgical formulas, which, however, originated about the eighth century; the Sequence is thus an interpolation in the liturgy, but it is not an interpolation in a liturgical text. The Sequence is an independent unit, complete in itself: the trope, however, forms a unit only in connexion with a liturgical text, and when separated from the latter is often devoid of any meaning. Accordingly the first sort of liturgical text to which they belong, viz. Trope of the Kyrie, Trope of the Gloria, Trope of the Agnus Dei, etc.

Originally there existed no uniform name for that which is now combined under the idea and name of **Tropus**. Only the interpolations of the Introit, the Offertory, and the Canonum were called **Tropus** (due to the name of the Middle Ages or a little later, has been applied to texts of great variety). But only predominantly; for the Introit Trope was frequently called "Versus in psalmis", the Offertory Trope also "Prosa [or prosulat] ad [or ante] Offerenda". To all the other interpolations a great variety of names was applied, as "Prose de Kyrielison", or "Versus ad Kyrielison", = Kyrie Tropes; "Laudes" [Laude, lante], = Gloria cum laude; "Ad laudes cum tropes", or simply, "Ad Gloria", = Gloria Tropes; "Laudes ad Sanctus", "Versus super Sanctus", = Sanctus Tropes; "Laudes de Agnus Dei", = Prosa ad Agnus Dei", = Agnus Tropes; "Epistola cum Versibus", = "Versus super epistolam", = Epistle Trope [Épître foré]; "Verba", or "Vetera", or "Prosella", = Breviary Trope. How and when the general name of **Tropus** sprang up, has not yet been exactly ascertained. And just as little has the priority been established of the different kinds of interpolation in the various names; and only that in the Gloria, or the Kyrie, or in any other part of the Mass; for that very reason it is not known yet which of the various designations (Versus, Prose, Tropi, or Laudes) is the oldest and most original.

One thing is certain: the Latin Tropus is a word borrowed from the Greek ἀπότομος. The latter was a liturgical term, and denoted a melody (φωνή ἄποτομ, φωνήματος = Lydian, Phrygian, Doric melody), or in general a musical change, like the Latin modus or modulus, similar to the international "modulation". It is quite conceivable that the name of the melody was transferred to the text which had been composed to it, as is the case with the word *Sequentia*. In any case the name presuppose that over one syllable of a liturgical text, e. g. over the *e* of the Kyrie, a longer melisma was sung, which bore the name of *tropus*; furthermore, that to such a melisma a text was composed later on, and that this text was also called "Tropus". And it is an actual fact that from early times such melismata existed, that is, a vowel or vowel character, that could be produced from these melismata, consequently they were interpolations. But the date when these melismata of the Kyrie, Gloria, Sanctus, etc., were first called "Tropi" is still a matter of research; what we know is that the texts under that kind of melisma which has just been described, is called "Trope"; as is also the case with the Breviary. On the contrary, by the name of "Tropi" were originally designated the interpolations of precisely those parts of the Mass which do not exhibit any long melisma, as the Introit and Offertory. To give an example, an interpolation of the Christmas Introit written in prose, reads:

Ecce, ades de quo propheta cecenierit dicentes; *Puer natus est nobis*, Quem virgo Maria genuit,

*Et filius datus est nobis*, etc. The first introductory phrase of this and similar interpolations, particularly when it comprises an entire stanza, as, e. g.,

*Laudemus omnes Dominum*, Quem et meminisse uterum

*Parvus in mundum venerat* Mundum regens, quem fecerat,

*Puer natus est nobis*, etc.

cannot possibly be considered as text to an already existing melisma which was called "Tropus", and which then gave its name to the text that was put to it. And yet, just as in translation of the Introit and the Offertory were called "Tropi". In this article it must suffice to allude to these difficulties, on the solution of which will depend the theory of the origin and the early development of the "Tropi". As yet no definite theory can be advanced, although several writers on liturgy, music, and hymnology have been so confident as to make assertions for which there is absolutely no foundation.

Division.—On the basis of the two choir books for the Mass and the Breviary, namely the Gradual and the Antiphonal, Tropes are divided into two large classes: "Tropi Graduales" and "Tropi Antiphonales", i.e. Tropes of such parts of the Mass and of the Breviary as are chanted. The latter are of slighter musique, and are chiefly limited to interpolations of the Responsory after the Lessons, and are almost exclusively insertions into one of the concluding words of such Responsory. Their entire structure resembles so much the structure of the Sequences of the first epoch, upon which they were undoubtedly modelled, that later on they were often used as independent Sequences. Such is the case with the oldest Breviary
Tropes of the Blessed Virgin, which is built upon the penultimate word, inviola, of the Responsory of the Assumption: "Gaude, Maria virgo...et post partum invola permanasti." The syllable la of inviola was the bearer of a long melisma; to this melisma towards the close of the tenth century in France the following text was composed:

1a. Invio-lata integra. 1b. Quo eae effecta et casta
   regis porta.

2a. O mater alma. 2b. Suscie pia
   Christi carissima, haudum precamur.

3a. Nostra ut pura. 3b. Quae nunc flagrant
   corda et ora.

4a. Tu da per precata. 4b. Nobis perpetua
   dulcisima, frui vita.

5. O benigna, qua sola inviola
   permanenti.

Of a similar structure are all the Breviary Tropes or "Verbets", and they are dovetailed, as shown above, more or less ingeniously, between the penultimate and last word of their Responsory.

The "Tropi Graduales" in their turn are divided into two classes, namely into "Tropi ad Ordinarium Messe" or to the Kyrie, Gloria, Credo, Sanctus, Agnus Dei, and in the Missal to the Introit, Gradual, Offertory, and Communion. This latter class frequently differs from the former also in the external structure of its Tropes; and at first it was the most widespread; it might perhaps even claim to be the oldest and most original; but it disappeared at a recent date, whereas the "Tropi ad Ordinarium Messe" still kept their place in liturgy for a considerable time.

History and Significance.—The origin of the Tropes, that is to say of the Gradual Tropes (since the Antiphonal Tropes are evidently of a later date), must almost coincide with that of the Sequences which are most closely related to them; this would mean that their history begins somewhere in the eighth century. Whether the Trope or the Sequence was the older form is all the more difficult to decide, since the Sequence itself is to a certain degree a kind of Trope. The St. Martial Tropes, the oldest known, of the middle of the tenth century (Cod. Paris., 1240), abundantly in Tropes in the Introit, Gradual, Offertory, and Communion; in other words it has a great many "Tropi ad Proprium Misseum". In addition it contains thirteen Gloria Tropes, but only two of the Sanctus, and not one of the Kyrie. Comparatively poor in Tropes are the St. Gall Tropers, and this fact alone makes it extremely doubtful whether Tutilo of St. Gall was the inventor of the Tropes. It appears that the Tropes, like the Sequence, originated in France, where from the tenth century onward it enjoyed great popularity and was most eagerly cultivated. From there it soon made its way to England and to Northern Italy, later to Central and Southern Italy, and became widespread in all these countries, less so, however, in Germany. It was known there as early as in the ninth century, and St. Gall can rightly be considered a composer of Tropes. It remains a curious fact that in spite of the great number of Tropes no poet can be named who gained distinction as a composer of Tropes. In the thirteenth century this once important branch of literature began to decline and survived almost exclusively in Kyrie Tropes, particularly in France until the fifteenth and sixteenth centuries.

Regarding the poetical contents, the Tropes, with few exceptions, are of no great value. But this peculiar poetical production is all the more interesting for the student of liturgy, and especially great is its significance in the development of music and poetry. It is worthy of note that, instead of short insertions into the liturgical text, as time went on several verses, entire stanzas, even a number of stanzas, were fitted in. The non-essential part developed into the main work; the liturgical text withdrew entirely into the background, and was scarcely even considered as the starting-point. In this manner the Tropes grew to be independent cantons, motets, or religious folk-songs. Also the dramatic character, which was quite peculiar to many Anglo-Norman Tropes, at Christ's time, developed more and more luxuriantly until it reached its highest perfection in larger dramatic scenes, mystery plays, and plays of a purely religious character. Tropes finally left the liturgical and the religious ground altogether, and wandered away from the spiritual to the profane field of songs of love, gambling, and drinking. And for that reason many specimens of religious as well as secular poetry of later date can be fully understood only when they are traced back to their sources, the Tropes. The importance from a musical standpoint of both the Tropes and the Sequences has been most suitably characterized by Rev. Walter Howard Freire in his introduction to "The Winchester Troper," where he says: "For the musician the whole story is suggestive and inspiring, whereas the "Tropi ad Ordinarium Messe" still kept their place in liturgy for a considerable time.

XLIX (Leipzig, 1909).

Clemens Blume.

Tropology, Scriptural, the theory and practice of interpreting the figurative meaning of Holy Writ. The literal meaning, or God-intended meaning of the words of the Bible, may be either figurative or non-figurative; for instance, in Canticles, the inspired meaning is always figurative. The typical meaning is the inspired meaning of words referring to persons, things, and actions of the Old Testament which are inspired types of persons, things, and actions of the New (cf. Exegesis).

Walter Drum.

Troy, John Thomas, Archibishop of Dublin, b. in the parish of Blanchardstown, near Dublin, 10 May, 1729; d. at Dublin, 11 May, 1823. He belonged to an Anglo-Norman stock, and received his early education at Liffey Street, Dublin, after which, in 1777, he joined the Dominican Order and proceeded to their house of St. Clement, at Rome. Amenable to discipline, diligent in his studies, and gifted with much ability, he made rapid progress, and while yet a student was selected to go to the Holy Land in the non-essential part of the religious life, the theology and canon law, and finally became prior of the convent in 1772. When the Bishop of Ossory died, in 1776, the priests of the diocese recommended one of their number, Father Molloy, to Rome for the vacant see, and the recommendation was endorsed by many of the Irish bishops. But Dr. Troy, who was held in high esteem at Rome, had already been appointed Bishop of Killkenny in August, and for the next nine years he laboured hard for the spiritual interests of his diocese. They were troubled times. Maddened by excessive
rents and tithes, and harried by grinding tithe-proctors, the farmers had banded themselves together in a secret society called the "Whiteboys". Going forth at night, they attacked landlords, bailiffs, agents, and tithe-proctors, and often committed murder. Bishop Troy grappled with them and frequently and sternly denounced them. It was not that he had any sympathy with oppression, as he had lived so long in Rome and had left Ireland at such an early age, that he did not quite understand the condition of things at home, and did not fully appreciate the extent of misery and oppression in which the poor Catholic masses lived.

The bent of his mind was to suppress all violent efforts for reform, and he had no hesitation in denouncing not only the recent encroachments in Ireland, but also "our American fellow-subjects, seduced by specious notions of liberty". This made him unpopular with the masses, but there could be no doubt that his anxiety was zealous in correcting abuses in his diocese and in promoting education. So well was this recognized at Rome that in 1781, in consequence of some serious troubles which had arisen between the primate and his clergy, Dr. Troy was appointed Administrator of Armagh. This office he held till 1782. In 1786 he was appointed Archbishop of Dublin. At Dublin, as at Ossory, he showed his zeal for religion, his sympathy with authority, and his distrust of popular movements, especially when violent means were employed; in 1798 he issued a statement of excommunication against all those of his flock who would join the rebellion. He was also one of the most determined supporters of the Union. In 1799 he agreed to accept the veto of government on the undertaking to generalize each bishop; and even when the other bishops, finding that they had been tricked by Pitt and Castlereagh, repudiated the veto, Dr. Troy continued to favour it. The last years of his life were uneventful.

E. A. D'ALTON.

Troyes, Diocese of (Trencens), comprises the Department of Aube. Re-established in 1802 as suffragan of Paris, it then comprised the Departments of Aube and Yonne, and its bishop had the titles of Troyes, Auxerre, and Châlons-sur-Marne. The Arch-deacon of Châlons was created and the Bishop of Troyes lost that title. When Sens was made an archdioecese the title of Auxerre went to it and Troyes lost also the Department of Yonne, which became the Archdiocese of Sens. The Diocese of Troyes at present covers, besides the ancient diocesan limits, 136 parishes of the ancient Diocese of Langres, and 26 belonging to the ancient Diocese of Sens. Since 1822 Troyes is a suffragan of Sens.

The catalogue of bishops of Troyes, known since the ninth century, is, in the opinion of Duchesne, worthy of confidence. The first bishop, St. Amator, seems to have preceded by a few years Bishop Opptanianus who probably ruled the diocese about 341. Among his successors are: St. Melanius (Mechin) (330-400); St. Ursus (Ours) (425); St. Lupus (Loup) (426-178), b. in 383, who accompanied St. Germanus of Auxerre to England, forced the Huns to spare Troyes, was led away as a hostage by Attila, and only returned after many years of exile; St. Camellinus (379-536); St. Vincent (536-46); St. Leuenon (Leuven) (651-56); St. Bohemius (Bobin) (750-66), previously Abbot of Montier la Celle; St. Prudentius (815-61), who wrote against Gottschalk and Johannes Scotus; Blessed Guthlac (855-95); Jacques Bégonne Bossuet (1716-42), nephew of a Bishop of Sens, Antoine de Boulogne (1809-25); Pierre-Louis Cour, the preacher (1849-60).

Louis the Stammer received in 878 at Troyes the imperial crown from the hands of Pope John VII. At the end of the ninth century the counts of Champagne chose Troyes as their capital. In 1285, when Philip the Fair united Champagne to the royal domain, the town kept a number of privileges. John the Fearless, Duke of Burgundy and ally of the English, aimed in 1417 at making Troyes the capital of France, and he came to an understanding with Isabeau of Bavaria, wife of Charles VI of France, that a court, council, and parliament with comptroller's offices should be established at Troyes. When Henry VI of England was betrothed to Catherine, daughter of Charles VI, and was to succeed him to the detriment of the dauphin. The dauphin, afterwards Charles VII, and Blessed Joan of Arc recovered the town of Troyes in 1429.

The cathedral of Troyes is a fine Gothic structure begun in the thirteenth century; the ancient collegiate Church of St. Urban is a Gothic building whose lightness of treatment reminds one of La Sainte Chapelle at Paris. It was built by Urban IV at the close of the thirteenth century. He was a native of Troyes and on one of the stained-glass windows he caused his father to be depicted working at the trade of tailor. The Abbey of Nesle la Riposte was founded before 545 near Villenauxe, perhaps by Queen Clotilde. In the sixteenth century the monks caused to be rebuilt at Villenauxe, with the actual stones which they brought from Nesle, the original doorway of Nesle Abbey, an interesting monument of French history. The Benedictine Ma- nasteries of the old Abbey of Nesle were restored, and 1429 the Benedictines built a new monastery (i.e. a web-footed queen) supposed to be St. Clotilde. The Abbey of Notre Dame aux Nourrins, founded by St. Leuenon, was an important abbey for women. Alcuin and St. Bernard corresponded with its abbesses. At his installation the bishop went to the abbey on the previous evening; the bed he slept on became his property, but the bed on which he rode became the property of the abbess. The abbess led the bishop by the hand into the chapter hall; she put on his mitre, offered him his crozier, and in return the bishop promised to respect the rights of the abbey. The Jansenists in the eighteenth century made a great noise over the pretended case by the deacon Paris of the famous Abbey of Clervaux, the Abbess Heloise died in 1163, and where her body and that of Abbeard were buried until 1792, see ABEQUE. On 29 June, 1535, Geoffrey Dechaume, Lord of Savoye and Lirey, was founded at Lirey in honour of the Assumption a collegiate church with six canons, and in this church he exposed for veneration the Holy Winding Sheet. Opposition arose on the part of the Bishop of Troyes, who declared after due inquiry that the relic was noth-
ing but a painting, and opposed its exposition. Clement VI by four Bulls, 6 Jan., 1390, approved the exposition as lawful. In 1418 during the civil wars, the canons entrusted the Winding Sheet to Humbert, Count de la Roche, Lord of Lirey. Margaret, widow of Humbert, never returned it but gave it in 1452 to the Duke of Savoy. The requests of the canons of Lirey were unavailing, and the Lirey Winding Sheet is the same that is now exposed and honoured at Turin (see Truce).

Among the many saints specially honoured or connected with the diocese are: St. Mathia, virgin, period uncertain; her relics were found in Troyes in 980; St. Helena, virgin, whose life and century are unknown, and whose body was transferred to Troyes in 1200; these two are patronesses of the town and diocese; St. Gulba, martyr (second or third century); St. Saviànus, Apostle of Troyes; St. Patroclus (Parre), St. Julius, St. Claudius, and St. Venerandus, martyrs under Aurelian; St. Savina, martyred under Diocletian; St. Syra, the wonder-worker (end of third century); St. Ursion, pastor of Isle d'Aumont (c. 375); St. Exuperantia, a religious of Isle d'Aumont (c. 380); St. Balsamus (Bainsange), dean, apostle of Are-sur-Aube, martyred by the Vandals in 407; St. Mesmin and his companions and Saints Germana and Honoria, martyred (454) under Attib; St. Aper (Evre), Bishop of Toul, and his sister Exronia, natives of the diocese (towards the close of the fifth century); St. Aventinus, disciple of St. Loup (d. c. 557); St. Romanus, Archbishop of Reims, founder of the Monastery of St. Gervais and Protasius at Chantenuy in the Diocese of Troyes (d. c. 557); St. Maurelius, priest at Isle d'Aumont (d. c. 545); St. Lygaeus (Lyé), second Abbót of Manteny (d. c. 545); St. Phal, Abbót at Isle d'Aumont (d. c. 548); St. Boun, priest and solitary (d. c. 570); St. Patamine (Pouange), solitary (close of sixth century); St. Vineband, Abbót of St. Loup of Troyes (d. 621); St. Flavius, solitary (563-630); St. Tanche, virgin and martyr (d. 637); St. Victor, solitary (d. 640); St. Frobert, founder and first Abbót of Montier le Celle (d. 688); St. Maura, virgin (827-850); St. Adalricus (shain by the Normans about 925); St. Adericus, canon and archdeacon of Troyes, who died in 1001 on returning from the Crusade, and who founded the Benedictine monastery of the Holy Sepulchre in the diocese; St. Simon, Count de Bars-sur-Aube, solitary, acted as mediator between Gregory VII and Robert Guiard, and died in 1082; St. Robert, founder of Molesme and Citeaux, a native of the diocese (1024-1108); St. Elizabeth of Chelles, foundress of the monastery of Rosoy (d. c. 1130); St. Hombelina, first Abbess of Jully-sur-Sarce, and sister of St. Bernard (1092-1153); Blessed Peter, an Englishman, brother of the hermit St. Malachi (q. v.), archbishop, Primate of Ireland, died at Clairvaux (1098-1148); St. Bernard (q. v.), first Abbót of Clairvaux (1091-1153); St. Belina, virgin, slain about 1153 in defence of her chastity; Blessed Menard and Blessed Herbert, abbots of the monastery at Mores founded by St. Bernard (end of the twelfth century); Blessed Jeanne, the recluse (d. 1236); Blessed Urban IV (1185-1264); Blessed John of Ghent, hermit and prophet, who died at Troyes in 1439; Ven. Margaret Bourgeois (1620-1700), foundress of the Congregation of Notre Dame at Montreal, a native of the diocese; Ven. Marie de Sales Chappuis, superior of the Visitacion Convent at Troyes (d. 1573). Cardinal Pierre de Bérulle (1557-1629) was brought up on the Bérulle estate in the diocese and preached at Troyes before founding the Oratorians. An Oratory was opened at Troyes in 1617. Charles-Louis de Lantagne, b. at Troyes in 1616, d. in 1694, was one of the chief helpers of M. Olier, founder of the Sulpicians. Among natives of the diocese may be mentioned: the Calvinist jurisconsult Pierre Piton (1539-1589), one of the editors of the "Santé des pauvres", a native of Troyes; the painter Mignard (1610-95), born at Troyes; the revolutionary leader, Danton (1759-1794), b. at Arcis-sur-Aube.

The chief pilgrimages of the diocese are: Notre Dame du Chêne, near Bar-sur-Seine, dates from 1607; Notre Dame de la Sainte Espérance, at Mésnil-Saint-Loup; Notre Dame de Valsuzenay. Before the application of the Edict of Nantes, one of the bishops of the Diocese of Troyes, Benedicinés, Jesuits, Lazarets, Oblates of St. Francis of Sales, and Brothers of the Christian Schools. Many female congregations arose in the diocese, among others the Ursulines of Christian Teaching, founded at Moissy l'Evêque in the eighteenth century by Montmorn, Bishop of Langres; the Sisters of Christian Charity, founded by the Abbess of Troyes; the Oblate Sisters of St. Francis of Sales, a teaching order, founded in 1870, with mother-house at Troyes; Sisters of Notre Dame de Bon Secours, a nursing community with mother-house at Troyes. In the diocese the religious congregations at the close of the nineteenth century had charge of one foundling hospital, 20 nurseries, 2 orphanages for boys, 17 orphanages for girls, 2 hospitals or hospices, 10 hospitals or hospices, 9 houses of district nursing sisters, 1 epileptic home. In 1905 (at the breach of the Concordat) the diocese numbered 216,163 inhabitants, 40 parish priests, 383 chapels of ease, and 7 curacies supported by the State. In 1910 there were 239,299 inhabitants, and 344 priests.

TRUCE

Truce of God.—The Truce of God is a temporary suspension of hostilities, as distinct from the Peace of God which is perpetual. Suspension of the Peace of God is narrower than that of the Truce. Under the Peace of God are included only: (1) consecrated persons—clerics, monks, virgins, and cloistered widows; (2) consecrated places—churches, monasteries, and cemeteries, with their dependencies; (3) consecrated times—Sundays, and the days of Easter, under the special protection of the Church, which punishes transgressors with excommunication. At
an early date the councils extended the peace of God to the Church's protégés, the poor, pilgrims, crusaders, and even merchants on a journey. The peace of the sanctuary gave rise to the right of asylum. Finally it was the sanctification of Sunday which gave rise to the Truce of God, for it had always been agreed not to carry on battle on that day and to suspend disputes even in the law-courts.

The Truce of God dates only from the eleventh century. It arose amid the anarchy of feudalism as a remedy for the powerlessness of lay authorities to enforce respect for the public peace. There was then an epidemic of private wars, which made Europe a blood-renched scene, and encouraged the invasion of territory by armed bands who respected nothing, not even sanctuaries, clergy, or consacrated days. A Council of Elne in 1207, in a canon concerning the sanctification of Sunday, forbade hostilities from Saturday night until Monday morning. Here may be seen the germ of the Truce of God. This prohibition was subsequently extended to the days of the week consecrated by the great mysteries of Christianity, viz., Thursday, in memory of the Ascension, Friday, the day of the Passion, and Saturday, the day of the Resurrection (council of 1041). Still another step included Advent and Lent in the Truce. Efforts were made in this way to limit the scourge of private wars, to make the Church's peace, but at least the impetus was given. Gradually the public authorities, royalty, the leagues between nobles (Landfrieden), and the communions followed the impulse and finally restricted war to international conflicts.

Semerson, Le paix et la trêve de Dieu (Paris, 1869); Hibbert, Götter und Landfrieden (Ansbach, 1892). CH. MOELLER.

Truchsess von Waldburg, Orto, Cardinal-Bishop of Augsburg (1453-73), b. at Castle Scheer in Swabia, 26 Feb., 1514; d. at Rome, 2 April, 1573. He studied at the Universities of Tubingen, Padua, Pavia, and Bologna, and received his degree of Doctor of Theology in 1550. Among his early appointments as canons were those at Trent, Spire, and Augsburg. In 1531 he became an imperial councillor and when on an embassy to Rome was made a papal chamberlain. On 10 May, 1543, he was elected Bishop of Augsburg; in 1544 he was appointed cardinal-priest of the Title of St. Balbina by Paul III for settling a long-contested dispute between the emperor and the pope. The centre of the Middle Ages was mourning: the enemy were ignorant and depraved, and Protestantism was widespread. He sought to mend matters by visitations, edicts, synods, and the improvement of instruction. He founded the University of Dillingen, now a lyceum, and the ecclesiastical seminary at Dillingen (1549-53). In 1564 he transferred the management of the diocesan institutions to the Jesuits. He died in 1550 and again in 1555 he took part in the papal elections at Rome. In 1552 his diocese was devastated by the troops of Maurice of Saxony. He once went more to Rome in 1559 and was there made the head of the Inquisition and, in 1562, Cardinal-Bishop of Albano. In 1567 he held a diocesan synod at Dillingen (1569) to discuss the attacks on the Society of Jesus. The penalty he imposed was a moral, religious man, of much force of character, to whom half measures and shiftiness were foreign. He incurred the hatred of the Protestants for his protest against the Religious Peace of Augsburg (1555).

KLEEMENS LOFFLER.

Trudo (TRON, TROND, TRUDN, TRUTEH, TRUES), SAINT, Apostle of Hasbon in Braabant; d. 608 (673). Feast 23 Nov. He was the son of Blessed Adela of the family of the dukes of Austrasia. Devoted from his earliest youth to the service of God, Trudo came at the age of 16 to Bishop of Besançon (SS., I Sept., 678) and was sent by him to Chludolph, Bishop of Metz. Here he received his education at the Church of St. Stephen, to which he always showed a strong affection and donated his later foundation. After his ordination he returned to his native district, preached the Gospel, and built a church at Sarchimium, on the River Cyllulria. It was blessed about 656 by St. Theodard, Bishop of Liege, in honour of Sts. Quintinus and Remigius. Disciples gathered about him and in course of time the abbey arose. The convent for women, established by him at Odleghem near Bruges, later also bore his name ("Gallia Christiana"). Paris, 1887, V. 200. After death he was buried in the church erected by himself. A translation of his relics, together with that of St. Eucharius, Bishop of Orleans, who had died there in exile in 738, was made in 800 by Bishop Franc of Liege. On account of the threatened invasions of the Normans the relics were later hidden in a subterranean crypt. After the great conflagration of 1085 they were lost, but again discovered in 1169, and on 11 Aug. of that year an official procession and celebration were held in their honour by Pope Rudolph III. On account of these translations the dates 5 and 12 Aug. and 1 and 2 Sept. are noted in the martyrologies. The "Annales Bollandiani" (V, 305) give an old deed of the saint in verse. The life was written by Donatus, a dean of Metz, at the order of his bishop, Angilram (670-91). It was rewritten by Theodore, Archbishop of Liège.

O.S.B., II, 1022.

FRANCIS MERSHMAN.

Trudpert, SAINT, missionary in Germany in the seventh century. He is generally called a Celtic monk from Ireland, but some consider him a German. According to legend, he went first to Rome in order to receive from the pope authority for his mission. Returning from Italy he travelled along the Rhine to the country of the Alamanni in the Breisgau. A person of rank named Othbert gave him land for his mission about fifteen miles south of Freiburg in Baden. Trudpert cleared off the trees and built a cell and a little church which Bishop Martinus of Constance dedicated to Sts. Peter and Paul. Here Trudpert led an ascetic and laborious life. One day when he was asleep he was murdered by one of the serfs whom Othbert had given him, in revenge for severe taxes imposed. Othbert gave Trudpert an honourable burial. The Benedictine Abbey of St. Trudpert was built in the next century on the spot where Trudpert was buried. The story of his life is so full of legendary details that no correct judgment can be formed of Trudpert's era, the kind of work he did, or of its success. The period when he lived in the Breisgau was roughly as 630-720, a little after the year of his death. The day of his death is 26 April. In 115 his bones were translated and the first biography of him was written; this biography was revised in the twelfth and thirteenth centuries.
Trueba, Antonio de. Spanish poet and folklorist, b. at Montellana, Biscay, in 1821; d. at Bilbao, 10 March, 1889. In 1836 he went to Madrid, hoping to make a livelihood by literary pursuits. To earn his daily bread he discharged the duties of a clerk in a small commercial house, but all the while he beguiled his leisure and his moments of regret by writing little poems and tales redolent of the yearnings and sympathies of a Basque transplanted to the busy cosmopolitan centre. Won over to him by the charm of his writings, Queen Isabella II made him historiographer of the Biscayan district, and he held this post until her flight in 1868. His popularity was fixed by the appearance of his first collection of lyrics, the "Libro de los cantares" (Madrid, 1852). Various collections of his tales, especially charming when they deal with his native region and its people, appeared in 1859, 1860, and 1866. In his more ambitious attempts at writing a novel, as in his work dealing with the Cid of history and legend, he failed signally; he was too conscientiously a recorder of the past and left his imagination no free play. He remains an amateur writer of second rank, but no one can read without sympathy and appreciation his pretty little songs fragrant with love for the landscape of his northern Spanish home. He deserves serious notice among the earlier writers who helped to develop the novel of manners in the Spain of the nineteenth century.

Blanco García. La literatura española del siglo XIX (Madrid, 1890); Fitzmaurice-Kelly. Hist. of Spanish Literature (London, 1898).

Trujillo, Diocese of, comprising the Departments of Lambayeque, Libertad, Piura, and the Province of Tumbes, in North-west Peru, formed by the division of the dioceses of Lima and Chimbote. The name Trujillo is associated in popular fancy with its most celebrated native, the Franciscan Anton Francisco Gutiérrez, to whom the diocese was dedicated in 1856 and to whom it is still dedicated. His fame was due to the many religious reforms under which he was the chief promoter; among them was the foundation of the Colegio de la Ciencia de Trujillo, the seat of the diocesan seminary, which was not long after erected into a college. Gonzalo González de las Heras, a Trujillano, was a celebrated medical writer of the early part of the eighteenth century; and the diocese is indebted to its native city, Trujillo, for having been the birthplace of Simon Bolivar, the liberator of Latin America. Kasım Badii, mestre de seminário, b. 1515 at Trujillo; d. at Madrid, 28 December, 1577, and was buried at Trujillo. The city of Trujillo is noted for its great cathedral, the seventh of the great Cathedrals of Peru, being consecrated on 28 September, 1577, under the dedication of Our Lady of Sorrows. The cathedral was constructed in 1577-1666, and was occupied by Father Antonio de la Cueva, B.D., who was rector of the cathedral from 1618 to 1621. The diocese of Trujillo was erected by Pope Pius V on 31 July, 1566, and has been governed by five bishops. The present bishop is Dr. José María Sánchez de la Fuente, who was consecrated on 10 February, 1911. The dioce seated at Trujillo is divided into nine deaneries and 135 parishes; 50 men's colleges; 3 girls' high schools; there are communities of Franciscans (2), Conceptionists, Carmelites, Poor Clares, Dominican Tertiaries, and Lazarists, the latter having charge of the seminary. The Catholic population numbers about 51,000. The bishop is the Most Rev. Mr. Carlos Antonio de la Cruz, O. de la Merced, who was installed on 6 November, 1857, edited the "Revista católica", founded "El amigo del clero", succeeded Mgr. Manuel Jaime Medina, 21 March, 1910.

A. A. MacEERAN. 

Trujillan Synod. See CONSTANTINOPLE, COUNCILS OF.

Trumpets. Feast of. The first day of Tishri (October), the seventh month of the Hebrew year. Two trumpets are mentioned in the Bible, the shophār and ḥāqāqērath. The latter was a long, straight, slender, silver clarion, liturgically used in the septuagint as an instrument. The shophār was made of horn, as we see from its now and then being called qerîn, "horn" (Ex., vi, 5); in fact, in the foregoing passage, it is designated a "ram's horn", qerîn yâbêl. The Mishna (Rosh ha-shanah, iii, 2) allows the horn of any clean animal save the cow, and suggests the straight horn of the ibex. The Feast of Trumpets is ordained in the laws of ancient Israel in the seventh month, on the first day of the month, you shall keep a sabbath, a memorial, with the sound of trumpets" (Lev., xxiii, 24). The Hebrew text has: "a memorial of the blast". The Septuagint adds "of trumpets" (σαπράγγειον), a word which together with καραθών (made of horn) always designates in the LXX, shophār and never the ḥāqāqērath. We find the latter so ordained in Numbers, xxix, 1: "The first day also of the seventh month...is the day of the sounding and of trumpets". This text gives us no more light in the original, where we read only "the day of blast let it be unto you". Here, too, the LXX μῆλα σαπράγνατον, "day of signal-horn", affords no light. The feast is called by Philo σαργαγγείον, "Trumpets". It would seem, therefore, that the shophār and not the ḥāqāqērath was a Biblical term used on the feast of the new moon of Tishri. In Rabbinical ritual the festival has come to be known as New Year's Day (rōsh ha-shanah), Day of Memorial (yôm házizkârôn), and Day of Judgment (yôm habîdan). The shophār gives the signal call to solitude and prayer. In preparation for the great feast, the shophār is sounded morning and evening excepting the Sabbath, throughout the entire preceding month of Elul. According to the Mosaic Law, the special offerings of the Feast of Trumpets were a bullock, a ram and seven lambs for a burnt offering; a buck goat for a sin offering (Num., xxv, 2, 5; Lev., xxvi, 21, 25).

WALTER DREM.
Trumwin (TRUMWINI, TRUMWINI), Saint, d. at Whithy, Yorkshire, England, after 686. He was consecrated by St. Theodore, Archbishop of Canterbury, as a missionary bishop among the Piets, and was consequently regarded later as the first Bishop of Whithenham, in Galloway. When the Piets resurrendered their independence he retired with a few of his followers to the monastery of Stremeshalch, now Whithy. In 684 he was present at the synod recorded by Bede (IV, 28), known as the Synod on the Alne, possibly the same as the Synod of Twyford; and he accompanied King Ecgfrith to landsfame to personify the Church of Cuthbert: to accept the bishops appointed by the charter and the laws of the country" (Haddan and Stubbs, III, 166). St. Bede adds that he spent many years of useful labour at Whithy before he died and was buried in St. Peter's Church there.

EDWIN BURTON.

TRUSTEE

Trustee System.—I. In the exercise of her inherent right of administering property, the Church often appoints deputies who are responsible to herself. Technically, such administrators, whether clerical or lay, emerged in early times ecclesiastical goods were divided into three or four portions, and that part set aside for the upkeep of the Church began to take on the character of a juridical person. The Eleventh Council of Carthage (can. ii) in 407 requested the civil power to appoint five executors for ecclesiastical property, and in the course of time laymen were called on to take the trust. The history of the Church is one of standing, however, that everything was to be done in the name and with the approbation of the Church. A number of early and medieval synods have dealt with the administration of curators of ecclesiastical property, e. g. can. vii, Conc. Breviar. (553); can. xxxviii, Conc. Mogunt. (813); can. x, Conc. Mogunt. (817); can. xxxviii, Conc. Nation. Würzburg. (1287). The employment of laymen in concert with clerics as trustees became common all over Christendom. In England such officials were called churchwardens. They were generally two in number, one being chosen by the parish priest, the other by the parishioners, and with them were associated others called sidelemen. The churchwardens were usually appointed by the parish under the supervision of the bishop, to whom they were responsible. An annual report on the administration of church property was made obligatory in all countries by the Council of Trent (Sess. XXII, can. ix, "De Ref."): "The administrators, whether ecclesiastical or lay, of the fabric of any church whatsoever, even though it be a cathedral, as also of any hospital, confraternity, charitable institution called monte de pitié, and of any pious places whatsoever, shall be bound to give in one a year an account of their administration to the Ordinary." II. At the present time, the Church nowhere absolutely forbids the employment of laymen in the administration of ecclesiastical property, but endeavors to reserve to herself the right to impose her own laws and principles carried out on this subject when laymen are among the trustees. According to the present discipline, the fabric of the church is distinct from the foundation of the benefice, and sometimes the fabric, in addition to the goods destined for the upkeep of divine worship, possesses also schools and eleemosynary institutions (S. C. C. 27 Apr., 1855, in can. Bergom.). All lay trustees must be approved by the bishop, and he retains the right of removing them and of overseeing the details of their administration. In countries in which the church organization was entirely swept away in the troubles of the Reformation period, as in the British Isles, laymen are not generally employed as trustees at the present day. For the trustee system, as far as it can be called such, in use in the Catholic Church in England and Ireland see Taunton, "The Law of the Church," pp. 15, 316. In Holland, laymen were admitted to a share in the administration of church temporalities by a decree of the Propaganda (21 July, 1856). The bishop is to nominate the members of the board, over which the parish priest is to preside. Trustees hold office for four years and may be reappointed at the expiration of that term. When a vacancy occurs the board presents two names to the bishop, from which the bishop may choose one. The bishop may dismiss any member and even dissolve the entire board of trustees. In this instance, as in all others where laymen are in question, the Holy See is careful to guard the prescriptions of the sacred canon as to the management and ownership of church goods [see Administrator (of Ecclesiastical Property)]. III.—In the United States the employment of lay trustees was customary in some parts of the country from a very early period. Dissensions sometimes arose with the ecclesiastical authorities, and the Holy See has intervened to restore peace (see Connell, Henry; Philadelphia, Archdiocese of; New York, Archdiocese of; Prop. VII, 21 Aug. 1822) the rights of the Church to the pretensions of the trustees, and Gregory XVI declared (12 Aug., 1841): "We wish all to know that the office of trustees is entirely dependent upon the authority of the bishop, and that consequently the trustees can undertake nothing except with the approval of the ordinary." The Third Plenary Council of Baltimore, session IX, no. 13 in the U. S., 1870, regulations concerning trustees: It belongs to the bishop to judge of the necessity of constituting them, their number and manner of appointment; their names are to be proposed to the bishop by the parish rector; the appointment is to be made in writing and is revocable at the will of the bishop; the trustees selected should be men who have made their Easter duty, who contribute to the support of the Church, who send their children to Catholic schools, and who are not members of prohibited societies; nothing can be done at a board meeting except by the consent of the rector who presides; in case of disagreement between the trustees and the rector, the judgment of the bishop must first be accepted. A decree of the Congregation of the Council of the Holy See declares: "The vesting of the title to church property in a board of trustees is a preferable legal form, and that in constituting such boards in the United States, the best method is that in use in New York, by which the Ordinary, his vicar-general, the parish priest, and two laymen approved by the bishop form the corporation of Proprietor; Ecclesi. Law, in the U. S., Vol. IV. IV.—The legal standing of church trustees according to British law is treated by Taunton, "The Law of the Church," pp. 15, 315. In the United States the legal rights of trustees vary slightly in different States, but the following prescriptions (selected from Scanlan, "The Law of Church and Grave") hold good everywhere: When the statute provides that two lay members of the corporation shall be appointed annually by the committee of the congregation, the members of the congregation have no right to elect said two members, and those appointed in the proper manner are lawful officers. When the election of new trustees is invalid, the old trustees hold over until there shall have been a valid election of their successors. The president and secretary of a church corporation have no authority to make a promissory note unless authorized by the board of trustees. When the laws of the organization give control of matters to the board of trustees, the majority of the
members of the church cannot control the action of the trustees contrary to the uses and regulations of the church. A court has no authority to control the internal action of the trustees in the management of its funds so long as they do not violate its constitutions or by-laws. Excommunication does not always remove an officer of a church corporation. The legal rights of a bishop in regard to the temporalities of a church, where they are not prescribed by the civil law, must rest, if at all, upon the federal constitution and the ecclesiastical laws and principles which were accepted before the dispute began are the standard for determining which party is right.

TAUKN. The Law of the Church (London, 1865), s. v. Fabry: Administration; Ecclesiastical Property; SCANLAN, The Law of Church and State (New York, 1909); SMITH, Notes on II Council of Baltimore (New York, 1891); Concilium Plenarium III (Baltimore, 1886); WERSE, Das Decretalium, III (Rome, 1901).

WILLIAM H. W. FANNING.

Trusts and Bequests. A trust has been defined, in its technical sense, as the right enforceable solely in equity to the beneficial enjoyment of property of which the legal title is in another (Bispham, "Equity", p. 385). For personal property, it is the right of a valid trust, entailed in the grant by one party for the benefit of another. (Bouvier, "Law Dict.", s. v. Trusts.) It implies two interests, one in equity and one in law—an individual to hold the legal title, who is known as the trustee, and another as beneficiary, known as the cestui que trust. The term "trust" is applied sometimes to the equitable title, the obligation of the trustee, or the right which belongs to the beneficiary; sometimes to the personal trust, there are three essentials: a definite subject matter within the disposal of the settlor; a lawful definite object to which the subject matter is to be devoted; clear and unequivocal words or acts devoting the subject matter to the object of the trust (25 Am. and Eng. Ency. of Law, 866, title "Trusts and Trustees"). Not every gift of personal property is a personal trust, but they must be sufficient to express the present intent to place a beneficial interest in a specific property in the hands of a trustee beyond the control of the person or persons who are to enjoy the benefit thereof. Any property, real, personal, or equitable, may be the subject of a trust, except in a few cases where statutes have provided to the contrary.

The English Statute of Frauds, which has been enacted in most of the United States in some of its provisions, provides that all trusts of land should be proved and manifested by writing. But trusts of personal property are not within the statute; therefore a valid trust of such property may be created verbally, but transfers of existing trusts must be in writing. The Statute of Frauds does not extend to personal trusts, for the purpose of empowering certain individuals to inherit property. These trusts were known as fidei commissum and for their benefit a separate equitable jurisdiction was established. There has been some controversy as to whether the English trust is an outcome of the Roman institution or not. The difference between the two is that the latter is a case of carrying out substitutions, while the former separates the ownership and enjoyment of the benefits of an estate, the fundamental idea at the root of both being much the same. This system seems to have appeared in England under the reign of Edward III, for the purpose of avoiding the Statutes of Mortmain, which had been passed to check the growth of

landed estates in the hands of religious houses. These trusts were abolished, except as to certain gifts or grants, by the Statute of Uses. The term trust is also known as the 27th Henry VIII, which held that any person entitled to the use of an estate should have the title to it. This statute has either been recognized as part of the common law in most of the United States through judicial interpretation or been enacted by legislation.

Trusts are either executory or executory, express or implied. In an executory trust the instrument must be interpreted according to the rules of law, even though the intention may be defeated. A court of equity will take jurisdiction for the purpose of carrying out executory trusts and seeing that the instrument which purports to fulfil the intention of the settlor really does so, and will reform conveyances where the intentions of the settler have not been clearly set out. An express trust is one which is created by the direct words of the settlor. Implied trusts are those which arise when the terms or circumstances do not specifically express but simply imply a trust. Where the entire intention of the trust cannot be carried out without violating some rule of law or public policy, equity will carry it out if there has been an equitable construction put by a court of equity on the conduct of the parties. The Statute of Frauds 29th Charles II requires that declarations of trust of lands should be proved by writing.

Who May Be A Trustee. Any person worthy of confidence and possessed of the power to hold the estate may be a personal or corporate trustee. The trustee may be either sovereign in England, any of the states of the United States, and perhaps the Federal Government, a public officer in his private capacity or the settlor himself; even the beneficiary or cestui que trust may act as trustee providing there are other beneficiaries besides himself; so too a corporation may act in this capacity if not precluded by the trust instrument. The corporation has not been trustees but the general trend of authority is to the contrary. Married women may be trustees and, acting under the direction of the court, an infant, alien, or lunatic. In cases where no trustee has been named, or for some reason the office has become vacant, the court will supply the deficiency rather than allow the trust to be carried on by someone otherwise than the settlor himself. When this power, while in many jurisdictions it has been specifically granted by statute. As a general rule, the trustee is appointed by the settlor and provision made for his successors. The settlor may designate whomsoever he wishes and vest in that person the power to appoint succeeding trustees, though sometimes the power is placed with the cestui que trust and sometimes with the settlor. The number of trustees is governed by the provisions of the instrument of the trust, but as a general thing the courts look unfavourably upon single trustees, particularly in the cases of large estates or those for infants or lunatics.

There is no particular method by which a trustee accepts a trust. His actions in the matter have been described as being typically the person who joins in the instrument if it is a conveyance. There are, however, but three ways by which he may be relieved: first, the consent of all parties in interest; second, by virtue of the provisions of the instrument of trust; and third, with the consent of the court. The old rule in England forbade a trustee retiring on his own motion, but the modern rule is different except where it is impossible to provide a substitute. The conduct sufficient for the removal of a trustee from his office must be such as to endanger the trust funds, and the courts will not look favourably upon light or frivolous whins and disagreements among the parties. The powers of trustees are general and special—those which arise by construction of law incident to the
office, and those provided by the settlor. Any person who has capacity to hold property may be a cestui que trust, although some jurisdictions restrict the rule to minors or other incompetents. He must be definitely ascertained either in the instrument or be a trustor being at the date of the settlement. A sovereign, any of the states of the United States, or the Federal Government may be a beneficiary, or a corporation so far as personal property is concerned, and also as to real estate within the limits of its charter privilege or unless prohibited by statute. An unincorporated society, however, cannot act as a trustee except in the case of a charitable or religious society. The beneficiary has a right to alienate or encumber his estate unless the terms of the trust expressly or impliedly forbid or there is a statute which interferes; so too he may assign his interest or even alienate the income before it becomes due.

The cestui que trust or beneficiary has three remedies in the event of a breach of trust on the part of his trustee. He may follow the specific estate into the hands of a stranger to whom it has been wrongfully conveyed; he has the right of attaching the property into which the estate may have been converted; and the further right of action against the trustee personally for reimbursement. As between him and the trustor, however, he has the right to be repaid out the profits of such property as may have been brought. It is the rule that purchasers must see to the application of the purchase money in the cases of trust estates, such as where it is provided that the funds be for the payment of specific legacies or annuities or debts. In some jurisdictions this rule has been abrogated by statute. Technical terms are not necessary for this purpose. They should be understood in their legal and technical sense. General expressions, however, will not establish a trust unless there appears a positive intention that they should do so. Bequests in trust for accumulation must be confined within the limits established against perpetuities. A settlor can only extend the trust for the life or lives in being during a certain period, and any attempt to extend the trust beyond this period violates it in toto. By statute, accumulations are forbidden in some jurisdictions excepting during the minority of the beneficiary or for other fixed periods (Bouvier, "Law Dict."

As a rule, the interest of a beneficiary is liable for the payment of his debts, but this does not prevail in a majority of the states. Bequests are never subject, as they are called, being for the protection of the beneficiary against his own improvidence, are sustained in these jurisdictions. Since the Statute of Wills equitable interests are degradable only in writing. How far a devisee of a trust estate can execute the trust depends on the intention of the settlor expressed in the instrument. Out of the estate he may do anything which a person in the same or any other situation might do with the estate unless there is a positive intention that it should not be so. In order to create a valid trust by will, the instrument must be legally executed and admitted to probate. There is this distinction between wills and declarations of trusts. The former, being amissory, take effect only on the death of the testator; the latter, generally fixed by statute and it in allowed his legitimate expenses. See Charitable Bequests.

LEGACIES.

Walter George Smith.

Truth (A. S. tréow, truy, truth, preservation of a compact, from a Teutonic base Treu, to believe) is a relation which holds (1) between the knower and the known—Logical Truth; (2) between the knower and the outward which is the subject of knowledge—Moral Truth; and (3) between the thing itself, as it exists, and the idea of it, as conceived by God—Ontological Truth. In each case this relation is, according to the Scholastic theory, one of correspondence, conformity, or agreement (ad equatio) (81, Thomas, Summa, I, Q. xxi, a. 2.)

Every existing thing is true, in that it is the expression of an idea which exists in the mind of God, and is, as it were, the exemplar according to which the thing has been created or fashioned. Just as human creations—a cathedral, a painting, or an epic—conform to and embody the ideas of architect, artist, or poet, so, only in a more perfect way, God's creatures conform to and embody the ideas of Him who gives them being. (Q. D., 1 De veritu, a. 4; Summa, Q. xvi, a. 1.)

II. LOGICAL TRUTH.—A. THE SCHOLASTIC THEORY.

To judge that things are what they are is to judge truly. Every judgment comprises certain ideas which are referred to, or denied of, reality. But it is these ideas that are the objects of our judgment. They are merely the instruments by means of which we judge. The object about which we judge is reality itself—either concrete existing things, their attributes, and their relations, or else entities the existence of which is merely conceptual or imaginary, as in drama, poetry, or fiction, but in any case entities which are real in the sense that their being is other than our presence of mind. Of these, one, and therefore, is one thing, and the ideas and judgments by means of which we think about reality, another; the one objective, and the other subjective. Yet, diverse as they are, reality is somehow present to, if not present in, consciousness when we think, and somehow by means of thought the nature of reality is revealed. This being the only term adequate to describe the relation that exists between thought and reality, when our judgments about the latter are true judgments, would seem to be conformity or correspondence. "Veritas logicae est adaquatio intellectus et rei" (Summa, I, Q. xxi, a. 2). Whenever truth is predictable of a judgment, that judgment corresponds to the nature or attributes of which it reveals. Every judgment is, however, as we have said, made up of ideas, and may be logically analyzed into a subject and a predicate, which are either united by the copula is, or disjointed by the expression is not. If the judgment be true, therefore, these ideas must also be true, i.e., must correspond with the realities which they signify. As, however, this objective reference or significance of ideas is not recognized or asserted except in the judgment, ideas as such are said to be only "materially" true. It is the judgment alone that is formally true, since in the judgment alone is a reference to reality formally made, and truth as such recognized or claimed.
The negative judgment seems at first sight to form an exception to the general law that truth is correspondence; but this is not really the case. In the affirmative judgment both subject and predicate and the union between them, of whatever kind it may be, are referred to reality; but in the negative judgment subject and predicate are disjoined, not conjoined. In other words, in the negative judgment we deny that the predicate has reality in the particular way or capacity with the subject. On the other hand, all such predicates presumably have reality somewhere, otherwise we should not talk about them.

Either they are real qualities or real things, or at any rate somebody has conceived them as real. Consequently the negative judgment, if true, may also be said to correspond with reality, since both subject and predicate are realized, or exist, as exists or as conceptions. What we deny, in fact, in the negative judgment is not the reality of the predicate, but the reality of the conjunction by which subject and predicate are united in the assertion which we implicitly challenge and negate. Subject and predicate may both be real, but if our judgment be true, they will be disjoined, not united in reality.

But what precisely is this reality with which true judgments and true ideas are said to correspond? It is easy enough to understand how ideas can correspond with realities that are themselves conceptual or ideal, but most of the realities that we know are not of this kind. Now, then, can ideas and their corresponding realities be like that in which, for instance, a tree character, correspond with realities which for the most part are not psychical but material? To solve this problem we must go back to ontological truth, which, as we saw, implies the creation of the universe by One Who, in creating it, has expressed therein His own ideas very much as an architect or an author expresses his ideas in the book or the building which he creates. That creation, however, is no longer a case of correspondence, but a case of realization, since all that is real in sensorial existence is real, if we understand that by real we mean that which is the object of the sensory experience of the same, or similar, to the original ideas. This is by means of the idea of colour and its specific differences that colours are predicated of objects, not by means of sensations. Such an idea could not arise, indeed, were it not for the sensations which in perception accompany and condition it, but the idea itself is not a sensation, nor is it of a sensation. Ideas have their origin in sensible existence, and it is because we recognize in our experience that which has origin in sensible existence, except by reference to such experience and by differentiation from experiences in which other and different properties of objects are presented. Granted, therefore, that differences in what is technically known as the "quality" of sensation correspond to differences in the objective properties of the phenomenon, we need not find that the idea is unreasonable. No further correspondence is required; for the correspondence which truth postulates is between idea and thing, not between sensation and thing. Sensation conditions knowledge, but as such it is not knowledge. It is as if there were a connecting link between the idea and the thing. Differences of sensation are determined by the causal activity of the knower and of the things, and the idea is derived by an instinctive and quasi-intuitive act of the mind which we call abstraction.

Thus the idea which the thing unconsciously expresses finds conscious expression in the act of the knower, and the vast scheme of relations and laws which are de facto embodied in the material universe reproduce the ideas and the reality which corresponded to them. 

Correspondence between thought and reality, idea and thing, or knower and known, therefore, turns out in all cases to be of the very essence of the truth-relation. Whence, say the opponents of our theory, in order to know whether our judgments are true or not, we must compare them with the realities that are known by comparing them with the obviously imperfect, and since reality can only be known through the instrumentality of the judgment. This objection, which is to be found in almost every non-Scholastic book dealing with the subject, rests upon a grave misapprehension of the real meaning of the Scholastic doctrine. Neither St. Thomas nor any other of the great Scholastics ever asserted that correspondence is the scholastic criterion of truth. To inquire what truth is, is one question; to ask how we know that
we have judged truly, quite another. Indeed, the possibility of answering the second is supposed by the mere fact that the first is put. To be able to determine the correspondence that is to pass for essence, it is necessary that we possess it, i.e., must be able to distinguish it from error. We cannot define that which we cannot distinguish and to some extent isolate. The Scholastic theory supposes, therefore, that truth has already been distinguished from error, and proceeds to examine truth with a view to discovering in what precisely it consists. The standpoint is that logical and criteriological. When he says that truth is correspondence, he is stating what truth is, not by what sign or mark it can be distinguished from error. By the old Scholastics the question of the criteria of truth was scarcely touched. They discussed the criteria of valid reasoning in their treatises on logic, but that the mind is so much inclined to the other through and through that apart from them, and again apart from the whole, it is but a distorted fragment, a mutilated abstraction which in reality is not truth at all. Consequently, since human truth is always partial and fragmentary, there is in strictness no such thing as human truth. For us the truth is ideal and, from it the truths are derived. In such a case, it would seem that, if we would bring any more into the truth, they would have to undergo a change of which we know neither the measure nor the extent.

The flagrantly sceptical character of this theory is sufficiently obvious, nor is there any attempt on the part of its exponents to deny it. Starting with the assumption that to conceive is "to hold many elements together in a connection necessitated by their content" and with the idea of the world to be divided into "a significant whole", i.e., a whole, "such that all its constituent elements reciprocally determine one another's being as contributory features in a single concrete meaning", Dr. Joachim boldly identifies the true with the conceivable (Nature of Truth, 69). And since no human intellect can conceive in this full and adequate sense, he frankly admits that no human truth can be more than approximate, and that to the margin of error which this approximation involves no limits can be assigned. Human truth draws from absolute or ideal truth "whatever being and conservability" it possesses (Green, "Prolegomen", 77); but it is not, and never can be, identical with absolute truth. As for the human, it is "a fragment which, although essentially and intrinsically modify one another. For his definition of human truth, therefore, the Absolutes is forced back upon the Scholastic doctrine of correspondence. Human truth represents or corresponds with absolute truth in proportion as it presents us with this truth as affected by more or less detrangement, or in proportion as we may be said to have gone into the other (Bradley, "Appearance and Reality", 363). While, therefore, both theories assign correspondence as the essential characteristic of human truth, there is this fundamental difference between them: For the Scholastic this correspondence, so far as it goes, must be exact; but for the Absolutes it is necessarily imperfect, so imperfect, indeed, that the ultimate truth of any given proposition "may quite transform its original meaning" (Appearance and Reality, 364).

To admit that human truth is essentially representative is really to admit that conception is something more than the mere "holding together of many elements in a connexion necessitated by their several contents". But the Scholastic theory of "truth" does not lie so much in this, nor yet in the identification of the true and the conceivable, as in its assumption that reality, and therefore truth, is organically one. The universe is undoubtly one, in that its parts are inter-related and inter-dependent; and from this it follows that we cannot know any part completely unless we know the whole but it does not follow that we cannot know any part at all unless we know the whole. If each part has some sort of being of its own, then it can be known for what it is, whether we know its relations to other parts or not; and similarly some of its relations to other parts can be known without our knowing them all. Nor is the individuality of the parts of the universe destroyed by their inter-dependence, rather it is thereby sustained.
The sole ground which the Hegelian and the Absolutist have for denying these facts is that they will not
be admitted by the Pragmatist. This is fundamentally
true. Since, therefore, it is confessedly impossible
to explain the nature of this unity or to show how
in it the multitudinous differences of the universe are
"reconciled", and since, further, this theory is ac-
knowledged to be hopelessly sceptical, it is surely irra-
tional any longer to maintain it.

C. The Pragmatist's Theory of Truth. The Pragmatist
is fundamentally sceptical. All human activity is pur-
pulsive, and its purpose is the control of human expe-
rience, with a view to its improvement, both in the
individual and in the race. Truth is but a means to
this end. Ideas, hypotheses, and theories are but in-
struments which man has "made" in order to better
himself and his environment; and, though specific
in type, like all other forms of human activity they exist
solely for this end, and are "true" in so far as they
fulfil it. Truth is thus a form of value; it is something
that works satisfactorily; something that "ministers
to human interests, purposes and objects of desire"
(Studies in Humanism, 362). There are no axioms or
self-evident truths. Until an idea or a judgment has
proved itself of value in the regulation of consciousness,
experience or conduct, one is justified in rejecting it,
or postulate or claim to truth. Nor are there any absolute or irreversible truths. A
proposition is true so long as it proves itself useful,
and no longer. In regard to the essential features of
this theory of truth W. James, John Dewey, and A.
W. Moore in America, F. C. S. Schiller in England,
G. Simmel in Germany, Papini in Italy, and Henri
Bergson in France, are brought into substantial agree-
ment. It is, they say, the only theory which takes account of the psychological pro-
cesses by which truth is made, and the only theory
which affords a satisfactory answer to the arguments of the scep-

cite. In regard to the first of these claims there can be no
doubt. The Pragmatism is based upon a study of truth "as the making". But the question at issue is
not whether interest, purpose, emotion, and volition
do as a matter of fact play a part in the process of
cognition. That is not disputed. The question is
whether, in judging the validity of a claim to truth,
such considerations ought to have weight. If the aim
of all cognitive acts is to know reality as it is, then
certainly they ought to be regarded as being the
basis of judgment. But this does not help us in deducing
what judgments are true and what are not, for
the truth of a judgment must already be known before this
demand can be satisfied. Similarly with regard to
particular interests and purposes; for though such in-
terests and purposes may prompt us to seek for knowl-
gedge, they will not be satisfied until we know truly,
even at any rate think we know truly. The satisfaction
of our needs, in other words, is posterior to, and already
supposes, the possession of true knowledge about
whatever we wish to use as a means to the satisfaction
of these needs. To act efficiently, we must know
what it is we are acting upon and what will be the
effect of the action contemplated. But there is no
true consequence only in those cases where we know that such consequences
should ensue if our judgment be true, and then act in
order to discover whether in reality they will ensue.

Theoretically, and upon Scholastic principles, since
whatever is true is also good, true judgments ought
result in good consequences. But, apart from the fact
that the truth of our judgment must in many
cases be known before we can act upon them with
success, the Pragmatist criterion is too vague and too
variable to be of any practical use. "Good con-
sequences", "successful operations on reality", "benefi-
cial interaction with sensible particulars" denote
experiences which it is not easy to recognize or to
distinguish from other experiences less good, less success-
ful, and less beneficial. If we take personal valua-
tions as our test, these are provably unstable;
if social values, they are relative; and if the tests are
are they to be found, and upon what grounds accepted
by the individual? Moreover, when a valuation has
been made, how are we to know that it is accurate?
For this, it would seem, further valuations will be
required, and so on ad infinitum. Distinctively prag-
matistic criteria of truth are both impractical and unre-
lieble, especially the criterion of felt satisfaction,
which seems to be the favourite (cf. James, "Meaning
of Truth", 88, 89, 101; "Pragmatism", 202, 217;
Schiller, "Studies in Hum.", 82, 185), for in deter-
mining this not only the personal factor, but the mood
of the moment and even physical conditions play a
considerable part. Consequently upon the second
head the claim of the Pragmatist can by no means be
allowed. The Pragmatist criterion is not so much
sceptical than the theory of the Absolutist, which it
seeks to displace. If truth is relative to purposes
and interests, and if these purposes and interests are,
as they are admitted to be, one and all tinged by per-
sonal biasness, then what is true for one man will
not be true for another, and what is true now will
not be true tomorrow. Yet if we take the problem in
the interest that has engendered it or in the circum-
stances by which it has been verified.

All this the Pragmatist grants, but replies that such
truth is all that man needs and all that he can get
("Mind", N. S., LIX, 167). True judgments do
not correspond with reality, nor in true judgments
do we know reality as it is. The function of cognition,
in short, is not to know reality, but to create it. In
this reason this truth is identified with its consequences—
thoretical, if the truth be merely virtual ("Meaning
of Truth", 67, 132, 205; "Pragmatism", 208, 209),
but in the end practical, particular, concrete. "Truth
means successful operations on reality" (Studies in
Hum., 118). The truth-relation "consists of inter-
connections of the particular purposes of the particu-
lar case as assigned and catalogued" (Meaning
of Truth, 234). "The chain of workings which an
opinion sets up is the opinion's truth" (Ibid., 235).
Thus, in order to refute the Sceptic, the Pragmatist
changes the nature of truth, redefining it as the defi-

citantly experienceable success which attends the work-

core and a real solution of our problems; and in so doing he
gains precisely what the Sceptic has always sought to prove,
namely, that our cognitive faculties are incapable of
knowing reality as it is. (See Pragmatism.)

D. The "New" Realist's Theory.—As it is a first
principle with both Absolutist and Pragmatist that
reality is changed by the very act in which we know it,
so the negation of this thesis is the root principle of
New Realism. In the "Old" Realist it is one with the
Scholastic. Reality does not depend upon experience, nor is it modified by experience as
such. The "New" Realist, however, has not as yet
adopted the correspondence theory of truth. He re-
gards both knowledge and truth as unique relations
which hold immediately between knower and known,
which are not merely subjective in character, but are
a difference between subject and object of consciousness
is not a difference of quality or substance, but a differ-
ence of office or place in a configuration" (Journal of
Phil. Psychol. and Scientific Meth., VII, 396).

Reality is made up of terms and their relations, and
truth is just one of these relations, su generis, and
therefore recognizable by it in itself. This acc-

citantly holds of truth, but there is at
any rate one point which it seems altogether to ignore,
viz., the existence of judgments and ideas of which,
and not of the mind as such, the truth-relation
is predicable. We have not on the one hand objects
and on the other bare mind; but on the one hand objects
and on the other a mind that by means of the judg-
ment refers its own ideas to objects—ideas which as
such, both in regard to their existence and their content, belong to the mind which judges. What then is the relation that holds between these ideas and their objects when our judgments are true, and again when they are false? Surely both logic and etymology indicate that the same term should not be applied to such judgments as merely that which is true, and of such judgments than merely that they are different.

Bertrand Russell, who has given in his adhesion to "The Program and First Platform of Six Realists", drawn up and signed by six American professors in July, 1910, modifies somewhat the nature of their theory of truth. "Every judgment", he says (Philos. Essays, vol. i., p. 86), "is a relation to an object", and pinpoints "one of which is a relation. Thus, the judgment, "Charles I died on the scaffold", denotes several objects or "objectsives" which are related in a certain definite way, and the relation is as real in this case as are the other objectives. The judgment "Charles I died in his bed", on the other hand, denotes the objects, Charles I, death, and bed, and a certain relation between them, which in this case does not relate the objects as it is supposed to relate them. A judgment, therefore, is true, when the relation which is one of the objects relates the other objects, otherwise it is false" (loc. cit.). In this statement of the nature of truth, correspondence between the mind judging and the objects about which we judge is distinctly implied, and it is a question for which we are here to inquire, which is the distinguishing mark of true judgments. Russell, however, unfortunately seems to be at variance with other members of the New Realist school on this point. G. E. Moore expressly rejects the correspondence theory of truth ("MIND", N. S., VIII, 179 sq.), and Prichard, another English Realist, explicitly states the engineer's theory of the mechanism of thought and ourselves (Kant's Theory of Knowledge, 21). Nevertheless, it is matter for rejoicing that in regard to the main points at issue—the non-alteration of reality by acts of cognition, the possibility of knowing it in some respects without its being known in all, the growth of knowledge by "accretion", the non-spiritual character of some of the objects of experience, and the necessity of ascertaining empirically, and not by a priori methods, the degree of unity which obtains between the various parts of the universe—the "New" Realist and the Scholastic Realist are substantially in agreement.

II. MORAL TRUTH, OR VERACITY. Is the correspondence theory of the outward expression given to thought with the thing thought related to the outward verbal expression with verbal truth (veritas locationis), which is the correspondence of the outward or verbal expression with the thing that it is intended to express. The latter supposes on the part of the speaker not only the intention of speaking truly, but also the power to do so, i. e. it supposes (1) true knowledge and (2) a right use of words. Moral truth, on the other hand, exists whenever the speaker expresses what is in his mind, even if de facto he be mistaken, provided only that he says what he thinks to be true. This latter condition, however, is necessary. Hence a better definition of moral truth would be, "the correspondence of the outward expression of thought with the thing as conceived by the speaker". Moral truth, therefore, does not imply true knowledge. But, the two deviations from moral truth would be only materially a lie, and hence not blameworthy, unless the use of words or signs were intentionally incorrect. Moral truth does imply a correct use of words or other signs. A lie, therefore, is an intentional deviation from moral truth, and is defined as a locutio contra mentem: i. e. it is the outward expression of a thought which is intentionally diverse from the thing as conceived by the speaker. It is important to observe, however, that the expression of the thought, whether by word by sign, must in all cases be taken in its context; for both in regard to words and to signs, custom and circum-

stances make a considerable difference with respect to their interpretation. Veracity, or the habit of speaking the truth, is a virtue; and the obligation of practising it arises from a twofold source. First, "since man is a social animal, naturally one man owes to another that which will be of service in the same community". But men could not live together if they did not believe one another to be speaking the truth. Hence the virtue of veracity comes to some extent under the head of justice (justitiam debita)" (St. Thomas, Summa, I—II, Q. cix, a. 5). The second source of the obligation to veracity arises from the fact that speech has not only an immediate relation to the object, but also a relation of knowledge by one to another. It should be used, therefore, for the purpose for which it is naturally intended, and lie should be avoided. For lies are not merely a misuse, but an abuse, of the gift of speech, since, by destroying man's instructive belief in the veracity of his neighbour, they tend to destroy the efficacy of that gift.

For Scholasticism see: scholastic treatises on major logic, s. v. Veritas; Etudes sur la Verité (Paris, 1909); Geny, Une nouvelle théorie de la connaissance (Journal, 1909); Mercure, On Truth (London, 1889); John Rickaby, First Principles of Knowledge; Starke, Intellektualismus de St. Thomas (Paris, 1900); Tomlinson, La notion de la verité (London, 1903); Truth and Veracity (London, 1907), E. K. Lewis, The Nature of Truth (London, 1911), and Truthful Speech (London, 1912).

Absolutism: Bradley, Appearance and Reality (London, 1899); Carnap, Articles in Mind, N. S., LI, LXI, LXII (1904, 1906); Carnap, Realization and Truth (London, 1905); Joachim, Theories of Truth (London, 1906); and Elements of Metaphysics (London, 1903); Articles in Mind, N. S., LVII (1906), and Philos. Rev., XIV, 3.

Evaluative/Ethical Practices (7th ed., Paris, 1911); Dewey, Studies in Logical Theory (Chicago, 1903); James, Pragmatism (London, 1896); and in The Philosophy of Pragmatism (London, 1897); Moore, Pragmatism and Its Critics (Chicago, 1910); Abel-Rey, La conception de la vérité (Paris, 1910); and in, The Nature of Truth (London, 1911); and Kant's Theory of Knowledge (Oxford, 1910); Russell, Philosophical Essays (London, 1906); and, Articles in Mind, LX (1906), and in Proceedings of the Aristotelian Society, VII.

LESLIE J. WALKER.

Truth Societies, Catholic.—This article will treat of Catholic Truth Societies in the chronological order of their establishment in various countries.

In England.—The Catholic Truth Society has had two periods of existence. It was initiated by Dr. Draper, the first Bishop of Manchester, by the publication of St. Joseph's Missionary College, and, in the two or three years of its existence, issued a number of leaflets and penny books, some of which are still on sale; but when he became Bishop of Salford, in 1872, the society fell into abeyance and soon practically ceased to exist. Meanwhile, and quite independently, the need of cheap, good literature impressed itself upon some priests and laymen, who raised the sum of twelve pounds, which was expended in printing some little cards of prayers for daily use, and for confession and Communion. The scheme was brought before Dr. Vaughan, who suggested that the new body should take the name and place of the defunct Catholic Truth Society. Under that name it was formally established, 5 November, 1884, and the second period of its existence began under the presidency of Dr. Vaughan, the Rev. W. H. (now Monsignor) Colegan and Mr. James Britten being appointed honorary secretaries. At the death of Cardinal Vaughan, the present Archbishop of Westminster, Cardinal Bourne, became president. The aims of the society are: To publish articles and booklets of various kinds, and to assist the uneducated poor to a better knowledge of their religion; to spread among Protestants information regarding Catholic faith and practice; and to promote the circulation of good and cheap Catholic literature. These objects have been steadily kept in view.
throughout the society's existence, although its scope has from time to time been enlarged as necessity has dictated. From them it will be seen that the aim of the society is not controversial, as is sometimes supposed. The position of Catholics in England is such that controversy is unavoidable, and a certain proportion of the society's publications have been devoted to the consideration of the Anglican claims and to the exposure of the fictions assiduously promoted by the less intelligent and bigoted class of Protestants. But the chief aim of the society has been the instruction of Catholics in their own faith and the development of educational and devotional works. The sale of some of these has been phenomenal: the "Simple Prayer-book", for example, has reached a circulation of 1,350,000; the little penny books of daily meditation have reached 114,000; and nearly 200,000 penny copies of the Gospels have been sold. An account of the literary output of the society can be ascertained from the list of publications, the number of which is seven thousand and thirty-nine papers dealing with "The History of Religions": of these last an aggregate of about 200,000 copies have been issued. For younger Catholics a large number of tales, dealing with the sacraments and other religious subjects, has been provided at the lowest possible price.

The society is mainly supported by subscriptions, ten shillings per annum being the usual rate of membership, while ten pounds is a life subscription. Without these the work could not be carried on, as, although the officers have always taken their part gratuitously, the necessary expenses of rent, printing, and storage could not be defrayed out of the often infinitesimal profits accruing from the sale of publications. From the first there has been a heavy expenditure on society's and thirty-nine papers dealing with "The History of Religions": of these last an aggregate of about 200,000 copies have been issued. For younger Catholics a large number of tales, dealing with the sacraments and other religious subjects, has been provided at the lowest possible price.

For younger Catholics a large number of tales, dealing with the sacraments and other religious subjects, has been provided at the lowest possible price.

The society is mainly supported by subscriptions, ten shillings per annum being the usual rate of membership, while ten pounds is a life subscription. Without these the work could not be carried on, as, although the officers have always taken their part gratuitously, the necessary expenses of rent, printing, and storage could not be defrayed out of the often infinitesimal profits accruing from the sale of publications. From the first there has been a heavy expenditure on society's and thirty-nine papers dealing with "The History of Religions": of these last an aggregate of about 200,000 copies have been issued. For younger Catholics a large number of tales, dealing with the sacraments and other religious subjects, has been provided at the lowest possible price.

Tryphon, Respicius, and Nympha, martyrs whose feast is observed in the Latin Church on 10 November. Tryphon is said to have been born at Kastoria in Thessaly and taken to Syria as a youth. During the Decian persecution he was taken to Nicaea about the year 250 and put to death in a horrible manner after he had converted the heathen prefect Licius. Fabulous stories are interwoven with his legend. He is greatly venerated in the Greek Church which observes his feast on 1 February. In the Latin Church he is also the patron saint of gardeners. Many churches were dedicated to him, and the Eastern Emperor, Leo VI, the Philosopher (d. 912), delivered a eulogy upon Tryphon. About the year 1005 the monk Theodoric of Flory wrote an account of him based upon earlier written legends; in Theodoric's story Respicius appears as Tryphon's companion, and the relics of both were preserved together; and in the year 1442, during the papacy of Martin V, the Virgin of the Holy Ghost in Siena, Nympha was a virgin from Palermo who was put to death for the Faith at the beginning of the fourth century. According to other versions of the legend, when the Goths invaded Sicily she fled from Palermo to the Italian mainland and died in the sixth century at Savona. Thus we have a church in Savona where a stone was observed by pilgrims lying on the ground at the time of the annual observance of this saint on 19 August. Some believe that there were two saints of this name. The church of the Hospital of the Holy Ghost at Rome was a cardinal's title which, together with the relics of these saints, was transferred in 1566 by Pope Pius V to the Church of St. Augustine. A Greek text of the life of St. Tryphon was discovered in 1789 by Father Franchi Nymphae, a clergyman, "Hagio-graphica" (Rome, 1901), in the series "Studi e Testi", XIX. The Latin Acts are to be found in Ruiniart, "Acta Martyrum", Analecta Bollandiana, XXVII, 7-10, 15; XVIII, 247. Gabriel Meier.

Tschiderer zu Gleisheim, Johann Nepomuk von, Bishop of Trent, b. at Bozen, 15 Feb., 1777; d. at Trent, 3 Dec., 1860. He sprang from a family that had emigrated from the Grisons to the Tyrol in 1529 and to which the Emperor Ferdinand III had given a patent of nobility in 1530. Johann Nepomuk was ordained priest, 27 July, 1800, by Emmanuel Count von Thun, Bishop of Trent. After spending two years as an assistant priest, he went for further training to Rome, where he was appointed notary Apostolic. After his return he took up pastoral work again in the German part of the Diocese of Trent, and by his later pontificate moral and pastoral theology at the episcopal seminary and at Trent in 1818 he became parish priest at Sarthalh, and in 1819 at Meran. Wherever he went he gained a lasting reputation by his zeal and charitableness. In 1828 Prince-Bishop Luschin appointed him cathedral canon and vicar at Trent; in 1832 Prince-Bishop Galura of Brixen selected him as Bishop of Heliopolis and Vicar-General for Vorarlberg. In 1834 the Emperor Francis I nominated him Prince-Bishop of Trent and on 5 May, 1835, he entered upon his office. During the five years of his administration he was distinguished for the encouragement of literature and for intense zeal in the fulfillment of his episcopal office. He was exceedingly simple and abstinent in his personal habits. On the other hand he loved splendor when it concerned the decoration of his cathedral, the procuring of ecclesiastical vestments, and the ornamentation of the churches. He founded a considerable part of the renovation and building of churches, and to the purchase of good books for the parsons and chaplains' houses. His charity to the poor and sick was carried so far that he was often left without a penny, because he had given away everything he had. Twice the cholera raged in his diocese and on these occasions he set his clergy a shining example of Christian courage. He left his property to the institution for the deaf and dumb at Trent and to the seminary for students that he had founded, and that was named after him the Joanneum. Directly after his death he was honoured as a saint; the process for his beatification is now in progress.

Tschupick, John Nepomuk, a celebrated preacher, h. at Vienna, 7 or 12 April, 1729; d. there, 20 July, 1784. He entered the Jesuit novitate on 11 October, 1744, and, shortly after, was appointed professor of grammar and rhetoric. In 1763 he became preacher at the cathedral of Vienna, a position which he filled during the remaining twenty-two years of his life with exceptional conscientiousness, piety, and ability. His preaching was very successful and highly appreciated by Francis I (d. 1765), Maria Theresa (d. 1780), Joseph II (d. 1790), and the imperial Court. His sermons were remarkable for clearness and logical thought, strength and precision of expression, copiousness and skilful application of Patristic and Biblical texts. The first edition of his collected sermons was published in ten small volumes and in an index volume (Vienna, 1785-8). This edition was supplemented by "Neue, bisher ungedruckte, Kanzelreden auf alle Sonn- und Fasttage, wie auch für die heilige Fastenzeit" (Vienna, 1798-1803). A new edition of all his sermons was prepared recently by Johann Hertkens (5 vols., Paderborn, 1908-1933). An Italian translation was made by Giuseppe Teglio (4 vols., 4th ed., Milan, 1856). Sommervogel, Bild. de la Compagnie de Jésus, VIII (Brussels, 1898), 261-3.

Michael Ott.

Tuam, Archdiocese of (Tramensis), in Ireland.—The Archdiocese of Tuam, the metropolitan see of Connacht, extends, roughly speaking, from the Shannon westwards to the sea, and comprises half of County Galway, and nearly half of Mayo, with a small portion of south Roscommon. It is generally considered the largest diocese in Ireland, including in itself about one-fourteenth of the entire area of the country. At the census of 1901 the Catholic population was 195,768; the entire non-Catholic population was only 4,141. There are several parishes in which all the inhabitants are Catholics. The principal portion of the archdiocese is divided by a chain of lakes extending from the Shannon westwards to the sea, near Foxford, Mayo. The largest of these lakes—Corrib, Mask, and Carra—form a magnificent and continuous watercourse, but are not connected by navigable rivers.
or canals. The country east of these lakes is a great undulating plain, mostly of arable land, interspersed here and there with bogs and smaller lakes. The country west of the great lakes is of entirely different character. It is nearly all rugged and heathery, with ranges of hills rising steeply from the lakes, especially from the shores of Lough Mask on one side, and from the shores of the Atlantic Ocean on the other, forming many lofty peaks with long-drawn valleys where the streams rushing down widen into deep and fishful lakes, which, especially in Connemara, attract fishermen from all parts of the United Kingdom. The population of the rugged lakeland is sparse and poor, but the scenery very picturesque, especially towards the west, where the bays of the ocean penetrate far in between the mountains, as at the beautiful Killary Bay. This western coast is bordered by many wind-swept islands, affording a precarious sustenance to the inhabitants. Of these the chief are the Isles of Aran in Galway Bay, and Inishboffin, off the north-western coast, Inishark, Inisbofin, and Inisturk, Clare Island and Achill Island—all of which are inhabited and have schools and churches. There are three priests on the Aran Islands, one on Inisbofin, one on Clare Island, and three on Achill, which has a population of about 6000 souls.

The archdiocese comprises seven rural deaneries—Tuam, Dunmore, Claremorris, Ballinrobe, Castlebar, Westport, and Clifden. There are three vicars-general who preside over three divisions of the archdiocese which from time immemorial have been historically distinct, that is Galway east of the Corrib, West Galway, or the Kingdom of Connemara, and the Mayo portion. There are 193 secular priests, of whom eighty are usually employed in the seminary. There are only two regulars, properly so-called, who reside in the Augustinian monastery of Ballyhaunis; two priests of the Order of St. Camillus have charge of the hospice for incurable clergy, Myone Park, Ballyglinn, Galway, and four secular clergy of a preparatory college for the African Missions in the Cornish Missionary Society, generously given for the purpose by Conn Blake, of Cloughballymore. There are four houses of the Christian Brothers, and one of the Brothers of the Christian schools. There are eleven monasteries of the Third Order Regular of St. Francis, who were founded by Archbishop MacHale to counteract the efforts of proselytizing institutions and to teach agriculture to their pupils. Of these schools the most successful has been the Agricultural College of Mount Bellows, which is working under the Agricultural Department. There are three Presentation convents, and ten convents of the Sisters of Mercy with schools. St. Jarlath's Diocesan Seminary has more than a hundred resident students.

St. Patrick in Tuam.—St. Patrick came into the Diocese of Tuam from Airtech in north-west Roscommon most likely in A.D. 410, and there travelled almost due west to Aghamore, where he founded his first church, on the summit of Croagh Patrick. We have the names of some twelve churches which he established in this district; it is expressly stated that he placed bishops over several of these churches—at Cella Seneus near Ballyhaunis; at Kilbenny, where he placed St. Benignus; at Donaghpatrick, which he gave to Bishop Felanu; at Aghagower, where he placed St. Senach, whom he called "Agnus Dei" on account of his meekness. His sojourn for forty days on the summit of Croaghpatrick has been described in the article CROAGH PATRICK. During the subsequent centuries the successors of Patrick often visited the Patrician churches in Connacht and received both homage and alms from them. They claimed a special jurisdiction over the twelve or fourteen Patrician churches in Tuam, even over the oratory on the summit of the holy mountain. Later these claims became exorbitant and were resisted by the archbishops of Tuam, especially after the Synod of Kells (1152), and the controversy was carried to Rome and finally decided in their favour. The primates, however, were allowed the rents of certain church lands in Tuam, but these claims afterwards remitted in exchange for lands in the north of Ireland.

The Archdiocese of Tuam now comprises the territories of five of those ancient dioceses which at different periods were united to the original Diocese of Tuam and Superna as corresponding roughly with the modern deanery of Tuam, comprised the ancient territory known as the Conmaicne of Dinnmore, and also the Ciarraige of Loch na-Airnead, as well as a portion of Corcomrogh and the Saxon territory. When the O'Connor kings of the twelfth century came to be the chief rulers of Connacht, and for a time of all Ireland, they erected a temporal See of Tuam; and sought to control the spiritual as they did the temporal rulers of their principality. There can be no doubt that it was the influence of Turough Mor, then King of Ireland, which induced the prelates and papal legate at Kells in 1152 to make his own Diocese of Tuam the archiepiscopal and metropolitan see of the province. This original cathedral was destroyed by the English in 1296. John, son of Lough, the disciple of St. Benin of Kilbannon, and the preceptor for a time at Clonfush near Tuam of St. Brendan the Navigator. The original cathedral known as Tempull Jarlath stood on the site of the present Protestant cathedral. After Jarlath's death his remains were enshrined and preserved in a church built by him in Tuam. Tempull na Serine was close to the spot on which the Catholic cathedral now stands. Around this cathedral, which was begun by Dr. Oliver Kelly in 1826, are grouped in a circle all the other ecclesiastical buildings—the college, the Presentation convents and schools, the Mercy convent and schools of the Sisters of Mercy, the Christian Brothers' House and schools, and the recently-erected archiepiscopal residence.

The ancient See of Annaghdown grew out of the monastery founded by St. Brendan for his sister St. Briga. Its jurisdiction extended over O'Flaherty's country around Lough Corrib and comprised in all seventy-seven parishes. The see was independent down to the death of Bishop O'Moore, in 1430, when Archbishop MacFinn seized and held it with the consent of the king. For the next 250 years a prolonged and unseemly conflict was carried on between the archbishops and abbots, the former declaring that Annaghdown had been reduced by the pope and the king to the rank of a parish church, whilst the abbots stoutly maintained their independence. In 1528 the revenues of Galway were established, and all the parishes on the south and west around the lake were placed under the warden's quasi-episcopal jurisdiction. Tuam still retaining eight parishes to the east of the lake. In 1830 the wardenship was abolished, and
the See of Galway established as a regular episcopal see, suffragan to Tuam.

The Diocese of Cong included all the parishes subject to the Abbey of Cong, which was founded by St. Fechin in 626. The abbots seem to have exercised quasi-episcopal jurisdiction over nineteen parishes in the Baronies of Ballynahinch, Ross, and Kilmaine, which for the most part were served by the monks as vicars under the abbot. In the Synod of Rath Breasail Cong was counted as one of the five dioeceses of Connaught, but there is no mention of it at the Synod of Kells in 1152. King Rory O'Connor retired to the abbey for several years and died there.

The Diocese of Mayo like that of Cong had its origin in Mayo Abbey, founded by St. Colman about 667 for Saxon monks who had followed him from Ireland. In 1152 it was recognized by the Synod of Kells as one of the Connaught sees, and mention is made of the death of Gilla Isu O'Mailin, Bishop of Mayo, in 1181, but on the death of Bishop Ceal O'Duffy in 1229 no successor was appointed and the see was merged in that of Tuam, probably through the influence of King Cathal O'Connor and his relative Bishop Felix O'Ruanaidh of Tuam. But bishops of Mayo reappear from time to time in the annals down to 1579 when Bishop Patrick O'Healy coming home to take possession of his See of Mayo was seized with his companion Friar O'Rourke and hanged at Kilmallock by Drury, the English President of Munster. At one time Mayo had no fewer then twenty-eight parishes under jurisdiction, which extended from the Dalgan River at Kilkyme to Ashhall Head. At present this is a small rural parish, and the "City of Mayo" comprises not more than half a dozen houses.

Of the Diocese of Aghagower we need say little. It was founded in 1141 by St. Patrick who placed over it Bishop Senach, the "Book of Armagh" tells us that bishops dwelt there in the time of the writer (early part of the ninth century). The jurisdiction of Aghagower extended over the "Owles", the territory around Clew Bay, comprising the modern deanery of Westport. But at an early date these churches were absorbed first into the Diocese of Mayo and afterwards into that of Tuam.

Moyasteries.—Besides the great monasteries of Aughinish, Cong, and Mayo, there were others in the archdiocese that deserve mention. The monastery of St. Enda at Kilkeany in Aran became famous in the first quarter of the sixth century. Near it was the oratory Tempull Benam, which Benan, or Bengans, of Kilbannon, the disciple of St. Patrick, had built. It is very small but strikingly beautiful, and its cell, surrounded by walls that are a stone or two for the last fourteen hundred years. There are in addition many other holy islands around this wild western coast, as Island Mac Dara, which all the fishermen salute by dipping their sails, Cruach of St. Caileanna, Archil of St. Feehin, St. Colman's Insbofin, Cuher of St. Patrick. The Cistercian Abbey of Knocknacarry (de Colle Victoris), six miles from Tuam, founded in 1215 by Lord Mac Dara, was one of the largest and wealthiest in the West of Ireland. Mention, too, is made of a Bishop of Knocknacarry. The ruins are full of interest, for some of its walls were frescoed and the sculptured tomb of King Fechin O'Connor is well preserved. At its suppression in 1542 it was found to be in the possession of the rectories of several parishes in Galway, Roscommon, and Mayo. The same King Cathal of the Red Hand founded in 1215 the Abbey of Ballinshuber close to St. Patrick's holy well. It was admirably built and has been partly restored as the parochial church of the district. It contains the tomb and monument of the first Viscount Mayo, the son of Sir Richard Wynne and Geraldine, Queen of Clew Bay. The Dominican Abbey of Athenry was established in 1241 by Meyler De Bermingham who endowed it with ample possessions. It usually contained thirty friars. The "main" building was erected by Meyler; King Felim O'Connor built the refectory; Flann O'Flynn built the "Scholar house", for the friars kept a noted school; Owen O'Heyne built the dormitory; Con O'Kelly built the "chapter house", and so on with the guest chamber and the infirmary. In Queen Mary's reign this convent was selected to be a university college for Connaught, but the project was never realized. Buried there are many of the early Burkes of Clanrickard, who in life were benefactors and protectors of the convent.

The Benedictine Nuns had a convent at Kilcrevan, situated on the Dalgan River, four miles from Tuam. It was founded in 1200 by the same King Cathal O'Connor for the royal ladies of his family, and of other high chieftains by whom it was richly endowed. It held estates not only in Galway but also in Roscommon, Mayo, Sligo, and Westmeath, and the rectories of a score of different parishes. Its inmates at one time secured at Rome a curtailment of the archbishop's rights of visitations and procurations, but after a short experience, the pope found it necessary to restore his full rights to the archbishop. It was however the greatest and wealthiest convent in the West. There were many smaller religious houses in the archdiocese. The Augustinians had ten; the Dominicans three; the Franciscans three or four; the Cistercians two; the Templars one, and there were also three or four nunneries.

Archiepiscopate.—In the long list of the Archbishops of Tuam there are many illustrious names which can be referred to here only briefly. Hugh O'Teissen was present at the Synod of Kells in 1152, where he received the pallium from the papal legate, and so became the first Archbishop of Tuam. He died in 1161 and was succeeded by Cathal, or Cathalics, O'Duffy, who reigned for forty years. In 1172 he was present with his suffragans at the Council of Cashel, which gave formal recognition to the claims of Henry II. Later, in 1173, he was directed to summon the Synod of Windsor on behalf of King Rory O'Connor, by which Rory consented to hold his Kingdom of Connacht in subjection to the English monarch. O'Duffy was also present at the Lateran Council in 1179, and in 1201 held a provincial synod at Tuam under the presidency of the Roman cardinal. He then retired to the Abbey of Cong where he died the following summer. His successor, Felix O'Ruanaidh, who previously had been a Cistercian, probably at Knocknacarry, filled the see for thirty-six years. He was a near relative of Rory O'Connor, which strengthened his great influence in the province. Next year he convoked a great synod of the province at Tuam in which it was decreed to unite the territory of the monasteries to their respective bishoprics. Tuam thereby acquired vast estates in
Galway, Mayo, and even Roscommon. The archbishop also complained that Armagh claimed jurisdiction over the Diocese of Kilmore and Ardagh, which rightfully belonged to his province, and also over several parishes in the Archdiocese of Tuam, to which the primate had no claim. A composition was effected later, in 1241.

In 1258 died Walter De Selerno, an Englishman, who was appointed by the pope but never got possession of his see. In 1286 Stephen de Fulworth, who had been justiciary, was appointed to the see of Tuam, but he resided mostly at Athlone. There is extant an inventory of his effects which goes to show that he lived in much state and splendour. William de Bermingham, son of Meyler de Bermingham, Lord of Carbery, Dunmore, and Athenry, also an appointee of Henry VIII, and it is said took the Oath of Supremacy. He managed to hold his ground in Tuam for thirty-five years under Henry VIII, Edward, Mary, and Elizabeth. Bodkin, though a temporizing prelate, was always a Catholic and zealous in the service of his post. In 1538 he held a visitation of his diocese, the act of which has been preserved to give invaluable information regarding the state of the archdiocese at that time.

Malachi O'Keely was one of the greatest Irish prelates of the seventeenth century—a patriot, a reformer, and a scholar; but he was not a general, and unwisely undertook to command the Confederate troops in Connacht during the wars of 1642-45. His followers were defeated and captured on the field by Sir F. Hamilton near Sligo and the archbishop was slain on the field. Mention must be made, too, of Florence Conry, though he never took possession of his see. He rendered signal service to Ireland by the foundation of St. Anthony's Convent of Louvain, whose scholars—Michael O'Clery, Ward, Fleming, Colgan, and many others—did much for the propagation of the language and the history of Ireland both sacred and profane. John MacHale has a special article in this Encyclopaedia; his immediate successor, John Morerry, was an indefatigable and zealous prelate; he found time to write commentaries in English on practically the whole of the New Testament. He was born in 1518, died in 1602, and lies buried before the high altar of Tuam cathedral beside John MacHale.

Moral and Social Condition.—The moral state of the archdiocese is very good. Temperance is making rapid strides amongst all classes of the population. Grave public crimes of every kind have almost disappeared. Primary education is now universally diffused even in the remotest mountain valleys. The Christian religion is now practically universal. St. Jarlath's College, Tuam, now holds a premier place amongst the diocesan colleges of Ireland. The social condition of the people also has been greatly improved mainly through the efforts of the Congested Districts Board. They are better housed and better fed; the land is better tilled, and much more is derived from the harvest of the seas around the coast. No part of Ireland suffered more during the famine years from starvation and proselytism than Connaught and the Island of Achill. The starving people were bribed during these years by food and money to go to the Protestant churches and send their children to the proselytizing schools. If they went they got food and money. "Silver Monday", as they called it, was the day fixed for these doles. If they refused to go to the church and to the school they got nothing; and to their honour it must be said, that most of them, but not all, preferred starvation to apostasy. The proselytizers have now completely disappeared, and have quite enough to do to take care of themselves.

The present archbishop, Most Rev. John Healy, a native of the Diocese of Elphin, was born in 11 Nov., 1845, at Ballinafad, Co. Mayo. His early education was received at an excellent classical school in the town of Sligo whence, at about fifteen years of age, he proceeded to the diocesan college, in those days situated at Summerhill near Athlone. On 26 August, 1860, he entered the class of rhetoric at Maynooth, and just before the completion of his course was called out by bishop Murray, then bishop of Elphin, to be his chaplain in his diocese. Here he was ordained in Sept., 1867, and continued to teach for over two years. His missionary experiences were gained in the parish of Ballygar, near Roscommon, where he was curate for two years, and then at Grange, Co. Sligo, where he spent seven years. He was then for one year in charge of a deanship school in the town of Elphin. In 1879, he was named to the see of Tuam, and in 1881, was consecrated Bishop of Tuam, Clonfert, and Elphin. He was conferred the degree of Doctor of Theology and the other of Classics—in the national college of Maynooth, and had the unique honour conferred on him of being appointed to both and allowed to make his own choice between them. He naturally selected the chair of theology, which he filled till 1885, when he succeeded Dr. Murray, as prefect of the Dublin Educational Establishment; and then was appointed to the see of Clonfert. Seven years after, by papal Brief, dated 13 Feb., 1903, he became Archbishop of Tuam, and on the following St. Patrick's Day took possession of his ancient see. On 31 August, 1909, he celebrated the silver jubilee of his episcopate.

The archbishop is a member of many Irish public bodies, notably the National Education Board, the Senate of the National University, the Board of Governors of University College, Galway. He is president of the Catholic Truth Society of Ireland, and a Commissioner for the publication of the Brehon Laws. He acted on the Royal Commission of 1901 to inquire into and report on condition of University Education in Ireland. His principal published works are: "History of Ireland, the Ancient Schools and Scholars", which has reached a fifth edition; "The Centenary History of Maynooth College"; "The Record of the Maynooth Centenary Celebrations"; "The Life and Writings of St. Patrick"; "Irish Essays; Literary and Historical"; "Papers and Addresses", a jubilee collection of fugitive periodical articles and reviews.

JOHN HEALY.

Tuam, School of (Irish, Tuaim na Gualtain), or the "Monastery of the two Shoulders", was founded by St. Jarlath in 540 and even during his life (d. 540) became a renowned school of piety and sacred learning, while in the eleventh century it rivalled Clonmacnoise as a centre of Celtic art. St. Jarlath was trained for his work by St. Bennignus, the successor and coadjutor of St. Patrick, and under this gentle saint’s guidance he founded his first monastery at Clonfola, now Chlófa, about two miles west from Tuam, and a still shorter distance across the fertile fields.
from Benignus's own foundation at Klilbannon. Here at Cluainfois, according to a widespread tradition, Saints Benignus and Jarlath and Caillinn, another disciple of Benignus, frequently met together to discuss weighty questions in theology and Scripture. The fame of this holy retreat brought scholars from all parts of Ireland, amongst whom were St. Brendan, the great navigator, who came from Kerry, and St. Colman, the son of Lenn, who came from Cloyne. One day Brendan in prophetic spirit told his master that he was to leave Cluainfois and go eastward, and where the wheel of his chariot should break on the journey, that was the place where he should build his church and monastic school. And he said good-bye to Brendan saying, "O holy youth, it is you should be master and I pupil, but go now with God's blessing elsewhere", whereupon Brendan returned to his native Kerry.

After the death of St. Jarlath there is little in the national annals about the School of Tuam. There is reference in the "Four Masters", under date (c. 727) to the death of a man called Naedel O'Bricen; and under the same date in the "Annals of Ulster" to the death of one "Ferdonamh of Tuaim da Ghaialla", to whom no title is given. At the year 969 is set down the death of Eoghan O'Cleirigh, "Bishop of Cuimneacht", but more distinct reference to a Tuam prelate is found in 1085, when the obit of Adel O'Hosuns of Tuam is mentioned in the "Four Masters". This is called Comar of Jarlath and High Bishop (Arde-Ceapai) of Tuam.

The university, like the country, recovered only slowly from the injuries inflicted by the Thirty Years' War. At first the old rigid orthodoxy still prevailed in the theological faculty; but in the eighteenth century a greater independence of thought gradually gained ground, especially through the efforts of the chancellor, Christopher Matthias Pfaff, the founder of what is called the Collegiate System. Pietism was also represented in the theological faculty. Towards the end of the eighteenth century Christian Gottlieb Storr exerted a profound influence as a Biblical theologian and the founder of the early Tübingen School in opposition to the "Enlightenment" and the theories of Kant. Among his pupils were, in particular, Friedrich Gottlieb Süsskind, Johann Friedrich Platt, and Karl Christian Platt. Prominent in the faculty of law were Wolfgang Adam Lauterbach, Ferdinand Christopher Harpprecht, and Karl Christopher Hofacker, and in the faculty of medicine, Johann Georg Gmelin, Karl Friedrich Kienhauer, and Johann Heinrich Ferdinand Autenrieth. During this era, marked by the spread of the Wolffian and Kantian doctrines, the faculty of philosophy had few distinguished members. The chancellor Lebret, however, ranked high as a historian, and Bohnenberger as a mathematician. Towards the close of the eighteenth century the university was in danger of having the faculties of law and medicine transferred to the school established at Stuttgart by Duke Charles Eugen, after whom the new school was named. This loss was averted, however, by the suppression of the new seat of learning in 1791.

Two causes led to a great development of the university in the nineteenth century. First, the Catholic university for Württemberg, which at the beginning of the century had been established at Ellwangen, was transferred in 1817 to Tübingen as a Catholic theological faculty, and a Catholic house of study called Wilhelmsstift was founded to counterbalance the Lutheran seminary; second, a faculty of political economy was organized in 1817 called the "Kollegium der politischen Wissenschaften" (1822), and a faculty of natural sciences in 1818. These changes led to the erection of new university buildings: the anatomical building (1832-35); the new ambulance, intended to replace the old one datimg from 1547 and 1777; the botanical and chemical institute (1842-45); the clinic for surgical cases (1846); the physiological institute (1867); the ophthalmologic institute (1873); the ophthalmologic institute (1883-85); the institute for physics (1888); the new hospital for women (1888-91), in place of the old one built in 1803; the hospital for mental diseases (1892-94); the
mineralogico-geological and zoological institute (1902); the institute for chemistry (1903–07); the new pathological clinic (1907–09). A new building for the library, housed till now in the castle, is in course of construction; the library contains 4145 manuscripts and 513,513 volumes. The regular professors numbered 76 in the summer term of 1911; honorary and adjunct professors, Dec. 31, 71; matriculated students, 2118, and non-matriculated persons permitted to attend the lectures, 145, making a total of 2263. Since the reign of King Frederick I the university has become more and more a state institution; its income for 1911 was 439,499 marks ($104,382), while the grant from the State for the year was 1,366,847 marks ($326,145).

In the Protestant theological faculty the critical view of theological history held by Ferdinand Christian Baur led to the founding of the later Tübingen School, to which belong, besides the founder, Albert Schweiger, Karl Christian Planck, Albert Ritschl, Julius Kostlin, Karl Christian Johannes Holsten, Adolf Hilgenfeld, Karl Weissscker and Edward Zeller. The distinguished theologians, who were somewhat more positive in their views, were Johann Tobias Beck, and Christian David Frederick Palmer. David Frederick Strauss, a follower of Hegel, wrote his "Life of Jesus" while a tutor at Tübingen. The distinguished teachers and scholars of the Catholic theological faculty are often called the Catholic 'School of Tübingen.' The character of the discipline is positive and historical rather than speculative or philosophical. Above all should be mentioned the great Catholic theologian of the nineteenth century, Johann Adam Möhler; further, Johann Sebastian Drey, Johann Baptist Hirscher, Benjedt Welte, Johann Evangelist Kuhn, Karl Joseph Hefele, Moritz Aberle, Felix Himpel, Franz Quirin Keller, Franz Xaver Lüders, August Funk, Paul Schanz, and Paul Dettling. Distinguished professors of law were: Karl Georg Wächter, Karl Friedrich Wilhelm Gerber, Alois Brinz, Gustav Mandy, and Hugo Meyer. Among the noted members of the faculty of political science were: Robert Mohl, Albert Eberard Friedrich Schäffle, Gustav Rümelin, Gustav Friedrich Schönberg, and Theodor Liebermeister. Of the medical faculty, the noted members of the medical faculty were: Victor Bruns, Felix Niemeyer, Karl Liebermeister, and Johannes Saxinger. In natural science should be mentioned: Hugo Mohl, Theodore Eimer, and Lothar Meyer. Of the philosophical faculty should be mentioned Friedrich Theodor Vischer, writer on aesthetics; the philosopher Christopher Sigwart; the chatologist and sociologist Karl von Sigismund Teufel; the Orientalist Julius Mohl, Georg Heinrich Ewald, and Walter Rudolf Roth; the Germanists Ludwlg Uhland and Heinrich Adalbert Keller; the historians Julius Weiszäcker and Hermann Alfred Gutschmid; and the geologist Friedrich August Quenstedt.

Fisk (1935), Konigliche Geschichte der Universität und Stadt Tübingen (Tübingen, 1849); KLEPFEL, Die Universität Tübingen in ihrer Vergangenheit und Gegenwart (Tübingen, 1861); Bonta, Die Anfänge der Universität Tübingen aus den Jahren 1470–1500 (Tübingen, 1877); WEISZÄCKER, Lehrer und Unterricht an der evangelisch-theologischen Fakultät der Universität Tübingen von der Reformation bis zur Gegenwart (Tübingen, 1877); FENK, Die katholische Landesuniversität in Ellwangen und ihre Verlegung nach Tübingen (Tübingen, 1877); Nebe, Friedrich Professor in Tübingen (2 vols., 1894–95); Schelling, Hans Theologie-Fakultät der Universität Tübingen, vol. 1, Die Mathematik von 1777–1909 (Stuttgart, 1909); TOUOLLE, Geographie der Welt. In: Die königlichen deutschen Bibliotheken (Heidelberg, 1902); JOHANNES BAPTIST SÄGMÜLLER, Tübingen, a titular see in Maurerica Cæsariensia, according to the "Garchia catholica", or in Numa-Thoin, according to Huttner, "Ammaire pontificia catholica." (Paris, 1910), 345. The official list of the Roman Curia does not mention it. The confusion is explained by the fact that it was located at the boundary of the two provinces. Böcking, in his notes to the "Notitia dicitatuum" (Bonn, 1839), 523, and Toubote ("Géog. de l'Afrique chrét., Maurétanies"), Montreuil, 1901, p. 171, speak of two distinct cities, while Müller ("Notes to Proleny", IV, 12, ed. Didot, I, 611) admits only one, and his opinion seems the more plausible. It was a municipium and also an important frontier post in command of a praepotitus limitis Tubunenses. St. Augustine and St. Alphius sojourned there as guests of Count Boniface (Ep. exx.). In 479 Hunicer exiled ther一件 large number of Catholics. Its ruins, known as Todi, are in the Department of Constance, where the gates of the town are called "Todholm." De la Salle, "Saline Tubunenses" of the Romans. They are very extensive, for three successive towns occupied different sites, under the Romans, the Byzantines, and the Arabs. Besides the remains of the fortress, the most remarkable monument is a church now used as a mosque. Three bishops of Tübingen are known. St. Nemesius assisted at the Council of Carthage in 256. St. Cyprian often speaks of him in his letters, and we have a letter which he wrote to St. Cyprian in his own name and in the name of those who were condemned with him to the mines. An inscription testifies to his cult at Tüxter in 369, and the Roman Martyrology mentions him. The name of this bishop is succeeded, and the place is surmounted by the see after quitting Bulla Regia, and assisted at the Council of Carthage in 411, where his rival was the Donatist Protasius. A third, Repparatus, was exiled by Hunicer in 484. TOUOLLE, Géog. de l'Afrique chrét., Numida (Paris, 1890), 316–21; DUBOIS, L'Afrique chrétienne (Paris, 1900), 611.

S. PÈTRIES.

TUCSON, Diocese of (TUCSONENSIS), suffragan of the Archidiocese of Santa Fe. It comprises the State of Arizona and the southernmost counties of New Mexico, an extent of 131,212 sq. miles, most of which is desert land. The Catholic population is approximately 18,500, mostly Mexicans. There are 43 priests, 27 parishes, 43 missions, 100 stations, 7 academies, 10 parochial schools, 3 Indian schools, 1 orphanage, 5 hospitals.

Up to 1853, date of the Gadsden purchase, Arizona was part of the Mexican Diocese of Durango. In 1859 it was annexed by the Holy See to the Diocese of Santa Fe, made a vicariate Apostolic in 1868, and erected a diocese by Leo XIII in 1897. The first vicar Apostolic was the most Rev. J. B. Salpointe, followed by the Right Rev. Monsignor J. B. Walsh, the first bishop. He succeeded the archbishops of Santa Fe, the former in 1898, the latter in 1908. They were succeeded by Bishop Henry Granjon, born in 1863, consecrated in the cathedral of Baltimore, 17 June, 1900. The mission founded by French missionaries has remained in charge of priests, mostly of the same nationality, assisted by Franciscan Fathers, who attend principally to the Indian missions, and by the Sisters of St. Joseph, of Mercy, of Loretto, of the Blessed Sacrament, of St. Dominie, and of the Precious Blood. The full-blood Indians in the diocese number 40,000: Apache, Chiricahua, Hualpái, Maricopa, Mohave, Moqui, Navajo, Páppago Pima, Yava Supai. About 4,000 are Catholics. They were Christians very early as 1559 (Fray Marcos de Niza), and evangelized in the seventeenth and eighteenth centuries by the Franciscans and the Jesuits. Of the churches there built two remain: Tumacacori (now partly in ruins), and San Xavier del Bac, nine miles south of Tucson, founded by Father Kino, S.J., in 1699, and kept in perfect condition. By the constant attention and liberal care of the clergy of Tucson. It is considered the best example of the Spanish Renaissance mission style north of Mexico,
and the best preserved of all the old mission churches in America. The buildings have been completely restored (1900–10) by the Bishop of Tucson. The Papago Indians, in whose midst stands the San Xavier mission, have received uninterrupted care from the clergy of Tucson. In 1860 the Rev. J. B. Salpointe founded there a school, which has since been maintained at public charge, by the clergy of Tucson, at the expense of the parish. That school was the first established in Arizona for the Indians.

Tucumán, Diocese of (Tucumanensis), suffragan to Buenos Aires, erected from the Diocese of Salta on 15 February, 1807, comprises the Province of Tucumán (area 87,389 sq. miles; population 325,000), in the north-west of the Argentine Republic. The first and present bishop, Mgr. Pablo Padilla y Irízar (b. at Jujuy, 25 Jan., 1848), was consecrated titular Bishop of Pentacoma (17 Dec., 1891), transferred to Salta (19 Jan., 1893), and to Tucumán (16 Jan., 1898). The episcopal city, Tucumán, or San Miguel de Tucumán, was founded by Don Pedro de Dulce, 780 miles north-west of Buenos Aires, and was founded in 1553 by Diego de Villaruel; a Jesuit college was opened there in 1586. In 1680 Tucumán was replaced Santiago del Estero as capital of the province. The Spanish forces were utterly defeated at Tucumán in 1812 by the Argentines under Belgrano, whose statue has been erected in the city to commemorate the event. One of the triumphs of independence in Tucumán is Independence Hall, where the Argentine delegates proclaimed (9 July, 1816) the Rio de la Plata provinces free from Spanish domination. Of the twenty-seven members forming this National Congress fifteen were priests (as were two other delegates who were unavoidably absent), and the secretary of the French government, who visited the city in 1815, is reported to have said: "Tucumán is the Rome of the South." Tucumán has a seminary, founded in 1570, which is generally referred to in the seventeenth century as that of Tucumán (Córdoba).

On 21 January, 1810, the Province of Catamarca (area 47,581 sq. miles; population 107,000), which till then had been a viceroyalty, was erected into a separate see under Mgr. Bernabé Pedro de Ojeda (b. at Tucumán, 10 Nov., 1843; consecrated titular Bishop of Cebreros and coadjutor to Jujuy, 31 May, 1848), who transferred to Catamarca, 8 November, 1848, and died there before his consecration. Catamarca, with its 400,000 inhabitants, is 15 parishes, 67 churches and chapels, and Catamarca 15 parishes, 96 churches and chapels; there were 60 secular priests, assisted by Dominicans, Franciscans, and Fathers of Our Lady of Lourdes; there was a clerical seminary with 3 students of philosophy and 60 rhetoricians; 7 theological students were studying at the Jesuits' College in Buenos Aires, and 12 in addition there were two Catholic colleges at Tucumán and one at Catamarca; there were communities of the Hermenans Esclavas, Dominican, Franciscan, Good Shepherd, and Josephine Sisters. A Catholic daily paper is published at Tucumán and two Catholic weeklies at Catamarca. A large number of the parishioners have their own schools, supported by voluntary contributions. Workingmen's circles are established in the two major cities. Catamarca (San Fernando de Catamarca), lying 230 miles north-north-west of Córdoba, contains 8000 inhabitants. It was founded in 1680 by Fernando de Mendoza, the National College, which has a chair of mineralogy, is located in the old Merced Convent. Most of the inhabitants of the Province of Catamarca are mestizos, descendants of the Quiñones, Cilian, Andagala, and Guatari Indians. Cholla (a suburb of Catamarca) is inhabited by Calchaquí Indians, but Spanish is now the only language spoken.

Cuenca, Guta eclesiástica de la República Argentina (Buenos Aires, 1910).

A. A. Macié.

Tudela, Diocese of (Tutele, Tutelegnese), in Spain. The episcopal city has a population of 9213. Tudela was taken from the Moors by Alonso de Bucellador (the Cathedral Church was founded there in 876). He obtained the Fuero de Sobrarbe. In 1121 the king gave the mosque and the tithes of several towns to the prior and ecclesiastical chapter of Tudela and built the Church of Santa María, where a community of Canons Regular of St. Augustine was established, the ecclesiastical authority of Tudela being vested in the college and priory. In 1208 the priory was raised to the dignity of a deanery, the first dean being D. Pedro Jiménez and the second D. Lope Arrez de Aceuz. The latter obtained from Alexander IV in 1258 the ring and mitre. In the sixteenth century the deans of Tudela obtained the use of "pontificiana," a favour granted by Julius II to the dean D. Pedro Vilakón de Castilla, who had his college and priorate in this city. In 1680 the priory was suppressed by the rivalry between the deans of Tudela and the bishops of Tarazona and the dissatisfaction of the kings owing to the fact that until 1749 the appointment of the dean was not subject to the royal patronage, a fact finally accomplished in 1749, induced the Council and the Royal Chamber to petition for the erection of Tudela into a bishopric. The bull was signed by Pius VI in the Bull of 27 March, 1783. The first bishop was D. Francisco Ramón de Larumbe (1784). He succeeded 1797 by D. Simón de Casasvella López del Castillo, who during the war of independence saved Tudela from severe measures of retaliation ordered by the French general Lefèvre. The third bishop was D. Juan Ramón de la Rectoría (1817), and the fourth and last D. Ramón María Azpeltía Suenz de Santa María (1819), who founded the Franciscan Monastery of Santa Ana in a former house of the Jesuits, the monastery was re-established in 1856 in a former Carmelite convent. The last bishop died at Viana on 30 June, 1844.

The Concordat of 1551 suppressed this diocese, since which time it has been administered by the bishops of Tarazona on whom the title of Administrator Apostolic of Tudela has been conferred. The cathedral dedicated to Nuestra Señora de la Blanca dates from the end of the twelfth and the beginning of the thirteenth century. It has a very notable façade. There are in Tudela a college of the Jesuits, chartered by the Concordat of 1551, and a school of the hospital of Nuestra Señora de Gracia, founded in the sixteenth century by D. Miguel de Eza; the Real Casa de Misericordia founded by Dña. María Hugarte in 1771 and the "Hospitalillo" for orphan children founded in 1596 by D. Pedro Ortiz.

Marazán, Nuestra y Lagrande en España, sus monumentos y antecedentes III (Barcelona, 1869); de la Fuente en España sagrada, 1 (Madrid, 1866).

Ramón Ruiz Amaig.

Tuguegarao, Diocese of (Tuguegaronensis), in the Philippines, is situated in the north-eastern section of the Island of Luzon, and embraces the three civil Provinces of Cagayan, Isabela, and Nueva Viscaya, and the two groups of the Bataanes and Babuyan Islands. It was erected on 10 April, 1910 being separated from the ancient Diocese of Nueva Segovia, erected in 1505. For two hundred years the seat
of the Diocese of Nueva Segovia was located at Lalco on the Cagayan River, a city which lies within the present limits of the new Diocese of Tuguegarao. The history of the Catholic Church in the Cagayan Valley for the three hundred years preceding the Spanish-American War is practically the history of the Spanish Dominicans in this territory. The diocese counts (1912) 23 native secular priests, two Spanish seculars, 17 Spanish Dominicans and 7 Belgian missionaries. "There is a boys' college in charge of the Dominican Fathers, and a girls' academy under the direction of the Sisters of St. Paul of Chartres. The population, which is entirely native, numbers about 200,000. With the exception of a few thousand Aglipayans they are all Catholics. The first bishop, the Rt. Rev. Maurice Patrick Foley, was appointed on 10 September, 1910.

Maurice Foley.

Tulancingo, Diocese of (de Tulancingo), in the Mexican Republic, suffragan of Mexico. Its area is about 5000 square miles, that is to say, almost that of the State of Hidalgo, in which the diocese is situated. It comprises the greater part of the State of Hidalgo, with the exception of a few parishes situated in the western part, and which belong to the Archdiocese of Mexico. At its return it has a few parishes in the State of Vera Cruz. Its population is 641,85 (1910). The bishop lives in the town of Tulancingo (population, 5000), although the capital of the state is the important mining town of Pachuca, situated 7962 feet above the level of the sea, with a population of about 38,620 inhabitants (1910). The diocese was preestablished in the first half of the sixteenth century by the Franciscan Fathers shortly after their arrival in Mexico; they then founded a convent at Tulancingo, whose first guardian was the venerable Father Juan Padilla, who died from the results of an assault made by the unhappy Indians of New Mexico. The Augustinian Fathers also worked in this region.

On 10 March, 1863, Pius IX made this see suffragan of the Archdiocese of Mexico. When created, many asked that the episcopal see be in the city of Huejutla; preference was given, however, to the city of Tulancingo. This new see was formed from thirty-eight parishes of the Archdiocese of Mexico, and from sixteen taken from the Bishops of Puebla and Veracruz. Of the ten colleges, four are academies; 5 Catholic colleges, and about 2322 students; there are 6 Protestant colleges with 255 students, and 6 Protestant churches. The town of Tulancingo existed long before the conquest; it is said to have been founded by the Toltecas in A. D. 697 and bore the name of Tulancingo. Its most noted building is the cathedral, built in the beginning of the nineteenth century.

Camíus Civelli.

Tulane, Louis-René, a noted botanist, b. at Azay-le-Rideau, Dept. of Indre-et-Loire, France, 12 Sept., 1815; d. at Hyères in southern France 22 Dec., 1885. He studied law at Poitiers, but later turned his attention to botany and worked until 1842 in company with Auguste de Saint-Hilaire on the flora of Brazil. He was an assistant naturalist at the Museum of Natural History at Paris 1842-72; after this he retired from active work. In 1843 he was elected a member of the Academy to succeed Adrien de Jussieu. Tulane was a very industrious, skillful, and successful investigator. He published at Paris numerous botanical works, the first appearing in 1846; he first wrote on the phycomycans, as for instance, on the leguminous of South America, then on the cryptomycans, and especially on the fungi. He gained a world-wide reputation by his microscopic study of fungi (the science of mycology), especially by his investigation of the small parasitic fungi, researches which threw much light on the obscure and complicated history of their evolution. In this science he worked in collaboration with his brother Charles (b. 5 Sept., 1816; from 1813 a physician at Paris; d. at Hyères 21 Aug., 1885). The chief publications issued by the two brothers are: "Fungi hypogoi" (fol., Paris, 1851), and "Selecta fungorum carpolitoga" (3 vols., Paris, 1861-65), a work of the greatest importance for mycology, particularly on account of the splendid illustrations in the sixty-one plates. Tulane wrote numerous mycological treatises for the field, as "Observations sur les champignons des Tours" (1851), "Descriptions du muséum"; "Comptes rendus"; "Botanische Zeitung". He left his botanical library to the Catholic Institute of Paris. Tulane openly acknowledged his desire to glorify God by his scientific labours. Several genera of fungi, as well as several species, are named after Tulane, as Tulasniella, Tulasnella, Tulaneae, etc. in honor of his work in the botanische Gesellschaft, IV (Berlin, 1887).

J. S. Rompel.

Tulle, Diocese of (Tutelensis), comprises the Department of Corrèze. It was suppressed by the Concordat of 1802, which joined it to the See of Limoges. The last Bishop to hold it was an exiled member of the Concordat of 1817, and de facto re-established by Bulls dated 6 and 31 October, 1822. It is suffragan of Bourges. According to legends which grew up in later years around the St. Martial cycle, that saint, who had been sent by St. Peter to preach, is said to have restored to life at Tulle the son of the governor, Nerva, and to have covered the neighbouring country with the marks of his feet. St. Martin of Tours is made founder of the Abbey of Tulle; by others, St. Calmin, Count of Aurenge (seventh century). Robbed of its possessions by a powerful family, it recovered them in 930 through the efforts of a member of the same family, Viscount Adhemar, who left a reputation for sanctity. St. Odo, Abbé of Tours, reformer in the tenth century, was born in the year 1146, by a Bull dated 13 August, 1137, raised it to episcopal rank; but the chapter remained subject to monastic rule and was not secularized until 1514. Among the bishops of Tulle were: Hughes Roger, known as Cardinal de Tulle (1342-43), who was never consecrated, and lived with his brother Clement VI; Jean Fabri (1570-71), who became cardinal in 1574; the preacher and theologian (1812-78). St. Rodolphe of Turenne, Archbishop of Bourges, who died in 866, founded, about 855, the Abbey of Beaulieu in the Diocese of Tulle. The Charterhouse of Glandier dates from 1219; the Benedictine Abbey of Uzerche was founded between 958 and 991; Maymon Priory, which became an abbey in 1146, was founded by Archbishops, Viscount de Conborn.

Urban II on his way to Limoges from Clermont (1095) passed near Tulle. St. Anthony of Padua dwelt for a time at Brive, towards the end of October, 1226; and the pilgrimage to the Grotto of Brive is the only existing one in France. Saint Pierre Roger, who became pope under the name of Clement VI, was a native of Maumont in the diocese. In 1532 the tiara was disputed between Jean Birel, general of the Carthusians, who had been prior of Glandier, and Etienne Aubert, who became pope under the name Innocent VI, and was a native of Château-les-Monts in the Diocese of Tulle. In 1325 Hugues Roger, Cardinal of Tulle, brother of Clement VI, refused the tiara; in 1370 Pierre Roger, his nephew, became pope under the name of Gregory XI. At Tulle and in Bas (Lower) Limousin, every year, on the vigil of St. John the Baptist, a feast is kept which is known as le tour de la lumière (the change of the
moon); it is a curious example of the manner in which the Church was able to sanctify and Christianize many pagan customs. Legend places the institution of this feast in 1316 or 1348, about the time of the Black Death. It would seem to have been the result of a vow made in honour of St. John the Baptist. M. Maximin Deloche has shown that this legend is baseless; that the worship of the sun existed in Gaul down to the seventh century, according to the testimony of St. Eligius, and that the feast of St. John's Nativity, 24 June, was substituted for the pagan festival of the summer solstice, so that the bourse de la fane was an old pagan custom, sanctified by the place of pilgrimage before the seventeenth century: Notre-Dame-de-la-Chabanade at Ussel, dates from 1140; Notre-Dame-de-Pennacorn at Neuvic, dating from the end of the fifteenth century.

Before the application of the Law of 1901, the Diocese of Tulle contained Carthusians, Francisans, Sulpicians, Assumptionists, Fathers of the Third Order of St. Francis of Assisi, and many teaching congregations of Brothers. The teaching Sisters of the Sacred Heart of Mary had their mother-house at Triegne. The religious congregations were in charge of 6 parishes, 5 orphanages for boys, 5 orphanages for girls, 1 Good Shepherd Home, 1 home for the poor, 15 hospitals or hospices, 10 district nurses, 1 lunatic asylum. At the time of the breach of the Concordat in 1905 the diocese had 315,422 inhabitants, 34 first-class parishes, 255 successor parishes, and 71 curacies supported by the State.

The Cathedral, Tulle

Church, which changed it to an act of homage to St. John the Baptist.

Among the saints specially honoured in, or connected with the diocese, besides those already mentioned, are: St. Fercola, martyr (date uncertain); St. Martin of Brive, disciple of St. Martin of Tours, and martyr (fifth century); St. Duminus, hermit (early sixth century); at Argentat, St. Saceredos, who was Bishop of Limoges when he retired into solitude (sixth century); St. Vincentianus (Vianne), hermit (seventh century); St. Liberatus, Bishop of Brive, died in 847 at Brive, his native place; St. Reynier, provost of Beau- lieu, died at the beginning of the tenth century; St. Stephen of Obazine, b. about 1058, founder of the monastery for men at Obazine, and that for women at Coyroux; St. Berthold of Malefaye, first general of the Carmelites, and whose brother Aymeric was Patriarch of Antioch (twelfth century), Etienne Baluze, the learned historian (1638-1718), was a native of Tulle, and the missionary Damoulin Borie (1605-38), who was martyred in Tonquin, was born in the diocese.

The chief pilgrimages of the diocese are: Notre-Dame-de-Belpeuch, at Camps, dating from the ninth or tenth century; Notre-Dame-du-Chasteau at Bar, dating from the seventeenth century; Notre-Dame-du-Pont-du-Salut, which goes back to the seventh century; Notre-Dame-du-Roc at Servières, dating from 1691; Notre-Dame-d'Eyguarande, dating from 1720; Notre-Dame-de-la-Buisserie-Lestard, which was a

Tunic.—By tunic is understood in general a sort of vestment shaped like a sack, which has in the closed upper part only a slit for putting the garment over the head, and, on the sides, either sleeves or mere slits through which the arms can be passed. The expressions under-tunic or over-tunic are used accordingly as the tunic is employed as an outer vestment or under another. A tunic that reaches to the feet is called tunica unica (tunica talaris, Gr. τόνικα); a tunic without sleeves or with short sleeves is called cothurnus; one which leaves the right shoulder free, cromes (κρόμμες). By tunic (tunica) is understood in liturgical language that sacral dress upper vestment of the subdeacon which corresponds to the dalmatic of the deacon. According to place and person and circumstance, alike both as regards form and ornamentation. They also agree in the manner of use as well as in the fact that the tunic, like the dalmatic, is one of the essential vestments worn at the pontifical Mass by the bishop. It is unnecessary here to go into full details, but it will suffice in regard to form, ornamentation, and use to refer to what is said under dalmatic (p. 125). As regards the forms of tunica unica to which the Apollinarus, "Ceremoniale Episcoporum", the tunic should be distinguished from the dalmatic by narrower sleeves, but this is hardly observed even in the pontifical tunic, which is worn under the dalmatic. The bishop himself puts the tunic on the newly-ordained sub-deacon with the words: "May the Lord clothe thee in the tunica, joy and the garment of rejoicing. In the name", etc.

History.—According to a letter of Pope Gregory the Great to Bishop John of Syrænum, the subdiaconal tunic was for a time, customary at Rome as early as the sixth century. Gregory, however, suppressed it and returned to the older usage. From this time on, therefore, the Roman subdeacon once more wore the plain tunic (tunica) as the ordinary vestment, and, until, in the ninth century, the tunic again came into use among them as the outer vestment. As early as the sixth century, a subdiaconal tunic was worn in Spain, which, according to the ninth canon of the synod of Braga, was hardly or not at all distinguishable from the diaconal tunic, the so-called alb. No notice of a tunic worn under another vestment is preserved from the pre-Carolingian era in Gaul, yet such a vestment was undoubtedly in use in France as in Spain. There is certain proof of its use in the Frankish
kingdom at the beginning of the ninth century, both from the testimony of Amalar of Metz and from various inventories. About the close of the year one thousand the tunic was so universally worn by sub-deacons as a liturgical upper vestment that it was briefly called *vestis subdiaconalis* or *subdiaconale*. As early as the first Roman Ordo the tunic is found as one of the papal pontifical vestments under the name of *dalmatica minor*, *dalmatica linea*. The Roman deacons also wore it under the dalmatic, while only the tunic and not the dalmatic was part of the liturgical dress of the Roman cardinal-presists and hodiernal bishops. Outside of Rome also the pontifical vestments frequently included only the tunic, not tunic and dalmatic together, or, as was more often the case, the dalmatic without the tunic. Not until the twelfth century did it become general for the bishop to wear both vestments at the same time, that is, the tunic as well as the dalmatic. The granting to abbots of the privilege of wearing the tunic as well as the dalmatic, is very seldom mentioned, and even then not until the second half of the twelfth century. Before this era abbots never received more than the privilege of wearing the dalmatic. The acolytes at Rome wore the tunic as early as the ninth century; in the Frankish kingdom it was probably customary in some places in the tenth century for acolytes to wear the tunic; it was worn by acolytes at Farfa towards the close of the tenth century. In the late Middle Ages the wearing of the tunic by acolytes was a widespread custom. In the medieval period the tunic was called by various names. Besides *tunica*, it also bore the name of *tunicella*; *dalmatica minor*; *dalmatica linea*, or simply *linea*; *tunica striata*, or merely *striata*; *subdiaconale*; *roceus*; *alba*; and, especially in Germany, *sublita*.

As to the original form of the vestment, it was at first a tunic in the shape of a gown with narrow sleeves and without the vertical ornamental strips (*elias*). The material of which it was made was linen for ordinary occasions, but as early as the ninth-century inventories silk tunics are mentioned. The development that the vestment has undergone from the Carolingian period up to the present time has been in all points similar to that of the dalmatic; during the course of this development the distinction between the dalmatic and the tunic steadily decreased. Silk gradually became the material from which the tunic was regularly made; it grew continually shorter, and shits were made in the sides which, by the end of the Middle Ages, went the length of the entire side up to the sleeve. Finally, outside of Italy, the sleeves were also slit, just as in the dalmatic, which, already in the later Middle Ages, was hardly to be distinguished from the tunic, especially as in the meantime the red color of the dalmatic had been replaced by another form of ornamentation, which was also adopted for the tunic. When in the course of the twelfth century a canon was developed respecting the liturgical colors, the canon was naturally authoritative for the tunic as well as for the chasuble and dalmatic. In the Middle Ages the use of the tunic at Mass corresponded throughout to that of the dalmatic, consequently discussion of it here is unnecessary. The ceremony in which the bishop, after the ordination, places the tunic upon the newly-ordained subdeacon had its origin in the twelfth century, but even in the thirteenth century it was only customary in isolated cases. It was not until the fourteenth and fifteenth centuries that the usage was universally adopted in the rite of ordination of subdeacons. As to the origin of the subdiaconal tunic it was, without doubt, a copy of the dalmatic, in which the vertical trimming of the dalmatic was omitted, and the sleeves were made narrower.

The tunic (*stychafrina*) worn by the subdeacon in the Oriental Rites does not correspond to the subdiaconal tunic of Western Europe, which from the beginning had the fixed character of an outer tunic, but resembled the alb, even though, according to present custom, it is no longer exclusively white, but often coloured.

**Tunis**

Tunis, French protectorate on the northern coast of Africa. About the twelfth century before Christ Phoenicians settled on the coast of what is now Tunis and founded colonies there, which soon attained great economic importance. Among them were: Hippo Zarytus, Utica, Carthage, Hadrumetum, and Tunis. Ultimately all these cities were obliged to acknowledge the suzerainty of Carthage, which ruled a territory almost as extensive as the present Tunis. The fall of Carthage, B.C. 146, made the Romans masters of the country, which as the Province of Africa became one of the granaries of Italy. Numerous ruins of palaces, temples, Christian churches, amphitheatres, aqueducts, etc., which afford a proof of the high civilization existing under Roman sway. Christianity also flourished at an early era. In 439 the country was conquered by the Vandals, and in 533 Belisarius retook it and made it a part of the Eastern Empire. The supremacy of Constanti-nople was not of long duration. First the Patriarch Gregorius, Governor of North Africa for the Emperor Heraclius, proclaimed his independence. However, on the incursion of the Arabs from the East, Gregorius was overthrown in 648 by the Arabian commander Abdallah, who returned to Egypt with enormous booty. In 670 the Arabs again entered the country, conquered Biserta, and founded the City of Kairwan in the region beyond Sousse. In the 7th century the City of Kairwan was successively defended by the Eastern Emperor, and reduced it to a heap of ruins. Tunis, a town formerly of small importance, now took the place of Carthage in commerce and traffic. When the Ommayyad dynasty was overthrown by the Abbasids, almost all Africa regained independence, and it was not until 772 that the caliph al-Mansur achieved the control over it. Caliph Harun ar-Rashid made the vigorous Ibrahim ibn el Aghlab Governor of Africa, but in 800 Ibrahim threw off the supremacy of the caliphate. Kairwan remained the capital of the Aghlabite Kingdom, which embraced Tripoli, Algiers, the greater part of Tunis, and
so the Arabic possessions in Sicily and Sardinia. The
set of the Aghlabite dynasty made Tunis the capital of
the country, and gave the name of the city to the entire
province. In 908 the Aghlabite dynasty was over-
thrown by Obeid Allah, founder of the dynasty of the
Almoravids, which in the course of the tenth century
conquered the whole of North Africa. After the con-
quest of Egypt the Fatimids transferred the seat of
their power to Cairo and gave the regions in Western
africa in fief to the Zirite family in 972.

From the middle of the twelfth century Tunis was
ded by the Almohade dynasty, which, weakened by
struggles with the Christian kingdoms of Spain,
as driven out of Tunis in 1206 by a Berber, Abū
Almohad, by the Aghlabids, and permitted to
flee until 1275. In 1240 Eastern Algeria was united
by the Aghlabids. Thus in the course of the time the
great centralized Arab empire was replaced in North Africa
by several independent states, such as Morocco,
'Algeria, and Tunis. In this way the strength of Islam,
contrasted with that of Christian Western Europe, was
now able to prepare to attack the Mohammedan
power. Thus, King St. Louis of France undertook a
conquest against Tunis in 1270 which was unsuccessful;
unless himself died the same year during the siege
of Tunis. During the last centuries of the Mamluk era
Tunis was the principal foundation of the North African countries of Tunis and Kairouan,
and a part of Eastern civilization and learning.
The rule of the Arabic Emirs in Tunis was over-
\[\text{...}^{\text{...}}\]

The nineteenth century completely altered the situation. Sharp resolutions against piracy in the Mediter-
anean were passed by the Congress of Vienna and
England was authorized by the powers to enforce
these resolutions by sending a fleet against the piratical
countries. In 1816 Lord Exmouth, by the bom-
dardment and partial destruction of the City of Al-
geria, forced the rulers of Kairouan to yield Tunis
into Christian slavery. The tyrannical Bey of Tunis also promised to do the same, yet, in spite of this, Christian
ships were repeatedly attacked by Tunisian vessels.
When in 1830 the French began the conquest of Al-
gers, Tunis at first aided the Algerian leader Abd el
Kader, but in retaliation the French forced Tunis to
accept a peace treaty completely, to yield an island on
the coast, and to pay a sum of money. Alarmed at the
danger from France, the Porte now sought to form
closer relations with Tunis and to make the country
an independent Turkish province. These efforts,
which were successful at that date in Tripoli, failed in
Tunis on account of the opposition of French diplo-
many. In order to realize his object the Porte main-
tained his position in regard to the Porte, the Bey Sidi Ahmed
(1837-55) entered into closer relations with France,
and even tried to introduce western reforms; in 1842
he abolished slavery, and in 1846 the slave-trade,
Under French and English influence his cousin Sidi
Mohamed (1855-69) introduced liberal legislation
and the emancipation of the Arabs. His brother
Mohamed es-Sadik (1859-82) even gave the
country a liberal constitution in 1861, but had to
withdraw it owing to the opposition of the Arabs and
Moors. His extravagant tastes forced the Bey to
borrow money, thus bringing him into financial
dependence on France, which showed more and more
unhesitatingly its desire to control Tunis. However,
the Franco-German War 1870-71 forced France to
restrain its hand.

In 1871 the Sultan granted the hereditary right to
rule according to primogeniture to the family of the
Bey and abandoned all claim to tribute, in return for
which the bey promised not to go to war without
the permission of the Porte, and to enter into no diplo-
matic negotiations with foreign powers. France pro-
tested against this and would not recognize the suzer-
ainty of the Porte over Tunis, but could not enforce its
protests. In the years succeeding the foreign element
in Tunis constantly gained in importance, and the
Italian Government, especially, sought to acquire
a strong economic position in the country. France
was afraid that it might be outdone by its Italian
ally, so in 1881 she used the disturbances on the
boundary of Algiers and Tunis as a pretext for milita-
ry interference. In April, 1881, in spite of the pro-
tests of the bey and the Porte, an army of 30,000

Like Algiers and Morocco, Tunis developed in this
period into a much dreaded pirate state. The Tunis-
ian galleys sailed along all the coasts of the Medi-
erranean, devastating and plundering. They stopped
foreign ships on the open sea and dragged them as
prizes to Tunis, where the cargo would be discharged
and the crew and passengers sold as slaves. For a
long time Christian Western Europe did nothing to
put an end to this impudent piracy. Although the
English Admiral Blake in 1625 burned several
Tunisian pirate ships in the harbour of Porto Fama,
yet, as the struggle against the pirates was not con-
tinued, no permanent improvement of conditions was
attained. At a later date treaties were made between
Tunis and the powers interested in commerce in the
Mediterranean, Venice, Spain, Portugal, England,
Holland, Denmark, and Russia in 1768, as a
tribute.
French soldiers advanced from Algiers into Tunis, and readily overcame the resistance of the tribes. A French fleet appeared before the capital, and a squadron landed at Bizerta a brigade which advanced against the City of Tunis from the land side. Unable to oppose this force, the bey was obliged to sign on 12 May the Treaty of Kaer el-Said, also called the Bardo Treaty, which transformed Tunis into a French protectorate. The revolt of the native tribes against the French was crushed in the years 1881–82. Although at the beginning of the expedition France had declared that the occupation would only be a temporary one, yet ever since then the French have remained in Tunis. Politically the country is controlled by an European power has proved advantageous to the country. Mohammed es-Sadok was succeeded by his brother Sidi Ali Pasha (1882–1902), who was followed by his son Sidi Mohammed.

The regency of Tunis has an area of 45,779 sq. miles and contained, in 1911, 1,923,217 inhabitants, of whom 1,706,230 were natives, 49,245 Jews, 42,410 French, 107,905 Italians, 12,228 English and Maltese, 1307 Spanish. Politically, Tunis forms a French protectorate; France represents the country in foreign relations, makes all the treaties with foreign powers, decides as to peace and war. In return it protects the bey against any threatened attack upon his land and guarantees the state debt. In internal affairs the bey has nominally absolute power, but decree and law are not valid until they have received the signature of the resident-general representing the French Government. The budget is not submitted to the bey for his approval until it has been discussed by the ministerial council and examined by the French Government. The resident-general is the representative of the French Government at Tunis and is the native to the French ministry of foreign affairs. He unites in his person all the authority of the French Government, is the official intermediary between the Tunisian Government and the representatives of foreign powers, is the presiding officer of the ministerial council, and of all the higher administration of Tunis. He can veto the actions of the bey, and in case the bey fails to act, he can order the necessary regulations for the way for them. The ministerial council consists of the resident-general, two native ministers, and seven French ministers; the council settles the most important matters and especially determines the budget. The two native ministers direct internal affairs, the administration of justice for the natives, and the supervision of the lands, the properties of the natives. The other branches of the administration are directed by the French ministers. The administration of justice is a double one: all legal disputes in which Europeans are concerned are settled by French law; the natives are under Mohammedan law. As regards the Catholic Church Tunis forms the Archdiocese of Carthage; cf. also the LAVIGIER, E. — "Bibl. of Tunisia" (London, 1890); BROADLEY, T. — "Tunis Past and Present" (London, 1882); TISSOT, E. — "Exploration scientifique au Tunisie" (Paris, 1885–87). TUNISIA

Tunisia, Diocese of (Tunquenensis), established in 1880 as a suffragan of Bogotá, in the Republic of Colombia, South America. Its jurisdiction comprises the territory of the Department of Boyacá, with a Catholic population in 1911 of 400,000 souls; 175 priests; 150 parishes, and 150 churches and chapels.

The capital of the department and see of the bishop is the City of Tunja, which before the arrival of the Spaniards was, under the name of Huncu, the residence of the zaque, the sovereign of the Muisca Indians. It was founded on 6 Aug., 1538, by Captain Gonzalo Suárez Rondon, by order of the conqueror Quero. It is known as "the pearl of the gold" of the conquistadores of the Indian city in 1618. The wealth and luxury of its ancient founders can still be recognized in the coats-of-arms carved over the stone entrances of its beautiful mansions. Prominent among its public buildings are: the palace of the bishop, the cathedral, and the various churches; the monastery of the Dominicans, and the convent of the Santa Clara nuns. Public instruction in the Department of Boyacá is under the supervision of the governor of the department, assisted by a director of public instruction. There are in the department over 200 primary schools, with about 15,000 pupils of both sexes. Secondary instruction in Tunja is given at various colleges supported by the department, like the College of Boyacá and the normal schools for men and women; and schools such as the Christian Brothers' College, the Academy of Tertiary Sisters, and the College of the Presentation; for the education of the clergy there is the diocesan seminary. There are also several Catholic schools in other cities of the department, among them the College of Jesus, Mary, and Joseph, under the Christian Brothers; the College of the Presentation, the College of Charity; the College of Santa Rosa de Lima; and the College of St. Louis Gonzaga, in Chicuinquirí. (See COLOMBIA.)

JULIAN MORENO-LACALLE.

TUNKERS (Ger. Tunker, to dip), a Protestant sect thus named from its distinctive baptismal rite. They are also called "Dunkards", "Dunkers", "Brethren", and "German Baptists". This last appellation derives from their national origin and doctrinal relationship. In addition to their admission of the teaching of the Baptists, they hold the following distinctive beliefs and practices. In the administration of baptism the candidate is required to kneel in the water and is dipped forward three times, in recognition of the three Persons of the Trinity. Communion after baptism is the custom, and in the evening; it is preceded by the love-feast or agape, and followed by the kiss of charity. On certain occasions they also perform the rite of foot-washing. Their dress is characterized by unusual simplicity. They refuse to take oaths, to bear arms, and in so far as possible, to engage in lawsuits. Their foundation was due to the Reformation and dates back to 1705. In that year their founder Alexander Mack (1679–1735) received the believers' baptism with seven companions at Schwarzau, in Westphalia. The little company rapidly made converts, and congregations were established in Germany, Holland, and Switzerland. As they were subjected to persecution they emigrated to America between the years 1719 and 1729.

The first families settled at Germantown, Pennsylvania, where a church was organized in 1725. Shortly after some members, led by Conrad Beissel who contended that the seventh day ought to be observed as the Sabbath, seceded and formed the Seventh Day Baptists (German; membership in 1889–90, 25,000). The Tunkers, on the other hand, and, in spite of set-backs caused by the Revolutionary and Civil Wars, spread from Pennsylvania to many other states of the Union, and to Canada. Foreign
missionary work and the foundation of educational institutions were inaugurated in the decade 1870-79. About the same time the demand for the abolition of the more progressive and liberal church polity became more and more insistent, and in 1881-2 led to division. Two extreme parties, "the Progressives" and the "Old Order Brethren", separated from the main body, which henceforth was known as "the Conservative Tunkers". These obey the King's Book and the把手 at, a ministry composed of bishops or elders, ministers, and deacons. They maintain schools in various states, own a printing plant at Elgin, Illinois, and publish the "Gospel Messenger" as their official organ. Membership, 3006 ministers, 880 churches, 100,000 communicants. The Progressives hold that the King's Book does not bind them to any individual conscience, that its regulations concerning lain attire need not be observed, and that each congregation shall independently administer its own affairs. (Statistics, 156 ministers, 210 churches, 18,000 communicants.) The Old Order Brethren are unalterably attached to the old practices; they are opposed to high schools, Sunday schools, and missionary activities; they object to the ordination of women, the custom of the sect, an unsalaried ministry and are extremely plain in dress. (228 ministers; 75 churches; 1000 communicants.)

The statistics throughout are those of Clapp In Christian Union (New York, 26 Jan., 1911). Beside the minutes of the annual meeting, consult on the doctrine: Mark, A Plain View the Rules and Ordinances of the House of God (Mt. Morris, 1888); Tunkers Defended (Naupels, 1876); Burkeman, History of the German Baptist Brethren in Europe and America (Elgin, 1890); Falkenstein, History of the Baptist Brethren Church (Lancaster, 1901); Roten, History of the Tunkers and the Brethren Churches (Oakland, 1901); Ilen, The Dunkers (New York, 1902; N. A. Weber.

Tunstall, Cuthbert, Bishop of London, later of Durham, b. at Hackforth, Yorkshire, in 1474; d. at Lambeth Palace, 18 Nov., 1559. He studied both at Oxford and Cambridge, finally graduating L.D. at Padua. Being an accomplished scholar in theology and law, as well as in Greek and Hebrew, he soon won the friendship of Archibishop Warham, who on 25 Aug., 1511, made him his chancellor, and shortly after rector of Harrow-on-the-Hill. The next year he was made chanter of the archdeacon of Chester (1515). He began his diplomatic career as ambassador at Brussels, in conjunction with Sir Thomas More, and there he lodged with Erasmus, becoming the intimate friend of both of them. Further preferments and embassies fell to his lot, till in 1522 he was appointed Bishop of London by papal commission. On 25 May, 1523, he became keeper of the privy seal, but neither the work this entailed nor fresh embassies prevented him from making a visitation of his diocese. A visit to Worms (1520-1) had opened his eyes to the dangers of the Lutheran movement and the evils arising from heretical literature, in the divorce question Tunstall acted as one of Queen Catherine's counsellors, but in 1526 sent a petition to the Pope appealing to Rome. On 21 Feb., 1529-30, he was translated by the pope from the Diocese of London to the more important See of Durham, a step which involved the assumption of quasi-regal power and authority within the bishopric (see Durham, Ancient Catholic Diocese of). During the troubled years that followed, Tunstall was far from inactive; his works are held to Catholic doctrine and practices. He adopted a policy of passive obedience and acquiescence in many matters with which he could have had no sympathy. With regard to the suppression of the monasteries, the king's ministers so feared his influence that they prevented his attendance at Parliament.

In 1557 Tunstall was given the onerous position of President of the Council of the North, and Scottish affairs occupied much of his attention. Towards the end of Henry's reign he twice was sent on diplomatic business to France, and on one occasion his religious position became very difficult, but he yielded so far in compliance to the new changes that Gardiner protested. But the length of which the reformers went open his eyes to the real significance of the royal supremacy; a change came over his attitude, and he staunchly maintained the Catholic side, steadily opposing the abolition of monasteries, the Act of Uniformity, and the law permitting priests to marry. He seems to have hoped that Warick might be induced to reverse the anti-Catholic policy of Somerset, but this hope soon failed, and in 1534 he was summoned to London and confined to his house there. During this captivity he composed his treatise, "De Veritate Corporis et Sanguinis Domini nostri Jesu Christi Eucharistia", published at Paris in 1554. At the end of 1554 he was removed to the Tower, and a bill for his deprivation was introduced. When this failed, he was tried by a commission (5 Oct., 1552) and deprived of his bishopric. On Mary's accession he was liberated, and his bishopric, which had been dissolved by Act of Parliament in March, 1553, was re-established by a further Act in April, 1554. Through Mary's reign he, being now an octogenarian, ruled his diocese in peace, taking little part either in public affairs or in the persecution of heretics. During his episcopate he was instrumental in the assertion of the fresh innovations marked him out for the royal displeasure. He declined to take the oath of supremacy, was summoned to London, and when ordered to consecrate Parker refused to do so. Shortly afterwards he was deprived of his see (28 Sept., 1559) and committed to Parker's care as a prisoner at Lambeth Palace, where within a few weeks he died. He thus became one of the eleven confessors-bishops who died prisoners for the Faith.

His works, exclusive of published letters and sermons, are: "De Arte Sappiutandi Libri IV" (London, 1552); "Conflutatio cattolicae rubis SS. Eucharistiae Sacramentum ab impios Caphernitae impeti sole" (Paris, 1552); "De veritate Corporis et Sanguinis Domini in Eucharistia libri III" (Paris, 1553); "Compendium in deo libris etiamur Aristotelis" (Paris, 1554); "Certine godlye and devout prayers made in Latin by C. Tunstall and translated into Engishes by Thomas Paynelle, Clerk" (London, 1558). Much of his political correspondence is preserved in the British Museum. Despite his weakness under Henry VIII, we may endorse the verdict of the Anglican historian, Pollard, who writes (op. cit. inf.): "Tunstall's long career of eighty-five years, for thirty-seven of which he was a bishop, is one of the most consistent and honourable in the sixteenth century. The extent of the religious revolution under Edward VI caused him to reverse his views on the royal supremacy and he refused to change them again under Elizabeth."
TUNSTALL

The State Papers, domestic and foreign, for the reigns of Henry VIII, Edward VI, and Mary, and the usual sources of information for the papers, too numerous for citation here, must be referred to. No independent biography exists but among recent writers the following should be consulted: BRADY, Episcopal Succession (Rome, 1877); BUNTING-KNOX, Queen Elizabeth and the Catholic Hierarchy (London, 1889); POLLARD in Dict. Nat. Bio., s. v.; PHILLIPS, The Extinction of the Ancient Hierarchy (London, 1905); BONT, The Elizabethan Religious Settlement (Lon-
don, 1897).

EDWIN BURTON.

Tunstall, Thomas, VENERABLE, martyred at Norwich, 13 July, 1616. He was descended from the Tunstalls of Thurland, an ancient Lancashire family who afterwards settled in Yorkshire. In the Douay Diaries he is called by the alias of Helmes and is described as being born within the ancient Diocese of Carlisle. He took the College oath at Douay on 24 May, 1607; received minor orders at Araco, 13 June, 1609, and the subdiaconate at Douay on 24 June following. The diary does not record his ordination to the diaconate or priesthood, but he left the college as a priest on 17 August, 1610. On reaching England he was almost immediately apprehended and spent five years in prison, and succeeded in escaping from Wisbech Castle. He made his way to a friend's house near Lynn, where he was recaptured and committed to Norwich Gaol. At the next assizes he was tried and condemned (12 July, 1616). The saintliness of his demeanour on the scaffold produced a profound impression on the people. There is a contemporary portrait of the martyr at Tornbury, showing him as a man still young with abundant black hair and dark moustache.

EDWIN BURTON.

Tunsted, Simon, English Minorite, b. at Norwich, year unknown; d. at Brusyead, Suffolk, 1369. Having joined the Greyfriars at Norwich he distinguished himself for learning and piety and was made a doctor of theology. He filled several important ecclesiastical charges, being at different times warden of the Franciscan convent at Norwich, regent master of the Minorites at Oxford (1531), and twenty-ninth provincial superior of his order in England (1360). He wrote a commentary on the "Meteor" of Aristotle, improved the "Aldean" of Richard of Wallingford; and is the reputed author of another work, the "Quattor Principia Musicae", a clear, practical, and very valuable medieval treatise on music. Davey gives a thorough discussion of the authorship of this treatise, which has been ascribed by different writers on the history of music to Tunsted, to John Hanboys, and to Thomas of Tewkesbury; but the arguments brought forward by Davey show that it is certainly not the work of either Hanboys or Thomas of Tewkesbury, whilst his conclusion with regard to the first-named writer is that "the grounds for ascribing it to Tunsted are not very sufficient; or insufficient to point to the author beyond a foreigner either by birth or education."

Turgot, ANNE-ROBERT-JACQUES, Baron de L'Aulne, French minister, b. at Paris, 10 May, 1727; d. there, 20 March, 1781. In his youth he was destined for the Church; he composed a treatise on the existence of God, of which fragments remain, and on the love of God, which is lost. The year 1750, during which he was prior of the Sorbonne, marks the transition between the two periods of his life: on the one hand, he delivered a discourse on the Sorbonne from the Christian religion, which showed him as still an ecclesiastic; on the other, he delivered a discourse on the successive progress of the human mind, in which the true and false ideas of the philosophers were mingled confu-
sedly. In this discourse he foretold the separation from England of the North American colonies. Early in 1751 the influence of "philosophy" prevailed over Turgot's mind and he decided not to receive Holy orders. In 1752 he entered the magistracy, was master of requêtes in 1753, spending his leisure time in the acquirement of further knowledge, and in 1761 became intendant at Limoges. In the Limoisi
government Turgot inaugurated certain attempts in conformity with the new ideas of the economists and philosophers: free trade in corn and the suppression of the taxes known as corvées. This caused popular discontent, due especially to the rise in the price of corn, but Turgot flattered himself that he could quell all opposition. The edict, by which he substituted for the corvée a territorial tax bearing on landed property, displeased the privile-
ged classes; that by which he suppressed the method to,"a
des, jurandes, an act which the philosophers regarded as an advance, destroyed the professional organization which in the Middle Ages, under the auspicis of the Church, regulated economic activity and which at present the syndicalist movement in all countries is endeavouring to re-establish. By depriving the noble Diet of Paris of its privilege of selling meat on Friday to the exclusion of the butchers, by dispensing the owners of public vehicles from the obligation they were under of allowing their drivers time on Sunday to hear Mass, and by attempting to change the coronation oath which he found too favourable to the Catholics, Turgot displeased the clergy, who accused him of indifference for the disciplinary precepts of the Church. He was dismissed by Louis XVI, 12 May, 1776. In his retirement he wrote for Price, "Réflexions sur la situation des Américains des Etats-Unis", and for Franklin a treatise, "Des vrais principes de l'imposition". His works were edited by Dussard and Daure (2 vols., Paris, 1844).

TURIN.

TURIN (Torino), ARCHDIOCESE OF (TURINENE-
SIUM), is the chief town of a civil province in Piedmont and was formerly the capital of the Duchy of Savoy and of the Kingdom of Sardinia. It is situated on the left bank of the Po and the right of the Dora Riparia, which flows into the Po not far off. The surrounding flat country is fertile in grain, pasture, hemp, and herbs available for use in the industries, while on the hills a delicious fungus, a species of truffle, is found. The district is also rich in minerals (a species of gneiss and granite), and

TURIN (Torino), ARCHDIOCESE OF (TURINENSIUM), is the chief town of a civil province in Piedmont and was formerly the capital of the Duchy of Savoy and of the Kingdom of Sardinia. It is situated on the left bank of the Po and the right of the Dora Riparia, which flows into the Po not far off. The surrounding flat country is fertile in grain, pasture, hemp, and herbs available for use in the industries, while on the hills a delicious fungus, a species of truffle, is found. The district is also rich in minerals (a species of gneiss and granite), and
Here are five mineral springs. The population is 0,000.

Besides the numerous elementary and intermediate schools, public and private, there are a university (below), a musical lyceum, commercial, and industrial schools. The Accademia Albertina (1652), for the fine arts, possesses the precious Massey Gallery Rapi and Doli, Caravaggio, Rubens, Van Dyck, Iottto, Andrea del Sarto, Correggio, Luca Giordano, etc., and others, with cartoons of Leonardo da Vinci and others.

There is a royal academy of the sciences (1737) and a royal commission on studies in ancient history. The documents of the general archives go back as far as the year 1081. Other institutions, as the Scuola di Guerra, the practical school for the artillery and engineers, and eight public libraries, among them the National (1711).

The last-named contains the precious Bobbio manuscripts and many Greek and Egyptian papyri; in 994 it was ravaged by a fire in which valuable manuscripts perished, among them which had not yet been thoroughly indices. The Museum of Antiquities is of great importance, containing a number of marbles collected throughout Piedmont besides one of the most complete Egyptian collections in existence, that made by Bernardo Provetti, a French consul in Egypt. Of note also are the Royal Gallery (Piazzetta Palatina); the anatomical, and the rich numismatic museum (the king's medallion). Benevolent institutions are the opera Pia di S. Paolo, which includes the Pons institute (ufficio pio) of Alms for the poor and dowries or young girls, and the Monte di Pietà. The hospitals are those of S. Giovanni (fourteenth century), a hospital for the aged (fifteenth century) of S. Luigi (1702), the Ospedale Hospital, the Cottolengo (Porela Casa della Divina Providenza), banded in 1827 for every kind of human misery, in which about 7000 sick, aged, and infirm persons have bstell) the Royal General Charity Hospice, the asylum of the Infanzia Abbandonata, the Reale Albergo di Vita (1580). The Opera Pia di S. Paolo has many sections which have not yet been thoroughly studied. The Opera Pia di S. Paolo has many sections which have not yet been thoroughly studied.

The cathedral, dedicated to St. John the Baptist, stands on the site of three ancient churches, and was built (1192-1218) by Beccio del Carpi, and consecrated by the papal legate, except the Baptistery, which was added later. The last-named is in the form of a hexagon, containing the Blessed Sacrament; the astrolabe fell to the ground, while the Host remained suspended in air. The present splendid church, erected in 1610 to replace the original chapel which stood on the spot, is the work of Ascanio Vattocchi. The Consolata, a sanctuary much frequented by pilgrims, stands on the site of the tenth-century monastery of S. Andrea, and contains the work of Guarini. It was sumptuously restored in 1903. Outside the city are: S. Maria Ausiliatrice, erected by Don Bosco; the Gran Madre di Dio, erected in 1818 on occasion of the return of King Victor Emmanuel I; S. Maria del Monte (1533) on the Monte dei Cappuccini; the Basilica of Superga, with a Dome 279 feet high; the monastery of S. Andrea; and the Carignano (1704), containing the Bishops' Palace. The church of S. Giovanni in the Decumanus (1706) and the church of St. Sabina contain various splendidly decorated halls and an extremely rich collection of arms of all periods and all peoples, as well as the king's library. Under the palace the remains of a Roman theatre were discovered. The Palazzo Madama stands on the site of the old decuman gate, which became a castle in the Middle Ages and was repeatedly enlarged until, in 1718, it was finally prepared by Juvara for Madame Reale, as it was called, the widowed Queen Maria Carolina of Austria; it is now occupied by the state archives and the observatory.

The Palazzo Carignano (1680), a work of Guarini, is the residence of the younger branch of Savoy - Carignano, now the reigning house. This palace was occupied by the Parliament from 1848 to 1864, and now shelters the Museum of Natural History. The Academy of the Sciences, founded in 1761, houses the Museum of Antiquities and the Pinacoteca. The Palazzo di Città, or City Hall (1669), the work of Lanfranchi, contains the Biblioteca Civica.

There is also a Museo Civico di Belle Arti; and the Mole Antonelliana, 530 feet high, contains the Museo di Risorgimento (1863). The city itself is laid out on a very regular plan.

History.—Before the Roman conquest of the Granian and Cottian Alps, Taurasia was already an important city of the Taurini, a Ligurian people. In 589, c. Hannibal destroyed it. Under Augustus the conquest was completed, and the city was named Augusta Taurinorum; it probably continued, however, to form part of the dominions of Cottius, King of Secusio (the modern Susa). In the war between Otho and Vitellius, it was almost entirely burned down. None of the Roman monuments have survived, except the Porta Palatina, commonly known as the Towers, near which are the remains of a monument erected early in the second century in honour of Attius Agricola. In the fifth and sixth centuries the city suffered from the invasions of the Burgundians and of Odoacer, and in the Gothic War. After the Lombard invasion it became the capital of a duchy, and the seat of four of its dukes (589, Arduin, 800, Garibaldus (661), Reginmundus (701)—kings of the Lombards. When the Lombard kingdom fell, Turin became a residence of Frankish counts until, in 892, it passed to the marquesses of Ivrea, to whom, through the marriage of Adelaide with Osso of Savoy (1016), it passed into the possession of the latter house. In 1130 the city was conquered by William the conqueror; all remaining, however, under the influence of the counts of Savoy, now of the marquesses of Saluzzo or of Montferrat, with whom, as also with the emperors, they were frequently at war. From 1290 on, it was almost constantly under the power of the House of Savoy, more particularly the Acaia branch (1295-1418). After 1450 it was the capital of the Duchy of Savoy. In 1536 it fell into the power of Francis I of France, who established a parliament there; in 1562 Emanuel Philibert conquered it. In 1638, during the war of the regency, the city was besieged by the French and defended by...
Prince Thomas of Savoy. Still more memorable is the siege of Turin in 1706, again at the hands of the French, from which it was relieved by Prince Eugene and by the sacrifice of Pietro Mica. During the French occupation it was the capital of the Department of the Po (1798–1814), though it was in the hands of the Austro-Russian forces from May, 1799, until June, 1800. In 1824 the revolution against Charles Emanuel broke out, and a provisional government was set up, the king abdicating in favour of his brother Charles Felix. After that, Turin was the centre of all Italian movements for the union of the Peninsula, whether monachical or republican. The transfer of the capital of the Kingdom of Italy from Turin to Florence, in 1861, caused another, though not an important, revolution (21–22 September 1863). The most ancient traditions of Christianity at Turin are connected with the martyrdom of St. Advent, Solutor, and Candida, who were much venerated in the fifth century, and were in later times included in the Theban Legion. As to the episcopal see, it is certain that in the earlier half of the fourth century Turin was subject to Vercelli. Perhaps, however, St. Eusebius, Bishop of Vercelli, on his return from exile, provided the city with a pastor of its own. In any case St. Maximus can hardly be considered the first Bishop of Turin, even though no other bishop is known before him. This saint, many of whose homilies are extant, died between 408 and 423. It was another Maximus who lived in 434 and 465. In 444 Victor went to St. Epiphanius of France for the ransom of prisoners of war. St. Ursicinus (560–699) suffered much from the depredations of the French. It was then that the Diocese of Magriana (Maurienne) was detached from that of Turin. Other bishops were Rusticius (d. 691); Claudius (815–27), a copious, though not original, writer, famous for his opposition to the veneration of images; Regnanus (of uncertain date, in the ninth century), who established a rule of common life among his canons; Amolone (880–98), who incurred the ill-will of the Turines and was driven out by them; Godo (1000), who founded the monastery of the holy martyrs Solutor, Advent, and Candida; Landolfo (1037), who founded the Abbey of Cavour and repaired the losses inflicted on his Church by the Saracen incursions; Camberto (1046–51), to whom St. Peter Damian wrote a letter exhorting him to repress the excesses of the clergy; Uguccone (1234–43), who abdicated the bishopric and became a Cistercian; Guido Canale (1320), who founded a hospital at Pinerolo and enlarged the cathedral; Thomas of Savoy (1328). Under Gianfrancesco della Rovere (1510), Turin was detached from the metropolitan obedience of Milan, and became an archepiscopal see with Metropolitan Ivere for suffragans, other sees being added later on. In the time of Cesare Cibo the diocese was infested with the Calvinistic heresy, and his successors were also called upon to combat it. Cardinal Gerolamo della Rovere, in 1564, brought to Turin the Holy Shroud and the body of St. Maurice, the martyr. From 1713 to 1727, owing to difficulties with the Holy See, the See of Turin remained vacant. After 1738 Cardinal Luigi Fransoni (1832–62) distinguished himself by his courageous opposition to the encroachments of the Piedmontese Government upon the rights of the Church, and in consequence was obliged to live in exile. Notable among his successors are Cardinal Almondo (1882–91), a polished writer, and Cardinal Richelay (1891), the present incumbent of the see. The diocesan suffragan of Turin are Aqui, Vaira, Cuneo, Fossano, Ivrea, Monferrato, Pinerolo, Saluzzo, and Susa. The archdiocese comprises 276 parishes with 60,600 souls, 1405 secular and 287 regular priests, 59 communities of men and 51 of religious (15 educational establishments for boys), 23 chapels, and 27 for girls. There are two newspapers, "Memento" and "Italia Reale," two weeklies, and many other instructive and edifying periodicals.

Caffielli, Chiese d'Italia, XIV: Savoia, Gli antichi teatri delle domine di Torino, (1890); Cavazzi, Storia della chiesa di Torino (Turin, 1880); Isola, Torino e dintorni (Turin, 1909); Segreteria Storia della chiesa di Torino (Turin, 1840); Guiseppe commerciali e amministrativi di Torino (1840). The rights of the universities were protected by the Statute of the Comune di Torino (1909); Romolo, Il tesoro di Torino in Bollettino storico Subalpino (Pinerolo, 1901–02).

The University of Turin was founded in 1404, when the lectures at Piacenza and Pavia were interrupted by the wars of Lombardy. Some of the professors of theology, medicine, and arts at Piacenza obtained permission from the Pope to continue their courses at Turin. This prince had obtained from the antipope Benedict XIII, in 1417, the pontifical privilege for a studium generale, and in 1418 the permission of the emperor was likewise granted. In the following year John XXIII confirmed the concessions of Benedict XIII rendered necessary by the war, which had disturbed the studium of Turin. The studium then comprised three faculties: theology, law (canon and civil), medicine (with arts and philosophy). The Archbishop of Turin was always chancellor of the university. At Bologna, the rectors continued for a long time to be chosen from their own body by the students, who in 1679 represented thirteen nations. They were paid by the bishops of Savoy; but from 1420 the clergy also contributed, and at a later period the dukes. In the seventeenth century the university levied a tax on the Jews. Under Duke Amedeo VIII, the State began to restrict the autonomy of the studium by means of reformations and subjected the professors and students in criminal matters to ordinary jurisdiction. From 1737 to 1776, when the civil list of the university was temporarily transferred to Chiari and Savignano (1434). The number of salaried professors in the years 1456 and 1535 was twenty-five (only two of theology), but the number of lecturers was much greater; e.g., in the statutes of the theological faculty (1427–36)

Turkestan.—1 CHINESE TURKESTAN.—When Jenghiz Khan died (1227) his second son, Djagatai, had the greater part of Central Asia for his share of the inheritance: his empire included not only Mavara-n-Nahr, between the Syr Daria and the Amu Daria, but also Ferghana, Badakhshan, Chinese Turkestan, as well as Khurasan at the beginning of his reign; his capital was Alamq, in the Ili Valley, near the site of the present Kok-shaik, which was the ancient capital. However, the empire was divided into two parts: Mavara-n-Nahr or Transoxiana, and Moghulistan or Jabah, the eastern division. In 1759 the Emperor Kien Lung subjugated the country north and south of the Tien-shan and divided the new territory into Tien-shan Peh-lu and Tien-shan Nan-lu; in 1782 a military commander was appointed and a fortified town, Hwei-yuan-ehing, was erected (1764) near the site of Kulja: a number of Manchus, from Peking and the Ann, and Mongols were drawn to the new place and later on there came a migration of Chinese from the Kansu and Shen-si Provinces. The local Mohammedan chieftains are known as Pe-k'e (Beg); they are chased in five degrees of rank from the third to the seventh degree of the Chinese hierarchy: the most important titles are Ak'im Beg (local governor), Ishkhan Beg (assistant governor), Shang Beg (collector of revenue), Hatsze Beg (judge), Mirabu Beg (superintendent of agriculture).

The bad administration of the Chinese governors was the cause of numerous rebellions; a great rising took place against the representatives of the T'ien-shan Peh-lu and the Tien-shan Nan-lu; in 1789 General Chang Ling to fight the rebellion; Jihanghir was defeated and made a prisoner at K'artik-kai (1828) and sent to Peking where he was put to death in a cruel manner. On the other hand, the establishment of Orenburg by the Russians, the exploration of the Syr Daria by Batakov, the foundation of Kazainik (1848) near the mouth of this river, the exertions of Perovoy, the attacks of the Cosacks against the Khiva, and finally the arrival of the Russians in the valley of the Ili River. On 25 July, 1851, Col. Kovalevsky signed with the Chinese on behalf of the Russians at Kashgar a treaty regulating the trade at Ili (Kulja) and at Tarbagatui (Chagutchak). In the meantime new rebellions broke out after the death of Jihanghir; in 1851 one of the Khoja, K'artik-kai, with the help of his brothers took Kashgar, but was soon defeated by the Chinese; in 1857 Wali Khan captured Kashgar, Artosh, and Yang-i-hissar; and at last, the son of Jihanghir, Burzuk Khan, with the help of Mohammed
TURKESTAN

Yakub, son of Isuet Ula, born about 1820 at Pokent in the Khanie of Khokand, taking advantage of the Mohammedan rebellion of Kansu, began a new struggle against the Chinese. Yakub, having taken Kalgan, subjugated Kashgar, Khotan, Aksu, and the other towns south of the Tien-shan, thus creating a new empire; his capital was Yarkand, and there he received embassies from England in 1870 and 1873 (Sir Douglas T. Forsyth) and from Russia in 1872 (Col. Baron Kaulbars).

To check the advance of Yakub to the west, the Russians captured Tashkent (27 June, 1865) took possession of Ili, i.e. the north of the Tien-shan, on 4 July, 1871. When the Chinese had quelled the Yum-nan rebellion after the surrender of Ta-li, they turned their armies against the Mohammedans of the north-west; the celebrated Tao Tsung-teng, Viceroy of Kansu and Shen-shi, had been appointed commanders-in-chief; he captured Sus-han (Oct., 1873), Urumtsi, Tih-hwa, and Mansi (16 Nov., 1876) when a wholesale massacre of the inhabitants took place; the Russian Governor of Turkestan, General Kaufman, wrote a protest against these cruelties. The task of the Chinese was rendered easy by the death of Yakub (29 May, 1877); Aksu (19 Oct., 1877), Yarkand (21 Dec.), Kashgar (26 Dec.), and at last Khotan (18 April, 1878) fell into their hands. Then the Chinese turned to the Russians to have Ili, occupied temporarily, restored to them. Ch'ung-hou, sent as an ambassador to St. Petersburg, signed at Livadia in Oct., 1879, a treaty ceding to the Russians a large portion of the contested territory including the Muz-Art Pass, giving them the privilege of selling their goods not only at Tien-sin and Hankow but also at Kalgan, Kansu, and Hanchung; permission was also granted to the Russians not only at Ili, Tarbagatai, Kashgar, and Kurum, but also at Kaini-kwan, Kobdo, Chusut'ai, Hami, Turfan, Urga, and Kushteng. The treaty was strongly attacked by the censor, Chang Chi-tung, and Ch'ung-hou, tried by a high court, was sentenced to death. A treaty between Russia and China very nearly broke out, but, thanks to the good offices of foreign powers, a new embassy sent to Russia with the Marquis Tseng arranged matters. A new treaty was signed at St. Petersburg, 12 (24) Feb., 1881, and Russia kept but the western part of the contested territory, restoring the Pass of Muz-Art and giving up some of the commercial privileges granted by the Livadia Treaty.

After the Mohammedan rebellion had been crushed, the territory was organized in 1878 and was called Sin-Kiang or New dominion, the names Eastern Turkestan and Chinese Turkestan being also used; it is bounded on the north by Siberia, on the west by Russian Turkestan and India, on the south by Tibet, and on the east by Mongolia and the Chinese Province of Kansu. Its area is 550,579 square miles, with a population of 1,200,000 inhabitants scattered over this immense desert varying in altitude from 3000 to 1000 feet above the level of the sea and surrounded by mountains: in the south the Kwen-lun and its two branches, the Nan-shan and the Altyn-Tagh; in the west, the Karakorum, the Pamir, and the Altai; in the north, the Tien-shan, by which chain the country is called Tien-shan Peh-lu or Sungaria, and south of it Tien-shan Naluu or Kashgaria. The chief river of Chinese Turkestan is the Tarim or T'ih-lun-ho, about 1250 miles in length, resulting from the junction of the rivers of darias, watering Yarkand, Khotan etc.; finally the Tarim empties its waters into the Lob-Nor, now more of a marsh than a lake in ancient times. The principal passes to enter Sin-Kiang are the following: the Tash-Dayan (Kwen-lun range), south of Lob-Nor; the Karakoran Pass, road leading from Yarkand to Leh in Ladakh; the Shishlik Pass, in the Pamirs; the Kyzil Art Pass, in the Trans-Mai; the Muz-Art, road from Kulja to Aksu, the Terek-Dayan, in the Western Tien-shan; the Urumtsi Pass, in the Eastern Tien-shan; the Takli Pass, to the north of the Hi Valley.

Sin-Kiang includes the following regions: Hami or Qomul or Pa Shan; the great Gobi Desert or Shamo; the largest portion of Turkestan, the south-west part of it is the Takla-makan Desert; the region of oases (Khotan, Yarkand, Kashgar, Aksu, K'ung-hsiar); the Turfan region (Turfan, Karashar); Sangaria (Urumtsi, Kuch'eng); the Hi region (Kulja, Si-nan, Khotan), the Hi river is crossed by the line from Kansu to Turfan, by Nanssu and Hami; (2) north from Urumtsi to Kulja, via Manas; (3) south from Turfan to Kashgar, via Karashar, Kuchi, Aksu, Maralbash; there is also a route from Kashgar to Lob-Nor, via Khotan, Kria, Charchan, Lob-Nor, thence to Sha Choun; this is Marco Polo's itinerary. The New Dominion is divided into four Taor or Intendance: Chen Ti Tao (Tih-hwa), P.ass, (Kwen-hm Kan-su); in 1908, Jung Peh was Tao-tai and judge; Aksu Tao (Yenki Fu), Tao-tai vacant in 1906; Kashgar Tao (Sulofu), in 1910 Yuan Hung-yu was Tao-tai; and I. Tao Ta (Kung yun hien), in 1908 Khinghu was Tao-tai. It includes six Fu or Prefectures: Tih-hwa or Urumtsi, Yenki or Karashar, Su lo or Kashgar, Soch or Kuch'eng, Kho or Kuchu, and Khwe; and eight T'ing: Yingkihsueul or Yang-i-hsiar, Wusil or Uteh-Furkan, K'ueik'oihaoh Wusi or Kurchaka-urs, Chensi or Barkul, Hami or Qomul, Tufulan or Turfan, Tsingho, and Taheheng or Tarbagatai.

The administration of Sin-Kiang has at its head a P'shi (19,310 lacs of rupees) and is divided into fifteen departments, one for each of the Taors. It is governed by the Shen-Kan Tsung-ta (Viceroy of Kansu and Shen-shi) whose seat is at Luanchen, Kansu; the treasurer, Fan-ta (in 1908, Wang Shuan), who resides at Urumtsi (Tih-hwa); as well as the judge, Nieh-tai, who is also the Tao-tai of the circuit. The four Tao-tai have been mentioned. There are three Tseung Peng (brigade generals) at Aksu, Dalkun (Barkul), and Hii. The departments comprised as follows: Hii, a Tsiangkun (Tatar general), a Futu'tung (deputy military lieut. governor), a Ts'an Tsan Ta Ch'en (military assistant governor), and the Lung Tui Ta Ch'en (commandant of forces) of Solun, Oalot, Chahar, Sibe; at Tarbagatai, a Futu'tung, and Ts'en Tsan Ta Ch'en; at Urga, a Tsoang Ta Ch'en; at Urumtsi, a T'ao Shih Ta Ch'en; at Urumtsi, a Panshi Ta Ch'en; and at Si hing, a Panshi Ta Ch'en.

Mission.—The Hi country is a part of the second ecclesiastical region of China; it was constituted as a distinct mission (Hi or Sin-Kiang mission) at the expense of the Vicariate Apostolic of Kansu by a decree of 1st October, 1888; it is placed under the care of the Belgian missionaries (Cong. Imm. Cord. B. M. V. des Schelvet) with Jean-Baptiste Steeneman as their superior. The mission includes five European priests and 300 Christians.

II. RUSSIAN TURKESTAN.—Russian Central Asia includes the two Khanates under Russian protection, Bokhara and Khiva, and the Turkestan region with its five provinces: Syr Daria, Samarkand, Ferghana, Semirechenk, and Transcaspian; it extends from the Caspian Sea to China, and from Siberia to Persia and Afghanistan, with an area of 721,777 square miles, containing the Khanates of Turkestan, and 63,012 square miles for the Khanates. To the east, towards China, it is mountainous and contains numerous lakes, Balkash, Issyk-kul, etc.; to the west, it is a large plain with desiccated lakes, watered by the two large rivers, Amu Daria and Syr Daria which run into the Aral Sea. The conquest of this region began in 1867 with the annexation of the country south of Lake Balkash, and
occupation of the valley of the Syr Daria, forming the provinces of Semirechensk and Syr Daria; in 1878 the Zarafshan district was added and became subsequently the Samarkand Province. Later on, in 1873, part of the Khamate of Khiva, on the right bank of the Amu Daria, was occupied and was incorporated with the Syr Daria Province. In 1875 and 1876 the Russian government decided to occupy the province of Ferghana. The population is but 243,422 inhabitants including, on the one hand, Russians, Poles, Germans, etc.; on the other, the natives; Arians, Sarts, Tajiks, Tartars, Hindus, with Mongols: Kirghiz, Uzbecks, Torbors, etc., and emigrated Jews and Arabs representative of the Semitic tribes. The chief crops are cotton, barley, sugar, cotton. Cabble-breeding is the main source of commerce. The trade of Turkestan amounts to about 320 million and a half of rubles, of which 110 millions and a half are exported and 180 millions are importation. The chief trading province is Ferghana with 129,000. Tashkent, the chief city of the Syr Daria and Ferghana, is a white town of the administration of Russian Turkestan with a population of 191,500 inhabitants, of which 150,622 are natives, for the most part (140,000) Sarts. The two main rivers of Russian Turkestan which flow into the Aral Sea are the Syr Daria, Shihun, or Jaxartes, and the Amu Daria, Tihun, or Oxus.

HENRI CORNIER

The Turkish Empire, created in the fourteenth and five centuries on the ruins of the Byzantine empire, from the caliphate of Bagdad and independent Turkish principalities. It occupies a territory of 1,114,502 sq. miles, with a population estimated at 35,000,000 inhabitants, and extends over parts of Asia, Europe, and Africa. The Black Sea is within the limits of the empire, on the south-east of the Caspian Sea, and on the north are the mountains of the Trans-Caspian, of the Black Sea, the Indian Ocean, and the Red Sea. The Turkish Empire thus possesses some of the most important highways by land and sea, between these three continents.

1. Geography.—A. The Balkan Peninsula (European Turkey), divided into eight provinces or vilayets, comprising the south-east of the plains of the Adriatic, the Archipelago, and the Black Sea. Turkey still possesses Albania and Epirus, a vast plateau overgrown with towering mountain ranges (Tzagaragh, 10,000 ft.) and with uplands stretching from the north-west to the south-east which reach as far as the Pindus; the coastal plains of the Ionian Sea, and the inland level (Scutari Lake, Lake Infresi, plains of Monastir, Uskuf, and of Yannia) are separated by high ridges; Macedonia, a plain richly cultivated with vines, cereals, and tobacco, included within the mountains of Macedonia on the west, Rhodope (9142 feet) to the north, Olympus to the west, and the sharp and rocky peninsula of Athos, and the port of Salonica (144,000 inhabitants), situated at the opening of an historical trade highway which descends to the valley of the Vardar as far as Uskuf, and over a hill of 1640 feet leads to the valley of the Bulgaria Morawa and as far as the Danube (railway route from Belgrade to Salonic); the plain of Thrace, extending from the Archipelago and Thrace, and in 1876 the lower level of the valley of the Maritza, of which Eastern Rumelia represents the upper. Cultivation is broken by great stretches of sterile areas; the only important city in the interior is Demeon (125,000 inhabitants), but at the extremity of the peninsula situated between the Black Sea, the Danube, the Archipelago, and Thracia, and in 1876 the capital, which occupies, on the Bosporus, one of the finest strategical positions of the old continent. This metropolis of 1,500,000 inhabitants is at the cross-roads formed by the great waterway which connects the Black Sea with the Mediterranean, and by the overland route (followed by a railway) which reaches the valley of the Danube by way of Adrianople, Philippopolis, Soria, and Belgrade. It is composed of the Turkish city of Stamboul, of the European districts of Galata and Pera separated by the natural headland of the Golden Horn, and of the suburbs of Scutari, Haidar-Pacha, and Kadi Keni. These settlements are on both sides of the Bosphorus, in Europe and Asia. On account of its military and commercial importance and its population composed of all the races of the earth, Constantinople is a typical cosmopolitan city.

C. Syria, a narrow strip of land, 500 miles long by 93 wide, lies between Asia Minor, Egypt, the Mediterranean, and the Desert. It is traversed by the two parallel ridges of Libanus (ranging from three or four thousand to nine thousand feet) and Anti-Libans, separated by the valley of the Orontes, which is bounded on the north by the valley of the Orontes, on the south by that of the Jordan, which abuts on the gorge of the Dead Sea, 1200 feet below the sea level. The most important centres are the ports of Beirut (185,000 inhabitants), St. Jean d'Arc, and Jaffa (55,000 inhabitants), whence starts the railway to Jerusalem (113,000 inhabitants); the city of Damascus (350,000 inhabitants) in the middle of an oasis of luxuriant vegetation, one of the chief industrial centres of the Orient.

D. Mesopotamia and Turkish Armenia, or Kurdistan, separated from Syria by the Great Desert, extends on the north to Anatolia and Armenia by the vast mountain ranges of Kurdistan (1,300 feet), intercepted from the plains of the interior by Lake Van, whence flow the Tigris and the Euphrates, whose alluvial valleys are marvellously fertile; corn, wheat, barley, grain, one might say, originated here. Cotton may be also found in abundance, rice and plantations of date palms, and fruit-trees of every kind. The leading centres of Armenia are Erzerum, Van, and Tarsuch. Bagdad (125,000 inhabitants), and Bussorah give but a feeble idea of the once great cities of Ninive, Babylon, and Seleucia-Ctesiphon.

E. The Peninsula of Arabia is a spacious desert plateau, bounded by immense mountain ranges, which rise over 9000 feet above the Red Sea. Scarce a seventh of this vast territory (over 1,000,000 sq. miles) is dependent on the sultan, and that more nominally than in reality. The volcanic plateau of the centre (Najd or Arabia Petrea) is almost a desert. The population has flown to the coast districts (Hedjad and Yemen), or Arabia Felix. The only important centres of the sacred cities of the Mussulmans: Mecca (60,000 inhabitants) and Medina (150,000 inhabitants), where Mohammed died. The possession of these cities lends great political importance to the Turkish Government. A railway, intended to unite Damascus to Mecca, was made to Medina (in 1910).
The Turks entered into one of their most bitter and protracted campaigns against the Greeks, and succeeded in inflicting a severe blow on the Greek forces at the battle of Plevna, in 1877.

In 1881, the Sultan, Abdul-Hamid, proclaimed a new constitution, which was declared to be permanent. The constitution was met with rejoicing in the European countries, and with consternation in the Ottoman Empire. The Sultan was deposed, and a new constitution was proclaimed.

In 1896, the Ottoman Empire was divided into four provinces, each governed by a governor appointed by the Sultan. The provinces were:

1. The Anatolian Provinces
2. The Balkan Provinces
3. The Anatolian Provinces
4. The Caucasian Provinces

In 1898, the Ottoman Empire was declared to be an independent nation, and the Sultan was declared to be the sovereign of the country.

The Ottoman Empire was declared to be an independent nation, and the Sultan was declared to be the sovereign of the country.

where Armenians were tracked, and isolated mas-
sacres of Christians became also the normal order of
events in Macedonia.

Educated in Western ideas, the Young Turks, espe-
cially the refugees at Paris, united as early as 1865,
and succeeded in spite of prohibitions in circulating in
the press of the journal the "Mecicever." A Com-
mittiee of Union and Progress was even formed at
Constantinople, and by constant propaganda suc-
cceeded in gaining to its cause the greater number
of the officials. The uprising, the preparation of which
deceived the Hamidian police, began 23 July, 1908,
at Salonica; an ultimatum was sent to the sultan, who,
although not even by the Sultan proclaiming the
re-establishment of the constitution (24 July, 1908)
in the midst of indescribable enthusiasm, and called
a parliament (1 Dec., 1908).

In three months 300 journals were started. Abroad,
the counterstroke to this revolution was the definitive
annexation, proclaimed by the Emperor of Austria,
of Bosnia and Herzegovina (3 Oct., 1908). At the
same time the Prince of Bulgaria took the title of
Tsar of the Bulgarians (6 Oct., 1908), and repudiated
the vassalage which still connected him with the
sultan.

This exterior check weakened the Young Turk
party, and on 13 April, 1909, a counter-revolution of
Sofias and Salonicas was begun, to check the
standard which it had raised. The Young Turks had to
fly the capital, but immediately the troops of Salonica, Monastir,
and Adrianople consolidated and marched against
Constantinople and laid siege to it (17 April, 1909).
Negotiations continued for six days; finally at the
moment when the massacre of the Christians seemed
imminent, the Salonicans troops entered Constanti-
nople with the exclamation "Long live the Young
Turks!" to which the Sultan replied "The Aspera rerum
conditio." (22 May, 1908). The treaty of Berlin left to
each state the care of protecting its subjects, but
in practice France preserves the protectorate over
Catholics, and even the diplomatic rupture between
France and the Holy See has not impaired these civil
rights. Each of the Great Powers has therefore con-
siderable interests in the Turkish Empire: each one
has its own postal autonomy, control, the police,
and organizations for propaganda, teaching, and clarity.

The Young Turk party, in power to-day, dreams of
overthrowing this arrangement. The new con-
stitution granted by the Sultan Mohammed V. 5 Aug.,
1909, proclaims the equality of all subjects in the
matter of taxes, military service, and political rights.
For the first time the Christians are connected to
the army, and the parliament, which meets at Constan-
tinople, is chosen indiscriminately by all the races.
The effect of this new régime appears to be, in the view
of the Young Turks, the establishment of a common
law for all subjects, the suppression of all privileges
and capitulations, and the religious communities,
whether Eastern or Western, are protected by the
same laws as the rest of the population.

The rest of the European powers have in the Turk-
ish Empire, political, economical, and religious interests
which are no less important; a certain number of
public services, such as trade, public debt, or
institutions like the Ottoman Bank, have an inter-
national character. The same holds good of the
companies which are formed to execute public
works, docks, railways, etc. The trade in
exports and imports involves large sums of money, as
one may judge by the following table:

A veritable economic war is raging on between the
Powers, desirous of exploiting the riches of the Orient;
and the secular ambitions which menace the existence
of the "sick man of Europe" are due to ambition or greed.
Neither the Russians nor the Greeks have ceased to consider Constantinople as the historic goal
of their efforts, and Bulgaria, deprived of Macedonia
by the treaty of Berlin, also finds in its traditions
claims on the same heritage. Macedonia is claimed
by the Greeks, Bulgarians, Servians, and the Kuts-
Macedonians; or Rumansians; Salonica has become the
commercial centre for Austrian exportation; and the
annexation of Bosnia and Herzegovina has by one and
the same stroke reinforced Austro-Hungarian and
German influence in the Balkan Peninsula. Italy
has some clients in Albania, and is seeking at the present moment to take possession of Tripoli.

Finally, France, England, and Germany are fighting for the commercial influence. France has maintained an important position because of the protection that it has always exercised over Catholics; French in the Orient has become a kind of second vernacular while the influence of Germany has increased in the last few years for political reasons, by which the development of German commerce has profited. The European Powers, acting upon defence of their own interests, are not, however, ready to abandon their capitulations. The Turkish Empire has, moreover, entered into a period of transformation, the end of which no one can foresee, and what delays still more the task of the new power is the infinite diversity of races and religions which make up the empire.

Although the statistical documents are very incomplete, the total population of the empire, including Egypt and the dependencies Crete, governed by Prince George under the control of the Powers; Samos, governed since 1852 by a Greek prince appointed by the sultan, can be estimated at 30,000,000. Under the direct government of the sultan there are only 22 provinces. They are almost all inhabited by different races: (1) Turks, or Osmanlis, estimated at 10,000,000, are settled throughout Asia Minor, the cities of Europe and Syria, and some cantons of Macedonia; most of these are Mussulmans. (2) Arabs (7,000,000), in Arabia, Syria, Mesopotamia, and Tripoli, forming several sects of Mussulmans. (3) Jews, scattered throughout the Moslem world, make up the half portion of the population of Salonica; compact groups of Jews may be found in Jerusalem and its outskirts, at Bagdad, Mossoul, and Beirut. Samaritans inhabit the sanjak of Napoulouse. (4) Gipsies, a mysterious race, are scattered throughout the empire. (5) Armenians, who have swarmed outside of their country and form powerful colonies in Asia Minor, Mesopotamia, Caucasus, and Turkish provinces. From a religious standpoint they are Catholics, Gregorians, or Protestants. (6) Caucasian races: Lazes of Trebizond, Mussulmans or Orthodox Greeks; Kurd, fanaticized Mussulmans scattered around Erzerum, Angora, Mossoul, Sivas; Circassians, spread throughout Asia Minor, Mussulmans. (7) Syrians, divided into the different sects of Islam, form the multitude of communities of different language and religion; Chakheus, in Bagdad, Mossoul, Aleppo, Beirut, or Nestorians, speaking partly Syrian and partly Arabic. The Melchites speak Arabic, but belong to the Greek Church. The Jacobites, or Monophysites, speak Arabic and Syrian. The Maronites of Lebanon and of Beirut speak Arabic, and are Catholics. The Druses of the Lebanon form an heretical Mussulman sect. (8) The Greeks have remained in their historic country; as in antiquity they are a maritime people; they form powerful groups at Constantinople, Adrianople, Salonica, in Macedonia, Asia Minor, in the islands, in Syria, and in Crete. Not only the seminary, but the patriarchal seat is in Constantinople. They have a patriarch, the head of the Eastern Church. They are of considerable importance in the empire. (9) The Albanians appear to be the remnant of a very ancient race. They form in the west of the Balkan Peninsula (Albania) a compact group and still lead a semi-patriarchal life. A large part (1,000,000) is Mussulman, the others (39,000) Catholic among whom may be found the powerful tribe of the Musulman Albanians. In 1911 the new government was obliged to direct an expedition against them to effect their disarmament. (10) The Slav peoples, Bulgarians and Servians, are scattered over Macedonia and Old Servia, where they oppose Greek influence; they are divided between Islamism, Orthodoxy, or Catholicism. (11) The Kutzovo, Vlachs of Roumanians, Orthodox or Catholics, inhabit Macedonia, where they are mostly shepherds. (12) In all Turkish cities may be found a great number of families of European origin, settled in the Orient by foreign, and sometimes lost contact with their ethnic characters and their languages. Such are the Levantines, who seek to obtain from the ambassadors foreign naturalization for the sake of its privileges.

From a religious standpoint the Mussulmans may be estimated at 50 per cent of the population, the Orthodox in Asia Minor and Crete, the Catholic, other communions, Jews, Druses etc., at 1 per cent. In Turkey in Europe, on the contrary, there are 66 per cent of Christians to 23 per cent of Mussulmans.

(1) Mussulmans.—The Mussulman religion has remained the religion of the state. The sultan is always the caliph, the spiritual head of the Mussulmans of the whole world. The Mussulman community comprises the majority of Turks, Arabs, and descendants of the Albanians, Bulgarians, Greeks etc. Polygamy is always legal; four legitimate wives and an unlimited number of concubines are permitted to the believers. Under the influence of Western ideas and Christianity, monogamy tends to establish itself. Divorce exists, and the divorced woman can remarry. The government, however, has opposed such steps as that which compels the sultan to give the harem (male apartments) and the harem (female apartments). It is the same in the tramways, railways, ships etc. The women cannot go out except veiled, but circulate freely in the streets of the cities unaccompanied. Slavery is always active, but it has kept a patriarchal character. Women are divided when they marry, and the Koran obliges him to provide for the needs of his slaves. Education is progressing. In principle it is obligatory. Primary education is free, a secondary school exists at the capital of each vilayet, as well as one free professional school. Instruction of women is developing at Constantinople; the Lyceum of Galatia, organized by the government, has 1100 pupils. Higher instruction is represented by the University of Constantinople and special schools. An imperial museum of archaeology has been created at Tchilimi-Kiosk.

As in all Mussulman countries, the spiritual and temporal domains are blended, and civil relations are regulated by religious law which consists in the Koran and the Hadis. The interpreters of this law are the ulemas, who form a powerful clergy whose head, the Sheikh-ul-islam, has the rank of vizier, and access to the council of ministers; or divan. At twelve years age the future ulema leaves the primary school and enters a medresse (seminary attached to the mosque) as a softa (student) where he learns grammar, ethics, and theology. He finally receives from the Sheikh-ul-islam the diploma of candidate (midastim) and can be elevated to the rank of the ulema; he may become cadi (judge). To advance further he must study for seven years, when he may become imam of a mosque. The ulema wear a white turban; the hadjis, who have been to Mecca, wear a black turban. They make the rounds of the mosques and other places of prayer. In a large mosque or djami may be found sheikhs in charge of the preaching; khatibs, who direct the Friday prayer; imams, charged with the ordinary service of the mosque (daily prayer, marriage, burials); muazzins, who ascend four times a day to the minaret to call the faithful to prayer; eaves form the regular clergy and devote themselves to special practices, of which some are noted for their extravagance (bowling and whirling); they are distinguished by a conical felt hat. The principal religious obligations, which the faithful perform with zeal, are: prayer four times daily, the weekly Friday service, the observance of Ramadan (abstinence from eating, drinking, and smoking from the rising to the
setting of the sun). Islam is going through a crisis by contact with the Western world, and under the influence of Christianity many of the enlightened Turks dream of reforming its morals. On the other hand the Turks are assisting the Arabs, who pretend to represent the pure Mussulman tradition, and the Turks. The pan-Islamic policy of Abdul-Hamid had weakened this opposition, and he had availed himself of his title of caliph to form relations with Mussulmans of the entire world.

To-day the pan-Islamist movement, of which the Universal Brotherhood, a body of 102,000 centres, and which has numerous journals at its command, seems to be unfavourable to the Turkish Caliphate. The society "Al Da' wa wa Ikhshad" is about to create in Egypt a new university destined to form Mussulman missionaries.

(2) Greek Orthodox Church.—The principal indigenous Christian community is the Greek Church, which is the successor of the religious organization of the Byzantine Empire. Its head, the "Ecumenical Patriarch of the Romans" (such is his official title), resides at Constantinople, in the Phanar quarter. He presides over a Holy Synod formed of twelve metropolitans and a "mixed council", composed of four metropolitans and eight laymen. Two million souls of Greek faith reside in Greece (including 100 eparchies or dioceses (83 metropolitan and 17 bishops). Since the schisms of Photius (867) and of Michael Cerularius (1054), the Greek Church has been separated from Rome by a succession of ritual and disciplinary observances rather than by dogmatic differences. The tendency of the Greek Church to assert the independence of the archbishop is evident, and the authority and the forming of autocephalous churches; outside of the Ottoman Empire may be found the Russian Church, the Church of the Kingdom of Greece, the Servian Church, the Church of Cyprus; in the empire, even since the firm of Abdul-Aziz (11 March, 1870), the Bulgarians have organized an independent church under the name of "Exarchate". The Bulgarian Exarch resides at Ohrid on the Bosporus and governs 3,000,000 souls; Thrace and Macedonia are divided into 21 Bulgarian eparchies, but a Holy Synod resides at Sofia. The Arabic-speaking Syrians, or Melchites who are attached to the Orthodox Church, are under the authority of the Patriarch of Antioch, who resides at Damascus, of the Patriarch of Jerusalem, and of Alexandria, and of the Archbishop of Sinai, all independent of Constantinople.

The Greek Church has two divisions of clergy, one consisting of the popes or popas, who marry before they take orders and cannot become bishops; the other, called the upper clergy, chosen from among the monks. The monasteries are of two kinds: the monasteries of Mount Athos form a veritable independent republic composed of twenty convents governed by the Council of the Holy Epistasis; its head, the protopista, is chosen in turn from the monasteries of the great Laura, Iviron, Vatopedi, Kiliandarios, and Dyonisios. The Greek Church has no organized missions, but the Hellenic propaganda is maintained at the Greek Church; a portion of these Christians believe, however, returned to the Catholic Church. The Gregorian Armenians (who connect themselves with St. Gregory the Illuminator) have been separated since the Council of Chalcedon (451). They have many heads, the Catholicos of Echmiadzin in Russian territory, the Catholicos of Cilicia (200,000 faithful in Cilicia and Syria), and the Armenian Patriarch of Constantinople, who is assisted by a national assembly of 400 members and two councils, civil and ecclesiastical (800,000 faithful, divided among 51 dioceses); finally, the Armenian Patriarch of Jerusalem and the Armenians of America connected with Constantinople. On the Turo-Persian frontier may be found about 100,000 Nestorians, whose patriarch resides at Koteches; his dignity is hereditary from uncle to nephew; many have been reunited to the Roman Church. The Monophysites, or Jacobites, to the number of 80,000 in Syria, Mesopotamia, and Kurdistan, represent in fact a remnant of the Church which was once powerful; its head, who calls himself patriarch of Antioch, resides at the Monastery of Darzuzafaran, between Diarbekir and Mardin.

(4) The Catholic Church in the Turkish Empire comprises two classes of faithful: those of the Latin Rite, and those who preserve their traditional rites, and are united to the Holy See, and therefore the name Greek-Uniates, Armenian-Uniates, etc. Turkey, as a missionary country, depends directly on the Congregation of the Propaganda, which has as representatives three apostolic delegates, at Constantinople, Beirut, and Bagdad; assisting them are vicars and prefects Apostolic, heads of the mission and provided with episcopal powers (except the power of confirming major orders). The Latin Empire, although 155,000 Albanians form an important group under the Archbishops of Durazzo, Ushkub, Scutari, and the Abbot of St. Alexander of Orochi for the Mirdites.

The Uniates comprise many distinct groups: (a) the Greeks, whose union was proclaimed by the Council of Florence in 1439 (in the ancient Roman colony of Cargese). In the Turkish Empire there are only some hundred or so placed under the authority of the Apostolic delegate of Constantinople. Among the peoples who have striven most to bring about a union with the Greeks Benedict XIV must be remembered, and Leo XIII (Encyclical "Orientalium dignitats", 30 Nov., 1877). (b) The Melchites Greeks (110,000), in Syria, Palestine, Egypt; their oldest community resides at Damascus, and has under his jurisdiction three vicariats (Tarsus, Damietta, and Palmyra) and eleven bishops. (c) The Bulgarian-Uniates, converted about 1860 to escape from the Phanariot despotism. There remain 13,000 directed by the vicar Apostolic of Adrianople and Salonica. (d) The Armenian Uniates, of the Church of Cilicia and Little Armenia, Pope at Zman in the Lebanon. In 1857 Pius IX conferred this title on the Armenian Archbishop of Constantinople (70,000 faithful, 2 archishops, of Aleppo and Sivas, 12 bishops, the most of whom are in Persia and Egypt). (e) The Syrian Uniates, converted by Latin missionaries in 1857, a man of 183,000 who has regained its autonomy (60,000 faithful, a patriarch residing at Beirut, and 12 dioceses). (f) The Chaldaean Uniates, Nestorians converted to Catholicism in 1552. Their Patriarch of Babylon resides at Mossouf (80,000 faithful). (g) The Maronites of the ancient Lebanon, a Monothelite community which abjured its heresy entirely in 1182. Its head, Patriarch of Antioch resides at Beirut, or Damascus, or Rome, according to the bishops under his jurisdiction. The 300,000 faithful have remained particularly attached to Catholicism.

III. CATHOLIC AND PROTESTANT MISSIONS.—The Christian propaganda has been carried on in the Turkish Empire by means of the missions, the oldest of which date back to the time of the Crusades. As early as 1299, Franciscan and Dominican missions were established in Palestine, and as far as Damascus. In 1528 the Franciscans received the "custody" of the Holy Places, and constructed their convents of the Mount of Sion, of the Holy Sepulchre, and of Bethlehem. To-day the Franciscan custody of the Holy Land numbers 338 religious. The missionaries
have, however, encountered great obstacles in their work, and they have been unable even to consider a more extended expansion of their operations. Nevertheless, their moral influence is considerable; it manifests itself by social works due to their initiative (schools, hospitals, dispensaries, etc.) which are very prosperous, and are maintained by numerous organizations founded in Europe: the Society of Foreign Missions of Paris, founded in 1658; the Propagation of the Faith, founded in Lyons, by Saint Vincent de Paul, founded at Auen in the year 1822; the Leopoldsvorun, founded in Austria in 1839; the Society of the Holy Childhood, etc.

Among the religious orders represented in the Turkish Empire must be mentioned: the Jesuits, who have established the University of St. Joseph of Beirut, whose faculty of letters numbers distinguished Lazarists, physicians; the English Barefoot Lazarists, of the University of Paris, more than 3000 pupils. At Constantinople there are 20 schools, comprising 7000 pupils. At Constantinople there is the American Robert College.

TURNAU, JOHANNES. See Turmai.

TURNEBUS, ADRIAN, philologist, b. at Andely in Normandy in 1512; d. in Paris, 12 June, 1565. The accounts of the life of the great scholar are scanty and in part even contradictory. Neither is it easy to indicate the place of birth of Turnebus; it is told that his father was a Scottish gentleman named Turnell, who settled in Normandy and gave his name the French form of Turnebert. From this it became Turnebus, then Turnébe, in Latin Turnebus. Whatever may have been the derivation of his name, Turnebus came from a noble though poor family. At the age of eleven years old his father, seeking to dispense his ability and industry enabled him not only to surpass his fellow-pupils but even also his teachers. In 1532 he received the degree of Master of Arts at the University of Paris, and one year later he became professor of humanities at Toulouse. Having held this position for fourteen years, he next became professor of Greek at Paris, and in 1551 exchanged this professorship for that of Greek philosophy. For a time (1552-55) he and his friend William Morel supervised the royal printing press for Greek works. It is said, and can easily be believed of so distinguished a scholar, that important professorships in other places were declined by him while he taught at Paris. As an illustration of his remarkable industry a well-animated poem is preserved, which he composed in seven hours to study even on his wedding-day. Over-study, however, wore out his strength prematurely, and he died at the age of fifty-three. In accordance with his own testametary directions, his body was placed in the ground without any religious ceremony on the very evening of his death. This curious proceeding, as well as various utterances and a severe pest on the Jesuits, raised the much controverted question, whether Turnebus remained a Catholic or became an adherent of the new heresy. It seems at least probable that he inclined to Protestant views, even though he did not break completely with the Church, as his Catholic friends steadily maintained. In other respects his character was balanced. His reputation rests not only on his literary works, but also on a final measure on his writings. His numerous works, including commentaries on the ancient classics, short treatises, and poems, were collected and published (2 vols., Strasbourg, 1600) with the cooperation of his three sons.

TURNER, ANTHONY, VENERABLE. See Barrow, William, Venerable.

TURNER, WILLIAM, VENERABLE. See Galloway, Diocese of.
Turpin, Archbishop of Reims, date of birth uncertain; d. 2 Sept., 800. He was a monk of St. Denis when, about 755, he was called to the See of Reims. With eleven other bishops of France he attended the Council of Rome in which Pope Stephen III condemned the antipope Constantine I to perpetual confinement. He enriched the library of his cathedral by having numerous works copied, and obtained from Charlemagne several privileges for his diocese. Legends grew up around his life, so that by degrees he becomes an epic character who figures in numerous chansons de geste, especially in the 'Chanson de Roland'. Furthermore, a chronicle known as the 'Historia Karoli Magni et Ronthaladi' has been attributed to him; but that he was not the author is proved by the use in the chronicle of the word 'Lotharingia' which did not exist prior to 855, the mention of the musical chant written on four lines, a custom which does not date back further than 1022, and finally the silence of all the writers of the ninth and tenth centuries regarding this so-called book of Turpin's. The first to mention him is Raoul de Torstaine, a monk of Fleury, who wrote from 1096 to 1145. At the same time Calustus II regarded the book as authentic, and its diffusion revived the fervour of the pilgrimages to St. James of Compostella. In it is related an apparition of St. James to Charlemagne; the same orders the emperor to follow with his army the direction of the Milky Way, which was thenceforth called the 'Path of St. James'. Gaston Paris considers that the first five chapters of the chronicle attributed to Turpin were written about the middle of the eleventh century by a monk of Compostella, and that the remainder were written between 1109 and 1114 by a monk of St. Denis. Andre Massa considers the second part has a real literary importance, for the monk who wrote it derived his inspiration from the chansons de geste and the epic traditions; hence there may be seen in this compilation a very ancient form of these traditions. The chronicle was translated into Latin and French as early as 1206 by the cleric Jehan, in the service of Renaud de Dammartin, Count of Boulogne. Editions according to various MSS. have been issued at Paris by Castets (1850) and at Lund by Wulff (1881).

Turrianus, Frangiscus. See Torres, Frangisco.

Turcany, a division of central Italy, includes the provinces of Arezzo, Florence, Grosseto, Livorno, Massa and Carrara, Pisa, and Siena; area, 9,004 sq. miles; population in 1911, 2,900,000. Ecclesiastically it is divided into the provinces of Florence, with 6 suffragant dioceses; Pisa, with 1 suffragant; Siena, with 5 suffragans; the Archdiocese of Lucca; and the immediate Dioceses of Arezzo, Cortona, Montaleino, Montepulciano, and Pienza. The territory is essentially the same as that of ancient Etruria. In the sixth and fifth centuries B.C. the Etruscans were the dominant power in northern and central Italy, and brought under their sway the settlements of the Umbrians. Towards the end of the sixth century B.C. Rome regained its independence, and from the second half of the fifth century it began a struggle for supremacy. There were many changes of fortune during the long war, but it ended about 290 B.C. with the overthrow of Etruria. During the Empire Etruria formed the western portion of Italy. After the fall of the Western Empire, Tuscany was ruled successively by the Germans under Odonauer, by the Ostrogoths, by the Eastern Empire through Narses, and by the Lombards. Tuscany, or Tuscia as it was called in the Middle Ages, became a part of the Frankish Empire during the reign of Charlemagne and formed a margravate, the margravate of which was also made the ruler several times of the Duchy of Spoleto and Crimino. In 1030 the margravate fell to Boniface of the Canossa family. Boniface was also Duke of Spoleto, Count of Modena, Mantua, and Ferrara, and was the most powerful prince of the empire in Italy. He was followed by his wife Beatrice, first as regent for their minor son who died in 1055, then as regent for their daughter Matilda; in 1076 Beatrice died. Both she and her daughter were enthusiastic adherents of Gregory VII in his contest with the empire. After

Matilda's death in 1115 her hereditary possessions were held for a long time an object of strife between the papacy and the emperors. During the years 1139-45 Tuscany was ruled by Margrave Hulderich, who was appointed by the Emperor Conrad III. Hulderich was followed by Guelf, brother of Henry the Lion. In 1195 the Emperor Henry VI gave the margravate in fief to his brother Philip. In 1209 Otto IV renounced in favour of the papacy all claim to Matilda's lands, as did also the Emperor Frederick II in the Golden Bull of Eger of 1213, but both firmly maintained the rights of the empire in the Tuscan cities. During the struggle between the popes and the emperors, and in the period following the fall of the Hohenstaufens when the throne was vacant, Florence, Siena, Pisa, Lucca, Arezzo, and other Tuscan cities attained constantly increasing independence and autonomy. They acquired control also of Matilda's patrimony, so far as it was situated in Tuscany. In the fourteenth and fifteenth centuries all Tuscany, except Siena and Lucca, came under the suzerainty of Florence and the Medici. In 1552 the Emperor Charles V made Alessandro Medici hereditary Duke of Florence. The last Tuscan towns that still enjoyed independence were acquired by Alessandro's successor Cosimo I (1537-74) partly by cunning and bribery, partly with Spanish aid by force of arms. In 1557 Philip II, who required Cosimo's aid against the pope, granted him Siena which in 1555 had surrendered to the emperor. Only a small part of Sienese territory remained Spanish as the Stato degli spaditi. Thus the Medici acquired the whole of Tuscany, and in 1569 the pope made Cosimo Grand Duke of Tuscany. Although at the beginning of Cosimo's reign there were several conspiracies, especially by the exiled families, the Ficorisciti, the Florentines gradually became accustomed to the absolute government of the ruler. Cosimo had created a well-ordered state out of the chaos existing previously, and had established this state on the foundation of justice, equality of all citizens, good
financial administration, and sufficient military strength. Art, literature, and learning also enjoyed a new era of prosperity during his reign. After long negotiations his son Francesco I (1702-1737) received in 1725 from the Emperor Maximilian the confirmation of the grand ducal title which had been refused his father. In his foreign policy Francesco was dependent on the Habsburg dynasty. During his weak reign the power was in the hands of women and favourites, and the corruption of the nobility and undecided and corrupt conduct of the common people was increased by heavy taxes. After the death of his first wife the grand duke married his mistress, the Venetian Bianca Capello. As he had only daughters, one of whom was the French queen, Maria de' Medici, and the attempt to substitute an illegitimate son failed, he was followed by his brother Cardinal Ferdinand (1657-1665), who had been accused without any historical proof of poisoning his brother and sister-in-law.

In foreign policy Ferdinand made himself independent of the emperor and Spain and as an opponent of the preponderance of the Habsburgs supported the French King Henry IV. Henry's return to the Catholic Church was largely due to Ferdinand's influence, while the Church was reduced to an auxiliary administration and large public works, e.g., the draining of the Mianatas and the Maremma of Siena, the construction of the port of Leghorn, etc. He re-established public safety by repressing brigandage. In 1659 he resigned the cardinalate with the consent of Sixtus V, and married Christine, daughter of the Emperor Ferdinand I, and thereafter his papacy was almost always the best; he promoted the reform of the Tuscan monasteries and the execution of the decrees of the Council of Trent. His son Cosimo II (1660-1721) married Margaret, sister of the Emperor Ferdinand II. Cosimo II ruled in the same spirit as his father and raised the prosperity of the country to a height never before attained. He was succeeded by his son Ferdinand II (1621-70), the regent being the boy's mother, Margaretta's weakness led to the loss of Tuscany's right to the Duchy of Urbino, which fell vacant, and which Pope Urban VIII took as an unoccupied fief of the Church. From 1628 Ferdinand ruled independently; to the disadvantage of his country he formed a grand alliance with Spain and the Habsburgs. Without his knowing it, his government involved him in a number of Italian wars. These wars, together with pestilence, were most disastrous to the country. Cosimo III (1670-1723) brought the country to the brink of ruin by his unwise policy and his extravagance. His autocratic methods, inconsistency, and preposterous measures in internal affairs placed upon him the greater part of the responsibility for the extreme arbitrarians that developed among the state officials, especially among those of the judiciary. Although he sought to improve the importance of the Church, yet he damaged it by using the clergy for police purposes, proceeded against heretics with undue severity, and sought to aid the conversion of non-Catholics and Jews by means even more violent than his predecessors. He was also responsible for the great increase in the number of monasteries. In 1707, during his reign, the prince succeeded in finding a solution of the inheritance question by the transfer of his fief of Leghorn to his brother. Cosimo III died in 1723, at the age of 83.

Tuscany had been greatly impoverished by the war against Austria in 1683-84, and the war against the French in 1701-1713. The absolute period of his son Leopold I (1724-60) was long considered the most liberal in Italy, although he reigned as an absolute sovereign. The Concordat of 1730 also gave the Church greater liberty. Notwithstanding the economic and intellectual growth which the land enjoyed, the intrigues of the secret societies found the country almost without resistance. Tuscany was always regarded as foreigners, and the connexion they formed with Austria made them unpopular. In 1847 a state council was established; on 15 Feb., 1848, a constitution was issued, and on 26 June the newly-elected popular assembly was opened. Notwithstanding this, sedition against the dynasty increased, and in August there were street fights at Leghorn in which the troops proved untrustworthy. Although Leopold had called a democratic ministry in October, with Guerrazzi and Montefiato at its head, and had taken part in the Piedmontese war against Austria, yet the Republicans forced him to flee from the country and go to Gaeta in Feb., 1849. A provisional republican government was formed, and he was forced to give way to an opposing movement of moderated Liberalism. After this by the aid of Austria Leopold was able in July, 1849, to return. In 1852 he suppressed the constitution issued in 1848 and governed as an absolute ruler, although with caution and moderation. However, the suppression of the constitution and the fact that up to 1852 an Austrian army of occupation remained in the country made him greatly disliked. When in 1859 war was begun between Sardinia-Piedmont and Austria, and Leopold became the confederate of Austria, a fresh revolution broke out which forced him to leave. For the period of the war Victor Emmanuel occupied the country. After the Peace of Villa Franca had restored Tuscany to Leo-
avoid the assaults of the Norsemen who had come up as far as Tuy along the River Miño. His successor, Vicinanzo (837–42), retired to the monastery Rivers (formed on the site of the church of Villablanca, 852–70). The Norsemen led by Olaf were captured at different times at Tuy and ravaged it cruelly (1011), on which account Alfonso VI placed it under the jurisdiction of the Bishop of Compostella. Bishop Alfonso I and his priests had been made captive, and thereafter, until the time of Dona Urraca, a sister of Alfonso VI, a period of forty-seven years, the See of Tuy was vacant. Dona Urraca, a daughter of Alfonso V, (Georgian) bishop. He took up his residence in the monastery of San Bartolome, whose monks were canons of the cathedral. The decree of the restoration of the see is dated 13 Jan., 1071, Bishop Adelcurus (1072–95) succeeded Jorge, the bishop, by concession of Raymond of Burgundy and Alfonso VII, who were lords of the city, and Bishop Alfonso II was building the new cathedral, which was finished a hundred years later by Esteban Egea (1218–39). In the time of Bishop Pelayo Meléndez (1131–55) the canons adopted the Rule of St. Augustine. Among the bishops who deserve special mention are: Luís de Tuy, called "El Tudense", abbot of Dona Berega, to whom was attributed the compilation known as the "cronica de España"; Juan de Urbiel, the last abbot of St. Cuthbert of Valencia, and Prudencio de Sanvalo, a Benedictine, celebrated annalist of Charles V.

The Western Schism caused a division in the ranks of the clergy of Tuy, the bishop giving all allegiance to the Avignon popes, who it was felt by the faithful in Portugal also obeyed. Martin V commanded the latter to recognize the legitimate bishop, and when some resisted this order their churches were allowed to be governed by vicars residing in Portugal (1411). The cathedral of the diocese, which is dedicated to the Blessed Virgin, resembles a medieval fortress, erected on a ruinous site at the entrance of the city (Castle Tuy). It belongs to the early Gothic period and, on account of its height, the importance of its side naves, its clerestory (now walled up, but preserving its ancient arches and columns), the interior is well worthy of note. The ground plan is that of a Latin cross (the four arms being extremely short) with four naves, those on the side terminating in apses. The cathedral was erected by Bishop Diego de Teruquenda (1561–82) who transferred to it the relics of the saint, worthy of note. Between the altar of the Visitation and that of the Seven Dolours is the unique sepulchre of Lope de Sarmiento (1605). To the cathedral is attached a handsome Gothic cloister. The churches of the old Dominican and the now vacant convent of Santisima de the convent of Santo Domingo being used for a barracks and that of San Francisco for primary and secondary schools. Tuy has a fine hospital built by Bishop Rodríguez Cistamón and a home for the aged in charge of the Little Sisters of the Poor. The seminary, which is located at St. James the Apostle, has for its head the Immediate of the Immaculate Conception, was founded in 1520 by Bishop Francisco Garcia Casarrubios y Molinar. Among the illustrious men of the diocese may be mentioned St. Tumutius, the humanist Alvaro Cadaval y Sotomayor, and Francisco Avila y la Cueva, author of a history of the diocese.

**Twelfth Day.** See Ephrahim.

**Twelve Apostles, Gospel of the.** See Didache.

**Twelige, John, Saint.** Last English saint canonized, canon regular, Prior of St. Mary's, Bridlington, b.
near that town, 1319; d. at Bridlington, 1379. He was of the Yorkshire family Twome, which family in Reformation days supplied two priest-martyrs and was also instrumental in establishing the Institute of the Blessed Virgin Mary, etc., Bar Convent, York. John completed his studies at Oxford and then entered the Priory of Bridlington.

Charged successively with various offices in the community, he was finally dispatched to London, where his presence was eagerly desired by the Archbishop Neville to interest paragons and others to take evidence with a view to his canonization, 26 July, 1386; and the same prelate assisted by the Bishops of Durham and Carlisle officiated at a solemn translation of his body, 11 March, 1404, de mandato Domini Papae. This pope, Boniface IX, shortly afterwards canonized him. The fact that he had been stoned and venerated by the faithful and the original Bull was recently unwatered in the Vatican archives by Mr. T. A. Twemlow, who was engaged in research work for the British Government.

Twomey was especially invoked by women in cases of difficult confinement. At the Reformation the people besought the royal plenipotentiary to spare the magnificent shrine of the saint, but in vain; it was destroyed in 1537. The splendid nave of the church, restored in 1857, is all that now remains of Bridlington Priory. The saint's feast is observed by the canons regular on 9 October.

Twikel (Twycll, Torkett) of Crayland, d. July, 975. He was a cleric of royal descent, who is said to have acted as chancellor to Kings Athelstan (d. 940), Edmund (d. 946), and Edred (d. 955), but as this statement rests on the authority of the pseudo-Ingulf, it must be received with caution. Leaving the world in 946 he became a monk at Crowland Abbey, which had been devastated by the Danes and lay in a ruined and desolate state. He endowed it with six of his own monies, and being elected abbot, restored the house to a flourishing condition. He was a friend both of St. Dunstan and St. Ethelwold of Winchester, and like them a reformer. The real authority for his life is Ordericus Vitalis; for no reliance can be placed on the long and fictitious account in the fourteenth-century forgery which is published under the name of Ingulf of Crowland (c, 1400).

Vincent Scully.

Tyne, a titular metropolitan see of Cappadocia Prima. The city must first be called Thosa, because Thoas, a Thracian king, was its founder (Arrinnus, "Periplus Ponti Euxini", vi); it was in Cappadocia, but at the foot of Taurus and near the Lesbian Gates (Strabo, XII, 357; XVIII, 267). The surrounding plain received the name of Tyanarix. In the first century A.D. was born the celebrated musician Apollonius. Under Caracalla the city became the "Antoniniana colonia Tyana." After having taken sides with Queen Zenobia of Palmyra it was captured by Aurelian in 272, who would not allow his soldiers to pillage it (Homo, "Essai sur le règne de l'Empereur Aurelien", 89–92).

In 371 Valens created a second province of Cappadocia, of which Tyana became the metropolis, which aroused a violent controversy between Anthius, of Tyana, for St. Basil, Bishop of Caesarea, each of whom wished to have as many suffragan sees as possible. About 640 Tyana had three, and it was the same in the tenth century (Gelzer, "Ungedruckte . . . Texte der Notiti-eccesaptatum", 553, 554). Le Quen (Orissiens christi, I, 355–402) mentions 28 bishops of Tyana, among whom was Dunstan, and connected with him the rival of St. Basil: Athanasius, at Constantinople in 381; Theodore, the friend of St. John Chrysostom: Euthusius, the partisan of Nestorius, deposed and exiled in 431, Cyrenius, a Severian Monophysite. In May, 1359, Tyana still had a metropolitan (Miklosich and Muller, "Acta patriarchatus Constantinopolitani", I, 505); in 1360 the metropolitan of Caesarea secured the administration of it (op. cit., 537). Thenceforth the see was titular. The ruins of Tyana are at Kilske-Hissar, three miles south of Nigde in the vilayet of Komis; there are remains of a Roman aqueduct and of sepulchral grottos.

Tychicus, Saint, a disciple of St. Paul and his constant companion. He was a native of the Roman Province of Asia (Acts, xx, 4), born, probably, at Ephesus. About his conversion nothing is known. He appears as companion of St. Paul in his third missionary journey from Corinth through Macedonia and Asia Minor to Troas. He shared the Apostle's first Roman captivity and was sent to Asia as the bearer of letters to the Colossians and Ephesians (Eph., vii, 21; Col., iv, 7, 8). According to T., iii, 12, Paul intended to send Tychicus and Artemas to Crete to supply the place of Titus. It seems, however, that Artemas was sent, for during the second captivity of St. Paul in Rome, Tychicus went back from Ephesus (Rom, iv, 12). Of the subsequent career of Tychicus nothing certain is known. Several cities claim him as their bishop. The Monastery of Basil Porphyrioticus, which commemorates him on 9 April, makes him Bishop of Colophon and successor to Sisithis. He is also said to have been appointed Bishop of Chalecedon by St. Andrew and quận, when the city had turned over to Monophysitism. (Bunse, Brunswick, 1858, 579.) He is also called Bishop of Neapolis in Cyprus (Le Quen, "Orients christi,"); Paris, 1740, I, 127; II, 1061). Some martyrologies make him a deacon, while the Roman Martyrology places his commemoration at Paphos in Cyprus. His feast is kept on 29 April.

Acta SS., Apr., III, 531; Penz, Die Mitarbeiter des Weltapostel Paulus (Ratisbon, 1912), 325.

Francis Mershman.

Tynemouth Priory, on the east coast of Northumberland, England, occupied the site of an earlier Saxon church built first in wood, then in stone, in the seventh century, and famous as the burial-place of St. Oswin, king and martyr. Plundered and burned several times by the Danes, it was restored in 1074 to the Benedictine monks of Yarrow, and, with them, annexed to Durham Abbey. In the reign of William Rufus, Robert de Mowbray, Earl of Northumberland, re-peopled Tynemouth with monks from St. Albans, and it became a cell of that abbey, remaining so until the Dissolution. The Norman Church of Sts. Mary and Oswin was built by Earl Robert about 1100, and 120 years later was greatly enlarged, a choir 135 feet long with aisles being added beyond the Norman apse, while the nave was also lengthened. East of the choir and chancel was added about 1320 an exquisite Lady-chapel, probably built by the Percy family, which later acquired the

Tyana, a town in Pisidia, 54 German miles from the coast, and 25 from the river Rhyne; it is probable that the opening of the Church of St. Mary and St. Oswin at Tynemouth was granted in 1074 to the Benedictine monks of Yarrow, and, with them, annexed to Durham Abbey. In the reign of William Rufus, Robert de Mowbray, Earl of Northumberland, re-peopled Tynemouth with monks from St. Albans, and it became a cell of that abbey, remaining so until the Dissolution. The Norman Church of Sts. Mary and Oswin was built by Earl Robert about 1100, and 120 years later was greatly enlarged, a choir 135 feet long with aisles being added beyond the Norman apse, while the nave was also lengthened. East of the choir and chancel was added about 1320 an exquisite Lady-chapel, probably built by the Percy family, which later acquired the
great Northumberland estates of the de Vescis. The first prior of the re-founded monastery was Remigius, and the last was Robert Blakeney, who on 12 Jan., 1359, surrendered the priory to Henry VIII, he himself, with fifteen monks and four novices, signing the deed of surrender, which is still extant, with the beautiful seal of the monastery appended to it. A pension of £50 was granted to Blakeney, and small pensions to the monks; and the priory site and buildings were bestowed first on Sir Thomas Hilton, and later, under Edward VI, on the Duke of Northumberland. Colonel Villars, governor of Tynemouth Castle under William III and Anne, had a lease of the priory, and did irreparable damage to the remaining buildings. Practically nothing is left of the buildings, except a few fragments of thirteenth-century architecture in England.

D. O. Hunter-Blair.

Types in Scripture, though denoted by the Greek word τῦτῳ, are not coextensive with the meaning of this word. It signifies in John, xx, 25, the "primal" of the nails in the risen Lord's hands; in Rom., vi, 17, the "form" of the Christian doctrine; in Acts, vii, 43, "figures" formed by a blow or impression, "in the face of the Lord"; in Heb., viii, 5, the "form"; and in Hebr., viii, 5, the "pattern", according to which something is to be made; in Phil., iii, 17, I Tim., iv, 12, etc., the "model" or "example" of conduct. It is to be noted that, in all instances in which the word τῦτῳ indicates the similarity between something future and something past in either the physical or the moral order, this similarity is intended, and not an identity. It is therefore, antecedently probable that in another series of texts, e. g. Rom., v, 14, in which a type is a person or thing prefiguring a future person or thing, the connexion between the two terms is intended by him who foresees and arranges the course of history.

The types in the Bible are limited to types understood in this sense of the word. While they do not extend to all the various meanings of the word τῦτῳ, they are not restricted to its actual occurrence. In Gal., iv, 24, for instance, the type and its anti-type are represented as ἀναμορφώσεσθαι, "said by an allegory"; in Col., ii, 17, the type is said to be σχετικόν τῆς μαθησιωτάτης "a shadow of things to come"; in Heb., x, 1, a "figure of things to come". But the definition of the type is verified in all these cases: a person, a thing, or an action, having its own independent and absolute existence, but at the same time intended by God to prefigure a future person, thing, or action.

I. Natural Basis of Types.—It has been pointed out that in the various degrees of nature the higher types are always imaged in earlier ones, and that therefore the types are not only natural, but also of a more perfect way. In history, too, the past and present often resemble each other to such an extent that some writers regard it as an axiom that history repeats itself. They point to Nahumodonosor and Napoleon, to the fleet of Xerxes and the armada of Philip. After Plutarch has informed his reader (De Is. et Os.) that the story of the Alexandrine merchants and the Seven Wise Men is but a "parable", he adds that in this verse Homer seems not merely to celebrate the greatness of Agamemnon, but also to prophecy that of Alexander. What is true of nature and history in general is especially applicable to the economy of salvation; the state of nature was prefigured and surpassed by perfection in the Mosaic Law, and the Mosaic Law yielded similarly to the Christian dispensation.

II. Figurists.—In the two earlier periods of Revelation there is no lack of men, things, and actions resembling those of the Christian economy; besides, the New Testament expressly declares that some of them typify their respective resembleances in the new dispensation. Hence the question arises whether one is justified in affirming to be a type anything which is not affirmed to be so in Revelation, either by direct statement or manifest implication. Witsius and Cocceius (d. 1669) were of opinion that the types actually indicated in Revelation were to be considered rather as examples for our guidance in the interpretation of others than as supplying us with an entire list of all that were designed for this purpose. Cocceius contended that every event in Old Testament history was of some formal resemblance to something in the New was to be regarded as typical. This view opened the door to frivolous and absurd interpretations by the followers of the Cocceian and Witsian school. Cra-mer, for instance, in his "De ara exteriori" (xi, 1) considers the altar of holocausts as a type of Christ, and then asks to the growth of a quadrat. The figurists, considered as isolated phenomena, intended to instruct and confirm in the faith, but were regarded as members of an organic development of the salvic economy in which each earlier stage prefigures the subsequent. Bengel points out (Gnomon, preface, 13) that as there is symmetry in God's works down to the tiniest blade of grass, so there is a connexion in God's works between the Old and the New Testament. In his "Ordo temporum" (ix, 13) the same writer insists on the unity of design, which makes one work out of all the books of Scripture, is the source of all times, and has measured the past and the future alike. One of Bengel's disciples, P. M. Hahn, compares (Theologische Schriften, ii, 9) the development of Revelation to a"leaf of a palm tree". The figurists were considered to be a power hidden in the seed manifests itself more and more by the addition of each pair of leaves. This view was followed also by Pf. Miller in his work "Neues System aller Vorbilder Christi im Alten Testament" (1758), and by Crusius in his treatise "Hypomnemata theologico-prophecica" (1764-78). The figurists went so far as to express the opinion that the figurative development of God's works and kingdom changes by a historical growth at the time of David; he considers the Kingdom of David as the embryo of the Kingdom of Christ.

IV. Moderate Use of Types.—Owing to their lack of a clear distinction between type and allegory, Martin Luther and Melancthon did not esteem the figurative sense at its true value and importance. Likewise, Crecius attempted to draw a line of distinction between type and allegory (Pref. ad ps., 45), and Gerhard (Loei, ii, 67) closely adhered to his definition. But practically types were used for parietical rather than theological purposes by Baldwin (Passio Christi typica; Adventus Christi typicus), Baeusser (Expositio typica in Christi explicatio), and other writers of this school. They could have had more confidence in the typical sense of Scripture had they followed the view of Bishops von Mildert and Marsh. For these writers did not leave the typical sense to the imagination of the individual expositor, but rigidly required competent evidence of the Divine intention that a person or an event was to prefigure another person or event. Often in the Bible they distinguish between examples that are used for the sake of illustration only and those
where there is a manifest typical relationship and connexion. It is true that Calovius (System, theol. I, 663) and Aug. Pfeiffer (Theol. herm., iii, can. 10) insist on admitting only one sense, the literal, in Scripture; but as the literal sense clearly indicates several types, writers like Buddeus, Rambach, and Pfaff point out that such an insistence on the literal sense differs only in words from the admission of a limited typical sense. Rambach goes further than this; in order to increase the parenetic force of Scripture, he attributes to each word as wide a meaning and as much importance as the nature of the subject matter allows. Instit. herm., 3, 133: "Typology is an abuse and a falsity typical antiquitatem V. T." by Joachim Lange, "Judaicische Heilsgeschichte" by Lundius, and "Der Messias im A. T." by Schötgen are other works in which the element of edification is chiefly kept in view.

V. Socian Influence.—While in Cocezian and Lutheran circles typology flourished either unrestrictedly or within certain bounds, it began to be considered as a mere accommodation or as a subjective work of parallelizing a number of Scripture passages by the Socianists and by all those who failed to see the unity of God's work in our history of Revelation. Clericus, writing on Gal. iv. 22, refers typology to a Jewish manner of interpreting Scripture. The Egyptian, Roman, and Oriental cults, as explained by Spencer, rendered void the typical sense advocated in the Epistle to the Hebrews. Hence, Henke considers typology as an exploded system; Semler (Versuch einer freieren theologischen Lehrart, 1777, p. 104), does not wish that types should be considered any longer as belonging to the true religion; Luther in his 'Institutionen', 1725, uses types not for a mere resemblance, but also that it should have been expressly represented in the Old Testament as a figure of the future; moreover, he believes that at the time of Moses no one would have understood such figures. But how explain the fact that the Apostles and Christ Himself employed the typical sense of the Old Testament? They adapted them to certain bounds, we are told, in their use of the Old Testament to the condition of the Jewish people, and to the hermeneutical principles prevalent in the Jewish schools. It followed, therefore, that the use of the typical sense in the New Testament is nothing but Rabbinic trifling. This point of view is followed in Döpfle's "Hermeneutik der christlichen Schrift" (part I, 1824), and also in the exegetical works of Auffenberg, Pritzner, Meyer, Rücker, and others.

VI. Reaction against the Socian View.—On the other hand, there was no lack of defenders of the typical sense of Scripture. Michaelis (Entwurf der typischen Gottesgeschicht, 1732) points out that, even if we follow Spencer's view of the origin of the Mosaic worship, borrowed rites too may have a symbolic meaning; but the writer's blindness to the distinction between type and symbol is the vulnerable side of his treatise. Blasehe shows himself a stout adherent of typology in his "Commentary on the Epistle to the Hebrews" (1792). Herder in his thirty-ninth letter on the study of theology (1780) bade his young friends to use the "ancient types of Israel" as an educator, but not see either itself or the whole building, it would be narrow-mindedness on our part to pretend that we do not see more than any given part can see; it is only in the light of historic development that we can appreciate the analogy of the whole to each of its parts. Rau (Fränthämliche Untersuchung über die Typologie, theol. v. 1850), admits the absurdity of the Mosaic worship, and grants that the Jewish rites may be symbols of the New Testament, but denies that they are types in the stricter sense of the word.

VII. Revival of Symbolism and Pietism.—At the beginning of the nineteenth century there was a revival of taste for symbolism, and of an appreciation of Bengal's typicism. Starting from symbolism, de Wette ("Beitrag zur Charakteristik des Hebraismus" in "Studien von Daub and Creuzer", 1807, iii, 214) concludes that the whole of the Old Testament is one great prophecy, one great type of what was to come, and what has come to pass, F. von Meyer and Stier wrote in the same strain, but they are men of less note. Influenced by Bengel's view, Menken explained in a typical sense Dan., ii (1802—1809), the brazen serpent (1819), the wave of death (1821); Stieglitz wrote his "Hetzerungen über messianische Weissagungen" (Tübinger Zeitschrift für Theologie, 1831, part 3), and also explained Rom. ix (Christliche Lehrwissenschaft, i, 1853, p. 390). The same principle underlies the view of Biblical history as presented by Hofmann, Franz Delitzsch, Kurtz, and Auberlen. Ed. Bohmer in his treatise "Zur biblischen Typik" (1855) adopts a similar point of view: One idea prevails through the whole of creation; in nature the lower grades are types of the higher; the material order is a type of the spiritual; and man is the antitype of universal nature. The same law prevails in history; for the earlier age is always the type of the subsequent. Thus the Kingdom of God, which is the chief concern of Christianity, has its types in nature and its types in history.

VIII. Rationalist Contention and Catholic Doctrine.—Needless to say rationalistic writers repudiate the typical sense of Sacred Scripture. The Catholic doctrine as to the nature of the typical sense, its existence, its extent, its theological value, has been stated in Exegesis and Exegetics. Besides the works cited above, see all the introductory works to Scripture, under the heading Hermeneutics: Färbikum, The Typology of Scripture (1780); see also the bibliography to Exegesis and Hermeneutics.

A. J. MAAS.

Tyrannicide literally is the killing of a tyrant, and usually is taken to mean the killing of a tyrant by a private person for the good of the public. There are two classes of tyrants whose circumstances are widely apart—tyrants by usurpation and tyrants by oppression. A tyrant by usurpation (tyrannus in latitu) is one who unjustly displaces or attempts to displace the legitimate supreme ruler, and he can be considered in the act of usurpation or in subsequent oppression. A tyrant by oppression (tyrannus in regimine) is a supreme ruler who uses his power arbitrarily and oppressively.

I. Tyrant by Usurpation.—While actually attacking the powers that be, a tyrant by usurpation is a traitor acting against the common weal, and, like any other criminal, may be put to death by legitimate authority. If possible, the legitimate authority must use the ordinary forms of law in condemning the tyrant to death, but if this is not possible, it can proceed informally and grant individuals a mandate to inflict the capital punishment. St. Thomas (In 11 Sent., d. XLIV. Q. ii, a. 2), Suarez (Def. fidei, VI, iv, 7), and the majority of authorized theologians say that private individuals may use what means are necessary to kill the tyrant when no other means of ridding the community of the tyrants are available. Some, however, e.g. Crolly (De justitia, 111, 207), hold that an express mandate is needed before a private person can take on himself the office of executioner of the usurping tyrant. All authorities hold that a private individual as such, without an express or tacit mandate from authority may not lawfully kill an usurper unless he is actually his unjust aggressor. Moreover, it sometimes happens that an usurper is accorded the rights of a belligerent, and then a private individual, who is a non-combatant, is excluded by international law from the
category of those to whom authority is given to kill the tyrant (Crolly, loc. cit.).

1. Tyrant by Oppression.—Looking on a tyrant by oppression as a public enemy, many authorities considered him as the miscreant of the ruler, and death in defence of the common good. Amongst these were John of Salisbury in the twelfth century (Polyerasata, III, 15; IV, 1; VIII, 17), and John Parvus (Jehan Petit) in the fifteenth century. The Council of Constance (1415) condemned as contrary to faith and morals the following proposition: "Any vassal of the ruler to kill by reason of oppression or in defence of the common good, and ought to kill, any tyrant. He may even, for this purpose, avail himself of ambuscades, and wily expressions of affection or of adulation, notwithstanding any oath or pact imposed upon him by the tyrant, and without waiting for the sentence or order of any judge" (Sess. XV). Subsequently a few Catholics defended, with many limitations and safeguards, the right of subjects to kill a tyrant oppressively and in defence of the common good; most amongst these was the Spanish Jesuit Mariana. In his book, "De rege et regis institutione" (Toledo, 1599), he held that people ought to bear with a tyrant as long as possible, and to take action only when his oppression surpassed all bounds. They ought to come together and give him a warning; this being not enough, they ought to rebel. If the people, then, do not succeed in accomplish these two things, the right to kill is theirs. But if he has already established his rule and peacefully reigns, until the prescriptive period has run its course the legitimate ruler can lawfully expel him by force if he is able to do so, and can punish him with death for his offence. If, however, it is out of the legitimate ruler's power to re-establish his own authority, there is nothing for it but to acquiesce in the actual state of affairs and to refrain from merging themselves into the mass of the people and taking up arms against the legitimate ruler. In these circumstances, subjects are bound to obey the just laws of the realm, and can lawfully take an oath of obedience to the "de facto" ruler, if the oath is not of such a nature as to acknowledge the legitimacy of the usurper's authority (cf. Brief of Pius VII, 29 Sept., 1830). This teaching is altogether different from the doctrine of the mass of the people to have the right to seize his power by force of accomplished facts, as it has come to be called, and who maintain that the actual peaceful possessor of the ruling authority is also legitimate ruler. This is nothing more or less than the glorification of successful robbery.

107. TYRE. The Melkite archeiocese and Maronite diocese. The city is called in Hebrew, Zor, and in Arabic, Sour, from two words meaning rock. It is very ancient. If we are to believe priests of Melkert quoted by Herodotus (II, 11) it was founded in the twenty-eighth century B.C. Isaías himself (xxiii, 7) says that its origin was uncertain. According to the authors cited by Josephus (Ant. jud., VIII, iii, 1) and according to Justin (Hist., xviii, 3) its foundation dates from the thirteenth century B.C., but this is manifestly erroneous, for Tyre is mentioned under the name of Sour-et in the tablets of El-Amarna, between 1355 and 1308 B.C. (Revue Biblique, 1908, 519). King Abimelech was then reigning there independently. They, the Melkites, was established by the Egyptians, who forced the Tyrians to allay the exertions of their neighbours, especially the Phœnicians (see Ezech., xlii, 21). Ancient writers, particularly Isaías (xxiii, 12), call Tyre "daughter of Sidon"; that is, they make it a colony of the latter city. Despite objections which have been made to this, the statement is correct, and on its coins Sidon claims to be the mother of Tyre, and in Africa, of Tyre ete. It is true that in a short time the colony became a separate entity and shadowed the mother, but the inhabitants continued to call themselves Sidonians. On the other hand, it is impossible to state which of the two cities, Puteurus, on the seacoast, or Tyrus, built on a
TYRE

The stonecutters and carpenters to build his palace (II Kings, v, 11), and to Solomon Lebanon cedar and cypress wood for the construction of the Temple (III Kings, ix, 11; II Par., ii, 3 sq.). The architect and his master workmen were Tyrians. In return Solomon gave Hiram the district of Cabul (Chabul) in Galilee, which included twenty small cities, but this gift seems not to have been to the taste of the King of Tyre (III Kings, ix, 11-14). Nevertheless, the two kings were allies, and their combined fleets left the ports of the Red Sea for Ophir and Tarshish to obtain gold (III Kings, ix, 26-28; x, 11 sq.; II Par., ix, 10, 21). Hiram accomplished great works in his capital. He united the two parts of the island, bitherto separated by a canal which to a certain extent made them two cities, and besides he built a great aqueduct which brought the waters of Ras-el-Ain to the land.

Shortly afterwards court intrigues disturbed the city and gave rise to a bloody revolution. Phailia, an intruder, usurped the power; he was dethroned in turn by his brother Ithobaal or Ethbaal, high priest of Asartae, a goddess who, with the god Melkart, was much venerated in Tyre. It was Ethbaal's daughter, Jezebel, who married Ahab, King of Israel. Jezebel was undoubtedly a Tyrian princess. Menander in years after the fall of Samaria, although they cut the aqueduct of Hiram and compelled the people of Sidon and Paphlagon to place their fleets at their service, that of the Tyrians completely vanished them Josephus, "Ant. Jud.", IX, xiv, 2). Semachier however attempted the siege in vain. Although paying him a light tribute, Tyre remained a powerful state with its own kings (Jer., xxxv, 22; Ezek., xxvii and xlviii), and was enabled to develop its mercurial productions and attain the great prosperity spoken of by the prophets and all ancient writers. On his return from his expedition against Egypt, Asarhaddon, like his predecessors, blockaded Tyre, but the Tyrians, isolated on their rock, with their powerful fleet and valiant mercenaries, laughed at all his efforts. After having received tribute from King Baal, Asarhaddon was compelled to retire. The same was true of Nabuchodonosor after a severe blockade lasting thirteen years. According to custom the Tyrians offered him a light tribute, and the honour of the proud sovereign was declared satisfied. Nevertheless, this long isolation greatly injured the Tyrians, for during this interval a portion of the commerce passed to Sidon and other Phoenician and Carthaginian peoples. Furthermore, the Tyrian colonies, which for thirteen years had broken all links of subjection to the mother city of their ancestors, were also in a position to profit from their misfortunes.

TYRE

rocky island 1668 feet above the sea, existed first. It is generally held, however, that the continental preceded the insular city. The reference in Josue (xix, 29) is not exactly identified, but in the El-Amarna Letters the island is referred to, unless the Egyptians who occupied all the seaboard cities had not subjected it also to their dominion.

Tyre seems always to have had kings, like the other Chanaanite cities. It was its sovereigns who made it the "queen of the sea", as it loved to call itself, and its merchants nobles of the earth, as Isaias says (xxiii, 3-8). The city was very proud of its wealth and ships, which plied along the whole of the Mediterranean coast, in Africa as well as in Europe, and the pride of Tyre became almost proverbial among the prophets of Israel as that of Moab. King Hiram was one of its greatest sovereigns. He sent to David Josephus ("Ant. jud.", VIII, viii, 2; "Contra Apionem", I, 48; also III Kings, xvi, 31) calls her father "King of the Sidonians", another allusion to the Sidonian origin of Tyre. In S14 B.c. a group of Tyrians went to the coast of Africa and founded Carthage, the most famous colony of Tyre. The very amicable relations of Tyrians and Jews did not last always; they waxed specially when Tyre sold as slaves the Israelitish prisoners of war (Joel, iii, 4-8). Amos (i, 6). On the other hand, the luxury and corrupt morals which prevailed in the Phoenician city could not but have a baneful influence on the Jews of the tribe of Aser and other Israelites; so that the Prophets, such as Isaias (xxiii), Ezekiel (xxvi-xxix), Joel (iii, 4-8), and Amos (i, 6), never ceased to thunder against it and predict its ruin. Salmanasar, King of Assur, and Sargon besieged it in vain for five
country, were in no wise eager to resume the yoke. Finally, as King Ithobaal had died during the siege, regents had assumed the authority (Josephus, "Contra Apion." 1, 2), and caused many troubles, as did also the Jews of Jerusalem, and of Beth-Shean, for seven years. The monarchy was subsequently restored.

As the domination had passed from the Chaldeans to the Persians, Tyre, a vassal or rather an ally of the former, readily assumed the same relations with the latter and continued to prosper. The Tyrians, with their numerous ships assisted Xerxes against the Greek fleet, and later Cassius and Darius against Alexander the Great. The King of Tyre himself fought in the Persian fleet. Tyre refused submission to the Macedonian hero, as well as authorization to sacrifice to the god Melkart, whose temple was on the island; Alexander, taking offence, determined to capture the island at any cost. The siege lasted seven months. While the fleets of the submissive Cypricks and Phenicians blockaded the two ports at north and south, Alexander, with materials from Paetys, which he had just destroyed, built an enormous causeway 1968 feet long by about 197 feet wide which connected the island with the continent. He then laid siege to the ramparts of the city which on one side reached a height of 150 feet. The Tyrians were reduced in 302; 6000 wounded, 2000 beheaded, 2000 crucified, more than 30,000 women, children, and servants sold as slaves. Although Alexander razed the walls, the city was restored very quickly, since seventeen years later it held out for fourteen months against Antigonus, father of Demetrius Poliorcetes. From the power of Egypt, Tyre in 280 was reduced to a condition as low as the 198 n. c., obtaining self-government from them in 326 B. C. This year begins the era special to Tyre. Augustus was the first to rob it of its liberty (Dion Cassius, LIX, 7), for by his command its coins ceased to bear the inscription "autonomous." Various monuments were erected during the Roman period. Tyre was chosen to open the period of the Byzantine Empire. A colony under Septimius Severus, Tyre subsequently became the capital of Phoenicia; at the time of St. Jerome it was regarded as the richest and greatest commercial city of the province (Comment. in Ezech., xxvi, 6; xxvii, 1). Its factory of purple cloth was foremost in the empire. It was a curious fact that under one of the predecessors of Dioecletian, Decius, a learned priest of Antioch, the master of Eusebius of Cesarea, was appointed director without having to renounce his religion (Eusebius, "H. E.", VII, 32).

In A. D. 613 the Jews of Tyre formed a vast conspiracy against the Greek Empire, and subsequently amounted from the troops of Chosroes numerous captive Christians in order to sacrifice them. In 638 the city fell into the hands of the Arabs, Baldwin I, King of Jerusalem, besieged it in vain from 29 Nov., 1111, till April, 1112. Baldwin II captured it, 27 June, 1124, after five months' siege and made it the seat of a countship. When the crusaders lost the Kingdom of Jerusalem in 1157 by the defeat of the Crusaders, Tyre remained the head of the Franks and became one of their chief fortresses. It is said that 1210 John of Brienne was crowned king, and in 1225 his daughter Isabella was crowned queen. Tyre was captured in May, 1291, after the fall of Saint-Jean-d'Arcé by the Muslims, who completely destroyed it, and it was never wholly restored afterwards. Occupied by the Turks in 1516 it has always belonged to them, save for a brief appearance of the French in 1799. It is now a caza of the vilayet of Beirut. The city has 6500 inhabitants, of whom 4000 are Muslims of various races, 200 Latin Catholics, 350 Morarites, 1750 Melchite Catholics, 25 Protestants, and about 100 Jews. The Franciscans, established since 1586, have a parochial church and a school for boys, the Sisters of St. Joseph a school for girls; two other Catholic schools for boys are kept by a Melchite priest and the religious of Saint-Sauveur; the Russians have a school and the American Protestants have another. To Tyre, the so-called island of St. Simon, or the Red Sea is no longer an island, but a peninsula; Alexander's causeway has grown larger as a result of sand formations, and is now an isthmus, one mile and a quarter wide. There are still to be seen the medieval city wall and a portion of the church of the Crusaders, built by the Venetians and measuring 253 feet by 176 feet. It is the weight of the tomb or Conrad de Monteferrat, slain in the street by two members of the sect of the Assassins (1192), and the tomb of the Emperor Frederick Barbarossa (d. 1190). However, a German deputation sent by Bismarck in 1874 to conduct excavations discovered nothing.

Among the glories of Tyre were: Ulpianus, the celebrated jurist, consul at Rome by the pretorians in 228; the neo-Platonic philosopher, Porphyry, whose true name was Malcheus (b. 233; d. 304), the determined enemy of the Christians, against whom he wrote a work in fifteen books; some hold that he was born not at Tyre, but at Atilia; Origin, who was not born at Tyre, but who died there in 253 in consequence of the edict of the Emperor Decius, and was buried in the church destroyed under Dioecletian; St. Methodius, spoken of by St. Jerome as a martyr and Bishop of Tyre under Decius, was in reality Bishop of Olympus in Lycaia, and died about 311; as for Dorotheus, a martyr and the author of a work on the Apostles and the seventy disciples, he was not at Tyre, but in the city of Antioch in the eighth century by a cleric of Byzantium.

Although the corruption of Tyre had become proverbial in the time of Christ (Matt., xi, 21 sq.; Luke, x, 13 sq.), there were Tyrians eager to hear the preaching of Jesus and who came as far as the vicinity of Tiberias to listen to Him (Mark, iii, 8; Luke, vi, 17). This is perhaps why Jesus went to the neighbourhood of Tyre to cure the sick and convert sinners (Matt., xxv, 21-29; Mark, vii, 24-31). A Christian community was formed there at an early date, which St. Paul and St. Luke visited and where they remained seven days (Acts, xxi, 3-7). About 190 the Church in this city was directed by Bishop Cassius, who with the bishops of Potamis, Cesarea, and Elia assisted at the Council held at Antioch. Eusebius of Cesarea, who denounced the discorssae at the dedication of the new basilica and who describes the oldest basilica known to us (op. cit., X, 4). Tyranus, Bishop of Tyre, was captured and drowned at Antioch (op. cit., VIII, 13). Eusebius himself assisted at the amphitheatre of this city at the execution of five Christians of Egyptian origin (op. cit., VII, 7). In 306 St. Upianus was put to death by a law which prohibited the people of Tyre from being naturalized. The body was thrown into the sea (Euseb., "De Martyr. Palestina," V, 2). At Cesarea Maritima one of the first victimes was St. Theodoria, a young Tyrian girl of eighteen, who was horribly tortured and then thrown into the sea on Easter Sunday, 2 April, 307 (Euseb., "H. E.", VII, 11). In 311 a municipal decree forbidding Christians to stay in the city was posted up in Tyre, together with a message of congratulation from the Emperor Maximin (Eusebius, "H. E.", IX, vii). This did not prevent the Church of Tyre from subsisting and developing after peace was granted to the disciples of Christ.

Shortly afterwards Tyre furnished Ethiopia with its first and greatest missionary, St. Frumentius, who
went to Africa with a philosopher who was his master and was consecrated by St. Athanasius the first bishop of that country, to whom he owed his education. The archdiocese was created by Constantine (335), which had about 310 members, judged the cause of St. Athanasius, who was in Tyre with 48 Egyptian bishops, and after a series of injustices it deposed him. Eusebius of Cesarea presided over the assembly (Hefele-Leclercq, "Hist. des conciles," I, 650–66). Another council was held in February, 410, of which the most important was that of St. Athanasius, whom he accused by the clergy of his church and absolved by this council. This sentence had serious consequences at Chalcedon and especially at the Council of the Three Chapters in 553 (Hefele-Leclercq, op. cit., II, 493–98). Finally, in 514 or 515 was held a council under the presidency of Severus, Patriarch of Antioch, and of Philemon, metropolitan of Hierapolis, and which assembled the bishops of the provinces of Antioch, Apanaea, Augusta Enthradensis, Osbene, Mesopotamia, Arabia, and Phoenicia Libanensis. It rejected the Council of Chalcedon, and the Hecatomont of the Emperor Zeno was explained in a sense clearly opposed to the latter council (Lebanon, "Le monophysitisme scene, p. 64). 

Le Quen (Orients christ., III, 501–12) mentions 29 bishops of this see, some of whom have no right to figure in the list. Besides those already mentioned were: Paulinus, friend of Eusebius of Cesarea, mentioned by Arrian in a letter as being one of his partisans (Theodoret, "H. E," V, v.) and who subsequently became Patriarch of Antioch; Irenicus, previously a member of a council of 448 in Petra, and who compiled a collection of very valuable documents which have reached us under the title of "Tragedia Irenaei"; Photius, very active in the religious quarrels of his time, and who assisted at the Councils of Tyre and Chalcedon, as well as at the Robber Council of Ephesus; John Codonatus, Metropolitan of Tyre, who represented the Patriarch of Antioch; Thomas, who at the Eight Ecumenical Council represented the Patriarch of Antioch.

Included at first in the Province of Syria, the Diocese of Tyre formed part of Phoenicia, at the creation of that province by Septimius Severus shortly before 198, when it became the religious as well as the civil metropolis; it was destined to become one of the most famous, if not the most famous in the world. As it was the residence of Christian Berytus, the life of its inhabitants was closely associated with the life of Christ, and the church of Tyre was therefore destined to become the religious metropolis of the entire Levant. The city was thus able to attract the attention of the Christian world from the very beginning of its existence. The fact that Tyre was the residence of the Patriarch of Antioch, who was the spiritual leader of the Christian church in the Levant, added to the importance of the city.

During the Byzantine period, Tyre became one of the most important centers of learning in the Christian world. The city was the home of many important scholars and theologians, including John Chrysostom, who was its archbishop from 398 to 403, and who is known for his work in the field of homiletics. The city was also the birthplace of many important figures in the history of Christianity, including the monk John Cassian, who founded a monastery in the city in the 5th century.

The city of Tyre was also known for its rich cultural life, which included the production of fine works of art and literature. The city was the home of many important artists, including the sculptor Procopius, who is known for his work in the field of portrait sculpture, and the poet Corippus, who is known for his work in the field of epic poetry.

The city of Tyre was the site of many important events in the history of the Christian church, including the Council of Tyre, which was held in 587 and which was attended by representatives of the Christian church from throughout the world.

The city of Tyre was also the site of many important events in the history of the city itself, including the construction of the massive walls that protected the city from attack, and the construction of the massive temples that were built to honor the gods of the city.

The city of Tyre was eventually destroyed by the Romans in the 2nd century, and was then rebuilt as a Roman city. The city was the site of many important events in the history of the Roman Empire, including the construction of the massive amphitheater that was built in the city in the 1st century.

The city of Tyre was also the site of many important events in the history of the Islamic world, including the construction of the massive fortifications that were built to protect the city from attack, and the construction of the massive mosques that were built to honor the Muslim gods.

The city of Tyre was eventually destroyed by the Ottomans in the 16th century, and was then rebuilt as a Ottoman city. The city was the site of many important events in the history of the Ottoman Empire, including the construction of the massive government buildings that were built in the city in the 18th century.

The city of Tyre was eventually destroyed by the British in the 19th century, and was then rebuilt as a British city. The city was the site of many important events in the history of the British Empire, including the construction of the massive financial buildings that were built in the city in the 20th century.

The city of Tyre was eventually destroyed by the Israelis in the 20th century, and was then rebuilt as a Israeli city. The city was the site of many important events in the history of the Israeli State, including the construction of the massive government buildings that were built in the city in the 21st century.

The city of Tyre was eventually destroyed by the Palestinians in the 21st century, and was then rebuilt as a Palestinian city. The city was the site of many important events in the history of the Palestinian State, including the construction of the massive government buildings that were built in the city in the 22nd century.
James Tyrie" (Paris, 1573). Next year he discussed several points of religion with Andrew Melville privately in Paris. In 1585 he was summoned to Rome as the representative of France on the Committee of Six, who eventually drew up Father Aequaviva's first edition of the "Ratio studiorum", printed in 1586. He was rector of Clermont College during the great siege of Paris (May to September, 1590). His anxieties and difficulties must then have been great, as he had over a hundred scholars as well as a large community to feed, and that at a time when men were perishing with hunger in the streets. After the Duke of Parma had revictualled the town (September), Tyrie was again sent to Rome, as French deputy for the congregation, which finally supported the government of Father Aequaviva.

On his return in December, Tyrie was sent to the University of Pont-à-Mousson, as professor of Scripture and head of the Scots College, and two years later, on the successive deaths of Fathers Edmund Hay and Paul Hoffeins, he was again called to Rome (22 May, 1592), where he became Assistant for France and Germany, and played his part in the important Sixth General Congregation of the Society of Jesus (1593). He also supported at Rome the vain endeavours in Scotland of the three Catholic Earls of Huntly, Erroll, and Angus to maintain themselves, with King James's connivance, by force of arms against the Kirk (1594). The earls asked and obtained a subsidy from Clement VIII; and Father Tyrie's advice and opinion were constantly taken by both the papal and the Scottish negotiators. He also took steps to restore the Scottish hospital at Rome, which eventually (1600) became the Scots College there. Rare as it was to keep on good terms with adversaries in those days, Tyrie won praise from such men as David Buchanan, both for his ability and for his courtesy. Part of his cursus is preserved in MS. at the Bibliothèque Nationale, Paris.

J. H. Pollen.
Ubaghs, Casimir, b. at Berg-les-Fauquemont, 26 Nov., 1800; d. at Louvain, 15 Feb., 1875, was for a quarter of a century the chief protagonist of the Ontologico-Traditionalist School of Louvain. In 1830, while professor of philosophy at the lower seminary of Rolduc, he was called to Louvain, where his influence became a centre of Ontologism. In 1840 he undertook the editorship of the "Revue catholique", and in conjunction with Arnold Tiss, who had taught with him at Rolduc and joined him at Louvain in 1840, and Lonly, professor at Rolduc, La Forêt, Claessens, the Abbé Bonquillon, Père Bernard Van Loo, and others followed the doctrines of Ubaghs. But opponents soon appeared. The "Journal historique et littéraire", founded by Kersten, kept up an incessant controversy with the "Revue catholique". Kersten was joined by Gilson, dean of Bonillon, Lups, and others. From 1858 to 1861 the controversy raged. It was at its height when a decision of the Roman Congregation (21 Sept., 1861) censured in Ubaghs's works, after a long and prudent deliberation, a series of propositions relating to Ontologism. Already in 1854 he had negatived five propositions and ordered M. Ubaghs to correct them and expunge them from his teaching, but he misunderstood the import of this first decision. When his career was ended in 1864 he had the mortification of witnessing the ruin of a teaching to which he had devoted forty years of his life. From 1864 until his death he lived in retirement. Ubaghs's works are contained in a vast collection of treatises on which he expended the best years of his life. Editions followed one another as the range of his teaching widened. The fundamental thesis of Traditionalism is clearly affirmed by Ubaghs, the acquisition of metaphysical and moral truths is inexplicable without a primitive Divine teaching and its oral transmission to man is a natural law, a condition so necessary that without a miracle man could not save through it attain the explicit knowledge of truths of a metaphysical and a moral order. Teaching and language are not merely a psychological medium which favours the acquisition of these truths; its action is determinative. Hence the primordial act of man is an act of faith; the authority of others becomes the basis of certitude. The question arises: Is our adherence to the fundamental truths of the speculative and moral order blind; and, is the existence of God, which is one of them, impossible of rational demonstration? Ubaghs did not go as far as this; his Traditionalism was mitigated, a semi-Traditionalism; once teaching had awakened ideas in us and transmitted the maxims (ordo acquisitivans) reason is able and apt to comprehend them. Though powerless to discover them it is regarded as being capable of demonstrating them once they have been made known to it. One of his favourite comparisons admirably states the problem: "As the word 'view' chiefly expresses four things, the faculty of seeing, the act of seeing, the object seen, e.g., a landscape, and the drawing an artist makes of this object, so we give the name idea, which is derived from the former, chiefly to four different things; the faculty of knowing rationally, the act of rational knowledge, the object of this knowledge, the intellectual copy or formula which we make of this object in conceiving it." (Psychology", 5th ed., 1877, 41-12). Now, the objective idea, or object-idea (third acceptance), in other words, the intelligible which we contemplate, and contact with which produces within us the intellectual formula (notion), is "something Divine" or rather it is God himself. This is the core of Ontologism. The intelligence contemplates God directly and beholds in Him the truths or "objective ideas" of which our knowledge is a weak reflection. Assuredly, if Ubaghs is right, skepticism is definitively overcome. Likewise if teaching plays in the physical life the part he assigns to it, the same is true of every doctrine which asserts the original independence of reason and which Ubaghs calls Rationalism. But this so-called triumph was purchased at the cost of many errors. It is, to say the least, strange that on the one hand Ontologistic Traditionalism is based on a distrust of reason and on the other hand it endows reason with unjustifiable prerogatives. Surely it is an incredible audacity to set man face to face with the Divine essence and to attribute to his weak mind the immediate perception of the eternal and immutable verities. Ubaghs's principal works are: "Logicæ seu philosophicæ rationalis elementa" (6 editions, 1834-60); "Anthropologicae philosophicae" (5 editions, 1835-63); "Theodiceæ seu theologiae naturalis" (4 editions); "Anthropologicae philosophicæ elementa" (1818); "Præcis de logicae elemento" (5 editions); "Præcis de anthropol. philosophico" (5 editions); "Du réalisme en théologie et en philosophie" (1850); "Essai d'idéologie ontologique" (1860); numerous articles in the "Annuaire de la Faculté de Louvain". On the Traditionalist Ontologism of Louvain see DE WULF, Histoire de la philosophie en Belgique (Louvain and Paris, 1910). 292 sq. For the life of Ubaghs see Jacques in Annales de l'Université de Louvain (1876), 417 sqq.

M. DE WULF.

Ubaldus, Saint, confessor, Bishop of Gubbio, b. of noble parents at Gubbio, Umbria, Italy, towards the beginning of the 12th century, Whitsun, 1165. Whilst still very young, having lost his father, he was educated by the prior of the cathedral church of his native city, where he also became a canon regular. Wishing to serve God with more regularity he passed to the Monastery of St. Secondo in the same city, where he remained for some years. Recalled by his bishop, he returned to the cathedral monastery, where he was made prior. Having heard that at Vienna Blessed Peter de Hesmonte some years before had established a very fervent community of canons regular, to whom he had given special statutes which had been approved by Paschal II, Ubaldus went there, remaining with his brother canons for three months, to learn the details and the practice of their rules, wishing to introduce them among his own canons of Gubbio. This he did at his return. Serving God in great regularity, poverty (for all his rich patrimony he had given to the poor and to the restoration of monasteries), humility, mortification, meekness, and fervour, the fame of his holiness spread in the country, and several bishoprics were offered to him, but he refused them all. However, the episcopal See of Gubbio becoming vacant, he was sent, with some clerics, by the population to ask for a new bishop from Honorius II who, having consecrated him, sent him back to Gubbio. To his people he became a perfect pattern of all Christian virtues, and a powerful protector in all their spiritual and temporal needs. He died full of merits, after a long and painful illness of two years. Numerous miracles were wrought by him
in life and after death. At the solicitation of Bishop Bentivoglio Pope Celestine III canonized him in 1192. His power, as we read in the Office for his feast, is chiefly manifested over the evil spirits, and the faithful are instructed to have recourse to him "contra omnes diabolicas potestates."

The life of the saint was written by Blessed Theobald, his immediate successor in the episcopal see, and from this source is derived all the information given by his numerous biographers. The body of the holy man, which had at first been buried in the cathedral church by the Bishops of Perugia and Cagli, at the time of his canonization was found flexible and incorrupt, and was then placed in a small oratory on the top of the hill overlooking the city, where in 1485, at the wish of the Duke of Urbino, it was transferred to a regular church, frequented to this day by numerous pilgrims, who come to visit the relics of their heavenly protector from near and far. The devotion to the saint is very popular throughout Umbria, but especially at Gubbio, where in every family at least one member is called Ubaldus. The feast of his patron saint is celebrated by the inhabitants of the country round with great solemnity, there being religious and civil processions which call to mind the famous festivities of the Middle Ages in Italy.

UBALDUS, BISHOP OF Gubbio. See Giraldi, UBALDO.

UBANGHI. PASTORAL APOSTOLIC OF BELGIAN, in Belgian Congo, separated on 7 April, 1911, from the Vicariate of the Belgian Congo and entrusted to the Capuchins. Its boundaries are: west and north, the river Ubangi from 1° 30' N. lat. to the meeting of the Mbonu and the Uele at Yakoma; to the south, a line parallel passing through Ubangi, then the watershed of the Ubangi and the Congo, and of the Ubangi and the Ngiri to 1° 30' N. lat., and thence to the Ubangi. R. P. Fulgence de Gérard-Montanet was appointed first prefect Apostolic, 11 July, 1911. Acta Apostolicae Sedis (Rome, 1911).

A. A. MACERELAN.

UBANGHI (Upper French Congo), VICARIATE APOSTOLIC OF, formerly part of the Vicariate of French Congo, created on 14 Oct., 1890; it has an area of about 380,000 sq. miles, and is bounded south and east by the Congo and the Ubangi; north by the Prefecture Apostolic of Ubangi-Chari; west by the Vicariates of Loanga, Gabon, and Cameroon; the mission of Linzolo lying south-west of Brazzaville was transferred from Loanga to Ubangi on 14 Feb., 1911. The principal railway in the Prefecture is the Brazzaville-Bonjou road, the last two being cunamidas. The French representatives, especially M. de Chavannes and M. Dolise, have greatly aided in the establishment and development of the mission. The first attempt to gain a foothold in the territory of the vicariate was made by Father (now Bishop) Augousti in 1883 at Brazzaville, relating to the unhappy experiences of the natives at the hands of the slave traders. In July, 1887, however, Mgr Carrie succeeded, owing to the help of M. de Chavannes. The Sisters of St. Joseph of Cluny arrived at Brazzaville on 21 August, 1892, and have a convent, chapel, and school there on a site presented by the French Government. Brazzaville, the capital of French interests in the region, is an important port, and is situated on a plateau 120 ft. high at the place where the Congo leaves Stanley Pool. Its cathedral, 37 metres long, 12

bread, and 9 high, surmounted by a steeple and cross rising 20 metres, was dedicated on 3 May, 1894. In 1888 the first two Christian marriages in Ubangi were solemnized before the vicar Apostolic. The mission spread to the surrounding villages and later to the Alima, 300 kilometres up the Congo; still higher up are the stations at Ubanga, at the junction of the Congo and the Ubangi, founded by Fathers Paris and Allaire on 3 April, 1889; at Bangui (1125 miles from the coast), established among the cannibal Bondjos and Buzerus and pastoral Ndiris, by Fathers Salaz and Rémy, in January, 1894; and at Sainte-Famille among the Balikiris, in 1895, by Father Moreau,—this is now the headquarters of Ubangi-Chari. Near these stations have been established villages where natives escaping from the clutches of the cannibal or slave owners can reside in safety. Bishop Augousti was awarded a prize of $3000 in April, 1912, by the French Academy of Moral and Political Sciences in appreciation of his work during thirty-four years in French Congo. Mission statistics: Vicariate, of which Bishop, of Upper-French Congo, titular Bishop of Sambros (b. 16 Sept., 1852; joined the Congregation of the Holy Ghost, to whom the mission is entrusted; and was consecrated, 23 November, 1860), is in charge, has 12 priests; 25 lay brothers; 12 Sisters of St. Joseph of Cluny; 4 churches; 23 schools; 5 hospitals; 2500 catechumens; and 5,000,000 pagans. The hot damp climate is very severe, and in one year (1887-8) 14 of the 31 missionaries died.

UBANGHI-CHARI, VICARIATURE APOSTOLIC OF, in Equatorial Africa, lies west of the Bahr-el-Ghazal territory and south of the Tchad district, and extends from 4° 30' to 10° N. lat., and from 12° to 26° 30' E. longitude. This region was formerly part of the Vicariate Apostolical of the Upper Congo; its first mission post was established at Sainte-Famille on the Upper Ubangi, about 1575 miles from the western coast by river, by R. P. Moreau, C. S. Sp., in 1895, among the Banzirs or Banziirs, in an almost unknown country. At the request of Mgr Philippe-Prosper Augousti, C. S. Sp., titular Bishop of Sinde and Vicar Apostolic of Ubangi-Chari, Ubangi-Chari was created by virtue of a Decree drawn from his jurisdiction in May, 1909, and formed into a new prefecture Apostolic under the care of the Fathers of the Holy Ghost, R. P. Pierre Catel, C. S. Sp., being appointed prefect Apostolic. He resides at Sainte-Famille. The mission contains: 25 parishes; 23 priests; 14 lay brothers; 13 nuns; 18 catechists; 15 stations; 17 churches and chapels; 22 schools, with 3,534 children; 1,902 orphans; 23,924 adult clergymen; 1,192 children; 684 catechumens. Boundaries: north and east, the Vicariate of the Sudan; south, the Prefectures of Tele and Belgian Ubangi, the Vicariate of Upper French Congo; west, the Vicariate of Cameroon and the Prefecture of Northern Nigeria. A. A. MACERELAN.

UBERABA, DIOCESE OF (UBERABA), suffragan of Mariana, in Brazil, created by the Consistorial Decree of 29 September, 1907, separating it from the Diocese of Goiás, and placing under its jurisdiction the portion of Minas Gerais known as Tramulho Minheiro and the following parishes which formerly belonged to the Diocese of Diamantina: Uruçu or Uruçu, Capão Branco and Caraça, on the Prefeito Pomeré, Negreiros Santa Ruya de Pato, Capão Redondo, and São Romão. The diocese is bounded: on the north by the Urucua River; east,
to the São Francisco River; south, the Marcella and Canastra mountain ranges and the Rio Grande; west, the Paraná and Jacaré rivers, and the Geral mountain range. The Catholic population numbered 200,000 souls in 1911. Rt. Rev. Eduardo Duarte Silva, the first and present bishop, was born at Paraná, Dec. 27, 1852; studied in the Pio-Latino College of Rome: was ordained priest, 19 Dec., 1874; chaplain of the Florianopolis hospital and canon of the imperial chapel; elected Bishop of Goyaz, Jan. 23, 1891, and consecrated on 8 Feb., 1891; precomputed Bishop of Uberaba, 19 Dec., 1908. The following religious orders are in the diocese: the Franciscan Republic of Our Lady of Mount Carmel; the Franciscan Missionary nuns of Egypt. There are 45 churches. The Catholic educational institutions are: the Gymnasium diocesano, a school of secondary instruction with the privileges of a federal college, directed by the Marist Brothers; and the Colégio de Nossa Senhora das Dóres, for girls, under the Dominican nuns. The principal Catholic college is the Pontifical University of São Paulo. It was founded in 1908, and has been coeducational since 1952.

The Catholic Church holds the见解 that the civil government should be subordinate to the Church. It is opposed to the secularization of education. It is also opposed to the introduction of any foreign language in schools.

The Catholic Church maintains a strong influence in the political and social life of the country. It is involved in many of the conflicts between the government and the people. The Church is also involved in many of the social issues of the day, such as poverty and inequality.

The Catholic Church in Brazil is made up of three main groups: the Archdiocese of São Paulo, the Diocese of Brasília, and the Diocese of Fortaleza. The Archdiocese of São Paulo is the largest and most influential. It encompasses the entire metropolitan area of São Paulo, which is the economic and political center of the country.

tled, 1322-23. However this may be, it is certain that in 1325 he was accused of heresy, especially of having obstinately sustained some errors of Olivi.

Ubertino, foreseeing the condemnation that hung over him, wrote in the pope in a letter dated 16 Sept., 1325, commanded the general of the Franciscans to have him arrested as a heretic; but Ubertino probably went to Germany under the protection of Louis the Bavarian, whom he is said to have accompanied on his way to Rome in 1328. From this time Ubertino disappeared from history, so that nothing further is known of him until 1332 when he left the Benedictines in 1332 to join the Carthusians, but this is not certain. The Fraticelli of the fifteenth century, who venerated him as a saintly man, spread the news that he had been killed. The end of this famous leader of the Spirituals, remembered even by Dante in the twelfth canto of the "Paradise," will probably remain an open question.

Besides the "Arbor vitae," his principal work, printed once only at Venice in 1485, and of which scarcely thirteen manuscripts are known in the principal libraries of Europe, Ubertino also wrote other works of a polemical kind: the "Responsio" to the questions of Clement V (1321); the "Rotulus" (1311); the "Declaratio" against the Franciscan Order (1311); the "Super tribus sacerdoribus;" and the treatise "Super tribus sacerdoribus" on poverty, compiled also in 1311. Some of these polemical writings have been published by Ehre (see below), the Apology of Olivi also by Wadding (ad an. 1297), whilst the treatise on the poverty of Christ and the Apostles has been inserted in many collections, on which see "Annales Hierosolimitanae," III (1901).

Ubiquitarians (Unicists), a Protestant sect started at the Lutheran synod of Stuttgart, 19 Dec., 1539, by John Brenz, a Swabian (1499-1576). Its principal confession is the "Confession of Wurttemberg," and entitled the "Wurttemberg Confession," was sent to the Council of Trent, in 1552, but had not been formally accepted as the Ubiquitarian creed until the synod at Stuttgart. Luther had upset the peace of Germany by his disputes. In the effort to reconcile and unite the contending forces against the threatening Turks, Charles V demanded of the Lutherans a written statement of their doctrines. This—the "Augsburg Confession"—was composed by Melanchthon, and read at a meeting at Augsburg in 1530. Its tenth article concerned the Real Presence of Christ in the Blessed Sacrament, a burning question among the Protestants. In 1540, Melanchthon published another version of the "Augsburg Confession," in which the article on the Real Presence differed essentially from what had been expressed in 1530. The wording was as follows:

Edition of 1530

"Concerning the Lord's Supper, they teach that the body and blood of Christ are truly present under the bread and wine of the Supper, and under the species of bread and wine, and not merely symbolically or sacramentally." (ibid., i, 179, 180.)

Edition of 1540

"Concerning the Lord's Supper, they teach that with bread and wine are truly exhibited the body and blood of Christ to those that eat in the Lord's Supper; and they disapprove of those that teach otherwise."

Johann Eck was the first to call attention to the change, in a conference at Worms, 1541. Debates followed, and the Ubiquitarian controversy arose, the question being: Is the body of Christ in the Eucharist, and if so, why? The Confession of 1530 was known as the Reformed doctrine. To this Melancthon, with his adherents, subscribed, and maintained that Christ's body was not in the Eucharist. For, the Eucharist was everywhere, and it was impossible, they contended, for a body to be in many places simultaneously. Adopting Luther's false interpretation of the context of the words "in the mouth of two or three witnesses shall the word be established," Brenz argued that the attributes of the Divine Nature had been communicated to the humanity of Christ which was thus defiled. It was everywhere, ubiquitous, just as His divinity, and therefore really present in the Eucharist. Brenz was in harmony with Catholic Faith as to the fact, but not as to the explanation. His assertion that Christ's human nature had been defiled, and that His body was in the Eucharist as it was elsewhere, was heretical. Christ, as God, is everywhere, but His body and blood, soul and divinity, are in the Eucharist in a different, special manner (sacramentally).

1538, Chemnitz, who had unconsciously been defending the Catholic doctrine, calmed the discussion by his adhesion to the doctrine of the Ubiquitarians. The controversy arose again as Kenoticism and Crypticism, but sank into oblivion in the troubles of the Thirty Years War.

Ucayali (San Francisco de Ucayali), Prefecture Apostolic of, in Peru.—At the request of the Peruvian Government, desirous of civilizing and converting the Indian tribes inhabiting a large and secluded mountainous district in the east of Peru, known as La Montana, in which a few Franciscan missionaries had been labouring, the Holy See on 5 February, 1900, erected the district into three prefectures Apostolic, depending directly on Propaganda. The central prefecture, San Francisco de Ucayali, remained under the control of the Franciscans, who were placed under the immediate jurisdiction of their master-general. The prefecture comprises (a) Chacuamayo, the district drained by the river of the same name, and drained into the Purus and Pajonal to its eastern valleys; and as far as the Tambo and the upper Ucayali; (b) Apurimac, the territory drained by the Nau, Mantaro, and Tambo, as far as the confluence of the latter and the Urubamba; (c) Ucayali, the region drained by the Ucayali to the meeting of the Tambo and Ucayali. The Indians belong to the Amechucho, Chapiqui, and Conivi tribes, 5325 being Catholics. The mission contains 12 priests, 10 lay brothers, 6 chief stations, 21 churches and chapels, 6 having resident pastors; 11 schools. The first prefect Apostolic, R. P. Augustin Alemany (11 February, 1905), was succeeded by R. P. Bernardo Instrazza (September, 1905). To prevent disputes concerning the jurisdictional limits of the neighbouring prefectures, Propaganda had decided that the mission was to be closed to the forest districts.

A. A. MacErlane.

Uccello, painter, b. at Florence, 1397; d. there 1475. His real name was Paolo di Dono, but from his love of painting birds he received the nickname of Uccello, and has been most frequently called by that name ever since. He was apprenticed to Ghieri, and was one of the assistants engaged in preparing the first pair of bronze gates made for the
baptistery in Florence. Vasari tells us that his special love was for geometry and perspective. Manetti taught him geometry, but where he learned painting we do not know, nor are we acquainted with the reasons which led him to leave the bolognese of Ghiberti and set up for himself. Vasari scolds at Uccello's study of perspective, regarding it as a study of geometry and proportion. Heathen in some of the complex difficulties of perspective, was quite remarkable, and his pictures for this reason alone are well worthy of study, for they display an extraordinary knowledge of geometric perspective. His most important work is the colossal equestrian figure of Sir John Hawkwood, a chiaroscuro in terra-cotta intended to imitate a stone statue, seen afloat, standing out from the wall of the cathedral. One of the most precious possessions of the National Gallery, London, is a battle-picture by this artist. For a long time this has wrongly entitled the "Battle of San Egido of 1416," but it really represents the rout of San Romano of 1432. Instead of Mahadetsa, the picture gives us a representation of Nicolo da Tolentino. Mr. Herbert Horne gave considerable attention to this picture some twelve years ago, and was able to arrive at a very accurate determination regarding it. There are very few paintings by Uccello in existence, although he must have painted a considerable number. There is a panel by him in the Louvre, containing his own portrait, associated with those of Giotto, Donatello, Brunelleschi, and Manetti, representing perspective associated with painting, sculpture, architecture, and geometry. Many of these frescoes he executed for Santa Maria Novella have been destroyed. The only other picture of his that need be mentioned here is a predella in a church near Urbino, relating to the theft of a relic, which is attributed to him by many critics. He is said to have studied the works of Pisanello with great advantage, and it is probable that it was from Pisanello that he first learned painting, but he may be practically regarded as one of the founders of the art of linear perspective. There are very few dates known in his history beyond those of his birth and death. But we know that in 1425 he was at work at Venice, in 1436 painting his portrait of Sir John Hawkwood, and in 1468 residing at Urbino.

GEORGE CHARLES WILLIAMSON.

UDINE

UDINE

successive patriarchs provided it with water-supply and other institutions. The population was notably increased by the arrival of Tuscan exiles in the thirteenth and fourteenth centuries. In the thirteenth century the patriarch was represented by a gastaldo, while twelve nobles and twelve commons represented the people in the government. The privileges of the citizens were augmented by the Patriarch Ramondo
della Torre (1291) and Bertrando di Saint Genais (1310) on account of the loyalty displayed by the Udineese in the wars against the Visconti of Milan and against the small feudatories. As early as the thirteenth century Udine was the ordinary residence of the patriarch of Aquileia. In 1387, the see was definitively transferred to Udine. In 1381 the city opposed Cardinal Philip of Alexandria, who had been given the See of Aquileia in commendam; they wished to have an effective prince and patriarch, and the consequent war ended only with the cardinal's renunciation of the see of Udine. In 1387, a popular rising against Giovanni Magrave of Moravia, who wished to revise the Constitution. In 1420 Udine, after a long siege, surrendered to the Venetians, and thenceforth it belonged to the republic, being the capital of Friuli. However, it retained in substance its ancient form of government. Udine was the birthplace of the military leaders Savorgnano and Collaredo and the painters Giovanni da Udine, Pellegrino da S. Daniele, Giovanni di Martino, and Odorico Polti.

In 1752 the Patriarchate of Aquileia was suppressed, and the two Archdioceses of Udine and Gorizia were formed, the former embracing that part of the patriarca which was subject to the Republic of Venice. The first archbishop was Daniele Dolfino, consecrated in 1762 and in 1763 the see was transferred to Udine; in 1765, Udine became a bishopric, subject to the metropolitan See of Venice; Pius IX, however, in 1866, re-established the Archdiocese of Udine, though without suffragans. The archdiocese contains 201 parishes, with 438,000 souls; 703 priests, 3 houses of male and 6 of female religious; 2 educational establishments for boys, and 6 for girls.

Ugento, Diocese of (Uxenti).—The City of Ugento, with its small harbour, is situated in the Province of Lecce, in Apulia, on the Gulf of Tarentum. It is the ancient Ucuntum, and claims to have been founded by Tyens, who is mentioned in the Eighth Book of the Iliad. In ancient times it was an important city. In 555 it was destroyed by the Goths under the domination of the Gothic bishop of Ugento of the Latin bishops the first known was the Benedictine Simeon, of unknown date. Others worthy of mention are: St. Charles Borromeo (1530-37); Antonio Sebastian Munturino, post (1559); the Carmelite Desiderio Mazzapica (1566), who was distinguished at the Council of Trent; and the great canonist Agostino Barbaro (1614). In 1818 the Diocese of Alessano (the ancient Lecua) was united to that of Ugento. The Greek Rite flourished in many places in this diocese until 1591, when it was abolished by Bishop Ercole Lecua. The diocese is suffragan of Otranto, and contains 30 parishes, 60,000 souls, 130 priests, secular and regular, 1 house of male religious, 4 houses of female religious, and 3 schools for girls.

UgHELLI, FERDINANDO, historian, b. at Florence, 21 March, 1705; d. 19 May, 1767. Having entered the Cisterian Order in his native city, he was sent to the Gregorian University, Rome, where he studied under the Jesuits, Francesco Precolomini and John de Lugo. He filled many important posts in his order, being Abbot of Settimo (Florence), and from 1638 Abbot of Tre Fontane, Rome. He was skilled in ecclesiastical history, and to encourage him in this work and to defray the expense of the journeys it entailed Alexander VII granted him an annual pension of 500 scudi. He was a consultant of the Index and theologian to Cardinal Carlo de' Medici, and was frequently offered the episcopal dignity, which he refused to accept. He was buried in his abbatial church. His chief work is "Italia sacra suo de episcopis Italica" (9 vols., Rome, 1643-62), abridged by Ambrogio Lucenti (Rome, 1704); re-edited with corrections and additions by Nicola Coleti (Venice, 1744-46), with a tenth volume. In compiling this work, he frequently had to deal with matters not previously treated by historians; as a result, the "Italia sacra" constitutes an invaluable source of information, especially from the point of view of criticism and diplomacy, containing serious errors, particularly as the author was more intent on collecting than on weighing documents. Nevertheless his work with all its imperfections was necessary to facilitate the labours of critical historians of a later day, and is consulted even now. Among his other writings are: "Cardinalium elogia ex sacro ordine cisterciensi" (Florence, 1621), on the writers and saints of his order and the papal privileges granted to it; "Columnaeis familie cardinalium imagines" (Rome, 1650), and genealogical works on the "Counts of Marsciano" and the "Capizzechi" (Rome, 1657, 1658); "Aggiunte" to the "Vite pontificie" of Chacunais. In the last volume of "Italia sacra" he published various historical sources until then unedited.

Ucanti, Italia sacra restrictio, I (Rome, 1704),preface; Jonekin, Notit. abbatiarum ord. cistere, (Cologne, 1640); Visch, Bibl. script. cisterc. XII (2nd ed., Cologne, 1650).

U. BENIGNI.

Uhtred (Urtred, Owtred), an English Benedictine theologian and writer, b. at Holton, North Durham, about 1315; d. at Finchale Abbey, 21 Jan., 1390. He joined the Benedictine Order, about 1332 and was sent to London in 1337. Three years later he entered Durham College, a house which the Durham Benedictines had established at Oxford for those of their members who pursued their studies at the University of Oxford. He was graduated there as licentiate in 1337 and as doctor in 1337. During the succeeding ten years, and even previously, he took part in numerous disputations at Oxford University, many of which were directed against members of the mendicant orders. It is on this account that Bale (loc. cit. below) wrongly designates him as a supporter of Wyclif. In 1367 he became prior of Finchale Abbey, a position to which he was appointed three other times, in 1379, 1386, and 1392. In 1368 and in 1375 he was secretary of the King of England. In 1375 he was one of the delegates sent by Edward III to the papal representatives at Bruges in 1374, with the purpose of reaching an agreement concerning the vexed question of canonical provision in England. In the same year he represented Durham Abbey at a council held by Edward, Prince of Wales, for the purpose of determining whether the king was obliged to recognize the papal suzerainty which had been granted to Innocent III by King John. On this occasion Uhtred defended the pope's right of overlordship, but, when on the following day the assembly cast its vote contrarily, he followed their example. (Flores Histor., Rolls Series, III, 357, 9.) Among his literary works, none of which have as yet been printed, areowy of importance, "Desultoria in Quinques Grammaticorum," preserved in the Durham Cathedral Library; "Contra quaderas Fratrum," written about 1390, extant in the British Museum; and a Latin translation of the "Ecclesiastical History" of Eusebius, which is also preserved in the British Museum.

MICHAEL OTT.
Ujiejski, CORNELIUS, Polish poet, b. at Berenice, Galicia, 1523; d. at Chojowice, 1806. His father was a professor, member of an ancient noble family. Cornelius completed his studies at Lemberg and while still a student at the university there wrote "Maraton" (1613), a patriotic lyric poem of excellent form. In 1616, at the instigation of the Austrian Government, the Galician peasants massacred several thousand of the nobility. Ujiejski then gave expression to the universal feeling of indignation in his powerful poem "Choral", which has become the national hymn of Poland. At Paris, 1817, he published a volume of poems entitled "Skargi Jeremiiego" (Lamentations of Jeremiah). He made the acquaintance of the most distinguished men in the Polish colony at Paris, among them Mickiewicz, and devoted himself with youthful ardor to the poet John Keats. When in 1818 he returned home, and won great popularity. He was regarded and beloved by the people as their national poet. Ujiejski wrote a number of other poems of fine sentiment and perfect poetic form, among them "Kiwyat bez won" (Flowers without perfume), 1848, and "Zwiedle liscie" (Faded leaves) in 1849. The latter was a second volume entitled "Melodie Biblijne" (Biblical Melodies). Ujiejski never achieved anything finer than his youthful works, though his later poems are distinguished by strong patriotic feeling, elegance of form, and fine poetic taste.

S. TARNOWSKI.

Uelenberg, KASPAR,convert, theological writer and translator of the Bible, b. at Lippstadt on the Lippe, Westphalia, in 1519; d. at Cologne, 16 Feb., 1617. He was the son of Lutheran parents and was intended for the Lutheran ministry. He received his grammar-school education in Lippstadt, Soest, and Brunswick, and from 1509 studied theology at the University of Lubeck. He entered the Lutheran Church about this time his first doubts as to the truth of the Lutheran doctrines were awakened, and were then increased by hearing the disputes between the Protestant theologians and by the appearance of Calvinism in Saxony. After completing his studies he taught for a short time in the Latin school at Lunden in Thuringen; but was then sent by his father to study law at the university of Leipzig, where he became a Roman Catholic and translated a number of Latin works into his own language. In 1547 he entered into the Roman Catholic Church and in 1550 became a professor in the University of Cologne. Uelenberg was influential in the controversy between the Roman Catholic and the Lutheran Churches in Germany, and was one of the most important figures in the development of Roman Catholic literature in Germany. He was a prolific writer, producing a large number of works in Latin and German, on a variety of subjects, including theology, philosophy, and literature. He was also a translator, and one of his most important works was the translation of the Bible into German, which he began in 1614. The first edition appeared in 1630, and the translation was completed in 1639. Uelenberg's translation of the Bible was important for its accuracy and fidelity to the original text, and it was widely used in German-speaking countries. He also wrote on a wide range of topics, including history, philosophy, and literature, and his works continue to be studied and debated today. Uelenberg's influence in the development of Roman Catholic literature in Germany and his translation of the Bible are significant contributions to the history of the Roman Catholic Church and its literature. Friedrich Lauchert.

Ulfilas (ULFILAS), apostle of the Goths, missionary, translator of the Bible, and inventor of an alphabet, b. probably in 311 (see Bessel), p. 53); d. at Constantinople in 389 or 381. Though Ulfilas in speech and sympathies was thoroughly Gothic, he was descended not from Teutonic ancestors, but from the Syrian lineage of Valerian and Galianus, during the raids in Asia Minor made by the Goths from the north of the Danube. There seems to be no valid reason for thinking Ulfilas was not born a Christian (Hodgkin places his conversion during his residence at Constantinople). As a young man he was sent to that city either as a hostage or as a groomsman, and during the position of lector in the church, he was consecrated bishop in his thirteenth year by the celebrated Arian bishop of Nicomedia, Eusebius. Shortly after his consecration he returned to Dacia and during the remaining forty years of his life he laboured among his fellow-countrymen as a missionary. The first eight or ten years of his missionary life were spent in Dacia, after which because of the persecution of his pagan countrymen he was compelled with many of his
Christian converts to seek refuge in Massia. It was at this period in his life that he conceived the idea of translating the Bible into the language of the Goths, a task demanding as a preliminary that he should invent a special alphabet. His familiarity with Greek made the task comparatively simple, only a few letters being borrowed from other sources, Runic or Latin. Despite his many other activities Ulfilas translated "all the books of Scripture with the exception of the Books of Kings, which he omitted because they are a mere narrative of military exploits, and the Gothic tribes were especially fond of war, and were in more need of restraints to check their military passions than of spurs to urge them on to deeds of honor or Latin. The Books of the Old Testament were translated from the Septuagint; those of the New Testament from the original Greek. Ulfilas was at the Synod of Constantinople in 355, and his maxim was "in its compromise creed as a substitute for the formulae of the Orthodox as well as the Arian parties. It is unfortunate that the career of Ulfilas was marred by his adherence to the Arian heresy. It may be said in extenuation of this fault that he was a victim of circumstances in coming under none but Arian and semi-Arian influences during his residence at Constantinople; but he persisted in the error until the end of his life. The lack of orthodoxy deprived the work of Ulfilas of permanent influence and wrought havoc among some of his Teutonic converts. His labors were impressed not only on the Goths, but on other Teutonic peoples, and because of the heretical views they entertained they were unable to maintain themselves as a kingdom which he established. Only a few chapters of Ulfilas's translation of the Old Testament are in existence. Of the New Testament we have the greater portion of the Gospels in the beautiful Silver Codex (a purple parchment with silver and gold letters) now at Upsala, and dating from the fifth century perhaps; nearly all of St. Paul’s Epistles, and much of Mark, Luke, and Casuardio’s Mark, and a large fragment of the Epistles to the Romans on a Wolfenbüttel pidimset.

WATT, Leben und Lehe des Ulfils (Hamers. 1840), this work contains the account of Ulfilas’s life written by his disciple Augustine, Bishop of Dorostorum; BRESSET, Ueber das Leben des Ulfils und die Bekehrung der Genti zum Christentum. (Gottingen, 1860); Scott, Ulfils, Apostle of the Goths, together with an account of the Gothic Churches and their Discipline (London, 1853); Stoye, Ulfils or die uns erhaltenen Denkmaler der gotischen Sprache (Padborn, 1850); P. L. XVIII, contains the existing fragments of the Bible of Ulfilas with notes and glossary.

PATRICK J. HEALY.

ULLATONR, William Bernard, English Benedictine monk and bishop, b. at Pocklington, Yorkshire, 7 May, 1806; d. at Ossow, Warrenshire, 21 March, 1880. His father was a lineal descendant from Blessed Thomas More, but had fallen in life and was then the chief tradesman of the village. His mother, a distant connexion of Sir John Franklin, the Arctic explorer, was a convert. When he was ten years old, the whole family removed to Scarborough, where young Ullathorne made his first acquaintance with the sea. His lively imagination and adventurous spirit led him to desire to be on the ocean and to see the world; and for three and a half years his wish was gratified, during which time he made several voyages in the Mediterranean and the Baltic Sea and elsewhere. It was on one of these voyages that a chance opportunity of attending Mass at Memel, a port in the Baltic, proved the turning-point of his life, for he then and there made up his mind to devote his life to the service of God. On his return to England, therefore, he entered as a novice of the well-known Benedictine community at Downside, near Bath, in February, 1823. He received the habit in March.

Façsimile Portion of a Page of Ulfilas's Translation of the Gospels Preserved at Upsala.
Mark iv, 3: 4: The Jews unless they often wash their hands do not eat, and there is much else which...
eral priests and nuns who had offered themselves for the work. On his landing, he found himself the centre of obloquy, on account of his evidence on the convict question, for it was supposed to be detrimental to the colony, which thrived on the free labour of the convicts. Nevertheless, his views in the end prevailed, and transportation was abolished. In 1830 Ullethorne left Australia, as it turned out, for good, traveling to England in company with Bishop Polding. He had already drawn out a scheme for a regular hierarchy, rendered possible by the remarkable and rapid increase in numbers and organization, and when Dr. Polding went to Rome he obtained its substantial adoption. Dr. Polding arranged for Archbishop Wiseman to be consecrated, but Archbishop Ullethorne was more than once pressed to accept a bishopric there; he remained staunch in his refusal, and retired to the mission of Coventry. Here he used his energy in building a handsome new church; but after a stay of three years he had once more to move, being appointed Vicar Apostolic of the Western District of England, with the title of Bishop of Birmingham. A few years later, however, he was transferred to the Central District, in which he was destined to spend the remaining forty-one years of his life. He soon acquired influence among his brother bishops, and in 1848 he went to Rome as their delegate, to negotiate the restoration of the English hierarchy—a task for which he was specially fitted in many respects and for which he had worked in the similar scheme already carried out in Australia.

His negotiations were successful, and after a delay of two years, due to the Revolution in Rome, the new English hierarchy was proclaimed by Pius IX on 29 September, 1850. Cardinal Wiseman became the first Archbishop of Westminster, Dr. Ullethorne being appointed Bishop of Birmingham of the Dominican Order; he resigned the see seven years later. On the death of Cardinal Wiseman, he was chosen by Propaganda to succeed him; but Pius IX overruled their choice and appointed Cardinal Manning, and Dr. Ullethorne remained at Birmingham. He took part in all the four provincial synods of Westminster, and in 1870 he attended the Vatican Council; but for the most part his episcopate was of tremendous busy days later. He spent a great deal of time on the control and administration of his diocese. When he first took up his residence in the Midlands, he found the finances in a deplorable condition; he lived to see his diocese thoroughly organized, and many new missions established, as well as new communities of men, the most famous of which was Newman's Congregation of the Oratory. He liad a strong influence at Eton College at that time a mixed college, and in 1873 Bishop Ullethorne established a regular diocesan seminary—St. Bernard's, Otton. He also devoted himself in a special manner to the convents of his diocese, in all of which he took a personal interest. One of his chief assistants was the well-known Mother Margaret Hul- lian, who founded a Congregation of Religious at Stone, from which there were several branch houses. In 1888 Dr. Ullethorne obtained leave from the Holy See to resign his diocese, being given the title of Archbishop of Cadiz. He retired to Oscott College, where he died the following year on the feast of St. Benedict, and was buried at St. Dominic's Convent, Stone.

His chief works, written during his last years, are: "Endowments of Man" (London, 1850); "Ground-work of Christian Virtues" (1852); "Christian Patriotism" (1856). He also published "Reply to Judge Burton on Religion in Australia" (Sydney, 1863); "La Salette" (1854); "The Immaculate Conception" (1871); "History of Restoration of English Hierarchy" (1871); "The Dellingerites" (1874); "An Answer to Gladstone's 'Vatican Decrees'" (1875); and a large number of sermons, pastoral, pamphlets, etc.

For the first half of his life (to 1850), see his Autobiography, edited after his death by Thesiger Drake, of Stone Convict (1801); for the second half, see his Letters, edited by the same (1892).

BERNARD WARD.

Ullerston, Richard, b. in the Duchy of Lancaster, England; d. in August or September, 1423. Having been ordained priest in December, 1883, he became the first Bishop of the Augustinian Order in New Zealand, holding office in the college, and proceeding doctor of divinity in 1391. In 1498 he became chancellor of the university and in the same year wrote at the request of the Bishop of Salisbury a sketch of proposed ecclesiastical reforms: Petitiones pro ecclesice militantis reformatione. He also wrote a commentary on the Creed (1460), one on the Psalms (1415), another on the Canticle of Canticles (1415), and "Defensorium dotationis ecclesiastici", a work in defence of the donation of Constantine. At the request of Archbishop Courtenay he wrote a treatise, "De officio militae", addressed to Henry, Prince of Wales. From 1403 he held the prebend of Oxford in Salisbury cathedral, and from 1407 the rectory of Fawley in Hants.

EDWIN BURTON.

Uloa, ANTONIO DE, naval officer and scientist, b. at Seville, Spain, 12 Jan., 1716; d. near Cadiz, Spain, 5 July, 1755. He entered the navy in 1733. In 1745 he was sent to the West Indies as a young Spaniard, a member of a scientific expedition which the French Academy of Sciences was sending to Peru to measure a degree of the meridian at the equator. They remained there for nearly ten years. In 1745, having finished their scientific labours, he and Jorge Juan prepared to return to Spain, agreeing to travel on different ships in order to minimize the danger of losing the important fruits of their labours. The ship upon which Uloa was travelling was captured by the British, and he was taken as a prisoner to England. In that country, through his scientific attainments, he gained the friendship of the men of science, and was made a Fellow of the Royal Society of London. In a short time, through the influence of the president of this society, he was enabled to return to Spain. He became a prominent as a scientist and was appointed to serve on various important scientific commissions. In 1766 he was sent as Governor to "La Florida Occidental" (Louisiana), where he remained two years, and in 1779 he became lieutenant general of the naval forces. He is to be considered in the establishment of the first museum of natural history, the first geological laboratory in Spain, and the observatory of Cadiz. As a result of his scientific work in Peru, he published (Madrid, 1751) "Relación histórica del viaje á la América Meridional", which contains a full, accurate, and clear description of the greater part of South America geographically, and of its inhabitants and natural history. In collaboration with Jorge Juan mentioned above, he also wrote "Noticias secretas de América", giving valuable information regarding the early religious orders in Spanish America. This work was published by David Barry in London, 1826.

VENTURA FUESTES.

Uloa, FRANCISCO DE, d. 1540. It is not known when he came to Mexico nor if he accompanied Hern Cortés in his first expedition to California.
Authors are divided upon these questions. Diaz del Castillo relates that during the absence of Cortés, his wife, Doña Juana de Juñchez, sent letters to him by Ulloa, begging him to return. Ulloa, in charge of two ships loaded with provisions, reached Cortés when he was sorely straitened, and he returned to Mexico in 1537. Ulloa soon followed. Eager for new discoveries, Cortés desired to go with him to the coast and, with his consent, Ulloa set sail in the spring of 1538, dispatching a fleet of three boats under the command of Francesco de Ulloa. According to Clavigero, Ulloa sailed along the coasts of the California peninsula until he was obliged by the scarcity of provisions to return to New Spain, where, in 1540, according to Diaz del Castillo, he was stabbed by a soldier and killed. Other historians relate, however, that it was in August 1539, after which the story of the "S.Tomás" was most lost; the "S.Agueda" was obliged to seek port in Manzanillo to repair damages, was afterwards driven by a tempest to the shores of Cuba, where it joined the "Trinidad", returning shortly with the discontented members of the expedition, and the ships "Trinidad", under command of Ulloa, was lost, no trace having been found of her.

PALACIO, México á través de los siglos, H; DÍAZ DEL CASTILLO, México en los primeros años de la Nueva España (Brussels, 1837); Cortés, Historia de Nueva España escrita con documentos por D. Francisco Antonio Lorena Arroyo, de México (Mexico, 1852).

Camillo Crivelli.

Ulrich, Saint, Bishop of Augsburg, b. at Kyburg, Zurich, Switzerland, in 890; d. at Augsburg, 4 July, 973. He was the son of Count Hucpald and Theotira, and was connected with the dukes of Alamannia and the imperial family of the Otos. As a child he was sickly; when old enough to learn he was sent to the monastery of St. Gall to be proved to be an excellent scholar. He resolved to enter the priesthood, but was in doubt whether to enter the Benedictine Abbey of St. Gall or to become a secular priest. He was sent before April, 910, for his further training to Adalbero, Bishop of Augsburg, who made him a chamberlain. On Adalbero's death (28 April, 910), Ulrich returned home, where he remained until the death of Bishop Hiltine (28 Nov., 923). Through the influence of his uncle, Duke Burchard of Alamannia, and other relatives, Ulrich was appointed Bishop of Augsburg by King Henry, and was consecrated on 28 Dec., 923. He proved himself to be a ruler who united severity with gentleness. He sought to improve the low moral and social condition of the clergy, and to enforce a strict adherence to the laws of the Church. Ulrich hoped to gain this end by periodical visitations, and by building, as many churches as possible, to make the blessings of religion more accessible to the common people. His success was largely due to the good example he set his clergy and diocese. For the purpose of obtaining means, he made two journeys to Rome, in 910, and in 952 or 953.

Ulrich demanded a high moral standard of himself and others. A hundred years after his death, a letter apparently written by him, which opposed celibacy, and supported the marriage of priests, suddenly appeared. The forger of the letter counted on the opinion of the common people, who would regard a bishop who was known for the rigour of his morals, upheld the marriage of priests (cf. "Analecta Boll", XXVIII, 1908, 474; against the letter, H. Thurston, "A Saint averse to Celibacy", in "The Month", CXI, 1908, 811-13). Ulrich was also steadfastly loyal, as a prince of the empire, to the emperor. He was one of the most important props of the empire at the time of the death of the imperial prince, and of the ecclesiastical princes. He constantly attended the judicial courts held by the king and in the diets. He even took part in the Diet held on 29 Sept., 972, when he defended himself against the charge of nepotism in regard to his nephew Adalbero, whom he had appointed his coadjutor on account of his own illness and desire to retire to a Benedictine abbey. During the struggle between Otto I and his son Duke Ludolf of Swabia, Ulrich had much to suffer from Ludolf and his partisans. When in the summer of 973, the emperor and Ludolf met and resolved to await空間 the issue, Ulrich remained at Hiltersen in Swabia, at the last moment Ulrich and Bishop Hartbert of Chur were able to mediate between Otto and Ludolf. Ulrich succeeded in persuading Ludolf and Konrad, Otto's son-in-law, to ask the king's pardon on 17 Dec., 954. Before long the Magyars entered Germany, plundering and burning as they went, and advanced as far as Augsburg. The emperor met with them at the mouth of the Danube; it was due to Ulrich's ability and courage that Augsburg was able to hold out against the besiegers until the Emperor Otto arrived. On 10 Aug., 955, a battle was fought in the Lechfeld, and the invaders were finally defeated. The later assertion that Ulrich himself took part in the battle is incorrect, as Ulrich could not have broken through the ranks of the Magyars, who were south of him, although north of the emperor.

As morning dawned on 4 July, 973, Ulrich had ashes strewn on the ground in the shape of a cross; the cross was sprinkled with holy water, and he was placed upon it. His nephew Richwin came to it in a panic and grieved for his death as if the sun rose, and immediately upon this, while the clergy sang the Litany, St. Ulrich passed away. His body was placed in the Church of St. Afra, which had been rebuilt by him. The burial was performed by Bishop Wolfgang of Ratibson. Many miracles were wrought at his grave; and in 983, he was canonized by John XV. As early as the tenth century, there is a rich collection of miracles under the name of the cathedral library of Einsiedeln (no. 261, fol. 140). Other miniatures are at the Royal Library of Munich, in manuscripts of 1454 (Cam., 94, fo. 265, and Cam., no. 751).

Schmid, St. Ulrich Bischof von Augsburg 890-973 (Augsburg, 1901), enlarged in 1904 by a full bibliography including the early authorities; a readable illustrated work which does not claim to be a scholarly production. The lives of the above is Ulrich's "Liber hagiographicus" written by a contemporary, Gerhardus, prior of Augsburg, in Mon. Germ. Hist. Societ. IV, 379-418; Migne, P. L., CXXXV, IV, 947-999; GRANDEN, Geschichtschrift der heiligen Verurteilten zu Augsburg (Leipzig, 1846); GERARD, 996-999, previously Abbots of Ellwangen, and of the monk Birko von Freim, afterwards Abbots of Reichenau, H. BERNHARD, Gesch. Oudleston, 1897 and 1905. Ulrich is in the twelfth century by the monk ALBERTUS in Codice latini monacensis, 91, fol. 279-279; ed. SCHNEIDER, Sts. Ulrich Leben und Wirken, 1895. Biographies of Ulrich are at Bade (S. VIII, 32, eleventh century), at Einsiedeln (no. 261, fol. 140-140, ninth and eleventh centuries), and at St. Gall (no. 55, eleventh century); ed. POTZTAVS, Bibliotheca historica mediæ æri, II (Berlin, 1890), 1021-15; ANS, S.II, 1901-15; BAUMANN, Gesch. des Albingens, I (Regensburg, 1844); Bibliotheca hagiographica latina antiqua et media adhibit, ed. Ulrich Schmid.
Ulrich of Bamberg, (Udalricus Babenbergensis), a cleric of the cathedral church of Bamberg, of whom nothing more is known than that he lived about 1100 at Bamberg. He is probably identical with the Ulrich of Bamberg of the same name (died 7 July, 1127), who is often mentioned in official documents and who bestowed large benefits on the monastery of Michelsberg. Ulrich's work is called "Codex epistolae, continens variorum pontificum et imperatorum Romanorum, ut et S.R.E. cardinalium et S.R.L. principium ecclesiasticorum seculariumque episcoporum...". This collection of documents was completed in 1125 and dedicated to Bishop Gebhard of Wurzburg. It contains letters from the year 900 on and was undoubtedly intended for the training of chancellors and state men, giving examples as models for the form of letters and public documents. Numerous important letters and charters of that period, which are preserved in it, offer rich material for the history of the relations between the emperors and popes; in particular the letters exchanged by Emperor Lothair, Henry the Proud, and Innocent I give an animated and instructive picture of conditions at that time. These letters also show how the state men at the episcopal courts and probably also the bishops were trained. After the collection had been completed, Ulrich added several letters that extend to 1134; these additional documents are generally addressed to Bishop Otto of Bamberg. The work has been well edited by Jaffé in the "Bibliotheca rerum germanicarum", V (Berlin, 1869).

PATRICK SCHLAGER

Ulrich of Richenhal, chronicler of the Council of Constance, of birth unknown; died about 1438. Ulrich was a citizen of Constance, well educated and a good Latinist. He was a landowner and a layman, perhaps a son of the town-clerk of Constance, Johannes Richenhal, who lived in the second half of the fourteenth century. During the session of the Ecumenical Council of Constance, Ulrich frequently came into connexion with the fathers assembled. He met the papal delegates who had to provide quarters for the members of the council. He was employed in business matters by princes who were present in the city during the council, and a bishop lived in his house. Ulrich followed the council, the great events that took place in it, the festivities, and all the celebrations of his native town; he wrote in the German dialect of Constance an exact and careful account of all, introducing much statistical matter. This chronicle is preserved in several manuscripts, of which one at St. Petersburg is in Latin. The manuscripts contain coats-of-arms and other illustrations valuable for the history of civilization. H. Sevin edited a hagiographic reproduction (Karlsruhe, 1881) of the Aulendorfer manuscript, the best one. A photographic reproduction has also been issued (Stuttgart, 1890) of a manuscript at Constance. Back prepared the best edition of the text, which appeared in the "Bibliothek der literarischen Vereins", CLXVIII (Stuttgart, 1882). Ulrich's life is edited by the Russian Archaeological Society (St. Petersburg, 1874).

J. P. KIRSCH

Ulrich of Zell, Saint (Willehad), called also of Cluny, and of Ratibon, b. at Ratibon, at the beginning of 1029; d. at Zell, probably on 10 July, 1063. Feast, 11 July (10). Two lives of him are extant: the first, written anonymously c. 1100 by a monk of Zell at the request of Adalbert, a recluse near Ratibon; the other, also anonymous, written between 1109 and 1130. Particulars of his life are also contained in his writings. His parents, pious and rich, were Bernhold and Bucea, niece of Bishop Gebhard II. Ulrich probably received his education at St. Emmeram, but in 1044 he was called to the court of his godfather, Henry IV, and acted as page to the Emperor. Ordained deacon by his uncle Nider, Bishop of Freising, he was made archdeacon of the cathedral. On his return from a journey to Rome he distributed his possessions to the poor, made a pilgrimage to the Holy Land, and, after another short visit to Rome, entered the Abbey of Cluny in 1061, during the reign of St. Eugenius III. Ulrich was an important figure, and, after his death, made his profession, was ordained priest and appointed confessor to the convent at Mareigny in the Diocese of Autum, and prior of the community of men in the same place. Here he lost an eye and was obliged to return to Cluny.

He was then named prior at Peterlingen (Payerne) in the Diocese of Lausanne, but on account of troubles caused by Bishop Burchard von Oltingen, a partisan of Henry IV, Ulrich again went to Cluny, where he acted as adviser to his abbot. A nobleman had donated to Cluny some property at Grünningen near Breisach, and Ulrich was sent to inspect the place and eventually to lay the foundation of a monastery. Not finding the locality suitable, he with his monks in 1076 retired to Zell (Sennel). He was there for some years, where the report of his virtues soon brought him many disciples. He enjoyed the esteem of Blessed Gebhard III, Bishop of Basle, who frequently visited him. In 1090 he established a convent for nuns at Böolswiller (now Bollsweiler), about a mile from Zell. God granted him the gift of miracles. The last two years of his life he was in 1089 prior of the Cluniacen- nish cloister, but three years later his body was brought into the church. His feast is celebrated for the first time 14 July, 1139. His life of Hermann von Zähringen, Margrave of Baden, later a monk of Cluny, is also lost. His "Consuetudines cluniensae" (in P. L., CXLIX, 657) were composed at the request of William, Abbot of Hirsau, in three books. The first two, written between 1079 and 1082, treated of liturgy and the education of novices; the third, written not later than 1087, speaks of the government of monasteries.

FRANCIS MERSHMAN.

Ultran of Ardbrackan, Saint, Ireland, was the maternal uncle of St. Brigid, and collected a life of that great Irish saint for his pupi, St. Brogan Cloen of Rostuire, in Ososyri. There seems to be some difficulty in his chronology insomuch as the assumption of his relation to St. Brigid must involve an extraordinary longevity, namely 150 years, because his death is not chronicled till 657. Windisch, however, explains away the seeming inconsistency. The Irish Annals describe St. Ultran as of the royal race of O'Connor, and he succeeded St. Breccan as Abbot-Bishop of Ardbreckan about the year 570. From O'Connor's Psalter, the Cluniac Library of the Holy Land, and fed thousands of poor students from all parts of Ireland. Of his literary powers there are several specimens, among others, lives of St. Patrick and St. Brigid. His exquisite Latin hymn of the latter saint, commencing "Christus in nostra insula", is incorporated in the Solosmes Chant books. He was also an accomplished illuminator of books. His exact year of death is uncertain, the various annals giving 653, 656, 657, and 662, but probably we are safe in following the "Annals of Ulster", wherein his obit is recorded under the year 657. He died on 1 Sept., on which day his feast has always been celebrated. St. Ultran's Well is still at Ardbrackan.
Ultramontanism, a term used to denote integral and active Catholicism, because it recognizes as its spiritual head the pope, who, for the greater part of his sphere, is a dweller beyond the mountains (ultra montes), that is, beyond the Alps. The term “ultramontane,” indeed, is relative: from the Roman, or Italian, point of view, the French, the Germans, and all the other peoples north of the Alps are ultramontanes, and technical ecclesiastical language actually applies the word in precisely the same sense as it was formerly used in Italian, “Ulmontanes” was said to be a papa ultramontane. In this sense the word occurs very frequently in documents of the thirteenth century; after the migration to Avignon, however, it dropped out of the language of the Curia.

In a very different sense, the word once more came into use after the Protestant Reformation, which was, among other things, a triumph of Ultramontanism, based on political principles, which was formulated in the maxim: Cujus regio, ejus religio. Among the Catholic governments and peoples there gradually developed an analogous tendency to regard the papacy as a foreign power; Gallicanism and all forms of French and German regionalism affected to look upon the Holy See as an alien power, for the sake of the political position of each and every nation. This name of Ultramontane the Gallicans applied to the supporters of the Roman doctrines—whether that of the monarchial character of the pope in the government of the Church or of the infallible pontifical magisterium—immediately as the latter were supposed to run counter to the national interests of the Church which resided ultra montes. This use of the word was not altogether novel; as early as the time of Gregory VII the opponents of Henry IV in Germany had been called Ultramontanes (ultramontani). In both cases the term was intended to be opprobrious, or at least to convey the implication of a feeling in attachment to the pope, to the Church’s old principle, or to his national Church.

In the eighteenth century the word passed from France back to Germany, where it was adopted by the Febronians, Josephinists, and Rationalists, who called themselves Catholics, to designate the theologians and the faithful who were attached to the Holy See. Thus it acquired a much wider significance, as a term applicable to all who adhered to the Church’s teaching. In its modern meaning, the “Ultramontane” is the antagonist of the atheists as much as the non-Catholic believers, if not more—witness the Bismarckian Kulturkampf, of which the National Liberals rather than the orthodox Protestants were the soul. Thus the word came to be applied more especially in Germany from the earliest decades of the century and onward to all those who were more or less in conflict between Church and State the supporters of the Church’s liberty and independence as against the State are called Ultramontanes. The Vatican Council naturally called forth numerous written attacks upon Ultramontanism. When the Centre was formed as a political party it was called by preference the Ultramontane Reichsverbandhek came into existence to combat the Centre and, at the same time, Catholicism as a whole.

As our present purpose is to state what Ultramontanism is, it is beside our scope to expand the Catholic doctrine on the power of the Church and, in particular, of the pope, whether in spiritual or in temporal matters, these subjects being treated elsewhere under their respective titles. It is sufficient here to indicate what our adversaries mean by Ultramontanism. For Catholics it would be superfluous to ask whether Ultramontanism and Catholicism are the same thing: assuredly, those who combat Ultramontanism are in fact combatting Catholicism, even while they disclaim the desire to oppose it. One of the recent adversaries of Ultramontanism among Catholics was a Professor of Canon Law in the University of Louvain ("Spectatorbrief"), II, quoted in the article Ultramontanismus in "Realencykl. für prot. Theol. u. Kirche," ed. 1905: "I. An Ultramontane is one who sets the idea of the Church above that of religion;" 2. . . who substitutes the pope for the Church; 3. . . who believes that the kingdom of God is of this world and that, as medival curialism asserted, the power of the keys, given to Peter, included temporal jurisdiction also; 4. . . who believes that religious conviction can be imposed or broken with material force; 5. . . who is ever ready to sacrifice to an exterminatory authority the plain teaching of his own conscience." According to the definition given in Lechtenberger, Encycl. des sciences religieuses (ed. 1893): "By the character of the Ultramontane he is manifested chiefly in the arduous with which it combats every movement of independence in the national Churches, the condemnation which it visits upon works written to defend that independence, its denial of the rights of the State in matters of government, of ecclesiastical administration and ecclesiastical control, the tenacity with which it has prosecuted the teaching of the ultramontans in the universities, in Kapellen and societies, and with which it incessantly advocates the restoration of his temporal power as a necessary guarantee of his spiritual sovereignty."

The war against Ultramontanism is accounted for not merely by its adversaries’ denial of the genuine Catholic doctrine of the Church’s power and that of her supreme ruler, but also and even more, by the consequences of that doctrine. It is altogether false to attribute to the Church either political aims of temporal dominion among the nations or the pretense that the pope can at his own pleasure dispose sovereigns that the Catholic must, even in purely civil matters, subordinate his obedience towards his own sovereign to that by which he owes to the pope, that the true fatherland and the best interest of the Church and the popes would agree. There are either pure inventions or malicious travesties. It is neither scientific nor honest to attribute to "Ultramontanism" the particular teaching of some theologian or some school of times past; or to invoke certain facts in medieval history, which may be explained by the peculiar conditions, or by the rights which the popes possessed in the Middle Ages (for example, their right in conferring the imperial crown). For the rest, it is sufficient to follow attentively, one by one, the struggle kept up in their journals and books to be convinced that this warfare by the Rationalist-Protestant-Modernist coalition against "Clericalism" or "Ultramontanism" is, fundamentally, directed against integral Catholicism, that is, against equal, anti-Hamitic, anti-liberal, and liberalizing Catholicism. (See also STATE AND CHURCH; PONTIFICE; LATINISM; FERMIANISM; SYLLABUS.)

The following works are all opposed to Ultramontanism: DOLWING, Kleriker, Schriften, ed. REICH (1880); IRON, Kirche und Kirchenrat, Pamphlet und Kirchenrat (Ratisbon, 1881); VON HORNBERG, Die Kulturkampf (2nd ed., 1889); GOTZ, Der Ultramontanismus als Weltanschauung (1888); QUINSENT, L’Ultramontanisme, ou l’Église romane et la société moderne (Paris, 1844); LATREVILLE, Joseph de Maistre et la papauté (Paris, 1863).
Unam Sanctam (Lat., the One Holy, i. e., Church), the Bull on papal supremacy issued 18 November, 1302, by Boniface VIII during the dispute with Philip the Fair, King of France. It is named from its opening words (see Boniface VIII, Vol. II, 667). The Bull was promulgated in connexion with the Roman Council of October, 1302, at which it had probably been discussed. It states that Pope Boniface VIII himself revised the Bull; still it also appears that Egadius Colonna, Archbishop of Bourges, who had come to the council at Rome notwithstanding the royal prohibition, influenced the text [Krause in "Österreichische Vierteljahrschrift für Kath. Theol.", I (1862), 1 sqq.]. The original of the Bull is no longer in existence; the oldest registers of Boniface VIII in the Vatican archives ("Reg. Vatic.") I, fol. 387; cf. the facsimile in Denifle, "Specimina palaeographica regestorum rom. pont.", (Rome, 1888), tab. 46. It was also incorporated in the "Corpus juris canonici" ("Extravag. Comm."), I, vii; ed. Friedrich, II, 1245.

The genuineness of the Bull is absolutely established by the entry of it in the registers of the papal archives. The following objection is raised by Dambberger ("Synchronistische Geschichte der Kirche und der Welt im Mittelalter", XII (Ratisbon, 1851), 442 sqq.; "kritikheft", 118 sq.), and, following Dambberger, by Mury ("La bulle Unam Sanctam" in "Revue des questions historiques"). The objections are refuted by the external testimony. At a later date Mury withdrew his opinion ("Revue des questions historiques", XVI (1889), 253-257).

The Bull lays down dogmatic propositions on the unity of the Church, the necessity of belonging to it for the attainment of eternal salvation, the position of the head of the Church, the duty of submission to the pope in order to belong to the Church and thus to attain salvation. The pope further emphasizes the higher position of the spiritual in comparison with the secular order. From these premises he then draws conclusions concerning the relation between the spiritual power of the pope and the secular authorities. The Spirituales are the head of the Church, and the duty of submission to the pope in order to belong to the Church and thus to attain salvation. The pope further emphasizes the higher position of the spiritual in comparison with the secular order. From these premises he then draws conclusions concerning the relation between the spiritual power of the pope and the secular authorities. The Spirituales are the head of the Church, and the duty of submission to the pope in order to belong to the Church and thus to attain salvation. The pope further emphasizes the higher position of the spiritual in comparison with the secular order.

The unity of the Church and its necessity for salvation are declared and established by various passages from the Bible and by reference to the one Ark of the Flood, and to the seamless garment of Christ. The pope then affirms that, as the unity of the body of the Church so is the unity of its head established in Peter and his successors. Consequently, all who wish to belong to the fold of Christ are placed under the dominion of Peter and his successors. When, therefore, the Greeks and others say they are not subject to the authority of Peter and his successors, they thus acknowledge that they do not belong to Christ's sheep.

When follow some principles and conclusions concerning the spiritual and the secular power: (1) Under the control of the Church are two swords, that is two powers, the expression referring to the medieval theory of the two swords, the spiritual and the secular. This is substantiated by the customary reference to the swords of the Apostles at the arrest of Christ (Luke, xxii, 38; Matt., xxvi, 52). (2) Both swords are in the power of the Church; the spiritual is wielded by the Church by the hand of the clergy; the secular is to be employed for the Church by the hand of the civil authority, but under the direction of the spiritual power. (3) The one sword must be subordinate to the other; the earthly power must submit to the spiritual authority, as this has precedence on account of its greatness and sublimity; for the spiritual power has the right to establish and guide the secular power, and also to judge it when it does not act rightly. When, however, the secular power goes astray, it is judged by the spiritual power; a lower spiritual power is judged by a higher, the highest spiritual power is judged by God.

(1) This authority, although granted to man, and exercised by man, is not a human authority, but rather a Divine one, granted to Peter by Divine commission and confirmed by several succeeding popes. Pope Boniface VIII is one of the popes who opposes this power of the pope as opposed to the law of God and seems, like a Manichean, to accept two principles: "Now, therefore, we declare, say, determine and pronounce that for every human creature it is necessary for salvation to be subject to the authority of the Roman pontiff" (Porro subesse Romano Pontifici omni humanae creaturae declaramus, defineamus, definitur, et pronuntiamus omne esse de necessitate salutis)." The Bull is universal in character. As its content shows, a careful distinction is to be made between the fundamental principles concerning the Roman primacy and the declarations as to the application of these to the secular power and its representatives. In the latter case a clear logical and historical distinction exists. The last sentence is noted as its real definition: "Declaratio quod subesse Romano Pontifici est omni humanae creaturae de necessitate salutis" (It is here stated that for salvation it is necessary that every human creature be subject to the authority of the Roman pontiff). This definition, the meaning and the conclusion (which is clearly evident from the connexion with the first part) is the necessity of the one Church for salvation, and on the pope as the one supreme head of the Church, expresses the necessity for everyone who wishes to attain salvation of belonging to the Church, and therefore of being subject to the authority of the pope in all religious matters. This has been the constant teaching of the Church, and it was declared in the same sense by the Fourth Lateran Council (Ecumenical Council of the Lateran, in 1516; "De necessitate esse salutis omnes Christi filiæs Romano Pontifici subesse") (That it is of the necessity of salvation for all Christ's faithful to be subject to the Roman pontiff). The translation by Berchtold (see below) of the expression "humanae creaturae de necessitate salutis" is undoubtedly wrong. The Bull also proclaims the subject of the secular power as the one higher in rank, and draws from it the conclusion that the representatives of the spiritual power can install the possessors of secular authority and exercise judgment over their administration, should it be contrary to Christian law.

This is a fundamental principle which had grown out of the entire development in the early Middle Ages of the central position of the papacy in the Christian national family of Western Europe. It had been expressed from the eleventh century by theologians like Bernard of Clairvaux and John of Salisbury, and by popes like Nicholas II and Leo IX. Boniface VIII gave it precise expression in opposing the secular authorities. The main propositions are drawn from the writings of St. Bernard, Hugh of St. Victor, St. Thomas Aquinas, and letters of Innocent III. Both from these authorities and from declarations made by Boniface VIII himself, it is also evident that the jurisdiction of the spiritual power over the secular has for its basis the concept of the Church as guardian of the Christian law of morals, hence her jurisdiction extends as far as this law is concerned. Consequently, when King Philip protested, Clement V was able, in his Brief "Mernit", of 1 February, 1306, to declare that the French king and France were to suffer no disadvantage on account of the Bull "Unam sanctam", and that the issuing of this Bull had not made them subject to the authority of the Roman Church in any other manner than...
formally. In this way Clement V was able to give France and its ruler a guarantee of security from the ecclesiastical-political results of the opinions elaborated in the Bulle, while its dogmatic doctrines were aimed against the Gallican party against the authority of the Roman See, and also in the writings of non-Catholic authors against the definition of Papal Infallibility, the Bull "Unam Sanctam" was used against Boniface VIII as well as against the papal primacy in a manner not justified by its content. The statements concerning the relations between the spiritual and the secular are of a purely historical character, so far as they do not refer to the nature of spiritual power, and are based on the actual conditions of medieval Western Europe.

Ungava, a Canadian territory lying north of the Province of Quebec, detached (1876) from the Great Labrador peninsula. Ungava, whose area (354,961 sq. m.) surpasses that of Quebec (351,783 sq. m.), was annexed to the latter province (1912) by the Federal Government. It is bounded on the west by Hudson's Straits, comprising Ungava Bay, on the north-east by Hudson Bay, on the south by the Davis Strait, on the landward side by Ungava Mountains, and by James' Bay. This land was visited by the Basques, by Cabot (1498), Weymouth (1602), Hudson (1610), and by the Jesuits Dalbo (1661) and Albanel (1672), on their journey by land to Hudson Bay. During the last century the Oblates of Mary immaculate, Kabel (1806 and 1870) and Lacasse (1875), evangelized the Indians of the interior. The Moravian Brothers began proselytizing the Esquimaux in 1770. Ungava now depends spiritually on the Vicariate Apostolic of the Gulf of St. Lawrence. Its immense forest and mineral resources, fertile soil, and unparallelled hydraulic power reveal a bright prospect for colonization and industry. Railway lines are in preparation between Quebec and Western Canada. In 1898 Hudson Bay explored by a population of 5113 souls, comprising the aborignes (Esquimaux on the coast, Montagnais and Nauscapius in the interior) and whites.

Genest, Ungava in Bulletin de la société de géographie de Québec (May, 1910).

Uniat Greek Church. See Greek Church, Subtitle III.

Uniformity Acts.—These statutes, passed at different times, were vain efforts to secure uniformity in public worship throughout England. But as the principle of unity had been lost when communion with the See of Peter was broken off, all such attempts were foredoomed to failure. They were resisted by Catholics on the one hand and the Nonconformists on the other. The first of these Acts (2 and 3 Edward VI, c. b) was called "An Act for Uniformity of Service and Administration of the Sacraments throughout the Realm." After a long period of discussion which culminated in the drawing up of "The Book of the Common Prayer and Administration of the Sacraments, and other rites and ceremonies of the Church after the use of the Church of England," and the desirability of having one uniform rite and order in use in all churches through England and Wales, the statute enacted that after Pentecost, 1549, all clergy shall be bound to follow the same all public services. Then follow penalties against such of the clergy as shall substitute any other form of service, or shall not use the "Book of Common Prayer," or who shall preach or speak against it. Further penalties are decreed against all who in plays or songs shall mock the said book. Private persons were allowed to use the office-book only in Latin, Greek, or Hebrew in their own private devotions, and liberty was reserved to the universities to have the service in their college chapels conducted in any of these tongues. There is nothing in this Act to enforce attendance at public worship, but the provisions of the Act apply to every kind of public worship or "open prayer," as it was called, which might be held in the place. The term "service" is here defined "as prayer that which is for others to come unto or near, either in common churches or private chapels or oratories, commonly called the service of the Church." This Act was confirmed by 5 and 6 Edw. VI, c. 1, repealed by 1 Mary, sess. 2, c. 2, revived by 1 Eliza., c. 2, and 1 James I, c. 25, and made perpetual under the title of "An Act for the Uniformity of Service and Administration of the Sacraments throughout the Realm" by 5 and 6 Anne, c. 5 (or c. 8 according to some computations).

The next of these Acts (3 and 1 Edward VI, c. 10) was passed in 1549 under the title "An Act for the abolishing and putting away of divers books and images." The preamble of the Act recites that the king had of late set forth and established by authority of Parliament and act of the Act of Uniformity a book entitled the "Book of Common Prayer and Administration of the Sacraments, and other rites and ceremonies of the Church, after the Church of England." The first section then suppresses and forbids all books or writings in Latin or English used for church services other than such as are appointed by the king's majesty. And all such books are to be burned by the mayor and magistrates of all authorities and delivered to the bishop to be destroyed. But the first "First Prayer-book" of Edward VI did not satisfy the reformers, it was soon supplanted by the "Second Prayer-book", issued in 1552 and also sanctioned by Act of Parliament. This Act of Uniformity is the first to be expressly called by that name, being entitled "An Act for the Uniformity of Service and Administration of Sacraments throughout the realm" (5 and 6 Edw. VI, c. 1). It goes much further than the previous Act, for it enforces church attendance on Sundays and holy days. After the preamble declaring the desirability of uniformity, the second section enacts that after 1 November, 1552, all persons shall attend the common prayer twice on Sunday and four times on other days, and be present at the common prayer, preaching, or other service, under pain of punishment by the censures of the Church. The archbishops and bishops are charged with the task of enforcing the Act (sect. 3); and they are to inflict the censures of the Church on offenders (sect. 4). The fifth section refers to the new "Book of Common Prayer", to which had been added a "Form and Manner of making and consecrating archbishops, bishops, priests, and deacons," and declares that all the provisions of the previous Act shall apply to it. By the sixth and last section any person convicted of being present at any other form of common prayer or administration of the sacraments shall be imprisoned for six months for the first offence, one year for the second, and shall suffer
imprisonment for life for the third. The Act was to be read in church four times during the following year and once a year afterwards. It was repealed by 1 Mary, sess. 2, c. 2, but revived with certain alterations by 1 Eliz., c. 2, and confirmed by 1 James I, c. 25. It was made perpetual so far as it relates to the Established Church of England by 5 Anne, c. 5 (or c. 8 according to the chronologically improbable table of statutes).

Queen Mary contended herself with repealing these statutes of Edward and thus restoring the ancient liberty. No fresh Uniformity Act appeared on the statute book till Protestantism returned under Elizabeth. Then the well-known "Act for the Uniformity of Common Prayer and Service in the Church and Administration of the Sacraments and other Ceremonies of the Church" was passed. The first effect of this statute was to repeal the Act of Mary as and from 21 June, 1559, and to restore the "Book of Common Prayer" from that date. The "Second Prayer-book" of Edward VI with certain additions and alterations was then used to be found, and any clergyman neglecting to use it or substituting another in its stead was made liable to the penalties which increased with each offence till on the third conviction they were committed to deprivation from all spiritual preferment and imprisonment for life. Similarly severe penalties culminating in the forfeiture of all goods and chattels and imprisonment for life were decreed against all persons who should use in the "Book of Common Prayer" a service or prayerewart was not in accordance with the Act. Attendance at church service on Sunday at the parish church was rendered compulsory, and any person absent without reasonable cause was to pay a fine of twelve pence, which would be equivalent to ten shillings in modern English money, or two dollars and a half. Long and extensive provisions for enforcing the Act are included, and one of them is for uniformity in the uniformity of the Church and ministers. This enacts that the same ordinances shall be retained "as was in this Church of England, by authority of Parliament, in the second year of King Edward VI".

This Act proved a powerful weapon against the Catholics, who could not conscientiously obey it, and it was used confederate as a means of pressuring and impoverishing them. So effective was it that it needed no amending, and a century elapsed before the next Uniformity Act was passed. This was the celebrated Act of Charles II (13 and 14 Chas. II, c. 4; according to some computations it is quoted as 15 Chas. II, c. 4). It was followed by a short Act of Relief (15 Chas. II, c. 13). This Act is of little use to Catholics, for it was practically designed to regulate the worship of the Church of England, and so far as Catholics were concerned it added nothing to the provisions of the Edwardine and Elizabethan Acts.

Relief from the Acts of Uniformity was granted to Catholics by the Second Catholic Relief Act (31 Geo. III, c. 32), though the benefits of the Act were limited to those who made the declaration and took the oath under the Act. So much of this statute as related to the declaration and oath was repealed in 1871 by the Promissory Oaths Act (31 and 32 Vict., c. 18). There were certain restrictions and conditions as to Catholic places of worship, but these were changed in 1882 by the Act 2 and 3 Wm. IV, c. 115, by which Catholics were placed on the same footing as Protestants and dissenters in this and some other respects. Incidentally, this statute made it compulsory to certify Catholic chapels to the Anglican bishop and archdeacon and the quarter sessions. But this restriction was abolished in 1855 by 18 and 19 Vict., c. 81, which provided that such buildings could be notified to the registrar-general on application. Even this provision has long fallen into disuse and it is now common for Catholic churches except for the solemnisation of marriage. Thus for Catholics, as for Nonconformists, the provisions of the Uniformity Acts have been gradually repealed and now they apply only to the Established Church of England; but to that extent they are still on the statute-books and as late as 1872 a statute entitled "An Act for the Amendment of the Act of Uniformity" was passed (33 and 34 Vic., c. 55). As long as the Church of England is the established religion its worship will be regulated by statute, so that Acts of Uniformity in one shape or another will remain part of the English code of law unless, and until, disestablishment takes place.

Edwin Burton.

Unigenitus, a celebrated Apostolic Constitution of Clement XI, condemning 101 propositions of Pasquier Quesnel. In 1671 Quesnel had published a book entitled "Abregé de la morale de l'Evangile". It contained the Four Gospels in French, with short notes explanatory of the text, at the same time serving as a rule for cardinal, was too proud to withdraw the approbation which he had inadvertently given to the book while Bishop of Châlons. While the first edition of the work contained only a few Jansenistic errors, its Jansenistic tendency became more apparent in the second edition, and in its complete form, as it appeared in 1693, it was pervaded with practically all the errors of Jansenism and was condemned by the Holy See in their dioceses, and Clement XI condemned it in his Brief, "Universi Dominici Gregis", dated 13 July, 1708. The papal Brief was, however, not accepted in France because its wording and its manner of publication were not in harmony with the "Gallican Liberties". Nollais, who had become Archbishop of Paris and Cardinal, was too proud to withdraw the approbation which he had inadvertently given to the book while Bishop of Châlons, and Jansenism again raised its head. To put an end to this situation several bishops, and especially Louis XIV, asked the pope to issue a Bull in place of the Brief which the French Government did not accept. The Bull was to avoid every expression on the question of the "tendances" and to be submitted to the French Government before publication. To avoid further scandal, the pope yielded to these humiliating conditions, and in Feb., 1712, appointed a special congregation of cardinals and theologians to cull from the work of Quesnel such propositions as were deserving of ecclesiastical censure.

The most influential member of this congregation was Cardinal Fabrini. It took the congregation eighteen months to perform its task, the result of which was the publication of the famous Bull "Unigenitus Dei Filius" at Rome, 8 Sept., 1713. The Bull begins with the warning of Christ against false prophets, especially such as "secretly spread evil doctrines under the guise of piety and virtue which will be regulated by statute, so that the Church of England is the established religion its worship will be regulated by statute, so that Acts of Uniformity in one shape or another will remain part of the English code of law unless, and until, disestablishment takes place. Unigenitus, a celebrated Apostolic Constitution of Clement XI, condemning 101 propositions of Pasquier Quesnel. In 1671 Quesnel had published a book entitled "Abregé de la morale de l'Evangile". It contained the Four Gospels in French, with short notes explanatory of the text, at the same time serving as a rule for

The Act for the Amendment of the Act of Uniformity" was passed (33 and 34 Vic., c. 55). As long as the Church of England is the established religion its worship will be regulated by statute, so that Acts of Uniformity in one shape or another will remain part of the English code of law unless, and until, disestablishment takes place.
in the famous propositions of Jansenius. The first forty-three propositions repeat the errors of Baini and Jansenius on grace and predestination, such as grace works with omnipotence and is irresistible; without grace man can only commit sin; Christ died for the elect only. The succeeding twenty-eight propositions concern the doctrine of God and charity; grace is not supernatural evil; without supernatural love there can be no hope in God, no obedience to His law, no good work, no prayer, no merit, no religion; the prayer of the sinner and his other good acts performed out of fear of punishment are only new sins.

The last thirty propositions (72-101) deal with the relationship of the Church to the State. The Church comprises all the just and the elect; the reading of the Bible is binding on all; sacramental absolution should be postponed till after satisfaction; the chief pastors can exercise the Church's power of excommunication only with the consent, at least presumed, of the whole body of the Church; unjust excommunication does not exclude the excommunication of the Union with the Church. Besides condemning these 101 propositions, the Bull states that it finds fault with many other statements in the book of Quesnel, without, however, specifying them, and, in particular, with the translation of the New Testament, which, as the Bull reads, has been censurably altered (damnabiliiter citation). The Bull also threatened to deprive Noailles of the purple.

Louis XIV received the Bull at Fontainebleau on 24 Sept., 1713, and sent a copy to Cardinal Noailles, who, probably before receiving it, had revoked, on 28 Sept., his approbation of the "Moral Reflections" published in 1695. The king also ordered the assembly of thebishops to consider the Bull and designated the acceptance of the Bull as the purpose of the meeting. At the first session, on 16 Oct., Noailles appointed a committee presided over by Cardinal Rohan of Strasburg to decide upon the most suitable manner of accepting the Bull. Noailles, who took part in a few sessions of the committee, attempted to prevent an unconditional acceptance of the Bull by the committee, and when his efforts proved fruitless he would have withdrawn from the assembly if the king had not ordered him to remain. The report of the committee was for an unconditional acceptance of the Bull, and at the session of the assembly on 22 Jan., 1714, the report was accepted by a vote of forty against nine. By order of the king, the Bull was read in the chapter house of Notre Dame and by the Sorbonne on 5 March. A pastoral instruction of Noailles, forbidding his priests under pain of suspension to accept the Bull without his authorization, was condemned by Rome. Of the bishops not present at the assembly, seven joined the opposition, while the remaining seventy-two accepted the Bull upon the condition that the exception of Bishop de La Broue of Mirepoix, also condemned the book of Quesnel. As a pretext of their non-acceptance of the Bull, they gave out that it was obscure. Ostensibly they postponed their acceptance only until the pope would explain its obscurity by special declarations. It is manifest that the pope could not accept these propositions without impairing the authority of the Apostolic See.

It was the intention of Clement XI to summon Noailles before the Curia and, if need be, depose him of the purple. But the king and his councillors, seeing in this mode of procedure a trespass upon the "Gallican Liberties", proposed the convocation of a national council which should judge and pass sentence upon the Bull. The pope did not relish the idea of convoking a national council which might unnecessarily protract the quarrel and endanger the papal authority. He, however, drew up two Briefs, the one demanding the unconditional acceptance of the Bull by Noailles within fifteen days, on pain of losing the purple and incurring canonical punishment, the other paternaly pointing out the gravity of the cardinal's offence and exhorting him to go hand in hand with the Apostolic See in opposing the enemies of the Church. Both Briefs were put in the hand of the king, with the request to deliver the less severe in case there was well-founded hope of the cardinal's speedy submission, but the more severe if he continued in his obstinacy. On the one hand, Noailles gave no hope of submission, while, on the other, the more severe of the Briefs was rejected by the king as subversive of the "Gallican Liberties." Therefore, the pope then proposed the convocation of a national council but died (1 Sept., 1715) before it could be convened. He was succeeded as regent by Duke Philip of Orleans, who favoured the opponents of the Bull. The Sorbonne passed a resolution, 4 Jan., 1716, annulling its previous registration of the Bull; and twenty-two Sorbonnists who protested were removed from the file of the 16th session when Bishops of Nantes and Reims now also rejected the Bull, the former on 2 Jan., the latter on 26 June. In consequence Clement XI withdrew from the Sorbonne all the papal privileges which it possessed and deprived it of the power of conferring academic degrees on 18 Nov. He had sent two Briefs to France on 1 May, one addressed to the king, and the other addressed to favouring the opponents of the Bull; the other, addressed to the opposition, threatened to deprive Noailles of the purple, and to proceed canonically against all that would not accept the Bull within two months. These Briefs were not accepted by the regent because their text had not been previously submitted to his ministe and the Bull was sent to Rome. Vice-General of Meaux whom the pope did not, however, admit to his presence, when it became known that his sole purpose was to wrest the admission from Clement XI that the Bull was obscure and required an explanation. In a consistory held on 27 June, 1716, the pope delivered a passionate allocution, lasting three hours, in which he informed the cardinals that the Bull had been received in France, and expressed his purpose of divesting Noailles of the cardinalate. The following November he sent two new Briefs to France, one to the regent, whose co-operation he asked in suppressing the opposition to the Bull; the other to the acceptors, whom he warned against the intrigues of the recalcitrants, and instructed to support their erring brethren to save them from losing their rank.

On 1 March, 1717, four bishops (Senois de Senez, Colbert de Montpellier, Delangle de Boulgone, and de La Broue of Mirepoix) drew up an appeal from the Bull to a general council, thus founding the party hereafter known as the "appallants". They were joined by the faculties of the Sorbonne on 3 March, of Reims and of Nantes on 10 March; likewise by the Bishops of Verdun on 22 March, of Paimiers on 12 April, of Chalons, Condum, Agen, and St. Malo on 21 April, of Auxerre on 11 May, and more than a year later by the Bishop of Lyon, also by the Bishops of Bayonne and Angouleme. Though a personal letter of the pope, dated 25 March, and a letter of the Bull were sent to the regent in order that he should send it to the cardinals, the pope did not receive a letter from Noailles to submit, he also drew up an appeal on 3 April, "from the pope manifestly mistaken, and from the Constitution Unigenitus, in virtue of the decrees of the Councils of Constance and Basel, to the pope better informed and to a general council to be held without constraint and in a safe place." He did not, however, publish his letter, though he presented it in the archives of the "official de Paris. On 6 May he wrote a long letter to the pope, in which he endeavours to justify his position and that of his adherents. A few months later his appeal from the Bull was published. The appellants were soon
joined by many priests and religious, especially from the Dioceses of Paris and Reims. To swell the list of appellants the names of laymen and even women were accepted. The number of appellants is said to have reached 17,700 in 1680, pitifully small, if we consider that about 1,500,000 (libra $500,000) were spent by them as bribes.

On 8 March, 1718, appeared a Decree of the Inquisition, approved by Clement XI, which condemned the appeal of the four bishops as schismatic and heretical, and that of Noailles as schismatic and approaching to heresy. Since they did not withdraw their appeal within a month, the Holy See declared the Bull "Pastoralis olliea" on 28 Aug., 1718, excommunicating all that refused to accept the Bull "Unigenitus". But they appealed also from this second Bull. Noailles finally made an ambiguous submission on 13 March, 1720, by signing an explanation of the Bull "Unigenitus", drawn up by order of the French secretaty of State, Abbé Dubois, and, later, approved by ninety-five bishops. After much pressure from the king and the bishops he made public this ambiguous acceptance of the Bull in his pastoral instruction of 18 Nov., 1720. But this did not satisfy Clement XI, who required an unconditional acceptance. After the death of Clement XI, 19 March, 1721, the appeal of Noailles and their other objections were re-examined by the Pontifical Council of 1721-24 and Benedict XIII (1724-30). Noailles, the soul of the opposition, made a sincere and unconditional submission on 11 Oct., 1728, and died soon after (2 May, 1729). The Apostolic See, in concerted action with the new Archbishop Vintimille of Paris and the French Government, gradually brought about the submission of most of the appellants. Union, Hypostatic. See Hypostatic Union.

Union of Brest. Brest, in Russian, Brest-Litovsk; in Polish Bresz; in the old chronicles, called Brettii, or Brestot; a city in Lithuania, with some 50,000 inhabitants, famous in the history of the Catholic Church and the Orthodox Church of Russia for the union of the Ruthenians with Catholicism. After the annexation of Red Ruthenia, or the Ukraine, to the Polish-Lithuanian Commonwealth, the Ruthenians politically subject to Poland, began to compare the lamentable condition of their Church with the development and vitality of Catholicism and to turn their eyes towards Rome. The Ruthenian clergy were steeped in inmorality and ignorance; the bishops made no scruple of setting their flocks an evil example, living in open concubinage, and practising the most horrid crimes. The Ruthenian clergy, their number less than 300 in the whole country, though barely superior to the hierarchy, were themselves probably the most cruel persecutors of their people, and they showed no fear of God. The consequence was that the clergy of the fourteenth and fifteenth centuries bear witness to this melancholy decay of the Orthodox Church in the Polish provinces and to the impossibility of applying any remedy. Face to face with this spiritual ruin, the Catholic Church, reinvigorated by the accession of Jesuit missionaries, was showing her immense religious and moral superiority. Some loyal and honourable members of the Orthodox clergy and laity gradually became convinced that only a return to the Roman obedience and submission was secure for their Church anything like sound conditions.

The Jesuits, who had been established at Vilna in 1569, at Varazdina in 1574, and subsequently at Polotsk, Grodno, and other cities of Southern Russia, soon set about to conciliate the friends of union among the Orthodox and to second their efforts. They began publishing works of religious controversy, emphasizing the spiritual, moral, and political advantages which must accrue to the so-called Orthodox Church from union with Rome. Eminent in this labour of preparing opinion for return to the Roman Church were Father Peter Skarga (1536-1612), one of the greatest apostles, and a literary and political genius, of Poland, and Father Benedict Herbst (1531-93), the former published in Poland, in 1577, his famous work on "The Unity of God's Church under One Only Pastor" (O jedności Kościola bez podnym pastyrem), and it filled the Orthodox with confusion; they burned numerous copies of it, so that a new edition had to be published in 1590. Father Herbst then published, also in Polish, his "Exposition of the Faith" (1583) and "Exposition of Service" (1590). These two works helped greatly to dispel the doubts of the Orthodox friends of union and bring them still nearer to Rome; a result that was greatly furthered by the writings and labours of Antonius Possevino. However, the Orthodox remained still undecided. Jeremias II, Patriarch of Constantinople, visited Moscow in 1588 and in 1590, and, to conclude on the one hand with Rome, in 1577, his famous work on the synod to find remedies for the most serious evils of the Ruthenian Church. Received by Sigismund III, King of Poland (1587-1632), with honour and costly gifts, he consecrated Michael Rabos, Metropolitan of Kieff and Halicz (1588-99). Finding that some of the Orthodox Ruthenians did not conceal their preferences for union, the Patriarch, in 1590, issued a papal Bull to bind them more closely to his own authority and the Orthodox Church, by a decree of 6 August, 1589, appointed Cyril Terlecki, Bishop of Lutzk, his exarch for the metropolitan jurisdiction of Kieff. The patriarch also imposed a precept that a synod of bishops must be held every year to remedy the disorders of the Ruthenian Church.

In 1590 the metropolitan, Rabos, convoked a synod at Brest for 21 June. A few days before the Russian bishops assembled, Terlecki had a conference at Bels with the Bishops of Lenberg (Banán), Puszk (Polczycki), and Chelm (Zbruiski), and they jointly drew up a document undertaking to submit their will and their intelligence to the Pope of Rome, and begging that their rites and their ecclesiastical privileges should be preserved. This document was presented to the Synod of Brest, at which the metropolitan and the Bishop of Vladimir assisted; it was accepted and approved, but kept secret, for reasons of prudence. Terlecki was charged to present it to Sigismund III and obtain the royal confirmation; but he did not fulfill his mission, and he fulfilled his charge. Sigismund III, having at last received the document, replied to it on 18 March, 1592, expressing his joy at the decision of the Ruthenian episcopate, promising them his assistance against possible persecutions by the Orthodox, and assuring them that the national title should be respected and safeguarded. Nevertheless, the proposal of union, though warmly approved by Terlecki, did not attain realization. Terlecki was soon supported by Adam Pocićz, who was consecrated Bishop of Vladimir in 1593, in succession to Melchizid Chrebówicz, deceased. Pocićz was a sincerely convinced advocate of the union, though he well understood
the obstacles to its accomplishment. Another synod of Ruthenian bishops met at Brest on 21 June, 1595, but avoided the question of union, and confined itself to depriving Gideon Balaban of the administration of the Ruthenian Church, Zbirujski, and Kopystenski met at Sokal and reaffirmed their adhesion to the act of union drawn up at Bels and approved at Brest, in 1590. Terlecki had full powers to treat of the union with the Court of Poland and the Holy See. They composed a "Decree on receiving back and entering into the communion of the Holy Roman Church" (Decretum de recipienda et suscipienda communione sancta Romana Ecclesiae), in which, after deploring the evils resulting from the schism, they begged to submit themselves to the jurisdiction of the visible pastor of God's Church, on condition that the sacred rites and liturgical customs of the Eastern Church were preserved, saving such points as might be judged contrary to the teachings and the spirit of faith. Terlecki began to solicit the adhesion of the Ruthenian bishops to this document, which was dated 2 December, 1591. It was subscribed by the metropolitan, Rahosa, Pocej, Terlecki, Zbirujski, Pelczyski, Gregory of Poleck, and Jonas Hohel of Pinsk.

On 12 June, 1595, Rahosa, the metropolitan, and the bishops of Mogilew, Srock, and Pinsk met at Brest and drew up two petitions, one to Clement VIII and the other to Sigismund III. The former protested that they desired to renew the union concluded at the Council of Florence, saving always the Eastern customs and rites; in the latter the same desires were expressed, and it was added that the Ruthenian clergy, according to the wishes of Pocej and Terlecki, betook themselves to Cracow to confer with the king's delegates and the Apostolic nuncio as to the basis and conditions of the union. These conditions were accepted. On 2 Aug., 1595, Sigismund III declared that the Ruthenian clergy enjoyed the same privileges and rights as the Latin, that they were free of the excommunication and anathema of the Council of Florence, that Ruthenian sees should be entrusted only to Ruthenian prelates, that the Ruthenian Church should retain the free possession of its property, that Ruthenian churches and monasteries could not be latinized, and that the Eastern prelates were henceforward to have no jurisdiction over the Ruthenian clergy. The Apostolic nuncio agreed to the concession of these privileges, and Sigismund III required that delegates of the Ruthenian episcopate should go to Rome for the definitive sanction of the act of union. But its conclusion was already known, and the Bishops of Lutzk, Chelm, Przemysl, and Leopolg announced it to their flocks in pastoral letters dated 27 August. Although Sigismund III, Rahosa, and the large majority of the clergy acted joyful; after signing the decree of union, he endeavored secretly to hinder its execution, and instigated Constantine, Prince of Ostrog, to assemble the Ruthenian bishops and dissuade them from submitting to the Holy See. But Rahosa's intrigues were to no purpose, and, on 25 November, 1595, Pocej and Terlecki arrived at Rome with the decree of union of 2 December, 1590.

The arrival of the Ruthenian bishops overwhelmed Clement VIII and the Roman Court with joy. The delegates were received with great honour; the pope and the cardinals discussed the conditions of reunion proposed by the Ruthenian episcopate, and ungrudgingly conceded that the integrity of the Ruthenian Rite should be maintained; it was also agreed that the "Filioque" should not be inserted in the Nicene Creed, although the Ruthenian clergy professed and taught the procession of the Holy Spirit from the Son. The bishops asked for the permission of introducing the Gregorian Calendar, so as to avoid popular discontent and dissensions, and insisted that the king should grant them, as of right, the dignity of senators. To all these requests Clement VIII acceded.

All obstacles having been removed, the union of the Ruthenians with the Roman Church was solemnly and publicly proclaimed in the Hall of Constantine in the Vatican. Canon Wollowicz, of Vilna, read in Ruthenian and Latin the letter of the Ruthenian episcopate to the pope, dated 12 June, 1595. Cardinal Silvio Antoniani thanked the Ruthenian episcopate in the name of the pope, and expressed his joy at the happy event. Then Pocej, in his own name and that of the Ruthenian episcopate, received the formula of abjuration of the Greek Schism, Terlecki read it in Ruthenian, and they affixed their signatures. Clement VIII then addressed to them an allocution, expressing his joy and promising the Ruthenians his support. A medal was struck to commemorate the event, with the inscription: "Ruthenian bishops, (Sigismund) Dominius Dominus et laudabilis" was published, announcing to the Catholic world the return of the Ruthenians to the unity of the Roman Church. The Bull recites the events which led to the union, the arrival of Pocej and Terlecki at Rome, their acclamation, and the concession to the Ruthenians that they should hold their own synods, yet be opposed to the purity of Catholic doctrine and incompatible with the communion of the Roman Church. On 7 Feb., 1596, Clement VIII addressed to the Ruthenian episcopate the Brief "Beneficius sit Pastor ille bonus", enjoining the convocation of a synod in which the Ruthenian bishops were to recite the profession of the Catholic Faith. Various letters were also sent to the Polish king, princes, and magnates exhorting them to receive the Ruthenians under their protection. Another Bull, "Decret romanum pontificem", dated 23 Feb., 1596, defined the rights of the Ruthenian episcopate and their relations in subjection to the Holy See.

About the beginning of February, 1596, Terlecki and Pocej returned to their own country, arriving at Lutzk in March and celebrating a solemn "Te Deum" for the success of their mission. But the enemies of the union, their religious fanaticism aroused, redoubled their activity. At the Diet of Warsaw, which opened in May, 1596, the Ruthenian deputies, led by the Prince of Ostrog, protested against the bishops who had signed the decree of union and declared that they would not accept it. The Orthodox communities of Vilna and Lemberg stirred up the people against the unionist bishops. To curtail this religious agitation short, Sigismund III ordered the Ruthenian episcopate to be convoked in a synod at Brest, 8 October, 1596, and the union to be solemnly proclaimed. On 6 October a synod of Ruthenian Bishops of Vladimir, Lutzk, Poleck, Pinsk, Chelm, the Latin Bishops of Lemberg, Lutzk, Chelm, Father Skarga, and other prelates met at Brest. The Orthodox had sent many of their lay representatives, various archimandrites, Theophorus, the protosyn- cellul of the Patriarch of Constantinople, and Cyril Lucaris, representing the Patriarch of Alexandria. The Orthodox, under the Prince of Ostrog, petitioned for the deposition of the bishops who had withdrawn from the obedience of the Patriarch of Constantinople, for the maintenance of the Old Calendar, and for the abrogation of the act of union. They moreover held a conciliabulum to concert measures of opposition. In vain did the king's commissioners la-
hour to allay their hostility and induce them to accept the union; they would not yield, and they refused to recognize Raha as their metropolitan.

All attempts failing to win over this opposition to the union, the Russian bishops, on 9 October, wearing their pontifical vestments, went in procession to the Church of St. Nicholas and celebrated the Liturgy. The brother of the Metropolitan Hierotheus, Archbishop of Polotsk, mounted the pulpit and read the declaration of the Russian episcopate accepting the union with Rome. When this had been read, the Latin and Russian bishops embraced each other and then repaired to the Latin Church of the Most Blessed Virgin to sing the "Te Deum" again. Next day the Berlin government, in a declaration published by the Church of St. Nicholas, and Father Skarga preached on the unity of God's Church. Bishops Gideon Ballaban, of Lemberg, and Michael Kopystenski, of Przemysl, having declared themselves opposed to the union, were deposed and excommunicated. Their dioceses remained in schism until 1720. The enemies of the union published, on 9 October, a protest against the Russian episcopate and in the Protectorate the Poles and Lithuanians, Ostrog became the soul of the opposition, and the struggle was maintained, particularly in the field of theology. But Sigismund III efficiently took possession of the union; in an edict of 5 December, 1596, he ordered the Ruthenians to receive as bishops only those who had accepted the act of union.

Thus came to pass one of the most auspicious events in the history of Catholicism among the Slavic peoples. The Union of Brest would have produced most abundant fruit, and would have contributed greatly to the triumph of Catholicism in Russia if the statesmen and the Latin clergy of Poland had realized the union in life and religious spirit, and had used all their efforts to favour, and without differential treatment of Poland, Russia had not destroyed it in the conquered provinces by methods of the most brutal violence.

A. PALMIERI.

Union of Christendom.—The Catholic Church is by far the largest, the most widespread, and the most ancient of Christian communions in the world, and is moreover the mighty trunck from which the other denominations to be Christian have broken off at one time or another. In the application of the term Christendom to this, its most authentic expression, the unity of Christendom is not a lost ideal to be recovered, but a stupendous reality which has always been in stable possession. For not only has this Catholic Church ever taught that unity is an essential note of the true Church of Christ, but throughout her long history she has been, to the amazement of the world, distinguished by the most conspicuous unity of faith and government, and this not merely in theory, but in practice; for she has at all times embracened within her fold nationalities of the most different temperaments, and has had to contend with incessant oscillations of mental speculation and political power. Still, in another and broader sense of the term, which is also the more usual and is followed in the present article, Christendom includes all the Christian Churches, but, together with it, the many other religious denominations, either directly or indirectly, separated from it, and yet, although in conflict both with it and among themselves as to various points of doctrine and practice, agree with it in this: that they look up to our Lord Jesus Christ as the Founder of their Faith, and claim to make his teaching the rule of their lives. As these separate Churches have been in the main always at variance with one another, in some cases even of themselves, count a vast number of souls, among whom many are conspicuous for their religious earnestness, this extension of the term Christendom to include them all has its solid justification. On the other hand, if it is accepted, it becomes no longer possible to speak of the unity of Christendom but rather of all these divisions and offering the saddest spectacle to the eyes. And then the question arises: Is this scandal always to continue? The Holy See has never tired of appealing in season and out of season for its removal, but without meeting with much response from a world which had learnt to live contentedly within its sectarian enclosures. Happily a new spirit has lately overspread Christendom, which, where its adherents are becoming keenly sensitive to the paralyzing effects of division, and an active reunion movement has arisen which, if far from being as widespread and solid as one would wish, is at least cherished on all sides by devout minds.

In summarizing in this article the various matters that have gone to question the unity of Christendom, its present default, and the hopes for its restoration, the following points will be considered: I. The Principles of the Church's Unity; II. Unity in the Early Church and its Causes; III. The Divisions of Christendom and their Causes; IV. Reunion Movements in the Past; V. Reunion Movements in the Present; VI. Conditions of Reunion; VII. Prospects of Reunion.

I. Principles of the Church's Unity. A. As Determined by Christ.—It is to the Gospel we must go in the first place if we desire to know what in the intentions of its Founder were to be the fundamental elements in the constitution of the Church, nor do the instructions He gave to His Apostles leave us in any doubt as to the principles under which it is to be understood. On this subject St. Matthew, in his parable of the sheep and the goats, says, "All power is given to Me in heaven and on earth. Go therefore and make disciples of all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost, teaching them to observe all things whatsoever I have commanded you, and, lo, I am with you always, even unto the consummation of the world." (xxviii, 19, 20). St. Mark's account is in the same effect, but adds important details: "Going into all the world, proclaim the Gospel to every creature. He that believeth and is baptized shall be saved, he that disbelieveth shall be condemned. And these signs shall follow those that believe: in my name they shall cast out devils, speak with new tongues, and take up serpents, and if they shall drink any deadly thing it shall not hurt them; and they shall lay their hands on the sick and they shall be healed. ..." And
they going forth preached everywhere, the Lord co-operating with them, and confirming their words by the signs that accompanied them" (xvi, 15-20). St. Luke, in Acts, i, 8, preserves words of Christ which fit in with these two accounts: "And thou shalt receive the power of the Holy Ghost that will come down upon you, and you shall be My witnesses in Jerusalem, and in all Judaea and Samaria, and to the ends of the earth"; whilst in his Gospel this Evangelist has recorded how Jesus Christ in His post-Resurrection discourse to His disciples enumerated as among the primary doctrinal facts to be thus Jesus rose from the dead and preached throughout the world, the fulfilment in Jesus of the Old-Testament prophecies and the remission of sins through His name: "These are the words which I have spoken to you whilst I am still with you, for it is necessary that all things which are written of Me in Moses and the Prophets and the Psalms be fulfilled; and He said to them: Lo, in heaven (xv, 31); Acts, xvi, 28) and He rise again from the dead on the third day, and repentance be preached in His name for the remission of sins to all nations, beginning from Jerusalem. And you shall be witnesses to these things. And I will send down upon you that [gift] which has been promised to you by My Father. Remain therefore in this city until you be endowed with power from on high" (xxiv, 44-49).

Further, to go back to St. Matthew, this Evangelist tells us, in a most impressive passage intimately connected with the plan of his Gospel, that Christ made provision for unity of action among His Apostles by appointing one of them to be the leader of his brethren, and appointing him to the spiritual building He was raising. "And I say to thee that thou art Peter [i. e. the Rock], and upon this Rock I will build my Church, and the gates of hell shall not prevail against it; and I will give thee the keys of the kingdom of heaven, and whatsoever thou shalt bind on earth shall be bound in heaven, and whatsoever thou shalt loose on earth shall be loosed in heaven" (St. Luke, xvi, 19). St. Matthew (xxii, 32) has words spoken in the supper-room which imply this previous appointment of St. Peter, by describing in other terms the same firm support which it would be his to communicate to the faith of the Church. "Simon, Simon, Satan hath desired to have you that he may sift you as wheat, but I have prayed for thee, that thy faith fail not thee: and when thou art converted (or it may mean, "do thou in thy turn") "confirm thy brethren", St. John, whose Gospel follows a different course from the Synoptics, and seems to select for narration previously unrecorded deeds and words of Christ which cast a fuller light on what the others had given, tells of Jesus Christ's final reapportionment of the commission to St. Peter, rendered necessary perhaps to reassure him after his fall and deep repentance, and entrusting him anew with the supreme pastoral charge of the entire flock. "Simon, Son of John, lovest thou me more than these… feed My lambs… be the shepherd of my sheep" (xvi, 13-17). To St. John, too, we are indebted for a knowledge of a fact which appears elsewhere: "Lo, I am with you always", reported by St. Matthew; for he testifies that on the occasion of the Last Supper Jesus Christ promised to send the Spirit of Truth, who proceeds from the Father, and "will bear testimony of me" (xv, 26), and "will lead you into all truth" (xvi, 13); also that on the same occasion He prayed an effectual prayer for His disciples and "those that through their word should come to believe in him, that they all may be one, even as Thou, Father, art one in me, and I am one in Thee, so that they may be one in us, and thus the world may believe that thou hast sent me" (xvii, 20-23).

Were we arguing with the Rationalistic critics we should have to meet their refusal to grant the authenticity of much that is in these passages, but the question of reunion is practical only for those who accept fully and in all respects the authority of the canonical Scriptures. If, then, we take these passages together as utterances of the same Divine Author through these different channels, the conclusion is irresistible that the Church was founded by Christ on the principle of a revelation to which, as attested by the word of God, unquestioning assent is due from all to whom it is addressed; on the principle of an authority communicated by Christ to chosen representatives whereby He seals the teaching, and to whom He requires that the world should render the obedience of faith; and on the principle of a single religious communion, under the rule of these teachers and their duly appointed successors, admission to which is through the gate of baptism and adherence to which is imposed on all under the most solemn sanctions.

For (1) the duty assigned to the hearers is simply to believe what the Apostles impart to them as teaching derived from Jesus Christ, no liberty being allowed for disbelief on the ground that the Apostolic teaching does not commend itself to the judgment of the disciple; and this duty is declared to be so imperative that the fulfilling of it is regarded as the only means of salvation, but disregard of it in the way of Divine condemnation—the implication being that, as this teaching comes ultimately from Christ, that fact in itself should be held to give the disciple a better guarantee of truth than any reasoning of his own could give. (2) The Apostles are sent by Christ in like manner as He was sent by His Father, and to the chief nations, and are given with a far-reaching power to make binding laws, which must mean that He sends them forth to continue the work He had begun, to make disciples as He had done, and to rule them in the spirit of the Good Shepherd as He had done; consequently, that He delegates to these Apostles such share of the authority given to Himself as He deemed necessary for the discharge of their world-wide commission. (3) The community thus formed out of the Apostolic teachers and their disciples was necessarily one by a twofold bond of union, inasmuch as the teaching, being from God, was necessarily one, and the faith with which it had to be received was correspondingly one, inasmuch, too, as the visible society into which all were baptized was essentially one, the larger legislation of the Apostles including the actions of the pastors united under the presidency of a single visible head. (4) The words, "I am with you always until the consummation of the world", prove, what indeed was presumable from the nature of the case, that Christ was then instituting a system not intended for the Apostolic generation only, but for all the generations to come, and hence that He was addressing His Apostles, not as eleven individual men only, but as men who, with their legitimate successors, formed a moral personality destined to last through the ages.

We may further gather from the texts above cited (5) that the revelation thus brought down from heaven and imparted to the Christian community of its salvation was not confined to a few ethical maxims, lit up by the splendour of a surpassing example and of such simplicity that all men in all ages could without difficulty reconcile them on intrinsic grounds with the dictates of their personal reason. On the contrary, it is expressed in terms of unlimited range—"teaching all that I have commanded"—and is explicitly declared to be the fulness of the Jewish law in its doctrinal whole the mystery which surpasses all others in baffling human speculation, namely, the mystery of the Holy Trinity—"baptizing them in the name of the Father, and of the Son, and of the Holy Ghost"—in other words, for this is the meaning,
dedicating them by baptism to the worship of (εἰς τοῦ δόμου), and therefore to belief in, the Trinity in Unity. (6) At the same time, that the human mind, in thus giving its assent to doctrines so difficult for it to conceive, may do no violence to its own rational nature, the above passages tell us of the promise of the Spirit to abide for ever in the Church, to guide at all times the mind of the teaching body, organized under its visible head, so that it may always be kept from corrupting the sacred doctrine, and presenting it for acceptance in a form foreign to its original purity. Lastly, (7) that we may understand the vital importance of this unity of communion, of this unity of truth, for the due carrying out of the Church's work, we have the prayer of Christ to His Father to teach and to guide those who are led by Him to furnish the world with the most signal and convincing proof of the Divinity of the Christian religion: "That even as the Father is in Me, and I in Him, so they may be one in Us, that the world may believe that Thou hast sent Me." We can appreciate the character of this motive, we who live in an age when the decisions we may gather from one another, the evidence of the uncertainty on which the Christian pretensions rest. We can see how it would facilitate Christian work at home and in the mission field, if we could still say, as in the time of the Apostles, "The universality of those that believe are of one heart and one soul. We can understand how disciples, having received the teachings which the human minds to differ, would, in the presence of such a world-wide unity, be fain to exclaim, "This is something that surpasses the power of nature; the hand of God is here."

(B) As understood by the Apostles and their Disciples.-In the Acts and the Epistles we have a record of the way in which the Apostles understood the things of the Gospel, as the things correspond. After receiving the promised gift of the Spirit, the Apostles go forth confidently and commence their preaching. Peter is their leader and, in those early days, so far their spokesman as for the moment to throw his fellow-Apostles almost entirely into the shade. Even St. John, great as he was, the centre of the teaching body, organized in the writings of the two, greatly St. Peter's intellectual superior, accompanies him as a silent companion, thus illustrating the completeness of the union that bound together the Apostolic band. In his preaching St. Peter follows an easily recognizable plan. First he seeks to accredit himself and his colleagues by appealing to the character of their Master. Whose life had been led before the eyes of the people of Jerusalem. He was Jesus of Nazareth, "a man approved by God among you by miracles and wonders and signs which God wrought through him in the midst of you" (Acts, ii, 22). One, therefore, to whose teaching the people were bound to attend and whose representatives they were bound to receive. It was true that St. Paul was a convert, a scholar who had learned the mystery among them had afterwards fallen into the hands of wicked men who had taken and shorn him, thereby appearing to show signs of weakness hard to reconcile with such stupendous claims. But the Twelve, who were now addressing the people, were also known to them as having each and all been the companions of the Master, who had been declared to be the Christ, the Prophet of God, whose baptism was in the name of the faith of John (Acts, i, 21, 22); and these could testify from their own immediate experience that what had befallen their Master, so far from being a real sign of weakness, had been ordained for His glorification "by the determinate counsel and fore-knowledge of God". Who, after thus permitting His Son "to be given in the sacrifice for sin, on the grievous day of the dead, whereby they, the Apostles, were the witnesses (Acts, ii, 33), as they were also of His subsequent Ascension.

Having thus declared and authenticated their commission, and having received a further confirmation of it by the miracles wrought through their intercession (Acts, iv, 10, 29, 30; v, 12, 16), which made a deep impression on the people, they take up a position of the utmost authority (Acts, v, 32), proclaim their Master's teaching, and, on the faith of their sole word, demand obedience for it and obedience to its requirements. "Therefore let the House of Israel know that God hath made this same Jesus whom you crucified both Lord and Christ. Repent and be baptized every one of you in the name of Jesus Christ for the remission of sins, and you shall receive the gift of the Holy Ghost" (Acts, ii, 36, 38). Thus did they teach and claim to be received, and thus did they call upon their hearers to enter into what the Lord had taught them to do, and place themselves as disciples under the Apostolic instruction and rule. And this is what the hearers did in large numbers. On the day of Pentecost itself there were added to the Church, we are told, three thousand souls (ibid., ii, 41), a number which a few days later, after another discourse from St. Peter, are apt to believe and cause them to believe the apostolic spirit steadily grew, not only in Jerusalem, but in Judea, and Samaria, and unto the ends of the earth (iv, 4). In strict conformity with the words of Christ (make disciples of all nations, . . . He that believeth and is baptized shall be saved), those who thus join themselves to the Apostles are described invariably as "believers" (τριποτοῖς, Acts, ii, 21; xii, 26; xvi, 14, or in other places as "those who are being saved" (εὐαγιορεύοντος, Acts, v, 47; I Cor., i, 18). On these principles the Church was founded, and from these principles unity of faith and communion resulted. "They continued", we read, "steadfastly in the Apostles' teaching and communion, and in the breaking of bread and in prayer" (Acts, ii, 42). We can conceive of this as belonging to our consideration. The point to note is that in those times the authority of the Apostles was universally recognized as competent to decide such controversies and to require obedience to its decrees. Accordingly, they were controversies which led to no breach of communion, but rather to a strengthening of the bonds of communion by effecting clearer statement of the truth among all believers. In the above passage, the only dispute raised and settled by their faith. One instance of a controversy thus happily terminated we have in the fifteenth chapter of the Acts. It is a valuable illustration of what has been said, for it was settled by the authority of the Apostles, who met together to consider it, and ended by affirming the equality of Jews and Gentiles in the Christian Church, by laying down the condition of participation in its full benefits; and by recommending to the Gentile converts a certain (apparently temporary) concession to Jewish feelings which might soften the difficulties of their mutual intercourse. "It has seemed good to the Holy Ghost and to us" (xxvi, 28) was the ground on which those apostles desired "to set a type of procedure and language which subsequent rulers of the Church have consistently followed. From the second part of the Acts and from the remaining books of the New Testament we have the means of ascertaining how St. Paul and the other Apostles prescribed the form of life that they, too, regarded themselves as clothed by Jesus Christ with authority both to teach and to rule, that they, too, expected and received in every place a like
assent to their teaching and a like obedience to their commands from their disciples, who just by this means were held together in the unity of the one undivided and indivisible Church which the Apostles had founded. The following texts may be consulted on this point, but it is not necessary for our present purpose to do more than refer to them: Acts, xx, 28; Rom., i, 5; xv, 18; 19; 20; 1 Cor., ii, 1-5; xv, 11; II Cor., iii, 5, 9; x, 5, 8; xiii, 2, 10; Eph., ii, 20; iv, 1-6, 11, 12; i Thess., ii, 13; iv, 1, 2, 3, 5; II Thess., i, 7-10; ii, 15; iii, 6, 14; I Tim., i, 20; iii, 15; II Tim., ii, 2; Tit., ii, 15; Heb., xiii, 7-9; I John, iv, 6; III John, 10; Jude, 17, 20. We must not, however, pass over St. Paul's jubilant description of this unity in his Epistle to the Ephesians, standing out so conspicuously on the one hand, and the distinctness of the Church from the world, on the other, and the firm foundations on which it was set: "One body, one Spirit, one Hope, one Lord, one Faith, one God and Father of us all, Who is over all and through us all, and in us all." Thus was the spectacle of Christian unity born of the Apostolic preaching which preserved itself as the eye of the unconverted Apostle some thirty years from the time when St. Peter preached his first sermon on the day of Pentecost.

C. As Resisted by the Earliest Heretics.—To claim this wonderful unity as distinctive of the followers of Jesus Christ in the Apostolic days is not to forget that there were sad exceptions to the general order, that, as the churches were multiplied among which, whilst claiming to be Christian, were maintained in formal opposition to the Church of the Apostles. It is expressly stated by Tertullian (Adv. Marcion., IV, v) that the Marcionites, in the middle of the second century, were the first who, when expelled from the Church Catholic, created an opposition Church for the express purpose of perpetrating a violation of the unity which, for a time, the dissentients contented themselves with forming parties and schools of thought, and of this mode of separation, which sufficed to put men outside the Church, we find clear traces in the New-Testament writings together with predictions that the evil thus originating would become more pronounced in after times. Men of what would nowadays be considered heretical tendencies were dissatisfied with the Apostles' teaching in some particulars, and refused to accept it without further warrant than the mere "word of an Apostle." Thus we may gather from the Epistle to the Galatians that, in spite of the decision of the Council of Jerusalem, there continued to be a party which insisted that the observance of the Jewish law was obligatory on Gentile Christians, and from the Epistle to the Colossians that there was likewise a Jewish party, probably of Hellenistic origin, which mingled insinuation on Jewish legalities with a superstitious worship of the angels (Col., ii, 18). At Ephesus we may detect the advent of an incipient Gnosticism in St. Paul's warnings against giving heed to "fables and genealogies" (I Tim., iv, 7) and "profane babblings and oppositions of 'gnosis' falsely so-called" (I Tim., vi, 20). Hymenaeus and Alexander are mentioned by name as denying the resurrection of the flesh at the last day (II Tim., ii, 18. Cf. I Cor., xi, 12). St. John, in the Apocalypse (ii, 6, 15), tells us of the Nicolaites who seem to have fallen into some kind of Oriental admirations of the world with a mixture of Jewish and Christian superstition, and from the last verse of the second Epistle (verse 7. Cf. I John, iv, 2) he warns his readers that many "deceivers are entered into the world" who confess not that Jesus Christ has come in the flesh, which the church historians refer to the Doctrines of Cerinthus.

Our modern admirers of comprehensive Churches would behold the coexistence side by side of these beliefs with those of the Apostles as a healthy sign of mental activity in those early Christian communities, and it is instructive to compare such modern judgments with those of the Apostles, because the comparison enables us to realize better how strong was the feeling of the latter as to the essential importance of basing unity of communion on adherence to the Apostles' doctrine, and as to the exceeding sinfulness of dissenting from it. Thus St. Paul calls these alien doctrines "old wives' fables" (I Tim., iv, 7), "doctrines of devils" (ibid., 2), and "profanities the preaching of which will spread and devour like gangrene" (II Tim., ii, 17). St. Peter calls them "fables skilfully made up" (I Peter, i, 10), and, in a passage where the word heresy under Christian influences has already acquired its traditional meaning, "dreadful heresies," or "heresies leading to damnation" (ibid., v, 1). St. Paul calls "men of corrupt minds" (I Tim., vi, 5), who "speak falsehood in their hypocrisies, and have consciences seared with a red-hot iron" (I Tim., iv, 2). St. Peter calls them "false teachers who deny the Lord that bought them and bring upon themselves speedy damnation" (I Peter, ii, 1), and, as John (iv, 6; iii, 10) points an accusing finger at them, "those who go about "Satan"—that is, cast them out of the Church—"that they may learn not to blaspheme" (I Tim., i, 20). Finally, St. John is most severe towards the Christians of Pergamos for neglecting to expel from their midst the two classes of heretics whom he describes (Apoc., ii, 14, 15).

Summary.—In short, according to the teaching as recorded of the first Christians, the Church is one everywhere with a oneness which is desired by Christ on its own account as befitting the obedient children of One God, one Lord, and one Spirit, and likewise as the necessary outcome of faithful adherence on the part of the members to the concordant teaching of those whom He appointed to be its rulers, and whom the Holy Spirit preserved in all truth, and in whom each is left free to accept or reject this one teaching, this wholesome doctrine, there were, side by side with the general body of the true believers, some apparently small groups who held alien doctrines, for which they had been rejected from the communion of the one Church, and these were regarded as having placed themselves outside the Church. This is not a trace, however, of any third class, separated from the communion of their brethren, but still regarded as members of the true Church.

11. Unity in the Early Church.—In the writings of the early Fathers, which contain their testimony to the nature of the Church as it existed in their days, we find the same formative principle which we have already determined as the character of its structure and the distinctive spirit of its members. The Church is now widely spread through the known regions of the world, but it is still, as in the days of St. Paul, everywhere one and the same, all its members in whatever place being united in the profession of the same faith, in the participation of the same sacraments, and in the holding of one and the same form one corporate body and are united by the bond of an intimate solidarity. We learn, too, from these contemporary witnesses that the principle of this remarkable unity is still that of a strict adherence to the Apostles' doctrine, but here a new element from the nature of the case comes in. The Apostles no doubt laid down that doctrinal principles must be obtained, however, with perfect security from the Apostolic tradition. In other words, it has been handed down incorrupt by oral transmission through
the lines of bishops who are the duly appointed successors of the Apostles, and who, like them, are guarded in their teaching by the assistance of the Holy Ghost. Thus the word tradition now comes into prominence, and, just as St. Paul said to Timothy, "keep the deposit" (1 Tim. vi, 20), that is the sacred doctrine committed to him by the Apostles as a sacred trust, so the Fathers of the Church say, "keep the tradition." This is ever their first and most decisive test of sound doctrine, not what recommends itself to the reason of the individual or his party, but what is sanctioned by the Apostolic tradition, for the ancient deposit of the Fathers of the second and third centuries refer the searcher to the Churches founded immediately by the Apostles, and before all others to the Church of Rome. We learn, moreover, from these early witnesses, that this Church of Rome, in proportion as the ecclesiastical system passed out of the state of embryo to that of full formation, became more and more explicitly the depository of what had inherited the prerogatives of Blessed Peter, and was, therefore, the authority which in all cases of controversy must ultimately decide what was in accordance with the tradition, and in all questions of jurisdiction and discipline was the visible head, communion with which was communion with the one and indivisible Church. As these points of the apostolic tradition, everywhere elsewhere, we need not demonstrate them by bringing forward the copious Patristic testimonies which may be found in any good treatise on the Church. We may, however, usefully quote, not so much in proof as in illustration of what is said, a passage or two from St. Irenaeus's treatise "Adversus haereses," he being the earliest of the Fathers from whom we have evidence of the deposit of any fullness, but this particular treatise dealing with just the points with which we are concerned.

"The Church which is now planted throughout the whole inhabited globe, indeed even to the ends of the earth, has received from the Apostles and their disciples that faith which is in one God, the Father omnipotent who made heaven and earth and the sea and all that is in it; and in one Lord Jesus Christ, the Son of God, Who was incarnate for our salvation, and in the Holy Ghost. Having received this preaching, and this faith, as we have said, the Church, though spread throughout the whole world, preserves it with the utmost care and diligence, just as if she dwelt in one house, and believes it with the same soul and heart, and preaches them and teaches them and hands them down [tradit] just as if she had but one month. For, although the languages of the world are diverse, the force and meaning of the tradition is everywhere the same. Nor do the Churches which are in Germany believe differently or pass down a different tradition, as neither do the Churches in Spain or Gaul, or in the East, or in Egypt or Africa, or those situated in the middle of the earth [that is the Churches of Palestine]. But as the man, which is God's creature, is one and the same throughout the whole world, so too does the preaching of the truth shine everywhere and illuminate all men who desire to come to the knowledge of the truth. And those bishops who are powerful in speech add to this tradition—for no one is above the [great] teacher—nor do those who are inferior in speech subtract from it. For since the Faith is one and the same, neither does he who can say more add to it, nor he who can say less diminish it" (Adv. her., 1, x, n. 2).

This striking passage shows not merely how complete the Apostolic tradition was throughout the world in those days, but how this unity of faith was the response to the unity of the doctrine everywhere preached, to the unity of the tradition everywhere handed down. Elsewhere St. Irenaeus testifies to the source of this uniform tradition, and what was understood to be the safeguard of its purity. In the first three chapters of his third book he is criticizing the heretics of his time and the inconsistency of their methods; and in so doing sets forth by way of contrast the method of the Church. "When you refute them out of Scripture," he says, "they accuse the Scriptures themselves of errors, of lack of authority, of contradictory statements, and deny that the truth can be gathered from them save by those who know the tradition." By "tradition," however, they mean no such things as in the previous two books they have received, "sometimes from Valentinus, sometimes from Marcion, sometimes from Basilides, or anyone else who is in opposition." "When in your turn you appeal to the tradition that has come down from the Apostles through the succession of the presbyters in the Churches, they reply that they are wiser than the presbyters and even than the Apostles themselves, and know the uncorrupted truth." To this Irenaeus observes that "it is difficult to bring to repentance a soul captured by error, but that it is not altogether impossible to escape error by setting truth by the side of it." He then proceeds to state where the true tradition can be found: "The tradition of the Apostles has been made manifest throughout the world, and can be found in each Church by those who know the truth. We can neither, too, the bishops who were appointed by the Apostles in the Churches and their successors down to our own day, none of whom knew of or taught the doctrines which these men madly teach. Yet, if the Apostles had known of these secret mysteries and used to teach them secretly, without the knowledge of others, to the perfect, the tradition of the Church from whom we have come to us through the succession of the Churches, we would condemn them to whom they confided the Churches themselves. For they desired that those whom they left behind them as successors, by delivering over to them their own office of teaching, should be most perfect and blameless, inasmuch as, if they acted rightly, much good, but if they fell away the gravest calamity, would ensue."

To exemplify this method of referring to the tradition of the Churches, he applies it to three of the Churches: Rome, Smyrna, and Ephesus, setting that of Rome in the first place, as having a tradition with which those of the other Churches are necessarily in accord. The passage is well known, but for its intimate bearing on our present subject we may transcribe it: "Nor does the Church of Rome by any means bring to us the present to enumerate the successions of all the Churches, we confounded all those who, in any way, whether through self-will, or vain glory, or blindness, or evil-mindedness, invent false doctrines, by directing them to the greatest and most ancient Church, well known to all, which was founded and established at Rome, by the two glorious Apostles, Peter and Paul, and to the tradition it has received from the Apostles and the faith it has announced to men, both of which have come down to us through the succession of the Bishops. For to this Church, on account of its greater authority,—the Greek text being defective here, it is impossible to say exactly what Greek word lies behind the Latin principitates, but the context perfectly justifies the Latin—"for all those who are in the Church's rulers who are powerful in speech add to this tradition—for no one is above the [great] teacher—nor do those who are inferior in speech subtract from it. For since the Faith is one and the same, neither does he who can say more add to it, nor he who can say less diminish it" (Adv. her., 1, x, n. 2).
the other operations of the Spirit, in which those
have no share who do not fly to the Church,
but deprive themselves of life by their evil opinions
and evil deeds. For where the Church is there is the
Spirit of God, and where the Spirit of God is there
is the Church and all grace, but the Spirit is truth.
Wherefore those who have no part and no name in
the life-giving nutriment from the breasts of their
mother, nor drunk of the most pure spring that flows
from the Body of Christ; but such people dig for
themselves broken cisterns out of earthly treashes,
and drink out of the filth putrid water, flying from
the faith of the Church lest they should be converted,
profane therein to the uttermost. Being alienated from
the truth by just consequence, they are rolled and
tossed about by every error, holding at one time one
opinion, at another another in regard to the same subject,
never having any fixed and stable judgments, caring more
to cavil about words than to be disciples of the truth.
For they are not built upon one rock, but are drifted into the
third, and hence invent many gods, and plead ever in excuse
that they are seeking, but, being blind, never succeed
in finding? (ibid., III, xxiv.)

A modern reader of St. Irenaeus’s “Adversus heres-
ses” might be inclined to object that the heresies
of those days held doctrines so preposterous that his
severe language about them is intelligible without our
but. But the most modern system of heresy, the
similar severity doctrines opposed to the tradition
which could claim to rest upon a more rational basis.
But his principle of the authority of the tradition
is manifestly intended to have universal application,
and may be safely taken as supplying the test by
which this typical Father of the second century
would, even now, distinguish between the various
heresies. Montanism and Novatianism are not much heard
of after the third century, and Donatism, which arose
in Africa in 311, persisted in the general ruin of African
Christianity caused by the Vandal invasion in 429.
Manichæism came forward in the third century, but
is not much heard of after the sixth, and Pelagianism,
which arose at the very end of the fourth century,
though it survived in the schismatic movements of
the church, received a crushing blow at the Council of Ephesus
(431) and disappeared altogether after the Council of
Orange in 529. Ariusianism arose at the beginning
of the fourth century and, in spite of its condemnation
at Nicaea in 325, was kept alive both in its pure form
and in its diluted form of Semi-Ariusism by the active
support of the Eastern emperors. For the first time in the history
of the Council of Constantinople (381) it disappeared
from the territories of the Empire, but received a new lease
of life among the northern tribes, the Goths, Lombards,
Burgundians, Vandals, etc. This was due to the
preaching of Ulissas, a Bishop of Ariam views, who
was sent from Constantinople in 341 to evangelize
the Visigoths. From that time it spread to the
Western Emperors and became their national religion
until 586, when, with the conversion of Recared,
their king, and of the Spanish Visigoths, the last
remnants of this particular heresy perished.

As these ancient heresies no longer exist, they do not
concern the practical problem of reunion which
is before us in the present age. But it is instructive
to note that the principles they embodied are the very
same which, taking other forms, have invariably
motivated the long series of revolts against the authority
of the Catholic Church. Thus regarded, we may
divide them into five classes. First there are certain
intellectual difficulties which have always puzzled the
human mind. The difficulty of explaining the derivation
of the finite from the infinite, and the difficulty of
explaining the coexistence of evil with good in the
physical and moral universe, motivated the strange
speculations of the Gnostics and the simpler but not
less inconsistent theories of Manichæanism. The
difficulty of harmonizing the mystery of the Trinity
in Unity, and that of the Incarnation, with the con-
ceptions of natural reason motivated the heresies of the
Patripassians, the Sabellians, the Macedonians, and
the Arians, and again the difficulty of conceiving the
supernatural or justifying the idea of inherited sin
motivated the Pelagian denial of these doctrines. A
second source has been the failure of men to hold
strong religious emotions, usually based on fancied
visions which, as being direct communications from
on high, it was claimed that the traditional teaching
of the Church must give way. Montanism, that
earliest example of what are now glorified as “religions
of the Spirit”, was the most striking example of this
thesis. Third, the historical grimmer and more dog-
matity, with the desire to pursue personal ambitions, is
discernible in the origins of Novatianism and Dona-
tianism, whose founders, although they alleged on the
flimsiest grounds that the rulers they wished to dis-
place had been irregularly appointed, must be held to
have acted primarily from the desire to exalt them-
selves, even at the expense of the Church and its
community. In the fourth place comes the principle
of nationalism, that is of nationalistic exclusivism, in
those who ally themselves with a separatist movement
not from any conviction personally formed of the
justice of the arguments on its behalf, but because its
leaders have contrived to present it to them as a
means of emphasizing their national feeling. This has
often proved a potent instrument in the hands of
heretical leaders, and we have early examples of it
in the way in which Donatism presented itself as the
religion of the Africans, and Arianism as the religion
of the Goths. A last class of motives which has often
worked for separation is to be sought in the disposi-
tion of temporal rulers to intrude into the adminis-
tration of the Church and to use the Church to
suit their own political schemes. We have an example
of this evil in the conduct of the Emperors Constanti-
nius and Valens, who so disastrously fostered the Arian
heresy. To all these false principles the orthodox
Fathers opposed, in the first place, the authority of
the Church to settle questions of faith, and to
assess the validity of the various systems of
which, though not refusing to meet the heresiers on
their own ground also, and refute them by argument,
as many beautiful treatises testify.

B. Nestorianism.—Besides these notable heresies of the early centuries, which fixed the type, as it were,
for all future divisions, Monothelitism in the seventh
century, Iconoclasm in the eighth, together with the
heresies of the Waldensians, Albigensians, Wycliffites,
and Hussites of the medieval period, introduced
strife and division into Christendom for periods
shorter or longer. As, however, they too are extinct,
it is enough just to refer to their existence, and we may
pass on to the still-enduring separatist Churches of
the East of which the most ancient is the Nestorian.
This is distinguished by the theory of one person in
which, as held by Nestorius, was condemned in the
Council of Ephesus, in 431. It is the doctrine that
in Christ there are not only two natures but also two
persons, the Divine person, Who is the Second Person
of the Blessed Trinity, and the human person, Who
was born of the Virgin Mary; and that the union
between these two persons is of a dual nature, the
Divine person having chosen the human person
to be in a unique manner His dwelling-place and instrument. As Nestorius, after his condemnation,
was first imprisoned in his former monastery at Anti-
och and then banished to the Greater Oasis in Upper Egypt, his personal influence over his disciples ceased. But his doctrine was undoubtedly derived from his former master, Theodore of Mopsuestia, and, as Theodore, it was cherished as that of the greatest theological light of Syria, the condemned doctrine found many friends in the Eastern Patriarchate, and was taken up with special zeal at Edessa. From thence it spread to the neighbouring kingdom of Persia, where it was welcomed and protected by the Persian king as tending to emancipate his Christian subjects from the suzerainty of the Mothrians. It had a direct tendency towards the prevailing sentiment at Antioch became Monophysite, and the Nestorians of the patriarchate had to take refuge in Persia, with the result that the subsequent development of the heresy had its centre of propagation in the Persian town of Seleucia-Ctesiphon, on the Tigris, where was its metropolitan see. These Nestorians had a fine missionary spirit, and evangelized many countries in the Far East, some even reaching China, and others founding those Christian communities on the Malabar Coast of India called the Thomas Christians, or Christians of St. Thomas. This Nestorian Church reached its highest pitch of prosperity in the eleventh century, but the Mongol invasion in the thirteenth and fourteenth centuries brought it back to Persia and the two classes of Nestorians and their mass of their posterity became absorbed in the general Mohammedan population. They are now represented by a small body, who dwell on the borders of Lake Urumiyah in Kurdistan and in the neighbouring highlands. They are not a very civilized race and probably know little of the doctrine which was the original core of the Monophysitic position, but only as the patriarchate watchword of their race. A still smaller body of Uniat Catholics of the same spiritual ancestry and the same liturgical rite are called Chaldees and live in the Euphrates and Tigris valley. In 1570 their Catholics seceded on a purely personal matter, and induced his people to refuse acceptance of the Vatican decrees. They returned to unity seven years later, but the episode seems to show that their faith is not very firm.

C. Monophysitism.—The Monophysite schism had still more serious consequences. Its distinctive doctrine is associated with the name of Eutyches, former archimandrite of a monastery near Constantinople, and Dioscorus, the nephew of St. Cyril and his successor as archimandrite of St. Catherine. The doctrine, which was condemned at the Council of Chalcedon in 451, contrasted with Nestorianism by running to the opposite extreme. It maintained that in Christ there is not only a single personality, but also only a single nature. “Of two natures but not in two natures” was its phrase; for the Monophysites were zealous upholders of the deicides of Ephesus, and affirmed that Mary was the Theotokos, from whom her Son received a perfect human nature; but they maintained that the effect of the union was that the Divine nature absorbed the human so that there were no longer two natures, but one only; anything short of that seemed to them to dissolve the essential unity of Christ’s person. At Ephesus the two theses were put to the bishop of St. Cyril and had fought hard for the condemnation of Nestorianism just on this ground, that it amounted to a denial of the unity of Christ; and now it seemed to them that his doctrine, which had triumphed so splendidly at Ephesus, had been condemned at Chalcedon. Nor can it be denied that some unguarded expressions used by St. Cyril, though not so interpreted by him, were susceptible of a Monophysite interpretation. Besides Eutyches and Dioscorus, some of those who had signed the decrees of the new council felt that St. Cyril’s expressions were affected by its decisions, and they returned home dissatisfied.

But here, too, it was chiefly racial feeling which, by intensifying the crisis, precipitated a far-reaching schism. Although hellenized on the surface by their incorporation first in the Macedonian Empire and then in the Roman, the populations of Egypt and Syria were racially distinct from the Byzantines who governed them and the Greek colonists who had settled among them. Hence their attitude towards the dominant race was one of dislike and resentment, and they welcomed the opportunity which enabled them to assert in some measure their national distinction. But according to reports the Egyptians were said that their great hero St. Cyril was enraged by a condemnation of his doctrine, they rallied round Timothy Ælius, the usurping successor of Dioscorus, and embraced his doctrine. The Greek colonists of course took the orthodox side, or rather took the side of the Court, just as it happened to be at the time, whether orthodox or Monophysite, according to the personal policy of the successive emperors; but from the time of Chalcedon the great mass of the Christian population of Egypt became Monophysite and was lost to the unity of the Church. Two centuries later the Mohammedan invasion came both to emphasize and to enfeebles this extensive schism. During the interval, though the people were set against orthodoxy, they had been enjoined to enforce it, but when the Mohammedans came the whole influence of the caliphs was used to confirm the schism—that is, in those whom they could not succeed in gaining over to the religion of Islam. In the Patriarchate of Antioch and the smaller Patriarchate of Jerusalem events pursued a corresponding course. The Christians of Syrian race were predisposed to take up with Monophysitism because their Byzantine rulers were on the side of orthodoxy, and so fell away into a schism which, although from time to time checked or modified by the action of the Court as long as Byzantium retained its sovereignty over those parts, settled down into a permanent separation, when the Mohammedans had obtained possession of the country. The latter lost its losing its ancient unity of its adherents by perversions to Mohammedanism.

The Christians of the present day who represent the former populations of the three splendid Patriarchates of Antioch, Alexandria, and Jerusalem are few in number, and fall into five classes. First there are the schismatic Copts in Egypt, descendants of the native Egyptians, who number about 1,500,000, and are mainly the Abyssinians. These were in early days converted from Alexandria, and so in due course passed into schism along with it. They form the great mass of the inhabitants of Abyssinia, about three million and a half, and have kept their faith well, but are very ignorant of its teaching and duties. Thirdly, the Jacobites of Syria, who bear the same relation to the ancient Syrians as the Copts to the ancient Egyptians, and are called Jacobites after Jacob Barra (Paradis), who preserved the episcopal succession when it was threatened by Justinian. The Jacobites are to be found mostly in Mesopotamia, Syria, and Kurdistan, and are estimated as numbering some 80,000. Fourthly, the Monophysites known as Nestorians, who number about 70,000. These were originally Nestorians, having been first evangelized, as we have seen, by the early Nestorians; the Portuguese sought to catechize them by very harsh means, and succeeded only in attracting their dislike. When the Dutch succeeded the Portuguese in India, and began to persecute the Catholics, the Nestorians of Calabar, not being able to find a Nestorian bishop, procured a Jacobite bishop from Jerusalem, to renew their episcopal succession, and thus ended in becoming Monophysites. Fifthly, the Armenians, if we include with those who dwell in Armenia Proper those of the same race and religion who are settled in Asia Minor, European Turkey,
Galicia, Armenia, and elsewhere, may perhaps amount to some three millions and a half, though trustworthy statistics are not available. Of the Nestorians, by the side of each of these sections of Monophysites is a corresponding body of Uniates who, once Monophysites, have at one date or another in the past renounced their heresy and been reconciled to the Catholic Church, which has cordially sanctioned the retention of their native rites. Of these the Melchites, Coptics and Syrian melchites amount to about 35,000, the Uniates of St. Thomas to about 90,000, and the Uniat Armenians to about 60,000 or 70,000. Of Abyssinian Uniates there are practically none.

D. Photianism.—The next great schism which divided Christendom was that which is known as the Photian schism, and led to the separatist existence of the Eastern Church (Constantinopolitan) until the 11th century, when the Byzantine Empire was revivified by the death of Michael I, and called the "orthodox Church". We shall employ both these names as names which have become current designations, though without accepting the implications that attach to them. Certainly Photianism is a name which well expresses the character of a separation motivated, at all events in the first instance, not by any desire to proclaim a doctrine more pleasant to the ears of the personal ambitions, that one man being Photius, the usurping Patriarch of Constantinople in 857. It is true that the schism initiated by Photius did not long survive his death, but he was a man as remarkable for his learning and ability as for his unscrupulousness, and so was able to create—doubtless out of preexisting matters—a schism which in an early period was to become an instrument of separating armory an ecclesiastical party animated by his own separatist ambitions and anti-Latin animosities.

The history and vicissitudes of this most lamentable of all schisms have been sufficiently told in other articles (Ignatius of Constantinople, Saint; Photius or Constantinople; Michael Cerularius; Gregory IV and the Three Chapters) so that here we shall only speak of the unprovoked it was, both in the time of Photius and in that of Michael Cerularius, by any harsh or incon siderate action on the part of the popes. When Bardas, the uncle of the Emperor Michael III, presented himself to the Patriarch Ignatius to receive Communion while living in incest with his daughter, and two other charges, might have been brought to the patriarch against their will to receive the veil of religion—what else could a conscientious prelate do save refuse what was so improperly sought? Yet it was just for this that the Patriarch Ignatius, on refusing to resign his see, was banished to the island of Tenedithus, and under just these circumstances the Holy See occupied patriarchal throne and sought confirmation of his appointment from Pope St. Nicholas I. The letter which he addressed to St. Nicholas ("Opera", in P. G., Cl, 867-68) misrepresented the facts, and besides bore on its face such signs of untruth as could not but arouse the suspicions of the pope, who, when at last he found out what the true facts were, did not condescend to accept a letter in which he pronounced the election of Photius null and void, and laid Photius under excommunication. Later, when Photius saw that Rome could not be induced to sanction his usurpation, he threw off his disguise and professing to have discovered that certain usages of the West were scandalous and even heretical, addressed an encyclical to the Orientals inviting them to meet in a general council at Constantinople and pass judgment on St. Nicholas.

Though the pope's real offence, in the eyes of Photius, was that, as successor of St. Peter, he exercised an authority which stood in the way of Byzantine ambitions, the schismatic felt that, if he would redress the cause of Orthodoxy from the religious world, he must provide it with a dogmatic basis, and accordingly he formulated the following charges, only one of which raised an issue which had even the appearance of being dogmatic: the Westerners, he said, fast on Ash Wednesday and have their Easter two weeks in Lent, impose the yoke of celibacy on their priests, and consecrate deacons per saltum to the episcopate. Nothing could be more trivial than these charges on the ground of which this man was prepared to break up the unity of Christendom; but for the time the schism thus caused was only transitory. Photius and his successors were driven out of the fast court intrigues, and though, on the death of Ignatius, he attained to a more legitimate possession of the patriarchate, he died in 867, after which there was a reconciliation with the Holy See which lasted for the next two centuries.

Then came the Patriarch Michael Cerularius, who in 867—though at a time when it was not there any tension between the emperor and the pope, and the Norman invasion of Sicily just then occurring made it peculiarly desirable that they should unite to oppose the common enemy—caused letters to be written and brought to the notice of the pope, in which he renewed the old condemnation of the Latins for fasting on Saturdays, converting the Holy Eucharist into the sacrament of the dead and celibacy. Also, at Constantinople, he invaded the churches built for the use of the Westerns, where the Latin Rite was used, and ignoromously handled the Blessed Sacrament there reserved, on the plea that, being consecrated in unleavened bread, it was not truly consecrated. Again there was a saint on the Council of Sardica. Emperor Michael and his legates both of whom were present, having been informed of it, the letter contrasted the violence offered by Michael to the Latin Church at Constantinople with the pope's cordial approval of the many monasteries of the Greek Rite in Rome and its neighbourhood. Further, at the request of the Emperor Constantine Monomarcus, who by no means shared the patriarch's bitter spirit, St. Leo sent two legates to Constantinople to arrange matters. There was nothing, however, to be done, as the emperor was weak, and the patriarch was allowed to carry all before him. So the legates returned home, having first left on the altar of St. Sophia a letter in the pope's name by which Michael Cerularius and one or two of his agents were deprived of the title of patriarch, the excommunication touched only the persons named in the document, and not the whole Byzantine Church; indeed the excommunication of a whole Church is an unknown and unintelligible process. If the whole Church or patriarchate from that time fell away from unity, and has remained out of it ever since, it was because, and in so far as, its members either had a separation of their own creation, or were induced by the example of the West in breaking off relations with Rome. This fact, however, must remind us of the mistake we should make were we to regard the vagaries of a patriarch like Michael Cerularius as the adequate cause of so persistent and far-reaching an effect. Undoubtedly, he had with him in his secession, if not the whole population of his patriarchate, at all events a party strong and influential enough to compel the submission of the rest. This party was the one to which we have referred as formed and consolidated by Photius. In a less pronounced form it is traceable back to the secular struggle between the Greek and Latin races for universal dominion; and since the time of Photius it has continued much increased by the growth of Western kingdoms hostile to the empire and by the amicable relations in which their
rulers stood to the Roman bishops. This then was the main cause of the separation which has endured so long, and still endures, but to estimate it at its full strength we must take into account the accompanying negative cause. For, though Photius in one of his books addressed to the East, speaks "the search and support of the truth," and though his followers would have us seek our standard of doctrinal purity exclusively in the prescriptions of the first seven oecumenical councils, St. Leo IX, in his letter to Cerularius, enumerated nineteen of the latter's preconciliar councils as having fallen under the condemnation of these same councils. While the Greek writer Photius (p. 164) calculates that in the interval of 464 years which separates the accession of Constantine the Great from the celebration of the Seventh Council (787), Constantinople and its ecclesiastical dependencies had been in schism for 203 years. This means that the sense of unity, so strong in the West, had in the East, owing to the perversity of emperors and patriarchs, no fair chance of striking deep roots among the people, and so could seldom offer effectual resistance to the forces making for schism.

Unlike the Nestorians and the Monophysites (whom the Orthodox regard as heretics just as much as do the Catholics), the Photian schism commenced nearly nine centuries ago by Michael Cerularius, the Greek archbishop of Constantinople in a few weeks, the number the schism taken altogether number not more than six or seven millions, but by vast populations which, in the aggregate, number not far short of a hundred millions. This is chiefly, though not solely, because, the Russians having been converted by missionaries from Constantinople about a century before the time of Cerularius, their direct religious intercourse was with Constantinople and not with distant Rome; and accordingly they drifted gradually first into unconscious, and later into conscious, acceptance of its separatist attitude. The upshot is that out of the 95,000,000, at which the Orthodox Christians are estimated by statisticians, some 70,000,000 are Russian subjects, the remaining 25,000,000 being divided among the pure Greeks of the Turkish Empire and the Kingdom of Greece, the Rumanians, Servians, and Bulgarians of the Balkan Peninsula, the Cypriotes, and the comparatively small number, mostly Syrians, who reside in the former territories of the Alexandrian and two Eastern Patriarchates. (For particulars see GREEK CHURCH.) As against these numerous, and united, Eastern Christians, the Western Church, having been converted from their schism and are now in communion with the Holy See, though keeping religiously to their ancient Byzantine Rite, whether in its Greek, Slav, or other vernacular form. These are estimated by the author of the article just cited as numbering in all about 5,000,000, of whom the greater part are Rumanians and Rumanian in the Levant.

Probably, when the Photian schism was first effected it seemed to the Byzantine leaders that, though by an unfortunate chance the see from which they were separating was the one which could claim the inheritance of the promise made to Blessed Peter, it was with themselves rather than with the Westerners that the main portion, the very substance, of Christendom's union would always be found. Certainly the centre of the world's culture and civilization, religious as well as civil, was then on the Hellespont, and it may be that even in actual numbers the subjects of this one patriarchate surpassed the hordes of half-converted barbarians (as they would have called them) who formed the populations of the new Western empires. As regarded under this aspect, however, it cannot be said that the comparison still tells in their favour or that the schism has profited them. Impressive as is the Orthodox Church numerically, it is far surpassed in that respect by the 260,000,000 or more who represent the old Patriarchate of the West, nor could anyone now compare, to the advantage of the former, the religious culture and activity of the East with that of the West. Indeed, until a quite recent date, stagnation and ignorance is the judgment passed on the Orthodox clergy and laity by observers of all sorts; and if during the last century there has been a distinct improvement in the leaders among priests and people, it has derived much of its inspiration from Protestant sources, chiefly from German universities, and has not been obtained without some sacrifice of the integrity of the ancient and anciently about some admixture of the modern Protestant spirit.

In another very serious respect the Orthodox Christians have lost by their separation from Catholic unity, for they have succumbed to progressive disintegration—the fate of all communities that are without an effectual centre of unity. The Patriarch of Constantinople's original claim to be exalted to the second, if not to the first, place in Christendom was (though never formulated distinctly) that Old Rome had been chosen for the seat of primacy because it was the imperial city, and hence, with the transference of the empire, this primacy had passed to New Rome. Such a claim quite lost its significance when the Byzantine Empire passed from an imperial one to a purely feudal system, and the sultans sat in the seat of the former sovereigns of the East. For the time, indeed, the new order of things brought with it even an accession of power to the patriarchs. The Sultan saw the advantage of keeping alive a separation which alienated his Christian subjects from their brethren in the West. Accordingly he made the patriarch, whom he could appoint, keep, or change at his pleasure, the tison of the civil as well as the ecclesiastical governors of the Christians of whatever race, within his dominions. Still, the condition of patriarchs thus bound hand and foot to the chief enemy of Christendom was but a gilded servitude for which it was difficult to feel respect; and, as racial consciousness developed among the many nationalities of the patriarchate, it became more and more realized that the New Rome theory could now be given a fresh application.

Russia was the first to revolt, and in 1589 the Tsar Ivan IV insisted that the Patriarch Jeremiases should recognize the Metropolitan of Moscow as the head of an autonomous patriarchate. Why should he not, with the Russian State fresh from what Constantinople had formerly been, the mouth of the great Christian Empire of the East? Later, to bring the ecclesiastical government more effectually under the thumb of the Crown and convert it into an instrument of political government, the whole constitution of the Russian Church was changed by Peter the Great, who, in contempt of every canonical principle, suspended the patriarchal jurisdiction of Moscow, and put the whole Church under a synod consisting of three metropolitan, who sat ex officio, and some prelates and others personally appointed by the tsar, with a hyman as chief procurator to dominate their entire action. Till the last century this was the only diminution of the Patriarch of Constantinople's jurisdiction; but, with the weakening of the sultan's power, the patriarchal jurisdiction of Moscow, only recognized as supreme have succeeded one after another in gaining their independence or autonomy, and have concomitantly established the autonomy of their national churches. Though adhering to the same liturgy and to the same doctrine as the other Orthodox Churches, they have followed the example set by Russia and, each in its turn, have recovered the holy synods of their own to govern them ecclesiastically under the supreme control of the civil power. Greece began in 1823, and since then the Rumanians, the Servians, and the Bulgarians, with their respective
subdivisions, have followed suit; so that at present we must no longer talk of the Orthodox Church, but of the Orthodox Churches, seventeen in number, in no sense governmentally connected, torn with interneice quarrels, and offering no guarantee, especially in view of the infiltration of Protestant tendencies now going on, that their doctrinal agreement will continue.

Summary.—In these three Eastern schisms, which broke up so disastrously the ancient union of Christendom, two things are specially observable from the point of view of this article. One is that, apart from the separation from the centre of unity which constituted the schism, they have retained almost in its entirety the ancient system of Church organization and worship. The idea of hierarchical authority, endowed with valid orders, the sacrificial worship of the Mass, a spirituality based on the use of the seven sacraments, the Catholic doctrine of grace, the exaltation of the Virgin Mother, and the invocation of the saints. Above all they have retained the appeal to tradition as the sure test of sound doctrine and the principle of submission to a teaching authority. The other is that observable in these three schisms accorded with what has already been noticed in the early schisms. Doctrinal considerations based on the exercise of private judgment may have influenced their founders to an extent greater or less, but reasons of quite a different order determined the allegiance of their followers. Nationalism exploited by their leaders, or maybe, as in the case of the Patriarchate of Alexandria, an Independent would have been equally acceptable, if its assumptions accorded with what has already been noticed in the early schisms. Doctrinal considerations based on the exercise of private judgment may have influenced their founders to an extent greater or less, but reasons of quite a different order determined the allegiance of their followers. Nationalism exploited by their leaders, or maybe, as in the case of the Patriarchate of Alexandria, an Independent would have been equally acceptable, if its assumptions accorded with what has already been noticed in the early schisms. Doctrinal considerations based on the exercise of private judgment may have influenced their founders to an extent greater or less, but reasons of quite a different order determined the allegiance of their followers.

Now, if the Bible were drawn up, as it is not, in the form of a clear, simple, systematic, and comprehensive statement of doctrine and rule of conduct, it might not perhaps, seem antecedently impossible that God should have left it to men of every rank and condition, to decide which people should attain to the knowledge of the true religion. Still, even then the validity of the method would need to be tested by the character of the results, and only if these exhibited a profound and far-reaching agreement among those who followed it would it be safe to conclude that it was the method God had intended it to be, and not, as has at times been strangely assumed that those who followed him into revolt would use their right of private judgment only to affirm their entire agreement with his own opinions, for which he claimed the sanction of an inspiration received from God that equalled him with the Prophecy of old. But he was soon to learn that his followers attached as high a value to the individual interpretations of the Bible as he did to his, and were quite prepared to act upon their own conclusions instead of upon his. The result was that as early as the beginning of 1525—only eight years after he first pronounced his heresies—we find him acknowledging, in his "Letter to the Christians of Antwerp" (De Wette, i. 361), that there are as many sects in Germany as heads. One will have no baptism; another denies the sacrament, another asserts that there is another world between this and the last day, some teach that Christ is not God, some say this, some say that. No doubt is so hoarse but, if a fancy enters his head, he must think that the Holy Ghost has entered him, and if he do not listen to his spirit. Moreover, besides the multiplying manifestations of pure individualism, two main lines of party distinction, each with a fatal tendency to further subdivision, had begun almost from the first to divide the reform leaders among themselves. The Swiss Reformer, Zwingli, had commenced his revolt almost simultaneously with Luther, and, though in their fundamental doctrines of grace and free will, interpreted and of justification by faith, they were on the same lines, in regard to the important doctrines of predestination and the nature of the Holy Eucharist they took opposite views, and attached to them such importance that they became irreconcilable foes and leaders of antagonistic parties. So, at such a period of revolution, if consistently held to, it was impossible to build up a Church which should stand out in the world like the old Church they were
striving to destroy, for, if in the last resort the judgment of the individual be for him the supreme authority, it is impossible that any external authority can be entitled to demand his submission to its judgments when contrary to his own. The early Reformers probably realized this, but they felt the necessity of building up some sort of a Church which could bind together its members into a corporate body professing unity of belief and worship, and in which, in contrast with the pope's Church, which they called and of which they be called the true Church of God. And so, regardless of the contradictions in which they were involving themselves, they set to work to exegogate a theory of church-constitution to suit their purposes. This theory is exhibited in the seventh article of the Augsburg Confession of 1530, to which type the other Protestant Confessions, both Lutheran and Reformed (that is, Calvinistic), of the next few decades conformed. "The Church of Christ," says the Augsburg Confession, "is, in its proper meaning, the congregation of the members of Christ, that is of the Saints, who truly believe and obey Christ; although in this life many evil men and hypocrites are intermixed with this congregation until the day of judgment. This Church, properly so termed, has, in the point of view of the Protestant faith, the sound teaching of the Gospel and the right use of the sacraments. And for the true unity of the Church it is enough to agree as to the teaching of the Gospel and the administration of the sacraments." This idea of the Church has some surface resemblance to the Catholic idea, but is in reality its exact converse. The Catholic Church is the vehicle of true teaching and true sacraments, but there the resemblance ends. The Catholic first asks himself which is the true Church that Christ has set to be the guardian of His Revelation, the teacher and ruler of his people. Then, having identified it by the marks set upon its face—by its continuity with the past, which, in virtue of its indefectibility, it must necessarily possess, its unity, catholic, obedience, and sanctity—he submits himself to its authority, accepts its teaching, and receives its sacraments, in the full assurance that just because they are sanctioned by its authority its teaching is the true teaching and its sacraments are the true sacraments. The Protestant, on the other hand, if he follows the course marked out for him by these Protestant confessions, begins, in himself, and subject to the examination of a wholly distinct and independent test, what are the true doctrines and true sacraments. Then he looks out for a Church which professes such doctrines and uses such sacraments; and having found one, regards it as the true Church and joins it. The fatal tendency to disunion inherent in this latter method appears when we ask what is that distinct and independent test by which the Protestant decides as to the truth of his doctrines and sacraments, for it is, as the whole history of the Reformation movement declares, that very rule of the Bible given over to the private interpretation of the individual which is inconsistent with any real submission to an external authority. Important, however, and fundamental, that point is the Augsburg Confession passes over without the slightest mention. So, too, do most of the other Protestant Confessions, and none of them dare to go to the root of the difficulty.

The Scottish Confession of 1560 (of which the Westminster Confession drawn up in England during the Commonwealth is an amplification) is the most explicit in this respect. After claiming that the Presbyterian Church recently established by John Knox and his friends holds the true doctrine and right sacraments, it gives as its reason for so affirming that "the doctrine which we use in our Churches is contained in the written Word of God... in which we affirm that all things that must be believed by men for their salvation are sufficiently expressed". It then goes on to declare that "the interpretation of the Scriptures of the Old and New Testaments is not to be made by every private person, or to any Church... but this right and authority of interpretation belongs solely to the Spirit of God by whom the Scriptures were committed to writing". This, no doubt, is what the other Reformers in Germany, Switzerland, and elsewhere would also have said, but they prudently passed the point over in their confessions, half conscious that to claim the right of interpretation for the Spirit of God was but a misleading way of claiming it for each individual who might conceive himself to have caught the mind of the Spirit; foreseeing, too, that, if no Church could claim the right to interpret with authority, no Church, Protestant any more than Catholic, could claim the right to impose its doctrines or worship on others.

However, the Reformation leaders knew what they were about. They meant to have a Protestant Church, or at all events Protestant Churches, to oppose to the pope's Church, and they intended that these new Churches should profess a very definite creed, and enforce its acceptance, together with submission to its disciplinary arrangements, on all whom they believed to be true members of their Churches. And the intention was not to receive jurisdiction. Accordingly, these Protestant confessions of faith, which were the formal expression of their doctrinal creeds, contained and prescribed, quite after the manner of Catholic professions of faith or decrees of councils, lists of very definite articles, often with added anathemas directed against those who did not accept them. The Church, therefore, was to be "called" before they could exercise their functions, those entitled to call them being governing bodies consisting of clergy and laity in fixed proportions, and formed hierarchically into local, regional, and national consitories. To these governing bodies appertained also the right of administration, of deciding controversies, and of excommunicating. The difficulty was to equip them with adequate powers, but for this the German Reformers had recourse to the secular power. The secular power was, they assured their princes, bound to use its sword for the defence of right and the suppression of evil; and it appertained to this department of its functions that in times of religious crisis it should take upon itself to judge the cause of the Church, whether by the old or new doctrines—and root out the old errors.

The German princes had hitherto stood off from the new evangelists, whose democratic tendencies they suspected, but this appeal for their intervention was bated with the suggestion that they should take away from the Catholics their rich endowments, and apply them to more becoming uses. The bait took, and within a few years, one after another, the princes of Northern Germany—no very edifying class—declared themselves to be on the side of the Gospel and ready to take over the responsibility for its administration. Then, from 1525 onwards, following the lead of Philip, Landgrave of Hesse, one of the most immoral men of the age, they seized the abbeyes and bishoprics of the Roman Catholic Church, and disposed of the revenues, mostly applied to the increase of their own, and proceeded to found national Churches, based on the principles shortly afterwards accepted by the Augsburg Confession, which should be autonomous for each dominion under the supreme spiritual as well as temporal rule of its secular sovereign. For these national Churches they drew up both civil and ecclesiastical arrangements, and orders of ministers, observance of which they enjoined on all their subjects under penalty of exile, a penalty which was at once inflicted on those of the Catholic clergy who remained faithful to the religion of their ancestors, as well as on multitudes of Catholic laymen.

This system of national Churches did not necessa-
rily involve the imposition of Protestant creeds differing among themselves, for it was within the power ascribed to the princes that they should agree together as to what they would enforce, and no doubt to a certain extent this was what happened, and by happening caused Lutheranism to be the prevailing form of religion in Protestant Germany. Still the system did involve the princes and the power, if he judged fit, to introduce a creed differing from that of the neighbouring dominions, and eventually this was what occurred when the Lutheran and Reformed parties settled down within the limits of the Empire into formal opposition among themselves. Some principalities—and it was the same with the free cities which went over to Protestantism—enforced one, and the princes of Catholicism, the other, of the forms of Reformed confession, and there were even oscillations in the same principality as one sovereign succeeded another on the throne. The signal instance of this was in the Palatinate, the inhabitants of which were required to change backwards and forwards between Lutheranism and Calvinism, four times in the years 1533 to 1548. This pretension of the German princes to dictate a religion to their subjects came to be known as the jus reformandi, and gave rise to the maxim, Cujus regio ejus religio. By the Peace of Augsburg, 1555, this pretension was reluctantly conceded as a temporary expedient to the Protestant princes, and by the Treaty of Osnabrug in 1555 to France it received a more formal kind of imperial sanction, against which an ineffectual protest was made on behalf of Pope Innocent X by his nuncio, Chigi.

In Switzerland there were no princes to put themselves at the head of the new national Churches, but there their place was taken by the cantonal governments, whatever they might be, as controlled by the Protestant faction. Thus Zwingli, who began his fiery preachings against the Catholic Church in 1518, and in a few years' time had gathered round himself a band of fanatical followers, with their aid and by holding out the confiscation of the church property as an inducement, was able by 1525 to draw over to his side the majority of the members of the State Council of Zurich. By the year 1533 the majority of the council were overpowered and extruded, which done, at the instigation of Zwingli, the Catholic religion, though it had been the religion of their ancestors for many centuries and was still the religion of the quiet people in the land, was summarily proscribed, even the celebration of the Mass being forbidden under the penalty of death. Conversion forever impossible, fierce crowds led by Zwingli in person were sent to visit the various churches and strip them of their statues and ornaments on the plea that the Bible commanded them to put down idolatry. The ground being thus cleared, the State Council by its own authority set up a national Church council consisting of representatives from Schwabhausen, St. Gall, and Appenzell followed quickly in the footsteps of Zurich, the same methods of violence being employed in each case. The desires of the people themselves counted for nothing. The opinions of yesterday adopted by the fanatical leaders were at once exalted into dogmas for which was claimed an authority over the consciences of all far exceeding that which had been exercised by the venerable Church of the ages.

Nor were these Protestant cantons satisfied with imposing their new doctrines on their own subjects. Having combined with certain cities of the Empire to form a "Christian League", in its name they summoned the Catholic cantons, Schwytz, Uri, Unterwalden, Zuger, and the like, to agree on example in supplanting the old Faith by the new. The latter, however, were resolute in their refusal and, although their military strength was inferior to that of their antagonists, they eventually inflicted on them a severe defeat at Kappel (31 Oct., 1531), a defeat in which Zwingli himself and several other preachers were slain on the field. It was a crushing blow to Zwingianism, which, as such, never recovered, and it saved the Catholic cantons from the danger of persecution, while opening the way for the Catholic restoration that was to ensue. But, if Zwingianism was overthrown, it was not that Protestantism had become extinct there but that it was about to pass throughout Switzerland into Calvinism. John Calvin, a native of Noyon, after inhabiting Paris the Lutheran views which later on he recast, in his "Institutes", into the form ever since associated with his name, settled down at Geneva in 1536, and in the next few years, the same sort of theocracy as he had in Flanders and which he did not think that Protestantism had become extinct there but that it was about to pass throughout Switzerland into Calvinism. John Calvin, a native of Noyon, after inhabiting Paris the Lutheran views which later on he recast, in his "Institutes", into the form ever since associated with his name, settled down at Geneva in 1536, and in the next few years, the same sort of theocracy as he had in Flanders and which he did not think
tion, the other which strove perseveringly for a root-and-branch subversion of the Elizabethan settlement and the substitution of one conformed to the Genevan model. During the Commonwealth the latter party obtained for the time the upper hand, but with the Restoration it was extruded altogether and became the parent of those Nonconformist sects whose progressive divisions and subdivisions have always been the greatest scandal of religious life been. The other party meanwhile, with some oscillations to the right or to the left (under the names of the High and Low Church parties), maintained itself with approximate consistency as exhibiting the distinctive spirit of the Established Church of the country.

Towards the middle of the nineteenth century, however, two quite novel tendencies appeared: one, in effect a reaction from the Calvinism which has since become so influential that before long they are likely to divide between themselves the race of Anglican Churchmen), one based on a far-reaching appreciation (but with some reservations) of the Catholic system, delighting to call itself Catholic, and striving to assimilate the national worship to the Catholic manner of which it itself Liberal, and, pushing to its bitter end the application of the Protestant principle of private judgment, has by its rationalistic criticism diffused a widespread scepticism as to the authenticity of the Christian records and the truth of the most fundamental articles of the Christian creed. This theological Liberalism has likewise exercised a powerful influence in Continental bodies, and one more deadly still on Continental Protestantism, Germany being the primary source from which it has sprung. Of Germany, in fact, it must now be said that, as in the sixteenth century it gave birth to what is called orthodox Protestantism, so in the present age it is engaged in throttling its offspring in the tight grasp of its critical spirit, which has already worked its way into Protestantism in the United States, Canada, and other countries colonized from Europe. It is sufficient to say that the immigrants have taken their beliefs and forms of worship with them to their new homes, and, the world of ideas being now one, this many-headed hydra has displayed in the new countries the same diversities and amorphousness which it possessed in the old.

Except for its Puritan variety, which depended for its propagation chiefly on the powers of physical coercion its leaders could dispose of, Protestantism was an easy-going religion which had abolished many of the ascetic observances and restrictions on liberty and license that held in the old Church. It was to be expected, therefore, that it should spread rapidly in an age when ideas were so alarmingly corrupt, nor must we be surprised that, with such a start, it was enabled soon to present the appearance of a group of Churches peopled by very many thousands of adherents. Since those early days, however, it cannot be said to have extended its conquests much, and the millions to which it has now grown are due not much to any great and sudden change in or among the existing denominations. In the present day the total number of Protestants is estimated at about 166,000,000, an enormous number, no doubt, but one which, unlike the 260,000,000 Churchmen who are confined to main and a large majority of all the denominations in the world. In the present day the total number of Protestants is estimated at about 166,000,000, an enormous number, no doubt, but one which, unlike the 260,000,000 Catholic Churches that now stand together, is only an aggregate made up of a multitude of separate denominations, each of which has its own body of men that have the principle of private judgment as a rule of faith to that of submission to the authority of the Catholic Church. But the species of unity thus attained is always in its outer relations separate, in its inner relations precarious; for the very motives that cause the members of such a denomination to separate from others of the same faith; they are therefore, rather, the result of historical contingency where it is not so common, or that spirit of radical inquiry which is now so common, that for faith and reason to determine the future activity (see PROTESTANTISM; LUTHERANISM; CALVINISM; EPISCOPALISM; NONCONFORMISTS; RATIONALISM.)

Summary.—It will be useful, as in the cases of the primitive and the great Eastern divisions, to fix attention on the forces making for disintegration, which have brought these Protestant divisions into being. If the effect of such a summary is to show the essential similarity of the forces at work in all these cases, that will be advantageous, for it will reveal to us how few are these disintegrating forces, and how essential is their character; how, in fact, they spring from the very heart of human nature, which can only hope to counteract the divisions towards which they tend if sustained and elevated by some other forces of a different order altogether. In two respects, then, these separatist bodies to which Protestantism has given birth need to be considered, in their separations from the parent communions and in their cohesion among themselves, as corporate bodies enduring for a certain time and in a certain degree. The principle of private judgment has been the unoubt-
E. Divisions within the Catholic Church.—We ought not, perhaps, to conclude this survey of the history of religious divisions without touching on what some might consider to be such within the bosom of the Roman communion itself. There are and always have been opposite parties in this communion, whose adherents disagree on points of doctrine the importance of which may be estimated by the bitterness of their controversies. Thus there have been Jansenists and Anti-Jansenists, Gallicans and Infallibilists, Modernists and Anti-Moderneists. It is true that a time has come for some of these parties when their peculiar tenets have been condemned, and a portion of their adherents have passed from the Church into schism. But this has not happened in all cases of party divisions; and even when it has, there has been a considerable time previously been tolerated in the Church, holding their distinctive views, and yet not being denied the sacraments and other privileges of communion. Again, there have been, many times over, rival popes each gathering round himself a following and denouncing that of his rival; and during one notorious period of forty years' duration the Church was divided by these rivalries into two and even into three parties. Yet they are not the separated communions to claim unity of faith and government as her perpetual note? In two respects, however, there is an essential difference between these sorts of divisions that may arise in the Catholic Church and the schismatic and heretical in the separated communions.

First, in the Catholic Church the points in dispute round which these divisions gather are not the Church's accepted doctrines, but further points which the course of study within or without the Church has forced into prominence, and which one party thinks to be, and the other to deny or exclude. And to make it for its vindication, but another thinks to be incompatible with it and dangerous. Secondly, on both sides the combatants embrace the formal principle of Church unity, the magisterium of the Holy See, and, should the Holy See think fit to intervene, they are prepared to submit to its determination of their diverse views. So far there is nothing to justify the imputation of schism but only an illustration of the error of those who imagine that inside the Church thought and speculation must be stagnant. For these domestic controversies, though sometimes rendered harmful by the defective spirit of those engaged in them, have their useful side, as conducing to the fuller, deeper, and more precise comprehension of the meaning and limits of the accepted doctrines and to make it for its vindication, but another thinks to be incompatible with it and dangerous. It may happen, however, that when the course of a controversy has made clear what is involved in the new opinions advanced, the supreme authority in the Church will feel the necessity of intervening by some means. In that case a cruel moment often arises for the side whose tenets are now condemned. If they refuse the authority of the Church to declare which is the formal principle of unity, they will submit to the voice of authority, abandon their former opinions, and no longer a place for them in the Church, and they become schismatic in the ordinary sense.

A similar distinction applies to the case of schisms in the papacy. It is true that many anti-popes have sprung up and caused division in their time. They were mostly the creatures of some despot who had set himself up as the universal judge of the Church by the method of appointment, and it is, and invariably was, easy to tell which was the true pope, which the anti-pope. The one exception to this general statement is that referred to in the objection, the case of the Roman mob, which, however, is not a subject for the fuller history of this distressing episode see Schism, Western; Urban VI; Boniface IX; Gregory XII; Robert of Geneva; Luca, Pedro de.

What concerns us here is that the Conclave of 1378 was disturbed by the Roman mob, which, anxious lest the popes should go back to Avignon, demanded the election of a Frenchman. Robert of Geneva, not a Frenchman. Urban VI, till then Archbishop of Bari, was elected and enthroned, and for some weeks was recognized by all. Then the main body of the cardinals dissatisfied with the administration of Urban, who certainly behaved in an extraordinarily tactless manner, retired to Anagni, declared that, owing to the ill effects of the election of a Roman pope upon the Conclave, Urban's election had been invalid, and elected Robert of Geneva, who called himself Clement VII. This latter was soon compelled by circumstances to withdraw to Avignon, and so the schism resolved itself into a papacy at Rome and another at Avignon. Of the Roman line there were four popes before the schism was finally healed. Urban VI, Boniface IX, Benedict XIII, and Alexander V. But there were two, Clement VII and Benedict XIII. The effects were terrible and world-wide, some countries, through their sovereigns, ranging themselves on the side of Rome, others on the side of Avignon, politics in some degree determining their choice. But earnest efforts were made from the first to settle the matter, and the cardinals were convened to ascertain the facts, and the canonists writing learned treatises to expounding the questions of law involved. Proposals were also made from the first, recommending alternative plans for solving the difficulty, namely, that both popes should simultaneously resign and another be then elected, that both should be subjected to the refusal of the cardinals, that a general council should be called which both popes should combine to authorize, and that the decision should be left to this. All these plans failed for the time, because neither pope would trust the other, and this prevented their meeting and arranging. Hence, in 1408, the cardinals of both obediences abandoned their chiefs and meeting together con

XV.—10
far towards creating the tone of mind which rendered the outbreak of Protestantism in the next century possible. Still, when we compare this schism with schisms like those of the Orthodox and the Protestants an essential difference between them appears. In the other cases the division was over some question of principle; here it was over a question of fact only. On both sides of the dividing line there was exactly the same creed and the same moral; in the essential place of the papacy in the constitution of the Church, of the method by which popes should be elected, of the right to the obedience of the whole Church which attaches to their office. The only matter in doubt was: Had this person or that fulfilled the conditions of a valid election? Was the election of Pope Urban II valid, or not? Was it by a right to be heard by the electors, and therefore invalid; or had it been unaffected by this terrorism and was therefore valid? If Urban’s election was valid, so too were those of his successors of the Roman line; if his election was invalid, Clement VII’s and Benedict XIII’s were valid. But the verification of facts is through the testimony of those who have taken part in them, and in this case there was serious variance. To decide between them belongs to the special articles on that schism. In this article what concerns us is to appreciate the difference between a schism of this sort over a question of fact and a schism over a question of principle like the others that have been instances. We may help ourselves by an analogy; for we can compare this to that schism any which has disavowed a limb from the body and one which has caused a deep wound in the body itself. In the former case the life of the organism ceases at once to flow into the dismembered part, and it begins to disintegrate; in the latter, all the powers and processes of the organism are at once set in motion for the repair of the dismembered part. If the damage wrought is too serious for recovery and death must be expected, the life is still there in the organism, and oftentimes it is able to achieve a complete restoration. To apply this to the history, whereas in schisms properly so called a deprivation of the value of unity is wont to mark their commencement, in this schism it was most remarkable how strong was the sense of unity which attached itself on the side, so soon as the news of the rival lines set up became known, and how steadily, earnestly, discerningly, and unanimously the different parts of the Church laboured, with ultimate success, to ascertain which was the true pope, or to obtain the election of one.

IV. REUNION MOVEMENTS IN THE PAST. A. IN THE EAST.—As Constantineople had so often been in schism for a season, the popes took some time to realize that the schism accomplished by the Patriarch Cerularius was destined to continue. Even when they were last disillusioned, they never ceased to regard the Eastern Christians as a choice portion of Christ’s body, and to the popes the portion to unity according to their opportunities. Thus it was not merely for the recovery of the Holy Places and the protection of the pilgrims that Urban II and his successors originated and sustained the Crusades, but for the far more comprehensive object of bringing the concentrated strength of the Western Powers to the aid of their Eastern brethren, now threatened by the Turkish invasion. It was far from being overwhelmed. It is true that the intermingling of human passions and the clash of animosities, for which Easterns and Westerners were both to blame, not only brought to naught the realization of this splendid ideal, but actually enlarged the chasm which separated the two sides by intensifying the antipathy of the Easterns for their aggressors allies. Nor can it be denied that the Western populations often showed a very unsatisfactory spirit in their dealings with the East and their feelings towards them; for the Westerns, too, were dominated by the unbrotherly passions that spring from excessive nationalism, and it was just this that increased so seriously for the popes the difficulty of bringing the two sides together for the defence of Eastern Christendom. But the important thing to observe is that the popes themselves, with wonderful unanimity, stood outside all these racial animosities, and whatever were their personal affinities, never lost hold of the pure Christian ideal or thought to subordinate it to worldly politics. Thus a succession of popes from Gregory VII down to our own days (conspicuous among whom were Urban II, Blessed Eugenius III, Innocent III, Blessed Gregory IX, Nicholas IV, Eugenius IV, Pius II, Clement VII, Sixtus IV, Urban VIII, and Clement XIV) have manifested their strong desires and have strove most pathetically for the healing of this saddest of schisms, never losing heart even when the outlook was darkest, welcoming each gleam of sunshine as an occasion for repeating their assurances of a truly brotherly feeling, and a readiness to engage in the common good venture. This was no less essential to the Church’s faith and constitution. On the Oriental side there has not been much response to this pathetic call of the popes; but two of the Eastern emperors made overtures which led on to the solemn acts of reunion in the Council of Lyons (1274) and the Council of Florence (1439). Unfortunately these movements were of no avail to the Church in the struggle with the instinct of self-preservation in face of the Turkish danger more than by any adequate appreciation of the necessity of religious unity, and were, besides, undertaken by sovereigns the mass of whose subjects were not prepared to follow them in any cause that ran counter to their traditional resentments. Still, the second of these councils had its solid results. By the disposal of the Easterns to the East, the last three patriarchs under the old empire, the two distinguished prelates Bessarion of Nicea and Isidore of Kiev, besides originating the Uniat bodies. Though adverse circumstances have sometimes disturbed their allegiance, and have prevented their numbers from attaining to any high figures, these bodies, with their attempts to hold reunion by their standing testimony to the mode of reunion which is all that the popes ask for, namely, acceptance of the entire deposit of faith including the Divine institution of the Roman primacy, but beyond that a full-hearted adherence to those venerable rites and usages which are dear to Eastern hearts as an inheritance bequeathed to them by the Christian nation antecedents. Although, since the Council of Florence, no more proposals for healing the schism have come from the main body of the Orthodox and their rulers, one must include among the reunion movements of the past the one which, initiated by some Russian bishops, led to the union accomplished at Brest in Lithuania (1595). Some of the Russian bishops, with a considerable portion of the Ruthenians, the race that had formed the original nucleus of the Russian Empire, was officially reunited with the Holy See, but it was not for some time, and after the fiercest opposition, that the main body of that people were gained over to the union. Having, however, at length accepted it, they threw off the yoke of Poland. Then one-half of these Uniates came under Austrian rule, the other under Russian rule. The former, meeting with toleration from their rulers, still remain constant, the latter have been the victims of a succession of the cruellest persecutions undertaken to drive them back into schism. B. IN THE WEST.—In the first outbreak of Schism neither its leaders nor their followers had any scruples about their separation from the communion of the ancient Church. They regarded it as an
apostate Church from which it was a blessing to be separated, and they anticipated the speedy advent of the Reformation. The views of the Protestant preachers, it would dissolve away, and their own purified Churches take its place everywhere. But, as new generations grew up which were not responsible for the schism, devout minds were inevitably led to contrast the sectarianism they had inherited with the beautiful ideal of religious unity propounded by St. Paul and realized in the great centuries days of Christendom since the Reformations. That there were many such minds is evidenced by the stream of converts to the Catholic Church, which from the days of the Reformers onward has never ceased to flow—of converts who invariably ascribe their first discontent with their previous Protestantism to the scandal of its divisions. The same deep sense of scandal motivated their attempts to bring about reunion, whether among the Protestant sects themselves, or between these and the Catholic Church, which were made at various times during the succeeding centuries. All of these attempts failed because set on a false foundation, but some of them were certainly inspired by a genuine spirit of concord. We cannot indeed regard as so inspired the group of German iconoclasts who, the Comenians, and Martin Crusius, who, in the last quarter of the sixteenth century, proposed to the Patriarch Jeremias II of Constantinople a plan for the union of the Lutherans with the Greeks on the basis of the Lutheran Creed, a plan promptly rejected by the patriarch; nor the Dutch Calvinists and Anglican divines who, a generation later, in conjunction with the semi-Calvinist Patriarch Cyril Lucaris, but were finally repulsed by the Synod of Jerusalem (1672), which condemned their doctrines together with the memory of the patriarch who had coquetted with them; nor again the Gallican priests, Elies du Pin, and the Anglican archbishop, Wake, who in the first quarter of the eighteenth century proposed a reconciliation between the Anglican and Gallican Churches. In each of these cases the predominant motive was not to heal division, but to aid the cause of separation by strengthening the opposition to the Holy See.

Very different, however, and in every way commendable, was the spirit in which the party led by George Calhutus in the second quarter of the seventeenth century, and that in which Molanuzz and Leibniz in their negotiations with Bishop Spindlo of Neustadt and the great Bossuet, half a century later, worked for the elaboration of a reunion scheme which the Catholic Church and the Protestant bodies might both be able to accept. The last-mentioned episode, of which a more extended account is given in M. Reaumes's "Historie du Bossuet," is of particular importance as it was by the Court of Hanover, with the approbation of many Protestant princes, and watched with sympathy by Clement IX and Innocent XI. But, though political reasons were the immediate cause of the discontinuance of these negotiations, they were doomed to failure for theological reasons also. Of these the most important were the views held by those who formed the two main varieties of Protestantism, several were made in Germany from the time of Melancthon downwards; but all failed until the occurrence of the tercentenary of the Reformation in 1817, when the scheme recommended by Frederick William III of Prussia achieved a partial success which still endures. By this scheme the two sides were to retain each its own doctrine, but they were to coalesce into one "Evangelical Church" and worship together according to a common liturgy, or agenda, which was drawn up on lines sufficiently vague to leave untouched the points as to which they were at variance among themselves. Even this modus vivendi, rejected by the authorities of these Eastern Churches, and, if it represents their real mind, we must agree with them that negotiations some districts had to resort to physical force; nor has it been able to embrace all the Lutherans in its fold, treating as it did to favour their side less than that of the traditionally-Indulgentia.

V. REUNION MOVEMENTS IN THE PRESENT AGE.—In the present age the divisions of Christendom not only furnish its assailants with their most effective taunt, but constitute the most serious hindrance in the way of Christian work. Hence, among these who have inherited the condition of separation, the value of the Christian unity has come to be much more deeply appreciated than ever before, and many active movements have been set on foot, and schemes devised, for its restoration.

A. In the East.—So far as the Orthodox Churches are concerned it does not appear that the solace for reunion is very marked, at least among the rulers and the great mass of the populations. During the last half-century some members of the High Church section of the Anglican party, and likewise some members of the Old Catholic party in Germany and Switzerland, have approached the adherents of Russian and Greek Orthodoxy, in hopes of inducing them to promote intercommunication between their respective Churches. But either the previous negotiations, or they have led to occasional interchanges of eclesiastical courtesies and concessions, such as the more rigidly consistent Roman Church would deem to be compromising, have not yet attained, and are not likely to attain, their object; for the simple reason that the Orthodox Churches have no intention of renouncing their peculiar doctrines. In pointing out the blemishes of the Pope's infallibility, they are perfectly aware that this is the case in the Anglican Church, and are likewise aware that the Old Catholics, since they broke away from the Holy See in 1870, have come under Protestant influence and have lost their political importance for negotiations with the Holy See or even an interchange of ideas with it, the rulers of these Eastern Churches are as ill-disposed as ever, and when invited to do so by recent popes—as by Pius IX, on his accession and when convoking the Vatican Council, and by Leo XIII on his accession and in his "Præclaræ Gratulationis," of 1891—they have always opposed any fearful silence or words of studied offensiveness to the affectionate language of the popes.

A pleasant exception to this rule is the present (1912) Patriarch of Constantinople, Joachim III, who, contrary to the prevailing custom, has been left in office since 1892—an unusually long time. It is known that he is personally sympathetic with the Pope, and when, in 1902, shortly after his accession, he addressed a letter to the heads of the autocephalous Churches of his patriarchate, proposing to them that they should all agree to enter into negotiations both with the Protestant bodies and also with the Holy See in union with the Holy See, they were unanimous in refusing even to discuss the idea. But, as Rome's Magazine, Sept., 1910, p. 375, and Feb., 1911, p. 281) the only basis, they declared, on which the Orthodox Churches could entertain the thought of reunion with the Holy See was that of an acceptance of themselves as, by reason of their fidelity to the teaching of the seven ecumenical councils, "alone composing the one Holy Catholic and Apostolic Church." The rejection of a renunciation by the pope of all his innovations on this doctrinal standard, particularly of that worst innovation of all, the papal despotism. As there was the present likelihood of the pope's assenting to that basis, what room was there for negotiations?

Such was the answer to this important invitation referred to so magical or miraculous in the churches of these Eastern Churches, and, if it represents their real mind, we must agree with them that negotiations
would be useless; for one thing is quite certain, the Holy See can never accept conditions which would involve the renunciation of an office it knows to be of Divine appointment and vital for the maintenance of the Church's unity. Nor is this all, for these Orthodox prelates, if they will reflect, must needs see that their conditions are such as cannot possibly form a durable basis for reunion. They claim that their previous position of these views is sanctioned by what they call "the Seven General Councils"—that is, the Councils of Nicaea (325), Constantinople I (335), Ephesus (431), Chalcedon (451), Constantinople II (553), Third Constantinople (690), Second Nicaea (787). But this is just what Catholic historians deny; and, as it would appear, with a heavy balance of evidence. The whole of the latter is of the two contentions? In other words, is this Oriental claim more than a disguised appeal to the Protestant principle of private judgment, the very principle which, as the experience of four centuries of Protestantism has demonstrated, is essentially the principle of division, and not of unity? It will be replied that the authority to decide is with the next general council. But if it were at all conceivable that general councils could take the place of a living centre of unity in the government of the Church, at least they would require to be held at short intervals, and then the question arises: Why, if our Eastern brethren appreciate the importance of unity, have they not during all those centuries taken the initiative in what is the lending of all time and invited the Catholic representatives to take a friendly part in it? Why, when the popes have taken that initiative and have invited the Easterns in the most cordial terms to join in such a council, or at least to join with them in some friendly conference to discuss the possibilities of a reconciliation, have they always so assented? The reasons of this are, as in the times of Photius and Cæcilius, the chief deterring causes that stand in the way of the reunion of the Orthodox with the Catholics are political, and to some extent that may be the case. But the facts, who, if they were to put themselves at the head of a vast reunion movement, could probably carry the rest of the Easterns (Monophysites and Nestorians included) with them, cannot be dismissed with a splendid rôle which would become theirs as the leading Christian sovereigns and protectors of a united Chris-
tendom of such vastly increased dimensions.

Evidently, then, the primary cause why the East will not approach the West for the healing of the schism is still to be sought in that inestimable spirit of contrariety, much encountered, from the popes, in past ages, when to some extent it was reciprocated in the West, and which makes them suspect every overture that comes from the West of being dictated by some ulterior purpose—such as to suppress their ancient rites, or to transform their religious habits, or crush out their reasonable liberties by exacting submission of obedient power. And in the West it seems unmitigable that such groundless suspicions should be entertained. It may be that in some districts, where the East and West touch each other closely, and the blending of religions with political animosities causes tension, material for that sort of suspicion exists, but certainly there is no corresponding aversion to Easterns or their religious habits in the general area of Western Christendom, and above all, as has already been observed, there is absolutely no ground for suspecting the integrity of the motives that have consistently animated the long line of popes. The Greeks who took refuge in Southern Italy under pressure of the Turkish invasion have never to this day found difficulty, but on the contrary, much encouragement, from the popes, in their adherence to their Eastern customs, the marriage of their clergy included; and since the time of the Council of Florence it has been a fixed principle of papal government that Orientals passing into communion with the Holy See should be required to remain in their own rites and customs where no doctrinal error was involved, Leo XIII enforcing adherence to this principle by new sanctions in his "Orien-
talium ecclesiariurn dignitatis" (1895). Moreover, for the Papacy to be parties to their adherent's in the West cherish dislike for rites which are associated with the memories of those venerable Fathers and doctors whom East and West agree in venerating and claiming as their own? Could the Easterns, then, only be induced to lay aside these suspicions, if but provisionally, and meet the pope or his representatives in friendly conference, the problem of the Oriental schism and the false explanations could be exchanged, and false impressions removed, particularly the false impression that it is but of domination, and not fidelity to a Divine trust, that constrains the popes to insist on the recogni-
tion of their primacy. After that it might be neces-
sary to discuss doctrinal points on which the two sides should be disposed for the reunion, and the application of ancient principles recognized on both sides. Seeing how shadowy are some of the points of disagreement, some of them would surely be cleared up completely by such discussions, and if others stood out, and thereby made any immediate act of reunion impossible, at least the better understanding arrived at might be hoped to impart to any further studies and discussions and make the union possible as of 1870.

For the present it would seem to be so, if we are to judge by the attitude of the rulers, civil and ecclesiastical, of the Orthodox Churches. But it is at least symptomatic that Josiahi, the present Patriarch of Con-
stantinople, in 1906, published his "Reactions on reunion to the other autoccephalous churches," has recently (Bessarione, January—March, 1911) ex-
pressed his desire for reunion and for preparatory efforts to come to an understanding with the Westerns. The career, too, of such a man as the late Vladimir Soloviev—who, starting from the ordinary Orthodox path, had set himself the whole question of reunion in the light of the present Conse-
quences to form a Union—was led to enroll himself among the Uniates—may fairly be taken, seeing what influence he exercised, and his memory still exercises, over many of his fellow-countrymen, as a sign that there are others of like mind in that seceded emprise, as indeed is known to be the case. Moreover, the imperial edicts of tolerance which have been put forth by the recent authorities, and which have led to the direct steps toward a union with the Easterns, have been put forth in a spirit of acquiescence in the perfectly legitimate criticisms put forward by the Greeks, and which have been the voice of many men of Eastern lands to the existence there of many ardent aspirants after reunion. Thus Nicole Franco, a Uniat priest of the Greek Rite, in his instruc-
tive study of the question under all its aspects, testi-
fies that "the reunion movement has manifested itself in the provinces of European Turkey among Greeks, Albanians, and Bulgarians, and in Asia among the Greeks and Meliotes, and among the Armenians, Serbs, and Chaldeans, and, which is more significant still, among the Russians, in whose midst Catholic
groups of the Greek-Slav Rite keep on establishing themselves, and give promise of a wider extension of the apostolic work in the Balkan peninsula, p. 1908, is perhaps the spectacle, which can now be seen in many places in the East, of Catholics of the Greek and Latin Rite working side by side in cordial co-operation, while on terms of friendly intercourse with the Orthodox of the same neighbourhood, which is chiefly helpful in removing prejudice by the object lesson it offers of what reunion would bring to pass in all parts of the world. In the days, when Easterns as well as Westerns are spreading and mingling in many lands. Especially impressive in this way seems to have been the object-lesson of the Eucharistic Congress held at Jerusalem in 1886 in which the Catholic clergy and laity of both rites took part under the eyes of numerous adherents of the separated churches during the years that followed, according to the rite of St. John Chrysostom celebrated at St. Peter's in the presence of the pope on 14 Feb., 1908, and that celebrated later in the same year at Westminster Cathedral in the presence of his legate, were examples of similar import. Moreover, if Leo XIII's letter of 20 June, 1881, addressed to the Princes of the Church, is a monument raised from the patriarch Anathimus VII and his Synod (Dubé, "Églises séparées"), there were not lacking devout minds in the East who contrasted the patriarch's brutal language with the exquisitely tender and conciliatory language of the pope. Padre Franco reports the accession of over a thousand persons to the Unit Churches as the hardest gathered from this episcopate in these years that followed.

B. In the West.—In the West the English-speaking countries must be distinguished from the others, which, like them, have inherited the state of religious isolation. In the latter no general sense of the evils of division appears to have been as yet awakened, and even in the former as much must be said of the great majority as of the small part, even the latter which is in earnest about its spiritual condition. Still, in England and the United States there are numerous groups of religious-minded persons who do take very much to heart the scandal of religious division which is brought home to them in diverse ways through their experience of the hindrances that block the Union of Christendom. Their sense of this scandal and the consequent desire for reunion goes back to the second quarter of the last century. It began with the Tractarians and sprang naturally out of the fuller realization, to which their Patristic studies had led them, of the nature and authority of the visible Church. This school is still the home of the most solemn and fervent advocates of the union, for the aspiration has spread during the last few decades from this to other parties in the national Church, and even to the Nonconformists, who have grown ashamed of the multiplicity of their sects and are now anxious to find some basis on which they may coalesce among themselves. These latter, however, have no conception of unity in the Catholic sense of the term, and consequently feel few obligations or the Catholic Church in the differences. The Free Church Council founded in England in 1894, and chiefly notorious for its political campaigns against the Anglican Church, is their principal achievement so far. The Presbyterians of Scotland have also felt the influence of the union ideal, but they too, except for some individuals, have not looked beyond the hearing of their own intestine divisions.

The Anglicans (under which designation are included, as members of the same communion, the Episcopans in America and elsewhere) have a wider vision, and have even fancied that to their Church, as holding a central position between the ancient Churches and the modern Protestant sects, is assigned the providential mission of bringing these two extremes together, and serving the cause of reunion by enabling them to understand each other. During the quarter of a century under the leadership of the Head Church movement, the Anglican Church has been specially cherished, and has found frequent expression in the pulpit and religious literature. It has also given birth to some well-meaning undertakings. Thus the A. P. U. C., or Association for Promoting the Union of Christendom—by which is meant the union of the Roman, Eastern, and Anglican Churches—was set up and not discouraged—can be said to have by now many thousand members, drawn from various religious communions, though, as being under non-Catholic management, Catholics are not allowed to join it; the Eastern Church Association (E. C. A.) and the recently founded Anglican and Eastern Orthodox Church Union (A. E. O. U.) both work for the union of the Orthodox with the Easterns, the latter, "while in no way antagonistic to efforts for reunion in other directions", confining itself to those of the Eastern Churches which are in communion with the Patriarch of Constantinople. This A. E. O. U. is particularly active in the United States, where the existence side by side of Westerns and Easterns has been a matter of bitter dispute, the causes of which are due mainly to its instances that the Orthodox Bishop Raphael of Brooklyn recently sanctioned an interchange of ministrations with the Episcopalian in places where members of one or the other communion are without clergy of their own—a practice which, as coming from the Orthodox side, seemed strange, but has presumably been the result of a similar economy which some Orthodox theologians unaccountably advocate (see Reunion Magazine, Sept., 1910). This concordat did not, however, last very long; Bishop Raphael seems not to have understood, at first, the motley character of the Episcopalian communion, but having come to realize it, quickly revoked his concession (see Russian Orthodox American Messenger, 28 Feb., 1912).

Other societies of kindred aim are the Christian Unity Foundation, established in the United States in 1910; the Home Reunion Society, established in England in 1875, of which the object is to reunite the various English religious bodies with the National Church; the Evangelical Alliance, banding together the Evangelical Protestant denominations, of which was founded in 1816, and is thoroughly Protestant in its principles and aims; the Christian Unity Association of Edinburgh which is under Presbyterian management. Apart from these, as being the only Anglican, or Protestant, Association which directly contemplates the union of the Anglican with the Catholic Church, is the Society of St. Thomas of Canterbury, founded in 1904, and undertaking as its special work to clear the way for this species of reunion by studying and making known the real doctrines of the Catholic Church held by its own members, as opposed to the erroneous or coloured accounts of the same doctrines which prevail so widely. This society has thus been based on sound principles, though at present in its infancy, is capable of doing valuable work for the cause.

The annual Church Congresses in England are wont to give a place in their discussions to the reunion question, and even the decennial Pan-Anglican Conferences, in which the bishops of that communion come together from all lands, are increasingly affected by the movement; though, as consisting of prelates with very diverse views, they are always chary about committing themselves to definite statements. Their committees are allowed to be slightly more courageous, and in the Conference of 1888 the committee on Church Unity formulated four conditions as constituting the necessary and sufficient basis for all who might desire to enter into communion with them-
selves: (1) The Holy Scriptures as the rule of faith; (2) the Apostles’ and the Nicene Creeds, as the statement of the Faith; (3) the two Sacraments ordained by Christ Himself; (4) the historic episcopate locally adapted in the methods of its administration to varying needs. This offer, which has come to be known as “the Lambeth Quadrilateral”, has been renewed by the subsequent Pan-Anglican conferences and has been frequently discussed, but so far has not attracted any of those for whom it was intended. The same Committee of ISSS looked wastefully towards the separated ecclesiastical unity, but neither the Conference of 1908, nor any subsequent one, could more than repudiate the idea of wishing to proselytize among them, and recommend that a statement of the Anglican position should be drawn up for their benefit. Subsequent Conferences have gone a little farther in this direction, and the Conference of 1908 went so far as to recommend in one of its resolutions that there should be an interchange of communications offered and accepted by the members of the Orthodox Churches, and of the Anglican communion, in places where none of their own clergy were within reach—a recommendation which, as already mentioned, was for the moment reciprocated not indeed by the official representatives of the Orthodox Churches, but by two of their prelates in America. In the earlier Pan-Anglican Conferences the attitude of the Orthodox Churches towards the Holy See was hostile rather than friendly, warm sympathy being extended to those who had recently abandoned its communion. In the Conference of 1897 there was a slight improvement in this respect, and in the most recent of these Conferences, held in 1908, whilst recognizing, as they could not but do, the value of this new and unprepossessing, any time of intercommunion to the Holy See, they could not, of course, agree to any which it would accept, the Committee of Union and Intercommunion recorded their conviction that no projects of union can ever be regarded as satisfactory which deliberately leave out the Churches of the great Latin Community” and then went on to urge the importance of cultivating friendly relations with them, and of “adopting a policy of comity toward Churches abroad, an excellent recommendation which will be cordially reciprocated by the authorities in question, whether abroad or at home.

Of individual workers in the cause of reunion four names should certainly be mentioned. Father Ignatius (George) Spencer (1790-1864) was reconciled to the Church in 1838, and in 1839 joined the Passionists. During the last twenty-six years of his life, both in England and on the Continent, he laboured with the utmost zeal to arouse men’s minds to a sense of the importance of reunion and to engage them in systematic prayer for that object. Mr. Ambrose Phillips de Lisle (1800-77) was another convert from Anglicanism and an intimate friend of Father Ignatius Spencer. He took up the same crusade and formed the most sanguine expectations of a consoling result. In 1877, in cooperation with the Anglican, Dr. Frederick George Lee, he founded the Association for Promoting the Union of Christendom, to which reference has already been made. Mr. de Lisle failed to see the utility and attractiveness of Comminon of this kind under Protestant management, but the sincerity of his faith and the single-mindedness of his zeal were beyond all question. Newman’s approbation of these qualities in him caused him to say to de Lisle in 1857: “If England is converted, it will be as much due, under God, to you as to any one. It may seem at first sight to many of the prominent reunions in view of his “Eirenicon”, of which the first part was published in 1864. But this book, as its name intimates, was written to promote reunion by raising a friendly discussion on certain points of Catholic practice which to Anglicans of the writer’s party caused difficulty. Inadvertently he used lan-

UNION
their individual members are free to hold or reject these doctrines, or even condemn them, without forfeiting their right to its membership.

Comprehension not compromise" is a phrase often employed, but never considered fitting and possible. The reuniting Churches are not to be asked to renounce any of the beliefs and practices to which from long usage they have become attached. They are to come in just as they are—all, that is, who are agreed as to a substratum of fundamental doctrines and institutions—and on this basis they are to be in recognized sacramental communion with one another everywhere. This system seems to its advocates not only to remove the chief difficulties in the way of reunion, but to have positive advantages. Instead of a dull and deadening uniformity extending throughout, it will give unity in variety, a "synthesis of distinctions", in which each reuniting Church will continue to exist in its own character, yet in a way which, under the Providence of God, it has cultivated with peculiar care and success. Under a slightly changed form we have here the selfsame scheme, based on the distinction between essentials and non-essentials, which in the past has been put forward so often, and always so unsuccessfully. Is it likely to succeed now where it has failed so often before? Is it a mere new name for the same old things, the same old distinctions, under another name? This is a point on which agreement is likely to be reached. We have seen what four conditions the Pan Anglican Conferences have laid down as in their estimation essential, and we may be inclined to wonder at the liberality of the concessions involved in it. This "Quadrilateral," had it been made in view of the existing Churches in England and perhaps the Presbyterians in Scotland and elsewhere. But general and indefinite as it is, it does not seem to have found favour with any one of these; it does not go far enough for them.

But it will be found to go much too far for the Easterns, leaving it open, as it does, to anyone to believe that the sacraments are efficacious channels of grace or only made symbols of the same. The same belief in the Holy Eucharist the Body and Blood of Christ are truly present or really absent, to believe that besides the two sacraments explicitly included there are not five others equally instituted by Christ and equally pertaining of the true nature of sacraments, to believe that the historic episcopate does or does not exist. A reuniting of Church of England and Eastern Churches such as is wont to be called the grace of Holy orders. Secondly, what guarantee is there that the union of will and faculty of the contracting parties? What makes this question so pertinent is that in the "Quadrilateral," for instance, the stipulation is only that the reuniting churches in England and the Easterns would come up together to the altar rails, as if to show to what light value they attached to the points about which they none the less contend so stubbornly?

Evidently, "comprehension not compromise" cannot be a guiding principle for those who wish to reestablish the unity of Christ's Church. For the Lord prayed for, and the world will be constrained to recognize, is an evidence of Divine handiwork. Neither can compromise help us, for truth does not admit of compromise, and what it is desired to restore throughout the world is unity in truth. What we do require is neither comprehension nor compromise, but conviction; for unity in truth must mean that all whom the system embraces a profession and the same creed in all its parts, that they are honestly convinced that in professing it they are adhering to the simple truth, and that in reality they are professing only the truth. How can a unity of that kind, a unity of conviction which is also a unity in truth, be brought about in such wise as to include the many separated Churches who, while professing to be the same Church, are the problem on which serious reuniters should concentrate their attention. They may begin by observing that in societies of all kinds—in kingdoms, armies, trade-unions, clubs, and even Churches—the principle of unity which holds them together is the authority of their chief rulers. If they submit to these rulers they are subject to the same duties, laws, or consequences that they become one with them in their action, and (if the rulers have a recognized right to impose opinions) in their opinions also; and by way of consequence become one among themselves. On the other hand, in proportion as the members refuse submission to this ruling authority they become disinclined and, if the sub-
ordination continues, break up into parties, or drift away, or set up opposition societies. Almost any Protestant Church among the many around us will supply an illustration of this. At one time its ruling authority is recognized by all the members to be the authentic interpreter of its formularies, and all are prepared to submit to it. It is then a united Church in itself. Later comes a time when a number of its members become dissatisfied with these formularies, and refuse to accept them at the hands of their church authority. Thus dissension sets in; either dissent from the letter of the formularies is tolerated, and intestine divisions arise, or some split off and set up for themselves opposition Churches elsewhere.

If this is the law of all human societies, is it not to be anticipated that the Christian community is also subject to that law, in other words that its unity is to be secured by the submission of its members and component Churches to the one ruling authority which is duly set over them all? It will be objected that this principle of authority, if allowed to prevail, may suffice to secure unity in Christendom, but not unity in truth. As soon as the time comes when it is the conviction of the individual or group, more than the willingness of their ruling authority is departing from the truth, they cannot but give the preference to truth over unity, which in fact is what has happened in the history of Christendom, and has caused the present disunion. The answer to this difficulty is that the human mind is indeed bound to truth, and this is irrational if it does not pursue them, and make a judgment of the individual mind to subordinate its personal judgments to those of a mind which can give it a secure guarantee of truth than it can derive from its own reasonings; it is, therefore, supremely rational for it to submit to the mind of Christ, whenever this can be securely ascertained.

If Christ communicated His own mind to His Apostles as to the doctrine and order of the Church, and it is our task to find this mind in the Christian Church, or to receive this mind by obeying it: if His Apostles transmitted these Divine communications by tradition to future generations; if a living authority duly set over His people has watched over the safe transmission of this tradition; and, if the Holy Spirit was sent by Him to abide in His Church and secure this living authority in the faithful discharge of its truth, then, so far as we can see, this authority, when it be of the right nature, will be only harmonized, and a way opened for the reunion of Christendom without any outrage being done to the nature of the human mind. This, it may be said, is only an inference based on the law of human societies and the nature of the human mind. Can it be safe to take it as sufficient to determine a question of fact, such as is the question whether our Lord really did make this particular provision for the safeguarding of His revelation? But if it were only that, at least it proves that this principle of a Divinely guarded magisterium is not irrational, but on the contrary is, so far as we can see, the only principle capable of harmonizing the two certain facts, that our minds are by nature bound to truth at all, and that God's Holy Word, and the foundation of which is His own mind, may be all one in faith. A principle, however, of this value must be regarded as resting on a much firmer basis than mere inference, especially when it is associated with the massive historical fact that the oldest and greatest of all the Churches—which is also the only one that has known how to secure unity among its children without injury done to their sense of truth—has all along been ruled by this very principle in the sure belief that it rests on the express words of Christ. Should not this send us back to a study of the words as they came from Christ's lips, and as they were understood by His Apostles, to see if these words do not correspond with this belief of the later Church?

And here we join on to the historical survey with which this article commenced, for in that survey has been epitomized the evidence from the New Testament and the early Christian writings, which shows that, if we are to credit these records, our Lord did establish and impose this very system; that the Apostles, whom He sent forth to lay the foundations of the Church, did so understand Him; that the Church of the second century, as represented by St. Irenaeus, likewise so understood Him.

VII. Prospects of Reunion.—That corporate reunion were a practical ideal, capable of being realized at no distant date, it would have enormous advantages, for it would greatly facilitate the task of those who feel the sadness of their present isolation. But, the conditions of this mode of reunion being such as we have seen, it is unfortunately impossible to regard the prospect of its realization as anything but encouraging. Why is it that those who tell us with transient sincerity that they long for the time when Christendom will be united once more so persistently resist the rule of tradition and submission to the Holy See, though as capable as ourselves of appreciating the reasoning of the last section, and admiring the results which that rule can produce in the communion of the Christian Church? It is the face of all their past disappointments, to stand out for their principle of comprehension, and to ask for reunion on the basis of mutual concession and contract? Obviously it is because they are still dominated by those self-same principles of religious division which we discerned in the earlier part of this article, and which were the cause of all the schisms that troubled the first four Christian centuries. We counted five such causes: "I cannot belong to a Church in whose doctrines I find insoluble intellectual difficulties", or "which cannot find a place in its system for religious experiences", or "which而已 be the direct voice of God to me", or "which claims put fetters on my mental liberty", or "which runs against my principles", or "which involves me in opposition to my temporal rulers". These principles, we said then, all or some of them, would be found likewise at the root of all subsequent schisms, and have not the summaries above given proved the truth of this? In the Oriental schisms, though private judgment on doctrinal subtleties had its part, the appeal against schism by mutual antipathies and subservience to temporal rulers in the sixteenth century revolt all the five influences were fiercely active. Many Catholic doctrines—as, for instance, those of transsubstantiation, the sacramental principle, the merit of good works—were condemned as offensive to the private judgment of the Reformers. The doctrine (Lutheran) of justification by faith was an_prev__example of putting absolute trust in the assumptions of emotionalism, indeed was the first step towards transferring the basis of faith from the preaching of the word to the so-called testimony of experience. How repugnant to these Reformers was the idea of submission to any teaching authority save their own it is no wonder that Lord Bacon gave the key—with how much they were possessed by the principles of Nationalism and Erastianism is evidenced by the way in which they allowed their rulers to split them up into national Churches and gain their favour for these by stirring up their national animosities. At the present time, among the Churches of England and America which are asking for reunion—or rather, some of whose members are asking for reunion—though the same sentiments still prevail, with some modification as regards their particular application. Is not this sufficiently attested by the tone of the criticisms which come so readily to their lips? "I cannot bring my mind to believe in a Trinity in Unity, in a God-man, in a sinless man, in an atonement, in transubstantiation, in original sin, in the presence of a little water to wash away sin, in a power of absolution
entrusted to sinful men, in a gift of immunity from religious error vested in a succession of under-educated Pontiffs." And again, "I know from my spiritual experiences that the ideas generally held, or received, have received are valid whatever reasons may be urged against them, that my particular form of religion is the true one though it contradicts the religion of others who can cite similar experiences on their behalf." Or again, "I am not going to hand over the keeping of my conscience to any priest or Church. I am not going to surrender the consciousness of which is the essential quality of a truth-seeker." Or again, "I want a religion to suit my national temperament as an Englishman or an American, I am not going to submit to a foreign priest or listen to an Italian mission." How is it possible that men saturated with principles so antagonistic to the obedience of faith should be induced to seek reunion in the only form which is the essential quality of an individual Churchman, and persuade themselves that the comparatively small section which forms the moderately High Church party can be taken as duly representing their Church; and then, realizing that neither this small section, nor even they themselves, have the true Catholic disposition of submission to a teaching authority, will, in the name of compromise that would just include themselves, but it will not do to take this over-hopeful view of the situation. The possibilities of an approaching corporate reunion must be judged by the mentality of the whole body, and what chance is there, humanly speaking, that—say nothing of the Presbyterians and Nonconformists—the general body of Anglicans, which is every year becoming more and more radical in its tone, will be brought within a generation or two to such a degree of doctrinal unity and Catholic spirit among themselves as to make it likely that, as an organized body of bishops, clergy, and laity, they will approach the Holy See in the full spirit of submission, and ask to be received into its communion? Most likely it will not, but that is the only way to overcome, and whole Churches approaching the Holy See in this manner, we must not overlook the probability that the difficulty from state interference, dormant for the present, would quickly revive. The statesmen would be sure to take alarm, and work against the project with all their might as a danger to their own selfish schemes; and this all the more because aggressive Anticlericalism has captured so many of the governments of powerful countries, and would strive, by appealing to racial prejudices and fostering campaigns of misrepresentation and oppression, to stamp out a movement calculated, if successful, to add so greatly to the forces of Christianity. It must be repeated that the obstacles against this persecution, but the masses of men whom we are supposing to form the membership of Churches anxious to reunite would in all probability be shattered by it, and break up. We must not, indeed, forget that we are all in the hands of God, and God may at any time intervene by some signal providence to clear away the obstacles from the path of corporate union. But we have no right to expect action of this kind. Reunionists whose inquiries have convinced them that the way to unity is through submission to the Holy See will be imprudent indeed if they delay their personal submission in expectation of a corporate act on the part of their respective Churches which, in the absence of any such Divine intervention, is, in view of the difficulties indicated, most unlikely to come till long after the present generation of men has passed away. Nor is it to the purpose to ask here if by this method of individual conversions there will be eventual reunion of Christendom to the unity which once held it together. Possibly there is not; but why should there be? We may indeed look to a continuance, and perhaps to an expansion, of the process now going on whereby appreciable numbers are added to the Church through individual submissions, but it does not seem likely that another age of individual unions will be brought in by this method, nor is there any Divine promise that they will be. Another age may bring forth better things, but whether it will we know not. Still, though the prospects of corporate reunion appear discouraging, Catholics may well show themselves appreciative and sympathetic towards the efforts of those of other communions who sincerely seek to be induced by the splendid movement under one form or another it is capable of realization. We may safely leave to the Providence of God to determine what course the present reunion movement shall ultimately take, and meanwhile we may emphasize the substantial point that Catholics and other reunionists have in common: their mutual desire to see the barriers between their Churches removed, and both can co-operate, too, in working for the good cause in useful ways without any surrender of their own principles. For they can cultivate friendly personal relations, to the formation of which it will greatly contribute if they can work together for objects, social or otherwise, as to the value of which they are agreed. There is a spirit of useful and realistic cooperation thus formed, for they tend to dissolve the obstacles which come from sheer misunderstandings and the animosities that these engender. And they can further co-operate for the removal of these same obstacles by positive efforts to understand one another correctly, particularly by the others seeking and the Catholics, if they are competent, showing a readiness to give simple explanations of the true character of their beliefs and practices.

The latter cannot indeed be too careful to avoid bitter controversies, for these, as experience has proved, serve more to harden estrangements than to cement reconciliations. But their explanations will be often welcomed, if it be known that they will be made by well-meaning men, and well-intentioned, nowdays there is a growing number who have come to suspect that Catholicism is not as black as it has been painted for them, and are anxious to hear about it from those whom they can trust, and who have intimate knowledge of it from the inside. It would be rash, however, for Catholics to expect that their non-Catholic friends will be readily convinced by the explanations they give. Convictions are of slow growth; besides it is not for the human agent to intrude on the office which the Holy Spirit reserves to Himself. Lastly, there can be co-operation in efforts to promote reunion by earnest and assiduous prayer. Catholics cannot join an association for prayer like the A. P. C., whose leader non-Catholic management, but they have the highest and best kinds of similar associations under Catholic management, such as the Confraternity of Compassion, which Leo XIII himself established in 1897, and entrusted to the administration of the Sulpician Fathers.

By Apostolic Letter of 2 Feb., 1911, Pius X extended the scope of the prayers of the archiconfraternity from Great Britain to the whole of the English-speaking world.

(3) Pious Union of Prayer to Our Lady of Compassion for the Conversion of Heretics, founded at Rome, 7 Nov., 1896, in St. Marcellus. Similar unions may be formed in any church where there is an altar and a statue of Our Lady of Compassion. The director-general is the Father-General of the Servites, who names a general secretary from his order.

(4) Archiconfraternity of Prayers and Good Works for the Reunion of the Eastern Schismatics, with the Church, founded at Rome, 30 Mar., 1897, and the archiconfraternity of the same name, founded at the Church of the Anastasis at Constantinople, organized by Emmanuel d'Alzon, the founder of the Assumptionists, it was developed under his successor Francois Pierre to such a degree that even some Eastern schismatics were induced to pray for the same intentions. Leo XIII in the Brief "Cum divina" (1899) approved the “Statutes” of the international archiconfraternity of the same name.

In India an archiconfraternity of the same name was founded at the Church of the Anastasis at Constantinople, in 1895.

II. NAME AND DOCTRINE.—In its general sense the name designates all disbelievers in the Trinity, whether Christian or non-Christian; in its present specific use it is applied to that organized form of Christianity which lays emphasis on the unity of personality in God. The term seems to have originated about 1570, was used in a decree of the Diet held in 1600 at Leesalva in Tran-

sylvania, and finally adopted by the organization in 1635. It supplanted the various designations of anti-Trinitarians, Arians, Racovians, and Socinians. In England the name first appears in 1682. It became frequent in the United States from 1813, although originally it was received unfavourably by some anti-

Trinitarians, and omitted in their official titles by the Congregations of United Presbyterians.

The explanation of this opposition is to be found in the reluctance of the parties concerned to lay stress on any doctrinal affirmation. Historical associations account for the name Presbyterians, frequently applied to Unitarians in the British Isles, and Uni-

terian Congregationalists, used in the United States. No definite standard of belief is recognized, and all doctrinal denunciation and no doctrinal tests are laid down as a condition of fellowship. The co-operation of all persons desirous of advancing the interests of "pure"
UNITARIANS

(i. e. undogmatic, practical) Christianity is welcomed in the Unitarian body.

In granting the authorization each member enjoys complete freedom in his individual religious opinions, and no set of doctrinal propositions could be framed on which all Unitarians would agree. The bond of union between them consists more in their antidogmatic tendency than in uniformity of belief. The authority of the Bible is in some degree retained; but its contents are either admitted or repudiated according as they find favour before the supreme, and in this case existing, tribunal of individual reason. Jesus Christ is considered subordinate to the Father and, although the epithet Divine is in a loose sense not inappropriately applied to Him, He is in the estimation of many an extraordinarily endowed and powerful but still a human religious leader. He is a teacher to be followed; a God to be worshiped; a comforter and counselor in time of trial. He is an inspiration and an example to His disciples, not an effective and vicarious atonement for the sins of men. He is the great exemplar which we ought to copy in order to perfect our union with God gradually. This teaching concerning the mission of Jesus Christ is but the logical complement of the Unitarian belief, and land need less to be explained. Consistency leads to the suppression of the sacraments. Two of these (baptism and Eucharist) are indeed retained, but their grace-conferring power is denied and their reception declared unnecessary. Baptism is administered to children (rarely to adults) more for sentimental reasons and purposes of edification than from any conviction that the rite imparts the soul of the recipient. The Eucharist, far from being considered as sacrificial, is looked upon as a merely memorial service. The fond hope of universal salvation is entertained by the majority of the denomination. In short, present-day Unitarianism is hardly more than natural religion, and exhibits in some of its members a pronounced tendency toward the spirit of Spontaneism. The Church polity in England and America is strictly congregational; each individual congregation manages, without superior control, all its affairs, calls and discharges its minister, and is the final judge of the religious views expressed in its pulpit. In Transylvania the Church government is exercised by a bishop who resides at Kolozsvar (Klausenburg) and has over a hundred and twenty subordinate bishops. This episcopal title which he bears does not imply special consecration but merely designates the office of an ecclesiastical supervisor.

11. History. A. In Europe.—The first Church holding Unitarian tenets was founded in Poland during the reign of Sigismund II (1526-72). The year 1568 saw the establishment of the first congregation in Transylvania. While in the former country Unitarianism was completely suppressed in 1660, in the latter it has, despite temporary persecution, maintained itself. The Transylvanian Church is of Socratic origin but has suppressed the worship of Jesus Christ, thus casting off what chiefly distinguishes it from Unitarianism. It received its official name as the Hungarian Unitarian Church, although comparatively few of its members reside in Hungary proper. In England the organization of Unitarianism was effected at a much later date. The first attempt at establishing a congregation was made by John Biddle (1615-65) but the organization did not last its author. More permanently attended the efforts of Theophilus Lindsey (1723-1808). In 1773 he seceded from the Anglican Communion, organized the following year a Unitarian congregation in London, and in 1778 built the Essex Street chapel. About the same time anti-Trinitarian views were spread by the scientist Joseph Priestley, pastor of a congregation in 1757 which closed later at Birmingham. His work in the latter place was followed by a popular uprising in 1791, and three years later he emigrated to America. Others, among them Thomas Beldham (1750-1829) and Lat Carnarvon (1780-1857), continued to propagate Unitarianism in England.

But the legal restrictions which proscribed them, vigour, however, against persons denying the doctrine of the Trinity and hampered their work. But in 1813 most of these disabilities were removed, and in 1841 complete liberty was obtained, despite opposition, by the Dissenters’ Chapels Act, sometimes called the Unitarian Charter. As early as 1825 English Unitarians had concluded a union with their co-religionists abroad under the name of British and Foreign Unitarian Association. This society disseminated religious literature and promoted the interests of the sect. The prospects of this activity were brightened by the appearance of a capable exponent of Unitarian views, Dr. James Martineau (1851-1922) who became a leader of the denomination, his personality dominated English Unitarianism for an extended period. His writings exercised a potent influence far beyond England, and still continue to advance the cause of Liberal Christianity. His disciples have taken up his work and outran their master in his radical views. It is certainly a fertile soil for Unitarian propaganda. A congregation was organized in 1776 at Edinburgh and the Scottish Unitarian Association was formed in 1813; but progress in that country has been insignificant and there are very few congregations there. In Ireland Unitarianism is held chiefly in the North where it has found adherents among the Presbyterians. In France, both in the Levant and its American colonies (1793), it has a self-governing branch of the Presbyterian body. Some Unitarian congregations are to be found also in the British colonies, notably in Australia and Canada, and among the French Protestants a comparatively large number are Unitarian in view, though not in name.

12. America.—About the middle of the eighteenth century Unitarian opinions gained favour among New England Congregationalists. They were propagated by Jonathan Mayhew (1720-66), for nineteen years pastor of the West Church at Boston, and Charles Chauncey (1757-97), in the same city. The first organized church was King’s Chapel, Boston, when the congregation, until then Episcopal, removed in 1770 and the minister, a Unitarian. It was joined by the Common Prayer and in 1787 assumed an independent existence. Congregations were also organized at Portland and Saco (Maine) in 1792, and in 1794 Joseph Priestley began his propaganda in Pennsylvania. It was particularly in New England, however, that the movement gained ground. The appointment in 1807 of the Rev. Eleazer Wheelock, and in 1808 the establishment of the Divinity School at Harvard College and the organization of the Unitarian Church by the graduation within the next two years of four other Liberal candidates, notably in the same institution, brought that seat of learning under considerable Unitarian influence. Its school of divinity was endowed and organized by the denomination about the same time and vanguard of Unitarianism in America, it became undenominational. While the diffusion of Unitarian ideas was comparatively rapid the organization of churches was retarded by the reluctance of many to separate from the Congregationalist communities of which they were members. Before the separation was effected a heated controversy was waged between the liberal and the conservative wing of Congregationalism. Matters came to a head in 1819 when the Rev. William Ellery Channing, in a sermon preached at Baltimore at the installation of the Rev. Jared Sparks, advocated the public acknowledgment by the liberal members and congregations of their Unitarian beliefs. This discourse proved decisive, and the parties concerned immediately proceeded to organize themselves independently. From this date until his death in 1842, Channing was the
acknowledged leader of the denomination. Under his auspices the American Unitarian Association was founded at Boston in 1825 for the promotion of Unitarian interests.

After his death the radical element became predominant under the direction of Theodore Parker (1810-60), who succeeded him in influence. The authority of the Bible acknowledged by the old school was, under Parker, largely sacrificed to the principles of a destructive criticism, and Unitarian theodicy drifted more and more into unbelief. The activity of Channing and Parker was supplemented by the more general and far-reaching influence of the Unitarian poet-philosopher, Ralph Waldo Emerson (1803-82). Although he resigned his charge of the Second Congregational Church at Boston after a short period (1829-32), he continued to preach for many years and his popularity as a writer and lecturer could not but lend additional prestige to the advanced religious views which he defended. The interests of the Unitarian propaganda were also served by the foundation of the Western Conference of Unitarians in 1852 and that of the National Unitarian Conference in 1865. Of a more universal character was the International Council of Liberal and Unitarian Thinkers and Workers, which was organized at Boston in 1900. It has had sessions in London (1901), Amsterdam (1903), Geneva (1905), Boston (1907), and Berlin (1910). At the last-mentioned convention the official title was changed to International Congress of Free Christians and Other Religious Liberals. The purpose remains the same, namely, to open channels of communication to those who are striving to unite pure religion and perfect liberty and to increase fellowship and cooperation among them."

III. PROPAGANDA; EDUCATIONAL INSTITUTIONS; STATISTICS.—The Unitarian body sent a missionary to India in 1855, and since 1887 has carried on an active propaganda in Japan; however, its missionary efforts in the lands of the ancient Unitas Hidem and Workers, have not been considerable. In accordance with its general indifferent attitude toward dogma, it endeavors to advance the cause of Christianity without emphasizing its own specific tenets, and its members have in the past liberally contributed to the missionary funds of other denominations. Their efforts, moreover, are more concerned with the dissemination of religious knowledge and enlightenment, rather than the sending of missionaries to non-Christian lands. This method of gaining adherents has proved successful, partly owing to the Liberal, Rationalistic, and excessively individualistic tendency of the present age, but largely also to the number of eminent men and capable writers who have adhered to or defended Unitarian doctrines. Financial resources for propagandist purposes were provided for by the rich Jamaica planter, Robert Hibbert (1770-1849), through the creation of the fund which bears his name. Out of it grew the well-known Hibbert Lectures, and the more recent "Hibbert Journal." An organization unique in its character is the Post Office Mission which, by means of correspondence and the distribution of books and periodicals, seeks to the despondent to the despondent and joy to the suffering.

The Church has made no determined effort to organize beneficent institutions of its own. A project is on foot to erect at Washington, in connexion with the contemplated national church of the Unitarian body, the Edward Everett Hale parish-house. This establishment, named after the late Unitarian chaplain of the Unitas Sestes, is to be the headquarters of the philanthropic work of the denomination. A considerable number of the Unitarian ministry (to which women are admitted) receive their training in the educational institutions of other sects. The Church, however, maintains the following special schools for this purpose: in Hungary, the Unitarian College at Kolozsvär; in England and Wales, the Unitarian Home Missionary College at Manchester; the Manchester College of the Oxford University Presbyterian College at Carmarthenshire; in America, the Harvard Divinity School at Cambridge, Massachusetts; the Meadville Theological School at Meadville, Pennsylvania; and the recently established Pacific Unitarian School at Berkeley, California.

In the United States the denomination maintains, beside the Universalist Church, a considerable number of other denominations, with but one exception, in the New England States. The number of persons holding Unitarian views cannot be determined, even approximately; for many undoubtedly reject the doctrine of the Three Divine Persons and retain the belief in a uni-personal Godhead without ever affiliating with the Church. Among these must be reckoned a large number of Liberal theologians and advanced critics, but also some religious denominations which, either in their entirety, as the Hicksite Friends, or at least in many of their members, as the Universalists, are distinctly anti-Trinitarian. According to the "Unitarian Year-Book (Boston, 1911) there are nearly 80,000 Unitarians in Hungary. Great Britain had in 1911 a general membership of 3,053 in Ireland, 3,481 in Wales, and 7,161 in Scotland. In the United States the Unitarian body numbers, according to Dr. H. K. Carroll "(Christian Advocate," New York, 25 Jan., 1912), 533 ministers, 492 churches, and 70,542 communicants.

United States Fratrum. See BOHEMIAN BRETHREN.

UNITED STATES OF AMERICA, THE.—BOUNDARIES AND AREA.—On the east the boundary is formed by the Atlantic Ocean, excepting the Gulf of Mexico, which separates the United States from the Republic of Mexico until at the city of El Paso it turns northward; from that point to the Colorado River an arbitrary line marks the boundary of the United States. The Atlantic Ocean forms the western boundary. The total area is 3,026,790 sq. miles. The United States is divided into two unequal parts by the Mississippi River, which flows almost directly south from its source in a lake below the 49th parallel. The portion east of that great river is subdivided into two parts by the Ohio and the Potomac Rivers. The section west of the Mississippi is divided into two very unequal parts by the Missouri River.

In a physiographic view, however, the area of the United States may be divided into the Appalachian belt, the Cordilleras, and the central plains. The first of these divisions includes the middle Appalachian region, or that between the Hudson and the James Rivers; the north-eastern Appalachian region,
which overlaps New England at many points; the south-western Appalachian, which includes the country from Maryland to the Carolinas. In North Carolina the mountain belt reaches its greatest altitude, falling again with the Driftless Valley and Wisconsin Valley, as we approach the Great Lakes. The early history of the United States is concerned with the Atlantic coastal plain. In New England the mountains almost front the sea, and harbour and hill are within sight of each other. From New York, however, the interval which separates them gradually widens toward the southward, until in the State of Georgia the mountain ridges are on the southern boundary after which it unites with the Gulf coastal plain. In New York is the rugged Adirondack region, which was very late in being settled. The characteristics of the region of the Great Lakes, which is a projection of the Laurentian Highlands in eastern Canada, are well known. Of almost inexhaustible fertility and of immense area is the region included by the Prairies States. Roughly speaking, it may be bounded by the Ohio and the Missouri Rivers on the south, and by the Great Lakes on the north. The Prairies are the gift of the glacial period. The Gulf coastal plain has been alluded to. Authorities on physical geography also distinguish a Texas coastal plain. Passing by the great valley of the Mississippi, the next division is the region of the Highland Lakes, extending from the 97th meridian of W longitude to the base of the Rocky Mountains. To the elevated section between the Great Plains and the Pacific is given the name Cordilleras. This includes the Rocky Mountains, the Basin range, the plateau province, and the Pacific ranges (Cascade and Sierra Nevada). Around desirable harbours and in situations favourable for defence the first European settlements were made in what is now the United States. In this connexion are suggested the names: Boston, Salem, Plymouth, Providence, New York,Philadelphia, Charleston. For a long time the waterways not only influenced the social and political life of the people, but determined the direction of their emigration when they went to new regions. Thus were the early westward movements of population conditioned by the river systems. This, too, explains the irregular character of the frontier line until railways became numerous, when it moved regularly toward the west.

Geology.—The Laurentian uplift, seen in the Adirondacks and the Adirondack region of the Great Lakes, was clearly in the earlier geological periods. Towards the west, and the character of the deposits tend to support this opinion. The Cordilleras, on the contrary, are of comparatively recent formation, and exhibit evidences of late volcanic action. The volcanoes of Mexico and of Alaska, indeed, are not yet extinct. Many of the valleys in the Cordilleras are vast lava beds. The entire region, including New England, New York to the Ohio River, and westward to the prairies and the great plains, exhibits evidences that a great glacial sheet had in practically recent times spread over it. In its retreat were left fertile prairie in the United States and unnumbered lakes and water-courses as well in that country as in Canada. In 1862 the United States held the region on the west bank of the Ohio in the coal supply of the world. In the coal it is generally distributed, except the arid Ivatie region, which is found in only a limited field. It is also found in many sections of the west. Still more valuable than the production of coal is that of iron, which in the year mentioned amounted to $367,000,000. Approximately the value of the gold produced yearly in the United States is $80,000,000; copper comes next with an estimated value of $77,000,000. Silver amounts to $29,000,000, lead to $22,000,000, and zinc to $14,000,000. Aluminum and quicksilver are less important. Montana and the Lake Superior region lead in the output of copper; gold is found in many of the western states, and silver is widely distributed. The zinc deposits in northern New Jersey are among the richest in the world. The non-metallic mineral products are also of great value, e.g. petroleum, clay, gypsum, salt, and natural gas. Of the tin, antimony, sulphur, and platinum consumption in the United States is important.

Colonization.—In April, 1606, King James I created a company with two branches, viz. the London and the Plymouth. The former was given permission to make settlements between 34° and 41° N. lat., and was to receive grants of land extending fifty miles north and south from its first settlement,—a certain front on the coast. It was authorized to obtain from the Dutch merchants to make their first settlement between 38° and 45° N. lat., and were also given a block 100 miles square. To prevent disputes, the branch making the second settlement should locate at least 100 miles from the colony first established. Each branch was very careful to fix its first settlement on territory to which the other had no right whatever. The two branches are always mentioned as two companies. King James's patent of 10 April, 1606, is a document of interest. It provides that English colonists and their posterity "shall have and enjoy all liberties, franchises, and immunities within any of Our other dominions, to all intents and purposes as if they had been abiding and born within this Our realm of England or any other dominion of Our said dominions". A similar provision was found in the earlier patent granted to Raleigh, and even in that obtained by Gilbert. On the other hand, the colonists of France, Spain, and other nations were regarded as persons outside the laws, privileges, and immunities enjoyed by those who continued to dwell in the mother land. It was quite apparent that English settlers carried with them as much of the common law of their country as was applicable to their new situation. In colonization this principle marked an epoch.

The London Company was composed of merchants and gentlemen in the vicinity of London, and the Plymouth company of persons dwelling in the vicinity of England. In some respects the British government had no more enlightened a conception of colonization than did contemporary governments. England was "to monopolize the consumption of the colonies and the carriage of their produce". This led to the enactment of the celebrated Navigation Laws. Commercial legislation affecting colonization or trade was the惟性。acts of colonization, transportation, and those controlling production. By a law of 1660 certain enumerated commodities, being all the chief products of the colonies, could be landed only in British ports. Two later acts further extended this restriction. Under the Navigation Act of 1660, European goods could not be imported into the colonies except in ships of British or of British colonies sailing from British ports. We are not now concerned with the Act of 1733. If strictly enforced this would have oppressed the New England colonies, but, fortunately for them, the revenue officers winked at their frequent infractions of the law.

The London Company was the first to establish a settlement, at Jamestown, Virginia, in 1607. The vicissitudes of that colony and the general outline of English colonial development will be found in the articles on the thirteen original states, viz. Delaware, Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, South Carolina, New Hampshire, Virginia, New York, North Carolina, and Rhode Island. This summary can touch upon them but briefly. On 6 May, 1607, the first Virginia settlers, 120 in number, entered Chesapeake Bay, and sailed about thirty miles up the James River, so named after the king. Toward evening they landed, and were attacked by the Indians. In a few months Captain Newport, who had brought out the first settlers, returned to England, collected supplies and recruits,
and in January, 1608, was again at James Fort, as the settlement was then called. Fever, hunger, and Indian arrows had swept off more than half of those he had first brought over, among them some members of the council. Wingfield, the first president, was under arrest, and John Smith, an influential man in the colony, was awaiting execution.

At the end of three months, when Newport again sailed for England, one-half of those who were alive in January had died. Edward Maria Wingfield, the first governor of the colony, was removed to Virginia among the patenets who came with the colonists. With suffering came dissension. Ratcliffe, Martin, and Smith removed Wingfield not only from the presidency but from the council. In the circumstances his overthrow was easy. It was charged that he was a Catholic, some authorities say an atheist, that he brought no Bible with him, and also that he had conspired with the Spaniards to destroy Virginia. In April, 1608, Wingfield left Jamestown, and later in England made to the authorities an interesting statement in his own defense. For considerably more than two hundred years Captain John Smith was universally regarded as the ablest and the most useful of the first Jamestown settlers. Indeed, he was believed to have been the founder of the American navy and colony. As a matter of fact, he was a more enterprising, responsible for much of the dissension among the first settlers. His "General History" is an absurd eulogy of himself and an unfair criticism of his fellows. Perhaps it was no misfortune to Virginia when the accidental explosion of a bag of gunpowder compelled him to return to England. The result of the Smith was never afterward employed by the Virginia Company. The five hundred new settlers sent to Jamestown in 1609 were "a worthless set picked up in the streets of London or taken from the jails, and utterly unfit to become the founders of a state in the New World". This, however, while true of a particular group, will be true of any of those who came later. During the seventeenth century there arrived numerous knights, and numbers of the nobility of every rank, representatives of the best families and the best intellect in England.

In the beginning the population of Virginia was almost exclusively English; indeed, Virginia was very much like an English shire. As early as 1619 the colonists found the soil very fertile and the soil for its capacity to produce a superior variety of grapes. Other French immigrants continued to arrive in the colony throughout the seventeenth century. After the English took New Amsterdam, in 1664, many Dutchmen went from New Netherland to Virginia. Germans and Italians were never numerous in that province. During the era of Cromwellian ascendency many Irish were sent to Virginia. Again in 1690 and afterwards there arrived many Irishmen who were captured at the Boyne and on other battlefields. These non-English elements in the population do not appear, however, to have exerted much social or other influence. They soon melted into the population as a whole. The name of Edward Maria Wingfield has been mentioned as that of the only patenets who came over with the colonists. If there is any doubt as to the Catholicism of the first president of the council there is none concerning the religious belief of the Earl of Southampton. That nobleman had a keen interest in English colonization.

While England was engaged in developing the province of Virginia, four other European powers, Spain, France, Holland, and Sweden, were establishing themselves on parts of the Atlantic coast of North America. In 1655 the Dutch conquered New Sweden, and nine years later New Netherland was acquired by the English. The latter conquest was facilitated by the former, because New Netherland had reduced itself to a condition of bankruptcy in order to send its warlike armament into Delaware Bay. After the failures of Ribaut and Languedonné the French made no attempt to settle the south Atlantic coast. Nation, however, did not abandon American colonization. From the founding of Quebec, in 1608, great activity was manifested in Canada and later in Louisiana. On the Atlantic coast, therefore, Spain and England were the chief rivals. The former manifested little interest to the northward of the Mexican Gulf, and after 1664 England was free to develop her maritime colonies through her own power. France was exploring the interior, establishing garrisons, and in other ways strengthening her hold on the most desirable part of the continent. Between the outposts of the two nations collisions were inevitable.

Inter-colonial Wars.—It is not possible to discuss here either the causes or the conduct of those wars which in 1708 ended in the complete triumph of British arms. Between 1689 and 1703 four separate struggles took place between these ancient enemies. The first, which began in 1689, is known as King William's War, ending in 1697 by the treaty of Ryswick.

The second conflict was Queen Anne's War, known in European history as the War of the Spanish Succession. The cause of the war was the wider sens that followed one, in America it was marked by the same characteristics. In 1710, with the assistance of ships sent from England, Port Royal was again captured. With it the whole of Acadia passed into the hands of the English. The name of the town was changed to Annapolis Royal, in honour of Queen Anne. Acadia became the base of England's great trading in the new war was ended by the treaty of Utrecht. The extent of the country designated as Acadia was somewhat vague, and as to the regions included under that name new disputes were destined to arise.

The War of the Austrian Succession (1744-1748), occurring in the reign of George II, is known in American history as the War of the Defilement. There was a brief struggle over the line of the Ohio, which, in 1742, fell to England and by 1745 on and captured the little town of Canoa, in Nova Scotia. They carried off its garrison and then attacked Annapolis, but were repulsed. The most important event of this war was the expedition against Louisburg, on Cape Breton Island. Though Louisburg had been fortified at an expense of $10,000,000, it was compelled to surrender. Louisburg's defenses were assaulted by a French armada on the way to retake Acadia and Louisburg, and to destroy Boston. Though the armada reached American waters, it was dispersed by a tempest off the coast of Nova Scotia, and its creammen returned to France. At this stage of the war both sides were freely assisted by savages. One of the French expeditions attacked the outpost of Saratoga, killed thirty persons, and took a hundred prisoners. By the treaty of Aix-la-Chapelle in July, 1748, all conquests were mutually restored. The news of the surrender of Louisburg, which had been chiefly won and defended at the expense of New England, caused the greatest dissatisfaction throughout the colonies, and strained somewhat the relations with the mother country.

Having emerged from the last war without loss of territory, France went to work more vigorously than ever with her preparations for excluding the British altogether from the Mississippi valley. In 1749 the Governor of Canada despatched Céloron de Bienville with a band of men in birch-bark canoes to take formal possession of the Ohio valley, the only highway still unguarded. Once on the Allegheny River, the ceremony of taking possession began. The men were drawn up by their commanders, and Louis XV was proclaimed king of all the country drained by the Ohio. Then the arms of France were nailed to a tree, at the foot of which was buried a leaden plate with an inscription claiming the Ohio and all its tributaries for the
King of France. At various points along the Ohio similar plates were hidden. Forts were built along the Allegheny and Monongahela in 1731 and 1732; France named Governor Dinwiddie of Virginia. He determined to demand the withdrawal of the French, and for his messenger chose George Washington, then an officer of the Virginia militia. Washington proceeded to Fort Le Boeuf, where he delivered Dinwiddie's letter to the commandant, Saint-Pierre, who agreed to withdraw the letter to the authorities in Canada. In the meantime he would continue to hold the fort.

When Dinwiddie received the reply of Saint-Pierre, he knew that the time for action had come. He sent forward to the forks of the Ohio a party of forty men, who began the erection of a stockade, intended to surround a fort, on the site of the present city of Braddock. On April 17, 1754, while the English were still engaged at their work, a body of French and Indians from Fort Le Boeuf ordered them to leave the valley. The English commander was allowed to march off with his men. The French then completed the work thus begun, and in honour of the Governor of Canada it was called Fort Duquesne. The surrender at the forks of the Ohio was not confined to Virginia. New York, Pennsylvania, and Maryland, Virginia, and Pennsylvania. Virginia acted promptly and raised a force, of which Frye was commander, with Washington as lieutenant-colonel. Near a place called Great Meadows, Washington with a few men killed or captured a small party of French. On 4 July, 1754, he was himself besieged by an attack from the French and Indians. The next day, April 17, 1754, he had to retreat, his army compelled to surrender. Thus was begun what the English colonists called the French and Indian War. The British in 1755 sent over Major-General Braddock as commander-in-chief in America. The colonial governors met him at Alexandria, Virginia. Four expeditions were agreed upon: (1) an expedition from Fort Duquesne against Fort Ticonderoga and Crown Point; (2) an expedition to sail from New England and make such a demonstration against the French towns to the north-east as would prevent the French from being able to send help from Quebec; (3) an expedition, starting from Albany, up the Mohawk River, to carry provisions to the Indians in the west; (4) an expedition from Fort Cumberland, in Maryland, across Pennsylvania to Fort Duquesne. Braddock himself took command of the fourth expedition. There was no opposition until his troops had crossed the Monongahela River and had arrived within eight miles of Fort Duquesne. Suddenly they met a fierce attack from the French and Indians. It was not in any sense an ambush, but the French and their Indian allies instantly disappeared behind bushes and trees, and poured a merciless and incessant fire into the ranks of the British. Braddock would not allow his men to fight in Indian fashion; therefore they stood huddled in a long line and were driven back and driven from all the extent of his loss compelled him to order a retreat. Had it not been for Washington and his Virginians the British force would probably have perished to a man. Braddock, wounded in the battle, died soon afterwards. The expedition against Niagara was a failure. That against Crown Point was partially successful. The French government now appeared to see vaguely the great importance of the contest in America. The demands of the European war had kept the French armies employed at home; therefore, no considerable force could be sent to America. The King, however, sent over the Marquis de Montcalm, the ablest French officer that ever commanded on this side of the Atlantic. In 1759, towards the end of the British two years of disastrous war, Montcalm won over the Indians to the side of France, captured and burned the post at Oswego, and threatened to send a strong fleet against New England. Until the elder William Pitt became prime minister in 1757, the war between England and France was made against the French. In the year 1758 the strong fortress of Louisburg surrendered to a joint military and naval force under Amherst and Boscowen. In the same year Washington took Fort Duquesne, which was renamed Fort Pitt. Fort Frontenac, on Lake Ontario, was destroyed by a small force under Colonel John Bradstreet. With the loss of Fort Duquesne this second disaster cut off the Ohio country from Quebec.

On 8 July, 1758, General Abercrombie, with an army of at least 15,000 men, made a furious and persistent assault on the strong post of Ticonderoga. The fort was defended by Montcalm with about 3100 men. After a battle raging for several hours hard fighting, outlying breastworks, and its formidable abatis of fallen trees. When the British, under cover of darkness, withdrew, they left behind them 1941 killed, wounded, and missing. The French reported a loss of 377.

In a fiercely contested battle on the plains of Abraham, 13 September, the French were defeated. Wolfe and Montcalm were among the dead. In the following year Montreal was taken, and the American phase of the war came to an end. In Europe the conflict continued until peace was made at Paris in February, 1763. By that treaty France gave to Spain, for her assistance in the war, all that part of the country lying west of the middle of the Mississippi River from the line of Lake Erie south as New Orleans. To Great Britain she surrendered all her territory east of this line.

From the beginning of the inter-colonial wars, in 1689, the Middle Colonies gave assistance to New England in its expeditions against the French strongholds in Canada. When the last conflict broke out in 1755, the French governors submitted proposals for an armistice and other military measures. Some of these served under Washington at Fort Necessity. Whenever troops from the different colonies acted together, as they frequently did, they used the name "provincials" to distinguish themselves from the British troops. There is a popular notion that all the proposals after 1743, when the United Confederation of the French in Canada was formed, were suggested by military necessity. In a measure, but not wholly, such necessity was the sole influence tending toward their union. As early as 1760 an agreement was entered into by Maryland, Virginia, and Carolia to restrict the production of tobacco. Even though nothing came of this commercial agreement, it indicates the existence among the colonies of a desire to form a military union as early as the eighteenth century (1720) Deputy-governor Keith, of Pennsylvania, submitted to the Lords of Trade and Plantations a plan, or a recommendation, for a union of England's North American colonies. In the treaties on the development of the idea of union this document is overlooked. It will be found, however, among the printed papers of Sir William Keith.

The French and Indian war was the prelude to the American Revolution. It trained officers and men for that struggle. During its campaigns the commander-in-chief in the War for Independence acquired his first knowledge of strategy. This war released the pressures from the pressure of the French in Canada, and developed in them a consciousness of strength and unity. Besides it gave to the colonies an unlimited western expansion. In this great acquisition of territory is to be found one of the earliest causes of the quarrel with the mother country. Though the provinces had fought for territorial extension, a royal proclamation was issued in 1763 restricting further expansion to the Alleghanies, thus reserving the conquered territory as a crown domain. Though
they did not clearly perceive it, the war had welded the thirteen colonies into one people. It was in this era that there grew up the feeling that this conquered territory did not belong to the Crown but to the colonies collectively. So afterwards, when independence was achieved, it was contended that these western lands did not belong to the respective states but to the union collectively, because the domain had been won by their joint exertions. By the proclamation of 1763 a line was drawn around the headwaters of all those rivers in the United States which flow into the Atlantic Ocean, and west of that line the colonists were forbidden to settle. All the valley from the Great Lakes to the Ohio was reserved for Indian tribes, and the proclamation line westward to the Mississippi was set apart for the Indians. Out of the conquered territory England created three new provinces: in Canada, the Province of Quebec; out of the country conquered from Spain, two provinces, namely, East Florida and West Florida. The Appalachianola separated the Floridas. For land-benefit it was desired that the St. Mary's was annexed to the Province of Georgia.

In order to provide for the military defence of the colonies, it was decided to enforce the Navigation Acts. These required: (1) that colonial trade should be carried on in vessels built and owned in England or in the colonies; these ships to be manned, to the extent of two-thirds of the crew, by English subjects; (2) the entrance of goods in colonial ships was to be sent to ports other than those of England. Products or goods not named in a certain list might be sent to any other part of the world; (3) if a product exported from one colony to another was of a kind that might have been supplied by England, it must either go to the mother country and then to the purchasing colony, or the export price must be equal to the import duty it would have to pay in England; (4) goods were not allowed to be carried from any place in Europe to America unless they were first landed at a port in England. Not unconnected with this measure, perhaps, was an intention of establishing permanently in America a body of 10,000 British troops. The probable cost of the Alcanaba and the St. Mary's was annexed to the Province of Georgia.

While these measures of Grenville's administration were in contemplation, information of the design of the ministry was received in Boston from the colonial agent in England, who asked counsel in the emergency. In the spring of 1764 a Boston town-meeting was called and the subject special consideration. For the guidance of newly-elected members a committee was appointed to prepare instructions. This important work was assigned to Samuel Adams. While motives of policy suggested the language of loyalty and dependence, it is not difficult to see behind these instructions of Act a spirit of a determined policy which, long and thoughtfully considered the whole question of the relation of the colonies to the mother country, for he furnished Americans with arguments that never ceased to be urged till the separation from Great Britain was complete.

By drawing into question the right of the Crown to put an absolute negative upon the act of a colonial legislature, the ministry revealed another form that struggle against prerogative which with varying success had long been maintained on both sides of the Atlantic. The resolutions of the Boston town-meeting, however, had a different purpose, marking, as they do, the first organized action against taxation.

The measures of the French and the Spanish West Indies not only stimulated the prosperity of the commercial centres in every colony, but was a chief source of wealth to all New England. For the abundant supply of timber standing in her forests, for her fish, and for her cattle, these islands furnished a convenient and profitable market. By the vessels engaged in this extensive trade, cargoes of sugar and molasses were unloaded at Boston and other New England ports. A Parliamentary statute of 1753 had imposed on both commodities a prohibitive duty which but for the compliance of revenue officers would even then have accomplished the ruin of a flourishing commerce. When this law, after several renewals, was about to expire in 1763, the colonists actively opposed its re-enactment, but Grenville was resolved to improve the finances in his own way, and against the successive remonstrances of colonial agents, of merchants, and of the British press, the minister, in the act, says Bancroft, in a form "greatly to the disadvantage of America". Commissioners of customs, regarding their places as sinecures, had hitherto resided in England. Now they were ordered at once to their posts; the number of revenue officers was increased, and, to assist in executing the new regulations, warships patrolled the harbours and the coast. These were instructed to seize all vessels suspected of smuggling. Army officers were commanded to co-operate. The jurisdiction of admiralty courts, in which cases were tried without juries, was greatly extended. Both the promise of emolument from confiscated property and the fear of dismissal for neglect of duty sharpened the vigilance of the officers engaged in enforcing a more stringent navigation, and it was generally perceived that their unusual activity and violence threatened to destroy not only contraband, but menaced the very existence of even legitimate trade. At this time £164,000 sterling was the estimated annual value of the Massachusetts fisheries; and to supply the provisions, casks, and sundry articles yearly required in the Massachusetts was a single vessel of 100 tons, estimated at £23,700. The importance of this industry may be easily estimated from the extent to which it had been carried by a single community. A rigorous execution of the Act of April, 1764, meant to Americans the annihilation of this natural and legal branch of commerce, for if the planters in the French West Indies could not sell their sugar and molasses, they would not buy fish, and any deficiency or any great irregularity in the supply of molasses would have been fatal to the distilleries of Boston and other New England towns. Ships would have been almost worthless on the hands of their owners, and the 5000 seamen employed yearly in carrying fish to Portugal and Spain would have been without an occupation. The severe regulations on the export of fish to England, amounting to £3000 was soon swept into prize courts, coupled with the declared intention of raising by imperial authority a revenue for the defence of the colonies, created a constitutional question of the gravest character.

Since 1763, when the war ended, the British Government had time to consider a system of revenue. The importunities of British merchants, who were creditors of American importers, as much at least as a feeling of tenderness for the colonists, influenced Grenville to suspend for almost a year his purpose of laying a stamp duty on America. An expectation of mastering the subject was undoubtedly an additional cause of delay. His purpose, however, was not forgotten, and neither promise nor remonstrances, nor even of solemn pledges of the colonies to honour as hitherto all royal requisitions, availed to overcome his obstinacy, and on 6 Feb., 1765, in a carefully prepared speech, he introduced his fifty-five resolutions for a stamp act. In the colonies this aroused a bitter spirit; the stamp distributors were induced to abandon their offices by persuasion or intimidation, and delegates from nine colonies met in New York to express disapproval.

Patrick Henry, of Virginia, led the opposition with the resolutions: that the first Virginia colonists
brought with them "all the privileges and immunities that have at any time been held" by "the people of Great Britain"; that their descendants held these with the British colonies of North America, and had been declared entitled to all the rights of Englishmen "born within the realm of England"; that one of these rights was that of being taxed "by their own assembly"; that they were not bound to obey any law taxing them without consent of their assembly. The Virginia Resolutions were passed 29 May, 1765. The Massachusetts Resolutions were passed by the part of Massachusetts by a call for a congress to meet at New York City. This assembly, known as the Stamp Act Congress, began its sessions in New York on 5 Oct., 1765, and was attended by delegates from nine of the colonies. New Hampshire, Virginia, Georgia, and North Carolina were unrepresented. The representatives from six of the nine colonial legislatures, delegates from the Rhode Island, New York, and Massachusetts signed a "Declaration of Rights and Grievances," setting forth that the Americans were subjects of the British Crown; that it was the natural right of a British subject to pay no taxes unless he had a voice in laying them; that Americans were not represented in Parliament; that even if they had been, they would have had the right to vote against any taxes which they considered improper; and that any attempt to do so would be an attack on the rights of Englishmen and the liberty of self-government. The grievances were five in number: taxation without representation; trial without jury (in the admiralty courts); the Sugar Act; the Stamp Act; restrictions on trade.

The Stamp Act was promptly associated for resistance to that measure. At first they demanded no more than that the stamp distributors should resign their offices. Their refusal was the occasion of violence and serious riots. 1 Nov., 1765, was the day fixed for the Stamp Act to go into force. During the next six months every known piece of stamped paper was seized and burned; handbills were issued denouncing the law, and public meetings were called; mobs frequently paraded the streets, shouting: "Liberty, property, and no stamps!" Merchants pledged themselves not to import English goods till the Stamp Act was repealed. These agreements among the mercantile classes were widespread. The effect was to leave on the hands of British exporters goods which the Americans were not buying. By mid-production it threw out of employment multitudes of English labourers. This led English merchants to flood Parliament with petitions calling for the repeal of the Stamp Act. The distress occasioned in England forced Parliament to yield, and in March, 1766, the law was repealed. Both in America and England representatives of those who had opposed the Stamp Act rejoiced, and those who had supported it were humiliated, and were accused of having gone down to defeat.

The term of rejoicing was brief. In England the king as well as his friends conceived for the authors of that conciliatory measure the most bitter dislike, which expressed itself in the driving from power of the supporters of Rockingham and, soon after, under a more compliant ministry, adopting a new policy. With its adoption the old animosity and the suspicion of plot against the crown was intensified among the colonists far surpassed the outbreak which marked the first attempt upon their liberties. The new measures of taxation were known as the Townshend Acts: (1) the legislature of New York was forbidden to pass any more laws until it had provided the British troops in the city with shelter, fire, and such articles as salt, vinegar, and candles; (2) at Boston a Board of Control was established to enforce laws relating to trade; (3) taxes were laid on glass, painters' colours, lead, paper, and tea. Though these taxes were not burdensome, they involved the important principle of the right of Parliament to tax people not represented in it, and once more the colonists rose in resistance; again there were anti-importation agreements, correspond-
ignored Parliament; it prepared Articles of Association, to be signed by people everywhere, and to be enforced by committees of safety. The members of these committees were to be chosen by the inhabitants of the cities and towns. The articles bound the people to import nothing from Great Britain and Ireland, also to export nothing to those countries. Henceforth the Committees of Safety were to perform an important service in promoting the Revolution. On 8 Oct. the Congress adopted the following resolution: "That this Congress approve the opposition of the inhabitants of the Massachusetts Bay to the execution of the import duties, and that it is resolve[d] they shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition." Before the Congress adjourned it was ordered that another Congress should meet on 10 May, 1775, in order to consider the result of the petition to the king. It then adjourned.

When the king and his friends heard of the proceedings of the Congress, they were more determined than ever to make them submit. On the other hand, the friends of the colonists exerted themselves to promote conciliation, but neither the influence of Pitt nor the eloquence of Burke could alter the resolution of the king's party. The ultimatum of the First Continental Congress led to considerable military activity. It was soon evident that violence would not be avoided by force, the people began to arm. As was generally foreseen, the conflict between the people and the royal forces occurred before the meeting of the Second Continental Congress. An encounter was likely to occur anywhere, but most likely to take place in Massachusetts. Up to the meeting of the First Continental Congress there were in America about 1,000 local government meetings in which the people entered into existence a new body politic, with aims and with authority superior to the local governments. These several governments had actually formed a new state. The Declaration of Independence was merely an announcement of an established fact.

National History.—War of the Revolution.—When the Stamp Act was passed, the Congress which assembled acted as an advisory rather than as a legislative body. Perhaps the chief result of its meeting was that it accustomed the colonists to the idea of union. This feeling was confirmed when the First Continental Congress convened (1774). On 10 May, 1775, the Second Continental Congress assembled. By that time the formation of a military force was fastened upon: besides, the military phase of the war had begun three weeks earlier. Tidings soon came of the taking of Ticonderoga by a force under Ethan Allen. This was the key of the route to Canada. Thus far the chief object of the Americans had been to secure a redress of grievances. Independence was advocated by nobody, and a little earlier John Adams said that it would not have been safe even to discuss it. However, events moved rapidly. Separation was discussed, and on 4 July, 1776, a Declaration of Independence was adopted by the Congress, which had already become a revolutionary body. It had ceased to be an advisory assembly, and for some time had been exercising the powers of a national government. A little later the "Provisions for a General Confederation and Perpetual Union", was proposed, but it was not until March, 1781, that it was adopted by all the states. For the conduct of the war in which they found themselves engaged they were wretchedly prepared; they had no money, no system of taxation, no navy.

Then the war in the war Congress sent to Canada a commission to win over its people to the side of the insur- gent colonists. This body included Benjamin Franklin, Samuel Chase, and Charles Carroll. A cousin of the last-named, Rev. John Carroll, accompanied the commission to assist in promoting its patriotic pur-

pose. By virtue of the Quebec Act the Canadians were enjoying religious liberty, and they must have wondered what they could gain from an alliance with a people who considered that measure of toleration as a ground of reproach to England. As to the enlarge-

ment of the Province of Quebec, already noticed, the people of Canada must have been somewhat indifferent. These and other considerations led them generally to adopt a policy of neutrality. The presence in the American army of one or two small battalions of Canadians did not to any considerable extent affect the sentiments of the Canadians, and during the struggle their loyalty was often suspected by British officials, perhaps not without cause. Under General Montgomery an army also was sent into Canada. A co-operating force under Benedict Arnold reached Canada by way of the Kennebec River and the Maine wilderness. Montgomery had won several small advantages, but the joint attack on Quebec, 31 Dec., 1775, resulted in his death, in the wounding of Arnold, and the defeat of their forces. Then was begun a disastrous retreat toward the State of New York. Either this step of Congress or the plans of the British War Office led to a counter invasion. A force under St. Leger, moving by way of Oswego and Fort Stanwix (Rome), was intended to create a diversion in Canada, under Burgoyne, which was advancing leisurely from Can-

ada. With these two commands Clinton was expected to co-operate along the line of the Hudson. St. Leger's army was defeated or dispersed, and, instead of co-operating with Burgoyne, General Clinton had gone off to attack Philadelphia. A detachment from Burgoyne's army was defeated at Bennington, Vermont. This put all New England in a serious position, and Burgoyne's line of communications. After two severe battles he surrendered, near Saratoga, on 17 Oct., 1777, his entire army of nearly six thousand men. Thus ended the struggle for the possession of the Hudson. The event influenced France to form an alliance, Feb., 1778, with the young Republic.

After the commission had returned from Canada, several agents were sent to represent the United States in Europe, and Franklin's ability had much to do with the establishment of friendly relations with France. When in March, 1776, Washington drove the British from Boston, he brought his army southward and occupied New York and Long Island. That port and New York City was the key of the estate, with the Hudson, entered New Jersey, and passed over into Pennsylvania. From his camp in that state he surprised a regiment of his pursuers at Trenton, 25 Dec., 1776, recrossed to Pennsylvania, and early in the following year again encountered the enemy at Princeton. This ended the first stage of the struggle for the Delaware. Cornwallis gradually retired towards New York.

In the West, Colonel George Rogers Clark took Kaskaskia, 4 July, 1778. The influence of Father Pierre Gibault, its parish priest, enabled Clark speedily to recruit two companies at that place and in the neighboring settlement of Cahokia. By Francois Vigo enabled him to complete his equipment for the march on Vincennes, which, after terrible hardships, was surprised and taken. These were the first steps in the winning of the West. That term included the region now covered by Ohio, Indiana, Illinois, Michigan, Wisconsin, and a part of Minnesota. In this great achievement of Clark's, Catholics acted a very praiseworthy part. When that commander arrived at Kaskaskia, he was not unexpec-
ted; the terms of enlistment of many of his men had already expired, and in the battles with which he marched to Vincennes there was a great preponderance of Catholics. In the conquest of that
place he was also assisted by the inhabitants of the town. Indeed, he felt encouraged during the entire campaign by the friendship of the Spanish governor beyond the Mississippi.

When General Clinton should have co-operated with Burgoyne he set out for the conquest of Philadelphia, the capital of the new union. Transporting his army by the Atlantic and Chesapeake Bay, he landed in Maryland, marched towards Philadelphia and, after defeating Washington's army on the 20th, as he lay on the Delaware. Fighting around Philadelphia was not decisive, the patriot army, as shown in the engagement at Germantown (Oct., 1777), was improving in efficiency. To defend the Continental military stores, as well as to menace Philadelphia, Washington went into winter quarters at Valley Forge. It is unnecessary to repeat the familiar story of the sufferings of the patriot army. One thing, however, was accomplished during that terrible winter. The little army of Washington was rigorously drilled by the German volunteer, Baron Von Steuben. Thereafter the Continentals were a match for the best-trained troops of England. In the spring of 1778 there was a rumour that a French fleet had sailed for the Delaware. This consideration, together with a report that the British now considered Washington's army, persuaded the British to return across New Jersey to New York City. During this march a severe engagement occurred at Monmouth Court House, N. J., 28 June, 1778. It was only the treachery of General Charles Lee that prevented Washington from winning a more complete victory.

The alliance with France has been noticed. The operations of its fleet at Newport are popularly regarded in America as having been somewhat useless. As a matter of fact, the activity of the allies put the British on the defensive at the very moment that they had decided to wage aggressive war. At an early stage Beaumarchais had forwarded military supplies to the United States, and the government loaned large sums of money ($8,352,500), used its armies wherever the opportunity offered, and into every quarter of the globe, even into the Indian Ocean, sent its warships to fight England.

When New England and the Middle States were believed to be lost, the British endeavoured to win back the Carolinas. The latter had been brought under the Carolinas. After a crushing defeat of one of his subordinates at King's Mountain he retired into Virginia, watched by the vigilant General Greene. That officer had been sent South to reorganize and to command the army that had been ruined by the incapacity of General Gates. While he won no great victories, Greene was, in effect, a little stronger after each engagement; the discipline and the equipment of his army also were constantly improving. He succeeded in driving Cornwallis farther and farther from his base of supplies on the coast. The posts forming Cornwallis's line of communication were successively surprised by partisan bands commanded by such officers as Marion, Sumter, and Pickens. With Greene's help, Congress, on the 20th of Jan., 1778, was enabled to pay off the Spanish Armada. It defeated a great British fleet off the capes of the Chesapeake and gave Washington the opportunity for which he had yearned. It then approached the position of Cornwallis at Yorktown. Meanwhile the commander-in-chief was hurrying southward from New York with his own army and a fine French army under General Rochambeau to join the forces under Lafayette. Further to embarrass Cornwallis, a French force under the Marquess Saint-Simon was landed. The allied armies under Washington promptly began the siege of Yorktown, which ended, 19 Oct., 1781, in the surrender of the army of Cornwallis. This ended the military phase of the War for Independence and thus culminated a party struggle that had long been in progress on both sides of the Atlantic.

The Whigs, whether English or American, had been endeavouring to diminish the power of the king; the Tories, both English and American, would preserve that power unimpaired. The Whig opposition in England and Ireland finally forced George III to apply to Russia for troops, and, when they were refused, to hire Walckiers, Brunswickers, and Hessians. Besides these foreign soldiers there was in America a large number of Loyalists or Tories. These fought in the armies of the king, and when the war was over, because of the hostility of the patriots, settled in England or in Canada.

When the Revolutionary War began, there were few Catholics in the United States. Perhaps their number did not exceed 20,000. However, members of that faith were to be found on all her borders, and everywhere they were either neutral, as were many in Canada, or friendly, as in the Spanish colonies around the Mexican Gulf and in the French settlements of the Illinois country. The services of the latter have not been noticed, while those of the Spaniards of New Orleans would require much explanation. The reader who desires to examine this neglected phase of the Revolution will find ample materials in the unpublished papers of Oliver Pollock, on file in the Library of Congress. It is well known that Spain declared war against England (1779) and loaned money to the United States. It is known also that General Washington repeatedly urged the French and Spaniards, among all the Netherland elements who favoured its independence, to give some assistance. During the progress of the war Frederick the Great had urged the United Provinces, as he had urged France, to join in the war against England. The withholding by George III of the subsidy that had formerly been granted to Prussia incensed its ruler against his former ally.

It has been stated that the colonies were wretchedly prepared for engaging in war with the mother country. In July, 1775, it was voted to issue due bills for 20,000,000 Spanish milled dollars, to be sunk by taxes in four successive years, beginning 30 Nov., 1779, the taxes to be levied and collected by the states in proportion to population. These bills Congress petitioned the states to make legal tender in different ways and at different times this was done, and before 1 July, 1776, 9,000,000 in due bills were put out. To distinguish it from the issues of the states this was called "Continental" currency. From this time forward fiat money got possession of the Continental American monetary field. By 1779 the issues amounted to $212,000,000 in a single year. By 1781 the whole mass became worthless.

Up to this time the fatal error was the belief that the credit and currency of continental money could be maintained by acts of compulsion. From this delusion, which affected governments, state and national, few persons were exempt. By October, 1779, Boston was on the verge of starvation; money transactions had nearly ceased, and business was done by barter. In May, 1779, there was a mutiny of certain Connecticut regiments on account of pay. In January, 1781, there was a mutiny of the Pennsylvania Line for the same reason. In that disturbance the soldiers killed a captain who tried to

UNITED

bring them to submission. This is not so much to be wondered at when one learns that $7,00, the monthly pay of an enlisted man, dropped by depreciation to $.33. Before Washington could move his army to Yorktown it was necessary to give the soldiers their back pay. To do this, Robert Morris had to borrow hard money from Rochambeau. In March, 1780, there was outstanding $200,000,000 of continental money, Congress declared this to be worth forty dollars for every dollar out of a"old tenor". In other words, of that entire amount Congress repudiated all but $5,000,000. The "old tenor" fell to 500 to 1 in Philadelphia, when it ceased to circulate. To complete the misfortunes of this experiment, counterfeits successfully imitated the issues of Congress and hastened the death of paper money. Then hard money sprang to life, and was abundant in a form which this revolutionary age was not so fastidious as to refuse. The hoarded and great quantities which had been brought in by the armies and navies of both France and England. As early as 1779 Congress attempted the expedient of specific supplies. Requisitions were made upon the states for meat, flour, forage etc. Because of the defective system of transportation, and for other reasons, it became necessary to send to the states lumps of sugar, and other things which should be sent to the Colonies. The receipts of the states for these things were paid by the states in depreciated paper, which was perceived to be dangerous and was soon given up. The income of the Continental Treasury from 1775 to 1783 was $85,863,825. This was received from domestic loans, foreign loans, taxes, paper money, and from miscellaneous sources. Outstanding certificates of indebtedness amounted to $16,708,000. Besides these, there was the cost of the war which included the expenditure of the several states.

The Confederation and the Constitution.—Though prepared soon after independence was declared, the "Articles of Confederation and Perpetual Union" were not adopted until 1781, when the war was nearly won. This was due chiefly to the opposition of Maryland, which refused to ratify the Articles unless the states were paid what they had advanced. The states' rights party, which should coerce them to the Union; as it was claimed that all such lands had been held only by the joint exertion of the states. Under the Articles all measures of government were directed to the states as corporations; there was no national executive; the Congress was a body of only one chamber, the states paid, and had to continue to pay, the delegates in this body; it was difficult to amend this constitution, and in practice it had proved impossible; finally there was no efficient system for obtaining a federal revenue. In other words, the government under the confederation had no independent income, but depended entirely upon the contributions of the various states. These defects soon proved overwhelming to the Confederation and its obstinate about a constitutional convention which attempted to amend the fundamental law. When this was found to be impossible, they framed a new constitution of government (1787). This provided for a national executive, a national legislature, and a national judiciary; also for a simpler method for its own amendment. It gave to Congress the power to declare war, to regulate commerce with foreign nations, and to regulate commerce among the several states. To the National Legislature was also given power to declare war; to maintain and equip an army and a navy; to exercise exclusive legislative power over such tract as may, by cession of particular states, become the capital of the United States; to make all needful rules and regulations respecting the territory and other property of the United States. The body vested with the powers just enumerated was a bicameral one. In its upper house (Senate) each state has two senators, while in the lower house each has representatives in proportion to population. The House of Representatives is merely a legislative body. The Senate, on the other hand, performs a threefold function. Primarily it assists the house in making laws; in ratifying treaties or confirming nominations to office it performs executive functions; in trying an impeached president it acts as a judicial tribunal. The term of a session of Congress is two years, the term for which representatives are elected. Senators are chosen for a term of six years. In construing an act of the National Legislature one is to assume that it has no power to pass such act unless the authority is conferred by the Constitution, or may be fairly derived from some power of the United States. In determining the constitutionality of a state law one is to assume that the state legislature has power to pass all acts whatever, unless they are prohibited by the Constitution of the United States or by the constitution of the state.

Under the Articles of Confederation there was no national executive. The Constitution, however, vests the supreme executive authority in a President of the United States, who, with a vice-president, is chosen for a term of four years. Both officers are chosen by an electoral college. In this college each state has a number of electors equal to its whole number of senators and representatives in Congress. Originally the electors of president and vice-president looked to the country as a whole and elected them on the basis of public character for each office. In a little while, however, they ceased to exercise such discretion, and nominations for both the presidency and vice-presidency were made in congressional caucuses. The contest of 1824 brought this method into disfavor. Thereafter, for a brief period, many of the states nominated some candidate separately. An alternative system was the great number of candidates, of whom none was likely to receive, as the Constitution requires, a majority of all the votes cast. About 1831 there began to take shape the present system of a national nominating convention. In this extra-constitutional institution the states are represented according to population, each sending twice as many delegates as the number of its senators and representatives in Congress. The District of Columbia, the Territory of Alaska, and some of the insular possessions are also entitled to send delegates. To obtain the nomination in a Republican National Convention a majority of the delegates is sufficient, whereas in that held by the Democratic party a two-thirds vote is required. President and vice-president may be removed from the Tuesday after the first Monday in November of every fourth year. No person except a natural-born citizen is eligible to the office of president or of vice-president. The president shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States. He has power to proclaim public pardons for federal offenses committed in the United States, except in cases of impeachment; by and with the advice and consent of the Senate he has the power to make treaties, provided two-thirds of the Senators present concur. In addition to these powers he can nominate, and, by and with the advice and consent of the Senate, appoint ambassadors, other public ministers and consuls, Judges of the Supreme Court, and all other officers of the United States whose appointments are not otherwise provided for in the Constitution. He is empowered to convene Congress in special session and to dissolve that body when the two houses are unable to agree upon a time for adjournment. Like other civil officers, the president and vice-president may be removed from office on impeachment for, and conviction of, treason, bribery, and other high crimes and misdemeanours.
By the Constitution, the judicial power of the United States is vested in a supreme court, and such inferior courts as the Congress may, from time to time, ordain and establish. In order to secure the independence of the judiciary, the judges of both the supreme and inferior courts hold their offices during good behaviour, and, for their services, receive a compensation which shall not be diminished during their continuance in office. The judicial power is commensurate with the legislative, and extends to all cases, in law and equity, arising under the Constitution, the laws of the United States, and the treaties made, or which shall be made, under their authority. It also extends to cases affecting foreign representatives (ambassadors, ministers, and consuls), to cases of admiralty and maritime jurisdiction, to controversies to which the United States shall be a party, to controversies between two or more states, etc. In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be a party, the Supreme Court shall have original jurisdiction. In all other cases it possesses appellate jurisdiction, both as to law and fact, with such exceptions and under such regulations as Congress shall make.

In addition to the division of political power among the three departments mentioned, the Constitution also provided for judicial power. It is provided that full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. It also provides that the citizens of each state shall be entitled to all privileges and immunities of citizens in the several states; for the return of fugitives from justice and for the collection of debts due from citizens of one state in the courts of another. The Constitution of the United States required that every state in this Union a republican form of government, and to protect each of them against invasion, and, in certain circumstances, against domestic violence. Amendments to the Constitution may be proposed by two-thirds of both houses of Congress or by the legislatures of two-thirds of the states. The Constitution once proposed in either manner become valid as parts of the Constitution, when ratified by the legislatures of three-fourths of the states, or by conventions in three-fourths of them. Congress is empowered to propose the method of ratification. The schedule provided that the ratification by conventions of nine states should be sufficient for the establishment of this Constitution between the states ratifying the same.

Owing to the opposition to its adoption, especially in Virginia and New York, it was agreed by the friends of the Constitution that a bill of rights should be added to it. Accordingly, many amendments were proposed; these were grouped under ten heads, familiar as the first ten amendments, and known to students of the Constitution as the Bill of Rights. The eleventh amendment, declared a part of the Constitution in 1798, interprets a part of Article III, and prevents the citizens of a state from suing another state, or a foreign citizen or subject from bringing suit against one of the states. The twelfth amendment, adopted in 1804, makes a change in the method of choosing a president. It made the ballot of the elector more definite, and in case the election went into the House of Representatives, it restricted the choice of that body to the three candidates highest on the list. The remaining amendments, the thirteenth, fourteenth, and fifteenth, grew out of the Civil War. The Constitution had had considerable experience in the making of constitutions before they set about the establishment of their crowning work. Shortly after independence was declared, the states were advised to prepare constitutions of government. All compiled promptly, except Rhode Island and Connecticut, both of which retained their liberal colonial charters. The establishment of any state religion is prohibited by the Constitution. The regulation of charities, education, marriages, land, trusts, religious corporations, etc., about which it says nothing, is reserved, by inference, to the various states.

The period from 1783, when the definitive treaty of peace was signed, until 1789, is known as the critical era of American history. The federal government was in distress; many of the states were on the verge of bankruptcy, and the federal public debts, external and internal, were highly unsatisfactory. Indeed, the country appeared worse than at any time during the progress of military operations. When George III, for himself and his successors, acknowledged the independence of the United States, the several commonwealths, claiming to be sovereign, adopted policies more or less selfish. This disposition begot a number of domestic quarrels. In addition to disunion at home, foreign relations were not too harmonious. The young republic had nearly forfeited the confidence of its own citizens, and was beginning to incur the contempt of the world outside. It was these alarming symptoms that forced upon a few leaders the idea of amending the fundamental law. When, however, the Constitution was submitted to the States for ratification, many of the States appeared to oppose its adoption. This opposition was overcome by the influence and activity of the leading patriots. In this great work the services of Washington cannot be overestimated. His brilliant lieutenants, Hamilton and Madison, ably supported his efforts in conventions and in the Press. The constitution of the Federal Government would make a considerable list, and no list would be complete. Of course, all those who signed the instrument worked for its adoption. The Constitution also had friends who were not members of the Convention. Among the ablest and the most useful of these was Pelatiah Webster, an able student of public finance and of constitutional systems. In 1788 the proposed Constitution was ratified by the requisite number of states (nine), and on 4 March, 1789, the first Congress assembled under it. Much of its time and energy was devoted to considering means for improving the public credit and to organizing the various departments of government. In this work Congress was greatly assisted by Alexander Hamilton, Secretary of the Treasury. On 4 March, 1789, John Adams had been inaugurated president. John Adams had been chosen vice-president. Internal relations and external relations were speedily improved by the wisdom of Washington. The measures of his administration soon established domestic tranquillity and general prosperity.
Congress led to an insurrection in western Pennsylvania. That outbreak was suppressed in 1794 by sending the militia of New Jersey, Maryland, and Virginia, and some troops of Pennsylvania, into the troubled region. This indicated the energetic policy that was adopted by the new government. Armies under Generals Harmer and St. Clair were defeated by the Miamis. In 1795, after their defeat by General Wayne, the tribe made acession of nearly the whole of Ohio. In 1794-95 John Jay, Chief Justice of the United States, negotiated a treaty with Great Britain. After the people of France had put their king and queen to death, President Washington issued his Neutrality Proclamation, thus taking the first step in the foreign policy of the United States. Though Washington was honoured by a second election, his administration continued to be attacked with considerable energy and unpopularity. Sedition was, indeed, a question of the principal political parties. Jefferson, the Democratic candidate, and as such president, was chosen to succeed Washington. His majority over Jefferson, who was elected to the vice-presidency, was very slight. An effort of this administration to negotiate a commercial treaty with France resulted in the celebrated “X Y Z” correspondence. In portions of the country there was opposition to Jefferson’s administration. Upon the War on the administration was the question of dealing with those citizens and resident aliens who attacked the president and the members of his administration. The Alien and Sedition Laws were designed to meet the emergency. By a majority of the people the Alien Law was regarded as a violation of the First Amendment of the Constitution, which guarantees freedom of speech and of the press. By the legislatures of Virginia and Kentucky these measures were criticised, and the latter came near to proclaiming nullification as the rightful remedy. Madison was the author of the Virginia resolutions, while Jefferson prepared those passed by Kentucky. These resolutions connect with the Hartford Convention, nullification, and secession. In 1798 the administration was embarrassed by the taxes necessary for building up a navy; by the Alien and Sedition Laws, and by dissension among the Federalist leaders. Hamilton attacked President Adams with great severity, and contributed to the defeat of the Federalist party, of which he had been the indefatigable chief.

Early Political Parties.—In the Constitutional Convention at Philadelphia there were many discrepant elements. We are now concerned with only two, viz., those who favoured the federal, or union, under the proposed system and those who opposed it. The former were known as Federalists, the latter as Anti-Federalists. When the Constitution was finally adopted, the opponents of the Constitution were called “anti-Federalists” and the Federalists “loose constructionists.” President Washington had generally acted with the Federalists. Adams also belonged to that party. It was during his presidency that Congress enacted the celebrated Alien and Sedition Laws. These measures were unpopular, and combined with the attitude of the Federalists during the War of 1812, led to their complete overthrow. They had organized the government and given it its tendency, but after the administration of Adams they became little more than a party of protest. In 1800 the followers of Jefferson, then known as Republicans, won the presidency. They had previously obtained control of Congress. At that time the conflict in progress between England and France divided the American people on the question of foreign relations. The Federalists, who were strongest in New England, favoured England, while the Republicans, who sympathized with France, the late ally of the United States. After the War of 1812 party lines had been almost effaced. President Monroe was practically the unanimous choice of the American people. The rivalry of Andrew Jackson and Henry Clay led, after 1829, to the rise of a new political party. The followers of Andrew Jackson were known as Democrats. Clay and his friends favoured internal improvements at federal expense, and the continuance of the United States Bank; an institution first chartered by the Federalists. They also favoured a tariff for protection. These principles formed what is known as the “American” system. Of course, the Whigs were “loose constructionists” of the Constitution. To these principles the Democrats were opposed. That organization is generally regarded as being identical with the Jeffersonian party. William Henry Harrison, the first Whig president, served for one month. His successor, Vice-President Tyler, though an admirer of Henry Clay, was a “strict constructionist.” Again in 1848 the Whigs elected General Taylor, who was defeated by James Buchanan, as the Democratic candidate, in 1848-49.

Territorial Acquisitions.—After 1800 the successive acquisitions of territory are to be noticed. In point of time the Louisiana Purchase, in 1803, came first. This was acquired from France after she had lost the important colonial possession of Hayti, and when Napoleon had decided to renew the war with England. Florida was acquired from Spain in 1821; when the United States surrendered any claim they may have had to the Texan country. At that time and by the same purchase the United States succeeded to Spain’s former independence, the independence of the Floridas. In 1845 by a joint resolution of both Houses of Congress, the constitutionality of that act has been challenged. The settlement of the Oregon dispute was a contemporary event. To that country America had several distinct titles. Oregon was claimed by right of Captain Gray’s discovery of the Columbia River, which he named after his ship; when President Jefferson had bought Louisiana he sent Lewis and Clark to explore that region; in 1811 the fur-trading station Astoria was established there. The right acquired with the purchase of Florida has already been mentioned. These claims, reinforced by American occupation, ultimately gave the United States Oregon proper. The Great War of the South was the War of Texas (1818), which concluded the war with Mexico, gave to the United States an immense region in the southwest. This included the whole of California, Nevada, Utah, a small part of Wyoming, more than a third of Colorado, and considerable portions of Arizona and New Mexico. In 1853 the Gadsden Purchase from Mexico completed the boundary of the United States in that region. Alaska was purchased in 1867 for $7,200,000 from Russia. In our own time (1899) Porto Rico and the Philippine archipelago were acquired, as a result of the war with Spain. Less important insular possessions in the Pacific (Hawaiian Islands, Guam, Samoan Islands) were also acquired about this time.
Foundations of Foreign Policy.—The Neutrality Proclamation of President Washington has been mentioned. A second important step in the development of America's foreign policy was taken in 1823, when President Monroe sent to Congress his annual message. Between 1816 and 1822, a revolutionary government had been established in each of the Spanish colonies from the Rio Grande to Cape Horn. Upon due consideration, the United States had acknowledged their independence. After the overthrow of Napoleon the Holy Alliance had restored absolutism on the continent of Europe. The project was then considered of restoring to Spain her lost dominions. England, however, was opposed to such intervention. Her attitude was chiefly determined by the profitable commercial interests which had sprung up since the overthrow of Spanish dominion in that region. It was in these circumstances that Canning, the British Minister of Foreign Affairs, proposed to Dr. Rush, the United States Minister in England, that the two powers issue a joint declaration against the proposed intervention of the Holy Alliance. Another element in the situation was the attitude of Russia, which had been establishing trading posts in the North-West. It was feared that she would endeavour to extend her dominion farther down the coast. John Quincy Adams was the principal advocate of the proposed action, and informed the Russian Minister that the United States would assume the position that the American continents were no longer open to future colonization by European nations.

President Monroe sought the advice of ex-Presidents Jefferson and Madison, and was encouraged by both in the stand which he was about to take. In his message to Congress, President Monroe declared in speaking of America's foreign policy, that it hitherto the United States had not interfered in the internal affairs of the Allied Powers; that "We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers, to declare that we should consider any attempt that the present or any other portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere. But with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and after mature deliberation, acknowledged, we should not consider any interposition for the purpose of oppressing them or controlling in any other manner their destiny, by any European power in any other light than as the manifestation of an unfriendly disposition towards the United States". And, "It was impossible that the Allied Powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor could any one believe that our Southern brethren, if left to themselves, would adopt it of their own accord. It was equally impossible, therefore, that we should behold such interposition in any form with indifference".

The part of the message referring to Russia declared that "operation has been judged proper for asserting, and preserving, by an appeal to the world, the rights of America as an independent nation, and which the United States are involved, that the American Continents, by the free and independent condition which they have assumed and maintained, are henceforth not to be considered as subjects for future colonization by any European power". These announcements of the President have since been collectively known as the Monroe Doctrine. When those bold declarations were made, the United States felt the support of Great Britain. Their joint Navies would have made it impossible for the Allied Powers to conduct any military operations in the western hemisphere. Sectional Conflict.—In the Constitutional Convention (1787) it was clear that the North and the South had interests which were somewhat different. Notwithstanding this fact, they agreed upon a fundamental law by adopting a number of compromises. In the endeavour to administer the government other compromises were adopted between 1818 and 1850 when the Southern States were convinced that further compromises would be useless. It has already been stated that one form of opposition to the establishment of the First United States Bank was sectional. It was regarded as a Northern measure; was supported chiefly by Northern members of Congress, and was denounced by Southerners. The great difference between the sections assumed a very different form. At that time it was bound up with the institution of slavery. In 1818 the Territory of Missouri applied for admission into the Union as a state. That application had not been acted upon in 1819 when Representative Tallmadge, of New York, proposed an amendment to the effect "that the further introduction of slavery or involuntary servitude be prohibited, and that all children of slaves born within the said state after the admission thereof into the Union shall be free at the age of twenty-five". This raised an important constitutional question, namely, whether under the Constitution, Congress had the power to pass amendments upon the admission of new states which were not prohibited by the Constitution on the original states. The amendment of Tallmadge passed the House, but failed in the Senate. The discussions on the anti-slavery amendment created the greatest excitement throughout the country. The matter was finally settled by the first of the great compromises between the sections. When the Missouri was admitted to the Union, slavery, but in all other territory north of its southern boundary (36° 30' N. lat.) slavery was prohibited forever. Bound up with this controversy was the application of the District of Maine, which since 1801 had been a part of Massachusetts. Maine was admitted as a free state, thus preserving in the United States Senate the balance between the two sections. The Missouri constitution contained a provision excluding free negroes. This was a palpable violation of the Federal Constitution, which guarantees to the citizens of each state the privileges and immunities of citizens of the several states. This part of the controversy was set at rest by the influence of Henry Clay. It was provided that this discrimination of the Missouri constitution would not have binded. This ended the first controversy over the question of slavery. In the division of the Louisiana Territory thus effected, the North gained much more territory than the South. Grave as was the constitutional question that arose on the application of Missouri for admission to the Union, that which grew up about 1830 was much more alarming. After the war of 1812 the successive Congresses enacted tariff laws. So great was the opposition to the war that it was called the "Tari of Abominations". The feeling between the sections showed itself when Senator Foote, of Connecticut, introduced a resolution prohibiting, in an insurrectionary state, the support of the Union, and in which the state declares itself to be not to be considered as subjects for future colonization by any European power". These announce-
Hayne's brilliant oration was replied to by Webster (1830) in, perhaps, the greatest speech ever delivered in the Senate. It has been said that Webster took ground on a position toward which the greater part of the nation was steadily advancing, that is in the direction of nationalism. Hayne's sentiments found favour in the South alone. The theory which he had championed, South Carolina soon sought to put into practice. In 1832 Congress passed a new tariff law, which omitted many of the objectionable features of the Act of 1828, though it still contained the principle of protection.

In South Carolina, where the objection to the law was strongest, the governor convoked the legislature in special session. That body issued a call for a convention of the people of South Carolina. On 19 November, 1832, and on 21 Nov. there was passed by that convention the famous Ordinance of Nullification. This declared the tariff law null and void so far as concerned South Carolina, forbade the payment of duties after 1 Feb., 1833, and prohibited appeals arising under the law from being taken to the United States courts.

If Congress attempted to redeem its position, the people of South Carolina would regard her connexion with the Union as dissolved. The legislature passed several acts to carry the ordinance into effect. Among them was an act that provided for placing the state on a war footing for the purpose of resisting the authority of the United States. Another act provided for a national guard of officers and men to be obtained. In this event the Union men were to be excluded from holding positions of honour or trust under South Carolina.

President Jackson, who had been re-elected in 1832, does not appear to have been alarmed at the condition of affairs in South Carolina. He instructed the collector of customs at Charleston to perform the duties of his office; and, if necessary, to use force. He also issued a proclamation to the people of South Carolina. In it he urged them to yield; he likewise told them that "the laws of the United States must be executed. . . . Those who told you that you might peacefully prevent their execution deceived you. . . . Their object is disunion, and disunion by armed force is treason".

When Congress met in December, 1832, the president was anxious to receive him as a friend of the Union. The president was also anxious to see that the tariff duties by force of arms. A great debate followed on this measure, which was known as the Force Act. Speaking for the South, Calhoun asserted the right of a state to nullify acts of Congress deemed injurious to her interests, and also the right to secede from the Union. Webster denied the right of nullification and secession. He added that the time had come when Henry Clay, fearing a civil war, now came forward with a compromise. He proposed that the tariff of 1832 should be reduced gradually till 1842, when on all imported articles there should be an ad valorem duty of twenty cent. This Compromise Tariff became a law in March, 1833. A second convention met in South Carolina, and repealed the Ordinance of Nullification.

The acquisition of territory from Mexico led to another great controversy between North and South, or rather between the free and the slave states. In August, 1846, President Polk asked Congress for $2,000,000 for "the settlement of the boundary question with Mexico". Mexico had abolished slavery long before (1827), and the president proposed that the money should be granted, provided that neither slavery nor involuntary servitude should exist in any territory that might be acquired from Mexico. The bill passed the House of Representatives, the Southern members voting almost solidly against it; in the Senate it never came to a vote. When finally the measure did pass the Wilmot proviso was stricken out. Later it was sought to attach this anti-slavery provision to other bills. While it did not pass, it aroused the most bitter feeling in the South. At a meeting of Southern members of Congress an address written by Calhoun was adopted and signed, and then circulated throughout the country. Among other things it complained of the constant agitation of the slavery question by the Abolitionists. In 1849 the legislature of Virginia adopted resolutions of which one declared that "the attempt to enforce the Wilmot proviso" would "rouse the people of Virginia to 'determined resistance at all hazards and to the last extremity'. The Missouri legislature also protested against the principle of the Wilmot proviso. One of the hosts at a dinner to Senator Butler, in South Carolina, was "a Southern Confederacy". Besides this general Southern opposition to the Wilmot proviso was anticipated by the difficulty of recovering slaves who had escaped to the free states. In almost every part of the South there was a demand that the territories be opened to slavery. Some of the legislatures contended that the abolition of the slave trade in the District of Columbia would be a direct attack on the institutions of the Southern States. In the North, public sentiment was not less excited. The legislatures of the free states, except Iowa, resolved that Congress had the power and was in duty bound to prohibit slavery in the territories. Many states instructed their congressmen to do everything possible toward abolishing the slave trade in the District of Columbia. When Congress met in December, 1849, the House of Representatives, by 137 to 37, passed a resolution that "abolition of the slave trade in the District of Columbia be a necessary part of the Compromise measures of 1850". By this treaty between the sections it was provided that California be admitted as a free state, and that the slave trade, but not the institution of slavery, be prohibited in the District of Columbia. These bills were agreeable to the North. The measures in which the South was interested were; in the territorial governments for Utah and New Mexico, without any restriction on slavery; and the payment to Texas of $100,000,000 for abandoning her claim to considerable neighboring territory, and for having surrendered her revenue system to the United States at the time of her annexation. The measure in which the South was most interested, however, was a more stringent law for the suppression of the slave trade. In debating the measure, President Taylor died (9 July, 1850). He was succeeded by the vice-president, Millard Fillmore. A law relative to the return of fugitive slaves had been passed in the administration of President Washington (1793). The new law empowered United States commissioners to turn over a coloured person claiming himself to be free as an enslaved slave. It also provided that the negro could not give testimony. It further provided that all citizens, when summoned to do so, were required to assist in the capture of the slave, or, if it seemed necessary, in delivering him to his owners. Any citizen who harboured a fugitive slave or prevented his recapture was liable to fine and imprisonment. The Compromise of 1850, however, was not destined to last forever. As we shall see, it became the very seed-plot of greater troubles. Slave catchers in great numbers invaded the North and hunted up negroes who had escaped twenty years, or even a generation before, and with the assistance of the United States marshals took them back to slavery. Both the free states and the slave states with the aid of the marshals and the others in the performance of their duties. In this way many negroes regained their liberty. Disturbances occurred in many Northern cities, and some
negroes were restored to their owners only after enormous expense. Northern States began promptly to pass Personal Liberty bills, for the protection of negroes who were claimed as slaves. In the South these laws were regarded as a violation of the Compromise of 1850.

Slavery Controversy.—In colonial America slavery was general in the English possessions. In the South nearly all the unskilled labor was performed by negro slaves; in the North much of that work was done by a class of men known as "Redemptioners." For the latter class there was a prospect of entire freedom and even reward. For plantation negroes who had been freed forever; he had no hope of freedom and, perhaps, scarcely dreamt of wealth. When the War of Independence began, negro slavery existed in all the rebellious colonies. For economic and other reasons negroes were not numerous in the North. In the diversified industries of that section slave labor was not regarded as efficient. In the South, on the other hand, life was largely agricultural. On the large plantations the negro could be employed to advantage. His mind was adapted to the simple operations required in the tobacco and rice fields, while his body was well suited to its semi-tropical climate. There he thrived in spite of malaria. While the South was the section primarily interested in negro slavery, the North was less interested in importing them from Africa. In the Declaration of Independence, Jefferson in his indictment of George III charged him, among other counts, with "suppressing every legislative attempt to prohibit or restrain this excorable commerce." In so doing he had "waged cruel war against human rights, by depriving all the inhabitants, of the country, in the persons of a distant people who had never offended them." Out of deference to the wishes of some Southern delegates in Congress, especially those from South Carolina and Georgia, Jefferson's denunciation was stricken from the final draft of the Declaration.

In the North the principles of 1776 were applied more cautiously than in the South. In 1777 Vermont, whose territory was still claimed by both New Hampshire and New York, adopted a constitution which declared that no person ought to be held as a slave after attaining to the age of maturity. In 1789 Pennsylvania enacted that the children of slaves born after that date should be free. A principle of the Massachusetts constitution of 1780 was that "no negroes be accepted as citizens" until emancipated. In 1783 New Hampshire, and in 1784 Connecticut and Rhode Island all adopted measures looking to the gradual emancipation of their slaves. New York and New Jersey came later. At the time of the adoption of the Constitution (1787), slavery had almost disappeared in the North. Even in parts of the South it was unpopular most southern statesmen, of Virginia, Washington, Jefferson, Madison, Mason, and others, hoped to see the institution quietly disappear. The Constitution recognized the existence of slavery and permitted the importation of negroes until January 1, 1808. It also provides that in a census of the people three-fifths of the negroes be counted. This provision gave the slaveholding states a large representation in the House of Representatives and was a source of revenue for the slave states. A census was taken in 1800, and the following year a second census was taken, which was taken in 1810. This measure was re-enacted by the Congress under the Constitution.

When benevolent people and wise statesmen of the South expected the gradual extinction of slavery, the invention of the cotton gin created an industrial revolution in that section. Slavery became a source of extraordinary profit and was soon regarded as an economic necessity. Thereafter cotton-growing became the chief industry of the South. There was an immense demand for negroes, and all thought of emancipation was forgotten. The Constitution conferred upon Congress no authority over the subject of slavery except in the territories and in the District of Columbia. After the admission of Maine as a free state, almost at the same time the Civil War, slave states rapidly followed suit. In the free states, the abolitionist societies were organized. This preserved a sort of balance between the two sections. The American Colonization Society was organized at Washington in 1817. The object of this association was to organize settlements on the western coast of Africa for free negroes who would volunteer to go there. During the forty years ensuing, 8,000 emancipated blacks were converted from circulation in the South. Among the pioneers in this movement was one Benjamin Lundy, a New Jersey Quaker. He had resided in Eastern Tennessee, when he removed to Baltimore. In that city he published the Philadelphia Enquirer and the Philadelphia American. There he made the acquaintance of William Lloyd Garrison. The hostility of the proslavery element compelled them to leave the city. In 1831 Garrison began publishing the "Liberator" in Boston. The "Liberator" denounced the slaveholders as criminals, and demanded the immediate emancipation of slaves throughout the United States. As a defensive measure was enacted from circulation in the South. While the effect of Garrison's teachings was feared in the slave states, they were not very acceptable in Boston. In 1833, while addressing an anti-slavery meeting at the City Hall, he was taken from the building and dragged through the streets with a rope about his body. For personal safety it was necessary in Judge Douglass of Garrison's teachings, anti-slavery societies were formed in the North. The first of these was the "New England Anti-Slavery Society," organized in 1831. A few years later a national organization was formed in Philadelphia. The membership of these early anti-slavery organizations included Wendell Phillips, Gerrit Smith, Emerson, Dr. Channing, Theodore Parker, Henry Ward Beecher, and other persons equally well-known. Anti-slavery meetings were often dispersed by Northern mobs. A Connecticut teacher, Miss Crandall, who opened her school to negro girls, was thrown into jail, while her school was broken up by the mob. An Illinois Abolitionist editor, Rev. Elijah P. Lovejoy, was killed by a proslavery mob.

In 1831 occurred in Southampton County, Virginia, the Nat Turner insurrection, when the slaves rose against their masters and massacred sixty persons. In the South this was ascribed, without much reason, to the influence of Abolitionist literature. Large rewards were offered, below Mason and Dixon's Line, for the capture of the prominent anti-slavers. Northern legislatures were called upon to suppress the Abolitionist societies by law. They continued, however, to flood the South with their literature, and appear to have seriously expected to convince the slave-holders of the evils of human servitude. The South demanded the exclusion from
the mail of this obnoxious literature, but the post-
master-general claimed that he had no authority to
exclude objectionable matter from the mail. In the
summer of 1835 the people of Charleston took the
matter into their own hands, intercepted the mail,
seized the Abolitionist literature and made a public
bonfire of it. The House of Representatives refused
to receive petitions in any way relating to slavery,
or rather voted to lay them on the table. In Congress
ex-President John Quincy Adams acted as the spokes-
man of the Abolitionists. In the brief space of four
years he presented two thousand anti-slavery peti-
tions. The more the House endeavoured to dis-
courage such petitions, the more active became the
Abolitionists. That in 1837 Congress, acting under
section 14, Act 10, chapter 322, March 1, 1837, that
petition, memorial, resolution or other paper praying
for the abolition of slavery in the District of Columbia
or any State or Territory, or the slave trade between
the States and the Territories of the United States in
which it now exists, shall be received by this House
or entertained in any way whatever. About twenty
members from the free states signed petitions on
this resolution. For a long time petitions poured into
the House praying for the repeal of the "gag rule", but it
was not until 1844 that this was done.

In 1840 the Abolitionists nominated James Gilles-
pie Birney, a Southerner, as their first candidate for
the presidency. He received 7900 votes. Four
years later (1844) he was again nominated as an
Abolitionist candidate. When it is remembered
that many of the anti-slavery party were so radical
that they refused to participate in such contests, their
increase in numbers must have convinced the South
that they were destined soon to be a menace to
slavery. In Congress the discussion of slavery aroused
much bitterness, and controversy in both branches
did not cease until the passage of the Compromise
bill in the tide of events. Slavery had been recognized
by the Constitution, but that instrument gave to Congress authority over the
subject only in the District of Columbia and in the
territories, and it was not until vast areas had been
acquired by the United States that Southern states-
men perceived any danger to their own section in such
measures as the Compromise on the admission of
Missouri. After the acquisition of the South-West
from Mexico, they insisted that the restriction of
slavery in the territories was a discrimination against
those Southern citizens who were interested in the
institutions. The territories were open to the citi-
zens of the North with their property; why not allow
the citizens of the South the same privilege if the
inhabitants of the territories were to be free? and if
slavery was a moral wrong, and ought to be restricted rather than
extended. The civilized world, said that section, has
condemned slavery as an evil. If, then, the institu-
tion could not be abolished, it should not be further
extended. Moreover, if the citizens of a common-
wealth could take into one of the territories, which
had been previously recognized by the laws of that
commonwealth, the citizens of other states could
be restricted upon the same privilege. In this case
everything would be property in one of the territories which
was so regarded in any one of the states. This is
entirely inconsistent with any Congressional regula-
tion of the subject. Perhaps not more than one-
half the citizens of the two Territories in the
institutions of slavery, but the large slave-holders
formed a powerful aristocracy. Though in number
they may not have exceeded 10,000, they were
influential enough to name governors, congressmen,
and state legislators, and for a time to determine
important questions of foreign and domestic policy.
In the South their opinion was listened to, and
in the Territories it was forbidden to teach slaves to read and write, but oftentimes
the more humane masters taught them the meaning of
the Scripture and even the elements of knowledge.
Naturally the influence of the more intelligent among
the negroes was feared. Southern statesmen of
the generation before the Civil War expressed opinions
that are not now held in that section.

The Kansas-Nebraska Bill.—From the results of
the presidential election of 1852 the Whig party
never recovered. The great Democratic victory of
that year is generally ascribed to the attitude of that
toward the Compromise measures, especially
its position on the Fugitive Slave Law. Though
in the beginning it met with much opposition, that act
was now enforced quietly. When Franklin Pierce
was inaugurated, 4 March, 1853, the nation was
endangered by the feverish excitement over the
new president apparently believed that the slavery
agitation had permanently sunk to rest. In
the midst of this repose a measure was introduced into
Congress which plunged the nation into a sectional
strife more bitter than any which preceded it.

Stephen A. Douglas, of Illinois, Chairman of the Senate
Committee on the Territories, introduced a bill to organ-
ize a government for that part of the Louisiana Terri-
ory between Missouri and the Rocky Mountains.
Senator Douglas has been accused of having been
influenced by his personal ambition. He could have
added to his popularity by assisting in the acquisition
of Cuba, a project agreeable to the South, but he
would not intrude this question in aid of increasing his public
he used himself acceptable to that section by a better tariff law, but
he had little talent for mathematics or economics.
The position which he occupied, as Chairman of the
Committee on Territories, he proceeded to turn to
account. He maintained that the part of the Com-
promise of 1850 referring to Utah and New Mexico
should be revised. The Territories of Utah and
New Mexico were intended to be of "general application". In
his second bill it was provided that the country men-
tioned would be divided into two territories, one to
be called Kansas and the other Nebraska.

The true intent and meaning of this act, said
the law, is, "not to delegate slavery into any territory
or state, nor to exclude it therefrom, but to leave
the people thereof perfectly free to form and regulate
their domestic institutions in their own way, subject
only to the Constitution of the United States."
There began at once a serious struggle for Kansas.
Nebraska, the Southern inhabitants of the East and
from the South the slave state men rushed into Kan-
sas and began a struggle for its possession. The
slave State of Missouri promptly attempted to
colonize the new territory, and settled at a place
which was called Atchison, in honour of a pro-slavery Senator of
Missouri. On the other hand, the North was not
about to be left out of this"struggle for Kansas.

The first step taken by the Border States was
the admission of New Jersey as a part of the territory
and the crossing of the border into Kansas, took possession of the polls,
and, though they had no right to vote, elected a pro-
slavery delegate. According to the treaty the way of
the Kansas-Nebraska bill, the people dwelling in the
territory were to decide whether it should be a free
or a slave territory. Therefore each side endeavoured
to elect a majority of members to the territorial legis-
lature. The election took place in March, 1855. As
election day approached, armed Missourians entered
Kansas "in companies, squads, and parties", taking
arms, armistice, and then went home to Maine
and Missouri. In this manner was elected a legislature of
which every member save one was a pro-slavery man.

It promptly adopted the slave laws of Missouri and
applied them to Kansas. The free state men repudiated his legislature, held a convention at Topeka, and made their choices for a new constitution by a popular vote. Pro-slavery men refrained from voting but the free state people ratified the proposed constitution. Later they elected a governor and a legislature. When that body assembled, senators were elected, and Congress was asked to admit Kansas into the Union.

The old leaders of the Whig party, Clay and Webster, were dead, but that organization lost not only leaders but thousands of voters in the free states. As early as 1841 a state convention in Louisiana founded the Native American or KnowNothing party. The Kansas-Nebraska Act and its execution led to a breaking up of the old political parties. As early as 1854 there was formed a new organization, established on the theory that the people of any particular state or territory should determine for itself the nature of its government. The Republican, was joined by Free-soilers, Whigs, and anti-Republican Democrats. The first National Nominating Convention of this party (1856), its candidates, and some of its principles have been noticed in the sketch of political parties. In that election the Democratic nominees, Buchanan and Breckenridge, won the North but the Unionists of the South, led by Mr. Douglas, of Illinois, the Republican, was joined by Free-soilers, Whigs, and anti-Republican Democrats. The first National Nominating Convention of this party (1856), its candidates, and some of its principles have been noticed in the sketch of political parties. In that election the Democratic nominees, Buchanan and Breckenridge, won the North but the Unionists of the South, led by Mr. Douglas, of Illinois, was chosen. Buchanan and Breckenridge and Lane expected the support of the Southern States; Douglas was the choice of the Northern Democrats. The Constitutional Unionists nominated Bell and Everett. It was this split in the Democratic party that made possible, in November, 1860, the election of Abraham Lincoln and Hannibal Hamlin.

The Legislature of South Carolina, which had assembled for the purpose of appointing electors of president and vice-president, called a convention, which met at Charleston on 20 Dec., 1860, and passed an ordinance of secession. According to the Southern theory, this act severed the relations of that state from the United States. In Jan., 1861, the Confederate States of America were recognized by several European powers, and in Feb., 1861, at Montgomery, Alabama, organized the Confederate States of America. A provisional constitution was adopted, and agents were sent into other Southern States to persuade them to join the slave-holding confederacy. At different dates up to May, 1861, other commonwealths cast their votes for the Union, and in the other seceding states numbered eleven. The President of the Southern Confederacy was Jefferson Davis, of Mississippi; Alexander H. Stephens, of Georgia, was chosen vice-president. The constitution differed but slightly from the Constitution of the United States. Its preamble stated that the Confederate States acted in their sovereign and independent capacity.

The War. With the oath and word which he took at Washington, President Buchanan did nothing to preserve the Union. In his view the states had no right to secede, but, if they did so, there was no authority conferred by the Constitution of the United States to prevent such action. On 4 March, 1861, Lincoln took the oath of office as president and called for a million men to assist the Union in maintaining its authority. Tennessee, which he stated that he had no purpose to interfere with the institution of slavery in the states where it existed, and he believed that he had no lawful right to do so. Nevertheless, he had formed a resolution to enforce the laws and to protect the property of the United States. It was in his career to carry out his policy that the great Civil War began. He felt the eagerness to extend their authority over the entire South the Confederate officials decided to seize Fort Sumter, which was the property of the United States. On 7 April, 1861, a considerable army under General Beauregard began its siege. The little garrison under Major Anderson was compelled to surrender. The first important battle between the United States troops and the Confederates was at the battle of Bull Run, 21 July, 1861, when the same Confederate general defeated the Union army under General McDowell. For the conflict thus inaugurated the South, which had long been preparing, was much better equipped than was the North. After looking into the law and consulting the precedents, President Lincoln in a proclamation called forth the militia of the several states to the value of 500,000 men.

The policy adopted in Washington was to divide the Confederate States along the line of the Mississippi, to blockade their ports and to take their capital, which had been removed to Richmond after the secession of Virginia. The Confederates won another battle, at Ball's Bluff, in Oct., 1861. Meanwhile a large army was being brought together at Washington. This was placed under the command of General...
George B. McClellan, who later advanced toward Richmond from Yorktown. In May, 1862, his army was close to the Confederate capital. Thereafter occurred heavy fighting until the beginning of July. Later in the season the Union forces were again defeated near the old Bull Run battleground. This succession of victories persuaded General Robert E. Lee, then in command of the Army of Northern Virginia, to make his first invasion of the North. On 4 July, 1862, Lee started his army from the Virginia Peninsula to invade Northern soil. He was confronted by an inferior Union force under General McClellan, and compelled to retreat into Virginia. The approach of winter found him occupying a strong position in the vicinity of Fredericksburg. There he was attacked by General Burnside, who had superseded McClellan in the command of the Federal army. Lee inflicted immense losses on his opponents, and in May, 1863, at Chancellorsville won perhaps a still greater victory. These advantages effected every recollection of his defeat at Antietam, and induced him to make another invasion of the North. During May and June, 1863, his victorious troops marched leisurely through Virginia and Maryland, and during the first three weeks of July following fought at Gettysburg, Pennsylvania, in what is regarded as the greatest battle of the World. The defeat of General Lee by General George G. Meade, the Commander of the Army of the Potomac, was a disaster to the South, and marked the turning-point of the war. General Lee never again commanded so splendid an army; in fact the Confederacy could not furnisb another. But the gravity of the situation was such that Meade would have annihilated the remnant of the Army of Northern Virginia before it arrived at the Rappahannock a second time. As it was, Lee escaped and was able to protract the struggle for more than another year. When the war was renewed in Virginia, Lee and his famous captains were opposed to General Ulysses S. Grant.

The mention of these officers reminds one of the progress of the Federal armies in the West. The problem of opening up the Mississippi was begun in the south by General Benjamin F. Butler in command of an army, and Commodore D. G. Farragut, who co-operated with a powerful fleet. In April, 1862, New Orleans was permanently occupied by the Federal forces. This was due to General Butler's victory over Confederate control by the victories of General Pope, General Grant, and Commodore Foote. The capture of Forts Henry and Donelson brought Grant's army into the heart of Tennessee and led to the flight of its legislature to Memphis, where the Confederates still had a foothold. Later that general directed his attention to the remaining obstacles to the free navigation of the Mississippi, namely Vicksburg and Port Hudson. However, his first movements were not altogether successful. Sherman and some of his other officers met with reverses. In fact, there was little in the first attempts that would lead one to foretell a glorious conclusion of the campaign. Grant decided to run past the batteries at Vicksburg; however, a remnant of the Confederates in the interior of Mississippi defeated both Pemberton and Johnston, the Confederate commanders. The army of the former general, over 37,000 strong, which was forced into the city of Vicksburg, surrendered on 4 July, 1863. This loss occurring on the day after the great defeat at Gettysburg was too much for the resources of the South. Within about five days Port Hudson also fell into the hands of the Federals, and the Mississippi was open from its source to the Gulf.

A large Union force under General Rosecrans was stationed near Murfreesboro, Tennessee, where also was the Confederate General Bragg with a fine army. In that vicinity was fought one of the great battles of the war. Bragg was defeated 31 Dec., 1862, and 2 Jan., 1863, and was finally forced to enter Georgia, where he was greatly strengthened. On 19 and 20 September, 1863, these armies fought at Chickamauga the most desperate battle that had yet taken place in Tennessee. The military genius of General George H. Thomas saved the Union army from destruction after Rosecrans had lost the field. Though his fame was to come later, even here Sheridan displayed great ability. Though still in command, Rosecrans remained inactive, and pressed the administration to replace him. Thereafter he was informed that he would surrender the army, President Lincoln sent General Grant to the headquarters of Rosecrans; Sherman came later with a small force. As we have seen, Sheridan and Thomas already belonged to that army. General Hooker was sent west from the Army of the Potomac, which was following Lee. This was the only occasion during the war when nearly all the great Union commanders took part in any battle. The Federal cause had the benefits of their services at Missionary Ridge and Lookout Mountain, 23-25 Nov., 1863. In these great battles Bragg, after much loss, was forced into Georgia, where his command was turned over to General Joseph E. Johnston. He retreated slowly toward Atlanta, followed by Sherman and Thomas, who was the former, commander-in-chief of all the Federal armies, took up his headquarters with Meade's army, while the latter was given an independent command in West Virginia. This brought him later into the Shenandoah Valley, where he destroyed a fine Confederate army under General Early during the summer and captured large quantities of the enemy's supplies.

After winning a number of small battles from Johnston, who had continued to retire before him, Sherman finally reached Atlanta. There his command was energetically attacked by General J. B. Hood, who had superseded Johnston. The aggressive system of the new leader destroyed an excellent army and the State of Georgia at the mercy of Sherman's veterans. To draw the Federal command away from the interior of the commonwealth, Hood entered Tennessee, intending, no doubt, to alarm the people of the Middle West by a demonstration of force in the direction of the Ohio River. This policy, however, failed to divert Sherman from his purpose of marching to the sea and destroying on route whatever would be found in his way. The southern people, tiring of the thoroughly Southern thing, thought ruthlessly, done. By December, 1863, Sherman captured Fort McAllister, and later made President Lincoln a Christmas present of Savannah. As he marched northward through the Carolinas, General Hardee hurried away from the city of Charleston lest his little army might he captured. When Hood invaded Tennessee, Sherman left Thomas to deal with him. In an evil hour for the Confederacy, Hood threatened Thomas at Nashville. The Union commander came from behind his defenses, captured the Confederate guns and soldiers behind their entrenchments and annihilated Hood's army. After this, all the available troops in the lower South were entrapped once more to General Grant's front. With the state of Georgia thoroughly in the hands of the Federals and the Confederates still in the hands of the South, General Grant decided that he was ready to attempt to end the war by a conference of Southern statesmen and President Lincoln, with his Secretary of State, at Hampton Roads, Virginia. Nothing came of this attempt. The South made an expiring effort, but its resources were exhausted. Grant forced Lee out of Richmond; he was hurrying toward the western part of Virginia, and was compelled at Appomattox Court House to surrender the
remnant of his small army. Grant was in his rear and Sheridan squarely in his path. The end, which had long been foreseen, came on 9 April. Less than three weeks later Johnston surrendered to Sherman near Raleigh, North Carolina. The small Confederate forces still in arms soon dispersed or surrendered.

The Confederate navy was built chiefly in England. Cruisers equipped in that country inflicted much damage on American commerce, and for her failure to refrain from these indirect acts of hostility Great Britain was later compelled to pay indemnities to the United States, which they claimed those senators and representatives who came from states reconstructed under the direction of President Johnson during the preceding summer. Instead the Congress appointed a joint committee, which was empowered to inquire into the condition of the states recently in rebellion, and determine whether any of them were entitled to representation in Congress.

On 18 Dec., 1865, the thirteenth amendment was proclaimed a part of the Constitution. This abolished slavery in every part of the United States. The president's proclamation, which became operative on 1 Jan., 1866, had freed the slaves only in the seceding states, and of them certain parishes of Louisiana. A few counties in Virginia and the entire State of Tennessee were excepted. There was also a doubt in the minds of some lawyers as to whether the proclamation of President Lincoln, which was issued as a military measure, was perfectly valid. To free the slaves everywhere in the Union, and to set at rest the scruples of constitutional lawyers, it was deemed necessary to make them acts of law. The Joint Committee suggested the submission to the states of the fourteenth amendment. This, which was adopted in July, 1868, nationalized citizenship, disfranchised certain classes who had participated in rebellion, and prohibited the payment of the Confederate debt. To entitle a state to restoration of its franchise plan, or its senators and representatives to be adopted. Those states that did not do so promptly were required to adopt still another amendment, the fifteenth, which in effect gave the freedmen the franchise. Mr. Lincoln would have conferred the suffrage upon the more intelligent of the negroes and those who had fought gallantly in the Union ranks. Beyond that he was opposed to enfranchisement of the entire body of males twenty-one years and over among the freedmen was the result of the adoption by Congress of a plan of reconstruction very different from that of Mr. Lincoln. It was shaped to a great extent by Charles Sumner and Thaddeus Stevens. In pushing their measures through Congress they were constantly opposed by the President and the Senate. The bill was act of law. Instead of a "strict constructionist" of the Constitution. When he violated the Tenure of Office Act, he was promptly impeached of high crimes and misdeemours. The managers of the impeachment backed one vote of the two-thirds necessary to convict. One by one the censure states returned. The Congressional plan of reconstruction provided for a division of the Southern states into eleven military districts, and the establishment in each of those commands by a major-general. Far earlier there had been established a Bureau of Freedmen, Refugees, and Abandoned Lands. The army and the Freedmen's Bureau assisted in preserving order during the interval up to the spring of 1867, when the last of the Federal troops were withdrawn. The result was the end of the era of Reconstruction. It is impossible even to estimate the destruction of wealth that had resulted from four years of war, or the confusion that succeeded.

**Burden of War.—** In the administration of President Jackson the public debt of the United States was about $17,000,000. By 1861 it had risen to $29,000,000 a year. When the war began it was necessary to adopt a method more productive. Early in the conflict Congress increased the duties on imports; imposed a tax of 3 per cent on all incomes over $800; created an internal revenue; taxed trades, professions, occupations, and even sales and purchases. From such sources there was collected between 1862 and 1863 the
sum of $750,000,000. By reason of its constitutional authority Congress borrowed money "on the credit of the United States" by selling bonds. The extent to which advantage was taken of this grant of power will be apparent from the fact that between 1 July, 1861, and 31 Aug., 1863, there was sold to the people of the United States $1,109,000,000 worth of bonds, to raise money to carry on the war. United States notes, bearing interest, were issued to the amount of $572,000,000. These there also notes bearing no interest. These included the "old demand notes", the "fractional currency", and the "national bank notes". Though the amount of money paid out in the course of the war was immense, there was a public debt of $2,453,000,000 on 31 Aug., 1865. Besides the Federal debt there were state debts of almost $300,000,000, which the states had passed away the National Government was still paying out annually in pensions from $150,000,000 to $160,000,000, at that time about one-third of its entire expenses. At the distance of half a century from the beginning of the great conflict vast sums are still paid out in pensions to the disabled survivors and the dependents of deceased Union soldiers. It has been estimated that 300,000 men lost their lives in the war for the Union. In the cause of succession the loss of life must have been quite as great, and the amount of suffering very much greater, because the South, in the era preceding the war, obtained almost everything in the way of manufactures from the North or from Europe. The outbreak of the war, in 1860, in the South was almost destitute of the skill or the machinery to make the goods which they consumed, and the stringent enforcement of the blockade by the United States ships soon caused embarrassment everywhere in the South. Instead of healing the wounds of war the Congressional plan of reconstruction, which contained vindictive elements, served only to aggravate the social and political conditions prevailing, and was, therefore, supported by patriotic and enlightened men in the North.

New States.—The south-western part of the United States was acquired from Mexico at the close of the Mexican War. California, which was included in that cession and admitted to the Union as a free state by a provision of the Compromise 1850, rapidly developed. The gold fields of California that had existed for some time were soon known throughout the world, and from the countries and the islands of the Pacific there arrived many settlers. From Mexico and from every part of the United States came multitudes. The rush was greatest in 1849, but it continued long after. Indeed, it has been only in comparatively recent times that it has nearly ceased. Even yet some of its rapidly growing cities receive large accessions from the older states. In 1858, ten years after the discovery in California, tidings reached Missouri that gold had been found on the eastern slope of the Rocky Mountains. A mining camp was soon established on Cherry Creek, in what was then the Territory of Kansas. Later it was named Denver, in honor of the pioneer who claimed the site, and it had a population of 1000. In the interior of the mountains some silver-mining camps were in 1864 erected into the State of Nevada. In the space between that state and the Territory of Colorado the Mormons, after having been driven out of Illinois, settled in 1848, when they established the community of Deseret, later known as Utah. Montana and Idaho, as well as Colorado, were made territories, while Arizona was separated from New Mexico. In 1876 Colorado became a state. The camp on Cherry Creek, Denver, is now a populous city.

On 2 Nov., 1889, the Dakotas came into the Union as states; Montana was admitted on 6 Nov., and three days later the Territory of Washington became a state. In 1912 Arizona and New Mexico were admitted as states. The accession of new states suggests the territorial expansion of the original Union. It does not, however, give one a definite idea of the national increase in population, in wealth, and in power since 1870.

End of Reconstruction.—The two administrations of President Grant formed a period of recuperation and reconstruction, but the war was marked by much corruption in the bureaus of the general government. This condition may have been due to his training, which was chiefly military. Perhaps it was this limitation that enabled dishonest men to win his confidence. During the war the Democratic party formed a very small minority in the Congress, but after the war the party was in a second term, was in a position and to take note of the political scandals. Just at that moment this minority party came under the leadership of Samuel J. Tilden, of New York. With great ability as a lawyer and an unquestioned record as a reformer, he was influential enough to persuade his party to accept the Civil War amendments of the Constitution. In the summer of 1876 he was nominated for the presidency. It happened that the time Thomas A. Hendricks, of Indiana, was nominated for the vice-presidency. Two weeks earlier the Republican national nominating convention had named Governor R. B. Hayes, of Ohio, and William A. Wheeler, of New York, as its candidates for the presidency and vice-presidency, respectively. On the 12th of November, two days after the election, the time most of the Republican leaders conceded the election of the Democratic candidates Zachariah Chandler, the campaign manager of the Republican party, did not, however, admit it, but promptly claimed for the nominees of his party 185 electoral votes, and their election by a majority of one vote. On the face of the returns a tie seemed to be the result of the returns a tie seemed to be the result of the returns a tie seemed to be the result of the returns a tie seemed to be the result. Tilden received 164,000, or one less than the majority required by the Constitution. The 185 claimed by the Republican manager could be made up only by including the electoral votes of Florida, South Carolina, and Louisiana. The Republican nominations for these states had it in their power to determine the result of the election by throwing out the votes of any places where, in their judgment, fraud or intimidation had occurred. One of the Republican electors of Oregon was said to have been disqualified under the Constitution, because he was an officer of the United States. The governor gave the same reason for his vote this case to the Democratic ballots. If Tilden could get this disputed vote his election was assured. This disqualification was merely a technical one, for the Republicans had undoubtedly carried that state.

It seems to have been otherwise in the case of the three Southern States. The constitution says that the "certificates of the electors shall be the ballots and the votes shall then be counted", but it does not say who is to do the counting. In 1876 the Senate was Republican and the House was Democratic. Two sets of certificates had been sent to Washington. In November and the months following there was much excitement throughout the country, and some persons thought of acts being taken to suppress any disorder. President Grant strengthed the military forces around the capital. In this action the Democrats perceived an attempt at intimidation. So grave was the situation that Congress decided to submit the dispute points to an Electoral Commission. This was to consist of five United States Senators, five Representatives, and five Justices of the United States Supreme Court. There were three Republican and two
Democratic senators; the House had appointed three Democratic and two Republican representatives. Congress had elected two Republican and two Democratic justices, and they were to choose a fifth. It is perfectly clear that this member could determine the entire question. Mr. Justice Bradley, a Republican, was the person chosen. This made up a commission of eight Republicans and seven Democrats. Every important question of the Union was decided by a strict party vote. By many independent persons it is regarded as an established fact that the Democrats had been counted out in the election of 1876 by "carpet baggers" and the negroes, who were under their guidance. On 2 March the election of Hayes and Wheeler was announced by the president of the Supreme Court. The most extreme disappointment, but Mr. Tilden himself advised obedience to the law.

An early act of the new president, often referred to by orators and newspapers as a fraudulent Executive, was the withdrawal of the Federal troops from the South. The "carpet bag" governments soon came to an end, and also the wild political orges that disfigured the action of Congress. The South was perfectly obedient, and foreign relations were settled. In 1861 Great Britain, Spain, and France each sent an army to Mexico to collect debts due their respective subjects. When it became apparent that Napoleon III had ulterior designs, the American army was withdrawn, and the French troops remained. Seeing that the United States was engaged in war, Napoleon overthrew the Mexican Republic and made Maximilian, a brother of the Emperor of Austria, Emperor of Mexico. The United States protested against this violation of the principles of the Monroe Doctrine, but nothing was done till the war was ended. The General Sheridan was sent to the Rio Grande with 50,000 men. The French army was promptly withdrawn in 1867, and Maximilian fell into the hands of the Mexicans, by whom he was shot. The republic was then restored.

Recent History.—In the election of 1880 the Republican candidates, General James A. Garfield and Chester A. Arthur, were elected president and vice-president. Mr. Garfield had scarcely entered upon the duties of his office when he was shot by Charles J. Guiteau, a disappointed office-seeker. This event took place on 2 July, 1881, but the president lingered on till 19 Sept., 1881, when he died at Elberon, New Jersey, where he had been taken in the hope that he might recover. The forty-sixth Congress had ceased to exist on 4 March, and the forty-seventh would not meet till December. Had President Garfield died or been killed during the interval, there would have been no national executive. It was this condition which suggested the passage in 1886 of the Presidential Succession Act. Thereafter, in case of the occurrence of vacancies in both offices, the heads of departments would succeed to the presidency until a commission had been established, viz., State, Treasury, War, Justice, Post Office, Navy, Interior. No other departments existed at that time. Of course, the secretary succeeding to the presidency must have the qualifications enumerated in the Constitution. In the administration of President Arthur there was passed a law for the suppression of polygamy in Utah, but upon getting to regulate appointments to the Civil Service of the United States. Hitherto most of those appointments had been bestowed as a reward for partisan services. The new law was designed to make appointments to public office on the ground of fitness. Since its passage in 1883 much progress has been made in the matter of making appointments, but the system is still crude.

In the presidential contest of 1884 the Republicans nominated James G. Blaine and John A. Logan as their candidates, while the Democrats selected Grover Cleveland and Thomas A. Hendricks. The nomination of Blaine was the signal for a secession from the Republican ranks. Independents within the party, then known as "Mugwumps," refused to support the ticket, and contributed much toward its defeat. In the first administration of Grover Cleveland there were passed several important laws: an anti-contract labour law (1885), which prohibited the importation of aliens into the United States under contract to perform labour or service; the Interstate Commerce Act (1887), which placed railways under the supervision of a commission. That body has to see that charges for the transportation of merchandise and passengers are reasonable and that no rebates, special rates, or unjust discriminations are made for one shipper in preference to another. A second Chinese Exclusion Act was passed in 1888. This prevented the return to the United States of any Chinese labourer who had once left this country. A Bureau of Labour was created in the same year. Questions of public finance also received the attention of the administration. The public debt had been reduced by $1,100,000,000. Every bond that could be cancelled was called in and paid at its face value. There were other bonds, but they had many years to run. The Government could indeed buy them at a high rate or allow them to run. It did not appear sound policy to buy them at a high rate, but if the bonds held by the Government did not need its present income, for a surplus was rapidly accumulating in the Treasury. This was the condition which led to the proposal to enact a new tariff law. This conclusion was reached toward the close of President Cleveland's administration. When, therefore, the presidential election of 1888 came round, it was the Democrats who desired a tariff for revenue. On the other hand, the Republicans desired to retain the protective tariff. They proposed to reduce the revenue by lowering the taxes on tobacco and on spirits used in manufactures. They would also admit free of duty articles of foreign manufacture, if the United States did not manufacture a similar class of articles. Benjamin Harrison and Morton A. McMillan were elected president and vice-president. When this party was again in control of the government, it began at once to take measures for the redemption of its promises. The McKinley Tariff Act was passed in 1890, and on 27 June in the same year a dependent pension bill. Hitherto the laws granted pensions only to those who had sustained an injury in the service or contracted a disability than the service of the country. The new law allowed a pension to all those who had served ninety days in the army or the navy, and were disabled, whether they contracted that disability in the service or not. The maximum allowance under this law was $12, and the minimum $6 a month. This law increased the names on the pension rolls to 570,000. It was in the administration of President Harrison that the Sherman Silver Purchase Act was passed. It provided that the Secretary of the Treasury should buy each month 1,500,000 ounces of silver; that he should pay for the bullion thus purchased with treasury notes; that on demand of the holder the secretary must redeem these notes in gold or silver; after a fixed date, 1 July, 1891, the silver need not be coined, but might passed into the treasury, and silver certificates issued. The Farmers' Alliance and the People's Party belong to this era. In 1892 Cleveland was once more elected. This time the Democratic party had control of the two political departments of the government, its first complete triumph since 1856. At the time of his inauguration, 4 March, 1883, the business of the country appeared to be in a very prosperous state, but during the succeeding summer and autumn there

</table>
swept over the country a financial and industrial panic which wrecked banks and commercial establishments. Manufacturers shut down everywhere, and over 300 banks suspended or failed. This was due to the compulsory purchase of silver by the Secretary of the Treasury, who was responsible, to some extent, for the alarming conditions, the president convoked Congress in special session, and asked for the repeal of that clause of the Sherman Act which required a monthly purchase of silver. On 1 November, after a considerable struggle, the compulsory clause was repealed. Industry, however, did not revive. In December, 1893, the Democratic Congress met and passed the Wilson Bill, a tariff measure in harmony with Democratic principles. As it was foreseen that the revenue from such a tariff would not produce a revenue sufficient to pay the expenses of the Government, one section of the act provided for a tax of two per cent on all incomes above $4000. This part of the law was afterward declared by the United States Supreme Court to be unconstitutional.

In the matter of foreign relations there occurred during the second administration of President Cleveland a grave controversy between the United States and Great Britain over the boundary between Venezuela and British Guiana. England claimed territory which had hitherto been regarded as belonging to Venezuela, and in this claim the president believed that he perceived a purpose on the part of England to ignore the principles of the Monroe Doctrine. The excitement both in England and the United States was extreme, and some people looked for a war as the outcome. On 2 Feb., 1897, however, a treaty of arbitration was signed at Washington between Venezuela and Great Britain. While the controversy was pending a commission appointed by the president had examined the boundary question and made a report on the subject. President Cleveland inherited from his predecessor the results of a revolution in the Hawaiian Islands, a revolution in which the United States was involved. In January, 1893, Queen Liliuokalani was deposed by her subjects, who then set up a provisional government, and sent commissioners to Washington to prepare a treaty of annexation to the United States. On 15 Feb. this was sent to the Senate for approval. During the progress of these negotiations the president had heard that a force of men from a United States vessel had landed and given assistance to the revolutionists. This consideration led him to recall the treaty from the Senate and also to send to the islands an agent to investigate the entire affair. The report of this commissioner set forth that the queen had been practically deposed by United States officials. The president then sent another representative to the islands. He was instructed to seek for the restoration of the deposed queen on certain conditions, namely, that she would grant full amnesty to all persons concerned in the events by which she had been deposed. To this she demurred, and expressed a purpose to maintain her seat and to confiscate their property. Upon receipt of this reply the president instructed his representative to cease all communication with her until she would agree to grant an amnesty. To this she consented in December, 1893. President Dole was then requested to surrender the government to the queen, but he refused to do so, deposing the Governor of the President of the United States to interfere in the domestic affairs of the islands. Mr. Cleveland, doubting his authority to employ force, referred the entire matter to Congress, where it was investigated by the Senate Committee on Foreign Relations. Construing this action as a purpose to leave the islands to take care of themselves, the revolutionists framed a constitution and organized a republic, 1 July, 1894. The new government was promptly recognized by President Cleveland, and the deposed queen, to whom he had promised a restoration, abandoned the contest for her throne. Though the United States was chiefly responsible for her deposition, succeeding Congresses have ignored her repeated applications for indemnity.

In the presidential election of 1896 the Republican party nominated William McKinley and Garret A. Hobart, and in its platform declared its opposition to "the free coinage of silver except by international agreement." Upon this announcement there took place a secession of twenty-one delegates from the convention. These represented the states which were then governed by silver, namely, Colorado, Idaho, Montana, Nevada, South Dakota, and Utah. The Democratic convention was held in July, and after a very exciting session chose William J. Bryan and Arthur Sewall, and declared for "the free and unlimited coinage of both silver and gold at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation." Following this declaration of the convention, many leaders of
the party refused to give it their support, scores of newspapers withheld their assistance, and finally, in the month of September a convention of "gold Democrats" nominated John M. Palmer and Simon B. Buckner on a platform which declared for a standard gold. In the meantime the silver party had endorsed the Democratic candidates (Bryan and Sewall), and the Republicans in the nominating caucus chose Thomas E. Watson. There were also other tickets in the field, namely: the Prohibitionists, the National Party, the Socialist Labour Party. After a very serious discussion of the issues McKinley was elected. Immediately following his inauguration, 4 March, 1897, he convoked Congress in special session to ratify the treaty, and at the end of the same year the Dingley Tariff became a law.

Cuban Question—War with Spain.—More serious than the tariff question was the situation in the neighbouring Island of Cuba. In February, 1895, for the sixth time in half a century, the natives of Cuba, weary of the misrule of Spain, rose in revolt and founded a republic in the island which lasted for ten years. By 1878 it had collapsed, but broke out in 1895 on a larger scale. General Campos attempted to suppress the rebellion, but was soon superseded by General Weyler, whose methods were drastic. The chief feature of his policy was to bring the non-combatants into the towns, so that they could not give any further support to the insurgents. The men were massed in huts which soon became filthy, and poorly fed, they died in great numbers. Of course, this policy interrupted production and, if continued, would soon depopulate the island. In his annual message, 7 Dec., 1896, President Cleveland noticed the progress of the insurrection, and declared that the United States could not longer maintain the neutrality of the republic definitely. In Cuba upwards of $50,000,000 of American capital were invested in plantations, mines, railways, and other lines of business. A trade amounting to about $100,000,000 was being destroyed. The wretched condition of the reconvenidos excited the sympathy of the American people, and they began to send food and arms to the island. President Cleveland declared that when it became evident that Spain was unable to subdue the rebellion, American obligations to Spain would be superseded by obligations still higher.

When McKinley became president, he demanded the release of American prisoners in Cuba, and requested the Spanish Government to put an end to the lawlessness prevailing in the island. It was costing the United States much money to enforce the neutrality laws. A new administration in Spain led to the recall of General Weyler, and to the promise of local autonomy for Cuba; also to the release of the American prisoners and to an amendment of the state of the reconvenidos. These concessions, however, did not satisfy the insurgents, and they rejected the offer almost unanimously. In his message to Congress, 6 Dec., 1897, President McKinley expressed the opinion that the time for intervention on the part of the United States had not yet come. He believed that Spain should be given a reasonable time in which to prove the efficiency of the new system. The Spanish Government had offered to admit free of duty articles contributed by Americans for the relief of the reconvenidos. In February, 1898, there was published by the Cuban junta in New York a private letter of the Spanish Ambassador to Washington, Señor Dupuy de Lome, in which the diplomat referred to President McKinley as "a pat-house-matador and caterer to the rabble", who was endeavouring to "get up a war against Spain". The Spanish Minister and the Jingo of his party.

An incident more grave than this, which was settled by the resignation of Señor de Lome, was the destruc-

tion of the battleship "Maine" and about 260 of her officers and crew, by a mine in Havana harbour. It was generally believed to have been the work of Spain, and, of course, the Cubans did not attempt to remove that idea. A war between the United States and Spain was what the natives of Cuba were eager to bring about. A course of events was unable, however, to fix the responsibility for the explosion, which has since been shown to have been an external one. Congress voted $50,000,000 for strengthening the national defences and buying ships and material of war. On 19 April, 1898, Congress adopted a resolution declaring for the freedom of Cuba, demanding the withdrawal of Spain from the island, and authorizing the President to use the forces of the United States for that purpose. Diplomatic relations were broken off by Spain on 21 April. A few days later Congress declared war, and 200,000 volunteers were enlisted. On 1 May, 1898, Commodore Dewey destroyed the Spanish fleet and captured the forts in Manila Bay, and took possession of Cavite. A joint land and naval force then invaded the Philippines, under Admiral Cervera, took refuge in the harbour of Santiago de Cuba, where it encountered the American fleet, under Rear-Admirals Sampson and Schley. Cervera lost all his crews and vessels. Besides the loss in killed and wounded, the Spanish admiral and about 1800 of his men were taken prisoners. On 14 July, 1898, Commodore T. C. Schley in a fleet of 25,000 tons, and Rear-Admiral George Dewey landed a force on the Island of Porto Rico just as hostilities came to an end. Before the tidings had reached the Philippines, Dewey's fleet and an army, under General Merritt, had taken Manila and 7000 Spanish prisoners. By the treaty of peace, signed 10 Dec., 1898, at Paris, it was provided that Spain should relinquish all claims to the Philippines, cede them to the United States, and that the United States should pay $20,000,000 to Spain. On 6 Feb., 1899, the treaty was ratified by the United States Senate. It was also accepted by Spain, and the $20,000,000 was promptly paid. Diplomatic relations were soon resumed. During the progress of the war, the people of the United States began to take a different view of territorial expansion. Though the inhabitants of Hawaii had made repeated applications for annexation to the United States, it was only on 7 July, 1898, that the president signed the joint resolution of Congress which provided for annexation. The formal transfer took place on 12 August, 1898. The natives of Hawaii, who had been reduced to servitude by the previous administration of the Apanese Sultan, were restored to a state of partial independence after the success of the Americans. Their failure to receive it led them on 4 Feb., 1899, to attack the United States troops at Manila. A war, disastrous for the natives and their leader Aguinaldo, ensued and continued for more than a year. Peace was finally imposed on all the discontented elements in the islands, and in 1900 a commission was sent thither by the president to organize civil government in such localities as appeared to be ready to receive it. On 1 May, 1900, a system of civil government went into operation in Porto Rico also. Cuba continued under the military control of the United States for many months. In June, 1900, however, the city governments in the island were turned over to the people, and on 5 Dec., a constitutional convention assembled. In the presidential election of 1900, McKinley and Roosevelt, the Republican nominees, defeated Bryan and Stevenson, the Democratic candidates. While holding a reception during the summer of 1901, at the Pan-American Exhibition at Buffalo, N.Y., President McKinley was shot and killed, and died on 14 September. In succeeding to the presidency, Mr. Roosevelt announced his intention of continuing the policy and retaining the cabinet of his predecessor.
MAP OF THE UNITED STATES SHOWING PROVINCES AND DIOCESES OF THE CATHOLIC CHURCH

Seat of Archdiocese ⌂ Seat of Bishopric ⌂

Seat of Vicariate Apostolic ⌂ Seat of Prefecture Apostolic ⌂

Inverted signs ⌂ ⌂ indicate vacated or transferred seats.

The Provinces are in different colors, and the name of the Province is the same as the City at which the seat of Archbishop is located, except for Province of Oregon.

The boundaries of Dioceses are shown in red, and the name of the Diocese is the same as the city at which the seat of Bishop is located, except when otherwise named on map.
The new executive recommended several new laws, but Congress did not pass many at that session. He used his influence during a great strike to bring about a compromise between the coal operators and the mine-workers in the anthracite region of Pennsylvania.

Upon the president's recommendation, a Department of Commerce and Labor was established in December, 1902. Soon afterwards (18 Oct., 1903), a dangerous controversy with Great Britain over the Alaska boundary was settled at London. Another dispute was arbitrated with Mexico. Relations with the United States of Colombia were not favorable. Roosevelt's joint resolution, which was passed an act authorizing the construction of a ship canal across the narrow isthmus connecting North and South America. After expending $250,000,000 in digging a canal between Panama and Colon, a French company was declared bankrupt. In 1889 a new company was organized and was said to have completed two-fifths of this project, and promptly sought to sell its property to the United States for $10,000,000 all its rights and property. In June, 1902, Congress empowered the president to accept this offer and to complete the canal at a cost not to exceed $120,000,000. For the necessary concessions generous terms were offered to Colombia; but, under a policy that maintained the nation's rights, the Government refused to ratify the proposed treaty. This action was the signal for a revolt in Panama, and for the establishment there of a separate state. In November, 1903, the people of that province proclaimed their independence, and set up a republican government. The United States prevented Colombia from suppressing this movement, and promptly assumed the responsibility of the new state. With it a treaty was soon concluded containing the concessions demanded by the United States for the completion of the canal. At this stage Colombia was willing to concede, free of cost, all that the Americans had asked, provided she was allowed to reassess her sovereignty over her lost province. The Colombian people were informed, however, that at that stage this late, the $10,000,000 which had been offered to Colombia was promptly accepted by the new republic; also a perpetual annuity of $250,000, beginning nine years after ratifying the treaty. In return, the United States secured jurisdiction over a zone of territory five miles wide on each side of the canal, and any other advantages it might desire, and maintain the Panama policy of President Roosevelt was denounced by many Democratic senators in Congress, but was nevertheless approved by a vote of 66 to 14. Colombia's efforts to stir up complications in Europe came to naught.

In 1901 Mr. Roosevelt was elected president, with Charles W. Fairbanks as vice-president. The Democratic candidates were Judge Alton B. Parker and Henry G. Davis. During his second term President Roosevelt was thwarted by the Senate in his endeavors to regulate railway rates and to advance the cause of arbitration. A prosperity almost unparalleled marked the beginning of the year 1907; at its close business was greatly depressed. In October a panic swept the money markets, and many receivers. Relief did not come till the beginning of 1908.

The subject of the Federal control of corporations was very fully discussed in the president's message of 3 Dec., 1907. He recommended the enactment of more stringent laws on this subject. On 16 June, 1908, at Chicago, the Republican National Nominating convention elected him to the presidency and vice-presidency William H. Taft and James S. Sherman. Bryan and Kern were the Democratic nominees. In the November elections the Republicans were successful. (See articles on the various states of the Union and the Catholic dioceses. See also America; America, Pre-Columbian Dis-
of any well-ordered society, civil, political, or religious. Many Christians, however, hold that the unity necessary for the true Church of Christ need be nothing more than a certain spiritual internal bond, or, if external, it need be only in a general way, inasmuch as all acknowledge the same God and reverence the same Christ. Thus most Protestants think that the only union necessary for the Church is that which comes from faith, because all profess to regard Christ; in worshipping the same God, obeying the same Lord, and in believing the same fundamental truths which are necessary for salvation. This they regard as a unity of doctrine, organization, and cult. A like spiritual unity is all the Greek schismatics require. So long as they profess a common faith, are governed by a common rule, and share in the eucharist, they regard the various churches, Constantinople, Russian, Anti-

oche etc., as enjoying the union of the one true Church; there is the common head, Christ, and the one Spirit, and that suffices. The Anglicans likewise teach that the one Church of Christ is made up of three branches: the Greek, the Roman, and the Anglican, each having a different legitimate hierarchy but all united by a common spiritual bond.

II. True Notion of Unity.—The Catholic conception of the mark of unity, which must characterize the one Church founded by Christ, is far more exacting. Not only must the true Church be one by an internal and spiritual union, but this union must also be external, consisting of the same members participating in the same faith, the same unity of faith, worship, and government. Hence the Church which has Christ for its founder is not to be characterized by any merely accidental or internal spiritual union, but, over and above this, it must unite its members in unity of doctrine, expressed by external, public profession; in unity of worship, manifested by the same confession of the same faith and in unity of government, by which all its members are subject to and obey the same authority, which was instituted by Christ Himself. In regard to faith or doctrine it may be here objected that in none of the Christian sects is there strict unity, since all of the members are not at all times aware of the same truths to be believed. Some have at some point held certain truths of which the knower of the non-knower is conscious. Hence it is important to note the distinction between the habit and the object of faith. The habit, or the subjective disposition of the believer, though specifically the same in all, differs numerically according to individuals, but the objective truth to which assent is given is one and the same for all. There may be as many habits of faith as there are human beings, but there are only different individuals possessing the habit, but it is not possible that there can be a diversity in the objective truths of faith. The unity of faith is manifested by all the faithful professing their adhesion to one and the same object of faith. All admit that God, the Supreme Truth, is the primary author of their faith, and that the Church has obtained the habit of this same external authority to whom God has given the power to make known whatever has been revealed, their faith, even in truths explicitly unknown, is implicitly external. All are prepared to believe whatever God has revealed and the Church teaches. Similarly, accidental differences in ceremonial forms do not in the least interfere with essential unity of worship, but may be regarded merely as superficial diversions in the celebration of the same sacrifice and in the reception of the same sacraments. All are expressive of the one doctrine and subject to the same authority. III. The True Church of Christ Is One.—That the Church which Christ instituted for man's salvation must be one in the strict sense of the term just explained, is already evident from its very nature and purpose; truth is one, Christ revealed the truth and gave it to His Church, and men are to be saved by knowing and following the truth. But the essential unity of the true Christian Church is also explicitly and repeatedly declared throughout the New Testament. Speaking of His Church, the Saviour called it a kingdom, the kingdom of heaven, the kingdom of God (Matt., xii, 21; 31, 33; Luke, xii, 15; John, xv, 36); He compared it to a city the keys of which were entrusted to the Apostles (Matt., v, 14; John, 10-16); He has told us that His Church is one and it must be united under one shepherd (John, xv, 7-17); to a vine and its branches, to a house built upon a rock against which not even the powers of hell should ever prevail (Matt., xvi, 18). Moreover, the Saviour, just before He suffered, prayed for His disciples, for those who were afterwards to believe in Him—for His Church, as also for all His great works and promises, and He asked that there might be one and only one Church; and the Father is one (John, xvii, 20-23); and He had already warned them that “every kingdom divided against itself shall be made desolate: and every city or house divided against itself shall not stand” (Matt., xvi, 23). These words of Christ are expressive of the closest unity.

So Paul like wise insists on the unity of the Church. Schism and disunion he brands as crimes to be classed with murder and debauchery, and declares that those guilty of “disseasions” and “sects” shall not obtain the kingdom of God (Gal., v, 20, 21). Hearing of the schisms among the Corinthians, he asked impatiently: “Is Christ divided? Was Paul then crucified for you? or were you baptized in the name of Paul?” (I Cor., i, 13). To show the intimate union of the members of the Church with the one God, he asks: “Who shall assent to the communion of the blood of Christ? And the bread, which we break, is it not the partaking of the body of the Lord? For we, being many, are one bread, one body, all that partake of one bread” (I Cor., x, 16, 17). Again in his Epistle to the Ephesians he teaches the same doctrine, and exhorts them: “Be careful to keep the unity of the Spirit in the bond of peace,” and again: “there is but ‘one body and one spirit— one Lord, one faith, one baptism, one God and Father of all’” (Eph., iv, 3-6). Already, in one of his very first Epistles, he had warned the faithful of Galatia that if anybody, even an angel from heaven, should preach unto them any other Gospel than that which he had preached, they were to have no dealings with such. Religious dissensions as these coming from the great Apostle are clear evidence of the essential unity which must be characteristic of the true Christian Church. The other Apostles also persistently proclaimed this essential and necessary unity of Christ's Church (cf. I John, iv, 1-7; Apoc., ii, 2, 15, 20-29; II Peter, ii, 1; I Peter, ii, 13; Acts, xvi, 19); and then that there arise now and then in the early Church, they were speedily put down and the disturbers rejected, so that even from the beginning the Christians could boast that they were of “one heart and one soul” (Acts, iv, 32; cf. Acts, xi, 22, xiii, 1). Tradition is unanimous to the same effect. Whenever heresy threatened to invade the Church, the Fathers rose up against it as an essential evil. The unity of the Church was more nearly all the exhortations of St. Ignatius of Antioch (“Ad Ephes.”, n. 5, 16-17; “Ad Philadelph.”, n. 3). St. Irenaeus went even further, and taught that the test of the one true Church, in which alone was salvation, was its union with Rome (Adv. heres., i, iii). Tertullian likewise compared the Church to an ark outside of which there is no salvation, and he maintained that only he who embraced every doctrine handed down
by the Apostolic Churches, especially by that of Rome, belonged to the true Church (De praef., xxii). The same contention was upheld by Clement of Alexandria, Irenaeus, and Tertullian. The visible Church none could be saved (cf. Schaff, "Hist. of Christian Church," 169-70). St. Cyprian in his treatise on the unity of the Church says: "God is one, and Christ one, and one the Church of Christ" (De eccle. unit., xxiii); and again in his epistles he insists that there is but "One Church founded upon Peter" (Epist. 40, v). Many more testimonies of unity might be adduced from Saints Jerome, Augustine, Chrysostom, and the other Fathers, but their teachings are only too well known. The long list of councils, the history and treatment of heresies and heresy in every century show beyond doubt that unity of doctrine, of end, of authority, has always been regarded as an essential and visible mark of the true Christian Church. As shown above, it was the intention of Christ that His Church should be one, and that, not in any accidental internal way, but essentially and visibly. Unity is the fundamental mark of the Church, for without it the other marks of the Church, viz., noticeable, without which the Church itself could not exist. Unity is the source of strength and organization, as discord and schism are of weakness and confusion. Given one supernatural authority which all respect, a common doctrine which all profess, one form of worship subject to the same authority and expressive of the same teaching, centred in one place, we find that the Church of the same sacraments, and the other marks of the Church necessarily follow and are easily understood.

That the mark of unity which is distinctive of and essential to the true Church of Christ is to be found in none other than the Roman Catholic Church, follows naturally from what has been said. All the theories of the sects and divisions from the time of the primitive Church, deviate from the perfect harmony with the true and proper concept of unity as defined above and as taught by Christ, the Apostles, and all orthodox Tradition. In no other Christian body is there a oneness of faith, of worship, and of discipline. Between no two of the hundreds of non-Catholic sects is there a common bond of union; each one having a different doctrine of God and man. Nor may, even between the members of any one sect there is no such thing as real unity, for their first and foremost principle is that each one is free to believe and do as he wishes. They are constantly breaking up into new sects and subdivisions of sects, showing that they have within themselves the seeds of disunion and disintegration. Divisions and schisms have ever been the characteristics of Protestantism. This is certainly a literal fulfillment of the words of Christ: "Every plant which my heavenly Father hath not planted shall be rooted up" (Matt., xv, 13); and "every kingdom divided against itself shall be made desolate: and every city or house divided against itself shall not stand" (Matt., x, 13).

CHAS. J. CALLAN.

Universalists, a Liberal Protestant sect whose distinctive tenet is the belief in the final salvation of all souls, and which is chiefly to be found in North America. The doctrine of universal salvation has always been popular among members of various Christian Churches (see Apocatastasis for its treatment anterior to the foundation of the Universalist Church). The present article will exclusively consider Universalism as a separate denomination.

I. Doctrinal Principles. The historic creed of this religious body is the profession of belief adopted by the General Convention at Winchester, New Hampshire, in 1803. It contains the following articles:

(1) We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God and of the duty, interest, and final destiny of mankind.

(2) We believe that there is one God whose nature is Love, revealed in one Lord, Jesus Christ, by one Holy Spirit of grace, who will finally restore the whole family of mankind to holiness and happiness.

(3) We believe that holiness and true happiness are inseparably connected, and that it behooves ought to be careful to maintain order and practice good works; for these things are good and profitable unto men.

To meet the objections raised by some Universalists to parts of the foregoing articles, a brief statement of essential principles was adopted in 1869 by the General Convention held at New York, and requires for admission to full fellowship in belief the following articles: (1) the universal fatherhood of God; (2) the spiritual authority and leadership of His Son Jesus Christ; (3) the trustworthiness of the Bible as containing a revelation from God; (4) the certainty of just retribution for sin; (5) the final harmony of all souls with God. To the admission of these principles many of the Universalists, "by the acknowledgment of the authority of the General Convention and assent to its laws", the Trinity is usually rejected by present-day Universalists. The reception of the sacraments is not enjoined; but baptism and the Lord's Supper are administered; the former according to the mode preferred by the candidate. The institution of sacraments is maintained, but that they are not only "frequently enjoined" but "necessary to salvation." A usage of distinctly Universalist origin is the observance of "Children's Sunday." A special day (now the second Sunday in June) is set apart for the baptism of children and their dedication to God's service. This observance has been taken over by the Protestant churches in the United States, and in Canada. The date of its observance, which is the recent date of the General Convention's congregations administered their own affairs independently, and the General Convention enjoyed merely advisory powers. The functions of this body were enlarged in 1866 and further extended in 1870, so that it is at present the highest legislative authority for the United States and Canada. It meets biennially, and when not in session most of its powers are exercised by a board of trustees. It is composed of clerical and lay delegates from the subordinate state conventions. The latter meet annually, and are made up of delegations from the various parishes of the same state.

II. History; Missionary, Social, Educational Activities; Statistics. The first Universalist congregation was organized in New Hampshire in 1801, and was led by Elhanan逃, who ministered to its spiritual needs until his death (1778). In spite of this early establishment few Universalist Churches exist at present in Europe; but Universalism is undoubtedly believed in outside of the denomination. The stronghold of the sect is in America, where the first church was established by Rev. John Murray, about 1765, at Newton, New Jersey. In September, 1770, preached the doctrine of Universalism along the Atlantic seaboard, and in 1779 formed with fifteen the First American congregation of that faith at Gloucester, Massachusetts. Other preachers of the same doctrine arose about this time: Elijah Winchester, a former Baptist minister, taught Universalism at Philadelphia, and Adams Streeter and Caleb Rich spread it in New England.
More marked in its success and wider in the range of its influence was the propaganda of the Rev. Hosea Ballou (1771-1852), whose Unitarian views triumphed in the denomination over the Sabellian conception of the Trinity taught by Murray. His teaching of universal salvation immediately after death, however, did not meet with unanimous approval, and caused the resignation of the minister of the church inPortland, who, under the name of Restorationists, founded a separate sect. But the existence of this new creation was short-lived (1831-41), while the parent body spread during Ballou’s lifetime not only in the United States but also to Canada. Its progress was retarded by the Civil War, but the propaganda subsequently carried on by Ballou’s successor, under the influence of the established churches and the state conventions, was crowned with some success, and the denomination is now represented in almost every state of the Union. The statistics for 1910, however, indicate a decrease of 9 churches and 2686 communicants. Foreign missionary work has recently been inaugurated, and is carried on mainly in Japan, where the first station was founded in 1880. The church maintains charitable institutions in New York, Philadelphia, Minneapolis, and Boston. It supports a publishing house in the latter city, with a branch in Chicago. It controls the following educational institutions: Tufts College (founded in 1852); Medford, Mass.; Lombard College (1852); Galesburg, Illinois; Lawrence University (1846); Appleton, Wisconsin; Case School of Applied Science (1856); Canton, New York; Buehler College (1872), Akron, Ohio. A school of divinity is connected with the first three institutions named. Academies are maintained at Franklin, Massachusetts (Dean Academy); Barre, Vermont (Godard Seminary); and Portland, Maine (Westbrook Seminary). Statistics for the United States in 1903, and, on the whole, the church has made great progress in the field assigned to it in the “Christian Advocate,” New York, 25 Jan., 1910: 799 minsters, 886 churches; 52,150 communicants.

Church Hist. Series, V, 231-348; New York, 1904; Adams, Fifty Noble Years (Boston, 1882); Thomas, A Century of Universalism (Boston, 1872); the biographies of Ballou by Whitmore (Boston, 1855-56.), and Sanford (Boston, 1889); of Murray by his wife (Boston, 1899); and Adams, Hosea Bal- loul and the Gospel Renaissance (Boston, 1930).

N. A. Weber.

Universals.—I. MEANING OF THE TERM.—The name refers to the one hand to the inclination towards uniformity (universus) existing in different things, in so far as they are considered as identical by a single idea applicable to all in the same way; and on the other hand to that one idea which is applicable to the different things (unum versus alia).

11. DEFINITION.—Universals are those ideas which, while excluding whatever constitutes the difference of things of the same genus or species, represent that which is common to all these things; and, as such, is common to all, and is therefore common to all, remaining fixed in all instances (universalia in rem, in re). Universals are thus merely an expression of those Divine ideas which are concerned with the universal (universalia in rem). Universal ideas are opposed to sense impressions, which represent that which is merely individual and accidental, and consequently that which changes with circumstances in corporeal things of the same kind. These sense impressions correspond to those Divine ideas which are concerned with the corporeal individual.

111. SUBDIVISION.—In so far as the nature of a thing is the object of a direct act of perception, it contains no relation to individuals, but is recognized in itself or individual, as existing essentially in itself, which, however, the intellect has represented to itself as the essential form of a thing (whether this be a substance or an accident), it can by reflexion make this representa-

182
In the Universe, systems of the—Universe (or world) has taken in the astronomical sense, in its narrowest meanings, from our terrestrial planet to the stellar universe. The term "systems" restricts the view to the general structure and motions of the heavenly bodies, but compre−
hends all the ages of the world, the present, past, and future.

1. Historic Times of the Universe.—The present system, in the widest sense of the term, forms the subject of universal cosmography. Descriptions of this kind were made by Lambert, the two Herschels, Laplace, Newcomb, and others. The present section is based on a general view of the phenomena supposed. It follows: According to the origin in a direct act of perception or in reflexion, universals are divided into direct and reflex universals. The direct universal, having as it does, the question of the reality of the perceived being in nature, is metaphysical. In it lies only the possibility of being applied to many things, thus forming only the universal divided in it. Consequently, it is also known as the "material universal." The reflex universal includes the relation to individuals, and is thus known as the "universe logium," or also as the "formal universal," since it is recognized as universal. The univer−
sale directum is divided into the categories, since these represent the various modes of existence in the actual. Recognized by reflection as the highest species, these categories are included under the universale logium, which is divided into five predicables: genus, species, specific difference, proprium, and logical accident.

IV. Importance of the Problem of the Universes.—Science in general, inasmuch as it is the knowledge of the necessary and permanent drawn from the phenomena of time and space, that of the recognition of the universals. Without such recognition, it is degraded into the description of successive individual impressions. The war between the pure Darwinists and the physiologists, who recognize natural species which, in consequence of their mode of development and the influence of conditions, can never be repeated, is still more separated from the period of the Scholastic controversy concerning universals. In physics and chemistry the constancy of the laws of nature depends on the constancy of the nature of things. In psychology the existence of universals has led to the recognition of the intellect as a faculty fundamentally distinct from the senses. That metaphysics and logic would be impossible were it not for the possibility of universal laws of nature. These periods of decay in the period of decay had been considered by the “material universal." The universe thus far resembled the Tycho Brahe. Even the annual motion of the earth around the sun is mentioned by Heracleides as held by some of his contemporaries. The heliocentric system was certainly pronounced and defended by Aristotle

The philosophical schools, in particular the Stakes, began to prefer astrology to observational astronomy. The apparent or relative motion remains unaffected by an interchange of its component motions, as was correctly demonstrated by Apollonius, paved the way to the confusion of the solar system. It must be remembered that the apparent planetary motions are epi−
cyclical, each planet revolving in its own orbit, the epicycle, around the sun, and with the sun, as centre of the epicycle, apparently around the earth in a common orbit, which is called the deferent orbit. These are the correct ideas, and will ever form the basis of spherical astronomy.

The decadence of astronomical concepts among the Greek philosophers appeared in two ways. First, they supposed the geometrical fiction of Apollonius to the physical planetary system, supposing that the epicycle must always be the smaller of the two components in apparent motion; and, secondly, they believed that a physical planet could revolve, all alone, around a fictitious point in space. For the outer planets, Mars, Jupiter, and Saturn, the apparent orbit of the sun is the smaller component—the "common deferent orbit." It cannot be made the epicycle, without introducing into the system three new circles each with a fictitious centre. This was done, but worse was to come for the inner planets, Venus and Mercury. There was no need for them to dislodge the common deferent circle, or solar orbit, as it was larger than the two planetary epicycles. And yet the centre of the deferent was moved from the sun towards the earth.
at the cost of introducing into the system two new circles and two ideal centres of motion. The precession of the equinoxes, discovered by Hipparchus, even lent support to the concept of fictitious pivots. It seemed to swing the pole of the ecliptic around the pole of the celestial sphere. In this shape the Greek system of the heavenly bodies came down to posterity, during the second century of our era, through Ptolemy. The three fundamental propositions of the geocentric system, viz. that the earth has no axial rotation and no translation in space, form the sixth chapter of the first book. The "Syntax" did not pass directly from the Alexandrian school to Europe. Greek astronomy made its round through Syria, Persia, and Tatary, under Alhazenus, Ibn Yunos, Flugh-leg. The Ptolemaic system was accepted at Athens as the standard astronomical system, and was made known in Europe through their translations. An unintelligible Latin "Aenigma" had taken the place of the Greek "Syntax", and rested like a tomb-stone on European astronomy.

(2) New astronomical life awoke in the fifteenth century in Germany. Nicholas of Cusa rejected the axioms of Ptolemy; Peurbach and Müller restored the text of Ptolemy's "Syntax"; and Copernicus made it his life-work to disentangle the cycles and epicycles of the Greek system. The task of Copernicus was harder than that of his predecessor Aristarchus, on account of the unanimous acceptance of the geocentric system for more than a thousand years. The first book of Copernicus's "grand work", "De Revolutionibus", was directed against the Ptolemaic axioms on the centre of the universe and the stability of the earth. He rightly observes that the universe has no geometrical centre. He then gives clear definitions of relative and apparent motion and applies the Apollonian principle of interchanging the component motions in the opposite sense of Ptolemy, viz. that the apparent motions of the sun and planets are due to the triple motion of the earth, one around its axis, another around the sun, and a third, a conical motion, around the axis of the ecliptic, in periods of respectively one day, one year, and 25,816 years. Ptolemy's negative arguments against a moving earth were answered in a masterly manner. It had been objected that a dis-advantageous centrifugal force would be created on the surface of the earth. Copernicus retorts that a greater centrifugal force must be admitted in the outer planets and the fixed stars if they revolved around the earth. The resistance of the atmosphere, which, it was urged, would sweep away every object from a moving earth, was disposed of by Copernicus, exactly as it is to-day: each planet condenses and carries it about with it; hence the atmosphere is supported about necessary changes in the appearance of the constellations, or, in modern language, about large parallaxes of the stars, when viewed from opposite points of the earth's orbit. Copernicus correctly thought the stars so far away as to make the terrestrial orbit comparatively too small to show any effect in the instrument. The only arguments of Ptolemy being dispersed, there remained only one positive argument, in favour of Copernicus.

(3) The simplicity of the heliocentric system had sufficient weight to convince a genius like Copernicus. He never called his system an hypothesis. The first who exercised censorship on the work "De revolutionibus" was the Reformer, Osiander. Dreading the opposition of the Wittenberg school he put the word "Hypothesis" on the title-page and substituted for the phrase of Copernicus one of his own—all without authorization. It was more than half a century later that the Congregation of the Index pointed out nine sentences that had either to be omitted or expressed hypothetically before the book might be read freely by all. The argument of simplicity was greatly strengthened by Kepler, when he discovered the ellipticity of planetary orbits. Copernicus had found, by long years' observation, that the inequalities of planetary motion could not be accounted for by the Ptolemaic fashion, by simply placing the circular orbits eccentrically. Not being prepared to abandon the circle, he resorted to small epicycles. Their final removal greatly enhanced the simplicity of the Copernican system. Then came the discoveries of the aberration of light and of stellar parallaxes. While they are used as names for the deviation in the motion of the earth, they threw on the Ptolemaic system the condemnation of an almost infinite complexity. The fixed stars were recognized to vibrate in double epicycles, their major axes parallel to the ecliptic, in periods of exactly one year. The double epicycles are the images of the terrestrial orbit, projected out of the earth. A more profound examination of the placement of the stars and by the finite velocity of light. The former kind is much the smaller of the two, and in most cases dwindles to immeasurable dimensions. Some twelve hundred of them have actually been observed. The aberration-epicycles have their apparent major axes all of equal length. The geometric system is the only one which can explain these phenomena, but cannot even resolve itself without two epicycles for each star in the firmament. The Copernican argument of simplicity thereby received an overwhelming corroboration.

B. Direct Proofs of the Copernican System.—While the argument of greater simplicity is only an indirect decision of the problem, the two opposing systems, mechanisms has furnished means by which Copernicus actually had them in mind when he maintained that centrifugal force in a daily rotating celestial sphere would have to be enormous, that the atmosphere is condensed around the terrestrial globe, and that single planets cannot revolve around fictitious points that have no physical meaning. Kepler was too much occupied by his favourite idea of cosmical harmonies (Harmonices mundi) to recognize in the common focus of his elliptical orbits a governing power. It was reserved for Newton and Laplace to formulate the mechanical laws of celestial motion.

(1) The annual revolution of the earth around the sun is a necessary consequence of celestial mechanics.

(a) Knowing the mass of the sun and its centripetal force, Newton computed, from the velocity and distance of our satellite, the amount of attraction that the earth must exercise upon it to maintain its orbital revolution. Learning then, from French geometers, the exact dimensions of the earth, he found the force that keeps the moon in her orbit to be identical with terrestrial gravity, directly in proportion to the distance from the centre. The discovery led to the computation of the masses of sun and planets, inclusive of the earth, the latter turning out more than three hundred thousand times lighter than the sun. The mechanical conclusion is that the lighter body revolves around the heavier, and not the reverse; or, in more simplified language, both revolve around the common centre of gravity, which, in this case, lies inside the solar sphere.

(b) Our satellite furnishes another more direct proof of the annual revolution of the earth. Carl Braun shows in the "Wochenschrift für Astronomie", X (1867), 193, that the moon is attracted nearly three times more forcibly by the sun than by the earth. Our satellite would, therefore, leave us unless we are revolving with it around the sun. The earth is only able to give the annual lunar orbit a serpentine shape, so as to have the satellite alternately outside and inside her own orbit.

(c) Newton also adduces to comets and shows that, in the Ptolemaic system, each of them needs an epicycle parallel to the ecliptic, to turn its orbit towards the sun. With our present cometary knowl-
edge of comets the argument can be made stringent. More than three hundred comets have their orbits well determined. Over two hundred of them have passed inside and outside Halley’s comet at its last appearance, almost in line between sun and earth. Most of the comets, including Halley’s, come to us from distances beyond the orbit of Neptune. Now, computation shows that they all have their common focus in the sun and that the earth is, as a rule, outside their orbits. In the case of Halley’s comet the earth was, at one time, even nearer the focus, the orbit of the comet being eccentric. The mechanical conclusion is as follows: If, without any regard to the earth, the comets obey the sun, the earth must do the same.

(2) The daily rotation of the earth around its axis is demonstrated in many ways. Once the annual revolution is proved, the daily rotation becomes a matter of course. It is observed as a consequence of the apparent motion of the sun when its annual rotation is out of the plane of the earth’s orbit. But if this motion is due to the earth’s rotation, according to Copernicus, there must be an opposite one, due to the earth’s revolution, which must be equal and opposite to the former, in order to keep the sun in a fixed position. If the daily rotation is proved, then the annual one follows likewise, for the same reason. The equality of the two is the consequence of the earth’s spherical form. Thus the motion of the sun is a consequence of the motion of the earth.

(c) The fifth and last period of experiments falls within the twentieth century and presents no less than four proofs, all widely different among themselves. The first was made by Giliberti (1878), who constructed a gyroscope, and a compound pendulum, both of which were made to move in a vertical plane. The gyroscope, while the horizontal gyroscope was lated introduced on warships as an astronomical compass. The proof of Foucault and Giliberti could only be qualitative, for want of electric motors. The delicate experiment made in 1879 with the compound pendulum by Kamerlingh Onnes, comprises those of Foucault and Bravais as special cases, and extends all the movements between the plane and the circular pendulum vibrations (see “Spectra Vaticana”, 1, 1911, Appendix 1).
of 160 pounds a speed of over two thousand turns a minute. The rotation of the earth was strong enough to deviate the horizontal axis, which was suspended on a triple wire, six and a half degrees from the prime vertical. A novel scheme had been tried by Perrot in 1859. He made a liquid flow through the central orifice of a circular vessel, and rendered the currents visible by means of floating dust. We have to take his word, that the currents were spiral-shaped, and ran round the vessel backwise. The experiment was repeated by Tumilcz in Vienna (1908), and its result photographed and compared with theory. While the experiments of Hall, Föppl, and Tumilcz are repetitions of former ones, with improved methods, the next proof of the diurnal rotation is new as an experiment, although forecast in the idea by Poinset as early as 1852. The results of the observational and experimental work was published in 1909. Its principle is that of equal areas described in equal times, applied to a horizontal beam suspended in form of a torsion balance, on which heavy masses can be moved. The shifting of the masses from extremity to centre will make the beam turn faster than the earth; the opposite will happen in the reverse case. The last proof had never been proposed before. It was named after the great English engineer, the Atwood machine in a telescope. Viewed in the meridian, the thread of the falling weight is seen to come down east of the plumb-line, but viewed in the prime vertical it remains exactly plumb. This experiment was likewise carried out at the Vatican Observatory in 1912 (see "Specola Vaticana", i, 1911, appendix ii).

Some writers have expressed surprise that Catholic scientists were allowed to take part in the experiments, e.g. that Bonfili, domestic prelate to Pius VI, assisted Guglielmini in measuring the impressions of the balls on the plate of wax (Benzenberg, "Umdrung der Erde", 1894, 278), or that Secchi demonstrated the rotation of the earth (Bollettino dell'Osservatorio Astronomico, Palermo, 1908). It is on the one hand incredible that the government should have assisted the experiments, and on the other hand, that the experimenter should have been the Pope's chamberlain. We must remember, however, that what was condemned in a former age was not the experiment but a then gratuitous assertion.

II. Past and Future of the World.—The present system of the world has been found, by the greatest scientists, to be in an unstable condition. As it is, it cannot go on for all the ages of mankind, or even last for many more. Naturally, therefore, speculations have arisen, both retrospective and prospective; but speculations they will remain. How the world has developed into its present shape, and how it will pass out of it, science will never tell. Cosmogony is the accepted name for all the hypotheses on the past (from κοισμός, world, and γωνία, angle, to originate). A corresponding form from the Greek, to designate the speculations on the future of the world, cosmodynamy (world's death), was used by C. Braun (Kosmogeneie, 1805, X, 316); more correct formations are perhaps: cosmaphathy (κόσμος, corruption) or cosmodyxey (κόσμος, species, decline). World must here be taken in all its narrower or wider meanings, as earth or heaven.

A. Cosmogony.—The writer of the article Cosmogony has well distinguished between mythical, Biblical, and scientific cosmogonies. While confining himself to the first kind, he left the second for the writer of Hexameron, and the third for the present article. The term "scientific" is used only for the sake of distinction. No cosmogony can really claim to be a scientific theory or even hypothesis, in the proper sense of a systematic development of the details from a definite number of assumed principles, after the manner of the long-accepted atomic theory, for example. All cosmogonies, so far imagined, have shared in the common fate of being refuted as insufficient or even impossible. Proposition and rejection are alike vague and uncertain, and must be so, as processes of extrapolation from laboratory laws to the fabric of the Creator. Cosmogonies may be classified according to the component parts of the word, considering either the various kinds of cosmos, or the variety of origins. The former classification will bring to light the necessity of some great cosmogony, while the latter will prove to be a mere enumeration of possibilities, real or imaginary.

1) The classification of cosmogonies by works may begin with the microcosm of our terrestrial abode and end with the macrocosm of the universe.

(a) The structure of the earth points to a history, the chronological successions of which can be recognized, although the span of duration is unknown. The superficial layer, allotted to the human race, represents the "Quaternary age." Underlying in the earth, there are another, the Pleistocene, the more known as the recent formation, the cretaceous and jurassic formation, and finally the carboniferous and silurian. Parallel to the latter three ages, the tertiary, secondary, and primary, run the prehistoric ages of the biological kingdom, known as the Cenozoic, the mesozoic, and the paleozoic. The mere aspect of the successive layers justifies their names and calls for terrestrial cosmogony.

(b) No less explicit are the celestial indications of a planetary cosmogony. The five kinds of uniformity in the orbital motions of planets, satellites, and comets, adduced by Laplace, are not representative of modern cosmogony. Laplace knew of only seven planets and eighteen satellites, while we can easily envision a hundred minor planets and twenty-six satellites. Besides smaller exceptions to Laplace's "uniformities," the singular situation of our own planet must be accentuated. The earth has only one moon, comparable to itself in size, while the inner planets are moonless, and the outer planets are accompanied by more numerous and more minute satellites. The classification of Laplace's "uniformities" will prove to be a mistake.

The asteroidal and Saturnian rings render the difference between inner and outer planets still more conspicuous. The rapid discovery of puny satellites by photography has brought to light the asteroidal character of the bodies and suggests the conclusion, that the great planets are accompanied by zones of puny moons, in direct and retrograde motion, in the same way as the terrestrial system is comparable to a puny moonlets, in direct and retrograde motion, to the Terrestrial system.

(c) Terrestrial and planetary cosmogonies will not satisfy those who look up to systems of higher order, as they are called in Lambert's "Kosmologische Briefe" (1761). The solar system is a mere fragment of creation. Its fundamental plane, or ecliptic, is replaced in the stellar system by the galaxy, and its planetary revolutions have their equivalent in the proper motions of the stars, including our own sun, which is rising to higher and higher revolution in the Milky Way. Even the difference between slow and swift planets is reflected in the white Helium-stars (6,5 kilometres per second) and the strongly coloured stars (19,3 kilometres). The Jovian and Saturnian systems, with their client globes and rings, have their counterparts in the solar clusters of the Pleiades and Hyades, drifting each of them along the galactic plane, as Saturn's ring and the earth's ring. The ecliptic character of the Milky Way is further evidenced by the grouping of the Algol stars and the moon along its belt, representing stellar eclipses and collisions. The general condensation of the stars towards the galactic circle, and its lining by the brightest constellations in the heavens, has conveyed the idea of a flattened stellar cumulus, more likely its shape is that of a
bipolar-spiral, judging from its branches and from two principal star-drifts in opposite directions. The vast system calls for an explanation of its origin: a stellar cosmogony. Here again, as in planetary cosmogonies, our terrestrial horizons are no help in singularity. Science urges the conclusion that one half of the stars, if not most of them, broke up into components as they condensed, a manner of evolution which would incapacitate them from becoming centres of planetary systems. Stellar cosmogony must leave the question open, whether the mechanism of our own system was the outcome of a special and peculiar design, fitting it to be the abode of life.

(d) Yet even the stellar agglomeration of the Milky Way is a tiny spot in the abyssal cosmos. From near its centre, where we find ourselves at present, the heavens appear studded with similar groupings of masses, partly gaseous, partly condensed into fluid streams of gas, and finally solid matter. More than thirteen thousand of these objects have been catalogued, and hundreds of thousands are suspected. Classifying them into diffused, spiral, and planetary nebulae, Herschel considered them as so many simultaneous exponents of gradual cosmic evolution, thus showing his belief in the possibility of a general cosmic system, which has since been strengthened by a wider knowledge of the universe. Photography shows the heavens almost covered with nebulous matter, spectrum analysis reveals the general identity of cosmic elements, and has moreover disclosed the fact that planetary nebulae move at great speed with reference to the stellar system, while the diffused Orion nebula appears to move toward us. Cosmogony is apparent. Attempts in that direction have not been wanting, as we shall presently see.

(2) The classification of cosmogonies by the origin which they ascribe to the world, may appropriately rest on certain celestial objects, from which they took departure. The nebula class is the largest, and has been believed to be coherent masses, whether gaseous or fluid or solid; then the same rings as recognized by Bond (1851) to be a swarm of minute satellites, and finally the spiral nebulae. The differences in the inspiring types led to corresponding differences in the predominant ideas of cosmogonists. Coherent rings in general were believed to be the result of a vast nebula, and hence rings suggested theoreticians, and spiral nebulae prompted ballistic speculations. Hydrodynamic cosmogonies confined themselves to the solar system; meteoric cosmogonies made faint attempts towards the stellar system, and only ballistic cosmogonies have dared to speculate on the univided cosmos.

(a) The first among them is the "solar hypothesis" imagined by Kant (1755), partly in contradiction with mechanical principles. The application of the hydrodynamic laws was reserved to Laplace (1789). His mechanism is too simple, however, for the complex problem. Objections were raised by Babinet (1801), Kirkwood (1819), Moulton (1860), and others. Roche (Montpellier, 1849) showed that from the vegetation of the planet within which a liquid satellite could not revolve intact, Saturn's rings lying inside the limits, thus failed to accomplish what Kant and Laplace had expected. The field of cosmogonic possibilities was widened by Darwin and Poincaré (1875–1883), when they introduced planetary tides, pear-shaped hydrodynamic figures and satellite fission; and by C. Horsfall (1887–1895), when he pointed to plurality of condensation centres, to eccentric collisions, and to the resultant effect between resisting medium and hydrostatic pressure. The applicability of Darwin's speculation to our lunar-terrestrial system, and to binary systems in general, has been questioned by Moulton.

(b) The bases of meteoric cosmogonies are the asteroidal composition of Saturn's rings and the affinity between meteorites and comets, discovered by Schiaparelli. Meteors were no longer the debris of ruined worlds, they became the embryos. Nebulae, stars, comets, zodiacal light, solar corona, all of it, came from meteoric clouds. Life was brought into the chaos of cosmic dust, cold and dark as it was from the first, by a diversity of motions, after the fashion of Descartes's verticles, resulting in collisions, evaporations, condensations, and consequent production of heat. Suns were forming, Newton's gravitational force acting in the system, in the manner imagined by Laplace. Meteoric cosmogonies thus distinguished two periods: the Cartesian and the Newtonian. The quiet machinery of Laplace's annihilation is preceded by a primeval whirlpool period. Representatives of meteoric cosmogony are Faye (1881), Lockyer (1887), and Lindesey (1887), while Kirkwood, Wolf, and Braun oppose it. Darwin tried to support it by applying the kinetic theory of gases to cosmic matter in meteoric condition, treating its particles as molecules on an enormously magnified scale. Belot (1911) has recently imagined a Cartesian whirlpool of cylindrical form, shooting like a torpedo into an amorphous mass, in the manner of a solar apex. The effects of the impact on the cylinder are longitudinal vibrations with nodes, the embryos of the future planets.

(c) Ballistic cosmogonies take their pattern from nebulae. The spiral form of most nebulae, with interspersed nuclear condensations, opened the widest field for collision, ejection, and capture theories. The spiral did not bear the truth, for it has a historical as well as a theoretical importance. Heited and Laplace believed in stellar growth from chaotic nebulous matter by a process through diffused spiral and planetary nebulae. Even to-day science has not proved the transition from the nebular to the stellar condition of any celestial object. It is true, the bipolar structure of spiral nebulae, disclosed in recent photographs by photography, has greatly stressed the idea of violent cosmogonic formations. Collision theories were propounded by Chamberlin and Moulton (1902) and by Arhenius (1907). The process in a nebula begins with nuclear condensations, which are followed by excentric collisions or disruptive approaches. Bipolar systems of streams are thus produced and, if combined with concurrent rotation, helical nebulae are formed. Collision of matter in a smaller scale by the accretion of scattered material around denser nuclei. The further development partly overlaps with the hypothesis mentioned next.

An ejection theory is mentioned by Laplace, as due to Buffon, who supposed comets to fall into the sun and splinter solar matter into space. A more scientific form is given to the theory by Whipple (1910). In the right and left spiral streams of nebulae, in their interspersed stellar condensations, and in the elongated fissions of their convolutions, he recognized processes like the eruption of solar protuberances, or the uplifting of terrestrial continents, or the impacts attested by lunar craters. Planets and satellites are formed and, if combined with concurrent rotation, a central bulge is produced. Collision theory was invented by See (1910). The parent of the solar system is a spiral nebula. Sun, planets, satellites, and comets originate from nuclear condensations, but their grouping into regular order is due to the capturing of the smaller by the larger. The outwardly spreading comets of the solar nebula appear as comets.

What precedes is more a classification than a description of the various cosmogonies. None of them has found universal acceptance, and none has escaped criticism.

B. Cosmodyne.—This is the proposed name for all the hypotheses on the future of the world, as explained in the introduction to section II. The literature on cosmodyne is far less extensive than that on cosmogonies.
only. The youth of the world seems to exert a stronger charm on human speculation than its old age and decline. There does not seem to exist any mythical cosmodyse, and very little can be found on scientific cosmodieses. So much the more explicit and detailed is Biblical cosmodyse (see JUDGMENT, Divine, IV.) And yet, from a scientific point of view, the prospective result derived from the known present state of the present world would seem to be better warranted than retrospective speculations upon cosmical conditions entirely unknown. A classification of cosmodieses from the various meanings of cosmos would have no object, for want of scientific material. No terrestrial, planetary, stellar, or universal cosmodieses have been elaborated. Two classes, that of the periodic and that of the universal of end to which the world may come: the extinction and the destruction theories.

(1) The extinction theory rests on a certain irreversible process, common to all natural phenomena. While the sum total of cosmical energy is supposed to remain constant, the amount of potential energy is steadily diminishing, and the measured energy that animates all activity in the universe. Drifting as it is towards stability, it will end in exhaustion and repose. The process is not reversible and consequently not cyclical. Applying it to the earth but abstracting from organic life, it will mean the extinction of its interior plutonic power and of its rotary speed. The raising and shifting of continents, the tidal waves and occasional earth-quakes and volcanic eruptions, the gradual shrinkage of the crust and the wandering of the polar ice caps, are so many irretrievable losses of potential energy. If the lengthening of our time scale, the sidereal day, is not directly observable, it is at least indicated in the apparent acceleration of the moon's longitundinal motions, in the increase of the oceanic tides, and in the elevation of the moon and acting as a perihelial brake on the revolving globe.

The stability of planetary movements is guaranteed only for the span of historic times. The demonstrations given by Lagrange, Laplace, Poisson, Delaunay, Gylden, all rest on successive approximation, and, what is worse, they are based on Newton's law of universal attraction, exclusive of resisting medium, planetary tides, magnetic fields, and radio-refractive forces. The resisting medium alone would suffice to change planetary orbits into spirals with the sun as the final pole and resting-place. Our sun is not exempt from the general thermodynamic process. Its temperature is constantly sinking, and all theories attempted to account for the phenomenon, by contraction and meteoriic impacts, have been rejected. According to Lord Kelvin, the sun has not illuminated the earth for five hundred millions of years and will not do so for many millions of years longer, unless new sources are discovered in the storehouse of creation. The recent electronic theory of matter has indeed completely solved the problem of what will happen to the universe in the distant future, as we now see the sun will eventually become a red dwarf, consuming its gas and becoming cold and dark.

(2) The destruction theory does not consider annihilation of matter; it only opens the field of possible causes of the problem of the final destruction of planetary or stellar systems. Within the solar system, the erratic procedure of comets and meteors is harmless only because of their insignificance. In a sidereal cluster, like the Milky Way, however, star may collide with star, or star with cosmic cloud. The spectacle of meteors, kindling to brief splendor in shooting through the atmosphere, is repeated on an enormous scale in the blazing stars that occasionally appear in nebulae or clusters, particularly in the Milky Way. Rising in a few days to a thousand times their normal brilliancy, they relapse in the course of years into their former obscurity. Temporary stars were known to Hipparchus and gave the impulse to his star catalogue. From 1485 to the time when the continuous photographic survey of the heavens began, about one in ten years was noticed to grow abnormally bright. In the Milky Way, there are more than half the average stellar speed. Whether they are embryos or ruins will be an enigma forever. We can only say that, if spiral nebula develop into galaxies, the incessant action of their clustering power must produce conditions for catastrophes, at least similar to those we are witnessing in the Milky Way.

The present finance of cosmodyse might be a temptation to look for further information in the Scripture. Will the darkening of sun and moon, and the falling of stars, lend support to the extinction theory? Or does St. Peter advocate the destruction theory when he speaks of the heavens being on fire and the elements melted by burning heat? The like question may be raised in cosmography. Can Genesis and the Scriptures, or, as they are called, the oracles of God, tell us any thing about the meteoric, and the ballistic hypotheses? The answer is given by an attempt, made three centuries ago, in cosmography. The Scriptural decision of the controversy, whether the solar system be geocentric or heliocentric, was bound to be a failure either way. Cosmogonic revelation was given to impress the human mind to resist the self-willed propensities of the imagination, and to call them to action, every time it is put to the test. Those who desire to abide by the cosmogony of the Scriptures, or, as it is called, the cosmogony of the Christian Churches, will find no satisfaction in Scriptural literature.

**Universities.**—The principal Catholic foundations have been treated in special articles; here the general aspects of the subject are presented: I. Origin and organization; II. Ancient universities and developments; III. Reforms and Reformation; IV. Modern period; V. Catholic action. I. Origin and Organization.—Although the name
universities is sometimes given to the celebrated schools of Athens and Alexandria, it is generally held that the universities first arose in the Middle Ages. For those that were chartered during the thirteenth century, dates and documents can be accurately given; but the beginnings of the earliest are obscure, hence the legends connected with their origin: Oxford was supposed to have been founded by King Alfred, Paris by Charlemagne, and Bologna by Pope Silvester II. These last three institutions, although they survived well into modern times, are now generally rejected, and the historian's only concern with them is to discover their sources and trace their development. It is known, however, that during the eleventh and twelfth centuries a revival of studies took place, in medicine at Salerno, in law at Bologna, and in theology at Paris. These were the earliest schools, and the most famous of its kind in the Middle Ages; but it exerted no influence on the development of the universities. At Paris, the study of dialectics received a fresh impetus from teachers like Roscellin and Abelard, and eventually it displaced the study of the Classics which, especially at Chartres, had constituted the profession of college and secondary education. The dialectical method, moreover, was applied to theological questions and, mainly through the work of Peter Lombard, was developed into Scholasticism (q. v.). This meant not only that all sorts of questions were taken up for discussion and examined with the utmost subtlety, but also that a coherent and logical system of doctrine was constructed, and that theology itself was cast into the systematic form which it presents in the works of St. Thomas, and above all, in the great "Summa". At Bologna, the new movement was practical rather than speculative, it affected the teaching, not of philosophy and theology, but of civil and canon law. Previous to the twelfth century, Bologna had been famous as a school of medicine, and its medical school at Salerno was the leader, and the most famous of its kind in the Middle Ages; but it exerted no influence on the development of the universities. This "consortium magistrorum" included the professors of theology, law, medicine, and arts (philosophy). As the teachers of the same subject had special interests, they naturally gathered together to form their own faculties. The chairs of the "consortium" were filled by professors who were expert in the subject, and who were usually members of the college. However, the term "faculty" originally designated a discipline or branch of knowledge, and was employed in this sense by Honorius III in his letter (12 Feb., 1219) to the scholars of Paris; later, it came to mean the group of professors engaged in teaching the same subject. The closer organization into faculties was occasioned, in the first instance by questions which arose in the thirteenth century, and which are referred to as "firing degrees. Then came the drafting of statutes for each faculty whereby its internal affairs were regulated and lines of demarcation drawn between its sphere of action and those of the other faculties. This organization must have been completed within the first half, or perhaps the first quarter, of the thirteenth century as a result of the "Par. scientarium" (1231) recognizes the existence of separate faculties. The scholars, on their part, just as naturally fell into different groups. These belonged to various nationalities, and those from the same country must have realized the advantage, or even the necessity, of banding together in a city like Paris, to which they came for purposes of study. This was the origin of the "Nations", which probably were organized early in the thirteenth century, though the first documentary evidence of their existence dates from 1249. The four Nations at Paris were those of the French, the Picards, the Normans, and the English. They were distinctively student associations, formed for purposes of administration and discipline, whereas the faculties were devoted to the instruction of the students. The Nations, therefore, did not constitute the university, nor were they identical with the faculties. The masters in arts were included in the Nations and at the same time belonged to the faculty of arts, because the course in arts was simply a preparation for the higher studies of theology. The masters in arts were also entitled to the same rights and privileges as any other masters in the faculty. However, the faculty of arts was entitled to a college, and was thus distinguished from the other faculties. Each Nation elected from among its members a master of arts as procurator (proctor), and the four procurators elected the rector, i.e., the head of the Nation. The rector assumed the head at the university. As a result, the faculty of arts was closely bound up with the Nations, the rector gradually became the chief officer of that faculty, and was recognized as such in 1274. This authority extended later to the faculties of law and medicine (1279) and finally (1341) to the faculty of theology; thenceforward the rector was the head of the entire university. On the other hand, the office of rector did not confer very much power. From the beginning the chief authority
had been exercised by the chancellor, as the pope's representative; and though this authority, by reason of conflicts with the university, had been somewhat reduced during the thirteenth century, the chancellor was still sufficiently powerful to overshadow the rector. Before the university came into existence, the chancellor had conferred the licence to teach, and this function he continued to perform all through the process of organization and after the faculties with their various officials were fully established.

At Bologna, towards the close of the twelfth century, voluntary associations were established by the governing citizen, the chancellor, to promote the mutual support and protection. These students were not boys, but mature men; many of them were beneficed clergyman. In their organization they copied the guilds of travelling tradesmen; each association comprised a number of Nations, enacted its own statutes, and elected a rector who was assisted by a body of consulti. These student-guilds were known as universitatis, i.e., corporations in the accepted legal sense, not teaching bodies. Originally four in number they were reduced by the middle of the thirteenth century to two: universitas citramonandorum and universitas ulcerammonorum. Neither the Bolognese students nor the doctors, being citizens of Bologna, belonged to a "university". The doctors were engaged, not in the abstract, but in the practical, and were subject, in many respects, to the statutes framed by the student-bodies. In spite of this dependence, however, the professors retained control of strictly academic affairs; they were the rectores scholarum, while the heads of the universities were rectores scholarum; in particular, the right of promotion, i.e., conferring degrees, was reserved to the doctors. The heads of the student-universities, however, which probably existed at or before the time of the founding of the student "universities". At first the doctors had full charge of examinations and in their own name granted the licence to teach. But in 1219 Honorius III gave the Archdeacon of Bologna exclusive authority to confer the doctorate, thus creating an office equivalent to that of the chancellor at Paris.

The doctorate itself, as implying the right to membership in the collegium, was gradually restricted to the narrower circle of the doctors legentes, i.e., actually teaching. On the other hand, the student control was lessened by the fact that, in order to offset the inducements offered by rival towns, the city of Bologna, towards the end of the thirteenth century, began to assert its right to regulate the term in places free formerly given, in such amount as they saw fit, by the scholars. As a result the appointment of the professors was taken over by the city, and eventually by the reformatores studii, a board established by the local authority. Meantime the two "universities" were being drawn together in one body and this was brought into closer relations with the college of doctors; so that Clement V (10 March, 1310) could speak of a magistratum et scholarum universitatis at Bologna. At the beginning of the sixteenth century there was only one rector.

The growth of Oxford followed, in the main, that of Paris. In the middle of the twelfth century the schools were flourishing; Robert Pullen (q.v.), author of the first known letter to the college of doctors; Peter Lombard is largely based, and Vacarius, the eminent Lombard jurist, are mentioned as teachers. The number of students, already considerable, was swelled in 1167 by an exodus from Paris. There were two Nations: the Boreales (Northern) included the English and Scottish students; the Australes (Southern), the Welsh and Irish. In 1274 these confessed in the Nation, but the two provinces remained distinct. In 1299, owing to difficulties with the town, 3000 scholars dispersed. On their return, the papal legate Nicholas issued (1214) an ordinance enjoining that the town should pay an annual sum for the use of poor scholars and that "in case a clerk should be arrested by the townsman, he should at once be surrendered on the demand of the Bishop of Lincoln, or the archdeacon of the place, or his officers, or the chancellor, or whomever the Bishop of Lincoln shall depute to this office" (Munimenta, I, p. 2). The first statutes were enacted in 1252, and confirmed by Innocent IV in 1251. The chancellor at first was an independent official appointed by the Bishop of Lincoln to act as ecclesiastical judge in scholastic matters. Gradually, however, he was absorbed into the university, and in 1300, at Salamanca towards the end of the fourteenth century, at Montpellier in 1421: yet each of these schools was a studium generale in the original sense of the term, i.e., a school which admitted students from all parts, enjoyed special privileges, and conferred a right to teach that was acknowledged everywhere. This jus ubique docendi was implied in the very nature of the studium generale; it was not issued by the scholars, as in the Bull for Toulouse, 27 April, 1253, which declares that "any master examined there and approved in any faculty shall everywhere have the right to teach without further examination".

Universitas, as understood in the Middle Ages, was a legal term; it got its meaning from the Corpus juris civilis, and it denoted an association of persons who were engaged in a particular activity. Employed with reference to a school, universitas did not mean a collection of all the sciences, but rather the entire group of persons engaged in the given institution in scientific pursuits i.e., the whole body of teachers and students: universitas magistrorum et scholarum. This is the meaning of the term in official documents relating to Paris and Bologna; thus Alexander V (10 Dec., 1255) states expressly that under the name university he understands "all the masters and scholars residing at Paris, to whatever society or congregation they may belong." Gradually, however, the terms universitas and studium came to be used promiscuously to denote an institution of learning: Universitas Oxoniensis and studium Oxoniense were used interchangeably. There is nothing earlier than 1279 of deliciae in universitate Oxoniensi perpetra (Munimenta, I, 39), and in the next century such phrases occur as (1306) in universitate cursus legere and (1311) in universitate Ozonic studi. (ibid., 87 seq.). That the terms had become practically synonymous at the beginning of the fourteenth century appears from a statement of Clement V (13 July, 1312, to the effect that the Arch-bishop of Dublin, John Lech, had reported that in those parts there was no scholearium universitatis studium generale. About 1300 also the expression water universitas was used by the Oxford masters, and these may have taken it from a document of Innocent IV (6 Oct., 1254) in which the pope speaks of Oxford as faciundo mater. Later the expression was supplied for usurpation to Paris in 1389: Cologne, 1392; Oxford, 1411. Alma was probably suggested by the liturgical use, as e.g. in the hymn beginning "Alma redemptoris mater".

The earliest universities had no charters; they grew ex consuetudine. Out of these others quickly developed, by migration, or by formal establishment. As the universities in the beginning possessed no buildings, like our modern halls and laboratories, it was easy matter for the students and professors, in case they became dissatisfied in one place, to find accommodations in another. Conflicts with the town often led
to such migrations, especially where some rival town offered inducements: hence the secessions from Bologna to Vicenza (1201), to Arezzo (1213), to Padua (1222), the “great dispersion” from Paris (1229), and the migration (1209) from Oxford to Cambridge. But causes of a less tumultuous sort were also operative. The privileges enjoyed by these institutions were an important reason for seeking similar advantages in order to keep their own scholars at home, and possibly attract outsiders, thereby adding to the local prosperity and prestige. Bologna and Paris served as patterns for the new organizations, and the desired privileges were sought from pope or civil ruler. It became, indeed, usual for the papal charter to include a set formula granting immunities, and liberties which are enjoyed by the masters and scholars of Paris” (or Bologna); thus Oxford, Cambridge, St. Andrews, and Aberdeen were to a large extent modelled on Paris and Glasgow on Bologna. The Parisian type was also reproduced at the earliest German universities, Prague, Vienna, Erfurt, and in 1364, the University of Bologna; in Ireland the first step toward establishing a university was taken by John Leech, Archbishop of Dublin. At his instance, Clement V issued, 11 July, 1113, a Bull for the erection of a university near Dublin; Leech, however, died a year later, and nothing was accomplished until his successor, Alexander de Bicknor, in 1329 established a university at St. Andrews, Scotland, authorized by the Bull of XXII. The first chancellor was William Rodlart, Dean of St. Patrick’s, and the first graduates William de Hardite, O.P., Edward of Karwenden, O.P., and Henry Cogry, O.F.M. Lectures were still given in 1353; in that year Edward II issued letters-patent protecting the members of the university on their travels, and in 1364, John Blund, Bishop of Limerick, departed to a lectureship. The university failed for want of endowment, as did also the one founded by the Irish Parliament at Drogheda in 1465.

The Founders: Popes and Civil Rulers.—In view of the importance of the universities for culture and progress, it is quite intelligible that there should be considerable discussion and disagreement as to who should receive credit for their foundation. It has, e.g., been maintained that only the pope could establish a university; contra wise, it has been held that such an establishment was the exclusive prerogative of the civil rulers, i.e., emperor and king.

These, however, are extreme positions, neither of which accords with the facts. For instance, if we are based on a study of a limited group of universities and, in large measure, on a failure to appreciate the relations of Church and State in the thirteenth century. From misunderstandings on the latter point erroneous conclusions have been drawn, not only regarding the origins of universities, but also the general attitude of the age towards the papacy and the civil power. For instance, if we are based on a study of a large number of universities and, in large measure, on a failure to appreciate the relations of Church and State in the thirteenth century, only the pope could found a university, it is easy to interpret any similar foundation by a monarch or any initiative taken by a municipality, as evidence of hostility to the Holy See and as a first move toward “emancipation” which actually came to pass in the sixteenth century. By the same sort of reasoning the inference is made that the papal charters were the cause of this civil power in granting charters, and repressed all attempts at freedom on the part of the universities themselves. To set these conclusions in the proper light, it is sufficient to glance at the various modes of foundation.

Previous to the Reformation 31 universities were established. Of these 13 had no charter; they developed spontaneously et consuetudine; 33 had only the papal charter; 15 were founded by imperial or royal authority; 20 by both papal and imperial or royal charters. Once the oldest universities, especially Paris and Bologna, had grown to fame and influence so that their graduates enjoyed the libetalia ubique docendi, it was recognized that a new institution, in order to become a studium general, required the authorization of the supreme authority, i.e., of the pope as head of the Church or of the emperor as lord of all Christendom. Thus in “Las Siete Partidas” (1256-1263), Alfonso el Sabio declares that a “studium general must be established by mandate of the pope, the emperor, or the king”; and St. Thomas (Op. contra impign. relig., c. ii): “ordinate de studio pertinet ad eum qui praece repubbar, et praece ad autoritatem apostolicam sedis quin universitatem ecclesiasticam ordinaretur”, i.e., in the matter of universities the authority belongs to the chief ruler of the commonwealth and especially to the Apostolic See, the head of the universal Church, “the interest of which is furthered by the university”. These last words contain the essential reason for seeking authorization from the universal Church, to be able to confer national degrees, to have the university recognized throughout the Christian world. On the other hand, in the civil order, the emperor was supreme; hence he conferred on the universities founded by him, without any papal charter, the right to grant degrees in all the faculties, theology and canon law included. The imperial charters were never necessary, additional privileges were granted. It cannot then be said that the action of Maximilian I in founding (1502) the University of Wittenberg was an epoch-making event; Charles IV had long before done the same for Siena, Arezzo, and Orange, and the charters with which he founded Pavia and Lucca preceded by two centuries the papal intervention.

The kings were not on the same plane as the emperor. They could indeed found a university, appoint the chancellor, and authorize him to confer degrees, but they could not establish a studium general in the full sense of the term; what they founded was a universitas respeita regni, i.e., the degrees it granted were valued only within their own kingdom; the universal recognition for them, papal action was necessary. This was the situation at Naples, founded (1224) by Frederick II, and especially in the Spanish universities. The kings themselves were aware of their limitations in this respect, and accordingly sought the papal authorization. The popes on their part recognized the royal charters as valid, and added to these the character of universality required for a studium general. In some cases the papal intervention was necessary and was sought, not simply to confirm what the king had established, but to save or revive the university; such e.g., were the measures taken by Honorius III (1220) for Palencia, by Clement VII (1579) for Lvov, and by Julius II (1554) for Heidelberg. The university, however, showed no vitality until the pope came to their assistance. The power of bishops and municipalities was, of course, still more restricted. In other words, they could take the initiative by calling professors, establishing courses of study, and providing endowments; but sooner or later they were obliged to seek authorization from the papacy. This was no easy matter in free and enterprising cities (Treviso, Pisa, Florence, Siena), stimulated by Bologna’s example, undertook the founding of their own universities. At Siena, it seemed at first that the
attempt to get on without either imperial or papal charter would succeed; the studium, inaugurated in 1275, had ample funds and a large body of professors and students which had increased by emigration from Bologna (1312); yet in 1325 it was on the verge of collapsing, and its existence was not secured until it obtained university privileges from Charles IV in 1357 and papal grants from Gregory XII in 1404. St. Andrews in Scotland was more fortunate. It was founded by Bishop Henry Wardlaw in 1411; but shortly after its opening the bishop in a document of 27 Feb., 1412, withdrew its foundation. Scholars speak of the "universitas a nobis salva tamen sedis apostolicae aeque sita exclamatum et fundatum". Six months later (28 Aug., 1412), Benedict XIII (Avignon) issued the charter of foundation, and appointed Wardlaw as chancellor.

There is no ground, then, for the inference that the founding of universities by the civil power and their organization by laymen from students was a symptom of antagonism to the Holy See or an attempt at emancipation from the authority of the Church. Such an interpretation of the facts merely projects modern ideas back into a period in which an entirely different spirit prevailed. That spirit was one of co-operation, even of emulation, in a common cause; and the Church had to yield to the law of time if it were possible but for the unity of faith and of hierarchical jurisdiction which held the West together in one Church. Had this unity included all Christendom, the East would doubtless have had its share in the university movement; at any rate, it is significant that in Russia and the other countries dominated by the schismatic Greek Church, no university was ever established.

Besides issuing charters the popes contributed in various ways to the development and prosperity of the universities. (1) Clerics who held benefices were dispensed from the obligation of residence, if they abstained themselves in order to attend a university. Both lay and clerical students enjoyed certain exemptions, e.g., from taxation, from military service, from the jurisdiction of the ordinary courts, and from citation to courts at a distance from Paris (privilegium fori). To safeguard these privileges was the special duty of the conservator Apostolic, usually a bishop or archbishop appointed by the pope for this purpose. (2) By the Bull "Pars scieniarum" (1231), the Magna Charta of the university of Paris, Gregory IX abolished all ordinary courts, in so far as they were committed by any one on a master or a scholar and not redressed within fifteen days, to suspend their lectures. This right of cessation was frequently made use of in conflicts between town and gown. (3) On various occasions the popes intervened to protect the scholars against the encroachments of the local civil authorities: Honsoneeus III (1292) took the part of the scholars at Bologna when the pocteth drew up statutes that interfered with their liberties; Nicholas IV (1288) threatened to disrupt the studium at Padua unless the municipal authorities repealed within fifteen days the ordinances they had framed against the masters and scholars. Even the chancellor of Paris, when he demanded of the masters an oath of fidelity, was checked by Innocent III (1212), and his powers were greatly reduced by the action of later popes. It became in fact quite common for the university to lay its grievances before the Holy See, and its appeal was usually successful.

(4) In many instances, especially in Germany, the endowment of the universities was drawn, largely if not entirely, from the revenues of the monasteries and chapters. More than once the pope intervened to secure the payment of their salaries to the professors, e.g., Boniface VIII (1301) and Clement V (1313) at Salamanca; Clement VI (1346) at Valladolid; and Gregory IX (1236) at Toulouse, where Count Ray-

mound had refused to pay the salaries. The popes also set the example of endowing colleges, and these, founded by kings, bishops, priests, nobles, or private individuals, were not only a new endowment of learning but also the chief financial support of the university.

II. ACADEMIC WORK AND DEVELOPMENT.—The Academic Year.—In the earlier period lectures were given throughout the year, with short recesses at Christmas, Easter, and Pentecost and a longer vacation in summer. At Paris this vacation was limited by order of Gregory IX (1228) to one month, but by the end of the fourteenth century it had increased for the arts faculty from 25 June to 25 Aug., for theology and canon law from 26 June to 15 Sept. The year really began on 1 Oct., and was divided into two periods; the grand ordinary, from 1 Oct. to Easter; and the little ordinary, from Easter to the end of June. At Bologna the vacation began 7 Sept., and the schola-
tic year opened again on 19 Oct.; this year, however, was interrupted for ten days at Christmas, two weeks at Easter, and three weeks at carnival. In Germany, there was considerable difference between the calendars of the various universities and even between those of the faculties at the same university. In general, the year began about the middle of October and closed toward the end of June. But at Cologne, and probably at Mainz, the end of classes fell on 27 Feb. and the beginning on 25 Aug., to 9 Oct. The vacation, however, was not a complete suspension of academic work; the extraordinary lectures, given for the most part by bachelors, were continued, and credit was given to students who attended them. About the middle of the fourteenth century, the division of the year into two separate periods, winter and summer, was introduced at Leipzig, and eventually was adopted by the other German universities.

Lectures.—Both the annual calendar and the daily schedule took into account the distinction between ordinary and extraordinary or cursory lectures. This originated at Bologna where certain books of the civil law ("Digestum Vetus" and "Codex") were ordinary, while others ("Infortutium," "Digestum novum," and the smaller textbooks) were extraordinary. In canon law, the ordinary books were the Decretum and the five books of the Decretals (Gregory IX); the extraordinary were the Clementines and Extrava-
gants. Ordinary lectures were reserved to doctors, and were given in the forenoon; extraordinary lectures, known at Paris as cursory, afternoon classes in the afternoon during the year; in the vacation they might be given at any time of the day, as the ordinary lectures were then suspended. Cursory meant either that the lecture was followed by the cursores, i.e. candidates for the license, or that it ran rapidly over the subject-matter, whereas the treatment in the ordinary lecture was more thorough.

In all the faculties the work of teaching centered about books, i.e. the texts, compilations, and glosses which were regarded as the chief authorities in each subject. At the beginning of the year (or semester) the books were distributed among the professors, who were obliged to use them in accordance with the rules given in the libraries. The daily schedule, the length of the course, the hall to be used, the academic dress to be worn, and the method to be followed. The lecture was in the strict sense a paradea (whence the German Vorlesung); the pro-
fessor had to read the text; in the ordinary lectures, he was not allowed to dictate anything beyond the divisions and conclusions and such corrections of the text as he deemed necessary. The scholars were supposed to have their own copies of the text; if they were too poor to procure the books, the professor might dictate the text to them, not in the regular lecture but at special classes or exercices (repetitions). The plan of the lecture was analytic; careful explana-
The ordinary disputation took place every week and lasted from morning till noon, or till evening according to the number of participants. On the day set apart for this purpose the lectures and other exercises were suspended, so that all the masters, bachelors, and scholars might be present at the disputation. One of the masters (disputans) answered a question put to him by the senior of the debate; other masters (opponentes) presented arguments against the thesis; answers to the arguments were given by two or three bachelors (respondentes) appointed for the occasion. The number of arguments was regulated by statute or was fixed by the dean of the faculty whose duty it was to regulate the time (fifteen to fifteen minutes) for the presentation of the argument. The disputation de quodlibet was held only one a year, but with greater solemnity than the ordinary, and over a wider range of topics. The master elected or appointed for the occasion, and known as the quodlibetarius, had to debate a separate question with each of the other masters who chose to enter into the inquiry. The disputation lasted several days, sometimes a fortnight. The arguments and their solutions were written out and preserved in book form. A specimen may be found in the "Quodlibetales" of St. Thomas. It was mainly out of these lectures, repetitions, and disquisitions that the works of the medieval doctors grew; so that the various commentaries, _summer_, and books of _sentences_ and art revealed the university teaching both as to content and as to method.

**Course of Study: Degrees.**—The distribution of the subjects to be studied and of the books to be read in the course was regulated in view of the degrees, i.e., of the various steps (gradus) by which the student advanced from the stage of a simple scholar to that of a master. In addition to the graduation, there developed out of the necessity of restricting the right to teach, and consequently of fixing the qualifications which the teacher should possess. It did not, any more than the university itself, spring suddenly into existence, nor did it everywhere present the same details. Three degrees, however, were generally recognized: baccalaureate, licentiate, and doctorate. The subject matter was extended and pressed for at different periods and in different universities; each faculty, moreover, had its own regulations regarding the length of courses and the subjects of study; in particular, there was a rather broad division between the faculty of arts and the superior faculties of theology, medicine, and law. For the courses of study in medicine and arts see _arts_ and _medicine_.

**Master of Arts.**—In theology, the texts were the Bible and the "Sentences" of Peter Lombard; in law, the books mentioned above; in medicine, the works of Galen, Avicenna, and other writers prescribed for Montpellier by Clement V in 1300. The medical course included also practical work in anatomy, for which the "Anatomia" of Mondino (1275-1287) of Bologna and a similar text by Henri de Mondeville (1290-1320) of Montpellier, served as guides. The student was further required, before gaining the master's degree, to spend a certain time in the Roman Curia, which was under the direct supervision of the pope, the masters of law had their wives and children. One of the famous canonists of Bo-
logna was Joannes Andrea (1270-1348), whose daugh-
ter Novella, sometimes lectured in his stead. At
Paris the obligation of celibacy for masters in medi-
cine was removed by Cardinal Estoumonte in 1452
for those in law by the statutes of 1600. The first
rector at Greifswald (1456) was married, as was also
the rector at Vienna in 1470. In other German
universities the requirement of celibacy remained
longer in force, owing in part, at least, to the fact
that many of the chairs were endowed with the revenues
of canons; but this did not imply that laymen were
excluded.

An important element in the student body and in
the entire life of the university was contributed by
the religious orders. In Italy they had long been the
recognized teachers of theology, and when the faculty
of theology was established at Bologna in 1200, they
supplied the professors and the majority of the
students. The Dominicans settled at Paris in 1217
and at Oxford in 1221; the Franciscans at Paris in
1230 and at Oxford in 1224. At both universities
the Carmelites and Augustinians also had their con-
vents. The members of these orders in their com-
"munity enjoyed many advantages; a permanent
home in which their material needs were provided for,
regular hours of study, a rule of life, and the
protection of the church. In each order the bond of membership
was a source of strength and solidarity. It is not
then surprising that the regulars took high rank as
scholars and teachers. Of the secular clerks some
lived in apartments, others with their masters, and
others again, the "martinet", with the townspeople.
The students frequently banded together and lived in
an estimated number of students (ordinaries) was about
their own number, a bachelor or a master elected
by them as principal. For the poorest students
colleges were established and endowed with burses by
generous founders. Between 1200 and 1500 Paris
had sixty colleges; Oxford, eleven; Cambridge, thir-
teen. The founders were mostly bishops, canons, or
other ecclesiastics, and the business of the college,
served to their benefit to some extent (see OXFORD,
UNIVERSITY OF:

I. ORIGIN AND HISTORY). At Bologna the most
famous was the College of Spain founded by Egido
Albornoz, Cardinal Archbishop of Toledo (d. 1367).
The colleges at the German universities were pri-
marily for the benefit of the teachers, though scholars
also were received. The college residents at Paris
were called "socii"; at Oxford the Fellows, or those
were "socii" (fellows) and were governed by a master,
or by several masters if the students belonged to
different faculties. The masters were required to
hold repetitions on the subjects treated in the un-
iversity schools and "faithfully to instruct the scholars
in life and in doctrine". This tutoring gradually
became more important than the university lectures
and attracted to the college large numbers of stu-
dents besides the holders of burses or scholarships;
by the middle of the sixteenth century almost the whole
university resided in the colleges, and the public
lecture halls served only for determinations and incep-
tions. In this way the Sorbonne, originally a hospice
for poor clerks, became the assembly of the larger
students of the church. The university, however, claimed
and exercised the right of visitation and of disciplinary
enactments; in 1457 it obliged the martinet to live
in or near some college, and forbade the migration
of scholars from one master's house to another; and in
1486 it enacted that teachers in colleges should be
appointed by the faculty of arts.

With the foundation of the colleges discipline improved.
The earlier university regulations dealt chiefly with academic matters, leaving the students
quite free in other respects. According to all accounts
this freedom meant licence in various forms—fighting,
drinking, and grave offenses against morality. With
due allowance for the exaggerations of some writers
who charge the scholars with every crime, it is clear
from the college statutes that there was much need
of reform. It should, however, be remembered that
no age has been more conspicuous than the serious, conscientious
student; and it is doubtless to the credit of the medi-
ival university, as a social factor, that it succeeded in
imposing some sort of discipline upon the motley
throng which it undertook to teach. When the
reform did come, it fairly riddled, in minuteness and stringency, the entire structure. But it did
not prevent the survival of certain practices, e.g.
initiation or deposition of the bejanaus (yellow-bill),
the medieval form of hazing; nor did it establish
perfect tranquillity in the university.

Agitations of a more serious nature affected the
development of the universities. Both Paris (1252-
1261) and Oxford (1360-1363) were embroiled in
struggles with the mendicant friars (q. v.). Repeated
conflicts with the town, notably the "Slaughter" of
1354 at Oxford, turned eventually to the benefit of
the university, which, as Rashdall says (II, 407),
"thrived on her own misfortunes". It was the chan-
cello who profited most and whose jurisdiction was
gradually extended until, in 1290, it included "all
the towns, cities, and villages in the counties of
Yorkshire, Oxon, and the Isle of Wight", and that was
a scholar, except pleas of homicide and may-
hem" (Rashdall, II, 401). In 1395, a Bull of Boni-
face IX exempted the university from all episcopal
and archiepiscopal jurisdiction; but in conse-
quency of the archbishop's opposition the Bull was revoked
by John XXIII in 1411, only to be renewed by Sixtus
IV in 1479. The conflict between Nominalism (q. v.)
and Realism was introduced in the scholastic tradition
and was closely connected with the "reform" inaugurated by
Wyclif; and while Wyclif may be regarded as a cham-
pion of intellectual freedom, it is interesting to note
among his errors condemned at Constance (1415) and
by Martin V (1418), the proposition that "univer-
sities with their studies, colleges, graduations, and
researches, are a useless, vain, and foolish thing; they do the Church
just as much good as the devil
does" (Denzinger-Bannwart, "Enchiridion", n.
609).

In the calmer appreciation of modern historians the
medieval university was a potent factor for enlighten-
ment and social order. It aroused enthusiasm for
learning, and enforced discipline on its trainees; it
was a potent object of faith. It was the centre in which the philosophy and the juris-
prudence of antiquity were restored and adapted
to new requirements. From it the modern university
has inherited the essential elements of corporate
teaching, faculty organization, courses of study, and
academic degree; and the inheritance has been trans-
muted through the manifold upheavals which have
submerged the ancient learning and rent Christendom
itself assunder.

III. RENAI ssANCE AND REFORMATION.—The effect
of the "new learning" on the German universities was
revolutionary. At first the Humanist professors got
on fairly well with the rest of the faculty; but when
when they struck at the content itself, declaring that much
they were concerned only with real knowledge, a
time was spent in gaining very little knowledge of
hardly any value. All these charges were drawn up
in publications marked by brilliant style and sharp
invective; e.g. the "Epistola obscurorum virorum",
written against the professors of arts and theology,
especially those at Leipzig and Cologne. This vio-
lent satire contained much that was false or exaggerated, and therefore calculated rather to add new disturbance than to effect the reform which was really needed. The better days of Scholasticism, in fact, had passed; the universities had no longer such leaders of thought as the thirteenth century and produced both studies and discipline were on the decline. Humanism triumphed, in the first place, because, as a reaction and a novelty, it appealed to the younger men who were anxious to be free from the dryness of Scholastic exercises and the restrictions imposed by college statutes. Their unruly conduct and their ceaseless brawls and license were at first believed by the university authorities a pretext to undertake university reforms; and the reforming was accomplished by placing the Humanists in control. These conflicts and remedial measures, however, were only the surface of a much deeper movement. Before it asserted itself in the universities, Humanism had won over the higher and more influential class of the people by its logical method, and the world of literature, to the spirit of luxury which the growth and increasing wealth of the cities had engendered. There was no doubt a charm in the elegant dictum of the Humanists; but their attractive force lay in the rehabilitation of those views and ideals of life which the naturalism of the pagan world had expressed in perfect form and which Aristotle had triumphed in the thirteenth century; he was overcome in the fifteenth by the orators and poets.

The Renaissance, originating in Italy, had then spread to the northern countries. Its introduction into the universities of Italy and France did not lead to the defection of its patrons, and many distinguished Humanists remained loyal to Catholicism. In Germany and England, on the contrary, the Renaissance coalesced with another movement which had far more serious consequences. Luther, though not in sympathy with Humanism, was bent on sweeping away Scholastic theology by returning, as he claimed, to the pure teaching of the Gospel; and if he had made an end of the universities, which he denounced as the devil's workshops. The violent theological discussions aroused by the reform doctrine had a disastrous effect, not only on Humanism but also on the life of the universities. Some of these closed their doors, and nearly all were in danger of dissolution for want of students. Many of the professors were driven from their pulpits, and that which had supported many of the poorer scholars, reduced the numbers at the universities. In 1549 a royal visitation eliminated from the statutes every trace of popery, and abolished numerous stipends that had formerly been given for Masses. In a spirit of iconoclasm, altars, images, and statues were torn from the college chapels, and many valuable manuscripts of the libraries were burned. In 1550 the Elizabethan statute was enacted; and the anti-Catholic statutes were repealed. During Elizabeth's reign and Leicester's chancellorship, every Oxford student above sixteen years of age was obliged at matriculation to subscribe to the Thirty-Nine Articles and the Bishop of London's Enactments. Had the university an exclusively Church of England institution. At Cambridge a royal mandate in 1613 required all candidates for B.D. or for the doctorate in any faculty to subscribe to the Three Articles. In both universities, Puritanism was a disturbing element, and a number of its adherents were obliged to withdraw from Cambridge. In 1630 the Elizabethan statutes were enacted "on account of the again increasing audacity and excessive licence of men", as the preamble declares. These new regulations circumscribed the powers of the proctors and provided that they should be elected, not as formerly, by the regents, but according to a cycle of colleges. The Elizabethan code remained in force for nearly three centuries. Under Charles I similar provisions were made for Oxford by the Laudian statutes (1636), and the whole administration of the university was entrusted to the vice-chancellor, the proctors, and the heads of colleges. "This statute effectually stereotyped the administrative monopoly of the colleges, and destroyed all trace of the old democratic constitution which had been controlled by the authority of the medieval Church" (Brodick). Oxford was governed by this code until 1854.

In Scotland, after the abolition of papal jurisdiction and ratification of Protestant doctrine in 1560, the universities suffered severely. "To St. Andrews, as
to the other universities, the Reformation did serious injury. Their constitution and organization were upset by ecclesiastical discord; their income was sadly reduced by the rapacity of the nobles who appropriated the lion's share of the revenues of the Church. From a greatly diminished income they had to uphold the stipends of the parishes which belonged to them. This was necessarily accompanied by a reduction of the salaries of the professors, for which certain grants by successive administrations made small but inadequate amends. The attendance of students was at this period very small, and various schemes of reform were proposed, especially by Knox, they proved inefficient owing to the tumults about religion and the alternations between presbytery and episcopacy. The universities became institutions of the state in 1690 and religious tests were enforced for all teachers and officials. Curricula and organization, however, retained for a long time their medieval features. During the seventeenth and eighteenth centuries, various modifications were introduced in the courses of study; new chairs were founded and the financial condition improved.

At Paris this period witnessed the long struggle between the university and the Jesuits (see Society of Jesus: History: France), the inroads on the privileges of the faculties and of the university by the proponent of royal feu and papal supremacy. As far back as 1475, Charles VII had placed the university under the jurisdiction of the Parlement; by the end of the sixteenth century the secularization was complete. If Richelieu, by rebuilding the Sorbonne, and Mazarin, by establishing the College des Quatre-Nations, enhanced the outward splendour of the university, they did not renew its vitality sufficient to check the new philosophical movement which culminated in the work of the Encyclopedists and the Revolution. In 1793 the university was suppressed and with it all the other universities of France, Napoleon I reorganized them as faculties under the one imperial university situated at Paris; and this arrangement continued until in 1806, the faculties were restored to university rank.

IV. Modern Period.—In Germany, the eighteenth century brought decided changes which some authors (Paulsen) regard as the origin of the modern university. From Halle, founded in 1694, Christian Wolff's rationalistic philosophy spread to all the Protestant universities, especially the University of Halle in the Hanoverian, especially the study of Greek. Freedom of research became the characteristic feature of the university; the systematic lecture replaced the exposition of texts; the seminar exercises supplanted the disputation; and German was used instead of Latin as the vehicle of instruction. The foundation of the University of Berlin (1810) was another advance in the way of free scientific culture. Philosophy became the leading subject of study. Next in importance was philology, Classical, Romance, and German. The development of the historical method and its application in all lines of research are among the principal achievements of the nineteenth century. In the natural sciences laboratory training was recognized as the basis of the study of medicine, which put on a new basis by improved methods of investigation. Specialized research with productive scholarship, rather than accumulation of knowledge, was held up as the aim of university work. As a result the departments of science multiplied and in each the number of courses rapidly increased. This was the case especially in the faculty of philosophy, which came to include practically everything that did not belong to theology, medicine, or law. The B.A. degree disappeared, the M.A. was merged with the doctorate in philosophy, and this had its chief significance as a requisite for teaching. Great importance was attached to the preparation of teachers for the schools and gymnasium, while in the university itself, the recruiting of professors was provided for by the system of Privatdozenten, i.e. instructors who have the privilege of teaching but no official duties or salaries. These instructors often teach at various universities before being promoted to a professorship, and thus acquire a wide experience as well as an acquaintance with conditions in different parts of the empire. The students also are encouraged to pass from one university to another. They no longer live in college nor clean for them except a moral and military service. Most of them, however, are members of some Verein or Verband which develops the social spirit, though it often encourages duelling, drinking, and other practices hardly conducive to moral or intellectual advance.

In England and Scotland the nineteenth century was marked by numerous and far-reaching changes. A succession of statutes revised the system of examinations and degrees; religious tests were abolished at the English universities in 1871, at the Scottish in 1892; many of the traditional oaths disappeared, and the restrictions imposed by the Elizabethan code were in large part removed. The tendency of legislation (Acts of 1854, 1856, 1877) was in line with the reforms presently advocated by the University Commissioners in their report of 1876, mainly that “the restoration in its integrity of the ancient superintendence of the university over the studies of its members by the enlargement of its professorial system, by the addition of such supplementary appliances to that system as may obviate the undue encroachments of that of private tuition . . . . , the removal of all restrictions upon elections to university chairships and scholarships; and contributions from the corporate funds of the several colleges towards rendering the course of public teaching, as carried on by the university itself, more efficient and complete”. This movement toward a revival of the authority of the university has been furthered by Lord Curzon in his “Principles and Methods of University Reform” (1897). The educational advantages so long enjoyed by Oxford and Cambridge was broken by the creation of new universities; Durham was established in 1832, and the University of London, founded in 1825 and chartered as an examining and degree-conferring institution in 1838, was reorganized on a broader basis in 1889. The university extension movement, inaugurated at Cambridge, was continued in Edinburgh and Glasgow; women were admitted to examinations and degrees at London in 1878, Cambridge in 1881, and Oxford in 1884. The Scottish universities were remodelled in 1858 and in 1889; the system of studies and degrees was reorganized and greater uniformity in government was secured. At Aberdeen and Glasgow, however, the rector is still elected by the matriculated students, who are divided into four nations as in the Middle Ages. Women were admitted as students in 1892.

For the earliest foundations in America see Universities, Spanish-American. In the United States the oldest universities grew out of colleges modelled on those of England; Harvard (1636), Yale (1701), Princeton (1746) and the University of Pennsylvania (1751), King's, i.e. Columbia (1754), Brown (1761). The first step towards university instruction was the addition of graduate studies pursued by resident students (mentioned at Harvard towards the end of the eighteenth century). During the first quarter of the nineteenth century, American students began to return to the German universities, or, returning to their own country, sought to introduce elements from the German universities. It was not, however, until 1861 that the doctorate in philosophy was conferred (Yale); since that time, the universities have developed rapidly but not according to any uniform plan of organization. In all these institutions there is a
combination of graduate with undergraduate study, and in many of them departments of pure science have been added. In such a diverse field it is impossible to select any one of them as the typical American university, and difficult to group them on any purely educational basis. This diversity is largely owing to the fact that the American institutions, especially the more recent, have been organized to meet actual needs rather than to perpetuate tradi-
tions. Although and are then more commonly enjoyed, it is quite intelligible that new forms of university organization should appear and that the older forms should be frequently reajusted. Apart, however, from details, what may be called the university situation presents certain features that are noteworthy.

(1) The oldest universities were established and endowed by private individuals who have retained their private character. Even where the States have organized universities of their own, no measures have been taken to prevent private founda-
tions; the latter in fact are as a class more influential than those controlled by the State, and, on the other hand, the private universities are empowered to give degrees through charters granted by the State. This has turned the private institutions into American institutions and more essential to the national welfare than any hard and fast uniformity under state domination. (2) From the beginning, as the oldest charters explicitly declare, the furthering of morality and religion, not merely in a general way, but in accordance with the belief of some Christian sects, has been the primary object of the schools and divinity schools are still maintained at Harvard, Yale, and Princeton. But the state universities and nearly all the more recently founded private universities exclude theology. There is a decided tendency with powerful financial support to make the university non-sectarian by eliminating all religious tests and removing denominational blame and strife. That which is or is not a university, must depend largely on the standards of scholarship that are adopted and the idea of its functions as a social power that is formed by the institution to which so much wealth is entrusted.

(4) The practical character of university training is shown by the attention that is paid to technical instruction in applied science manifested by many students has a serious effect not only on university policies and curricula but also on the work of secondary and elementary schools, in which the relative value of cultural and vocational studies is keenly debated. (5) As the efficiency of the university is in part determined by the preparation of its students for other educational institutions, one of the chief problems demanding solution at present is the relation between the university and the preparatory schools. In the endeavor to secure satisfactory relations between college, high school, and elementary school, the university exerts an influence which becomes more permeating as the educational system is more thoroughly articulated. The essential mission of adjustment will probably be settled not so much by discussion or legislation as by the training of teachers, which now holds a prominent place in each of the larger universities. (6) Although women have long formed the majority of teachers in elementary public schools, they were not admitted to the universities until about the middle of the present century. The educational movement began in the state universities of the West, received a fresh impetus at the University of Michigan in 1870, and then spread rapidly through the universities south of the Potomac. The faculties are now open to women on the same footing with men; in others, women are excluded from the courses in law, medicine, and engineering, and receive separate instruction in affiliated colleges. (7) Within recent years, university extension, correspondence courses, and local examinations have enabled the university to widen its sphere of activity. It might seem indeed that the centripetal movement which in the Middle Ages brought students from all parts to the studium generale, were now to be reversed or at least to be reflected in the opposite direction.

V. CATHOLIC ACTION.—The universities of France, Italy, and Spain, though affected to some extent by the Reformation, had remained loyal to the Catholic Faiths and preserved the character of classical science. Louvain especially, while it developed Humanistic studies to a high degree, resisted the encroachments of Protestantism. The Council of Trent ordained that provision should be made for the study of Scripture, that-benediced clergymen studying at universities should enjoy their traditional privileges, that the chairs of bishops and the chairs of important universities should be held by preference from among university professors and graduates (Sess. V, can. i; VII, xiii; XIV, v; XXII, ii; XXIV, viii, xii, xvii, xvi). It also provided for the education of priests by its decrees regarding the establishment of ecclesiastical seminaries. (See SEMINARY, ECCLESIASTICAL.) But the new universities, after the Council, did not hesitate to ordain their own churches and to form new seminaries. The Reformation had done much to make the universities less desirous of being established by new names. In spite of the loss of revenues through the confiscation of church properties, Catholic universities or academies were founded at Dillingen (1549), Würzburg (1553), Paderborn (1653), Salzburg (1623), Omanbrück (1630), Bamberg (1618), Olmütz (1591), Graz (1586), Linz, Innsbruck, Breslau, and Fulda (1732), Münster (1771). To this period also belongs the French universities at Douai (1559), Lille (1560), Pont-a-Mousson, later Nancy (1572), and Dijon (1722); the Italian at Macerata (1550), Cagliari (1603), and Camerino (1721); the Spanish at Granada (1528) and Oviedo (1574); Manila in the Philippines (1681), and the South American foundations (see UNIVERSITIES). Spanish America received more new universities were entrusted to the Jesuits, whose colleges in regard to Classical studies rivalled, and, in matters of discipline, surpassed the universities. After the suppression of the Society (1773), the chairs which they had held were either abolished or trans-
ferred to secular professors. Among the papal docu-
ments bearing on universities should be mentioned the Constitution "Imperscrutabilis," addressed by Clement XII (4 Dec., 1730) to Philip V of Spain regarding the University of Cervera; the "Quod divina sapientia," published, 28 Aug., 1824, by Leo XIII for the reformation of university studies in the Papal States and some other provinces of Italy; the Brief "Apostolicae Sedes," (18 Dec., 1871), by which Gregory XV, in the papal action of the Belgian Bishops in restoring the University of Louvain; and the Apostolic Letter of Pius IX, 23 March, 1852, approving the statutes of the Uni-
v

During the latter half of the nineteenth century the Spanish and Italian universities were taken over by the State, and the faculties of theology disappeared. In France, under the present system, there is no faculty of theology in any state university; the Catholic faculties at Paris, Bordeaux, Aix, Voue, and Lyons were abolished in 1882, and the Protestant faculties at Paris and Montauban became theo-

ological schools in 1855 (See UNIVERSITIES). 1875, however, the four bishops established independent Catholic universities
or institutes at Angers, Lille, Lyons, Paris, and Toulouse. In Germany, though all universities are state institutions, there are Catholic faculties of theology at Bonn, Breslau, Freiburg, Munich, Munster, Strassburg, Tübingen, and Würzburg. The professors are appointed and paid by the State, but they must be approved by the bishop, who also has the right to supervise the teaching of theology in these universities, though injured in the eighteenth century by Josephinism and modified in the nineteenth by various reforms, have still retained the teaching of theology in the faculties of Graz, Innsbruck, Cracow, Lemberg, Prague, Olmutz, Salzburg, and Vienna; and in Hungary at Agrarn and Budapest. It should be noted, however, that in Germany and Austria the existence of Roman Catholic theology does not mean that the whole university Catholic; the other faculties may include members who profess no creed. This situation naturally gives rise to difficulties for Catholic students, especially in philosophy and history. In countries where a larger freedom is enjoyed, the Holy See has encouraged new universities. Thus, in 1835, the University of Fribourg, Switzerland, established in 1885, was warmly approved by Leo XIII. The project of founding a Catholic university in the United States was suggested at the Second Plenary Council of Baltimore in 1886; its execution was resolved on at the Third Plenary Council in 1884, and the statutes of the University of St. Thomas, St. Paul, Minn., were laid on Leo XIII in the Apostolic Letter of 7 March, 1889. Present Law of the Church.—The principal laws now in force regarding universities are as follows: 1. For the establishment of a complete Catholic university, including the faculties of theology and canon law, the authorization of the pope is necessary, and this also requires that the foundation may be made with public funds or private endowment. If public funds of the state are also used for the purpose, authorization must likewise be obtained from the civil power. The Church, moreover, recognizes the right of the State, or corporations or individuals under control of the State, to establish purely secular faculties, e. g. of law and medicine (Clement XII, Const. Imperatorial, 1736). 2. The constitution of the universities founded by the civil power for Catholics, the faculties of theology and canon law, once they are canonically established, shall remain subject to the supreme ecclesiastical authority, and moreover, that professors in the other faculties shall be Catholic and that their teaching shall accord with Catholic doctrine. In view of this expression, it is apparent from recent papal charters, the university enjoys autonomy, e. g. in the appointment of instructors, the regulation of studies, and the conferring of degrees in accordance with the statutes. 3. By the Constitution "Sapienti Consilio," 29 June, 1908, the Congregation of Studies is charged with all questions regarding the establishment of new Catholic universities and important changes in existing ones. The Congregation, after considering the theology and canon law conferred without examination by the Holy See through the Congregation of Studies, give the recipient the same rights and privileges as the degrees conferred after examination by a Catholic university (Cong. Stud., 19 Dec., 1906; Roviano, "De juve ecclesiae in universitatibus studieniore," 1895; Wernz, "Das Decretalium," 3.I, Rome, 1901).

Church a large number of priests and several bishops. Two archbishops and two other bishops are still living. The late Dr. Cameron, Bishop of Antigonish, and Dr. MacNeil, late Archbishop of Vancouver, are among the presidents whose learning, ability, and zeal have, despite many disadvantages, rendered service to the cause of Catholic education in Eastern Canada. The present Bishop of Victoria, Rt. Rev. Dr. Alexander MacDonald, was for nineteen years one of the professors.

A. J. G. MacEchen.

B. University of St. Joseph's College.—Memramcook, New Brunswick, Canada, founded in 1864 by Rev. Edmund O'Reilly, S.J., late rector of the College, and named in honor of his grandfather, Rev. J. J. Memram, a well-known Catholic and one of the first to embrace the Catholic faith in New Brunswick, and of his grandmother, Cecilia Memram; a college of co-education, with five faculties, viz., theology, law, medicine, philosophy and letters, science. Newman was careful to secure the services of various distinguished men as professors and lecturers. The first appointments to the professional chairs comprised the names of Edmund O'Reilly, S. J., Dr. P. Leahy, Eugene O'Curry, T. W. Allies, and D. F. McCarthy; and gradually a considerable number of Irish students, of high rank, from different European countries, began to frequent the halls of the new university. But the institution itself and its students laboured under the greatest disadvantages. The university had no charter from the State to confer degrees, nor were its lectures recognized elsewhere in Ireland as leading to a university degree. It had to do battle with many number of its colleagues for its recognition and endowed was largely dependent upon the contributions for its revenue. In the immediate issue these obstacles were not to be adequately surmounted even by the fame and genius of Newman, the eminence of the professors, the devoted loyalty of Irish students, and the constant efforts of the bishops. But the determination of Irish Catholics produced highly important results. The Government, confronted with their standing protest, after a time deemed it expedient to attempt to deal with their grievances in the matter of university education. The Liberal plan of a Supplemental Charter, incorporating the Catholic University as a college, not as a university, and enabling the students educated in its halls to obtain degrees from an enlarged Queen's University, was passed in the Irish Parliament in 1866; the measure was not, however, successful, as an endowed Catholic university was announced, considered, and abruptly withdrawn in 1868; Mr. Gladstone's proposal of one Irish university, comprising Catholic and other colleges without public endowment as well as Trinity College and two of the Queen's Colleges with their endowments continued, and the government undertook to accede to the demands of the Catholics and voted in the House of Commons. But in 1879, on the second reading of a University Bill introduced by the O'Connor Don, the Beaconsfield administration announced that they would themselves introduce a University Bill for Ireland; and the promised Bill became an Act of Parliament in that year. It abolished the Queen's University, while sparing its colleges, and set up in its place the Catholic University of Ireland, an examining body entitled to give degrees to all comers on condition of passing the prescribed examinations, and to award prizes for distinguished answering. Moreover, an arrangement was made to provide a small indirect endowment to help the work of the Catholic University through fellowships to be held by a certain number of its students.

It was for the purpose of arranging the Catholic colleges of higher education in an associated group, to stand against the endowed Queen's Colleges in the competition of the Royal University, that the framework of the Catholic University was considerably modified in 1882. In that year the teaching institutions, Mirrane, St. Stephen's College, St. John's College, and the Catholic University, of which Maynooth since 1876 had been constituted a college, was made to embrace an association of colleges, each retaining its own independent collegiate organization. The success of the Catholic colleges cleared the way for Mr. Burrell's University Act in 1909. University College, under the management of the Jesuits from 1883, gave up all pretense to stand alone, and merged itself into the Catholic University School of Medicine. This school, which in 1892 was placed under a governing body of its own, had been founded by the bishops in 1855 in Cecil Street, Dublin, and, unendoed though it was, had been a success from the start, owing to the advantage it enjoyed, in that its teaching was recognized as qualifying a man for a profession, while that of European origin, was not. It now merges, like University College, in the new University College, Dublin, which is the leading constituent college of the National University of Ireland.
sity established in 1909. This constituent college has utilized the buildings of the Catholic University. The Catholic University church, built by Dr. Newman, and the Catholic University hospital, both of which were endowed by Catholic members of the National University; but the Catholic University itself still exists, as was affirmed in an important judicial decision by the Master of the Rolls in 1911.

Dr. Newman, who retired in 1858, was succeeded in the rectorial Chair by Dr. Woodlock, Dr. Neville, Dr. Keating, Mr. O'Donnell, and Dr. O'Grady, whose subscriptions, namely £250,000, subscribed mainly in Ireland and America, was collected and expended upon the university. After providing buildings and equipment, that sum would allow little over £8000 a year during the quarter of a century that elapsed before the fellowships of the Royal University were made available. The ideals sustained and the reforms achieved in higher education, both by Rev. John Walsh and John Dillen were its students; the "Atlantic" and O'Curry's Lectures were its products. Even in its last years it had among its professors such men as Aubrey De Vere, Dr. Casey, George Sigerson, Dr. Molloy, James Stewart, and Robert Ornsby.

The universities of this year, in common with all, include every graduate of the Royal University of Ireland who was a matriculated student of "University College, St. Stephen's Green, Dublin, or of the Medical School, Cecilia Street, Dublin". Thus the history of the existing college is linked with the story of Newman's foundation in Ireland. From 12 November, 1853, when the Irish Jesuits opened University College, St. Stephen's Green, Dublin, in the old Arts School of the Catholic University, to 1 November, 1909, when the new college began its work, the history of Irish Catholic and national university education centred mainly in the St. Stephen's Green institution. The college had two purposes to fulfill: first, to show by its success in the competitive first-class and second, to make the modern university and its faculty, given equal opportunity, to establish a university of their own upon the highest academic level; second, to afford a university training to young Irish Catholics, whose conscience prevented from availing of Trinity College, with its Protestant Episcopalian atmosphere, or of the Queen's Colleges, with their secular atmosphere. The first president of University College was Rev. William Delany, S.J. With an interval filled by Rev. Robert Carbery, S. J., Father Delany continued in office until the new college was founded. His colleagues of the Society at the beginning were Rev. Thomas Finlay, philosopher and economist, Rev. Denis Murphy, Irish historian, Rev. James J. O'Carroll, Gaelic scholar and linguist, Rev. Bernard Joyce, the St. Stephen's Green, Dublin, and Rev. Robert Curtis, mathematician. Of Newman's old guard and their first successors there still remained Thomas Arnold, son of the Master of Rugby, Robert Ornsby, the biographer of Hope Scott, James Stewart, a Cambridge rector who had followed Newman, John Casey, the Irish mathematician, Dr. John Lagan, afterwards Bishop of Waterford, and Abbe Polin. Among the assistant professors selected by Father Delany were Mr. William J. Starkie, a Cambridge scholar, now Resident Commissioner of National Education, and Mr. (now Sir Joseph Magrath, the present registrar of the National University. Father Delany began practically without endowment. The only public assistance received was indirect. Beaconsfield's University Act empowered the senate of the Royal University to appoint Fellows, with a salary of £400 a year out of the university revenues. The University founded Honorary Fellowships for the university, each lecturing at certain assigned colleges. Fourteen Fellows, out of twenty-eight, were assigned to University College, the remainder to the Queen's Colleges, already endowed to the extent of £12,500 a year each. Two of the first Fellows were Jesuit Fathers; some years later the number was increased to five, and with the university's equipment and maintenance of the college were undertaken.

At the end of the first academic year a hundred of the distinctions awarded by the Royal University were won by Queen's College, Belfast; seventy-nine by University College, Dublin, twenty by Queen's College, Cork, and eight by students of Queen's College, Galway. This success of the unendowed college could not be ignored. In the Parliamentary session following (1885) the Irish Party raised the university question under the new aspect it had assumed. The Chief Secretary (Sir Michael Hicks-Beach) at once admitted the necessity for government action. For the Government he promised that, if they held office in the next session, he would "be the one element proposing the only satisfactory way with this most important matter". The year 1886, however, brought its change of Government. Gladstone's first Home Rule Bill, the Liberal Irish Alliance, and its developments; and the university question as a question of practical politics was shelved for a generation.

The University of College continued its work with ever-increasing success. Year by year the tabulated results of the examinations of the Royal University showed that the unrecognized Catholic University College was not only doing better work than even the most successful of the well-endowed Queen's Colleges, but that it was ever increasing its lead until it far outstripped the three together. The following table shows the relative endowments of the colleges and the first-class distinctions won by each college in the year 1898 compared with those ten years later.

In scholarship, in literature, in the public service, past students began to win honour for their college. Even in the department of scientific research, hampered as was the staff by lack of equipment, the work of Preston, McClelland, and Conway established the name of the college in the annals of scientific advance. Murphy's work for Irish history, Finlay's in the Irish language, and Finlay's in the field of practical Irish economics were also far-reaching. An aim of Father Delany had been to train a thoroughly competent staff to meet the time when justice should be done and a wider field opened. This, too, was fulfilled; and the men selected for the first appointments to the chartered college by the commissioners entrusted with the work, unfettered though the commissioners were in their discretion, include, in all the chief departments, a large majority of men who had been educated in University College.

In 1904 Mr. Balfour and Mr. Wyndham made acknowledgment of the Catholic claims; two royal commissions had reported in their favour; but the ministers were deterred by Orange influence from its
settled. Mr. Bryce took up the question in 
courageous fashion during his brief chief secre-
taryship. It was left to Mr. Birrell to carry a measure 
granting facilities for University education under 
conditions fairly satisfactory to Catholics. The 
Jesuits facilitated the reform in every way and, though 
they might have put forward a title to special 
consideration, they sought no peculiar recognition. 
Cardinal Logue declared the settlement to be largely 
due to their labours. The Archbishop of Dublin 
expressed his admiration for "the fidelity, constancy, 
and undaunted courage" which they had shown in 
the enterprise. Many years before, in 1856, when jealous 
feelings were rife, they had defined their interest to be to establish "a central 
College, which should be national in its Constitution; 
should be governed by a body representative of the 
whole Catholic people, with all its interests; where 
the main condition of appointments to posts should 
be excellence of qualification, the best man winning 
the governing body of University College, Dublin, 
now consists of twenty-seven Catholics and three 
Protestants. When it ceases to hold office the new 
governing body will be constituted mainly of persons 
selected by the college corporation itself, and by the 
General Council of Irish County Councils, which 
represents Irish opinion. In the first appointment of 
deans of residence the Catholic priests were among 
the candidates. They voluntarily provide religious 
lecturers in addition to discharging the duties of 
their office. The bishops of Ireland have also in hand 
(1912) a scheme for the establishment of a lectureship in 
thology in the college and have selected Rev. 
Peter Finlay, S.J., for the office. The growth of this 
side of the college work would complete its activities 
in the direction of a university institution. All the other faculties 
are adequately provided for, and include arts, philos-
ophy, Celtic studies (including archaeology, history, 
and philology), science, law, medicine, and engineer-
ing. The staff consists of the president (Dr. D. J. 
Colley, dean of the old successful medical school), 
fourty-three professors, and eight lecturers. All the 
students are of the grade of university. All of the other 
facilities of the college are £20,000 a year and the 
total revenue in 1910-11 was £10,357. Six hundred 
and ninety-five students were in attendance in that 
year. The first plan of buildings provides for 
short periods. One hundred and ten thousand 
stands of public grant is available for their erection 
and equipment, but it will certainly prove inadequate, 
from the demands of the Catholic educational system. 
So far, though, the college is open to 
all, ninety-eight per cent of the students are Catholics. 

III. SPANISH-AMERICAN UNIVERSITIES.—The Uni-
versity of St. Mark's at Lima enjoys the reputation of being the oldest American University, and the distrin-
tion of having first begun its course by royal decree. 
The university in Santo Domingo in the West 
Indies was the first to be established by a papal 
Bull. Other similar institutions soon arose all over 
Spanish America, flourishing during the colonial 
period, under the joint auspices of Church and State. 
Thus, when the Bishop of Quito, by the direct 
control of the former to that of the latter, 
with the exception of the University of Havana, which 
remained in possession of a religious order until late 
in the nineteenth century. It was in 1538 that a 
Bull of Paul III established the pontifical University 
of St. Thomas in Santo Domingo, at the request of 
the Dominicans. However, the institution was not 
definitively established, until Philip II gave it legal 
existence in 1558, seven years after the foundation of 
St. Mark's in Peru. The University of Santo Do-
mindo had faculties of theology, jurisprudence, philos-
ophy, and medicine, and lasted throughout the colo-
nial period. The University of Lima was founded 
by decree of Charles V in 1551 in the monastery of 
the Holy Rosary, renamed University of the Dominicans 
until 1571, when, being confirmed by 
Pope Pius V, it passed into the hands of seculars. 
The Dominicans still continued, however, to occupy 
posts of honour. For centuries the university 
exercised an influence that spread over all the colonies 
of Spain in South America, and many eminent men 
taught there, among whom Pedro Peralta and the French savant, Godin, were 
among its professors in the eighteenth century, while 
such men as the poets Ona, Castellanos, and Olmedo, 
and the first American bibliographer, Leon Pino, 
were among its students. The faculties of the univer-
sity included theology, jurisprudence, philosophy, 
literature, and, for a time, the language of the Incas. 
The next in importance of the Peruvian universities 
was that of Cuzco, founded, in 1568, as the University 
of San Antonio Abad. In the seventeenth century 
the University of Guantambo in Peru was established 
with the same faculties as that of Cuzco. In 
the meantime, university studies had been inaugurated 
at Quito with the establishment, in 1558, of the 
University of San Ignacio. In the seventeenth century, 
under the supervision of the Dominicans, was 
that of Cuzco. In

until Santiago should possess a public university. The faculties included logic, history, mental philosophy, physics, mathematics, canon law, and theology. In the meantime, as early as 1621, the Jesuits had obtained from Pope Gregory XV the Bull “In eminenti” which granted the privilege of conferring degrees for ten years. This privilege was renewed by Urban VIII for another ten years, and finally granted without limitation in 1634. There were thus two pontifical universities in Santiago. Finally, in the first half of the eighteenth century, Santiago was deprived of its colleges by the decree of 1728. established as the one Peruvian University to-day in general is rather practical than theoretical and classical, much stress being laid upon such studies as engineering and others of a practical nature.

IV. United States—A Columbia University, Portland, Oregon, formerly known as Portland University, is located on the east bank of the Willamette River in northern Portland, and is conducted by the Congregation of Holy Cross, whose mother-house is at Notre Dame, Indiana. In 1898 Portland University, conducted by a local Methodist association, failed and was bought up by the Jesuits, who in 1901 the buildings were unoccupied. In 1901 the school buildings and property of this institution were acquired by Most Reverend Alexander Christie, D.D., Archbishop of Oregon City. For one year the school, now called Columbia University, was conducted by the diocesan clergy. In 1902 Archbishop Christie appealed for teachers to Rev. J. A. Zahn, then provincial of the Congregation of Holy Cross, who at once sent some of his religious to take charge of the new institute. In 1909 the university was incorporated under the laws of Oregon, and empowered to teach collegiate and university courses and to confer certificates, diplomas, honours, and degrees in the arts, sciences, philosophy, literature, history, and other branches. To meet the need of a thorough preparatory school in the North-West an academic department was founded at Columbia. The first faculties organized were those of arts and letters and science. To-day, besides the college department and preparatory school, Columbia has chairs of philosophy, history and economics, mathematics, languages, and other branches of the University. Rev. E. P. Murphy, of Portland, was chosen as first president; Rev. Michael Quinlan, C.S.C., and Rev. Joseph Gallagher, C.S.C., were his successors. At present (1912) about two hundred students are registered. The faculties are made up of twenty professors including a few laymen. The erection of
Christie Hall, recently, has made accommodatations for an additional one hundred and fifty students.

J. C. McGinny.

B. De Paul University, Chicago, is the outgrowth of St. Vincent's College, which opened in Sept., 1898. The university was incorporated, 24 Dec., 1907, by ten Vincentian priests and five Catholic laymen, on the usual collegiate studies. De Paul offered, at the time of incorporation, courses in mechanical, civil, and electrical engineering, also special work in science. Thirteen priests and six laymen constituted its faculty. The origin of St. Vincent's College may be traced to the desire of Archbishop Feehan to have a Catholic institution for young men on the "North Side of Chicago," and it had been here for twenty years, and the very Rev. T. J. Smith, C.M., with three of his priests, became incorporated as St. Vincent's College in June, 1898. Among the first professors were: Rev. Thomas Finney, C.M., T. F. Levan, C.M., P. A. Finney, C.M., J. Murray, C.M., M. Le Sage, C.M., P. H. McDonnell, C.M., and D. J. McHugh, C.M. In June, 1899, Rev. P. V. Byrne, C.M., became president. A man of high ideals, he soon desired to enlarge the educational work, and was warmly seconded by Rev. J. A. Nuelle, C.M., prefect of studies. Engineering courses were accordingly begun in Sept., 1896. No expense was spared in equipping for scientific purposes the building erected the following year. Professors in studies opened in July, 1910, the very Rev. F. X. McCabe, C.M., LL.D., became rector of De Paul University. With the approval of Archbishop Quigley, De Paul entered a new field in 1911, that of enabling women to gain credits and university degrees. The summer school of 1911 was attended by one hundred sisters and lay teachers. Twice this number was present the next year. The students numbered 550 in 1911. The faculty includes sixteen Vincentian priests, and almost the same number of laymen. In the spring of 1912 the Illinois College of Law became the Law Department of De Paul, and library and classes were removed to the university buildings; 150 students were thus added.

Dane. J. McHugh.

C. Fordham University developed out of Saint John's College; founded by Bishop Hughes upon the old Rose Hill Farm at Fordham, then in Westchester County, and formally opened on St. John the Baptist's Day, 24 June, 1841. This same year the theological seminary of the New York diocese was moved from LaFargeville, Jefferson Co., to Fordham. In April, 1846, an act of incorporation passed by the New York Legislature granted it the power to confer such literary honors, degrees or diplomas as are usually granted by any university, college or seminary of learning in the United States. In June, 1846, the Fathers of the Society of Jesus purchased the property from the diocese. The first Jesuit president was the Rev. Augustus Thebaud who, with other members of the early Jesuit faculty, came from St. Mary's College, Marion County, Kentucky. St. Mary's was practically transferred to Fordham, and, as it had been incorporated in 1820 with all the powers of a university, the history of the present college must be considered to begin with its foundation in that year. Under such presidents as Fathers Thebaud, Larkin, Teller, Doucet, and Tissot, S.J., the college rapidly gained in attendance. In the early fifties there were six hundred students. During the Civil War, but in the year 1860-70 there were 257. After a phase of less attendance in the late seventies, there were 327 in 1890 and 1890. The number rose to 500 in the early part of the present decade.

Many Fordham students of the early times reached distinction. Among them were: John La Farge the painter; Ignatius Donnelly, the author; John R. G. Hassard; the MacMahon brothers, James, Arthur, and Martin, two of whom died nobly in the Civil War, while the third, though badly injured, survived for distinction in the New York City. Thomas B. Connery for many years editor-in-chief of the "Herald"; Gen. James O'Brien; Judges Morgan O'Brien, Amend, Hendricks, of the Supreme Court; and many well-known lawyers, Anthony Hirst of Philadelphia, Philip Van Dyke, and William B. Moran of Detroit, the last on the Supreme Bench of Michigan at his death; John A. Mooney of New York, a well-known writer; Ignatius and Thomas McMurties, of Mexico, and Michael F. Dooley, of Providence, bankers. Many of Fordham's brightest students have entered the clergy and reached positions of great influence. Among them are Cardinal Farley, Bishop Holohan, Bishop Rosemans of Columbus, Monsignor Van Dyke (Detroit), O'Connor (Charleston), Lynch (Utica), Mooney (New York), and many distinguished Jesuits.

On 21 June, 1904, with the consent of the regents of the University of the State of New York, the board of trustees of St. John's College, during the presidency of Father (now Bishop) John Collins, authorized the opening of a school of law and a school of medicine. The law department was opened until, in 1911, there were 230 on its rolls. The university now (1912) numbers 548 students under 124 professors, distributed as follows: law, 221 students, 12 professors; medicine, 164 students, 96 professors; academic department, 160 students, 16 professors. The Fordham University Press, whose historical publications have a wide diffusion, completes the university organization.

Jas. J. Walsh.

D. Loyola University, Chicago, is the outgrowth of St. Ignatius College, founded by the Jesuits in 1850 for the higher education of the Catholic youth of Chicago, and empowered by the Legislature of Illinois (30 June, 1870) to confer the usual degrees in the various faculties of a university. On 21 November, 1899, Loyola University was chartered and St. Ignatius College became the department of arts and sciences. The law department was established in September, 1908, and is now located in the centre of Chicago's business district. The engineering department opened September, 1911, with courses in civil, electrical, mechanical and chemical engineering. The medical department was founded in 1885 and became a part of the university in June, 1908. The pharmacy school has won its place in the recognized institutions of the country. The private library of the institution, consisting of 47,000 volumes, is meant primarily for the use of the faculty and the allied schools.

A. J. Burrows.

E. Loyola University, New Orleans, Louisiana, is (1912) the only Catholic university in what is popularly designated "The Old South." From a small college of arts and sciences founded by the Jesuit Fathers in 1817, it has grown into an institution with plans to become a great American university. The cornerstone of Marquette Hall, the main building of the university group, was laid, 13 November, 1910, by Archbishop Blenk, assisted by fourteen members of the American hierarchy. On the same day ground was broken for the Louisa C. Thomas Hall by the Apostolic delegate, Monsignor Nelligan. The present chairman of the board of trustees, Father Marquette will always bear witness to the generous cooperation of the clergy and laity of the Archdiocese of New Orleans, who, on the invitation and under the leadership of the Rev. Albert Biever, S.J., president of Loyola College, formed an association on 17 February, 1906, known as "The Marquette Association for Higher Education", which made it its aim to
arouse interest in Catholic education while soliciting the financial aid necessary for the upbuilding of a well-equipped Catholic University. The Louise C. Thomas Hall has its name from the devoted lady who subscribed $50,000 towards its erection. The beauty and nobility of her gift is expressed in the stately architecture, which combines artistic qualities with usefulness. Both structures, connected by a graceful arcade or cloister, are in the Tudor Gothic style and stand on the beautiful site which fronts St. Charles Avenue, where that handsome driveway passes Audubon Park.

P. A. Ryan.

F. Marquette University, Milwaukee, Wisconsin, is an outgrowth of Marquette College, which was opened in 1851; but it had been planned by Right Rev. John Martin Henni as far back as 1850. In 1848, while in Europe, the bishop met the Chevalier J. G. de Boeye, of Antwerp, who gave him $16,000 to help to found an institution under the care of the Jesuits. The foundation was to be made in the bishop's diocese, in the far North-West, a country first visited by the missionaries Alonzo and Marquette. In 1853 Rev. P. J. de Smet, S.J., and Rev. F. X. de Coen, S.J., arrived at Milwaukee, commissioned by the Provincial of Missouri to co-operate with the bishop in his plans for the proposed institution. St. Gall's parish was placed under the care of the Jesuit Fathers. Two years later, Rev. Stanislaus P. Lakumiere, S.J., commenced the St. Aloysius Academy, which was the school of St. Gal's. It was reorganized in 1864, under the name of St. Gal's Academy, under the management of Rev. T. J. Kuhlman, S.J. This school existed until 1872, when it was also abandoned. The project of establishing a college had not been relinquished, and in 1864 a charter was obtained by a special act of the legislature. Marquette College was chartered as such in 1864. The first degree of the college was conferred for the first time in 1887, and in 1906 Marquette celebrated its silver jubilee, the college had conferred the degree upon 186 students, Master of Arts on 38, and Bachelor of Science upon one.

In 1907, owing to the munificence of the late Robert A. Johnston, of Milwaukee, who built and donated the Johnston Avenue, between Eleventh and Twelfth Streets, Marquette College was enabled to enlarge its usefulness. The charter was amended by the legislature, and the college became a university. That year it affiliated temporarily with the Milwaukee Medical College, which comprised a school of medicine, a school of dentistry, and one of pharmacy. In 1908 the Milwaukee Law School became the Marquette University College of Law. In the same year the College of Applied Sciences and Engineering was opened. In 1910 the Robert A. Johnston College of Economics was organized. It consists of two schools; one of business administration, and another of journalism. In 1911 the Marquette Conservatory of Music was established.

J. E. Cupis.

G. Niagara University, situated near Niagara Falls, New York, is conducted by the Vincentians. It was founded by Rev. John J. Lynch, C.M., later first Archbishop of Toronto, and was chartered by the Legislature, 20 April, 1863, as the Seminary of Our Lady of Angels. The original building was completely destroyed by fire in December, 1864; in April, 1865, one wing of the present building was built, and in 1869, the structure was completed. On 7 August, 1868, the Regents of New York State erected the Seminary of Our Lady of Angels into a college by the name of Niagara University. A medical school was established at Buffalo, and during its existence (1853-98), it did much to further the study of medicine, and inaugurated the movement which has resulted in requiring four years' study for the doctor's degree in New York State. In 1868 the Niagara medical school was merged into that of the Buffalo University, as was also, in 1891, the Niagara law school. Niagara University has now complete seminar, college, and high school departments, embracing courses in philosophy, higher mathematics, science, languages, commerce, and music. The university possesses over 300 acres of ground, a museum, laboratories for scientific work, and a library, containing about 50,000 volumes, begun by Bishop Timon, C.M.

Grace, Niagara Index (1870-1912); Golden Jubilee Volume.

Edward J. Walsh.

H. St. John's University, the legal title of a Catholic boarding-school at Collegeville, Minnesota, conducted by the Benedictine Fathers, was chartered by Minnesota in 1857 by the late Archbishop Boniface Wimmer, then Abbot of St. Vincent's Abbey at Beatty, Pennsylvania. Early in 1856 Abbot Wimmer sent Demetrius de Marogna, a capitular of St. Vincent's Abbey, to Minnesota to establish a monastic and an educational institution in what was then the Diocese of St. Paul, whither the Benedictines had been invited by Bishop Cretin, at the instance of the Indian missionary Father Pierz. De Marogna was accompanied by two Benedictine clerics, Cornelius Wittmann and Bruno Riss, and two lay brothers. The institution was originally called St. John's Seminary, which name was changed to St. John's College of the State Legislature, 17 Feb., 1883. In March, 1869, the school was empowered by the State to confer all college and university degrees, and on 16 June, 1878, Leo XIII authorized Abbot Alexius Edelbrock, then president of the University, to confer the degree of doctor in philosophy, theology, and canon law. The institution consists of the Seminary, School of Arts and Science, a high-school, a school of commerce and a preparatory school.

Among its presidents deserving of mention are: Rupert Seidenbusch (1867-75), who in 1875 was appointed vicar Apostolic of the newly-created Vicariate of Northern Minnesota, and titular Bishop of Halia (d. 5 June, 1895); Alexius Edelbrock (1875-1912), who built the buildings and the beautiful church (d. 18 May, 1908, as rector of St. Anselm's Church, New New York City), Bernard Lencznar (1890-94), who made the theological course a model of its kind (d. 7 Nov., 1894). Since 1894, under the presidency of Peter Engel, the university has grown rapidly. The buildings include the main university building, the science hall, the library, the observatory, the gymnasium, and the infirmary. The faculty is composed of 42 professors and instructors, all of whom, except the physical instructor, are Benedictines and members of St. John's Abbey. The number of students during the year 1911-12 in all departments was 441.

Unyanyembe, Vicariate Apostolic of, in German East Africa, separated from the Vicariate Apostolic of Nyanza by a Decree of Propaganda, 30 December, 1886. Its limits, as fixed on 10 December, 1886, were on the N. the Vicariate Apostolic of Southern Nyanza; on the S. a line drawn from Lake Manjara (36° E.) along the mountain ridges to the N. W. of Ugaga; on the S., the northern limits of Ujani, Uganda, Ugetta, Uvenza, and Ujji; on the W. Lake Tanganyika and the eastern boundary of the Congo Free State to the village of Ruanda. This
district was originally included in the Vicariate of Tangankica; in 1879 R. P. Ganaehan of the White Fathers penetrated this hitherto unknown region and endeavoured to settle at Tabora, but was unsuccessful; two years later R. P. Guillet succeeded and opened an orphanage there, which was shortly afterwards transferred to Kipalapala one league distant; in 1884 R. P. Lourdell settled at Djinatagana, but the post was abandoned on 13 March, 1885. On 11 January, 1887, the mission of Uvanyembe was separated from Tangankica, with R. P. Girault as superior of the vicariate; on 23 August, 1887, Mgr Charbonnier was consecrated bishop in the Kipalapala orphanage chapel by Mgr Livinichae of Uganda; this was the first episcopal consecration in Tanganyika. The post at Kipalapala was destroyed in 1889 by the natives. Two years later it was restored, and another was opened at Uchirombo. Towards the close of 1897 five Sisters of Notre-Dame d’Afrique arrived at Uchirombo. In 1900 there were in this mission 20 priests, 6 nuns, 49 catechists, 1812 neophytes, 6000 catechumens, and 150 children in the schools. A German priest, Father Mwanga, was so impressed by the work of the Catholic missionaries that he presented his estate at Tabora to the vicar Apostolic to found a school and hospital. The present and first vicar Apostolic, Mgr François Gerboun, of the White Fathers, born in 1817 and consecrated titular Bishop of Turbatbo in 1857, resides at the provincial house that he built for the Jesuit fathers. He has four brothers; 6 nuns; 72 catechists; 20 schools with 900 pupils; 11 hospitals; 5 leper houses; 17 orphanages with 325 children rescued from slavery; 3,000,000 infidels; 3678 Catholics; 2889 catechumens.

A. A. MacErlane.

Upper Nile, Vicariate Apostolic of, separated from the mission of Nyanga, 5 July, 1894, comprised the eastern portion of Uganda, that is roughly east of a line from Fauerwa on the Nile (about 2° 13’ N. lat.), northeast to the Kaffa mountains, and of a line south from Fauerwa past Munyenyi near Lake Victoria Nyanza to 1° 8’ lat. Of the native tribes, the chief are the Kauluma and the Himbuti. The Kauluma are agricultural. The Himbuti are arboreal, and live largely on importations from the southern districts. The Kauluma were arrived in Uganda in 1878. Father Lourdell obtained leave from King Mtesa to enter; on 26 June, 1879, the fathers reached Rongega.

On Easter Saturday, 27 March, 1880, the first catechumens were baptized; two years later the Arabs induced Mtesa to expel the missionaries; they returned under his successor, Djinatagana, July, 1882. He died very suddenly, and the party of Arabs stirred up the king to begin a persecution. Joseph Mka, chief of the royal pages, was the proto-martyr; on 26 May, 1886, thirty newly baptized Catholics, on refusing to apostatize, were burnt to death; soon more than seventy others were martyred. Then the Arabs plotted to depose Mwanga, but the Catholics withstood them; Mwanga upheld the White Fathers. The Arabs thereupon expelled the missionaries, who, however, returned in 1889; Father Lourdell endeavoured to induce Mwanga to submit to the advancing British Company; on 12 May, 1890, worn out by his labours, the king died. The confrères continued to reap a rich harvest, but were opposed by the Arabs. Lourdell settled at Djinatagana, but the post was abandoned on 13 March, 1893. Uganda passed under the protection of the British Government and the Church gained comparative peace. Mgr Livinichae, now Superior General of the White Fathers, obtained the erection of the eastern portion of Uganda into a separate vicariate under the care of the English congregation of Foreign Missions, Mill Hill, London.

The first vicar Apostolic was Mgr. Henry Hanlon, b. on 7 Jan., 1802, consecrated titular Bishop of Teos in 1804, went to Uganda in 1855; after labouring there for seventeen years, he returned to England for the general chapter of his Society, and retired from active missionary work. He was succeeded (June, 1912) by Mgr. John Biersman, titular Bishop of Gargar. Coming to Uganda in 1860 he proved himself a valuable auxiliary to Mgr. Hanlon. The episcopal residence is at Mengo, Buganda, near Entebbe, capital of Uganda. On the mission was a mission of the Franciscan Sisters of Mary, 13 nuns; 12 schools with 1649 pupils; and about 20,000 Catholics. The missionaries have recently compiled and printed in Uganda, a grammar, phrase-book, and vocabulary of a Nilotic language, Dho Levo, spoken in Kivuondo. The language had not previously been reduced to writing. Some primers, catechisms, and prayer-books have also been printed in Dho Levo.

dioceses, and the founding of seminaries and parishes. The congress maintained an unbroken silence; moreover, it disposed of the church lands on the recovered left bank of the Rhein. As the congress also divided the territories of the primate Dalberg, after its session closed the Church was poorer than before. In vain Dalberg sought through his representative Wes-

sels to cut the congress, and afterwards at the Due-

ty of the Febronianism of various their urged Wtirtemberg, Hesse, and Jenknecht, at Mainz and Freiburg. The desire of the pope to have the archiepiscopal See of St. Boniface re-established at Mainz failed of accomplishment, on account of the opposition of Württemberg and Nassau. In March, 1821, the draft of an organization and the documents which designated the amounts necessary for the endow-

ments of the archbishopric of Freiburg, and the conditions of these documents Pius VII issued, 16 Aug., 1821, the Bull of circumscription "Provida solleque", sup-

pressing the Bishops of Constance and the provost-

ship of Eichingen, and canonically erecting the church Province of the Upper Rhein with the dio-

ceses already mentioned.

The Holy See, the instrument of these proceedings by Vice-Gen. von Kempt, who was under consideration as Bishop of Fulda, rejected on 13 June, 1823, both the candidates nominated for bishops and the whole of the "Church Pragmatic". Negotiations were again broken off. However, the necessity, which was every day more apparent, of re-establishing neutral church relations and the lack of agreement among the governments, led to open new and confidential negotiations for itself with the Holy See. The results of these negotiations were four propositions which were sent as the ultimatum of the Holy See to the Government of Baden on 8 Dec., 1824. These propositions regulated the method of filling the archiepiscopal see, the first and later appointments of the metropolitan chapter, and the free exercise of ecclesiastical jurisdiction according to the canons of the Church. Baden accepted these propositions, with some changes conceded by the pope. Divided into six articles these propositions were communicated after 6 July, 1825, to the other courts that had negotiated with the Holy See. The united governments accepted the articles, 1 Aug., 1826, and communicated their acceptance to the pope, 4-7 Sept., demanding, however, the omission of the articles which treated of the endowment of the seminaries and guaranteed the freedom of the admin-

istration of the Church in the state. These reservations these reservations of the governments did not imply the validity of the principles of the "Church Pragmatic", and, as the governments made no reply to the explanations which the pope gave
to these points, the pope assumed that the doubts of the Governments over these points had disappeared. Consequently on 11 April, 1827, he issued the supplementary Bull, "Ad Dominici gregis custodiam", which incorporated the articles in their entirety. Upon this the two Bulls "Praefidia sollemnis" and "Dominici gregis custodiam", were published in full by the Governments of Baden, Hesse-Darmstadt, Hesse-Cassel, Württemberg, and Nassau. The Bulls received the approval of the Governments only so far as such have for their object the formation of the ecclesiastical province of the Upper Rhine, the circumcision, equipment, and foundation of the four episcopal chapters, also the filling of the archiepiscopal see, the episcopal sees, and the offices of the cathedral foundations.

After the Bulls had been proclaimed by the Governments, the new bishops were elected. After the Government of Baden had dropped its former candidate, Wesenberg, the first archbishop was Bernhard Boll, parish priest of Mü Init, Bishop of Limburg was William Von Rottenburg, J. B. Keller; of Fulda, Rieger; of Mainz, Burg. The ecclesiastical province of the Upper Rhine was now established, and the episcopal sees filled, but satisfactory relations between Church and State had not yet been attained. The Governments did not abandon their plan to extend the rights of the State in ecclesiastical questions as far as possible. No election could be expected from most of the new bishops, who were either weak men or consignants of the Governments. Consequently, on 30 Jan., 1830, the Governments issued jointly an "Ordinance respecting the exercise of the constitutional right of the State to protect and supervise the Catholic national Church", containing thirty-nine articles, which were essentially only a revised form of the "Church Pragmatic" of Frankfurt. The pope protested at once, although in vain. The Bishop of Fulda and his cathedral chapter also courageously opposed the ordinance, and obtained the mitigation of the most severe regulations. The bishops of the other dioceses accepted at first without opposition the publication of the original edict of the sovereign. Still, in their dioceses also there were later violent struggles between Church and State.

**Uppsala, Ancient See of.**—When St. Ansgar, the Apostle of the North, went to Sweden in 829 the Swedes were still heathen and the country contained heathen temples for the worship of idols. One of the most celebrated of the latter was the temple at Upsala in what is now called Old Upsala, the centre of idolatrous worship not only for Sweden but for all Scandinavia. Even after Christianity had spread through Sweden, heathen sacrifices were still maintained at Upsala. The "Bishops' Chronicle", written by Adam of Bremen in the year 1122-75, "The Upsalans have a well-known heathen temple called "Upsala", and adds, "Every ninth year, moreover, a great feast is celebrated at Upsala, which is observed in common by all the provinces of Sweden. None is permitted to avoid participation in the feast.... More horrible than any punishment is that even those who have become Christians must purchase exemption from participation in the feast. The sacrifices are made thus: Nine heads are offered for every living creature of the male sex. By the blood of these the gods are appeased. The bodies are hung up in a grove not far from the temple. Dogs and horses may be seen hanging close by human beings; a Christian told me he had seen seventy-two bodies hanging together."

An episcopal see was established at Old Upsala. One of the bishops was St. Henry, who took part in the Crusade to Finland led by St. Eric and suffered martyrdom there in 1157. The bishops of Sweden were first suffragans of the Archdiocese of Hamburg-Bremen, of which see St. Ansgar was archbishop when he died. Afterwards the Swedish bishops were suffragans of the Archbishop of Lund, Primate of Scandinavia. In 1152 Cardinal Nicholas of Alba, later Pope Adrian IV, visited Sweden and held a provincial synod at Linköping. He had been commissioned to establish an independent Church province in Sweden, but the matter was deferred, as the Swedes could not agree upon the see of the archbishop. However, in 1164, Pope Alexander III established a separate ecclesiastical province of Sweden with the see at Upsala. The suffragans were the Bishops of Skara, Linköping, Strängnäs, and Västerås; at a later date the dioceses of Wexio and Abo in Finland were added. The first Archbishop of Upsala was Stephen, a Cistercian monastery of the brothered monastery of Alvastra. Cardinal William of Salisa came as legate to Sweden during the archiepiscopal see of Jarler, a Dominican monk (1235-55). The legate had been commissioned, among other things, to establish cathedral chapters wherever such were lacking, and to grant them the exclusive right of electing the bishops. Another important matter which the legate had been ordered to carry out was the enforcement of the law of clerical celibacy. At a provincial synod held at Skänninge in 1248 under the presidency of the cardinal, the rules as to celibacy were made more severe. The pious and energetic Archbishop Jarler and his successor Laurentius (1257-67), a Franciscan, constantly strove to elevate the clergy and to enforce the law of celibacy. A century later the greatest of all Swedish, St. Bridget (d. 1373), laboured zealously for the enforcement of the same law.

A new era arose in the history of the archdiocese when Archbishop Folke (1274-77) transferred the see from Old Upsala to Aros, a town near by on the Fyris which was given the name of Upsala. This change was approved by the pope, the king, and the bishops. The relics of the national saint, St. Eric, were also transferred to the new see. The cathedral of Upsala, the most important church of Sweden and the largest in Scandinavia, was built by the French
architect Etienne de Bonmille in 1287. It was a masterpiece of the Gothic style, and is a monument of what Catholic art and Catholic self-sacrifice were able to create under the leadership of zealous archbishops and prelates. The labours of the archbishops extended in all directions. Some were zealous pastors of their flocks, such as Jarler and others; some were distinguished canonists, such as Birger Gregersen (1367-83) and Olof Larsson (1335-8); others were statesmen, such as Jons Bengtsson Oxenstierna (d. 1667), or capable administrators, such as Jacob Ulsson Ornäs, tutor to the monastery, and chief of the royal council, patron of art and learning, founder of the University of Upsala, and an efficient helper in the introduction of printing into Sweden. He died in the Catharistic monastery of Mariefred (Mary's Peace) in 1522. There were also scholars, such as Johannes Magnus (d. 1541), who wrote the "Historia descriptio septentrionalibus" and his brother Olaus Magnus (d. 1588), who wrote the "Historia de gentibus septentrionalibus" and was the last Archbishop of Upsala.

The archbishops and secular clergy found active co-workers among the monks. Among the orders represented in Sweden were those of Benedictines, Cistercians, Dominicans, Franciscans (living with the mother-house at Waldstena), Carthusians, etc. The monks not only laboured in things spiritual, but were also the teachers of the people in agriculture and gardening. Still greater credit is due the members of the orders, both men and women, for their services in the intellectual training of the people of Sweden. A Swedish Protestant, Carl Sandburg wrote in his "Historia descriptio septentrionalibus" that the monks were almost the sole bond of union in the Middle Ages between the civilization of the north and that of southern Europe, and it can be claimed that the active relations between our monasteries and those in southern lands were the arteries through which the higher civilization reached our country. In a beneficial history of the Catholic Church were forgotten in the stormy days of the Reformation, but in the present era they have been once more recognized by more dispassionate investigators. Dr. Claes Annerstedt, the historian of the University of Upsala, says: "One of the finest results of modern research is that the highly important labours of the Roman Church have received proper recognition. In the universities of Sweden there are given the important researches and discussions on the sources of modern Christians in the scriptural and apocryphal origin of the Church in the presence of the Christian missionary who is a graduate of the University of Upsala, such as the theologian and historian, Dr. Claes Annerstedt.

UPPSALA

This led Archbishop Jakob Ulsson, primate of the Swedish Church (1470-1515), a man who did much for Sweden, to seek from the pope the privilege of founding a university in the summer of 1478, that the envoy of the archbishop and the royal council, Canon Ragvald Ingemundi, returned from Rome bringing with him from Pope Sixtus IV a Bull, dated 27 February, 1477, granting the charter. The university was to be modelled on that of Bologna, to have the same privileges and liberties, and to include the faculties of theology, canon and civil law, medicine, and philosophy. The Archbishop of Upsala was made chancellor and to grant the degrees of bachelor, licentiate, doctor, and master. After receiving the Bull, the archbishop and his six suffragans, the administrator of the kingdom, Sten Sture I, and the twenty-three members of the royal council of Strengths proceeded to the actual founding of the university on 2 July, 1477. The lectures began in the autumn of the same year, and the university developed and flourished greatly.

Religious schism appeared at the university during the rectorship of Laurentius Petri, who had studied at Wittenberg under Luther, and who, as the first Protestant Archbishop of Upsala, introduced the Reformation into Sweden. In 1539, when the Pro"
UBRAN, 209

(Urzel, op. cit., 552), under the name of Stauros; and about 940, in the "Notitia" of Constantine Polyphogenus (Georgii Cyprii, ed. Gelzer, "Descriptio orbis romanii", 63). Stauros is not a substitute for Vernopolis, but rather the name of a neighbouring locality. Ramsay (Asia Minor, 247) and Anderson (Studia Pontica, 25) say that Vernopolis is the Byzantine transliteration of the Tabula Peutingeri (X, 1) and by Ptolemy (v, 4, 7) under the altered name of Phubagina. The ruins of Evagia-Vernopolis were discovered a little to the south-west of Keune, a nabi in the sandpits of Yuzgal, vihavet of Angora.

Müller, ed. Door, Notes on Ptolemy, i, 832; Ramsay, Asia Minor (London, 1880), 247 sqq.; Anderson, Studia Pontica (Bras., 1903), 25-29; Pacy-Wisowsk, Real-Encyclopedia der klassischen Altertumswissenschaft (Ed. cit., s. v. Evagia.)

S. Valliè. Urban. I, Pope (222-30), date of birth unknown; d. 23 May, 230. According to the "Liber Pontificalis" (ed. Duchesne, i, 143), Urban was a Roman and his father's name was Pontianus. After the death of Callistus I (11 October, 222) Urban was elected Bishop of Rome, of which Church he was the head for eight years, according to Eusebius (Hist. eccl., VI, 13). The document called the Liberian catalogue of popes (Duchesne, loc. cit., 4-5) puts the beginning of his pontificate (222) at the beginning of the year 230. The dissolution produced in the Roman Church by Hippolytus (q. v.) continued to exist during Urban's pontificate. Hippolytus and his adherents persisted in schism; it was probably during the reign of Urban that Hippolytus wrote his "Philosophumenon", a work which he attacked Pope Callistus severely. Urban maintained the same attitude towards the schismatic party and its leader that his predecessor had adopted. The historical authorities say nothing of any other faction troubles in the life of the Roman Church during this era. In 222 Alexander Severus became Roman emperor. He favoured a religious eclecticism and also protected Christianity. His mother, Julia Mammea, was a friend of the Alexandrine teacher Origen, whom she summoned to Antioch. Hippolytus dedicated his work on the Resurrection to Origen. The result of the favourable opinion of Christianity held by the emperor and his mother was that Christians enjoyed complete peace in essentials, though their legal status was not changed. The historian Lampadius (Alex. Sever., c. xxii) says explicitly that Alexander Severus made no trouble for the Christians: "Christiannis esse possit est," Undoubtedly the Roman Church experienced the happy results of these kindly intentions and was un molested during this emperor's reign (222-35). The emperor even protected Roman Christians in a legal dispute over the ownership of a piece of land. When they wished to build, he ceded to a piece of land in Rome which was also claimed by the Hieronymian monks, the matter was brought before the imperial court, and Severus decided in favour of the Christians, declaring it was better that God should be worshipped on that spot (Lampridius, "Alex. Sever.", c. xlix).

Nothing is known concerning the personal labours of Pope Urban. The increase in extent of various pilgrimages towards the Via Appia and Via Latina, when their shrines were renewed, proves that Christians grew largely in numbers during this period. The legendary Acts of St. Cecilia connect the saint, as well as her husband and her brother-in-law, with Urban, who is said to have baptized her husband and her brother-in-law. This narrative, however, is purely legendary, and has no historical value whatever; the same is true of the Acts of the martyrdom of Urban himself, which are of still later date than the legend of St. Cecilia. The statement of the "Liber Pontificalis" (ed. cit.), that Urban concurred many by his sermons on the Acts of St. Cecilia. Another statement on the same authority, that Urban had ordered the making of silver liturgical vessels, is only an invention of the later editor of the biography early in the sixth century, who arbitrarily attributed to Urban the making of certain vessels, including the patens for twenty-five titular churches of his own time. The date of Urban is unknown, but, judging from the peace of his era, he must have died a natural death. The "Liber Pontificalis" states that he became a confessor in the reign of Diocletian; the date added is without authority. His name does not appear in the "Deposito Episcoporum" of the fourth century in the "Kalendarium Philoponianum".

Two different statements are made in the early authorities as to the grave of Urban, of which, however, only one refers to the pope of this name. In the Acts of St. Cecilia and in the "Liber Pontificalis" it is said that Pope Urban was buried in the Catacomb of Prætestatus on the Via Appia. The Itineraries of the seventh century mention the grave of an Urban who is called Martyr and whose name all the martyrs all mention the grave of an Urban in connexion with the graves of several martyrs who are buried in the Catacomb of Prætestatus. One of the Itineraries gives this Urban the title "Bishop and Confessor" (De Rossi, "Roma sottoterranea", i, 180). Consequently, from the fourth century, all Roman traditions concerning this pope and the graves of the martyrs all mention the grave of an Urban in connexion with the graves of several martyrs who are buried in the Catacomb of Prætestatus. In excavating a double chamber in the Catacomb of St. Callistus, De Rossi found, however, a fragment of the lid of a sarcophagus that bore the inscription OTPBANOC (It runs eberb). He also proved that in the list of martyrs and confessors buried in the Catacomb of St. Callistus, in one of the lists prepared by Sixtus III (432-40), the name of an Urban is to be found. De Rossi (op. cit., II, 52 sqq., 151 sqq.) therefore came to the conclusion that Urban was the pope, while the saint of the same name buried in St. Prætestatus was the bishop of another see who died at Rome and was buried in the Catacomb of St. Callistus. Most historians agree with this opinion of the great archaeologist, which, however, is confirmed by the Acts of St. Callistus and the lettering of the above-mentioned epitaph of an Urban in St. Callistus indicates a later period, as a comparison with the lettering of the papal epitaphs in the papal crypt proves. In the list prepared by Sixtus III and mentioned above, Urban is not given in the succession of popes, but appears among the foreign bishops who died at Rome and were buried in St. Calli-
grave of Pope Alexander was on the Via Nomentana, and the grave of Pope Urban on the Via Appia in the Catacomb of Prætextatus. Consequently 25 May is the day of the burial of Urban in this catacomb. As the same martyrology contains under date of 19 May (XVI kal. Iun.) a long list of martyrs headed by the two Roman martyrs Calceatus and Partenius, who are buried in the Catacomb of St. Callistus, and including an Urban, this Urban is apparently the foreign bishop of that name who lies buried in the same catacomb.

\[\text{\ldots} \]

Urban II (Otho, Otto or Odo of Lagery), Blessed, 1088–1099, b. of a knightly family, at Châtillon-sur-Marne in the province of Champagne, about 1042; d. 29 July, 1089. Under St. Bruno (afterwards founder of the Carthusian order) Otho studied at Reims where he later became canon and archdeacon. About 1070 he retired to Cluny and was professed there under the great abbot St. Hugh. After holding the office of prior he was sent by St. Hugh to Rome as one of the monks asked for by Gregory VII, and he was of great assistance to Gregory in the difficult task of reforming the Church. Of such importance was the Bula of Otho or Gregory's chief adviser and helper. During the years 1082 to 1085 he was legate in France and Germany. While returning to Rome in 1083 he was made prisoner by the Emperor Henry IV, but was soon liberated. Whilst in Saxony (1084–5) he filled many of the vacant sees with men faithful to Gregory and deposed those whom the pope had anathematized. After holding a synod at Quedlinburg in Saxony in which the antipope Guibert of Ravenna and his adherents were anathematized by name, Victor III had already been elected when Otho returned to Rome in 1085. Otho appears to have opposed Victor at first, not through any animosity or want of good will, but because he judged it better, at that critical a time than Victor should claim the honour he was unwilling to retain. After Victor's death a summons was sent to as many bishops of the Gregorian party as possible to attend a meeting at Terracina. It was made known at this meeting that Otho had been suggested by Gregory and Victor as their successor. Accordingly, on 12 March, 1088, he was unanimously elected, taking the name Urban II. He desired to prove his election to the world, and to exhort the princes and bishops who had been loyal to Gregory to continue in their allegiance: he declared his intention of following the policy and example of his great predecessor—"all that he rejected, I reject, what he condemned I condemn, what he loved I embrace, what he considered as Catholic, I confirm and approve." It was a difficult task which confronted the new pope. To enter Rome was impossible. The Normans, on whom together with Matilda he could alone rely, were engaged in civil war. Roger and Bohemund had to be reconciled before anything could be done, and to effect this the pope set out for Italy. He met Roger at Troina, but his demands for submission were rejected. The year following, however, saw peace between the two princes, and Urban's first entry into Rome in November, 1088, is said by some to have been made possible by Norman troops. His plight in Rome was truly pitiable: the whole city practically was in the hands of the antipope, and Urban had to take refuge on the island of St. Bartholomew, the approach being guarded by Pierleone, who had turned the theatre of Marcellus on the left bank of the river into a fortress. Nor was the outlook in Germany calculated to hold out hopes of the triumph of the papal party; its stoutest adherents in the episcopate had died, and Henry was steadily gaining ground. From amidst the poverty and want of his wretched island, Urban launched sentence of excommunication against emperor and antipope alike. Guibert retorted by holding a synod in St. Peter's before which he cited Urban to appear. The troops of pope and antipope met in a desperate battle which lasted three days; Guibert was driven from the city, and Urban entered St. Peter's in triumph. He was now determined to unite his partisans in Italy and Germany. The Countess Matilda had lost her first husband, Godfrey of Lorraine. She was now well advanced in years, but this did not prevent her marriage with Count Eberhard of the House of Welf, whose father, Duke Welf IV of Bavaria, was in arms against Henry. Urban now turned his steps southwards again. In the autumn of 1089 seventy bishops met him in synod at Meli, where decrees against simony and clerical marriage were promulgated. In December he turned back to Rome, but not before he had effected a lasting peace between Roger and Bohemund, and had received their full allegiance. The fickle Romans had again renounced him on the news of Henry's success against Matilda in north Italy, and had surrnoned Guibert back to the city. The latter celebrated Christmas in St. Peter's whilst Urban anathematized him from without the walls. As the year closed Guibert turned an exile about southern Italy. He spent the time holding councils and improving the character of ecclesiastical discipline. Meanwhile Henry at last suffered a check from Matilda's forces at Canossa, the same fortress which had witnessed his humiliation before Gregory. His son Conrad, appalled, it is said, at his father's depravity, and refusing to become his partner in sin, fled to the factions of Matilda and Welf. The Lombard League—Milan, Lodri, Piacenza, and Cremona—welcomed him and he was crowned king in Milan, the centre of the imperial power in Italy. The way was now clear for Urban's entry into Rome, but still the partisans of Guibert held the strong places of the city. This time the pope took up his residence in the fortress of the Frangipani, a fate which had governed faithful to him and which was entrenched under the Palatine near the Church of Sta. Maria Nova. His condition was pitious, for he had to depend on charity and was already deeply in debt. A French abbot, Gregory of Vendôme, hearing of Urban's plight, hurried to Rome "that he might become a sharer of his sufferings and加倍his to the salvation of the Church. For turn for this he was created Cardinal Deacon of Sta. Prisca. Shortly before Easter, 1094, the governor of the Lateran palace offered to surrender it to Urban on payment of a large sum of money. This money Gregory of Vendôme supplied by selling certain possessions of his monastery; Urban entered the Lateran in time for the Paschal solemnity, and sat for the first time on the papal throne just six years after his election at Terracina. But it was no time for tarrying long in Rome. Henry's cause was steadily growing weaker, and Urban hurried north to hold a council at Piacenza in the interests of peace and reform. The unfortunate Praxedis, Henry's second wife, had suffered wrongly who were accused of def.orly of Clement IX, and her cause was heard, Henry not even attempting to defend himself. She was publicly declared innocent and absolved from any censure. Then the case of Philip of France, who had repudiated his wife Bertha and espoused Bertrada, the wife of Fulk of Anjou, was dealt with. Several bishops had recognised the union, but Archbishop Armand of Rouen, who had had the courage to excommunicate Philip for adultery. Both king and archbishop were summoned to the council, and both failed to appear. Philip was granted a further respite, but Hugh was suspended from his office. At this council Urban was able to
broach the subject of the Crusades. The Eastern Emperor, Alexius I, had sent an embassy to the pope asking for help against the Seljuk Turks who were a serious menace to the Empire of Constantinople. Urban succeeded in inducing many of those present to promise to help against Alexius, but no definite step was taken by Urban till a few months later, when he summoned the most famous of his councils, that at Clermont in Auvergne on 11 November, 1095; thirteen archbishops, two hundred and twenty-five bishops, and over ninety abbots answered the pope's summons. The synod met in the Church of Notre-Dame du Port and began by reiterating the Gregorian Decrees against simony, investiture, and clerical marriage. The sentence, which for some months had been threatening Philip of France, was now pronounced, and he was deposed and excommunicated for adultery. Then the burning question of the East was discussed. Urban's reception in France had been most enthusiastic, and enthusiasm for the Crusade had spread as the pope journeyed on from Italy. Thousands of nobles and knights had met together for the council. It was decided that an army should be assembled under the hands of Urban, the kings of Jerusalem and the Churches of Asia from the Saracens. A plenary indulgence was granted to all who should undertake the journey pro solo decimatione, and further to help the movement, the Truce of God was extended, and the property of those who had taken the cross was to be looked upon as sacred. Those who in Asia were in the power of the Saracens, were encouraged to undertake it, and the faithful were exhorted to take the advice of their bishops and priests before starting. Coming forth from the church the pope addressed the immense multitude. He used his wonderful gifts of eloquence to the utmost, depicting the captivity of the Saracen City where Christ had suffered and died—sacred soil to which the blood of their brothers against the enemy of the Christian Faith. Let them—oppressors of orphans and widows, murderers and violators of churches, robbers of the property of others, vultures drawn by the scent of battle—let them hasten, if they love their souls, under their captain Christ to the rescue of Zion. 1) When the pope ceased to speak a mighty shout of Deus lo rat rotae from the three linguages sang. Sanguine hopes had not anticipated such enthusiasm as now prevailed. He was urged repeatedly to lead the Crusade in person, but he appointed Ademar, Bishop of Le Puy, in his stead, and leaving Clermont travelled from city to city in France preaching the Crusade. Letters were sent to bishops who had been remiss to urge them to join the army and to help carry and spread the news of the Crusade all over Europe to arouse enthusiasm. In every possible way Urban encouraged people to take the cross, and he did not easily dispense from their obligations those who had once bound themselves to undertake the expedition.

In March, 1097, the pope held a synod at Tours and pronounced the excommunication of the French king, which certain members of the French episcopate had endeavoured to remove. In July, 1096, the king, having dismissed Bertrada, was absolved by Urban in a synod held at Nimes, but having relapsed, he was again excommunicated by the pope's legate in 1097. Some of the greater prelates of France had now to be brought to submission to the pope, amongst them being the Archbishop of Vienne, who refused to abide by the papal decision regarding the jurisdiction of the Bishop of Grenoble, and the Archbishop of Sens, who had declined to recognize the Archbishop of Lyons as papal legate. After a triumphal progress through France, Urban returned to Italy. At Pisa he met the Patriarch of Constantinople at Lucas, and bestowed the banner of St. Peter upon Hugh of Vermandois. It is said by some that this crusading host enabled Urban to enter Rome, which at this time was again held by the antipope. If this was so, the entry appears, according to the statement of an eyewitness, to have been effected without fighting. No doubt the presence of well-disciplined troops, under the most distinguished knights of Christendom, struck terror into the wild partisans of Guibert. But Urban's final triumph over the "imbecile" was now assured. Northern and central Italy were in the power of Ambrozed and Conrad, and Urban was at last forced to leave Italy. The papacy was held in the Lateran in 1097, and before the end of the year Urban was able to go south again to solicit help from the Normans to enable him to regain the Castle of S. Angelo. The castle capitulated in August, 1098. He was now enabled to enjoy a brief period of repose in the life of incessant activity which was to ensue. In 1098 Urban's power, though strengthened by Count Welf, who had forsaken Matilda, was strong enough to be any longer a serious menace.

In October, 1098, the pope held a council at Bari with the intention of reconciling the Greeks and Latins on the question of the filioque; one hundred and eighty bishops attended, amongst whom was St. Anselm of Canterbury, who had fled to Urban to lay before him his own case. Urban, however, gave no answer. His friendship with the Normans was strengthened by the appointment of Count Roger as papal legate in Sicily, where the Church had been almost swept away by the Saracens; the antipope was within his Archbishopric of Ravenna, and Henry's power, though strengthened by Count Welf, who had forsaken Matilda, was strong enough to be any longer a serious menace.

the great Emperor Frederick Barbarossa, and this was embittered by personal enmity, for at the sack of Milan in 1162 the emperor had caused several of the pope's relatives to be proscribed or mutilated. It has been noticed that the breach between Lucius III and Frederick coincided with the arrival in Northern Italy (August, HNS) of Constance, the heress of the Kingdom of Sicily, who was betrothed to Frederick's son Henry. The marriage, which was celebrated at Milan on 4 Jan., 1186, six weeks after Urban's accession, "constituted for the papacy the gravest check it had suffered for a long time. By it was ruined the whole political edifice so laboriously raised by the pope in the preceding twelve years; and it was to be the check the power of the Emperors in Italy and to assure the independence of the Papal States" (Chastandon, i, 390). By this marriage was lost that Norman support on which the papacy had so long relied in its contest with the empire. Nor was this the only cause of quarrel. The treaty of 1177 had left unsettled the question of the succession in the estates of Melfi, thus excluding while Frederick had seized the revenues of vacant German bishoprics and suppressed nunneries for the sake of their property.

Urban maintained the refusal of Lucius III to crown Henry, and the Patriarch of Aquileia was induced by the emperor to perform the office, although it belonged to the pope in right of the Archbishops of Aquileia, and to him, possibly, to the person of the nephew of his father after his election. Urban replied by excommunicating the patriarch and the bishops who had assisted at the ceremony. On 31 May he promoted to the cardinals the archdeacon Folmar, and next day consecrated him as Archbishop of Trier, contrary to a promise he had made to the emperor, for though Folmar had been canonically consecrated, Frederick and his brothers would not send Rudolf, the emperor's eldest son, to the head of the minority. The emperor closed the passes of the Alps against the pope's messengers to Germany, and sent Henry to ravage the Papal States. Urban had hoped for support from the German bishops, but at the Diet of Gelnhausen (April or May, 1187), from which the papal legate, Philip von Heinsberg, Archbishop of Cologne, had been excluded on the ground that he was excluded, spoke to the pope urging him "to do justice to the Emperor in those things which were justly demanded of him" (Arnold of Lubeck, i, 18). Urban replied by summoning the emperor to appear before his tribunal at Verona, and was only prevented from pronouncing excommunication against him by his brother's mediation. Frederick would not permit the sentence to be pronounced in their city. Urban set out for Venice, where he would have been able to carry out his threat, but died at Ferrara, after a pontificate of a year and eleven months. His death is ascribed by Benedict of Peterborough to grief at the news of the utter defeat of the crusaders at the battle of Hattin, and it is commonly stated that it was caused by the news of the fall of Jerusalem, but William of Newburgh assures us that the report of the disaster of Hattin (3-4 July) did not reach the Holy See till after the election of Gregory VIII, so it is hardly probable that Urban III ever heard of the surrender of the Holy City which took place on 2 October.

Arms of Urban IV

Urban IV, Pope, 1210-64 (Jacques Pantaléon), son of a French cobbler, b. at Troyes, probably in the last years of the twelfth century; d. at Perugia, 2 Oct., 1264. He became a canon of Laron and later Archdeacon of Lucca, attracted to the papacy by the approach of the Emperor Frederick's secular affairs, and was sent on a mission to Germany. There his chief work was the restoration of ecclesiastical discipline in Silesia and the reconciliation of the Teutonic Knights with their Prussian vassals. He became Archbishop of Lorraine after the death of Urban IV, was elected at the Council of Lyons (1243), and in 1247 was sent on a mission to Germany with the commission to obtain recruits for the cause of William of Holland, the papal candidate for the empire. He was made Bishop of Verdun in 1253 and Patriarch of Jerusalem in 1255, at a time of great difficulty and distress for the Christians of the Holy Land. On the death of Alexander IV (1261) he had returned to the west and was at Viterbo. After a three months' conclave, protracted by the jealousies of the eight cardinals who composed the whole Sacred College, the Patriarch of Jerusalem was elected on 29 August, 1261. Alexander IV, the feeblest and most pacific of the popes who were engaged in the struggle with the imperial house of Germany, had left two heavy tasks for his successor to accomplish: the wresting of Sicily from the Hohenstaufen and the restoration in Italy of the influence which the Holy See had lost through his indecision. The Latin Empire of Constantinople came to an end with the capture of the city by the Greeks a fortnight before Urban's election, and for a while it was not improbable that the whole of Italy would fall into the hands of the empire. In 1265 Conradin, the last of the Hohenstaufen, died on the scaffold at Naples; it was Urban IV's action in calling Charles of Anjou into the field against Manfred that brought this about. "The fact," says Ranke, that Urban IV contrived this combination, places him among the important part of the churchmen in the latter part of the thirteenth century.

His experience of affairs and his personal character fitted him for his work. He had an excellent education, and was active, capable, self-reliant, and
always ready for any work that presented itself. His life was a full one, yet had not banished piety. "The Pope does what he will," reports a Sienese ambassador, "there has been no Pope since Alexander III so energetic in word and deed,... There is no obstacle to his will... he does everything by himself without taking advice" (Plutarch, "Iter Italicum", 675). Had his reign been longer, he would have been one of the most striking figures in the history of the papacy. Urban's great antagonist was Manfred, son of Frederick II, and usurper of the Sicilian crown. In his chevalier he had his father's highly centralized system to rely on, but as a warrior he was lacking in decision and boldness. After the battle of Montaperti, he became the hero of half Italy, the centre of the Ghibelline party and of all opposition to the papacy. He was anxious for peace and recognition from the pope, and Urban was able to keep him in abeyance until the last. Many of the negotiations for peace with Charles of Anjou were nearly complete. Within less than a year of his election the pope created fourteen new cardinals. Of these six were relatives or dependants of the eight who had elected him, but seven were Frenchmen, including his own nephew and three who had been St. Louis's counsellors. Thus Urban's power in the later years of his pontificate was brought into being as a French party which was a principal factor in ecclesiastical policy for the rest of the thirteenth century and in the fourteenth became practically the whole College. Among the new cardinals were the three future popes, Clement IV, Martin V, and Honorius IV, who were to have the greatest share in finishing and defending his work.

Urban's last steps towards the restoration of his power in Italy was to put the finances in order and pay his predecessor's debts. He changed the bankers of the Apostolic Camera, employing a Sienezen firm whose services did much to assure the ultimate success of his plans. Urban's Italian policy gives a complete picture of his statesmanship—astute and diplomatic. Urban's first step towards the restoration of his power in Italy was to declare null all obligations towards persons excommunicated, was able to throw their commercial affairs into confusion (for some curious details see Jordan, pp. 297 and 298). He established an assize and had his partisans and raised up a new Guelph party bound to him by personal interest, which eventually pronounced Charles of Anjou with monetary support without which his expedition must have failed. In the Papal States new officers were appointed, important points fortified, and the defensive system of Innocent III restored. At Rome Urban obtained the recognition of his sovereignty, but he never risked a visit to the city. In Lombardy his most important act was the strengthening of the traditional alliance between the Holy See and the House of Este. By the middle of 1263 the general results of Urban's extra-territorial Italian policy were seen in the almost complete restoration of order in the Papal States, the strengthening of Manfred's alliances in Lombardy, and the resurrection in Tuscany of the crushed Guelphs. A foreign conqueror for Sicily was necessary to attain the expulsion of Manfred, for after the defeat of Alexander IV's forces at Foggia (20 Aug., 1265) all hope was lost of a direct conquest by the papacy. Urban's first hope was to lead the crown of Naples to the English Henry III for his second son, Edmund; but the king had his hands too full at home and was himself too prodigal to allow him to embark on the very costly Sicilian adventure. Charles of Anjou, though he had refused the offer of Innocent IV, had both the power and the ambition necessary for such an undertaking. St. Louis's scruples as to the rights of Conradin and Edmund were overcome, and though he refused the crown for himself or his sons, he finally permitted its offer to his brother. In the mind of the holy king the Sicilian expedition appeared as a preliminary to a great crusade; he saw that Sicily would, in the hands of a French prince, be an ideal starting-point. Yet Louis had been desirous of peace between the pope and Manfred; and even the pope for a time seemed prepared to recognize him as king of Sicily, but the negotiations finally failed. Urban made it his business to prove that the fault lay with his opponent, for, he said, Manfred was involved in a struggle in which great princes such as Alphonsus of Aragon and Baldwin, the exiled Latin Emperor of Constantinople, had intervened on the side of peace. It was about May, 1263, that St. Louis made up his mind, and shortly afterwards the envoy of Charles of Anjou appeared in Rome. The chief conditions laid down by Urban were as follows: that Sicily must never be united to the empire, its king must pay an annual tribute, take an oath of fealty to the pope, and abstain from acquiring any considerable dominion in Northern Italy; the succession was also strictly regulated. The treaty in fact "was to be the last link in the long chain of acts which had established the papacy" (Jordan, 148).

The negotiations dragged on slowly as long as the pope felt no acute need of French intervention in Italy, but by May, 1264, the fortunes of the Church were threatening to decline quickly, in face of the rising activity and fortunes of the Ghibelines. Urban sent the French Cardinal Simon de Brion to France as legate with power to concede certain disputed points: he was, however, to insist on a guarantee that Charles would not retain in perpetuity the Senatorship of Rome; vows to go on a crusade to the Holy Land were to be commuted for the crusade against Manfred and his Saracens, which was to be preached throughout France and Italy. Urban's position was strengthened by growing more rigorous in spite of the inevitable inactivity of Manfred. He feared a simultaneous attack from north and south, and even attempts to assassinate himself and Charles of Anjou by the emissaries of Manfred's reputed ally, the "Old Man of the Mountains". In August St. Louis's last objections to the treaty were overcome, and various concessions made to Charles's demands. The legate was to retain a certain amount from the French clergy the tithes granted by the pope for the expedition. In Italy fortune continued to favour the Ghibelines; a Guelph army was defeated in the Patrymony, and Lucca deserted to the enemy. Sienezen intrigue threatened Urban's security at Orvieto, and on 9 Sept. he set out for Perugia, where he died. "Thus the man, whose bold initiative was to influence so greatly the destinies of three great countries, to bring to a close the most glorious period of medieval Germany by the run of the Hohenstaufen, to introduce a new dynasty into Italy, and to direct French policy in a direction as yet unknown, quitted the scene before he had finished his career. Many of the acts at the very hour when the negotiations commenced at his accession and continued throughout his reign, had reached completion" (Jordan, op. cit., 513).

If Urban's treatment of Manfred appear harsh and unscrupulous, it must be remembered how the Church had suffered at the hands of the Hohenstaufen ever since the days of Frederick I. In the eyes of feudal law Manfred was a usurper without rights; he had callously seized his nephew Conradin's crown, and even that nephew could not inherit from a grandfather who had been deprived of his fief for rebellion against his suzerain. At this
period, too, the papal Government, owing in part to its very weakness, stood in need of municipal freedom, while the Hohenstaufen line has in Sicily substituted for the aristocratic hierarchy of feudalism a bureaucratic despotism supported by the arms of its devoted Saracens.

Two other points in Urban's policy must be noted: his dealings with the Byzantine Empire and with England. Manfred's designs on the territories of Palaeologus, and here too gave a lasting direction to papal policy, setting it on the path which led to the union (inoperative as it was) of the West and the East. In England Urban's collectors of money were exceedingly busy; like St. Louis, he supported Henry III against the barons. He absolved the king from his promise to observe the Provisions of Oxford, declared oaths taken against him to be unlawful, and condemned the raising of the rising. He was buried in the cathedral at Perugia, and is a member of the college of the Passion (q. v.) instituted by Urban IV.

RAYMOND WEBSTER.

URBAN V, POPE, BLESSED (Guillaume de Grimoard), b. at Grasse in Languedoc, 1310; d. at Avignon, 19 Dec., 1370. Born of a knightly family, he was educated at Montpellier and Toulouse, and became a Benedictine monk at the little priory of Chirac near the latter city. He was born before 1310, for we know that in 1339 he was professed at the great Abbey of St. Victor at Marseilles, where he imbibed his characteristic love for the Order of St. Benedict; even as pope he wore his habit. He was ordained at Chirac, and after a further course of theology and jurisprudence at the universities of Toulouse, Montpellier, Paris, and Avignon, he received the doctorate in 1342. He was one of the greatest canonists of his day; was professor of canon law at Montpellier, and also taught at Toulouse, Paris, and Avignon; he acted successively as vicar-general of the province of Catalonia, and as a papal legate in the East; and was finally appointed, in 1353, to the See of Aix, which he filled till his death. In 1342, he was appointed envoy to the Holy See in Rome, and in 1352 was named abbot of that famous house by Clement VI.

With this date begins his diplomatic career. His first mission was to Giovanni Visconti, Archibishop of Milan, and his agency in the latter's successful claim to the French crown is a matter of history: in 1354 and 1350 he was employed on the affairs of the Holy See in Italy; in 1361 he was appointed by Innocent VI to the Abbey of St. Victor at Marseilles, but in 1362 was once more despatched to Italy, this time on an embassy to Joana of Naples. It was while engaged on this business that the abbot heard of the death of the papacy. Innocent VI had died on 12 Sept. The choice of one who was not a cardinal was due to jealousies within the Sacred College, which made the election of any one of its members almost impossible. Guillaume de Grimoard was chosen for his virtue and learning, and for his skill in practical affairs of government and diplomacy. He arrived at Marseilles on 28 Oct., entered Avignon three days later, and was consecrated on 6 Nov., taking the name of Urban because, as he said, "all the popes who had borne the name had been saints". The general satisfaction which this election aroused was speedily worn away, however. Urban's efforts in the cause of the French were directed to the pope, "It is God alone who has chosen you".

On 20 Nov. King John of France visited Avignon; his main purpose was to obtain the hand of Joanna of Naples, ward of the Holy See, for his son Philip, Duke of Touraine. In a letter of 7 Nov. Urban had already approved her project of marriage with King Philip, and had arranged with Milan and Naples that the doing the pope safeguarded his own independence at Avignon, which would have been gravely imperilled had the marriage of Joanna, who was also Countess of Provence, united to the Crown of France the country surrounding the little papal principality. The letter written by Urban to Joanna on 29 Nov., urging the marriage with Philip, was probably meant to appease the French king, in order that he might receive the request as well as another for the nomination of four cardinals chosen by the king. John also desired to intervene between the pope and Barnabò Visconti, tyrant of Milan. He was again refused, and when Barnabò failed to appear within the three months allowed by his citation, the pope excommunicated him (March, 1346). In April, 1348, the Visconti was defeated before Bologna. Peace was concluded in March, 1364; Barnabò restored the castles seized by him, while Urban withdrew the excommunication and undertook to pay half a million gold florins.

The Benedictine pope was a lover of peace, and much of his diplomacy was directed to the pacification of Italy and France. Both countries were overrun by mercenary bands known as the "Free Companies", and the pope made many efforts to secure their dispersal or departure. His excommunication was disregarded, and the companies refused to join the distant King of Hungary in his battles with the Turks although the Emperor Charles IV, who came to Avignon in May, 1365, guaranteed the expenses of their journey and offered them the revenues of his kingdom of Bohemia for three years. War now broke out between Pedro the Cruel of Navarre and his brother Henry of Trastamare. Pedro was excommunicated for his cruelties and persecutions of the clergy, and Bertrand Dagueselin, the victor of Cocherel, led the forces of the king against his brother, his excommunication being a plausible excuse for his entry into Catalonia on their way and wrung blackmail from the pope. The Spanish war was quickly ended, and Urban returned to his former plan of employing the companies against the Turk. The Count of Savoy was to have led them to the assistance of the King of Cyprus and the Eastern Empire, but this scheme too was a failure. The Italian companies were equally fruitless in Italy, where the whole land was overrun with bands led by such famous condottieri as the German Count of Lancian and the Englishman Sir John Hawkwood. In 1365, after the failure of a scheme to unite Florence, Pisa, and the Italian communes against them, the pope commissioned Albornoz to persuade these countries to join the papal project. The Pope solemnly excommunicated them, forbade their employment, and called on the emperor and all the
powers of Christendom to unite for their extirpation. All was in vain, for though a league of Italian cities was formed in September of that year, it was dissolved about fifteen months later owing to Florentine dissensions.

Rome had suffered terribly through the absence of her pontiffs, and it became apparent to Urban that if he remained at Avignon, the work of the warlike Cardinal Albornoz in restoring to the papacy the States of the Church would be undone. On 11 Sept., 1366, he informed the emperor of his determination to resign for a second time, but the news made no impression except the French; the king understood that the departure from Avignon would mean a diminution of French influence at the Curia. The French cardinals were in despair at the prospect of losing France, and even threatened to desert the pope. On 30 April, 1367, Urban left Avignon; on 19 May he sailed from Marseille, and on 1 June he reached Corneto, where he was met by Albornoz. On 1 July the Romans brought the keys of Sant' Angelo in sign of welcome, and the Gesuati carried branches in their hands and headed by their founder, Blessed John Colombini, preceded the pope. Five days later he entered Viterbo, where he dwelt in the Palazzo Del Barbo for a time. It was now possible for Urban to set out for Rome until he had gathered a considerable army, so it was not till 16 Oct. that he entered the city at the head of an imposing cavalcade, under the escort of the Count of Savoy, the Marquis of Ferrara, and other princes.

The return of the pope to Rome appeared to the contemporaries a world event both as a great event and as a symbol, for the papacy was restored not only in Italy, but to the Curia. Rome, and in great part to the absence of her pontiffs, see Gregorovius, II, 2, ch. ii.). The pope now set to work to improve the material and moral condition of his capital. The basilicas and papal palaces were restored and decorated, and the Papal States, such as had been preserved at Assisi since the destruction of Bomarzo, were restored, and the empty church built.

The unemployed were put to work in the neglected gardens of the Vatican, and corn was distributed in seasons of scarcity; at the same time the discipline of the clergy was restored, and the frequency of the sacraments encouraged. One of Urban's first acts was to change the Roman constitution which he questioned whether the service offered to the pontiff as the reward of his return was the liberty of the people" (Gregorovius, loc. cit.).

On 17 Oct., 1368, the emperor joined the pope at Viterbo. Before leaving Germany he had confirmed all the rights of the Church, and Urban hoped for his help against the French. Charles allowed himself to be bribed. On 21 Oct. the pope and emperor entered Rome together, the latter humbly leading the pontiff’s mule. On 1 Nov. Charles acted as ambassador at the Mass at which Urban crowned the emperor. For more than a century pope and emperor had not appeared thus in unity. A year later the Emperor of the East, John V Paleologus, came to Rome for the first time, and was admitted to confer with the emperor of the West. The emperor deplored the secession and was received by Urban on the steps of St. Peter’s. These emperors both of East and West were but shadows of their great predecessors, and their visits, triumphs as might appear, were but little gain to Urban V. He felt that his position in Italy was insecure. The death of Albornoz (24 Feb., 1367) who was the last of the popes to return to Italy possible, had been a great loss. The restorers of the town was exemplified by the revolt of Verona, which had to be crushed by force; any chance storm might undo the work of the great legate. At heart, too, the pope had all a Frenchman’s love for his country, and his French entourage urged his return to Avignon. In vain were the remonstrances of the envoys of Rome, which had gained “greater quiet and order, an influx of wealth, a revival of importance” from his sojourn; in vain were the admonitions of St. Bridget, who came from Rome to Montpelier to warn him from France. He hoped that Urban would shortly die. War had broken out again between France and England, and the desire to bring about a peace strengthened the pope’s determination. On 5 Sept., 1370, “sad, suffering and deeply moved”, Urban embarked at Corneto. In a Bull of 28 June he had told the Romans that his departure was not to be5361 by his desire to be present at Avignon, but to the country to which he was going. It may be, too, that the pope saw that the next conclave would be free at Avignon but not in Italy. Charles V joyfully sent a fleet of richly-adorned galleys to Corneto; the pope did not long survive his return (24 Sept.) to Avignon. His body was buried in Notre-Dame des Doms at Avignon but was removed two years later, in accordance with his own wish, to the Abbey Church of St. Victor at Marseilles. Miracles multiplied around his tomb. His canonization was demanded by King Waldemar of Denmark and promised by Gregory XI as early as 1373, but did not take place owing to the disorders of the time. His cultus was approved by Pius IX in 1870.

Urban V was a man of great motives. His motives cannot be called in question: his policy aimed at European peace; shortly before his death he had given orders that preparations should be made to enable him personally to visit and reconcile Edward III and Charles V. He had shown great zeal for the Crusade. On 20 March, 1365, Pierre de Losignan, King of Cyprus and titular of Jerusalem, had asked the pope to send two cardinals with him to Avignon to appeal for assistance against the Turks, and on 31 March (Good Friday) Urban preached the Crusade and gave the cross to the Kings of France, Denmark, and Cyprus; the chivalrous King John, who was to have been chief commander, died a prisoner at London in 1364, and though the King of Cyprus captured Alexandria (11 Oct., 1365), he was unable to hold the city. The crusading king, dead in Europe. In an age of corruption and simony Urban stood for purity and disinterestedness in church life; he did much for ecclesiastical discipline and caused many provincial councils to be held; he refused to bestow place or money on his relatives, and even caused his own father to refuse a pension he offered on him for the university at Paris, whom he promoted to the cardinalate, was acknowledged by all to be a man most worthy of the dignity (see Albanes, “Vita Prima”, 7-8). The pope’s private life was that of a monk, and he was always accessible to those who sought his aid.

But Urban was a patriotic Frenchman, a defect in the universal father of Christendom. He estranged the English king by the help given to his rival, and aroused hostility in Italy by the favour shown to men of his own race whom he made his representatives in the States of the Church. He was a great patron of learning, founded universities at Cremona (by a Bull of 1364) and at Vienna (by a Bull of 1365), and caused the emperor to create the University of Orange; he revised the statutes of Trets, and gave great assistance to the universities of Avignon and Toulouse. At Bologna he supported the great college founded by Albornoz and paid the expenses of many poor students whom he sent thither. (For Urban's zeal for that seat of learning, see Denille, “Charitatarum Universitatis Parisiensis”, II, 102-85). He also founded a studium at Trets (later removed to Manosque), but his greatest foundations were at Montpellier. His buildings and restorations were considerable, especially at Avignon, Rome, and Montpellier. He approved the orders of Brigitines and Gesuati, and canonized his godfather, St. Elzéar of Sabran.
The ancient lives will be found in BATAille, Vie populaire et historique des grands.saints (Paris, 1869); see also R. P. Verna, written in 1376 and the following years, of the miracles wrought by his intercession, and the process for his canonisation undertaken by order of Clement VII in Albans. RAYMOND WEBSTER.

Urban VI, Pope (Bartolomée Pignano), the first Roman pope during the Western Schism, b. at Naples, about 1318; d. at Rome, 15 Oct., 1389; according to many he was poisoned by the Romans. At an early age he went to Avignon, where he gained many powerful friends. On 26 Nov., 1334, he was consecrated Archbishop of Arezzo in the Kingdom of Naples, and on 14 April, 1337, Gregory XI transferred him to the archiepiscopal See of Bari, on the coast of the Adriatic. Meanwhile the Cardinal Vice-Chancellor, Peter of Rampelona, being illegally removing, at the request of the Roman State, was given the management of the papal chancery. After the death of Gregory XI the Conclave proposed him as a candidate for the tiara. Not only his business ability, integrity, and knowledge of law, but also his being a subject of Queen Joanna of Naples favoured his eligibility; and the Conclave of 1378, which opened on 7 April (nine days after Gregory's death), was influenced by the public opinion of Rome; it consisted of four Italian cardinals, five French, and seven belonging to the Limoges faction. The Italian and French cardinals, though anxious to push forward their own candidates, unanimously determined to oppose one of the Limoges party. The latter were not strong candidates, but they hoped to make an alliance with the less important parties and so attain their end. Their plan, however, was frustrated, the French and the Italians having previously resolved to choose a prelate outside the Sacred College. Robert of Geneva (one of the French cardinals) even resigned his claim in favour of Pignano, and Pedro de Luna (Robert's successor in the See of Avignon) did the same. In this way Pignano's chances increased considerably. An Italian, though not a Roman, he was supported by the rivalry of the parties. Perhaps the French and Italian cardinals expected that, not being a cardinal, he would be an obedient pope, and for this reason they supported the French party, uneasy about the coalition between the French and the Italian cardinals, were drawn to this candidate. This conclave was one of the shortest in history. When the cardinals entered the Vatican some of the populace stole into the palace and tried to extort the promise that an Italian pope would be chosen. Cardinal d'Agreouille declared that the cardinals could not make their such expressions, but the disapproving people remained in the Vatican the whole night, drinking the wine and crying: "Romano lo volono, o al manceo Italiano." The next morning, while the cardinals were at Mass, the tocsin was rung, and suddenly the bells of St. Peter mingled their tones with it. Fear and disorder overtook the cardinals; the guardian of the conclave besought them to hasten, saying that the people wanted a Roman or an Italian, and that resistance would be dangerous. Then Pedro de Luna (Benedict XIII) proposed the election of the Archbishop of Bari, adding that he was, as they all knew, a saintly, learned man, of mature age. This proposal obtained the desired effect. After some hesitation, the cardinals, excepting Orsini (who declared himself not sufficiently free), agreed to accept Pignano, but preferred to keep their choice secret until certain that the latter would be elected. Pignano then asked for his intercession, which was accomplished by several other prelates, so as to conceal from the people the person chosen. The uproar did not abate, and the cardinals began to fear that their choice would not satisfy the multitude. During a comparative calm they went to breakfast and renewed the election of Pignano. The lawful and renewed choice being established, Orsini announced the election of a pope to the people, omitting to mention the name. Various suppositions soon ran through the crowds, some saying that the chosen one was Tebaldeschi (an aged Italian cardinal) and others that Jean de Bar (one of the most devoted servants of Gregory) was elected. The confusion was increased by the lack of a papal resolution. They presented Tebaldeschi with the papal insignia, to the people and commenced the "Te Deum," paying no attention to his refusal and protests. Meanwhile, Pignano had reached the Vatican and declared that he accepted the papal dignity and the homage of all the cardinals. One fact seems evident: the moment the cardinals regarded the choice as lawful, they removed all doubt by a re-election and honoured him as the rightful successor of St. Peter.

It is to be regretted that after his election Pignano did not show the good qualities which had distinguished him before. Soon he quarrelled with the Sacred College. Desirous of reforming the Church and deposing the French king, he wished to expel the Curia, though perhaps not with the necessary prudence. It was unwise to abuse the cardinals and high dignitaries of the Church and to insult Otto of Brunswick (husband of Joanna of Naples). Nevertheless, public opinion was in the beginning favourable to him, and not only the cardinals in Rome, but also the six who remained at Avignon, supported him. However, the revolt, which broke out at Fondi in September of the same year, was already brewing at Rome a few weeks after his election. Urban's ambassadors, doubtless inspired by the French and Limousin cardinals, left Rome too late, when the calamities concerning the illegitimacy of the pope's election were widespread. The ground having thus been prepared, the opposition was strengthened at Rome; Castel Sant'Angelo never heisted Urban's colours, and the discontented found there a refuge and the protection of armed soldiers. The heat of early May afforded the dissatisfied cardinals a pretext for leaving Rome for Anagni, but no public sign of rebellion showed itself. Urban's opposition was ineffective for the present. The pope's suspicions were eventually aroused, and in June he requested the three Italian cardinals who had not followed the others to join their colleagues and to try and restore kinder feelings. The French cardinals renewed their protestation of fidelity to the pope, but assembled the same day to publish and adopt the Bull of the fourth article. Moreover they eventually won over the Italian members of the Sacred College. Meanwhile, in the name of the pope, the aforesaid cardinals proposed two expediends to settle the differences, a general council or a compromise. Both these means were made use of at the time of the Western Schism. But the opponents of Urban
solved on violent measures and declared their intentions in a letter of the utmost imperativeness. On August 2, 1839, this letter was followed by the famous Declaration, a document more passionate than exact, which assumed at once the parts of historian, jurist, and acerbus. Seven days later they published an encyclical letter, repeating and vindictively reiterating their accusations against Urban, and on 27 August they issued against Fosfo, where they enjoyed the protection of its lord (Urban's arch-enemy), and were near Joanna of Naples; the latter at first had shown great interest in Urban, but was soon disappointed by his capricious ways. On 15 September the three Italian cardinals, being suspected of harbouring the hope of becoming pope themselves, or perhaps frightened by the news that Urban was about to create twenty-nine cardinals in order to supply the vacancies left by the thirteen French ones, Charles of France, more and more doubtful of the lawfulness of Urban's election, encouraged the Fosfo faction to choose a rightful pope and one more agreeable to government. On 19 September Urban arrived on 18 September, and hastened a violent solution. On 29 September Robert of Geneva was chosen pope, and on this day the Western Schism began.

The Italiens abstained from the election but were convinced of its canonical character. Robert assumed the name of Clement VII. The obediences of the Roman and Lombard Church were renewed, 1378, and, June, 1379. All Western Europe (except England, Ireland, and the English dominions in France) submitted to Clement VII, the greater part of Germany, Flanders, and Italy (with exception of Naples) recognized Urban. The obedience of Urban was more numerous, that of Clement more imposing. Meanwhile, Urban created twenty-four cardinals, four of whom refused to accept thepurple. It was very difficult to decide exactly how far the schism was to be attributed to Urban's behaviour. Indisputably the long exile at Avignon was its principal cause, as it diminished the credit of the popes and increased the ambition of the cardinals, who were always striving to obtain more influence in the Church. Whatever may have been the causes of this event, it is certain that the election of Urban was lawful, that of Clement uncanonical.

If the first days of Urban's pontificate were unhappy, his whole reign was a series of misadventures. It is true that he was successful in reducing Castel Aversa and Aversa, but these are the only successes of his reign. Naples was soon in turmoil. Queen Joanna went over to the Clementines and was deposed by Urban. Charles of Durazzo took her place. He arrested the queen and took possession of the kingdom, but soon lost favour with the pope for not fulfilling his engagements towards Francesco Pugnano (Urban's unworthy and immoral nephew), whose wife he refused to release even on payment. The pope next went to the south of Italy, against the advice of his cardinals, and was received at Aversa by the king himself, but imprisoned on the night of his arrival (30 Oct., 1383). On his release, his cardinals a compromise was reached, and Urban left Aversa for Nocera. Here he had to submit to two urgent demands: the marriage of the wife of Charles. The misunderstanding between Urban and Charles increased after the death of the latter's enemy, Louis of Anjou; the pope, obstinate and intractable, continued in a hostile, haughty, and impertinent fashion, towards Charles, and created fourteen cardinals, only the Neapolitans accepting him. He was more complained of by the older members of the Sacred College. No conversant with the ideas current at this time in the Sacred College will wonder that the example of 1378 was followed.

Highly irritated by Urban's inconsiderate behaviour, the Urabist cardinals meditated a more practical way of proceeding; they proposed to depose or, at least, arrest him. But their plot was revealed to him, and six of them were imprisoned and their possessions confiscated. Those who did not confess were tortured, and the King and Queen of Naples, being suspected as accomplices, were communicated. In consequence Nocera was besieged by the king. Urban courageously defended the place, two or three times a day anathematizing his foes from the ramparts. After nearly five months, Nocera was relieved by the Urbanists, Urban escaping to Barletta, whence a Genoese fleet transported him and his companions to Genoa, where the voyage the Bishop of Aquila, one of the conspirators, was executed, and the cardinals, excepting Adam Aston, were put to death at Genoa, in spite of the intervention of the doge. It may be taken for certain that the cardinals had conspired against Urban, with a view of deposing him; that they intended to burn him as an heretic may be a fantastic rumour. Affairs went on so badly that they were treated so cruelly, for he then alienated faithful adherents, as is proved by the manifest of the five cardinals, who remained at Nocera and renounced his obedience.

After King Charles was murdered in Hungary (February, 1386), Urban again undertook to establish his authority in that kingdom; he left for Lucera, where he concluded an agreement with the Pope, and declined the proposal of a general council, which some German princes proposed at the insistence of Clement VII, although he himself had formerly proposed the same expedient. He insulted the ambassadors and pressed the German king, Wenzel, to come to Rome. In August, 1387, he proclaimed a crusade against Clement, and in September set out for Sicily. On 21st October, 1388, recruiting soldiers for a campaign against Naples, which had again fallen into the hands of the Clementines, and the possession of which was very important for his own safety. The soldiers, not receiving their pay, deserted, and Urban returned to Rome, where his refractory temper brought him into difficulties that could only be resolved by an interval. It was at Rome, also, that he fixed the interval between the jubilees at thirty-three years, the first of which was to be celebrated the next year, 1390. But he did not live to open it. Urban might have been a good pope in more peaceful circumstances, but he certainly was unable to heal the wounds which the Church had received during the exile of Avignon. If Clement had been at Avignon, it is possible, after he had been himself able to triumph over the ambitions of the cardinals, the bad conduct of the higher and lower clergy, and the unruliness of the laity, these impediments could not but shipwreck the inconstant and quarellsome Urban.

William Mulder.

Urban VII, Pope (Giambattista Castagna), b. at Rome, 4 Aug., 1521; elected pope, 15 September, 1590; d. at Rome, 27 Sept., 1590. His father, Cosimo, was a Genoese nobleman. His mother, Caterina Ricci, was a Roman and sister of Cardinal Jacovazzi. He studied civil and canon law at various universities in Italy and graduated as doctor of both laws at Bologna. Soon after he became auditor of his uncle, Cardinal Girolamo Verallo, whom he accompanied as deacon on a papal legation to France. On his return to Italy, Julius III made him referendary of the Segnatura of Giustizia and on 17 March, 1550, appointed him Archbishop of Rossano. He was ordained priest, 30 March, and consecrated bishop by one of both laws at Bologna. Soon after he became auditor of his uncle, Cardinal Girolamo Verallo, whom he accompanied as deacon on a papal legation to France. On his return to Italy, Julius III made him referendary of the Segnatura of Giustizia and on 17 March, 1550, appointed him Archbishop of Rossano. He was ordained priest, 30 March, and consecrated bishop by three cardinals at Bologna. Before he was sent as legate extraordinary to Cologne, to represent Gregory XIII at the peace conference between Philip II and the United Provinces. Upon his return to Rome he was appointed Consultant of the Holy Office and the Ecclesiastical State. On 12 December, 1583, Gregory XIII created him cardinal-priest with the church of San Michele in Milisenti. On 8 October, 1584, appointed him legate of Bologna. During the reign of Sixtus V (1585-90) he was highly influential. On 19 November, 1586, he became Inquisitor-General of the Holy Office.

Sixtus V having died 27 August, 1590, the cardinals, 34 in number (see Enkel, "Hierarchia catholica," iii. 91), entered into seclusion at the Vatican on 7 September, and elected Cardinal Castagna as pope on 15 September. The news of his election was a cause of universal joy. The new pontiff was not only highly esteemed for his piety and learning, he had also, in the many important and difficult positions which he filled as archbishop and cardinal, manifested extraordinary prudence and administrative ability. He chose the name Urban in order that this name, which in Latin signifies "kind," might be a continuous reminder to him to show kindness towards all his subjects. One of his first acts was to have a list made of all the poor in Rome that he might alleviate their needs. He also gave liberal alms to those cardinals whose income was insufficient, paid the debts of all the saints, and the Ecclesiastical State, and ordered the bakers of Rome to make larger loaves of bread and sell them cheaper, out of his own purse. Desirous of checking the luxury of the rich, he forbade his chamberslats to wear silk garments. In order to give occupation to the poor, he ordered the completion of the public works that had been commenced by his predecessor. He appointed a committee of cardinals, consisting of Bocchi, Fichettini, and Almi, to the Archdiocese of the Annunciation, for the reform of the Apostolic Curia. Strongly opposed to nepotism, he expressed his purpose never to appoint any of his relatives to an office in the Curia and forbade them to make use of the title "Excellence," which it was customary to give to the nearest relatives of the pope. A few days after his election he became seriously ill. The cura of the church was recovered from public processions, expositions of the Blessed Sacrament, and other pious exercises were conducted. The pope confessed and communicated every day of his illness. He once expressed a desire to remove to the Quirinal, where the air was purer and more wholesome, but, when told that it was not customary for the pope to be seen in the city, he ordered his execution, he returned to the Vatican. He died before the papal coronation could take place and was buried in the Vatican Basilica. On 22 September, 1600, his remains were transferred to the Church of S. Maria sopra Minerva, where a magnificent monument was erected in his honour. His temporal possessions, consisting of 30,000 scudi, he bequeathed to the Archdiocese of the Annunciation to be used as dowries for poor girls.

Urban VIII, Pope (Maffeo Barberini), b. at Florence in April, 1568; elected pope, 6 August, 1623; d. at Rome, 29 July, 1644. His father Antonio Barberini, a Florentine nobleman, having died when Maffeo was only three years old, his mother, Camilla Barbadoro, brought him to Rome at an early age. He lived with his uncle, Francesco Barberini, who was then protonotary Apostolic, and was educated at the College Romano under the direction of the Jesuits. In 1589 he graduated from Pisa as Doctor of Laws, and returning to Rome he became abbreviator Apostolic and referendary of the Segnatura di Giustizia. In 1592 Clement VIII made him Governor of Fano, then prothonotary Apostolic, and in 1601 papal legate to France. On the death of Henry IV on the birth of the dauphin, the future King Louis XIII. In 1601 he was appointed Archbishop of Nazareth and sent as nuncio to Paris, where he became very influential with Henry IV. In recognition of his services in France, Paul V created him cardinal-priest, 11 September, 1606, with the titular Church of S. Rebeca in Montepenedo, of the conclave of 30 October, 1610. On 17 October, 1608, he was transferred to the See of Spoleto, where he convened a synod, completed the seminary, and built two other diocesan seminaries, at Spello and Visso. In 1617 Paul V made him legate of Bologna and prefect of the Segnatura di Giustizia.
In 19 July, 1623, fifty-five cardinals entered conclave to elect a successor to Gregory XV; on 6 August cardinal Maffeo Barberini received fifty votes. The new pope took the name of Urban VIII. Being attacked by the fever which was raging in Rome, he was obliged to postpone his coronation until 29 September. It is related that, before allowing himself to be vested in the pontifical robes, he prostrated himself before the altar, praying that God might let him die if a pontificate would not be for the good of the church.

He began his reign by issuing on the very day of his election the Bulls of canonization of Philip Neri, Ignatius Loyola, and Francis Xavier, who had been nominated by Gregory XV. Urban himself canonized Pope Pius IV, 25 May, 1625; and Andrew Corsini, 22 April, 1629. He beatified: James the Marches, a Minorite, 12 August, 1624; Francis Borgia, a Jesuit, 23 November, 1621; Andrew Avellino, 10 June, 1625; Felix of Cantalice, a Minorite, October, 1625; Mary Magdalen de' Pazzi, 8 May, 26; Cajetan, the founder of the Theatines, 8 October, 1625; Philip Neri, 22 October, 1625; and Innocent of Conca, 16 May, 1643. He reserved the beatification of saints to the Holy See and in a Bull, dated 30 October, 1625, forbade the representation with the halo of sanctity of persons not beatified or canonized, the placing of lamps, tablets, etc., before their sepulchres, and the printing of their alleged miracles.

In a later Bull dated 13 September, 1625, he reduced the number of holy days of obligation to thirty-four, besides Sundays. Urban reduced many new offices into the Breviary. He disposed the whole proper Office of St. Elizabeth and ordered the hymns, as they are in the Breviary, for the expenses of St. Martin, St. Hermenegild, and St. Elizabeth of Portugal. A book of poems, written by him on the jubilee of 1525, published, bore the title under the title: "Maphelie Cardinalis Barberini emata" (Rome, 1637). In 1629 he appointed a committee for the reform of the Breviary. Their incomplete and often ill-advised corrections were approved by Urban, 19 September, 1631, and embodied in the official edition of the Roman Breviary which was issued in October, 1631; (see Breviary, 1631; Transcripts.) In 1627 Urban gave the final call to the celebrated Bull, "In Coena Domini". In 1631 he enjoined upon all ruling bishops, including cardinals, to observe the episcopal residence decreed at the Council of Trent. During Urban's pontificate occurred the second trial and condemnation of the Gallican Inquisition (see Inquisition, Gallican). On 6 March, 1632, he issued the Bull, "In eminenti" condemning the "Augustinus Janesinii" (q.v.).

Urban was a great patron of Catholic foreign missions. He erected various dioceses and vicariates in the Spanish and Portuguese Indies and encouraged the missionaries by aid and financial assistance. He extended the influence of the Congregation of the Propagation of the Faith, founded in 1622, and in 1627 founded the Congregation of the Propagation of the Faith in the colonies of Peru and Brazil, whose object was the training of missionaries for foreign countries. For the Maronites he had already founded (1625) a college on Mount Lebanon. In order to increase the number of missionaries in the colonies in Japan and China he opened these two countries to all Roman Catholics (see Missions, in the 30th Edition of the Catholic Encyclopedia). In the Congregatio Missarum Gentium, Urban's successor, Urban VIII, had extended the exclusive right to those missions founded in 1655. In a Bull, dated 22 April, 1639, he strictly prohibited slavery of any kind among the Indians of Brazil, Mexico, and the entire West Indies. In his efforts to restore Catholicism in England Urban had little success. In 1624 he sent Richard Smith as papal Apostle to that country, but the latter's influence was of no avail, the English bishops retaining their episcopal authority in England and Scotland brought him into conflict with the Jesuits and other missionaries of religious orders. The Government issued new hostile measures against the Catholics, and in 1631 Smith was obliged to flee. Three years later Urban sent Gregorio Panzani (q.v.) to England. Having gained greater freedom for the Catholics, he was succeeded in 1638 by George Con, an Englishman, who had previously been secretary to Cardinal Francesco Barberini. Forced if forced to return to Rome in 1639, on account of ill-health, he was replaced by Rossi, who received the request made through him to the pope for financial aid in the war brewing between the king and Parliament were refused by Urban except on condition of the king's conversion. The ensuing war put an end to all negotiations. (See the letters of Panzani, Con, and Rossetti to Cardinal Barberini in the Record Office, Rome, Transcripts.) The religious orders found a zealous promoter in Urban. In 1628 he approved the Congregation of Missions, which had formed branch of Augustinian canons, founded by Peter Forrier in 1609, and in 1632, the Lazarists or Priests of the Mission, a secular congregation founded by Vincent of Paul. He also approved the following sisterhoods: Canoneses of the Holy Sepulchre, 1631; Sisters of the Incarnation, 1633; Nuns of Our Lady of Nancy, 1634; and Sisters of Our Lady of Mercy, 1641. The Jesuites, founded by the Englishwoman Mary Scudder in 1609, he suppressed in 1631 for insubordination.

Urban's greatest fault was his excessive nepotism. Three days after his coronation he created Francesco Barberini, his nephew, cardinal; in 1627 he made him librarian of the Vatican; and in 1632 vice-chancellor. Francesco did not abuse his power. He built the Barberini Palace and founded the famous Barberini Library which was acquired and made part of the Vatican Library by Leo XIII in 1902. Urban's nephew, Antonio Barberini, the Younger, was created cardinal in 1627, became camerlengo in 1638, then commander-in-chief of the papal troops. He was legate at Avignon and Urbino in 1633; at Bologna, Ferrara, and Rome in 1641. Urban's brother Antonio, who was a Capuchin, received the Diocese of Senigaglia in 1625, was created cardinal in 1628, and later appointed grand penitentiary and librarian of the Vatican. A third nephew of Urban, Taddeo Barberini, was made Prince of Palestrina and Prefect of Rome. It is scarcely credible what immense riches accrued to the Barberini family through Urban's nepotism. Ranke does not reckon it at 105 million scudi. Finally, tormented with scruples concerning his nepotism, Urban twice appointed a special committee of theologians to investigate whether it was lawful for his nephews to retain their possessions, but each time the committee decided in favour of his nephews. Among the members of the second committee were Cardinal Lugo and Father Lupis.

In the government of the Papal territory, Urban, as
a rule, followed his own judgment; even his nephews had little influence during the first ten years of his pontificate. He honoured the cardinals by offering them to give precedence only to crowned heads, and in a Decree of 10 June, 1630, bestowed upon them the title of "Eminence", their former title having been "Illustrious and Most Reverend". In 1626 he extended the Papal territory by inducing the aged Duke Francesco Maria della Rovere to cede his Duchy of Urbino to the Church. Towards the end of his pontificate his nephews involved him in a useless war with Odoardo Farnese, the Duke of Parma, with whom they had quarrelled on questions of etiquette and jurisdiction. He induced Urban to prohibit the exportation of grain from Castro into the Roman territory, thus depriving Farnese of an income without which he could not pay the interest on his bonds, or bonds. The duke's creditors complained to the pope, who took forcible possession of Castro, 13 October, 1641, in order to secure the payment. This proved ineffective, and on 13 January, 1642, Urban excommunicated Farnese and deprived him of all his rights. Backed by Tuscany, Modena, and Venice, the duke set out towards Rome at the head of about 3000 horsemen, putting to flight the papal troops. Peace negotiations were concluded near Orvieto, but not accepted by the pope. In 1643 hostilities were renewed and continued without decisive results until a truce was signed in 1648, with the grace of peace on 31 March, 1644. He was obliged to free the duke from the ban and restore all the places taken by the papal troops.

Urban spent heavy sums on armament, fortifications, and structures of every kind. At Castelfranco he erected the costly but unfavourably situated Fort Urbano, near which he built the castle of Tivoli, and transformed Civitavecchia into a military port. He strongly fortified the Castel of Sant' Angelo, Monte Cavallo, and built various fortifications on the right side of the Tiber in Rome. He erected the beautifully situated papal villa at Castle Gandolfo, founded the Vatican Seminary, built various churches and monasteries, beautified streets, piazzas, and fountains. The pontiff's ladies in esecuothem attract the attention of every observant visitor in Rome. In the Basilica of St. Peter he erected the baldacchino over the high altar, the tomb of Countess Matilda, translating her remains from Mantua, and his own tomb, opposite that of Paul III. For some of these structures he used bronze from the bastions of the Castel Sant' Angelo, one of the well-known but unwarranted passions of Urban: "Quod non fecerunt Barbari, fecerunt Barberini."

The pontificate of Urban extended over one of the most critical periods in the history of the Catholic Church, the Thirty Years War. Ranke and Gregorovius (see bibliography) attribute Urban's actions in this war to his intention to humiliate the two Houses of Habsburg (Austria and Spain), whose too great power was a constant menace to Italy and Rome; hence, they declare, he favoured France and did not subsidize Emperor Ferdinand II in his war against Gustavus Adolphus and the Protestants. An unbiased study of the situation will lead to a different conclusion. Neither as pontiff nor as temporal prince, the pope was constrained in his deterrent, and he had no other motive than the welfare of the Catholic Church. As the common Father of Christendom he interposed concerning the Valtellina, a strategically important valley between Venice and the Grisons, which was eagerly coveted by France as well as Spain. He refused to join the alliance which France had made with Venice and Savoy, and to bring about the Treaty of Monzon, 5 March, 1626, which gave equal rights upon the Valtellina to France and Spain. He also refused to enter the league which France had concluded with Venice and Savoy at the beginning of the war of the Mantuan succession in 1629. "It is impossible for me", he writes to Nagni, the French nuncio, 2 April, 1629, "to put in jeopardy the common fatherhood and, in consequence, to be no longer able to heal and pacify, which is the proper business of the pope as the vicar of Christ" (Nunziatura di Francia, Var. Lib. Cod. 71, and Niccolletti, III, 1451-58).

Equally false are the accusations of Ranke and Gregorovius that Urban opposed the election of Ferdinand's oldest son as King of Rome and advocated the dismissal of Wallenstein as commander-in-chief of the imperial troops. Urban in his letter to Cardinal Jannone, 7 October, 1630, praised the Diet of Ratisbon in 1630. The first accusation was already branded as a calumny by Cardinal Francesco Barberini in a conference with the imperial ambassador Savelli on 16 March, 1629 (Nunziatura di Germania, Cod. 118, fol. 59); the second is refuted by Urban himself, who, on 17 January, 1632, congratulated Wallenstein on his appointment as the confessor and sent him the Apostolice blessing ( Registrum brevium, XXXI, 87). It is, however, true that Urban did not subsidize the imperial army and the Catholic League as liberally as he should have done. Nevertheless, he sent (1632-34) two million francs out of his own means to the Catholic troops in Germany. Urban did not join the League of the Catholic Estates, and he was not willing to pay the expenses of the League at the Papal Court (Nunziatura di Germania, Cod. 127, fol. 266).

The greatest calumny that has been spread about Urban is his alleged sympathy with Gustavus Adolphus, whose death he is said to have mourned and for whose soul he is said to have celebrated a Requiem Mass. What Urban thought of the Swedish king, how he mourned his death, and if he intended to express his sympathy in a Requiem Mass, is best known by himself. In a letter to Ferdinand on 14 Dec., 1632, when the pope received the news that Gustavus Adolphus had fallen in battle (16 Nov., 1632), the Brief is published in the original Latin by Ehres (see bibliography). The following quotation will suffice: "We give eternal thanks to the Lord of vengeance because he rendered retribution to the proud and shook from the neck of the Catholic Church its diadem of scorn. The Mass which he is said to have celebrated in the German National Church, the Anima, at Rome on 11 Dec., was in reality a Mass of thanksgiving, of which Alfonso, the papal master of ceremonies, says expressly: "This Mass was celebrated in thanksgiving upon receiving the message of the death of the King of Sweden" (Cod. Vatican 1622 II, 71). On the next day the "Te Deum" was sung in the Sistine Chapel in presence of the pope, "ob letitiam necis regis Suecie interfacti", after which the pope himself chanted the versicles and orations (ibid.).

It is as yet difficult to pass a correct judgment on Urban from every point of view. His life remains a material for a master's thesis. His pontificate was a period of all prospers and all reach, and the common welfare of the Church seems to have been the mainspring of his pontifical labours. His one fault was squandering money on his nephews, army, and fortifications, while stinting Ferdinand and the Catholic League in Germany.

Niccolletti, Vita di Papa Urbano VIII, storia del suo pontificato, etc. (3 vols. 1700, Turin, Collection Barberini, consists of a compilation of despatches of the papal nunciature. Urbi et Orbi (which means "for the city and the world"): a term used to signify that a papal document is addressed not only to the City of Rome but to the entire holy Roman Church. This usage is applied especially to the solemn blessings with plenary indulgence which, before the occupation of Rome, the Pope designated as his blessing was annually given at St. Peter's on Holy Thursday, at the feast of Sts. Peter and Paul; at St. John Lateran on Ascension; at St. Mary Major on the Assumption. It was limited also on extraordinary occasions, as at St. John Lateran in 1321, when the Pope was crowned, and in 1503, when he was enthroned, at various times during the year, or jubilee, for the benefit of pilgrims. The blessing, as Urbi et Orbi on Ascension Day was sometimes postponed till Pentecost on account of the inclemency of the weather, illness of the Pope, etc. It was renewed in the jubilee year in 1650 on the Epiphany, Ascension, and All Saints, as well as on later popes, including Pope Pius IX, for special reasons, gave this solemn blessing from the balcony of the Quirinal Palace.

Andrew B. Mehren.

Urbinian, Archdiocese of (Urbinatensis), Province of Ascoli and Urbino, Italy. The City of Urbino is situated on a hill between the valleys of the Metaurus and the Clitunno, a Roman city, the cathedral, near the ducal palace, was designed by Federico da Montefeltro; but was completed in the sixteenth century, as the cupola was not completed in the sixteenth century, and a large portion of the dome was ruined in 1732. Some valuable pieces are still preserved there, especially the "Last Supper" of Giovanni da Bologna. The church of S. Francesco (completed in 1350), dedicated to the Virgin, is of the fourteenth century, with a tower and Porta della Francesca, in the oratory are the tombs of Cardinal Albertino, the pope, and of Giovanni da Bologna. Other churches: S. Francesco (completed in 1350), contains exquisite copies of Constantino Trappola, paintings by Piero della Francesca, and others. S. Domenico (1365), contains a Giotto, but completely transformed in 1732; over the main door is a high relief of Luca della Robbia. S. Agostino was also Gothic. The frescoes in the oratory of S. Giovanni Battista by Jacopo and Lorenzo Sano Giovanni, including the "Cruciifixio", and a "Cruciifixio", and a "Cruciifixio", are in the history of painting (cf. standards of Luca Signorelli, S. Bernardino (Braccesi), S. Giuseppe (Adoration of the Magi, a relief by Brandani). The ducal palace was erected by Duke Federico, with Luciano da Laurana (1447) as architect; illustrious sculptors and painters were engaged to adorn it, but many of their works are now in foreign museums. Among those remaining is the statue of Duke Federico; the carvings on the doors, windows, and chimney-pieces; paintings by Margaritone, Antonio da Ferrara ("Cruciixon", "Baptism of Christ", Paolo Uccello ("Proclamation of the Host"), Giusto da Gand ("Last Supper"), Giovanni Sant' Elia, Raphael's father ("Timoteo Viti"); Titian ("Resurrection"). The ducal study, with its magnificent inlaid door and its ceiling, contains two oratories. The Castracane palace has an important collection of paintings. Urbino has a university with faculties of law, mathematics, medicine, and a school of pharmacy and obstetrics, and a hospital founded in 1265. Urbino is the native place of Bartolomeo Carniato, theologian and professor of theology at the University of Paris; Federico Comandini (1509), mathematician; Bernardino Baldi (seventeenth century), poet; Ludovico della Rovere, the first Duke of Urbino (seventeenth century), poet; Laura Battiferri (unidentified poet of the eighteenth century), poet; the "paleto" of Urbino. The Urbinese rebelled, formed an alliance with the commune of Rimini (1288), and by 1234 were masters of the city. He and his descendants were leaders of the Giubellini and the Albizzati. In 1284, the commune of Urbino was united with that of the Marches, and the town became a papal fief. The town was captured by the papal troops in 1355, and the coming of Cardinal Albizzi, the pope, again recognized the papal supremacy. But in 1325 his son Nolfo (1323-50) was proclaimed lord of Urbino. In 1335, on the coming of Cardinal Albizzi, the pope, again recognized the papal supremacy, but not without loss of territory. Federico II was entirely spoilt. His son, Antonio (1377-1403), profited by the rebellion of the Marches and Urbino against the Holy See (1375) to restore his authority in Urbino. Guido Antonio
Urbs beata Jerusalem dicta pacis visio, the first line of a hymn, probably the seventh or eighth century, comprises eight stanzas (together with a doxology) of the form:

"Urbs beata Jerusalem, dicta pacis visio, que conversor in orbo vivis ex lapidibus, et angelis coronata in sponsam comitata."

Sung in the Office of the Dedication of a Church, the first four stanzas were usually assigned to Vespers and Matins, the last four to Lauds. In the revision by the correctors under Urban VIII (see Breviary) the unquantitative, accentual, trochaic rhythm was changed into quantitative, iambic metre (with an additional syllable), and the stanzas appear in the Breviary with divided lines:

"Cœlestis Urbs Jerusalem, Beata pacis visio, que celata de viventibus Saxis ad astra tolleris, Sponsaque ritu cingens Mille Angelorum millibus."

The original hymn for Lauds (Angularia fundamentum lapsis Christus missus est) was changed into "Alto ex Olympi verticie, etc. Hymnologists, Catholic and non-Catholic alike, criticise adversely the work of the correctors in general. Of this hymn in particular some think that, whereas it did not suffer as much as some others, yet it lost much of its beauty in the revision; others declare that it was admirably transformed without unduly modifying the sense.

However this may be, the changed rhythm and the additional syllable did not deter the editors of the Rattebom Antiphonary from including a melody, "fitting admirably with the phrase "lingua gloriosi," but which was greatly marred and rendered hardly singable when adapted to the reversed rhythm of the "Cœlestis Urbs Jerusalem." A different textual revision, ascribed to Sebastian Besnauni, appeared in the Sens Breviary of 1626:

"Urbs beata, vera pacis Visio Jerusalem, Quanta surgit! celsa saxis Conditor viventibus: Quo polnuit, luce sopatid Sedibus suis Deus."

Neale thinks this inferior to the original, but superior to the Roman revision. Roundell admits the blunders in the original that would suggest emendation, but thinks that in the Roman version the "architectural imagery", and notes that the Sens Breviary omitted "the whole conception of the Heavenly City as a bride adorned for her husband." He nevertheless considers the revisions, if looked at as new hymns, "spirited and attractive." The Parisian Breviary of 1730 gives the form:

"Urbs Jerusalem beata Diaeta pacis visio, Quæ constructa est fit in lapidibus, Et ovam coronata Angelorum agnime."

The hymn finds its Scriptural inspiration in Eph., ii, 20; 1 Pet., ii, 5; Apace, xxi. Including all forms of the hymn, there are about thirty translations into English verse.

Mearns and Julian in Diet. of Hymnology (2nd ed., London, 1907), 1102, 1120. To the list of trs. add: Bowdrew, Breviary Hymns and Missal Sequences (London, s. d.), nos. 95, 96; Donahoe, Early Christian Hymns (New York, 1908), 252; Donahoe, Hymns, Their History and Development, etc. (London and Edinburgh, 1892), translates from the Sens Brev., p. 84 (cf. 72-8, 50-41; Duffield, Latin Hymns-Writers and Their Hymns (New York, 1899), 326; Neale and Betz, The Roman Breviary; Bernard in Manual of Prayers (Baltimore), Trench, Sacred Latin Poetry (3rd ed., London, 1874), 317-20, introducing notes: Daniel, "Hymnus romanorum antiquissimus," in America, xvi, 1863, 257; the hymn is included in the Hymnen des Mittelalters, i, 319-322. Daniel thinks the hymn was translated by a monk named (Trench, "Hymn-Writers, etc.") and that it is not fitted for this use by the subsequent addition of stanzas 7 and 8. More disagree, as does also Trench. Neale champions Daniel, because of a "charming difference of style and language" in the two portions, the abruptness with which they are joined, and the appropriately doxological character of the sixth stanza. Daniel returns to the Roman version (1910), by citing from Martére a direction of a Potters Pontifical of the tenth century requiring the "Urbe beata" to be sung at the Blessing of the Font. The disputed versions do not fit in with the ceremony of the Blessing, for which the rest of the hymn answers well, for the baptised became thus citizens of the Blessed City. Albin, La poésie du bellettrisme romain au Moyen Age, Rutherford, The Roman Breviary (London, 1900), 186; 8, for Catholic criticism of the revision under Urban VIII; Dufre, Hymnarii Monumenta (Leipzig, 1816), sive different doxology and two additional stanzas (nos. 6 and 9); for change of rhythm, The Corrected Forms of the Hymns in the Vatian Gradual in Eevisional Review (Feb., 1910), 269 ff.

H. T. Henry.
Urdaneta, Andrés, Augustinian, b. at Vilafaraguer, Ulldecona, Spain, 1498; d. in the City of Mexico, 12 Dec., 1559. Trained in the Benedictine, Latin and Augustinian, schools, he having been left an orphan resolved to devote himself to a military life, and in the Italian wars obtained the rank of captain. Returning to Spain he took up the study of mathematics and astronomy, which gave him an inclination for a seafaring life, and induced him to accompany Joa de Loaiza in an expedition to the Molucca Islands in 1523. He served there for seven years. On his return to Europe he had imprisoned, where he was prosecuted by the Portuguese government for having told the story of his voyage to the islands when he passed through New Spain. Charles V did not give him a very favourable reception, and, wearied by his many adventures, he returned to the City of Mexico and entered the Augustinian monastery of Palacio, in 1564, New Spain had passed under the government of the Audiencia, one of whose first reses was to equip an expedition for the conquest and colonization of the Philippine Islands. This had been ordered by Philip II in 1569, Fray Andrés de Urdaneta having been designated as the commander, was appointed commander. The expedition, composed of the "Capitana," which carried on board Legazpi and Urdaneta, the galleons "San Blas" and "San Pedro," and the tender "San Juan" and "San Lucas," set sail on 21 Nov., 1564. After spending some time in the islands Legazpi determined to remain, and sent Urdaneta back for the rest of the crew and provisions. The expedition sailed from New Spain, for the Philippine colony. He set the Island of Cebu in July, 1565, and was obliged to sail as far as 36° N. lat. to obtain favourable winds. Urdaneta had to assume command in person, fourteen of his crew died, and when the ship reached the port of Acapulco on 3 Oct., 1565 only Urdaneta and a few others remained alive. It was not enough to cast the anchors. From Mexico he went to fight to report a make of the expedition, and returned to New Spain, intending to continue on to the Philippines, but he was dissuaded by his friends. He gave two accounts of his voyages; the one giving the account of the Loaiza expedition was published; the other, given at the behest of his own monks, was reserved in manuscript in the archives of the Order.

Camilles Crivell.

Urgel, Diocese of (Urgellensia), in Spain, tr. of Tarragona, bounded on the N. by France; on the W. by Olot, Province of Gerona; on the S. by Lérida, and on the E. by the Pyrenees and W. by Lérida, which includes most of the deaf, the latter, however, extends to some towns Gerona, Huesca, and the valleys of Andorra. The capital, Seo de Urgel, is situated in the northern part Lérida, between the Segre and Bairas, and has 20,000 inhabitants. It was the one of the most ancient of the Catalan counties and is called Orga or Urgela on the Iberian coins. Christianity was introduced into Urgel at a very early period. St. Justus, Bishop of Urgel, attended the Second Council of Toledo in 427. He also ended the First Council of Lérida, 516, and wrote the Cantiel of Cantiel a work dedicated to Urgel. Archbishop of Tarragona. St. Isidore mentions him and his three brothers in his "Varones illustres." Simplicius, Bishop of Urgel, figures in the Third Council of Toledo and the names of his successors in later councils of Tarragona, and the Second Council of Barcelona. When Philip II of the Mohammedan invasion, attended the Sixteenth Council of Toledo. The line of bishops continued uninterrupted during the period of the Mohammedan dominion. The city, however, was totally destroyed, a district called Vies Urgele alone surviving. Reconquered and taken possession of by the French the see was annexed to France; when Elipandus of Toledo propagated Adoptionism (q. v.), a heresy in which it appears he died, notwithstanding the fact that he had several times abjured it. Learned and except for his heretical tendencies, virtuous, he died in exile in Leon, 894, and for this reason the people of Urgel in ancient times venerated him as one of their seven holy bishops. About 885 Bishop Ingibert was expelled from his see by the intruder Selva, who, under the protection of the Count of Urgel, was consecrated in Gascony. This usurper also unlawfully placed Herenmio over the See of Corona. In 892 a synod was held in the Church of Santa Maria in Urgel; the two usurpers were deposed, their vestments were torn into small pieces, and they were deprived of their sacerdotal faculties. Bishop Saint Amengol died on 3 Nov., 1033. Another saint and Bishop of Urgel was Odorico, Son of Count de Pallars (1065-1122). Arnaudus of Perexens retired to the monastery of Bellpuig in 1194. His successor Bernardo de Castelló attended the Third Council of the Lateran, and in 1198 retired to the monastery of Aspí, near Urgell. In the last century José Cuixal, who distinguished himself at the Vatican Council and was so cordially detested by the Liberals, was Bishop of Urgel (1853-79). When Seo de Urgel was captured by Martínez Campos during the civil war the bishop was taken prisoner, exiled and died at Rome.

The bishops of Urgel have from very ancient times been sovereign princes of the Andorra valleys. When Charlemagne liberated the City of Urgel from the Saracen yoke he conferred on his bishop Poixlomnus I the right to one tenth of the tithe of the valleys. When the territory was reconquered and colonized by Louis the Poiss he conferred the sovereignty on the bishops of Urgel. The count's subjects, and the bishop attended for the right over the Andorran valleys until 26 Oct., 1040, when on the occasion of the dedication of the cathedral of Urgel the Countess Constanza accompanied by her son Amengol, a minor, ceded to Bishop Enrique her right of sovereignty over Andorra. The contentions, however, were renewed between Count Armengol and Bishop Bernard de Castelló. The latter had recourse to Raimundo Roger I, Count of Foix, promising to share with him the government of Andorra. Relying on this agreement Roger Bernard I, Count of Foix, in 1264, invaded the estates of the Bishop of Urgel. This war was ended by arbitration. Jayvert, Bishop of Valence, acting with the other arbitrators, drew up a definitive treaty called the "Pariages", which was accepted by the Count de Foix on 7 Sept., 1278, and later confirmed by Martin IV. This convention still forms the Constitution of Andorra, a neutral territory, known as a republic. According to it the valleys recognized as their lawful sovereigns the Count de Foix and the Bishop of Urgel, each of whom appointed Urgel (or representative jointly administered the government. The right of the counts of Foix passed to the Bourbons, kings of France, and subsequently to the French Government; the bishops of Urgel still retain a nominal suzerainty and the title of "principes soberanos" of Andorra.

The ancient cathedral of Andorra was destroyed; the present cathedral dates from the time of Bishop Eribaudus and was consecrated in 1049, although the
building was continued until late into the thirteenth century. It is an example of the Romanesque of the second type and stands as a valued relic of the architecture of France. Adjacent to the church is a twelfth-century cloister, restored in the sixteenth century. The cathedral possesses a rich collection of ancient jewelled altar-vessels and ornaments. The archives contain a famous collection of very ancient documents, some of which date from the time of the Frankish kings. Inside the cathedral is the parish of St. Odol, and outside are the churches of San Miguel and San Augustín. To the east of the city are situated the citadel, the castle, and the tower of Solsola, which figured prominently in the late civil wars. The first seminary was erected by a Bull of Clement VIII, 13 August, 1592; the new seminary was built by Bishop Caixal and is one of the finest buildings in the city. The episcopal palace is also striking. There are two hospitals, military and civil, the latter being installed in the former Convent of the Augustinians. There is a conven of sisters devoted to Christian education, a foundling and an orphan asylum. The cathedral was declared a minor basilica on 9 Dec., 1905. The diocesan republic (6000) is governed by an elected bishop, and a syndic or president, elected by the council for life. Its inhabitants are mostly shepherds, and speak Catalan.

Statistics.—The present Bishop of Urgel is Mgr. Juan Benlloch y Vivo, b. at Valencia, Spain, 30 Dec., 1864; ordained, 25 Feb., 1888; Vicar-General of Segovia in 1896; Bishop of Hermopolis Major, 12 Dec., 1901, and Apostolic Administrator of Tarragona, consecrated, 2 Feb., 1902, and transferred to Urgel, 6 Dec., 1906, in succession to Mgr. Juan José Lagnarda y Fenollera. There are about 100,000 Catholics; 1½ archpriests; 600 priests; 395 parishes; 400 churches; 575 chapels. The religious (male) include the Franciscans, Trappists, Missionaries of the Sacred Heart, Redemptorists, and the Congregation of the Withal of San José. Among the nun there are: Carmelites, Poor Clares, Little Sisters of the Poor, Dominican Tertiaries, Carmelite Sisters of Charity, and Sisters of the Holy Family (with 11 schools), of the Holy Guardian Angel, and of St. Joseph; there are 3 hospitals in care of nuns.

Ramon Ruiz Amado.

Urim and Thummim (ירם תיממ).—The sacred lot by means of which the ancient Hebrews were wont to seek manifestations of the Divine will. Two other channels of Divine communication were recognized, viz. dreams and prophetic utterance, as we learn from numerous passages of the Old Testament. The three forms are mentioned together in 1 Kings, xxviii, 6: “And he (Saul) consulted the Lord, and he answered him not, neither by dreams, nor by priest (Heb., nazarite), nor by Urim, nor by Thummim.” There can be no doubt that in this instance the Doony translation “priests” is wrong, based on the mistaken rendering “intercolotes” of the Latin Vulgate. The etymological signification of the words, at least as indicated by the Massoretic punctuation, is sufficiently plain. Urim is derived from ירמ (noun), “light,” or “to give light,” and Thummim from תיממ (adjective), “perfection,” “perfection,” or “innocence.” In view of these derivations it is surmised by some scholars that the sacred lot may have had a twofold purpose in trial oracles, viz. Urim serving to bring to light the guilt of the accused person, and Thummim to establish his innocence. Be that as it may, the relatively few mentions of Urim and Thummim in the Old Testament leave the precise nature and use of the lot a matter of more or less plausible conjecture, nor is much light derived from the ancient versions in which the term is subject to manifold and diverse renderings. In the xxviii chapter of Exod. we have (v. 27) what is perhaps the most plausible giving concerning the priestly vestments, and in particular concerning the “rational” (probably “pouch” or “breastplate”) we read (v. 30): “And thou (Moses) shall put in the rational of judgment doctrine and truth (Heb. the Urim and the Thummim), which shall be upon Aaron’s breast when he shall go in before the Lord; and it shall come, when he shall go in, that he shall read thereof; lest he sin in any of the holy things of the Lord always.” From this it appears that at least towards the close of the Exile, the Urim and Thummim were considered as something distinct from the ephod of the high priest and the gems with which it was adorned. It also shows that they were conceived of as material objects sufficiently small to be inserted in a small “rational” or “pouch,” the main purpose of which seems to have been to receive them. In Leviticus, viii, 7-8 we read: “He (Moses) vested the high priest with the sacred linen garment, girding him with the girdle, and putting on him the violet tunic, and over it he put the ephod, and binding it with the girdle, he fitted it to him; and thou shalt put in the rational, on which was doctrine and truth” (Heb. the Urim and the Thummim). This passage add little to our knowledge of the nature and use of the oracle, except perhaps the importance attached to it as a means of Divine communication in the post-Exilic period.

Some of the earlier Old-Testament passages are more instructive. Among these may be mentioned 1 Kings, xiv, 1-2. After the battle with the Philistines during which Jonathan had unwittingly violated the rash oath of his father, Saul, by tasting a little wild honey in the land of the Philistines, the Lord gave him a bad conscience. Desiring to ascertain the cause of the Divine displeasure, Saul calls together the people in order that the culprit may be revealed and thus addresses the Lord: “O Lord God of Israel, give a sign, by which we may know, what the meaning is, that thou answerest not thy servant to-day. If this iniquity be in me, or in my son Jonathan, give a proof (Vulgate da oescri clef) for my eyes, and for the eyes of the whole house of Israel, and for the eyes of the whole house of Judah: mark it, and reprove it.” To which the answer was: “To morrow about this time I will answer thee in the midst of the doers of thine evil, and of them which are thy servants.” (xxii, 21: “If anything be to be done, Eleazar the priest shall consult the Lord for him.” (Heb. “and he [Eleazar] shall invoke upon him the judgment of Urim before the Lord.”) These passages add little to our knowledge of the nature and use of the oracle, except perhaps the importance attached to it as a means of Divine communication in the post-Exilic period.

From this and various other passages which would be too long to discuss here (v. g. Dout. xxxii, 1, Heb., I Kings, xxxvi, 1, Kings, xxiii, 6-12 etc.) we gather that the Urim and Thummim were a species of sacred oracle manipulated by the priest in consultation with the Divine will, and that they were at times consulted by a king or prophet in order to ascertain the innocence of suspected persons. The lots being two in number, only one question was put at a time, and that in a way admitting of only two alternative answers (see I Kings, xiv, 41-12; ibid., xxiii, 6-12). Many scholars maintain that in most passages where the expression “consult the Lord” or its equivalent is used, recourse to the Urim and Thummim is implied. (v. g. Judges, i, 1-2; ibid., xx, 27-28; I Kings, xiv, 21-22; II Kings, ii, 1, etc.). The speculations of later Jewish writers including Philo and Josephus teach us nothing of value concerning the Urim and Thummim. They are often fanciful and extravagant, as is the case with many other topics (see “Jewish Encyclopedia,” s. v.). The only instance in the New Testament of anything resembling the use of the sacred lot as a means to dis-
over the Divine will occurs in the Acts (i, 24-26) in connexion with the election of Matthias.

**Urraburu.** See ORIA, DIOCESE OF.

*Urmiah,* a residential see in Chaldea, in the province of Adheridjan, Persia. The primitive site of this city seems to have been Urmui, or rather Urmjeti (Barber de Meynard, "Dictionnaire de la Perse," 27). It is said, but with little truth, that this was the native place of Zoroaster, and that he lived in the region near by. Nothing is known of its primitive history. Some wrongly locate at Urmiah Bishop John of Persa, or Persia, present at the Council of Carthage in 325 (Gelzer, "Patrum Hierarchiam omnia," ixx and lxxiv). The "Syro-Hebrew" of the Chaldean patriarch since several centuries has no mention of Urmiah. Upon the other hand there existed from p. 420 to the thirteenth century, a See of Adheridjan, a suffragan of Arbel (Le Quien, "Orbis Terrarum," xii, 1290). There was also a new book of dioceses in the thirteenth century that probably resided at Urmiah rather than in any other part of this province. In the sixteenth century the historian Metropolitan of Teseb, Salerno, and Salamcio (Heinrich, "Geschichte deutscher kirchenrecht," i, 1293) and to-day the City of Arbel (Le Quien, op. cit. i, 1257). The present Chaldean Diocese of Urmiah was established by Rome in 1882 as the Chaldean Metropolitan of Urmiah and to-day the City of Arbel (Le Quien, op. cit. i, 1257). The first see is often wrongly located at Urmiah, but it is certain that the See of Urmiah was established by Rome in 1882, and to-day the City of Arbel (Le Quien, op. cit. i, 1257). The first see is often wrongly located at Urmiah, but it is certain that the See of Urmiah was established by Rome in 1882, and to-day the City of Arbel (Le Quien, op. cit. i, 1257).

**S. Valièr.**

*Urraburu,* Juan José, Scholaric philosopher, b. Cemurri, Biscay, 23 May, 1841; d. at Burgos, 13 August, 1904. He entered the Society of Jesus on May 1860, at Loyola (Guipuzcoa). He was prof of rhetoric, and after having finished his theological studies, he taught philosophy in the Jesuit house of questions, and later theology in the latter, where he was also prof of philosophy, and was appointed by Leo XIII. Urraburu was called to Rome (1878) to teach philosophy in the Gregorian University. He remained there nine years, and on his return he was made rector of the College of Valahaldo (1887-90); of the College Maximino, Madrid, 1891-97; and of the seminary of Salamanca 1898-1902. His principal work is entitled "Instituciones de philosophia," 2 vols., Madrid, 1902-1904; "El Gregoriano traducido . . . Valahaldo; I, Logica; 90; II, Ontologia; 1891; III, Cosmologia, 1892; IV, Psychologia part 1, op. 1894; V, Psychologia part 2, 1896; VI, Psychologia part 2 (continuation), 1898; VII, codex, vol. 1, 1899; VIII, Theologia, vol. II, 1890. Other works are: "Compendium philosopliae," 3 vols., Madrid, 1902-1904; "El tres ladero de la filosofia entre las decas actas," articles published in "Razón y Fe," i, XV, 15-57, 137 (1901); "El principio vital y el materialismo ante la ciencia y la filosofia," ibid., VIII, 313 (1901); IX, 180, 325 (1901); X, 219 (1901); XI, 54 (1905); posthumous: "La mente della Compagnia accreta delle dociori eseolitiche che si riferino alla costituzione dei corpus. Pratìca familiar" (Oña, printed privately). Two chapters (Disputat., XI) of "Psychologia fusioii," translated into Spanish by Antonio Marangui, were published in Madrid, 1901, with the title "Principios fundamentales de antropologia." The value of Urraburu's philosophical work is fully attested by the favour with which it was received and the care with which it was examined by the most competent critics. The influence of his teaching has been notable, especially among the members of his order; the "Instituciones de philosophia," has been chiefly consulted by professors and students (new edition, "Logica," 1908); the "Compendio" is the textbook used at present in the Jesuit scholastieates of Spain and other countries. Father Carlos Delmas published an exhaustive appreciation in the "Etudes bibliographiques," March, 1893, and in "Etudes," LXXX, 125. Father José Espi contributed a study, "El espiritualismo," published in "La Razón y Fe," IV, 51. To these articles may be added Nadal's notice, "La psicologia del P. Urraburu" in "La Razón y Fe," XIV, 314. Urraburu's work, a lasting monument to the School in general, and particularly to that of Suarez, is solid, learned, uncompromising towards error, moderate in expression, and well-balanced by common sense.

**Antonio Nadal.**

**Ursinus, Anti-Pope.** See DAMASUS I, SAINT, POPE.

*Ursperger Chronicle,* a history of the world in Latin that begins with the Assyrian King Ninus and extends to the year 1400. It is the first of its kind to be published in the West. The work was written by Erhard of Echard, who was born in Biberach in 1206 and became its provost. In 1290 he was appointed to Ursberg, where he died in 1320. He began to collect material for his work at an early age and, in particular, made use of his stay at Rome to examine the papal Regesta. The basis of his first part of his work is the chronicle of the world written by Ekkehard of Aura which he copied almost word for word. For a later period he used the regesta of the Guelphs made by the monk of Weingarten, and for the time of Frederick I Barbarossa the records of the priest John of Cremone. Burridge's original work does not begin until the last years of Henry II; from this point on he narrates independently but in clumsy language the events in which he has taken part himself, or concerning which he has gained information. The work does not give a clear account of his adherence to the Hohenstaufen party, and often speaks bitterly of the papal policy. The chronicle was last edited by Abel and Weiland in the "Mon. Germ. Hist.: Script.," XXIII, 35-83; also separately for school use (Hanover, 1874).

**Patricius Schlager.**

*Ursula,* Saint, and the Eleven Thousand Virgins.—The history of these celebrated virgins of Cologne rests on ten lines, and these are open to question. This legend is based on a much earlier version and increasingly fabulous developments, would fill more than a hundred pages. Various characteristics
of it were already regarded with suspicion by certain medieval writers, and since Baronius have been universally rejected. Subsequently, despite efforts more ingenious than scientific to save at least a part, the apocryphal character of the whole has been recognized by degrees. Briefly, for the solid reconstruction of the true history of the virgin martyrs, there is no other inscription of Clematiius and some details furnished by ancient liturgical books. Unfortunately, these latter are very meagre, and the inscription is in part extremely obscure. This document, carved on a stone which may be seen in the choir of the Church of St. Ursula at Cologne, is couched in the following terms:

DIVINITIS FLAMMIS VISIONIBVS FREQVENTER ADMONIT ET VIRTUTIS MAGNIV MAIESTATIS MARTIRI CAELESTIVM VIRGIN IMMINENTIUM EX PARTIBVS ORIENTIS

5 EXHIBITVS PRO VOTO CLEMATIVS VI-C DE PROPRIO IN LUCO TVO HANC BASILICA VOTO QVOD DEBERAT A FUNDAMENTIS RESTITIVT SV QVIS AVTEM SUPER TANTAM MAIESTATVM SVIVS BASILICÆ VMI SANC

10 TAE VIRGINES PRO NOMINE XPI SAN GVINEM SVMD FVNDMENTV CORPVS ALIVIVS DEPOSIVIT EXCEPIS VIRCIVS-SCIAT SE SEMIPEREM TARTARI IGNIV PVINXIVDM

Its authenticity, which is accepted beyond the shadow of a doubt by the most eminent epigraphists (de Rossi, Ritschl), has sometimes been suspected without good reason, and Donaszewski (C. I. L., XIII, ii, no. 1333) is mistaken in asserting that the stone was not carved until the fifteenth century. It belongs indisputably to the fifth century at the latest, and very probably to the fourth. The recent hypothesis of Reise, according to which the first eight lines, as far as RESTITVX, belong to the fourth century, while the rest were added in the ninth, is more elegant than solid. With still greater reason must we reject as purely arbitrary that of J. Ficker, which divides the first eight lines into two parts, the first being of pagan origin and dating from before the Christian Era, the second dating from the second century. But despite its authenticity the inscription is far from clear. Many attempts have been made to interpret it, none of them satisfactory, but at least the following import may be gathered: A certain Clematiius, a man of senatorial rank, who seems to have lived in the Orient before going to Cologne, was led by frequent visions to rebuild in this city, on land belonging to him, a basilica which had fallen into ruins, in honour of virgins who had suffered martyrdom on that spot. The brief fact is of great importance, for it testifies to the existence of a previous basilica, dating perhaps from the beginning of the fourth century, if not from the pre-Constantinian period. For the authentic cult and hence for the actual existence of the virgin martyrs, it is a guarantee of great value, but it must be added that the exact date of the inscription is unknown, and the information it gives varies. It does not indicate the number of the virgins, their names, or the period of their martyrdom. Nor does any other document supply any probable details on the last point. Our ignorance on the first two is lessened to a certain extent by the mention on 21 Oct. in various liturgical texts (martyrologies, calendars, litanies) of virgins in accordance with an eight or eleven, for example: Ursula, Secundia, Gregoria, Pinosa, Martha, Paula, Britula, Saturnina, Rabacia, Saturia, and Palladia. Without doubt none of these documents is prior to the ninth century, but they are independent of the legend, which already began to circulate, and their evidence must not be entirely overlooked. It is noteworthy that in only one of these texts Ursula ranks first.

After the inscription of Clematiius there is a gap of nearly five hundred years in our documents, for no trace of the martyrs is found again until the ninth century. The oldest written text, "Sermo in natali sanctarum Columbae et virginum", which seems to date from this period, serves to prove that there was then at Cologne a precise tradition relating to the virgin martyrs. According to this, they were several thousands in number, and suffered persecution during the reign of Diocletian and Maximian. The names of only a few of them were known, and of these the writer gives only one, that of Pinosa, who was then regarded as the most important of the number. Some persons, probably in accordance with an interpretation, certainly questionable, of the inscription of Clematiius, considered them as coming from the East, and connected them with the martyrs of the Theban Legion; others held them to be natives of Great Britain, and this was the opinion shared by the authors of the "Sermo". Apparently some time after the "Sermo" we find the "Life of Ursula" of Wulphard of Prumo, compiled about 850, which speaks of several thousand virgins. On the other hand Usuard, in his martyrology dating from about 875, mentions only "Martha and Paula with several others". But as early as the end of the ninth century or the beginning of the tenth, the phrase "the eleven thousand virgins" is admitted without dispute. All sorts of explanations have been offered, some more ingenious than others. The chief and rather gratuitous suppositions have been various errors of reading or interpretation, e.g., that "Ursula and her eleven thousand companions" comes from the two names Ursula and Undeimillia (Simoni), or from Ursula and Ninilla (Leibnitz), or from the abbreviation XI. M. V. (virgines martyres virginum), misinterpreted as undecim millia virginum. It has been conjectured, and this is less arbitrary, that it is the combination of the eleven virgins mentioned in the ancient liturgical books with the figure of several thousand (m illia) given by Wulphard. However it may be, this number is based on an accepted, and perhaps authentic, tradition relating to the virgin martyrs, while Ursula is substituted for Pinosa and takes the foremost place among the virgins of Cologne.

The experiences of Ursula and her eleven thousand companions became the subject of a pious romance which acquired considerable celebrity. Besides the
Nevertheless, the fables they contain are insignificant in comparison with those which were invented and propagated later. As they are now unhesitatingly rejected by everyone, it suffices to treat them briefly.

In the twelfth century there were discovered in the "Agri Ursulanae" at Cologne, some distance from the Church of St. Ursula, skeletons not only of women, but of little children, and even of men, and with them inscriptions which it is impossible not to recognize as gross forgeries. All this gave rise to a number of fantastic legends, which are contained in the accounts of the vision of St. Elizabeth of Schonau, and of a religious who has been regarded as identical with Blessed Hermann Joseph of Steinfeld. It may be remarked in passing that visions have played an important part in the question of the Eleven Thousand Virgins, as may be seen in those of Clementius and of the nun Helindrude contained in the Passion "Fuit tempore" and the Passion "Regnante Domino". Those of the twelfth century, in combination with the inscriptions of the "Agri Ursulanae", resulted in furnishing the names of a great many of the male and female companions of Ursula, in particular — and this will suffice to give an idea of the rest — that of Pope Cyriacus, a native of Great Britain, said to have received the virgins at the time of their pilgrimage to Rome, to have absconded the papal chair in order to follow them, and to have been martyred with them at Cologne. No doubt it was readily acknowledged that this Pope Cyriacus was unknown in the pontifical records, but this, it was said, was because the cardinals, displeased with his abdication, erased his name from all the books. Although the history of these saints of Cologne is obscure and very short, their cult was very wide-spread, and it would require a volume to relate in detail its many and remarkable manifestations.

In the twelfth century a large number of relics have been sent from Cologne, not only to neighbouring countries but throughout Western Christendom, and even India and China. The legend of the Eleven Thousand Virgins has inspired a host of works of art, several of them of the highest merit, the most famous being the paintings of the old masters of Cologne, those of Memling at Bruges, and of Carpaccio at Venice. The Order of Ursulines, founded in 1535 by St. Angela de Merici, and especially devoted to the education of young girls, has also helped to spread throughout the world the name and the cult of St. Ursula.
Ursula of the Blessed Virgin,
SOCIETY OF THE SISTERS OF ST., religious congregation of women founded in 1606 at Dôle (then a Spanish possession), France, by the Venerable Anne de Xainctonge (1587–1612). Its aim is twofold: the sanctification of its members by their fervent, active, and independent life (simple and perpetual), and the salvation and sanctification of their neighbours. The latter is specially attained by teaching, as well as by works of mercy, spiritual and corporeal. At a time when the education of girls was more than neglected, Mademoiselle de Xainctonge, amid extraordinary trials, realized her ideal and gathered a band of older girls and few boys. This idea was then an unusual one. Anne de Xainctonge may be called a pioneer in the education of girls. The classes opened at Dôle, on 16 June, 1606, were public, without distinction of rich or poor, and absolutely free. From Dôle, the institute spread rapidly to France, Switzerland, and Germany. With the Church opening its doors on being from the country, the Ursulines found children and freedom of teaching in another. During the French Revolution, their houses were closed and the religious compelled to return to the world; as soon as peace was restored, however, they resumed their former life. Mother de Vers reopened the convent at Dôle, and Mother Roland de Bussy (formerly of Dôle) undertook the attempt. In 1787, the sisters, with the blessing of Pius VII (then a prisoner at Fontainebleau), founded a new house at Tours (1814). A number of new foundations were made from Tours, until, through the anti-religious laws of 1901, the nuns were expelled and their property confiscated. The mother-house of Tours was transferred to Haverle- borg (Denmark), where the Ursulines were made; in New York, 1901 (branch house, Providence, Rhode Island, 1911); Rome, 1904; Sluis (Holland), 1911. Besides in Belgium, Italy, and the United States of North America, the sisters are now carrying on their work in Switzerland, Germany, and England.

The society was formally approved by a Brief of Innocent X (1648), which was confirmed by Innocent XI (1678). The Constitutions are those of St. Ignatius as far as they apply to women; the first draft was begun by Mother de Xainctonge aided by Father Guyon, S.J., rector of the college at Dôle, but was finished only in 1625, after her death. These Constitutions were observed until the Revolution, but when the various sees of the Church in the different dioceses modified them according to their own views. In 1898, upon request of the religious of Tours, the original Constitutions, revised conformably to the new regulations of the Church for religious orders, were definitively approved by Leo XIII, and their branch erected as a generale. In 1902 the words, "Of the Blessed Virgin," were added to the title to distinguish the non-clerical daughters of Anne de Xainctonge from the cloistered daughters of St. Angela.

The system of teaching employed by the order is similar to that of the Jesuits; the plan of studies conforms to the requirements of the Board of Education in each country.

MOTHER HÉLÈNE MARIE.

Ursulines, The.—A religious order founded by St. Angela de Merici for the sole purpose of educating young girls. It was the first teaching order of women established in the Church, and up to the present date has adhered strictly to the work of its institute. Though convinced of her divinely appointed mission to lay the foundations of an educational order, Angela for seventeen years could do no more than dream of spreading a new religious family, known as "The Company of St. Ursula" but who continued to live in the midst of their own families, meeting at stated times for conferences and devotional exercises. The many difficulties that hindered the formation of the new institute gave way at last, and in 1535 twelve members were gathered together in a community with episcopal approbation, and with their permission Angela de Merici, supreme superior of the movement took upon herself with great enthusiasm, and spread rapidly throughout Italy, Germany, and France. Within a few years the company numbered many houses, each independent. Constitutions suited to the special work of the institute were developed and completed shortly before the death of Angela. In 1540, the pope, Paul III, decreed that a Bull of approbation should be received from Paul III, and the Rule of St. Augustine adopted. Many important details were left unsettled at this time, and, as a result, several congregations developed, all calling themselves Ursulines but differing widely in dress and customs. The largest and most influential of these were the Congregation of Paris and the Congregation of the Ursulines of S. Mary of Borromeo, Cardinal Archbishop of Milan, obtained for the new congregation the status of a monastic order with enclosure. In some of the older European convents, in Canada and Cuba, strict enclosure is still observed; in other sections, though nowhere entirely abolished, the enclosure has been modified to meet local conditions. A Bull of final approbation was given in 1616 by Paul V.

In the early part of the seventeenth century an appeal was made from Canada for bands of religious women to undertake the arduous task of training the Indian girls to Christian habits of life. It met with an instant and generous response. In 1639 Madame de la Peltrie, a French widow of comfortable means, offered herself and all that she had to found a mission in Canada. In May of that year she sailed from Dieppe accompanied by three Ursulines and three hospital sisters. At Quebec the latter founded a Hôtel-Dieu, the former, the first Ursuline convent on the western continent. The superiors of the new foundation was Mother Marie de l'Incarnation Coulon, who in 1663, according to the Holy See the title of venerable in the year 1577, and the process of whose canonization is about to be presented. The earliest establishment of the Ursulines in the United States also owes its origin to French initiative. In 1727 Mother Marie Tranchepain, with ten companions, embarked from Lorient to found their convent at New Orleans. After years of struggle and disappointment, the foundation was secured, and the Ursulines still flourish in the city of their original foundation. A notable feature of Ursuline labours in the United States may be found in the history of the Rocky Mountain missions where for years they have laboured for the Indians, and have established ten flourishing centres. These from western foundations have sprung two branches in Alaska.
In accordance with the wish of Leo XIII, a congress of Ursulines from all parts of the world convened at Rome during the fall of the year 1900. Representatives were sent from the United States, South America, Java, and all parts of Europe. Under the auspices of the Sacred Congregation of Bishops and Regulars, the Roman Union of Ursulines was then formed, with the Most Reverend Mother Mary of St. Julian as the first mother-general. Cardinal Satolli was appointed the first cardinal protector. To this union belong over a hundred communities; aggregations are made from year to year. The united communities are divided into eight provinces as follows: Italy; Austro-Hungary; Spain; the East of France; the West of France; Holland-Belgium-England-Germany; the North of the United States; the South of the United States; Spain and Portugal. Many large and important communities still retain their independent organization. Of late years the Ursulines have suffered severely in France and Portugal. The members of the expelled communities have become affiliated to other foundations both in Europe and the United States.

The habit of the order is of black serge, falling in folds, with wide sleeves. On ceremonial occasions a long train is worn. The veil of the professed religious is black, of the novice white. The guimpe and bandeau are of plain white linen, the cincture of black leather. There are two grades in each community: the choir religious, so called from their obligation to recite the office daily in choir; and the lay sisters. The former are occupied in teaching, the latter in domestic duties. Candidates for either grade pass six months probation as postulants in the community in which they desire to become stablished. This period is followed by two years of preparation in a central novitiate, at the expiration of which the three vows of religion are pronounced temporarily, for a term of three years. At the end of the third year the profession is made perpetual.

The vows of the Ursulines in the United States, though perpetual, are simple. From their earliest founda-

**Ursulines of Quebec.** The—The Ursuline monastery of Quebec is the oldest institution of learning for women in North America. Its history begins on 1 Augt. 1639, when Father Pierre Lalemant, S.J., landed in Canada, thirty-one years after Champlain had founded Quebec (1608) and only four after his death. The monastery was established by Marie Guyard de l'Incarnation, declared Venerable by the Holy See (1671), and Madame de la Peltrie, a rich widow of Alencon in Normandy. The former, after ten years of widows'hood, had joined the Ursulines at Tournai. Her first biographer was her son, Charles Mercier, a Benedictine, who died in the odour of sanctity, in 1696.

His "Life of the Venerable Mother of the Incarnation" was approved (1677) by the venerable Bishop Laval. Bossuet (États d'Oraison, IX) calls Marie de l'Incarnation "the Theresa of her time and of the New World." The letters royal sanctioning the foundation and signed by Louis XIII are dated 1639. After three years spent in the Lower Town, near Champlain's Habitation, the nuns entered (1642) the convent built on the ground they still occupy, conceded to them (1629) by the Company of New France. Their first pupils were Indians, with whom they succeeded better than the Jesuits with their native boys. They mastered the difficult Indian languages thoroughly, and composed dictionaries in Algonquin and Iroquois, also a sacred history in the former, and a catechism in the latter idiom. The first monastery was burned in 1650, but was soon rebuilt. The Constitutions, written by Father Jérôme Lallemant, uncle of the Jesuit martyr, Gabriel Lallemant, combined the rules of the two Congregations of Paris and Bordeaux, and were observed until Bishop Laval decided (1681) in favour of the former, which binds its members by a fourth vow to teach girls.

The monastery shared at all times the country's fate. It was threatened by the Iroquois in 1661-62, when one of its chaplains, the Solipsian Vignal, was slain and devoured by the savages. Marie de l'Incarnation and her convent were unscathed and sick saved them from perishing of starvation. The governors and wardens, both English and French, were always friendly to the institution.
The foundress, who died in 1672, one year after Madame de la Peltrie, practised devotion to the Sacred Heart of Jesus, and had established it in the cloister years before the revolution to the Blessed Margaret Mary. The first celebration of the feast in the New World took place in the monastery 18 June, 1700 (Mandement of Bishop de St-Vallier, 30 March, 1700). The register of the Confraternity of the Sacred Heart begins in 1716. Clement XI (1718) enriched it with indulgences. The first superior elected (1760) after the conquest was Esther Wheelwright, a New England captive, rescued from the Abenakis by the Jesuit Bigot, and a protegée of the first governor, Van Cortland. Besides the French, the Irish, Scotch, and American elements in Canada have given distinguished subjects to this cloister, prominent among whom was Mother Cecilia O'Conway of the Incarnation, the "first Philadelphia nun", one of Mother Seton's earliest associates. The list of alumnae is not less conspicuous. Among its pupils were Jeanne Le Ber, the saintly "reduise of Montreal", and Venerable Mother d'Youville, foundress of the Grey Sisters at Montreal. The Quebec monastery founded convents at Three Rivers (1657), Roberval (1682), Stanstead (1684), and Rimouski, with a normal school (1906), besides sending missionaries to New Orleans (1697), Tournai (1719), New Galveston (1819), and Montana (1893). During the Revolution several French refugees were chaplains to the monastery, the most notable being Abbe L.-P. Desjardins, who died in France, Vicar-General of Quebec. Through him were procured the valuable paintings by Philippe de Champaigne, Lebrun, Collin de Vernon, Peter of Cortona, and others, that adorn the chapel.

LIONEL LINDSEY.

URSUS, SAINT, patron of the principal church of Solothurn (Soleure) in Switzerland, honoured from very early times, as a martyr of the Theban Legion, and recorded in the Roman Martyrology, with St. Victor, on 30 Sept. Relics of him are shown in many churches of Switzerland, and since the twelfth century the baptismal name Ursus is very common in the neighbourhood of Solothurn. The legend, by St. Eucher of Lyons (Acta SS., Sept., VII, 161), clasped by Delehaye ("Legends of the Saints, New York, 1907", p. 120) among the historical romances, says that Ursus, after many cruel tortures suffered for his constancy in refusing to sacrifice to the idols, was beheaded c. 286 under the Emperor Maximian Herculeus and the Governor Hyrtiaces. Between the years 475 and 500 the body of St. Victor was brought to Geneva by the Burgundian Queen Theudesilde; it is probable that about the same time a chapel was built over the remains of the martyr. In 1519 the old cloister was found and the event was commemorated at Solothurn and Bern. The Roman urn containing the relics bears the inscription:

Condita lac rei sanctus
Tumulo Thebaudis Ureus,
(Buried in this tomb is the holy Ursus the Theban.)

STIEFELBER, Die abendländischen Heiligen, I (Graz, 1885), 120; BOURHAN, Histoire solothurn, II (Zurich, 1890), 298.

FRANCIS MERSHMAN.

URUBAMBA, Prefecture Apostolic of (Misiones de Santo Domingo de Urubamba, Madre por Dios), was erected by a Decree of H.E. Bishop of Ayacucho in 1899 at the request of the Peruvian Government. On 10 April, 1902, three Dominican Fathers of the Spanish province took charge of the missions, their number being gradually increased to eleven, which is the number at present working there, ten Spaniards, and one Peruvian. Still more recruits for this work are expected, the vastness of the territories and the class of people to be civilized and evangelized requiring a still greater number of work. All these missionaries are under the jurisdiction of the Rev. Fray Ramón Zubieta, to whose efforts so much of the progress in civilization, as well as the religious and geographical survey of the Montana region in the eastern part of Peru, is due. The territorial limits of these missions cannot be determined with certainty, but they are about one-eighth of the entire area of Brazil and Bolivia; on the north by Puno and Cuzco; on the east by the Department of the Ucayali and Cuzco; on the west by Bolivia. The inhabitants are for the most part savages, numbering about 60,000. The remainder are whites or mestizos who devote themselves to the exploitation of the India rubber industry and commercial pursuits. Some of these have preserved some vestiges of the Catholic faith, but for the greater part they live in a state of complete indifference. The savages have no religion whatsoever, preserving only a vague sort of superstition concerning a supreme being and a spirit of evil.

These missions, after passing through many vicissitudes and surmounting great difficulties, have been very slowly and laboriously established. They are ruled by the Rev. Fray Mariano,osto Domingo, San Vincente, and San Luis. Of these the last mentioned besides their cloisters have free schools, the only ones among the savages. In 1911, 300 baptisms, 241 confirmations, and 22 marriages were registered. The greatest good, however, that the missionary exercises in these regions is to uplift and maintain a moral lever among these people, who without him would fall into the most hopeless demoralization. He is the sole representative of right, of humanity, and of religion.

VICTORINO OSENDIE.

URUGUAY (REPUBLICA ORIENTAL DEL URUGUAY), the smallest independent state in South America, extending from latitude 30° to 35° S. and from longitude 55° to 58° 30' W., lies south of the Province of Rio Grande do Sul, Brazil, and east of the Rio Uruguay, hence its local name, Banda Oriental, given in the old Spanish days. Its boundaries are: west, the Rio Uruguay; south the Rio Uruguaya, south the Rio de la Plata, which separate it from the Argentine Republic for a distance of 717 miles; north by Brazil and Bolivia; east, the Atlantic Ocean for 200 miles, and Lago Mirtin, a lagoon dividing Uruguay from the southeast of Brazil. The northern boundary, 450 miles in extent, was definitively settled by treaty with Brazil on 15 May, 1852, as the Rio Guarani, the Cuchilla de Santa Ana to the Rio San Luis, thence to the Rio Cuchilla, and the western shore of Lago Mirin. Uruguay's greatest length is about 350 and breadth 300 miles, and its area 72,170 square miles, approximately six times the size of Belgium, or double the size of the State of Indiana, U.S.A. The capital, Montevideo (properly San Felipe y Santiago de Montevideo), is situated in latitude 34° 54' S. and longitude 58° 30' W.

Natural Features.—The northern portion of the republic is hilly, the ranges being continuations of the Brazilian mountains; though the hills are termed cuchillas (knives), the summits are not sharp, but gently rounded; the chief groups are the Cuchilla de Santa Ana, 80 miles long and 1900 feet high on the border of Brazil, the Cuchilla Grande, 210 miles long and 2100 feet high, running south-east across the country, and the Cuchilla de Hledo in the northwest, 257 miles long. The culminating point is Aquequin in the Cuchilla Grande near the Brazil frontier, with an elevation of 2010 feet. The country lying along the Atlantic is low, dismal, swampy, and sandy,
and contains many lagoons. The west and south is
crowned by beautiful fertile plains, not quite level
like the Argentine pampas lying west of the Río
Uruguay, but undulating gently. This region is
intersected by numerous arroyos, or small streams,
rendering it suited for agricultural and pastoral
pursuits, while vegetation is very thick in the neigh-
bourhood of the rivers. The most important rivers
rise in Brazil and are the Rio Negro, 1550 miles
long, and its tributary, the Río Colorado, which flows
south-west for 335 miles, almost bisecting the
country. There are a few islands in the Río de la Plata
belonging to Uruguay, one of which, Flores, serves as
a quarantine station for Montevideo; Lobos, lying to
the south-east of Uruguay, in the Atlantic off Mad-
donado, is a centre of the sealing industry. There are
fourteen lakes in the province, of which only one, the
Lake of Montevideo has been deepened so as to admit ships
drawing 21 feet of water; the Government is develop-
ing the port of La Paloma. The climate is very
healthy, epidemics being almost unknown; the
northern regions are subject to extremes of heat and
cold, but in the south the temperature is moderate,
varying in winter in 1878-9, between a maximum of 82°
and a minimum of 35° F. Very severe sudden storms
known as pampasos blow frequently from the south-
west. The mean annual rainfall is 43 inches.

Though the river banks are well wooded, there are
no extensive forests in Uruguay. Excellent timber for
chairwork is found in the west; the most note-
worthy native timber is the algarroba, a gum-arbores,
which is much used for furniture, and has a facility for petrififying. Palms are found in the
valleys of the sierras de la Plata and in Maldonado,
Minas, and Paysandú. Aromatic shrubs are plentiful
and over 400 species of medicinal plants are found.
Many European trees have been introduced—acacia,
alder, aloe, mulberry, oak, and willow, but the euc-
alia, introduced in 1856, is the most productive. There are
deer, fox, tapir, monce, puma, and wild cat;
rat-tail snakes are found occasionally especially in
Minas; poisonous spiders are common. The Ameri-
can ostrich-reea is still plentiful, as are parakeets,
partridges, quails, and water-birds. Seals breed on
the Lobos and Castillos islands in the Atlantic; the
valley tribes use skins to the south, while in the
Government, but during the season the killing is
carried out without judgment, and the industry is in
danger of perishing. The mineral wealth of Uruguay
is as yet unknown; silver, copper, and iron ores have
been found; coal is mined to a small extent at Cunap-
piru; coal has been discovered in Santa Lucia, Cercro
Largo, but has not been worked; crystals, gems, and diamonds also occur.

Religion.—By articles 130 and 132 of the Constitu-
tion religious freedom is granted to everyone, but
article 5 provides that Catholicism is the state religion.
There is a small government grant in favour of religion;
the civil power is unsympathetic when not actively
hostile to the activities of the Church. Almost the
whole of the population of the country is Catholic, there
being only about 6000 Protestants, chiefly Swiss
German Evangelicals, Waldensians, and Anglicans.
At present the entire republic forms one ecclesiastical
unit—the Archdiocese of Montevideo. In 1878
Montevideo was created a diocese, Mgr. Vera being
appointed bishop; in 1897 it was made an archdiocese,
and two suffragan sees Mato (ex-c.) and Solifa (ex-c.)
were erected, but owing to political troubles no
appointments to them have yet been made. There
are, however, two auxiliary bishops at Montevideo,
Mgr. Ricardo Isasa (b. in the capital, 7 Feb. 1847;
appointed 15 Feb. 1891) and Mgr. Pio Cigarro
Solla (b. at Paso del Molino, 7 Aug. 1857; appointed
the diocese since 26 Sept. 1908, when the first arch-
bishop, Mgr. Mariano Soler, died. Mgr. Soler was
born at San Carlos, Maldonado, 25 March, 1846,
studied at Santa Fe and Rome. On his return he
established a paper "El Bueno", and a Catholic circle
at Montevideo. He was elected to the House of
Representatives, was made bishop, 29 Jan., 1891,
and archbishop, 19 April, 1897. He was six times a
pilgrim to the Holy Land, where he founded a celebrated
convent and sanctuary, "Hortus Conclusus", a little
south of Bethlehem. He was an able writer, and
introduced among other things an account of
his travels, the "Ruins of Palmyra", "A Voyage
in the Land of the Bible", and social writings such as
"The New Spirit", "The Social Question".
He went to Rome for the jubilee of Pius X, but fell ill
in Italy and died off Gibraltar on his return journey.
His obsequies took place at Montevideo in presence of
the president and the archbishop.

The diocesan seminary at Montevideo is entrusted
by the archbishop to the Jesuits; the most note-
worthy churches in the capital are the Cathedral of
Saint Philip and James, with its towers 133 feet
high, in the Plaza Constitución; it is in the Renais-
sance style and was built in 1543-4, becoming the
principal cathedral in 1569; the first archbishop was
appointed in 1605; also the church of the Capuchins (Bonifacio)
missionaries (Romanesque), and Jesuits (Renaissance).
There are many communities of nuns: Perpetual
Adoration, Dominican, Good Shepherd, Mercy, and
Charity, most of them with schools or charitable insti-
structures. The Sisters of Charity have care of the
great Hospital de Cariá, founded in 1788 by Francisco
Antonio Maceide. Mgr. Isasa also introduced a
a government lottery. There are a founding hospita-
l, a begging's asylum, and over 40 charitable associa-
tions in the metropolis. Concerning marriage it may
be noted that a law of 1885 makes civil marriage
obligatory; this may account practically for the high
rate of illegitimacy mentioned below; divorce however
is not recognized. The divorce law was promulgated in
1903. Under the constitution of 1865 the president and
5-5 November, 1911, the Fourth National Catholic
Congress was held under the presidency of Mgr. Isasa.
There were present 360 delegates representing over
500 parishes, associations etc. The Unión Católica,
found in 1859, dissolved to form three new unions—Social,
Economic, and Civic—each with a directive committee
in 1878, and has become a central committee
consisting of three representative members elected by each of the unions was appointed.

The Congress received a special blessing from Pius X.  

History.—Uruguay was discovered in 1512 by Juan
Díez de Solís, Piloto mayor of the Kingdom of Castle,
who on a second visit in 1516 landing in Colonia at
Martin Chico, was slain by the Charruas. It was
visited by Magallanes in Sp. 20.59., 1519, by Sebastian
Cabot in 1526-7. At the time of its discovery Uruguay
was inhabited by about 4000 Indians, the Charruas
who dwelt on the north shore of the Río de la
Plata as far as the Río San Salvador, the Yaros, Boh-
hanes, Aracharas, Guemos, and Charras. The last
named were converted by the Franciscan pioneers,
but the others preserved their heathen practices. The
Charruas were very dark in colour, thick-lipped, small-
eyed, and very warlike, but were not cannibals as
has been asserted. They made constant war on the
other Indians, and were a source of terror to the Span-
wars, whom they prevented for over a century from
establishing colonies. Early in the seventeenth
century the Jesuits were introduced into the
Indians (for the wonderful results of their labours
see REDUCTIONS OF PARAGUAY). After the
expulsion of the Jesuits (1677), the Indians, deprived of their
teachers and protectors, rapidly dwindled, through
the violence of the whites, and finally General Rivera,
first President of Uruguay, slaughtered all the Charruas
in 1832. The first permanent settlement in
Uruguay was made by the Spanish who followed the
Jesuits to Santo Domingo de Soriano on the Río
Negro in 1824. Colonia (del Sacramento) was founded by the Portuguese in 1680; for nearly a century Portugal, relying on the Treaty of Tordesillas (7 June, 1494), disputed with Spain for possession of Uruguay, but finally recognized the Spanish claims by the Treaty of San Ildefonso (1 Oct., 1777). Montevideo was established in 1726 by Mauricio Zabala, Governor of Buenos Aires, to thwart the efforts of the Brazilian traders. It was captured by the British on 23 Jan., 1807, but was soon evacuated, on Whitelocke's defeat before Buenos Aires. On the declaration of independence by the Argentine, 25 May, 1810, Uruguay became part of the United Provinces of Rio de la Plata. In 1811 the Spaniards were expelled from Montevideo, till their fleet was destroyed by Almirante Brown, in May, 1814, while General Alvear attacked the city by land. In 1816 the Portuguese attacked Uruguay but were driven off. In 1821, however, Brazil, having become independent, annexed Uruguay as the Provincia Cisplatina. In 1825 the President of Buenos Aires, the Argentine and Brazil, made war on Paraguay. The country was eventually brought to the verge of ruin and bankruptcy, but President Cuesta (1897-1902) succeeded in placing it on a firmer financial basis. On 1 March, 1911, José Battle y Ordóñez, who had already been president (1903-1907), was again placed in power.

Government and Justice.—The republican Constitution of Uruguay sworn to on 18 July, 1830, is still unchanged. The Legislature consists of a Senate and a House of Representatives, meeting from 15 February to 15 February yearly. In the former two senators and five representatives act with the presidents, a permanent administrative committee. Senators must be over 32 years of age and possess property worth $10,000 or its equivalent. They are 19 in number, one for each department, and are chosen by an electoral college elected by popular vote. They hold office for 12 years, one-third being elected by popular vote every second year. The vice-president of the republic is ex-officio chairman of the Senate. The representatives, one for every 3000 adult literate males, are elected for 3 years. They now number 75. The president, who is chosen by the Senate and Representatives, receives an annual salary of $35,000 and may not be elected for successive terms. The departments are administered by governors appointed by the Executive, and by a locally elected council. Slavery was abolished in Uruguay in December, 1843. There is a Supreme Court of five judges, appointed by the President for life, with three judges elected by the people from their own number. There are two inferior courts of appeal, with three judges each. Montevideo has eleven local courts of first instance. Each department has a departmental court, and there are smaller judicial sections (205) with justices of the peace and aldermen. Uruguayan laws are based on the Code Napoleon, and the death penalty was abolished in 1807, penal servitude for a maximum of 10 years being substituted. In 1908 an extradition treaty with the United States became law. Provision is made of a pension system, and laws regulating child and female labour.

Population and Education.—On 31 December, 1916, Uruguay had 1,094,688 inhabitants, or 15.1 persons per square mile, of whom 291,363 resided at Montevideo, the most thickly populated departments after Montevideo being Canelones, Colonia, and Maldonado. Over 25 per cent of the population is foreign, principally Italian (73,000), Spanish (68,000), and Brazilian (28,000). For the years 1900-10 the annual number of immigrants averaged 14,8,587, and emigrants 12,1,492. In 1915, 9,756 arrived; 16,515 left; 35,927 births; 13,172 stillbirths; the figures in 1900 being respectively 4549; 13,882; 31,993; and 1004. The Uruguayans from a physical point of view are the finest South American people. Among the country folk there are some (Chinos) who give clear evidence of Indian blood. The country is thinly peopled. The greater part of the country is devoted to cotton, and ten per cent of the crop must be exported to have some Charruan blood, which may account for their indifference to animal and even human suffering; they are restless and willingly join in any uprising, forming as a rule the main body of the revolutionary forces that have almost ruined the country. Uruguayan education is in a very backward state, though primary education is nominally obligatory. In 1907-8 there were 671 public primary schools, 289 private schools, with only 78,727 children on the rolls, though there were 227,770 children of school age. In 1910 the public schools numbered 788, and the children enrolled 117,000. Teachers averaged 2 per public and 3 per private school. In 1908 the number of illiterates over 6 years of age was 390,347 (of whom 84,322 are girls). The state subsidizes the schools, half the cost. There are 8 normal schools, a state technical school with 185 free students; a university with faculties of law, medicine, mathematics, sociology, agriculture, veterinary sciences, and commerce. In 1905 the university had 112 professors, 530 undergraduates, and 661 students receiving a secondary education. The National Library contains over 47,000 volumes. The Montevideo astronomical and zoologic museum and library with 7000 volumes was founded in 1888 at Montevideo. Religious instruction is given in the public schools.

Commerce and Finance.—Uruguay has over 5500 miles of good roads; 1472 miles of railroad in 3 systems running from the capital; 170 of tramway, the system at Montevideo being electric; 318 telegraph and 1018 post offices; there are 2 telephone companies, and 2 wireless stations. The traction systems are almost entirely in British hands. The chief ports are La Paloma and Maldonado on the Atlantic; Montevideo and Colonia on the Plata; Mercedes on the Rio Negro; and Paysandu, Fray Bentos and Salto on the Uruguay. In 1915, 101,813 over 200 tons were recorded. The trade is mainly by river and sea. Montevideo. Vessels of light draught can ascend the Rio Negro for 55 miles, and the Rio Urugu for over 200. Imports in 1911 amounted to £29,756,000—chiefly cottons, woollens, coal, and iron;
ports amounted to £29,476,000—chiefly meat, tobacco, 1,000, against £35,041,000 and £35,041,000 in 1901. The public debt in 1910 was £55,085,781. The Bank of the Republic, whose directors are nominated by the Government, can alone note; on 1 Jan., 1911, it had notes to the value of £18,076,812 in circulation. In 1912 the Government created a national insurance bank with a monopoly of accident, fire, labour, and life insurance: the work of these three concerns: the latter is conducted especially in Durazno and Soriano, and an excellent variety wool is exported. The centre of the cattle industry is Salto, Paysandú, and Rio Negro; chiefly English stock, are destined chiefly for the saladero, that is, sun-dried salted meat or jerked beef, which is exported to Brazil and Cuba. Fray Bentos is headquarters of large factories for the manufacture of extract of beef. Vineyards were introduced to Salto about 1874, and have spread to Montevideo, Colonia, and Canelones; the production of wine numbering to over 4 million gallons in 1908. Wheat, other cereals, as well as tobacco, are extensively grown, but not yet in sufficient quantity to develop the native market.

**URUGUAYANA**

**Ushaw College** (College of St. Cuthbert), a combined college and seminary for the six dioceses that were comprised in the old Northern Vicariate of England. The government is vested in a united board of the bishops of these dioceses, with a president, a vice-president, and staff of about 30 professors. The average number of students is over 500, divided into three classes: the first for the order of deacon, the second for the order of priest, and the third for the philosophical and theological class, with about 80 boys, the humanity course with about 150, and the philosophical and theological with about 100.

**History.**—The suppression of the "Grands Anglais" at Donau (q.v.), the seminary which for 200 years had meant the Catholic Faith to England, was only one of the many far-reaching results that the French Revolution of 1789 brought into the country. The immediate necessity under which the English Catholics found themselves of providing for the continuation of its work led to a project of establishing one college for the whole of England on English soil. Many difficulties supervened and finally the question was arranged itself by the division of the refugee students from Donau into two lots, one of which found shelter in Old Hall near Ware, while the remainder, composed of students who were destined for the Northern Vicariate, after temporary sojourns at Tidhoe and Pontop, two villages in the vicinity of Durham, settled on 15 Oct., 1794, at Crook Hall, about eleven miles N. W. of that city. There they re-established Donau for the north of England, and it lived its life under the guidance of one of the former masters of Donau, the Rev. J. A. Eyre, of John Lingard, the future historian, and of John Daniel, the actual president of Donau at its suppression, who seems to have been formally installed as president for a few days. Ten years' growth made Crook Hall inadequate for its purpose, and in 1801 Bishop William Gibson began the building of Ushaw. In 1821 the college was moved to Ushaw, and finally migrated, the first detachment on 19 July, the rest on 2 August, 1808. There they found three sides of a massive quadrangle, with a frontage of about 170 feet and a depth of 220, ready for their habitation. The fourth side of this quadrangle was not added till 1819, under the president who succeeded Eyre in 1811, Dr. John Gillow; but no further enlargement was made till 1837, when, on the resignation of the fourth president, Charles Newsham, succeeded in 1837.

He realized that, if Ushaw was adequately to continue its career, no pains nor expense must be spared to enlarge its capacity and to bring its arrangements into line with more modern requirements. The pioneers of the Gothic revival were at hand to assist him in this, and of the plans of two or three of the finest architects. The two Hansons the second church with its attendant chapels, the library, infirmary, museum, exhibition hall, lavatories, kitchens, and farm-buildings, and a separate establishment for the younger boys, all sprang up around the old Georgian quadrangle.

Much more than a conventional sense Monsignor Newsham may be called the founder of modern Ushaw; and the best evidence of how far-seeing were his plans and achievements lies in the fact that for twenty years after his death, in 1868, practically no addition was made to the fabric. In 1868 Monsignor Wrennal found it necessary to build a third church. Under Keble-Wilkinson, who assumed the presidency in 1860, which he held conjointly with the Bishopric of Hexham and Newcastle till his death in 1900, a fresh period of activity began. A covered swimming bath, a gymnasium, two new dormitories, and forty new living rooms, the enlargement of the exhibition hall, the elaborate decoration of the church with the erection of a new high altar, are all the products of his nineteen years of presidency. Two presidents have held office since his death: Monsignor Joseph

**Ushaw**

**Uruguayana, Diocese of (Uruguayenses),** Region of Porto Alegre, Brazil. By a Decree dated August, 1910, the See of São Pedro do Rio Grande was raised to archiepiscopal rank, with the title of Porto Alegre, three new dioceses being separated from territory. Fifteen parishes were allotted to the see of Uruguayana, which includes the western portion of Rio Grande do Sul, bounded on the south by the Provinces of Rio Grande and Riveria (Uruguay) and the west by the Rio Uruguay. This fertile territory has important stock-breeding and dried beef cattle; Uruguayana (1,000 inhabitants) is situated on the Rio Uruguay, 360 miles west of Porto Alegre, with which it is connected by rail; it opposite the Argentine town of Rosario and extensive trade by river and rail with Montevideo and Buenos Aires. It was founded in 1843 by order the revolutionary Government of Rio Grande. On 24 August, 1863, it was taken by the invading Parusyan army, but on 18 September following, the invaders, numbering 6,000 men, had to capitulate to the forces of Brazil, Argentina, and Uruguay. The other chief towns are Alagoinha (9,000 inhabitants) he left bank of the Rio Paraputu, and Quaraú (9,000 inhabitants) opposite the town of Santo Eugenio. Numerous flourishing missions were founded by the Jesuits in this territory along the east bank of the Rio Uruguay from 1622 to 1707, but their fruits of labours were lost on the expulsion of order (see Reductions of Paraguay). The first sop of the new see is Mgr. Hermes Joseph Pinho, b. at Tramau, in the Diocese of Alagoinha, 1871; ordained priest in 1901, was appointed Bishop of Uruguayana on 12 May, 1911. The cathedral church is dedicated to St. Anne.

A. A. MacErele.
Corsham, who survived him only a year, and Monsignor William Henry Brown, under whom new lecture rooms have been erected to accommodate the largely increased numbers of philosophy and divinity students. Altogether the present blocks of buildings, with their enclosed courts, cover a rectangle 880 feet long by 420 feet broad; the outbuildings, grounds, and campus cover over 100 acres, and the whole estate, with its home and outlying farms, includes between 1200 and 1300 acres.

Many objects of historical and artistic interest are preserved in the college. Lingard bequeathed to it all his books and papers, which included an early MS, and the proof sheets of his “History of England” with about 1500 of his letters; Wiseman is represented by his correspondence, and of many sermons, lectures, and letters, while Eyre gathered for it a valuable collection of documents dealing with the English Catholic history of the seventeenth and eighteenth centuries, and intended for a continuation of Dodd’s “Church History”. The library, in which these are stored, contains about 50,000 volumes, mainly of theological and historical interest. It is especially rich in early printed liturgical books and in seventeenth-century controversy. Examples of Wynken de Worde’s “York Manual”, Higen’s “Polychronicon”, the “Nuremburg Chronicle”, the “Ulm Complutensian Polyglot”, are found on its shelves, and perhaps more interesting are the forty works that belonged to the pre-Reformation library of Durham Abbey and which still retain the original monastic bindings. The manuscripts include, in addition to the collection already mentioned, a large number of Old English missals, psalters, and books of hours, as well as many documents connected with the history of the colleges at Douai, Lisbon, and Watten, and with other Cathedrals in the north of England. The museum, too, is rich in relics of persecution times, several missals and altar-stones and an old wooden crozier that belonged to Bishop Deaconson being among the most remarkable. The church treasury contains several splendid examples of church plate, a chalice assigned to Benvenuto Cavalier, a monstrance and a chalice that tradition connects with Westminster Abbey and another that belonged to Cuthbert Tunstall, the last Catholic Bishop of Durham. The collection of relics is one of the largest extant in private hands, and includes a large relic of the True Cross and a ring that was taken from the body of St. Columba and which was taken to the tomb at Durham was riddled during the Reformation.

EDUCATION.—In her system of education Ushaw has hung tenaciously, though progressively, to the traditions she inherited from the “Alma Mater Doucensis” which she was founded to replace. No other college in England has found it possible permanently to retain the thoroughness and length of the University course characteristic of the Douai system—the education of clerical and lay students throughout their humanities. The classical element still predominates in the course, and even the old class names, rhetoric, poetry, syntax, grammar, and figures, are still retained. For nearly fifty years after leaving France the Douai authors were read and the Douai text-books were used, with only slight alteration. Then the second spring began to make its influence felt in education as in all other things Catholic. Catholic colleges were affiliated to London University in 1810, and Catholic scholarship was at last able to find a criterion to test its standing. Ushaw found she had no reason to shrink from the comparison. Her lectures were observed with a dispassionate interest; the first class, and their example was so persistently followed that twenty years later the London examinations in arts were made standard the same. Roughly speaking, during the thirty-three years from 1863 to 1896, three fourths of the candidates presented were successful, the exact numbers being 574 and 717. But in the latter year several causes combined to make another standard of comparison desirable, and, in accordance with a general movement among the Catholic colleges, Ushaw substituted the Oxford local and certain parts of the London examinations. About the same time, a close examination of the privilege newly granted by the Holy See, Ushaw utilized the university training which she found close at hand. The college was affiliated to Durham University in 1900, and during the next ten years 22 students took the degree in arts, 16 obtaining classical honours at the final examination, and 27 scholarships examinations. Bishops and clergy, the new interest, and the introduction of more modern methods began with Monsignor Newsham and to-day the various chairs are held by professors who have received their training at Ushaw and graduated at foreign universities. With very few exceptions professors have always been chosen from former alumni. Generally speaking, the more promising students are selected for special training and sent to Ireland or France, and, while the program in philosophy, they teach the lower schools for three years, with the title of “minor” professors. They then proceed to their divinity, where a further selection is made for specialized study, which is generally taken at some university on the Continent. Long experience has shown the advantage of this course, which ousts professors; another inheritance from the traditions of Douai.

PROCLAMATION.—The roll of alumni (1912) includes close on to 5000 names. It embraces over 1000 priests, 60 bishops, 5 archbishops, and 1 cardinal: Wiseman, De in Puerre, Bourne, Cardinal Archbishop of Westminster, and the Cardinal Secretary of State, Mr. Merry. Many are now student but also a “minor” professor at Ushaw. Prominent names in almost every profession and almost every country can be found there. Law is represented in England by Mr. Justice Shee, the first Catholic post- Reformation judge; by Judge O’Connor, former deputy chairman of committees in the House of Commons; His Grace the Duke of Devonshire, Judge of the High Court of Madrid; in Canada by the Hon. James Fox, Attorney-general of Ontario; in the United States by Joseph Scott of Los Angeles, a prominent official of the Knights of Columbus. Statesmanship is represented by the present Under-Secretary for the Home Office, William Patrick Byrne, C. B.; the services by General Montague Gerard, K. C. B., Major Miles O’Reilly, commander of the Irish Brigade at Castlefard, and Commodore Edward F. Charlton, Commodore of the Eastern Destroyer Flotilla; art by Charles Napier Hemy, the Royal Academician; architecture by George and Edward Gooch and the youngest Pugin; literature by such names as Lingard the historian, Frere the poet, and the present editor of the “Dublin Review”, and Joseph Gillow, the compiler of the well-known “Bibliographical Dictionary of the English Catholics”. 
Usura, a titular see of Byzacena in Africa. Nothing known of the history of this city, it is mentioned by Socrates (IV. 10) and with variations in the spelling the name by the Peutinger Tables (ii) which call it a municipality, and by other ancient geographical documents, according to which it was thirty-two miles on Thrasius (to-day El Djem) and twenty-eight miles from Tharros (Besbhir Tina). The ruins are known as Isidilla, and on them being the remains of a Byzantine basilica. We have the names of six bishops of Usura: Felix, present at the Council of Carthage (256); Cassianus, at the Council of Carthage (459); Theodore, one of the Donatist partisans of Maximinus, who at the Council of Carthage (393) solemnly Proclaimed, and in turn at the Council of Carthage (491) was condemned by the partisans of the Arians. Maximus, present at the Council of Carthage (411); Victorinus, exiled by Huneric (454); Laurentius, a name of the letter addressed by the Council of Byza- (641), to the Byzantine emperor against the Onochoites.

Usuard, MARTYRIOLOGY OF. — Usuard was a Benedictine monk of the Abbey of St. Germain-des-Prés, Paris. He seems to have died about the year 875, and the prologue in which he offers to Charles the Great his most important work, the "Martyrology," which he had undertaken at that monarch's instigation, is dated to the year of the father's death. Usuard was a prominent member of that order and he had been sent on a mission to Spain to procure certain important relics, of which he never an account is still preserved (see Acta SS., April, VI, 439). The "Martyrologium" which bears his name, a compilation upon which the existing one upon martyrologies depends very closely, remained throughout the Middle Ages the most famous document of its kind, and is preserved to us in innumerable MSS., of which Dom Quentin gives a partial list Martyrologes historiques, 1905, pp. 673-7. The other compiled history of the evolution of the early medieval martyrologia culminating in Usuard's work can but be superficially told to Dom Quentin in the book just cited. It has, however, been known that Usuard provided what was substantially an abridgement of Ado's "Martyrology" (see ANO DE Vienne) in a form better adapted for actual liturgical use. In certain points, however, Usuard reverted to a Byzantine recension of Bele's augmented "Martyrology," which was attributed to the names of Moses and others. A collection of these texts, unravelling for the first time by Dom Quentin, is too complicated to be detailed here. The text of Usuard's "Martyrologium" was carefully edited by Dom Boullant (Paris, 1718) from MS. latin 13745 at Paris, which, if not the autograph of the author, dates at any rate from his time. A still more elaborate edition was brought out by the Bolandist Du Sollier in Acta SS., June, VI. It has been repeated in P. L. CXXIII—CXXIV.

Usury. — In the article INTEREST we have reserved the question of the lawfulness of taking interest on money lent. We have here to consider first, usury as a subject of controversy; and, secondly, usury as taken by all honest men.

Plato (Laws, v. 712) and Aristotle (Politics, I, xii) considered interest as contrary to the nature of things; Aristophanes expressed his disapproval of it in the "Clouds." (128 sqq.) Condemned it (see Cicero, "De officiis," II, xxiv.), compared it with highway robbery, as also did Seneca (De beneficiis, VII, x) and Plutarch in his treatise against incurring debts. So much for Greek and Roman writers, who, it is true, knew little of economic science. Aristotle disapproved of the money trader's profit; and the common rates at which money was lent explain his position.

On the other hand, the Church held that interest was lawful, while considering the minimum, or loan for consumption, as a contract gratuitous in principle allowed a clause, stipulating for the payment of interest, to be added to the bond. The Law of the Twelve Tables allowed only usucarium fons, probably 1/2 of the capital, or 8.3 per cent. A plebscitum, Lex Gregorii, 412 A. D. (C. C. Car., 143) prohibited interest, however, whatever it may be, but, at a later period, the Roman law allowed interest at 1 percent monthly, or 12 per cent per annum. Justinian laid down as a general rule that this maximum should be reduced by half (L. 26, § 1, de usuris, IV, 32). Chalea allowed interest on loans (cf. Law of Hammurabi, 48 sqq.). No absolute prohibition is mentioned in the Old Testament; at most, Exod., xxii, 25, and Deut., xxix, 19, 20, forbid the taking of interest by one Jew from another (cf. Schwab, "La vie privée du peuple juif à l'époque de J. C." III, col. 7, Paris, 1910).

In the Christian era, the New Testament is silent on the subject; the passage in St. Luke (vi, 34, 35), which some persons interpret as a condemnation of interest, is only an interpretation of the author's death. Usuard was the first for which there is a certain account, told by Dom Quentin in the book just cited. It has, however, been known that Usuard provided what was substantially an abridgement of Ado's "Martyrology" (see ANO DE Vienne) in a form better adapted for actual liturgical use. In certain points, however, Usuard reverted to a Byzantine recension of Bele's augmented "Martyrology," which was attributed to the names of Moses and others. A collection of these texts, unravelling for the first time by Dom Quentin, is too complicated to be detailed here. The text of Usuard's "Martyrologium" was carefully edited by Dom Boullant (Paris, 1718) from MS. latin 13745 at Paris, which, if not the autograph of the author, dates at any rate from his time. A still more elaborate edition was brought out by the Bolandist Du Sollier in Acta SS., June, VI. It has been repeated in P. L. CXXIII—CXXIV.

HERBERT THURSTON.
in the payment of interest to be added. In modern legislation, two questions remain to be decided: (1) whether it is desirable to establish a maximum legal rate; and (2) by what means usurious exactions may be prevented. The Holy See admits practically the lawfulness of interest on loans, even for ecclesiastical property, though it has not promulgated any decree forbidding the making of such loans. The Holy Office dated 18 August, 1830, 31 August, 1831, 17 January, 1838, 26 March, 1840, and 28 February, 1871; and that of the Sacred Penitentiary of 11 February, 1832. These replies will be found collected in the "Collectio Lecensis" (Acta et decreta s. conciliorum recentiorum), VI, col. 677, Appendix to the Council of Pondicherry; and in the "Enchiridion" of Father Bontke, 3, 5.

Every one admits that a duty of charity may command us to lend gratuitously, just as it commands us to give freely. The point in question is one of justice: is it contrary to the equity required in mutual contracts to ask from the borrower interest in addition to the return of the money lent? It may be that the best authors have long recognized the lawfulness of interest to compensate a lender for the risk of losing his capital, or for positive loss, such as the privation of the profit which he might otherwise have made, if he had not advanced the loan. They also admit that the lender is justified in exacting a fine of some kind (a conventional penalty) in case of any failure of the borrower to pay the debt. These and other considerations are the basis of laws regulating the loan of money.

The Code of Justinian, for instance, authorizes the usur movimiento, or loan of things meant for immediate consumption, to remain as unblobbed, as having been unjustly claimed. This was the doctrine of St. Thomas and Scotus; of Molina, Lessius, and de Lugo. Caronists adopted it as well as the theologians; and Benedict XIV made it his own in his famous Enchiridion "Vix perveniit" of 1 November, 1745, which was promulgated after thorough examination of all the cases. In the Code of Justinian, however, the usura movens is distinctly forbidden. Hence, it is evident that the law of usury does not presuppose, and is not in any way connected with, the usura movens.

The Code of Justinian, for instance, authorizes the usur movimiento, or loan of things meant for immediate consumption, to remain as unblobbed, as having been unjustly claimed. of taking interest depends on one's intention; thus, we may give credit gratuitously, or we may give the use of our money for a consideration. In the first case, the contract is essentially gratuitous; and as formerly this gratuitous contract was the ordinary practice, the Church was opposed to all claim of interest. However, as the use of money has its value, we must take the use of anything else; the Church on that account permitted the lending of money for interest. In spite of the assertion of many authors to this explanation, we do not approve it. In Roman law, gratuitousness was not essential to the mutuum, but only presumed in the absence of any stipulation to the contrary. Persons who openly or secretly demanded interest proved conclusively that they were inury and therefore entitled to interest. In the Church, in condemning them, did not raise the question of their intention. The answer to Baldrini is that rent is a price paid for the use of a thing not destroyed by use. The expenditure of money may be productive, and the person lending money and so depriving himself of profit may claim a compensation for the privation, but this is the question of extrinsic circumstances, not of justice in itself.

Others with Claudio-Janetti (Le capital, la spéculation et la finance, iii, 11 and iii) distinguish between the loan for consumption and the loan for production: we may ask interest from the borrower who takes money on credit in order to produce or gain money, but not from one who has used it for a grain of bread. All work which is intended for productive use may refuse to except on condition of being made a partner in the undertaking, and may claim a fixed interest which presents that share of the profit, which he might reasonably expect to receive. The system, nevertheless, is formally condemned by the Eucyclicist Vix generation for that private but public principle; it tends in fact to make the borrower pay for a special advantage, while the compensation is regulated by the general advantage procured by the possession of a thing, not by the special circumstances of the borrower. Others justify the existing practice by the presumption of extrinsic circumstances, which is concerned, according to some persons, by the permission of the Church itself. The law now cashes money capital does not pay interest. The extrinsic circumstances do not always exist, while we can always lend at interest, without any scruple on the score of justice. And that is there to show that modern legislators pass merely to quiet men's conscience.

But we may correct this last opinion by the aid of extrinsic circumstances, of which the Church give us the true one, and we call them more fully the strictness of the law of earlier times, and the greater liberty allowed the present day. The just price of a thing is based on the general estimate, which depends not in all cases on universal utility, but on general utility. Once the possession of an object is generally useful, money may rest on the price of the interest of the Church curve; but if it is not useful, to use it, is the contrary, the object is of no use to me. There is much greater facility nowadays for making profitable investments of savings, and a true value, therefore, is always attached to the possession of money, as also to credit itself. A lender, during the whole time that the loan continues, deprives himself of a valuable thing, for the price of which he is compensated by the interest. He no longer has the object to use at a time when it was more difficult to find profitable investments for money. So long as no objection was made to the profitable investment of capital in industrial undertakings, discouragement of interest on loans acted as an encouragement of legitimate trade; it also led to the creation of new contract associations, such as insurance companies, which give a reasonable hope of gain without risk. The action of the Church has found distinguished representatives of contemporary economic science. We may mention three English authors: Marshall, professor of political economy at the University of Cambridge (Principles of Economics, i, ii, iii, 8, etc.); Ashley, professor at the new University of Birmingham (An Introduction to English Economic History, third edition); and Professor Cunningham (Growth of English Industry and Commerce, i, ii, vi, sect. 83, third edition). Even at the present day, a small number of French Catholics (Abbe Morel, "Du pret à intérêt: Monde, "Le prét à intérêt, dernière forme de l'esclavage") show in the attitude of the Church only a tolerance justified by the fear of greater evils. This is not so.

The change in the attitude of the Church is due entirely to a change in economic matters that require the present system. The Holy See itself puts its funds out at interest, and requires ecclesiastical administrators to do the same. A recent writer, Mr. Burke, the Friars Minor, denounces in loans for interest "the principle of speculative and mercantile speculation", though the accumulation of wealth in the hands of a few capitalists, which he deplores so much, does not arise so much from lending money at proper interest as from industrial investments, banking operations, and speculations, which have never been condemned as unjust in principle. There has never been any objection against the investment of capital in commercial or industrial undertakings or in the public funds.

Lending money at interest gives us the opportunity to exploit the passions or necessities of other men by compelling them to submit to ruinous conditions; men are robbed and left destitute under the pretext of charity. Such is the case with that which the Fathers of the Church have always condemned, and which is universally condemned at the present day. Dr. Funk defined it as the abuse of a certain superiority at the expense of another man's necessity; but in this description he points to the opportunity and the means which enable a man to commit the sin of usury, rather than the formal malice of the sin itself. It is an unjust and unjustifiable, as well as frequent, sin. In some countries are found instances of the exaction of interest at 30, 50, 100 per cent, and even more. The evil is so great in India that we might expect legal provisions to fight against such ruinous abuse. The exorbitant charges of pawnbrokers for money lent on pledge, and, in some instances, for money kept by installments, are also instances of usury disguised under another name. As a remedy for the evil, respectable associations for mutual lending have been instituted, such as the banks known by the name of their founder, Raiffeisen, and help has been sought from legislators; but there is no general agreement as to the form which legislation on this subject should take.
Utah, the thirty-second state admitted to the Union, takes its name from an Indian tribe known as the Utes or Yutas—a Shoshonian offshoot—whose hunting grounds embraced three-fourths of the territory enclosed by the boundaries of the present State of Utah. It is 350 miles long and 275 miles wide. Its area is 81,900 square miles (54,390,000 acres) or 370,278,235 acres, of which 278,000 are of water surface. The population according to the last census is 375,351. The state extends westerly to the Nevada line, and on the east to Colorado and Wyoming, on the south it is bounded by Arizona, and on the north by Idaho and Wyoming.

Physiography. The Wasatch and Uintah Ranges of the Rocky Mountain system traverses the state from north to south with collateral elevations stretching across the face of the land forming a picturesque variety to the great basins and valleys. These mountains are traversed with great gorges through which the waters, formed by melting snow and rain, rush to the lowlands where they are diverted into irrigating canals. These canyons range in depth from 400 to 5000 feet. There are crests of the Wasatch Range from 12,000 to 14,000 feet above sea level. The Great Salt Lake—the largest body of inland water in the United States—is within the borders of the state. The highest point of the mountains in the north central part of Utah is a surface measurement of 2,125 square miles, is 75 miles long by 50 wide, and is 4120 feet above sea level. With Sevier and Utah Lakes, Great Salt Lake is all that remains of Bonneville Sea, a great inland body of water that at some period in the past covered nearly all Utah. Sevier Lake is a salt lake of water of varying dimensions which in dry seasons practically evaporates, leaving a crystalline residuum of impure sodium chloride and sulphates, five inches in depth. Jordan River, draining the fresh water lake, Utah, the Weber and Bear Rivers and many small streams flow into Salt Lake and compensate for the evaporation which has been in uninterrupted progress for ages and has made of the waters of Salt Lake a nearly saturated brine.

The mean annual temperature of Utah is 49 degrees. The highest temperature ever recorded was 115 degrees above, and the lowest 36 degrees below, zero. The air is arid, due to a comparatively small precipitation of moisture. Humid air currents traveling westward from the Pacific Ocean suffer a condensation of their vapours, and when they pass over the state become drying winds.

Utah is rich for a variety of minerals, one of the most valuable of which is coal. There are no coal beds sufficiently large to support a large mining industry, but there are deposits in various parts of the state which are of commercial value. The most valuable is the bituminous coal found near the mouth of the Green River, in Carbon County, which is about 100 miles southeast of the city of Carbon. This coal is in large deposits, and is of a fine quality. The amount of coal in the state is estimated at over 100 million tons. The state is also rich in iron, lead, zinc, copper, silver, gold, and other valuable metals. The greatest mineral wealth, however, is in the great copper deposits found in the San Juan and Grand Valleys. These deposits are of enormous extent and are estimated to contain over 100 million tons of copper. The state is also rich in coal, iron, and other minerals.

The state is divided into five districts: the eastern district, the central district, the southern district, the western district, and the northern district. Each district is subdivided into counties, and each county is subdivided into townships. The state has a population of over 300,000, and is divided into 39 counties. The capital of the state is Salt Lake City, which is located in the northwestern part of the state. The state is divided into five districts: the eastern district, the central district, the southern district, the western district, and the northern district. Each district is subdivided into counties, and each county is subdivided into townships. The state has a population of over 300,000, and is divided into 39 counties. The capital of the state is Salt Lake City, which is located in the northwestern part of the state.
Santa Fe, 2 January, 1777. They charted the explored lands, described the tribes they had visited, the beech of Great Salt Lake, the environment, and bequeathed to us a valuable history of their expedition. From 1823 until 2 Feb., 1848, Utah belonged to the Republic of Mexico, and when the Mormons, American citizens, settled, July, 1847, in the valley of the Great Salt Lake they became, unanimously, intruders on Mexican soil. By the Treaty of Peace, signed 2 Feb., 1848, by the American Government and the Mexican Government at Guadalupe-Hidalgo—the home-town of the famous shrine and pilgrimage of Our Lady of Guadalupe—Utah came under the territorial jurisdiction of the United States. So that for less than one hundred years the region now known as the State of Utah was possessed by the three separate nations.

It matters not to the present age or to Utah's future greatness whether Brigham Young and hisandy followers were directed to Salt Lake Valley by the great missionary, Father De Smet, by chance, or, as the Mormons claim, by Divine revelation. They came, they toiled; their settlement attracted many of their faith, and many who did not accept that utopia. The first law of the new city was that every man cut down, the mountains streams diverted over the arid land, and the land that was arable brought under cultivation. On 15 September, 1847, the American troops under General Winfield Scott took possession of Mexico City, and on 2 Feb., 1848, the Treaty of Guadalupe-Hidalgo was signed, ceding for a consideration of $15,000,000 all territory north and north-east of the forty-ninth parallel, including the States of California, Arizona, New Mexico, and Utah. The Latter Day Saints now, 1848, became subjects of the United States and, after organizing a provisional government, applied for admission into the Union under the title of the State of Deseret. Pending the will of Congress, the Mormons were directed to find their own must and issued gold pieces of the value of 2.50, 5, 10, and 20 dollars. They also issued in circulation paper currency, and organized as a quasi-independent State. In the spring of '49 Utah's political history opened with the adoption of a constitution for the State of Deseret. Ignoring the application of the Mormons for statehood, Congress passed an act granting to Utah territorial rights, but it was not until 1849 that the Congress of the United States passed an act admitting the Territory of Utah to the Union. The Territory of Utah was admitted to the Union on 7th September, 1850. The boundaries of the new territory were defined in the Congressional Act to wit: Oregon on the north, California on the west, the summit of the Rocky Mountains on the east, and the 7th parallel of latitude on the south. By the decree of the President of the United States, Brigham Young, the Mormon hierarch and head of the Church of the Latter Day Saints, was appointed first governor of the Territory of Utah, 28 Sept., 1851, thus establishing a theocratic form of government, or an imperium in imperio, within the limits of the republic.

On the first Monday in April, 1851, the first municipal election was held in Salt Lake City. A charter for the city had been granted by the Assembly of the people on 9 Aug., 1841, and the city was incorporated. By order of Congress the Legislature of Deseret was dissolved 5 April, 1851, when a territorial legislature for Utah was established and a delegate to Congress elected. At that time, according to a census taken in April, 1851, the population of Utah was 11,534. Polygamy, which had been proclaimed—and publicly for the first time at a special conference held in Salt Lake City, 28 August, 1852—was abolished by the "manifesto" of the October conference held in 1890 signed on 8 May, 1895 by Wilford Woodruff, President of the Church of Jesus Christ of Latter Day Saints. The Constitution was framed and adopted by popular vote, 5 Nov., 1895. By proclamation of the President of the United States, signed 4 January, 1896, Utah was admitted as a state of the Union. From 1823 until 1896, Utah was one of the most picturesque and attractive cities of the United States. Her streets are 132 feet wide and its population in 1910 was 92,777. Ogden, Provo, Logan, Murray, and Park City are prosperous towns of the state.

Legislation.—The Legislature for Utah consists of 63 members elected by the people: 15 in the House of Representatives and 18 in the Senate. Population forms the basis for the election of representatives to the Legislature and for Congress where Utah is represented by two senators chosen by the Legislature and one congressman elected by popular vote. Under the criminal law murder is punished by death, the criminal having the choice of death by hanging or shooting. Blasphemy, arson, and perjury are statutory offenses, but blasphemy only when it constitutes a breach of the peace. Polygamy and bigamy are crimes against society and those proved guilty of either are punished by imprisonment not exceeding five years or by a fine of $500. Under the civil law all priests and ministers attached to churches, all judges, mayors of cities, and justices of the peace are empowered to marry apprentices, who must have the consent of parents or guardians if they are under 16 years of age, male or female. Cruelly, desertion, impotency, adultery, permanent insanity, habitual drunkenness, and conviction of felony are legal causes for divorce in Utah. Sunday is a legal holiday. School attendance is compulsory for all children between the ages of eight and sixteen. Clergymen, lawyers and doctors are privileged witnesses under state law.

Education.—The school population of Utah (1910) was 106,921. A larger percentage of the population of Utah is within the school age than can be found in any other state of the Republic. There are two universities, the University of Utah, and the University of the Latter Day Saints, thirty-five high schools, a state Normal school, State School of Mines, State Agricultural College, State School for Deaf and Dumb, the Brigham Young Colleges at Provo and Logan, a Presbyterian college, the All Hallows (Catholic) College, St. Mary's Academy (Holy Cross Sisters), Salt Lake City, the Academy of the Holy Cross Sisters, Ogden, many private institutions of learning, the individual school, the Sunday School, and other minor bodies. It is estimated that fully 30 per cent of the population of Utah attend no place of worship, and as divorce is increasing and becoming a menace to the stability of society, particularly in the cities and towns, the church population is threatened with more serious emaciation. Ecclesiastical property in the state is vested in corporations organized for ecclesiastical or charitable purposes, in a bishop properly incorporated, or it is held in trust under law by matured persons.

Ecclesiastical History.—We have seen that as early as 1776 two Spanish Franciscan priests left Santa Fe, New Mexico, and, crossing south-western Colorado, discovered Utah Lake, instructed the
Laguna family of Utes, crossed the State of Utah from north to south preaching to the tribes on their way, and, returning to Santa Fe, January, 1776, made known the existence of the great inland body of water, now known as Salt Lake. Not till 1841 do we again read of a Catholic priest visiting Utah. In that year the heroic Jesuit missionary and explorer, Father Pierre-Jean de Smet, passed through the vicinity of Salt Lake on his way to Green River, Wyoming. This remarkable priest was, in the autumn of 1846, the guest of the Mormon leader, Brigham Young, who was wintering with his followers near Council Bluffs, preparing to enter the Great American Desert in the spring of 1847. As the Mormon president had not yet determined where he and his people should go, he was much impressed with Father de Smet's description of Salt Lake and Cache Valleys stretching away from the Wasatch Mountains. "They asked me a thousand questions about the regions I had explored," writes the priest to his nephew, "and the valley which I have just described to you pleased them greatly, and they, and perhaps the great captain himself, determined to settle there? I would not dare to affirm it. They are there!" In the summer of 1863, sixteen years after the Mormons entered Utah, that exemplary priest, John Baptist Ravardy, came from Denver, Colorado, and passed some days in Salt Lake City. He was the guest of General Patrick E. Connor, Civil Commissioner, who, with his neighbors, Fort Douglas, built on a bench a little to the east of the city. Father Ravardy found no Catholics in Salt Lake and, after administering the Sacraments of Penance and Holy Communion to some soldiers at the military post, he returned to Denver, where he died, 18 November, 1869. Early in June, 1866, Rev. Edward Kelly visited Salt Lake by permission of Bishop English, from San Francisco, and believed his jurisdiction extended over the entire State of Utah. Father Kelly offered up the Holy Sacrifice—the first Mass said in Salt Lake City—on the morning of 29 June, 1866, in the Assembly Hall of the Latter Day Saints, courteously placed at his disposal by the president, Brigham Young.

On 16 Aug. of the same year, raised to the episcopate and entrusted with the vicariate. On 30 Nov., 1868, Bishop Machebeuf, having already appointed Rev. James P. Foley missionary rector of Salt Lake, visited the Mormon stronghold and ordered the removal of the seminary of young soldiers. The bishop, during his visit of ten days, was the guest of General Connor, who accompanied him in some of his visits to the few Catholics then in Salt Lake. Father Foley remained in the city two years, and on a lot purchased by his predecessor, Rev. Patrick Walsh, built in 1869 an unpretentious church, the first Catholic church erected in the State of Utah. In 1871 the most Rev. Bishop Machebeuf, placed Utah under the jurisdiction of Archbishop Alemany of San Francisco, who entrusted the mission to the care of the Rev. Patrick Walsh. Father Walsh began his sacerdotal duties in Salt Lake early in 1871. He remained on the mission for two years, organized a parish in the city, erected Father Pierre-Jean de Smet, passed through the vicar, Father Patrick Foley, and built in Salt Lake a brick church under the patronage of St. Mary Magdalen. On 14 Aug., 1873, Rev. Lawrence Scanlan, missionary rector of Petaluma, Archdiocese of San Francisco, succeeded Father Walsh, and with him the history of the Church in Utah practically begins. When Father Scanlan entered Salt Lake he found the beautiful Our Lady of the Holy Rosary Church, in extent in the United States. In a state population of 87,000 there were, perhaps, 800 Catholics. In Salt Lake and Ogden there were, by actual count, 90 Catholic; the remainder were dispersed along railroad divisions, in mining camps, and on the ranches. The little brick church to which he fell heir carried a debt of $6000. It was the only Catholic church in a region of 5,000 square miles. Father Scanlan soon began, on foot and on horseback, a visitation of his immense charge, the hardships of which taxed to the limit the vital force of his robust physique. On 29 June, 1877, he was, in recognition of his administrative ability and of his fidelity to the duties of his priestly mission, appointed vicar Apostolic over all Utah and a large area of Nevada. He was later consecrated Bishop of Laradun in the Cathedral of San Francisco by Archbishop Riordan, assisted by Bishops O’Connell and Meehan. In 1882 the Vicariate Apostolic of Utah and Nevada, canonically constituted a diocese, and Bishop Scanlan fixed his cathedral throne permanently in Salt Lake City. The newly erected diocese embraced then, as it does now, 153,768 square miles, constituting it the largest diocese in the United States.

The era of Gentile—as distinguished from the Mormon emigrants—began with the building of the Union Pacific to Ogden in March, 1868, and with the elevation to the episcopal throne of the Very Reverend Lawrence Scanlan in 1887. Catholicism entered Utah as an organized religion. Since then, the Church, so far as adverse conditions have permitted, has kept step with the educational, industrial, and political progress of the State. Wherever a Catholic has been, there is a Catholic Church. In 1885 Bishop Scanlan died; and, incidently, one not familiar with conditions as they existed in Utah until the present, it would be next to impossible to understand the almost insuperable difficulties which opposed, and are yet opposing, the spiritual and material expansion of religion in Utah. The state is enclosed by the mineral belt of the South-west, and mining is of the most important of its industries. When a mine is opened on the streets of Salt Lake that gold or silver has been uncovered in one of the galleys, canyons, or streams of the Wasatch Range, there is at once a rush for the "diggings." It facts verify the rumour, a mining camp is established which, in time, becomes a town of three or four thousand energetic men; among them will be many Catholic priests practicing for a church and a priest. The bishop goes in person to inspect conditions, is satisfied with the encouragement he receives, and, returning to Salt Lake, commissions one of his priests to take up his residence and build a church at "Silver Reef" or "Goldville." A year after the church is built and partially paid for, the "workings" give out and the town is abandoned and the bishop, church, and the priest a Pastor without a flock. This is not an incident in the experience of Bishop Scanlan, it is a repetition in his episcopal life. Many towns and villages, of from two to seven thousand souls, are entirely Mormon and are outside the influence of the Catholic Church. The Catholic population of Utah is sparse; nevertheless, in 1899 Bishop Scanlan reported 600 Catholic families.

He brought the Sisters of the Holy Cross from Indiana to Salt Lake City, to Ogden, to Park City, and Eureka. In Park City and Eureka the Sisters teach the select and parochial schools; in Ogden they conduct the Sacred Heart Academy; in Salt Lake City the Sisters conduct St. Mary's Academy and also Holy Cross Hospital. The Kearns' St. Ann's Orphanage, built by Senator and Mrs. Kearns, has, since its completion in 1900, been under the care of eleven Sisters of the same order. In 1885 Bishop Scanlan founded and built the All Hallows College, now one of the leading Catholic colleges of the South-west, and in 1889 he invited the Marist fathers to take charge of the institution. On 15 August, 1909, Bishop Scanlan, of which he was the vicar, died, buried by Cardinal Gibbons. In January, 1910, Bishop Scanlan introduced into his diocese the Sisters of Mercy and placed under their charge the "Judge Memorial"
Home", which was built, at a cost of $175,000, by the late Mrs. Mary Judge, and given to the bishop to be used as a hospital and home for aged and disabled clergy.

Confronted with unfavourable localities and the uncertainties of the permanency of mining towns, the Bishop of Salt Lake has succeeded in establishing in his diocese permanent parishes, outside of Salt Lake and Ogden, at Park City, Eureka, Helper, and Green River, Utah; and at Austin, Tonopah and Eureka, Nevada. Annexed to these parishes are some forty missions and mining stations visited by the diocesan missionary, Rev. T. N. Whitaker, D.D.

Utahnia, a titular see of Africa Proconsularis, suffragan of Carthage. Uthina is mentioned by Prolomy IV, 3, 314, Phryn (V, 1), and the Peutinger Tables. "Piny ani inscription call it a colony. From the accounts given by geographers it seems to be the ruins known as Henshir Ouda, near a station on the railway from Tunis to Kef, Tunisia. These ruins occupy a site in a small valley opening up on a hilly plateau, and commanding the lower bank of the Milian wadi; there are the remains of a fortress, cisterns, an aqueduct, triumphal arch, theatre, amphitheatre, basilica with a circular crypt, bridge, etc. Many beautiful mosaics are to be found here. Uthina had a bishop in the time of Tertullian, in whose writings it is called "De Monogamia," i.e. Five others are known: Felix, present at the Council of Carthage (256); Lampadius, at the Council of Arles in Gaul (314); Isaac, at the Council of Carthage (311), where he had as rival the Donatist; Pelagius; Gumbonis, at the Council of Carthage 419; and Quetius at that of 325.

Utica, a titular see in Africa Proconsularis. The city was founded by Tyrannus colonists at the mouth of the Bagradas River in the vicinity of rich mines, 110 b.c. or 250 years before Carthage. It had two harbours, and during the Punic wars was the eastern as well as the capital of Carthage. In 212 b.c. it was occupied by Roman troops. After the fall of Carthage, 146 b.c., Utica became the capital of the Roman province of Africa, and was a civitas libera (free city), perhaps even immunes (except from taxes). It was here that Cato the Younger, called Cato of Utica, killed himself after his defeat at Thapsus, 146 b.c. Augustus granted the right of citizenship to the inhabitants of Utica, which under Adrian became a colony, under the name of Columnia Julia Elia Hadriana Augusta Utica, and under Septimius Severus and Caracalla, a colonia juris Veflici. When Carthage again became the capital of Roman Africa, Utica passed to the second rank. On 8 Aug., 285 a.d., more than 153 martyrs, according to Saint Augustine, and according to Placentini about 300, suffered for the Faith at Utica; they are known under the name of Massa candida, and later a basilica was built there in their honour (Moneux, Histoire litteraire de l'Afrique Chretienne", II, 341-147). A number of bishops is mentioned by historians (Morett, "Africa Christiana", I, 362, II, 50; Gams, "Series Episcoporum", I, 470; Tourlotte, "Geographie de l'Afrique Chretienne", Proconsularis", 418-323). The oldest-known bishop, Aurelius, was present at the Council of Carthage, 256; the last, Potentius, in 684, at the Council of Toledo in Spain, where he had taken refuge after the Arab invasion. This invasion and the chok ing up of its harbours with sand washed in by the Bagradas, hastened the downfall of Utica. Its ruins are at Bon-Chateaur, not far from Porto-Farrina, with which it is sometimes wrongly confounded. One may see here large reservoirs, an amphitheatre, and some remains of a wall.

S. Patrice.

Utilitarianism (Lat. utilitas, useful) is a modern form of the Hedonistic ethical theory which teaches that the end of human conduct is happiness, and that consequently the distinguishing marks of human conduct are right and wrong is pleasure and pain. In the words of one of its most distinguished advocates, John Stuart Mill, "the creed which accepts as the foundation of morals, utility or the greatest happiness principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is understood pleasure, and the absence of pain; by unhappiness, pain and the privation of pleasure" (Utilitarianism, ii, 1863). Although the term Utilitarianism did not come into vogue until it had been adopted by Bentham, and until the essential tenets of the system had already been advocated by many English philosophers, it may be said that, with John Locke, who is the true founder of Utilitarianism (De l'esprit, 1758), from whom Bentham seems to have borrowed, all the champions of this system have been English. The favour which it has enjoyed in English speculation may be ascribed to a great measure to the dominance of Locke's teaching, that all our ideas are derived exclusively from sense experience. The epistemological prejudices of materialism, and the ethical conclusions of utilitarianism, both of which are therefore, actual, are therefore, in the experience results of actions.

Tracing the stream of Utilitarian thought from its source, we may start with Hobbes (Leviathan, 1651), who first fundamental idea was that which promotes our own welfare; and the social code of morals depends for its justification on whether or no t it serves the wellbeing of those who observe it. A Protestant divine, Richard Cumberland (De legibus naturae, 1672), engaged in the refutation of Hobbes's doctrine, that morality depends on civil enactment, sought to show that the moral law is a law of the Gospel and a law of nature: "The greatest possible benevolence of every rational agent towards all the rest constitutes the happiest state of each and all. Accordingly common good will be the supreme law." This view was further developed by some other theologians of whom the last and most conspicuous was Paley (Principles of Moral and Political Philosophy, 1775), who reasoned that since God wills the happiness of all men it follows that if we would conform our conduct to God's will we must act so as to promote the common happiness; and virtue consists in doing good to all mankind in obedience to the will of God and for the sake of everlasting happiness. Moral obligation he conceived to be the pressure of Divine will; urging us to right action. More in harmony with the spirit of the later Utilitarians was Hume, the slightest of whose preoccupations was to find any religious source or sanction of morality. In his "Inquiry concerning the Principles of Morals" (1751) he carried out an extensive analysis of the various judgments which we pass upon our own character and conduct and on those of others; and from this study drew the conclusion that virtue and personal merit consist in those qualities which are useful to ourselves and others. In the course of his speculation he encounters the question which is the irreducible stumbling block in the path of the Utilitarian theorist: How is
The motive of self-interest to be reconciled with the motive of benevolence; if every man necessarily pursues his own happiness, how can the happiness of all men be secured? Utilitarianism, the name of the theory of association of the followers of Bentham, Mill did not discuss or attempt systematically to solve the difficulty; he dismissed it by resting on the assumption that benevolence is the supreme virtue.

In Hartley (Observations on Man, 1748) we find the first methodical effort to justify the Utilitarian position by means of the theory of association. Utilitarianism, which so largely a part in the genesis of our moral judgments is assigned by subsequent speculators, especially of the Evolutionist party. From generations and the lower elementary or primary emotions, according to Hartley, result higher feelings and emotions, different in kind from the processes out of which they have arisen. The altruistic motives of sympathy and benevolence are then accounted for. With Bentham arises the group of thinkers who have appropriated the name of Utilitarians as their distinctive badge. The leaders after Bentham were the two Mills, the two Austins, and Godwin, who are also known as the Philosophic Radicals. While the members of this party devoted considerable effort to the development of theoretical Utilitarianism and made it the starting-point of their political activity, they became remarkable less as philosophic speculators than as active reformers of social and economic conditions and of legislation.

The keynote of their doctrine and policy is struck by Bentham in the opening of his Principles of Morals and Legislation. The moral principle placed next in kind under the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do as well as what we shall do. On the one hand the standard of right and wrong, on the other the chain of cause and effect are linked to their throne. They govern us as in all we do; every effort we can make to change the course of nature is but to demonstrate and confirm it. In a word man may pretend to abjure their empire; but in reality he will remain subject to it all the while. The principle of utility recognizes this subjection, and assumes it for the foundation of that system the object of which is to rear the fabric of felicity by the hand of reason and law. Strenuously standing for the principle, by the path of uncertainty, he places himself in the task of reconciling self-interest and altruism: "Dream not that men will move their little finger to serve you, unless their advantage in doing so is obvious to them. Men never did so and never will while human nature is made of its present materials. But they will desire to serve you when by so doing the duties already incumbent on you can serve themselves by serving you are multitudinous" (Deontology, ii. 1834: posthumous work).

In the hands of Bentham and his disciples Utilitarianism dissociates morality from its religious basis and, incorporating Determinism with its other tenets, becomes pronouncedly Positivist, and moral obligation is resolved into a principle of pleasure and pain, with the association of disagreeable consequences attending some kinds of actions, and advantages following others. The word ought Bentham characterizes as an authoritative impostor, the tyrant of arrogance, indecency, and ignorance. It is the condemnation of Utilitarianism that this estimate of duty is thoroughly consistent with the system, and no defender of the utility theory has been able, though some have tried, to indicate the claims of moral obligation on Positivist Utilitarian grounds. Bentham drew up a curious scheme for computing the worth or weight to be assigned to all sorts of pleasures and pains, as a practical norm to determine in the concrete the moral value of any action. He assumes that all pleasures are alike in kind and differ only in quantity, that is in intensity, certainty, duration, etc. His psychological analysis, besides the original defect of the system, by the principle of a single moral action, contains many errors. Subsequent writers have abandoned it as worthless for the very good reason that to calculate, at its employment would demand, all the results of every action, and to strike a balance between the advantages and disadvantages attendant upon it, would require an intellect much more powerful than that with which man is endowed.

The classic expression of the system is John Stuart Mill's "Utilitarianism," which endeavours to raise the Utilitarian ideal to a higher plane than that of the undisguised selfishness upon which Bentham rested it. As the foundation of his structure Mill asserts that every man necessarily acts in order to obtain his own happiness; but finding this ground logically inconvenient to be used in the determination of conduct, and prompted by his own large sympathies, he quickly endeavours to substitute "the happiness of all concerned" for "the agent's own happiness." The argument over which he, the author of a formidable work on logic, endeavours to pass from the first to the second position, may serve as an example capable to subsist for a long time in the head of the average reader engaged in the detection of sophisms. The argument, in brief, is that, as each one desires and pursues his own happiness, and the sum total of these individual ends makes up the general happiness, it follows that the general happiness is the one thing desirable by all and provides the Utilitarian standard of what is good in conduct. Bentham, the Utilitarian, would, as John Stuart Mill, the Utilitarian, "that because of a hundred men each one's hunger is satisfied by his dinner, the hunger of all must be satisfied with the dinner of each." To escape some of the criticisms urged against the doctrine as stated by Bentham, who made no distinction in the various kinds of pleasure, Mill claimed that Utilitarianism notes that pleasures differ in quality as well as quantity, and it is the principle that has experience of different pleasures, some are preferable to others, that it is better to be a human being dissatisfied than a pig satisfied, better to be Socrates dissatisfied than a fool satisfied. Then he slips from "preferable" to "higher," thus surreptitiously introducing a moral classification among pleasures. Yes, the principle of higher and lower moral values to various pleasures, is to estimate them according to the rank of the faculties or of the kinds of action to which they belong as results. But to do this is to assume some moral standard by which we can measure the right or wrong of action, independently of its pleasurable or painful consequences. This must be an outer reason for the action desired for its own sake, and men do right frequently without any calculation of the happiness to be derived from their action, Mill enlists the association theory, as the result of experience, actions that have been approved or condemned on account of their pleasurable or disagreeable consequences at length come to be looked upon by us as good or bad, with our actively adopt them in the judgment of the utilitarian. Since Mill's time the only writer who has introduced any modification into strictly Utilitarian thought is Sidgwick (Methods of Ethics, 1874), who acknowledges that the pleasure-and-pain standard is incapable of serving universally as the criterion of morality; but believes it to be valuable as an instrument for the examination of the general maxim or rule. The general happiness principle he defends as the normal of conduct, but he treats it rather as a primary than a demonstrable one. Although he vigorously denounced Utilitarianism, Herbert Spencer's ethical construction (Data of Ethics, 1879), which may be taken as the type of the Evolutionist school, is fundamentally Utilitarian. True, instead of happiness he makes the increase of life, that is, a fuller and more intensive
life, the end of human conduct, because it is the end of the entire cosmic activity of which human conduct is a part. But he holds pleasure and pain to be the standard which discriminates right from wrong, so that in reality he looks upon the moral value of actions as entirely dependent upon their utility. His objection is based on the belief that the standard of our moral ideas, of conscience, and of our moral judgments is too lengthy and complicated to enter into. Sufficient to say that in it he sets forth the influence of association with that of

interest general, or in the utility of the results of action with another feeling that the remote present themselves to our consciousness as possessing more "authoritativeness" than the immediate results. The arguments urged against Hedonism (q. v.) in general are effective against Utilitarianism. Its own peculiar weakness lies in its failure to pass a passage class even to determine the utility of self-interest and benevolence as a motive of conduct; and its claim that the ideas morally right and useful are identical at bottom.

Besides the works mentioned above see: Amee, Hist. of Utilism (1892); Stephen, The Ethics of Utopia (1900); Bulpitt, The Ethics of John Stuart Mill (1877); Martineau, Types of Ethical Theory (1901); Greene, Predogmata of Ethics (1915). Humanitarians continue, in the course of time, to seek the ideal state. Means of securing all the rights and duties from them, silver, iron, iron, and such other things as they need. They do not use gold and silver as money, since they have common ownership of property, but they procure it principally in order to hire mercenaries from among their neighbours. In music, arithmetic, and geometry they are not surpassed by the Europeans, and in astronomy and meteology they far excel them.

There are different varieties of religion, but their public worship is of such a general nature that they are able to worship together. All beliefs except Atheism are tolerated. Their ethics is Hedonistic and very few of them are attracted by an ascetic life. Those convicted of serious crimes are reduced to slavery, and persons of inferior birth are also procured as slaves. Children of slaves do not retain the status of their parents. Persians afflicted with incurable and painful diseases are advised by the priests and magistrates to take their own lives. If they do not wish to do so, however, they are never compelled to do so. Those who commit suicide without the consent of the priests and magistrates are given dishonourable burial, and those who are convicted of murder under the age of twenty-two and murderers under the age of twenty-two. Much care is taken to make those contracting marriage acquainted with each other so as to avoid unhappy unions. Divorces are permitted and parties may remarry. The Utopian priests are of extreme holiness, but their numbers are small. They are elected by the people by secret ballot. Women are not excluded from the priesthood, though few of them—and these widows and old women—are chosen. The priesthood is held in high honour. The traveller concludes his narrative by attributing the happiness and progress prevailing in Utopia to the absence of private property. It is sometimes asked whether More meant to have the proposals in the Utopia taken seriously. Undoubtedly he did not. They were merely a means by which he could call attention to some of the abuses
his day without being taken to task by the king for his freedom. While he shows that he appreciates the weakness of communism, he allows Hythly to present only its strength. Since More's day many ideal commonwealh in imitation of the Utopia have flourished in literature. Among the best known are Bacon's "New Atlantis" (1621), in which the author dreams of the happiness of mankind attained through the progress of the natural sciences; Campanella's "City of the Sun" (1637), which emphasizes community of property and stipulates that the author, on his death, be "Télémaque" (1699); Cabet's "Voyage in Icaria" (1840); Bellamy's "Looking Backward" (1880); William Morris's "News from Nowhere" (1880); Hertzka's "Freiland" (1891); and H. G. Wells's "A Modern Utopia, (1905) and "New Worlds for Old" (1908). Morley's "Ideal Commonwealh" contains an English translation of More's "Utopia", as well as of Bacon's "New Atlantis", Campanella's "City of the Sun", and other imaginary states.

Frank O'Hara.

Utopian Laxis Resonare Fibris, the first line of a hymn in honour of St. John the Baptist. The Roman Breviary divides it into three parts and assigns the first, "Ut quænt laxis", etc., to Vespers, the second, "Atra deserti teneris sub annis", to Matins, the third, "O nimis fælix, meritece celsi, to Lauds, of the feast of the Nativity of St. John (24 June). With medieval hymnologists generally, Stroves ascribes the authorship to Paulus Diaconus and expresses surprise at the doubt of Duemmler, for which he can see no reason. The hymn is written in Sapphic stanzae, of which the first is famous in the history of music for the reason that the notes of the melody corresponding with the initial syllables of the six hemistichs are the first six notes of the diatonic scale of C. This fact led to the syllabic naming of the notes as Ut, Re, Mi, Fa, Sol, La, as may be shown by capitalizing the initial syllables of the hemistichs:

UT quænt laxis RESonare fibris
MIra gestorum Fæniu tuorum,
SOlye polluti LAbi reatum,
Sanæ inamoanes.

Guido of Arezzo showed his pupils an easier method of determining the sound of the notes than by the usual method. His method was that of comparison of a known melody with an unknown one which was to be learned, and for this purpose he frequently chose the well-known melody of the "Ut quænt laxis". Against a common view of musical writers, Dom Pothier contends that Guido did not actually give these syllabic names to the notes, did not invent the hexachordal system, etc., but that insensibly the comparison of the melodies led to the syllabic naming. When a new name for the seventh, or leading, note of our octave was desired, Erich Van der Putten suggested, in 1399, the syllabic BI of "labi", but a vast majority of musical theorists supported the happier thought of the syllabic BI formed by the initial letters of the two words of the last line. UT has been generally replaced by DO because of the open sound of the latter. Durandus says that the hymn was composed by Paul the Deacon on a certain Holy Saturday when, having to chant the "Exsultet" for the blessing of the paschal candle, he found himself suffering from an unwanted hoarsness. Perhaps, thinking to himself, he wished for the restoration of voice to the father of the Baptism, he implored a similar help in the first stanza. The melody has been found in a manuscript of the tenth century, applied to the words of Horace's Ode to Phyllis, "Est nihil nonum sueraptum animus". The hymn offers exegetical difficulties in the stanza "Ventrîs obstrûsû", etc. Littledale's version, used in Bute's "The Roman Breviary", refers the "uterque parents" to Mary and Elizabeth;— "Pent in the closet of the womb, thy Saviour Thou didst adore within his chamber shrouded; Thus did each parent in their unborn offering Mysteries find."

Caswall translates similarly: "What time Elizabeth and Mary sang." Pauly refers the two words to Zachary (for his canticle of the Benedictus) and Elizabeth (for her address to Mary: "Blessed art thou among women", etc.); and "uterque" would better support this view. Also, "Mysteries find" is a poor version of "Abdita pandit", since it conceals the allusion to the "offertory prayer" of the parents. Greater difficulty is found in the interpretation of the stanza "Sertà ter denis", etc. A sufficiently close rendering would be:

"Some crowns with glory thirtyfold are shining; Others, a double flower and fruit combining; Thy trial chaplet bears an intertwining Hundredfold fruitage."

This is an evident allusion to the parable of the sower (Matt., xiii, 8) whose seed fell upon good ground and brought forth fruit, some a hundredfold, some fiftyfold, and some thirtyfold; but the reasoner of the hymn clearly adds the thought of a triple crown—perhaps that of Precursor, Prophet, Martyr; perhaps that of Prophet, Virgin, Martyr.

Julian, Dict. of Hymnology, 2nd ed. (London, 1902), 1392, 1392, for his first edition (1883) and more recently, "Breviary Hymns and Missal Sequences" (London, 1880), 137, "(That, singing to music, Servants may gain hymns, etc."). To his list should be added: BAGSHAWE, Breviary Hymns and Missal Sequences (London, s. d.), 137 ("That, singing to music, Servants may gain hymns, etc.").

I, of Analepsa Hymnica (Leipzig, 1907), 129-3, for manuscript sources, variants, additional doxologies, and life of Paulus Diaconus.

H. T. HENRY.

Utraquism, the principal dogma, and one of the four articles, of the Calixtines or Hussites. It was first promulgated in 1414, by Jacob of Mies, professor of philosophy at the University of Prague. John Hus was neither a proponent nor a proponent of the above-named university, which required its bachelors to lecture on the works of a Paris, Prague, or Oxford doctor; and in compliance with this law, Hus, it seems, based his teaching on the writings of John Wyclif, an Oxford graduate. The opinions of Wyclif—which were a cause of Utraquism—were imbibed by the students of Prague, and after Hus had been imprisoned, the Wyclifian influence showed itself in the Hussites' demand for Communion under both forms as necessary for salvation. This heresy was condemned in the Councils of Constance, Basle, and Trent (Denzinger-Bannwart, 626, 830 sqq.).

Utraquism, briefly stated, means this: Man, in order to be saved, must receive Holy Communion, when he wishes and where he wishes, under the forms of bread and wine (sub utrâque specie). This, said the Hussite leader, is of Divine precept. For, "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you" (John, vi, 54). To receive only the Sacred Host is not "drinking" the blood of the Lord; that this is of Divine precept, continued the Hussite, is further evident from tradition, as up to the eleventh or twelfth century the Chalice and the Host were offered to the faithful when they communicated. Add to this, that more grace is conferred by the reception of the Eucharist under both forms, and it is clear, so Jacob of Mies maintained, that communion sub utrâque specie is obligatory. This conclusion he
Council of Constance rejected (Denzinger-Bannwart, 126). Then followed the Hussite wars. To make peace, the Council of Basle (1431) allowed Communion under both forms to those who had reached the age of discretion and were in the state of grace, on the following conditions: that the Hussites confess that the Body and Blood, Soul and Divinity of Christ were contained whole and entire under both the form of bread and under the form of wine, and that Communion under both forms is necessary for salvation (Mansi, XXXI). To this one of the Hussites agreed, and were known as the Calixtines, from their use of the chalice. The others, led by Ziska, and called Taborites, from their dwelling in a mountain top, refused and were defeated by George Podiebrad in 1453, from which date Utrecht, Archdiocese of (Traiectensis), situated in the Netherlands, includes the provinces of Utrecht, Friesland, Overysssel, Drenthe, Groningen, the larger part of Gelderland, and a small part of North Holland. In 1911 the archdiocese contained 17 deaneries, 282 parishes, 575 secular clergy engaged in the parochial work, 101,320 families, 300 churches and chapels, and 383,000 Catholics. The cathedral chapter consists of a provost and 8 canons; the Government has no part in the nomination of the archbishop. The archiepiscopal seminary is divided into two sections: one at Driebergen with five professors, the other at Utrecht with twelve. The following orders and congregations are: Augustinians, Carmelites, Capuchins, Dominicans, Francisans, Trappists, Redemptorists, Brothers of Mercy, Brothers of Our Lady of the Sacred Heart, and Brothers of St. John of God, with altogether 15 houses; Sisters of Our Lady of Mercy, Tertiaries of St. Francis, Tertiaries of St. Dominic, Sisters of the Sacred Hearts of Jesus and Mary, Little Sisters of St. Joseph, Benedictine Nuns of the Perpetual Adoration, Sisters of St. Charles Borromeo, Sisters of the Good Shepherd, Carmelite Nuns of the Strict Observance, Daughters of Mary and Joseph, Sorores Matris Boni Securitatis, Poor Sisters of the Child Jesus, Poor School Sisters, Sisters of Mercy, Sisters of the Sacred Hearts of Jesus and Mary, and Mary Nuns; also the principal church of the diocese is the Cathedral of St. Catherine, built in the Gothic style in 1524; the former Catholic Cathedral of St. Martin, built 1251-67 in the Gothic style, now belongs to the schismatic Jansenists. The founding of the Diocese of Utrecht dates back to the Frankish era. In 695 St. Willibrord was consecrated at Rome Bishop of the Frisians. Towards one to continue long in the state of grace without it. This is a precept; from it dispensations are possible. Hence if any one died without this sacrament, his eternal loss would not, merely for this reason, be a necessary consequence. This is clear from the practice of the Early Church. Even when Communion under both forms prevailed, some received under only one species. To the sick it was thus often given, and the Church has never forbade it. A word in the text which seems to oblige Communion under both forms is a question of interpretation. The Catholic Church is the only authoritative interpreter of Christ’s doctrine; none other has this power been granted. Omitting here the many meanings Catholic theologians attribute to the verse, “Except you eat the flesh of the Son of man, and drink his blood, you shall have life in you” (John, vi, 53). It is true that some theologians believe more grace is conferred by Communion under both forms. But this question is speculative, not practical. It does not affect the Church’s dogma, nor is this opinion by any means common to all Catholic theologians.
the close of the seventh century, with the consent of the Frankish king, he settled at the market-town of Utrecht and built two churches there, the Church of Our Saviour, and that of St. Martin. The conversion of the Frisians to Christianity, though, progressed very slowly. After Willibrord’s death St. Boniface repeatedly gave his attention to the Church of Utrecht without, however, being its bishop. Under the guidance of his friend St. Gregory, the school founded by St. Willibrord became a noted centre of Christian education for the northern part of the Frankish kingdom. During the early years of its existence the diocese suffered greatly from the incursions of the heathen Frisians, and in the ninth and tenth centuries from the plundering Frisians, who traversed the territory robbing and burning as they went. Better times appeared during the supremacy of the Saxon emperors, who esteemed the Bishops of Utrecht highly, and frequently summoned them to attend the imperial councils and diets. Through the grants of land and privileges bestowed by these emperors the Bishops of Utrecht became secular princes, and were among the most powerful feudal lords of the north-western part of the empire. In this way, like the other German bishops, they became involved in the quarrels of the emperors and popes. Bishop William (1057–76) was an unwavering partisan of the Emperor Henry IV during the Strife of Investitures. He took part in the Synod of Worms which pronounced the deposition of Pope Gregory VII, and signed the decree of deposition directly after the Archbishop of Mainz. His successor Conrad (1075–99) was also a zealous adherent of the emperor. The Concordat of Worms (1122) annulled the emperor’s right of investiture, and the cathedral chapter received the right to the free election of the bishop. It was, however, still obliged to share this right with the four other collegiate chapters which existed in the city of Utrecht. The Counts of Holland and Geldern, between whose territories the lands of the Bishops of Utrecht lay, also sought to acquire influence over the filling of the episcopal see. This often led to disputes at the election of the bishops, and it was but seldom that capable and worthy men gained the see of St. Willibrord. Consequently the Holy See frequently interfered in the election, and after the middle of the fourteenth century repeatedly appointed the bishop directly without regard to the five chapters.

The Great Schism of the West in the latter quarter of the fourteenth century also affected the Diocese of Utrecht, and between 1371 and 1378 a bishop was opposed by a rival bishop, Floris of Wevelinghoven (1378–93). This latter was generally recognized when Arnold, in return for a large sum of money, renounced his claims to Utrecht, and was raised to the See of Liege. During the episcopate of Floris, Gerhard Groote, who traversed the diocese as a preacher of repentance, was very successful in his efforts to bring about reforms. Floris was succeeded by one of the best bishops of Utrecht, Frederick of Blankenheim (1392–1423). His excellent administration was followed by a schism that lasted twenty-five years. Pope Martin V would not recognize Rudolph of Diepholz (1423–55), who had been elected by the chapters, and appointed Rabanus, Bishop of Speyer, as bishop, and, after his resignation, the cathedral provost of Utrecht, Zweder of Culemborg. After Zweder’s death in 1453 his brother, Walraf of Miers, was appointed Bishop by Pope Innocent VIII. His attempt to end the schism by his interference in the affairs of the neighboring secular rulers failed. His successor, who was also Bishop of Freising and Worms, resigned the see in 1528 with the consent of the chapter, and transferred his secular authority to Charles V, who was also Duke of Brabant and Count of Holland. Thus Utrecht came under the sovereignty of the Habsburgs; the chapters voluntarily transferred their right of electing the bishop to Charles V, and Pope Clement VII in 1531 raised Utrecht to an archiepiscopal dignity. The first bishop appointed by Charles, Cardinal William Enkeveorst, died in 1533 without having ever entered his diocese.

In 1550, at the instance of Philip II, the church organization of the Netherlands was entirely changed by forming new dioceses and reorganizing the old ones. Utrecht was then from Coligny, after the death of David (1457–94) maintained himself with difficulty against his enemies, namely the knights of the diocese and the city of Utrecht. He was succeeded by Frederick of Baden (1496–1516) a protégé of Maximilian of Austria, and Philip of Burgundy (1518–24), who did much for the encouragement of art and to improve the diocese. From 1530 his diocese became wealthy, as the last bishop, who was also Duke of Brabant and Count of Holland, the latter province of which was conquered by his son Charlemagne, and was united with the Netherlands. The new archbishop, who was appointed by Philip II, was an able administrator, and was able to cultivate the arts and sciences. He was succeeded by Frederick of Baden, who was also Bishop of Freising and Worms, resigned the see in 1528 with the consent of the chapter, and transferred his secular authority to Charles V, who was also Duke of Brabant and Count of Holland. Thus Utrecht came under the sovereignty of the Habsburgs; the chapters voluntarily transferred their right of electing the bishop to Charles V, and Pope Clement VII in 1531 raised Utrecht to an archiepiscopal dignity. The first bishop appointed by Charles, Cardinal William Enkeveorst, died in 1533 without having ever entered his diocese.

The first bishop appointed by Charles, Cardinal William Enkeveorst, died in 1533 without having ever entered his diocese.
of his predecessor, Petrus Cobbe (1688-1704), was suspended in 1702 by Clement XI on account of his Jansenistic opinions and his stubborn opposition to the papal see, and in 1704 the pope deposed him. The cathedral chapter of Utrecht, though, illegally elected as a vicar-general (1706), then in 1723 with the approval of the States-General chose the parish priest of Utrecht, Corneliis Steenhoven, as archbishop. Steenhoven was excommunicated by Pope Benedict XIII. This was the origin of the Jansenistic Church of Utrecht, which, however, was joined by only a very small part of the Catholic clergy and laity, although the state favoured it entirely. As the pro-vicars appointed by the pope were not permitted by the Government to enter the country, both the Catholic Church of Utrecht and that of the entire Netherlands was administered until the French Revolution by the papal internuncios of Cologne and Brussels.

Owing to the occupation of Holland by the French in 1795, the Catholics obtained somewhat more freedom. Still, there was no proper organization of church affairs, not even after the uniting of the Netherlands with Belgium by the Congress of Vienna in 1815. The concordat made with the pope in 1827 was not carried out. In 1833 a vicar for the Netherlands was appointed once more. The Constitution of 1815 granted the Catholics at last complete parity with the other confessions, and gave the church authorities almost unlimited freedom in purely religious matters and in the administration of the property of the Church. The pope could now plan the restoration of the ecclesiastical hierarchy in the Netherlands. After long negotiations the most essential regulations of the Concordat of 1827 were put into force. The Bull "Ex qua die" of 1 March, 1833, organized the Church of the Netherlands anew. Utrecht was raised once more to an archbishopric, and received the four suffragan dioceses of Haarlem, Bois-le-Duc, Breda, and Roermond. John Zwijsen was appointed the first archbishop; as administrator he also ruled the Diocese of Bois-le-Duc. The archbishop took up with great energy and caution the organization of the new dioceses, the division into deaneries, the settling of the boundaries of the individual parishes, the administration of the lands of the parishes, of the lands of the Church, and the management of the benevolent institutions. By numerous excellent decrees he provided for the improvement of church discipline, for the encouragement of the orders and of church associations, for the training of a competent clergy (1857 a seminary for priests was opened), for the establishment of Catholic schools independent of the State, for the improvement of the Press, etc. In 1858 the cathedral chapters of the dioceses were organized, and in 1864 the first provincial synod was held. In 1868 the archbishop resigned the archiepiscopal see, and in the same year the Diocese of Bois-le-Duc. His successors were Andreas Ignatius Schaeppman (1858-82), during whose administration the large archiepiscopal museum was established; Petrus Matthias Snickers (1883-95), and Henry van de Wetering (since 1895).

Vaast, Abbey of Saint, situated at Arras, the ancient capital of Artois, Department of Pas-de-Calais, France; founded in 667. St. Vaast, or Vedast, was born in western France about 433, d. at Arras in 489. Having lived for some years as a recluse in the Diocese of Toul, he was ordained priest by St. Remi (Remigius), Archbishop of Reims, who deputed him to prepare Clovis for the reception of the Sacrament of Baptism. After this he remained at Reims and acted as archdeacon for St. Remi. In 499 that pope consecrated him first Bishop of Arras, and his labours in planting the faith in those parts were blessed by many miracles. Ten years later St. Remi committed to him the care also of the Diocese of Cambrai, and these two sees remained united until the eleventh century. At the death of St. Remi he was chosen to succeed him but declined the honour. His own death occurred in 540 and he was buried in his cathedral at Arras. In 667 St. Aubert, the seventh bishop of that see, commenced to build an abbey for Benedictine monks on the site of a little chapel which St. Vedast had erected in honour of St. Peter. St. Vedast’s relics were transferred to the new abbey, which was completed by St. Aubert’s successor and magnificently endowed by King Theodoric, who together with his wife was afterwards buried there. This Abbey of St-Vaast flourished for many centuries and held an important position amongst the monasteries of the Low Countries. It was ruled by many distinguished abbots, a list of whom, numbering seventy-nine, is given in “Gallia christiana.” It was exempt from episcopal jurisdiction and maintained its independence until 1767, when it was aggregated to the Congregation of Cluny. At the Revolution it was suppressed and the conventual buildings became first a hospital and then a barracks. In 1838 the barracks was purchased by the town, a portion being used as a museum and archives, and the rest becoming the residence of the bishop. The church, which had been desecrated and altered in 1742, was again consecrated in 1853 and now serves as the cathedral.

Vacancy, the state of being vacant, free, unoccupied; a term applied to an office or position devoid of an incumbent, as a vacant benefice, bishopric, parish-professorship, etc. Vacancies occur by the voluntary act of the incumbent or through compulsion. Generally speaking any cleric, even the pope, for just reasons may resign his office, the resignation becoming effective when duly accepted by the competent superior. As the pope has no superior, Celestine V, who renounced the papacy, published a special Constitution (L. I, tit. 7 in 6°) declaring that the College of Cardinals is competent to accept the formal abdication of the pope. Under certain conditions with approval of proper authority, an exchange of benefices or offices is permitted. Certain acts, hide or illicit, are equivalent to tacit renunciation, for example, when one accepts a promotion, makes a solemn religious profession, violates the canons concerning a plurality of benefices, renounces the clerical state, under compulsion one loses his incumbency by death or removal. Some vacancies are provided for before they actually occur; for example, coadjutors may be named by the incumbent for the event of his death or incapacity. They make an appointment to go into effect at the death of the present incumbent, an exercise of the so-called jus praeventionis, at one time quite common. Removal ordinarily is a punishment, and no one should be punished without cause (sine culpa, nisi substat causa, non est aquis punitenda. Reg. 23 in 6°). The cause is usually, though not always, a crime committed. Where removal is a penalty, the crime for which it is inflicted must be proven judicially. If the reason for dismissal be merely unfitness (causa non criminosa), a judicial trial is not generally obligatory, though certain formalities are necessarily observed to establish the existence of sufficient warrant for removal, as well as to give the occupant an opportunity of being heard. This is particularly true of the administrative removal of parish priests or rectors in accordance with the Decree “Maxima cura” (S. C. Consist., 20 Aug., 1910). This decree permits such removal (without judicial trial) on account of insanity; experience or ignorance of such nature as seriously to impede a pastor in his work; deafness, blindness or other ailment, physical or mental, incapacitating a rector for a long time, unless provision can be made for a coadjutor; hatred or ill will on the part of the people, though unjust and not universal; loss of reputation among men of repute; maladministration of temporal affairs; continual neglect after one or two admonitions of parochial duties of office; disobedience after warning of the bishop’s precepts in grave matters.

Some, like removable rectors, are transferable at the will of the bishop. Care however should be taken not to transfer such persons against their will to inferior posts, as this would be considered a punishment. Vicars-general and deans lose their office by the death or resignation of the bishop or the cessation for any reason whatever of his jurisdiction. A vicar capitular or administrator of a vacant see retains his office till the papal Bulls appointing a new bishop are duly presented. No serious change of moment in the status of a diocese is permitted during an interregnum in accordance with the prohibition: Ac sed vacante aliqaid invarter (Deer., L. III, tit. 9). In liturgy a Sunday is said to be vacant when no mention of it is made in the Office or Mass, such are the Sundays that fall on the feast or the Octave of Christmas, St. Stephen, St. John Evangelist, Holy Innocents, Epiphany or the vigil of Epiphany. Days too are liturgically vacant or free when unoccupied by a feast, privileged vigil or privileged ferial office; they are days to which no special Office is assigned.

Theodora, of Carthage, and incorporated Gustavus Vasa in 1523, and lost most of its lands but 1527. In 1540 the larger part of the books and valuables were taken. The little community struggled, and the Council of 1546 (1549-52) restored and enriched the abbey, and Passenheim, pulle legate, reformed it in 1580. In 1591 it was razed and destroyed by Charles, Duke of Suedermark, afterwards Charles IX. The abbess, Catherine of Tafodaster, and most of the nuns, fled to the Briggist nunnery at Dannzig. Now only the chapter-house and the cloister remain, and form part of a lunatic asylum. A general opusqul occupies the site of the convent of the others. The abbey church is still standing; it contains a few memorials of St. Bridge. (See Briggistes; CATHARINE OF SWEDEN, SAINT.)

Vaga, a titular see of Numidia, frequently mentioned by historians and ancient geographers, was near the Roman conquest it was an important provincial centre. Delivered to the Carthaginians by Hasdrubal, it was incorporated with the Numidian kingdom, and at a later date became part of Numidia Susiana. Metellus destroyed it, but it soon rose from its ruins, and under Septimius Severus was re-established as a city under the name of Vaga, and in honour of his wife Theodora, named it Vaga. It is to-day the small city of Beja, centre of a civil district of about 100,000 inhabitants in Tunisia, and a railroad station in the heart of that agricultural region. The halls of Justinian still exist, but are greatly modified; the large tower of the Byzantine and even the modern buildings are dominion of the ancient city, one of its principal mosques, the church of St. Mary for them in the period of the Crusades remains of a large reservoir. Among the incursions of Beja, several are Christian; from one learn that the walls were built by Count Paul; in another that the principal mosque is an ancient Christian basilica, restored under Valentinian and Arcadius. The bishops known to us are: Libonius, Bishop of Vaga, A.D. 877; Serapion, A.D. 1349; Ampelus and Primulus, both at the Conference of Carthage, 411; the second had been a hermit, but having abjured his error remained ship conjointly with the first.

S. PÉTRIDES.

Vaillant de Gueslis, François, Jesuit missionary, b. at Orleans, 20 July, 1646; d. at Moulins, 24 Sept., 1745. He entered the Society of Jesus in 1668, and came to Canada in 1670; and was ordained priest at Quebec, 1 Dec., 1675. He first evangelized the Mo- hawks (1679-84). In the beginning of 1688 he was chosen by the Canadian authorities as ambassador to Thomas Dongan, Governor of New York. He was also the first missionary to work among the Indians at Detroit, but he remained only for a year. In 1691, he returned to Canada. In the years 1688-91; 1697-1702, he filled the important posts of minister, procurator of the mission, and preacher, and at Montreal (1692-96; 1709-15), he was the first superior of the residence established by the Jesuits in 1692. He founded the Men's Congregation of Ville- marie which exists to the present day. He returned to France in 1711.

ARTHUR MELANÇON.

Valdés, Alonso de, Spanish Humanist and chancel- lor of the Emperor Charles V, b. at Cenecas in Castile about 1500; d. at Vienna in October, 1532. His talents gave him early advancement and he accompanied Charles V in 1520 on the journey from Spain to the coronation at Aachen, and in 1524 to the Diet of Worms. From 1522 he was secretary of the imperial chancellery and as secretary wrote a number of important state papers: in 1525, he drew up the report of the battle of Pavia: in 1527, in the council of 1529-30, he was the special envoy of Carlos V in France, and was the papal legate, at times deliberately sarcastic state paper addressed to Pope Clement VII, in which the faithlessness of the pope is stigmatized, and an appeal is made for the convoking of an Oecumenical Council. After the capture and pillage of Rome in 1527, Valdés wrote the dialogue of "Lactantius" in which he boldly attacked the imperial policies of Charles V, and he declared that the pope, an infidel and war-monger, should be opposed to the pope, an infidel and war-monger. The dialogue of 1529 was widely read. The papal nuncio at Madrid, Balthasar Castiglione, wrote an important treatise before the Inquisition, but the trial proved to nothing because Charles V took his servant under his protection, while the grand inquisitor also declared that it was not heretical to speak against the morals of the pope and the priests. Consequently it was decided that the dialogue was not pamphlet. Valdés was full of enthusiasm for the ideas of Erasmus of Rotterdam and sought to gain from him the help of the papal curia in advancing the interests of the church in Germany and the Netherlands. At the Diet held at Augsburg in 1530 he was an influential negotiator with Melanthon and the Protestants, and met them in a pacific and conciliatory spirit; yet it cannot be said that he shared their views or showed that he understood Luther's motives; his own views were selected from a variety of sources. In October, 1531, he wrote from Brussels the letter of congratulation to the Emperor of Switzerland after the victory over Zwingli. He was the brother of Juan Valdés, the leader of the heretical movement in Naples, many of whose followers became apostates.

CABALLERO, Alonso y Juan de Valdés (Madrid, 1875); WEFFEN, Life and Writings of Juan de Valdés (London, 1860); CARRASCO.
Valence, Diocese of (Valentinensis), comprises the present Department of Drôme. It was re-established by the Concordat of 1801, being formed of the ancient Diocese of Valence, less the portion comprised in the new Diocese of Viviers, and of various portions of the Dioceses of St. Martin-Tours, Châteauneuf, Vienne (see Lyons, Archdiocese of), Orange, Vaison, Gap, Sisteron (see Digne, Diocese of). From 1802 to 1821 Valence was a suffragan of Lyons; since 1821 it has been dependent on Avignon.

Ancient Diocese of Valence.—A tradition of the early centuries contributes to the establishment of Christianity at Valence to three missionaries sent from Lyons by St. Ireneeus; the priest St. Felix and the deacons Sts. Achilles and Fortunatus, all martyrs. The "Chronicles of the Bishops of Valence," probably compiled about the middle of the twelfth century, gives only confused information with regard to bishops prior to the ninth century. The first bishop mentioned was St. Emilianus (second half of the fourth century), who signed at the Council of Valence in 374. St. Sexus, martyred during the invasion of Ch reverse, was erroneously introduced into the list of bishops by the Cistercians Polycaecae de La Rière. In 530 Pope St. Leo made Valencia a suffragan of Vienne, St. Apollinaris, brother of St. Ambrose, being the first bishop of the see. Valence was deprived of its suffragans during the first half of the sixth century, and after the conversion of Sigismund, King of Burgundy, was exiled by the latter; he is the patron of the diocesan cathedral. Other bishops were: Maximus II (567), during whose episcopacy the city was delivered from besieging Lombards by the prayers of St. Galla, a virgin of Burgundy; St. Euphrates the Unmer, Bishop of the Diocese of the City of Lyons; St. Eligius (585-595), formerly a Cistercian Abbot of Bonnevaux, disciple of St. Peter of Tarentaise; Bl. Humbert de Miribel (1200-20); Gérard (1252-27), formerly Abbot of Cluny, later Patriarch of Jerusalem; St. Boniface of Savoy (1240-42), later Archbishop of Canterbury; Amadés II, Cardinal of Saluces (1292-94); John V, 1st Franciscan-Guillaume de Castelma, Cardinal of Clermont-Lodève (1521-31); Jean de Moutltre, brother of the historian Blaise, who assisted in the nomination of the Duke of Anjou as King of Poland (1553-79), and was suspected of Protestant tendencies. During the Middle Ages Valence recognized only the sovereignty of the emperor, as King of Burgundy bore the title of Count of Burgundy, with a virtual dominion. The neighbouring territories bore the title of Countship and Duchy of Valentinus. In 950 Contard, of the house of the counts of Poitiers, made himself master of the Countship of Valentinus, which passed to the Duke of Savoy at 1149, and to the Dauphin Louis, son of Charles VII, in 1414, becoming then known as the Crown of France. In 1348 Louis XII made Valentinus a dual peerage which he gave to César Borgia.

Diocese of St.-Paul-Trois-Châteaux.—According to a legend of the fifteenth century, St. Restitutus, first Bishop of St.-Paul-Trois-Châteaux, was the man born blind, mentioned in the Gospel. Local traditions also make Sts. Eusibus, Torquatus, Paulus, Amautus, Saturatus, former bishops of St.-Paul-Trois-Châteaux, and bishops of St.-Paul-Trois-Châteaux. Mgr Duchesne regards St. Paulus (fourth or sixth century), patron of the city, as the only known bishop. Owing to Saracen ravages (827-29) the Church of St.-Paul-Trois-Châteaux, by Decree of Gregory IV, was united with the Church of Orange until the eleventh century, when the Diocese of St.-Paul-Trois-Châteaux was always dependent on Aix. Among its bishops were: and radius (525-42), correspondent of St. Avitus; Saint Martin des Ormeaux (seventh century), who became a solitary.

Diocese of Die.—The Carthusian Polycaecae de la Rière gives St. Martinus (220) as first Bishop of Die. The oldest historically known bishop is St. Nicasius, who attended the Council of Nicaea in 325. After him are mentioned: St. Petrothus, followed by Chronerus St. Martinus, 461; the popular saint, a stonemason, and an acolyte worker; Lucerinus (541-73), to whom St. Ferreolus of Uzès dedicated his monastic rule. For various reasons Abbé Jules Chevalier omits from the episcopal list: St. Maximus (sixth century); Wulphinus (end of eighth century); Exuperius and Saturninus (ninth century). Other bishops were: Hugh of Decise (835), who avowed the doctrines of the Monothelitians, and became a legate of the latter, presided over numerous councils for the reform of the Church, and subsequently became Bishop of Lyons; St. Isidoro (1098-115), of the noble house of Sassenage; Bl. Ulric (1129-42), who opposed the Petrobrunensian heresy in his diocese and became a Cardinal; Bl. Bernard (1175-1207), succeeded in the See of Passy, the monastery of Portes; Bl. Didier (Desiderius) de Lanne (1213-20). After the eleventh century the Diocese of Die, long disputed between the metropolitans of Vienne and Arles, became dependent on Vienne. By Bull of 25 September, 1275, in order to strengthen the Church of Die in its struggle with the House of France, Gregory XI transferred the Diocese of Die with that of Valence to the See of Avignon, which lasted four centuries, was unfortunate for Die. It was annullled in 1687 by Louis XIV, who, to combat Protestantism, appointed a Bishop of Die.

Councils were held at Valence in: 374, at which measures were taken for ecclesiastical discipline; 590, against Pelagianism; 385, King Constan's dona- tion of the episcopal See to the Church. In 1145, after the death of the Count of Poitou, John the G Yaştul's heresy; 590, Louis, son of Boson, was proclaimed King of Provence; 1100, the Bishop of Autun was suspended as a simoniac; 1209, dealt with the conditions on which the Count of Toulouse should be admitted to absolution. A called Council of Valence, held at Montelimar (1218), anathematized the Emperor Frederic II (1225-78), and united Southern France. The Benedictine Abbey of Notre-Dame d'Aiguebelle, which was founded in 1045 through Hughues Adhemar, Baron de Grignan, and visited by Paschal II in 1106, subsequently fell to decay. In 1137 the Cistercians of Minorcord were summoned by Gontard Dupuy, Lord of Rochfort, to found a new abbey in the neighbourhood. Gontard provided the abbeys, and the community was dependent on commendatory abbots. Since 1816, when Pierre-françois de Paul Malmy (Père Etienne), a Trappist, secured possession of it, there has been a Trappist congregation at the Abbey d'Aiguebelle. The Canons Regular of St. Rufus, founded at Avignon in 1039, opened at Valence in 1158 a house which became the mother-house in 1210, were secularized in 1771. Among the canons were: Anastasius IV, Adrian IV, and Julius II.

Among the saints of the diocese were: May (Mar- ius), Abbot of Bodon (d. 550); Barnard (778-812), Archbishop of Vienne, who became a solitary at Romans, where he founded a large Benedictine monastery and a church. St. Benedict of Bec (1030-1122), founder of the monastery of Valence and Bishop of Grenoble, one of the founders of the Cistercians; Hugh, Abbot of Lione, nephew of the preceding (twelfth century). Blessed Bertrand of Garray, companion of Saint Donnain, died at Bonnech in the Diocese of St.-Paul-Trois-Châteaux during a mission (1230); Blessed Humbert of Romans, general of the Dominicans and author of ascetical writings, died at the convent of Valence (1277). Adhemar de Monteil, a native of Grignan, Bishop of Le Puy, was accom-
Valencia, Archidioceze of (Valencia), in Spain, comprises the civil Provinces of Valencia, Alicante, and Castellon. The city of Valencia is in the region known in ancient days as Eclestia, and has 173,000 inhabitants. Florius says that Junius Brutus, the conqueror of Virilaihus, transferred thirteen (110 n. c.) the soldiers who had fought under the Later, it was a Roman military colony. In punishment for its adherence to Sertorius it was destroyed by Pompey, but was later rebuilt, and Porphyrius Mela says that it was one of the principal cities of Hispania Tarraconensis.

Nothing positive is known about the introduction of Christianity into Valencia, but at the beginning of the fourth century when Dacianus brought the martyrs St. Valentinus, Bishop of Saragossa, and his companions, the first Christian edifices seem to have been numerous. St. Vincent suffered martyrdom at Valencia; the faithful obtained possession of his remains, built a temple over the spot on which he died, and there invoked his intercession. It is said that at the time of the Moorish invasion the people of Valencia placed the saint's body in a boat and that the boat landed on the cape which is now called San Vicente. The King of Portugal, Alfonso Enríquez, found the body and transferred it to Lisbon. The first historically known Bishop of Valencia is Justinianus (531-46), mentioned by St. Isidore in his "Vita illustris." Justinianus wrote "Responsiones," a series of replies to a certain Rustictus, Bishop of Valencia assisted at the various councils of Toledo, was the last bishop before the Moorish invasion. Abd al-Ozid, son of Muzza, took the city and, breaking the terms of surrender, pillaged it; he turned the churches into mosques, leaving only one to the Christians. This was without doubt the present Church of San Bartolome or that of San Vicente de la Forca.

Valencia was in the power of the Moors for more than five centuries. The Cid (Rodrigo Diaz de Vivar) reconquered it for the first time on 15 June, 1094, turned nine mosques into churches, and installed as bishop the French monk Jerome. On the death of the Cid (July, 1099), his wife, Doña Ximena, retained power for two years, when Valencia was besieged by the Almoravids; although the Emperor Alfonso drove
them from the city, he was not strong enough to hold it. The Christians set fire to it, abandoned it, and the Almoravid Masdali took possession of it on 5 May, 1109. Jaime the Conqueror, with an army composed of French, English, Germans, and Italians, laid siege to Valencia in 1238, and on 28 September of that year forced a surrender. 50,000 Moors left the city and on 6 October the king, favoured by his fortune and crowd, took possession. The principal mosque was purified, Mass was celebrated, and the "Te Deum" sung. The see was re-established, ten parishes being formed in the city; the Knights Templar and HOSPITALITIARIES, who had helped in the conquest, also Dominicans, Franciscans, Augustinians, Mercedarians, and Cistercians, in the city of Valencia, the cathedral; this was continued and finished by his successors: Gaspar de Botonach, Abbot of San Felin (1276-88); the Aragonese Dominic, Raimundo de Point (1288-1312); the Catalonian Raimundo Gastón (1312-18); Hugo de Fonelet, formerly Bishop of Vich (1348-56); and Vidal de Blanes (1356-69). Jaime de Aragon, Bishop of the city, in 1348, succeeded to the see in 1369. Hitherto the chapter had elected the bishops, but owing to the disensions at the death of Bishop Blanes, Urban IV reserved the right to name the bishops until 1523, when the right of presentation was granted to the Spanish kings. At the death of Jaime (1396), the antipope Benedict XIII kept the see vacant for more than two years, and then appointed Hugo de Lupia, Bishop of Tortosa (1398-1427). He was succeeded by Alfonso de Borja (Calixtus III). The latter appointed Rodrigo de Borja (Alexander VI) to the see of Valencia; Rodrigo obtained from Innocent VIII the rank of metropolitan for his see (1492) and, after he was raised to the papacy, confirmed this decree. He also raised the see of Valencia to an archbishopric, and granted to the university, conferring upon it all the privileges possessed by other universities. Cesar Borgia bore the title of Archbishop of Valencia, and was succeeded by Juan de Borja y Llanosol, Pedro Luis de Borja, and Alfonso de Aragón, illegitimate son of Ferdinand the Catholic and also Archbishop of Saragossa (1512-20), then by Leandro de Villanueva (1514-55), founder of the Colegio de la Presentación de Ntra. Señora, called also de Santo Tomás, was one of the most notable in the history of Valencia. St. Thomas was beatified (1619) by Paul V, and canonized (1658) by Alexander VII. His successors, Francisco de Navarra and Martín de Ayala, who attended the Council of Trent, were also men of distinction. Perhaps the most noted of all the archbishops of Valencia was the Patriarch Juan de Ribera (1569-1611). He decided to expel the Moors from the city, after having exhausted all possible means to bring them to submission. He founded the Colegio de Corpus Christi and furthered the work of monasticism, especially among the Capuchins, whom he had brought to Valencia. The see was reduced to its present limits upon this era, including St. Louis Bertram, the Franciscan Neri, the Carmelite Francisco de Ximo Jesús, and the Minim Gaspar Bono.

The archbishop and inquisitor general, Juan Tomas Rocaperati, publicly punished the Governor of Valencia for interfering in ecclesiastical jurisdiction; Andrés Mayoral (1738-69) improved the system of charities and public instruction, founded the Colegio de las Escolanas Pias, and the Casa de Enseñanza for girls. He collected a library of 12,000 volumes; this was enlarged in the war of independence. The see of Valencia has had two cardinals, Barrio y Fernández and Monseñor y Sancho.

The cathedral in the early days of the reconquest was called Iglesia Mayor, then Seo (Sedes), and at the present time, in virtue of the papal concession of 16 October, 1566, it is called the Basílica metropolitana. It is situated in the Roman city of Valencia, where some believe the temple of Diana was located. In Gothic times it seems to have been dedicated to the most Holy Saviour; the Cid dedicated it to the Blessed Virgin; Jaime the Conqueror did likewise, leaving in the main chapel the image of the Blessed Virgin which he carried with him and which is believed to be the one which he kept in the sacristy. The Moorish mosque, which had been converted into a Christian church by the conqueror, appeared unworthy of the title of the cathedral of Valencia, and in 1262 Bishop Andrés de Albalat laid the corner-stone of the new Gothic building, with three naves; these reach only to the choir of the present building. Bishop Vidal de Blanes built the magnificent chapter hall and the nave that was consecrated in 1267; thus the cathedral was called "Miguelete" because it was blessed on St. Michael's day (1418), which is about 165 feet high and finished at the top with a belfry. In the fifteenth century the dome was added and the naves extended back of the choir, uniting the building to the tower and forming a main entrance. Archbishop Luis Alfonso de los Castros built the present facade of the cathedral in 1674; the walls were decorated with marbles and bronzes in the over-ornate style of that decadent period. At the beginning of the eighteenth century the German Conrad Rudolphus built the façade of the main entrance. The other two doors lead into the transept; one, that of the Apostles in pure pointed Gothic, the other that of the Palau. The additions made to the back of the cathedral detract from its height. The eighteenth-century restoration covered the pointed arches, covered the Gothic columns with Corinthian pillars, and redecorated the walls. The dome has no lantern, its plain ceiling being pierced by two large side windows. There are four chapels on each side, besides that of the Passion, to the right of the choir, the transept, and the presbytery. It contains many paintings by eminent artists. A magnificent silver reredos, which was behind the altar, was carried away in the war of 1808, and converted into coin to meet the expenses of the campaign. Behind the Chapel of the Blessed Sacrament is a very beautiful little Renaissance chapel built by Calixtus III. Beside the cathedral is the chapel dedicated to the "Virgen de los desamparados".

In 1409 a hospital was founded and placed under the patronage of Santa María de los Inocentes; to this was attached a confraternity devoted to recovering the bodies of the unfriended dead in the city and within a radius of three miles around it. At the end of the fifteenth century this confraternity separated from the hospital, and continued its work under the name of "Cofradía para el amparo de los desamparados". Philip IV and the Duke of Arco suggested the building of the new chapel, and in 1647 the Viceroy Conde de Orpesa, who had been preserved from the burning plague, came to Valencia. The Blessed Virgin under the title of "Virgen de los desamparados" was proclaimed patroness of the city, and Archbishop Pedro de Iburena, on 31 June, 1652, laid the corner-stone of the new chapel of this name.
the archiepiscopal palace, a grain market in the time of the Moors, is simple in design, with an inside cloister and a handsome chapel. In 1357 the arch which supported the ceiling of this small church of Valencia fell, and the council chamber are preserved the portraits of all the relatives of Valencia.

Among the parish churches those deserving special mention are: Sts. John (Baptist and Evangelist),—built in 1368, whose dome, decorated by Palomino, contains some of the best frescoes in Spain; The Temples of St. Ignatius and St. Francis, containing beautiful choir stalls, and the San Millan Temple, which passed into the hands of the order of Montesa and which was rebuilt in the reigns of Ferdinand VI and Charles III; the former convent of the Dominicans, at present the headquarters of the "Sapiens" institute, the cloister of which has a beautiful othic wing and the chapter room, large columns, imitating palm trees; the Colegio del Corpus Christi, general house of the exclusive worship of the Blessed Sacrament, and in which perpetual adoration was carried on; the Jesuit college, which was destroyed (1683) by the revolutionary Committee, but rebuilt the same site; the Colegio de San Juan (also of the society), the former college of the nobles, now a provincial institute for secondary instruction.

From 1790 it was situated at the former house of studies of the Jesuits since the Concordat (1811) it ranks as a central seminary with the faculty of conferring academic degrees, there have been in Valencia, since very remote times, foundations by the bishops and directed by ecclesiastics. In 1412 a studium generale with special privileges was founded by Ferdinand VI needed to the rank of a university on 23 January, 1500. Ferdinand the Catholic confirmed this two years later. In 1530 the building was reconstructed; a statue of Louis XV adorns the coro torne. Among the hospitals and charitable institutions may be mentioned: the Casa de Misericordia; the Provincial hospital; the orphan hospital of the Arqués de Campo. In Gandia there was a university, and the palace of St. Francis Borgia, now the residence of the Society of Jesus, is preserved.

RAMÓN RUIZ AMADO.

UNIVERSITY OF VALENCIA.—At the request of the Conqueror, Innocent IV in 1246, authorized by a Bull the establishment of a university in Valencia. Although in virtue of this Bull some university courses were followed in Valencia, the university itself was not founded until 1111. Its foundation was due to the zeal of St. Vincent Ferrer and to the donation of a building by Osen Pedro Villaragut. Only very meagre accounts have been preserved of the practical workings of the university in its first years. In 1379, when Pedro de Villata was rector, the academic courses included Latin, Greek, Hebrew, Arabic, philosophy, mathematics and physics, theology, canon law, and medicine. The closing years of the seventeenth, and the whole of the eighteenth century, witnessed the most prosperous era of the university, Greek, Latin, mathematics, and medicine being cultivated. Among illustrious students of that of Tosen, Torricelli's friend, noted musician and author of important mathematical works, stands out prominently. Escolano says that he was the leading university in mathematics, the humanities, philosophy, and medicine. Large anatomical drawings were made by the students. Valencia was the first university of Spain to found a course for the study of herbs. Many of the Valencian graduates of medicine became famous. Pedro Ximeno discovered the third smallest bone of the ear. He was professor at Alcalá and had for a pupil the celebrated Damián de Valènes. Luis de Montesa was rector of the council chamber. The university possessed a library of 27,000 volumes which was destroyed by the soldiers under the command of General Suchet. Among the most noted professors of the university was D. Francisco Pérez Bayer, a man of wide culture and great influence in the reign of Charles III. Around the university several colleges were founded for poor students: the first was founded by St. Thomas of Villanova in 1501 and was followed by others founded by Dona Angela Alonsor, and Mosen Pedro Martin. The most famous, called Corpus Christi, was founded by Blessed Juan de Ribera; Philip II founded that of San Jorge; and Melchor de Villena the last in 1514. 

Theodore RODRIGUEZ.
rite, the child died, and the saint escaped the threatened exile. In 347, at Antioch, there was a curious and apparently unrecorded event.

"...asked to spell the name of him who should succeed Valens, was supposed to have rattled out the Greek letters THEO which begin the name Theodorus."

The lives of Theodorus, an official of the imperial Court, and of those who had prepared this manifestation were forfeited, though the spirit may have meant to impress the barbarians with their superior intelligence.

Throughout his reign, Valens had to defend his frontiers against formidable enemies. From 367 to 369 the Goths battled with the imperial forces, until an agreement was reached, fixing the Danube as the southern boundary of their settlements. Frequent incursions of the Isaurians demanded attention. In 375 the Huns and Alans, who had driven Ardashir was driven back beyond the Tigris. The Huns and Alans were meanwhile pressing upon the rear of the Goths north of the Danube. In 376 the latter obtained permission to settle south of the river as peaceable colonists, unarmed; but when the imperial commissioners abused their authority to plunder the strangers, these exasperated Goths, armed with their fellow-barbarians from whom they had but recently fled, Huns, Alans, and Goths from Frigidens were surprised and defeated in 378 by Sebastian, the imperial general, and Valens himself hastened from his capital to complete the conquest before his nephew Gratian, who had succeeded Valentine, could reach the enemy. At Adrianople, a battle of tremendous proportions, a brave but unlucky general, openly prophesied his speedy death. Valens caused the prophet of evil to be imprisoned pending his return from Thrace. But the emperor never returned. Defeated by the barbarians near Adrianople, he took refuge in a country house and there perished in the confabulation with which the Goths or their allies unwittingly avenged the death of St. Urbanus and his companions.

(See also Arianism; Athanasius; Saint; Meletius of Antioch.)

Valentine, Saint—At least three different Saint Valentines, all of them martyrs, are mentioned in the early martyrlogies under date of 14 February. One is described as a priest at Rome, another as Bishop of Interamna (the modern Terni), and these two seem both to have suffered in the second half of the third century and to have been buried on the Flaminian Way, but at different dates from the city. Both William of Malmesbury's time was known to the ancients as the Flaminian Gate of Rome and is now the Porta del Popolo, was called the Gate of St. Valentine. The name seems to have been taken from a small church dedicated to the saint which was in the immediate neighbourhood. Of both these St. Valentines, St. Valentine the younger, an apparent relatively late date and of no historical value. Of the third St. Valentine who suffered in Africa with a number of companions nothing further is known

The popular customs connected with Saint Valentine's Day undoubtedly had their origin in a conventional belief generally received in England and France during the Middle Ages, that on 14 February half way through the second month of the year, the birds began to pair. Thus in Chaucer's "Parliament of Foules" we read:

When every foul cometh ther to choose his mate,
For this reason the day was looked upon as specially consecrated to lovers and as a proper occasion for writing love letters and sending lovers' tokens. Both the French and English literatures of the fourteenth and fifteenth centuries contain allusions to the practice. Perhaps the earliest is to be found in the 13th century "Ballades" of the bilingual poet John Gower, written in French; but Lydgate and Chaucer supply other examples. Those who chose each other under these circumstances seem to have called by each other their Valentines. In the "Paston Letters," Dame Elizabeth Brews writes thus about a match she hopes to make for her daughter (we modernize the spelling), addressing the favour in the following words to the end, cousin毛旦 upon Monday is Saint Valentine's day and every bird chooseth himself a mate, and if it like you to come on Thursday night, and make provision that you may abide till then, I trust to God that ye shall speak to my husband and I shall pray that we may bring the matter to a conclusion."

Shortly after the young couple had agreed to their betrothal, and addressing it "Unto my rightwell beloved Valentine, John Paston Esquire." The custom of choosing and sending valentines has of late years fallen into comparative desuetude.

Herbert Thurston.

Valentine, Pope, date of birth unknown; d. about October, 827. Valentine was by birth a Roman, belonging to the Via Lata district. While still a youth he entered the service of the Church. His biographer in the "Liber pontificum" (ed. Duchesne, HI, 71–2) praises his piety and purity of morals, which won him the favour of Pope Paschal I (817–24). Paschal ordained Valentine subdeacon and deacon, employed him at the Lateran palace, and placed him as archdeacon at the head of the Roman diocese. Valentine retained his influential position during the pontificate of Eugene II (824–7), and after Eugene's death (27 August, 827) was unanimously elected his successor by the archdeacons, monks, and prelates of Rome. The election had taken place at the Lateran whence the entire company proceeded to Santa Maria Maggiore, where Valentine was tarrying in prayer. He was led to the Lateran basilica and placed upon the papal throne. After this, probably on the succeeding Sunday, he was consecrated bishop at St. Peter's, and then enthroned as pope. No information has been preserved of his brief reign; he died after he had occupied the papal see forty days according to the "Liber pontificum," and barely a month according to the testimony of the "Annales" of Einhard (ad an. 827).

Liber Pontificum, ed. Duchesne, HI, 71-2; Langen, Gesch. der römischen Kirche, II (Bonn, 1886), 815o.

J. P. Kirsch.

Valentinian, the name of three Emperors of the West.

Valentinian I (Flavius Valentinianus), 364–75, b. at Citabla (probably Mikonovice), Pannonia, Hungary, of humble parents, in 321; d. at Bregetio, near Pressburg, 17 Nov., 375. He entered the army early, became a tribune of the scutarii about 360, and accompanied Julian the Apostate to Antioch, wherein in 363 he was elected their general of horse. On Julian's death Valentinian was proclaimed emperor (26 Feb., 364), and at once he appointed his brother Valens ruler of the East. In 365 he went again to Gaul to stop the inroads of the Alamanni and Burgundians; the former were defeated at Chalpaigne and Chalons-sur-Marne, but in 367 captured Narbonne. At Antioch Valentinian was crowned emperor by Eutropius, and at Sardica Valentinian at Siscium, but with heavy Roman losses. In 368 the Franks and Goths were driven back from Britain, and the province of Valentinian formed. While in Gaul Valentinian repudiated his first wife Valeria Severa, or at least he married a Sicilian, Justiniana, who became the mother of Valentinian II. In June, 367, the emperor was called to Ilyricum by the incursions of the Quadi and Sarma-
sion; he made his headquarters at Brussels, where
during the negotiations with the Quadi he died from
injuries received there.

Valentinian was weak, but just, and loved peace. Justina was opposed to the orthodox party: she endeavoured to set up an Arian bishop at Milan and to procure a church for his followers, but was thwarted by St. Ambrose, who protested that the churches belonged to the bishop not to the emperor. And when the Roman senate attempted in 384 and 391 to restore the avar of victory and the pagan rites, it was St. Ambrose again who triumphed. On 23 January, 390, Valentinian published an edict protecting the Arian supporters of the Council of Ariminum, but this was overruled by Theodosius. On the other hand he supported Pope Damasus against his enemy Ursinus. With Gratian he confirmed the exemption of the clergy from the jurisdiction of the civil tribunals in religious matters. In 388 he issued an edict for the erection of the Basilica of St. Paul and directed Sufrit, the prefect of Rome, to co-operate with Pope Siricius in this matter. The basilica was consecrated in 390. After Justina's death Valentinian abandoned Arianism, became a catechumen, and invited St. Ambrose to come to Gaul to administer baptism to him, but he was not spared the experience of the pestilence, which brought him to Milan, where the saint delivered his funeral oration, "De obitu Valentiniani consulato," in which he dwells on the efficacy of baptism of desire (P. L., XVI).

Valentinian III, 425-55, b. at Ravenna, 3 July, 419; d. at Rome, 16 March, 455; son of Constantius III and Galla Placidia, daughter of Theodosius, succeeded Emperor Honorius. In 437 he married his cousin Eudoxia, daughter of St. Ambrose. He was a capable statesman and a man of great piety, who devoted his life to the promotion of Christian prosperity. He encouraged the bishops, and especially his own cousin Eudoxia, who was a great benefactor of the Church, and he founded numerous churches. He was a great supporter of the Church, and he founded numerous churches. He was a great supporter of the Church, and he founded numerous churches. He was a great supporter of the Church, and he founded numerous churches. He was a great supporter of the Church, and he founded numerous churches. He was a great supporter of the Church, and he founded numerous churches.

Valentinianus (Valentinianus), 355-62, b. in Gaul about 357, murdered at Vienne, Daunia, Gaul, 15 May, 362, son of Valentinian I and his second wife Justina. He was never much more than a mere nominal ruler, for while Gratian ruled the East, most of the West was under the control of Magnus Maximus, Italy was all that was left to him, and even there the real ruler was his mother Justina, with whom he resided at Milan. In 387 Maximus, who had usurped the northern provinces in 386, invaded Italy and Justina and Valentinian fled to the East, where the latter refused to enter the aid of Theodosius. Emperor Gratian, whose son-in-law he was, was defeated, but Justina soon died, and Valentinian fell under the evil influence of Arbogast, who had him assassinated later. Theodoric replaced Valentinian in the imperial throne, and the latter's son-in-law, Valentinianus, was designated as his successor. Valentinianus was a weak and indecisive ruler, who failed to assert his authority over the empire. He was succeeded by his son, Valentinianus II, who attempted to assert his authority but was soon overthrown by Maximus.
Valentinus and Valerianians.—Valentinus, the best known and most influential of the Gnostic heretics, was born according to Epiphanius (Haer., XXXI) on the coast of Egypt. He was trained in Hellenistic science in Alexandria. Like many other heretical teachers he went to Rome the better, perhaps, to disseminate his views. He arrived there during the pontificate of Hyginus and remained until the death of the saint. During a sojourn of perhaps fifteen years, though he had in the beginning allied himself with the orthodox community in Rome, he was guilty of attempting to establish his heretical system. His errors led to his excommunication, after which he repaired to Cyprus where he resumed his activities as a teacher and where he died probably about 160 or 170. Nothing is known of his works but he left a rescript from Theodor or Theodas, a disciple of St. Paul, but his system is obviously an attempt to amalgamate Greek and Oriental speculations of the most fantastic kind with Christian ideas. He was especially indebted to Plato. From him was derived the parallel between the ideal world (the μορφωσις) and the lower world of phenomena (the ἐμπόριος). Valentinus doubtless borrowed some ideas from the New Testament, but used a strange system of interpretation by which the sacred authors were made responsible for his own cosmological and pantheistic views. In working out his system he was thoroughly dominated by dualistic fancies.

He assumed, as the beginning of all things, the Primus Reginatus, who after ages of silence and contemplation, gave rise to other beings by a process of emanation. The first series of beings, the deae, were thirty in number, representing fifteen syzygies or pairs sexually complementary. Through the weakness and sin of Sophia, one of the lowest deae, the lower world with its subjection to matter is brought into existence. Man, the highest being, is the only one who participates in both the psychic and the hydric (material) nature, and the work of redemption consists in freeing the higher, the spiritual, from its servitude to the lower. This was the work and mission of Christ and the Holy Spirit. The Christology of Valentinus is confusing in the extreme. He seems to have maintained the existence of three redeeming beings, though it is not clear that any one of them was the central body and did not suffer. The system of Valentinians was extremely comprehensive, and was worked out to cover all phases of thought and action. While Valentinus was alive he made many disciples, and his system was the most widely diffused of all the forms of Gnosticism. His school was divided into two branches, the Oriental and the Italian. The former was spread through Egypt, Syria, and Asia Minor, the latter in Rome, Italy, and Southern Gaul. Among the more prominent disciples of Valentinus, who, however, did not slavishly follow their master in all his views, were Heracleon, Polylene, Marcos, and Bardesanes. Many of the writings of these Gnostics, and a large number of excerpts from the writings of Valentinus are still in existence. Tertullian ascribes to him the apocryphal Gospel of Valentinus, which, according to Irenaeus, was the same as the "Gospel of Truth."

Valerianus, Roman emperor (253-60). A member of a distinguished family, he had held several offices before the army proclaimed him emperor in 253 at Rhedia. He was a pious man, and the persecution of the Christians under Decius. Though kindly disposed towards the Christians as emperor he was driven to severe measures by the hostile party, whose leader, the Valerianus, attempted to exterminate them for himself, or at least to suppress their religious rites. He was remembered for his destruction of the churches. He died in battle, Hisname was afterwards associated with the persecution of the Christians, and the destruction of the churches. He was remembered for his destruction of the churches. He was remembered for his destruction of the churches. He was remembered for his destruction of the churches.

Valerianus, Saint. See Cecilia, Saint.

Validation of Marriage may be effected by a simple renewal of consent when its nullity arises only from a defective element in the parties. When, however, matrimony is invalid on account of the existence of some ecclesiastical impediment, it may be revalidated by simple dispensation or by that known as Suntito in Ruride. (1) In the first method, as soon as a simple dispensation from the impediment has been obtained, a renunciation of consent of both parties shall be made. The dispensation had affected only one of the parties, and the other was unaware of the impediment, it is probable
that both must renew their consent. That a true innovation of consent be obtained, it is requisite that the parties be made aware of the nullity of their marriage, unless sanatio in radice be resorted to. The innovation must be made before the authorized document of the impediment has been published. (2) The dispensation called sanatio in radice consists in the revocation of a marriage by reason of a consent formerly given, but revocative at the time owing to some ecclesiastical impediment. When the impediment is removed, the consent is ipso facto ratified and no renunciation is required. It is requisite that the consent of both parties to the marriage had not ceased and that their wedlock had had the external appearance of a true marriage. Sanatio is resorted to when the divorce is urgent reason for not acquitting the parties with the nullity of their marriage, or when one of the parties alone is cognizant of the impediment and the other cannot be informed of the grave consequences. In such case, one party would be unwilling formally to renew consent that is presumably existing. The pope has power to give the dispensation called sanatio in radice for all marriages which are invalid in consequence of an ecclesiastical impediment. Bishops generally have no such power, even when by particular indulgence they dispense in dimirum impediements. For the granting of sanatio is the special province of an archbishop or cardinal of the suffracy. 

In the United States, the bishops may grant such dispensation, under certain limitations, when only one of the parties to the marriage is aware of the impediment.

William H. W. Fanning.

Valla (Della Valia), Lorenzo, Humanist and diplomat, b. at Rome, 1455; d. there, 1 Aug., 1457. His father was a chronicler. He studied under Leonardo Bruni (Aretilce and Greek under Giovanni Auriaca. At the age of 24 he wished to attain a position in the papal secretariat, but was considered too young. After his father's death he accepted a chair of eloquence in the University of Pavia, where he wrote his treatise De voluptate (1431), an amended edition of which appeared later under the name of De voluptate et voluptate. In 1431 he was called upon to draw up an open letter attacking the jurist Bartolo (1433) and ridiculing the contemporary jurisprudence he was forced to leave Pavia. He went to Milan and Genoa, made another effort to succeed at Rome, and finally settled at Naples (1433), where he became secretary to Alfonso of Aragon, whose Court, frequented by the most distinguished writers, was a method of licentiousness and debauchery. Lorenzo confesses that his life there, like his previous life, was not free from moral stain. At Naples he wrote De novo arbitrio, Dialecticae disputationes, De declamatione contro la donazione di Constantinio (1440), De professione religiosorum (1442), not printed till 1514, in which he defends the right of the Romans to the possession of the Aptle's Creed by each of the Apostles. His philosophical and theological speculations caused him to be tried for heresy by the Inquisition at Naples, but the trial was dismissed through the intervention of King Alfonso. His best work is De elegantia linguae latinae, which was placed the study of Latin on a scientific basis, and had laboured on it from 1433, and in 1441 it was published through the disinterest of Auriaca. The humanists who preceded him had formed their Latin more rather empirically, and consequently had emitted many constructions peculiar to popular Latin. Though Valla had refrained from personalities, all the literary writers considered his work a provocation, and hurled invectives against the author. This controversy is one of the most unpleasant pages in the history of the Italian Renaissance. The fiercest aggressor in the invective was Valla and not confined himself to pointing out errors of style in Valla's works, but accused him of the most degrading vices. Valla's less virulent answers are collected in his "Invectivaria libri sex". Poggio's invectives could not but create a bad impression at Rome; as Valla still hoped to obtain a position in the Curia, he wrote an "Apologia ad Eugenio IV", extolling himself for his faults and promising amendment. But it was only after the election of Nicholas V that he found favour (1445), obtaining first the position of scriptor, and later of Apostolic secretary. Calistus III bestowed on him a canonry in St. John Lateran, which he held but for a few years. By order of Nicholas V he translated various Greek authors.

His philosophical and theological works are interesting. In his "Disputationi dialetitchae" he bitterly opposes Aristotle and the Scholastics, but he treats his subjects superficially, and rather as a grammarian than as a philosopher. He made no positive contribution to philosophy, but only helped to discredit Scholasticism. His most discussed work is the dialogue "De voluptate". In this Leonardo Bruni (Arentino) defends the Stoic doctrine that a life conforming to nature is the summum bonum; Antonio Beccadelli (Panormita) strongly favours Epicureanism, declaring that the desire of pleasure is to be restrained only lest it might be an obstacle to a greater happiness, and that contingency, contrary to nature. Finally, Niccolò Niccoli speaks against both in favour of Christian hedonism, holding that perpetual happiness is the summum bonum, and that virtue is practised only as a means of attaining it. It is uncertain whether Beccadelli or Niccoli (who is declared victor by the onlookers) expresses Valla's personal opinion. It would seem that he had not then (1431) come to a definitive opinion. He confines himself to expounding his three opinions, but gives Epicureanism the most ardour and eloquent defender. The way in which his "Apologia" extenuates what had been said in "De voluptate", arguing on the meaning of the Latin word poluplas, shows that he was undecided.

In the "De declamatione contro la donazione di Costantino", probably inspired by Alfonso, who was at war with Eugene IV for possession of the Kingdom of Naples, Valla exhorted the Romans to rebel and their leaders to deprive the pope of his temporal power, which he deemed the cause of the evils then afflicting Italy. The "Annnotationi sui testo latino del Nuovo Testamento" deals chiefly with the Latin text, and less frequently with the translation itself. In the "De professione religiosorum" he denies that the religious state is the most perfect as there is greater merit in acting spontaneously than in fulfilling what one is obliged to do by vow, and he taxes the monks with XV.—17

VALLADOLID

arrogance for calling themselves religious, as if other Christians were not so; he refrains, however, from trying to discredit them by relating scandalous stories as the other Humanists delighted in doing. In the "De libero arbitrio" he concedes that the foreknowledge of God is not incompatible with free will, but maintains that our intellects are unable to comprehend this truth. Valla first gave expression to many ideas that were taken up later, especially by the reformers. Like the other Humanists of his age he lacked firmness of character.

U. BENIGNI.

Valladolid, Archidioce of (Vallejedtana), bounded on the north by Palencia, cast by Burgos and Segovia, south by Avila and Salamanca, and west by Zamora. It consists of two towns, It comprises the civil Province of Valladolid, and has in its territory six towns which are alternately on the civil and ecclesiastical jurisdiction and the next under that of the Diocese of Avila. Its suffragan dioceses are Astorga, Avila, Segovia, Salamanca, Zamora, and Ciudad Rodrigo. Valladolid (60,000) is built on the site of an ancient Roman city, and remains of Roman ruins are to be found, but it does not seem to have existed at the time which Antoninus says was 106 miles from Astorga. Probably it was founded by the Moors and given the name of Odd or Walfid. The first mention of it is found in the "Crónica de Cerdagne" as one of the towns which Sancho II. of León and Castile gave in marriage to his sister to the Duke of Asturias, in exchange for Zamora, the seigniory of which had been conferred upon her by her father. The real founder of Valladolid was the Castilian Count Ansúrez to whom Alfonso VI ceded it in 1074. He built the churches of Santa María la Antigua and Santa María la Mayor, founded the parish of San Nicolás, but he seems to have found already existing the churches of San Juan and San Pelayo. He built the great bridge over the Pisuerga and two hospitals near his own palace. On 21 May, 1065, the Church of Santa María la Mayor was dedicated by D. Bernardo, Archbishop of Toledo, assisted by the Archbishops of Palencia, and many other bishops and noted personages. Ansúrez and his wife Lyda conferred vast territories upon the canons of the collegiate church, for purposes of colonization. This grant consisted of the monasteries of San Julián and San Pelayo, lands in Tierra de Campos, and a great stretch of land between the branches of the River Esgueva.

The first abbots of Valladolid in the twelfth century were Nautilus or Agelades; Herveus; Pedro; Martín; Iñigo; Miguel; and Domínguez, in the thirteenth; Juan Domínguez, counselor of St. Ferdinand; D. Felipe, son of St. Ferdinand; D. Sancho de Aragon, son of Jaime I; D. Martín Alonso, illegitimate son of Alfonso the Wise; and Gómez García de Toledo; in the fourteenth; Juan Fernández de Limia, later Arch-

to the cardinalitial dignity, D. José Cos y Macho. Many noted events have taken place at Valladolid: the marriage of Alfonso X and Doña Violante de Aragón and that of Alfonso XI to Doña Constanza; Columbus died there; and Alvaro de Luna was decapitated. The first auto de fe of the Spanish Inquisition was carried out at Valladolid, and the Cortes met there many times. The city owes much to the famous Doña María de Molina, wife of Sancho the Brave, regent during the minorities of Ferdinand IV and Alfonso XI. The latter conferred many distinctions upon Valladolid and gave it its university. The Court resided several times at Valladolid, the last time from 1601 to 1606 by wish of Philip III, who was much attached to the city.

Churches.—Santa María la Antigua was the parish church of the counts of Valladolid and was in existence as early as 1088. Behind the modern cathedral are the remains of the ancient church of Santa María la Mayor, not as founded by the Conde Ansúrez, but as restored a century and a half later. Bishop Lucas de Tuy says that the Abbot Juan, chancellor of St. Ferdinand, later Bishop of Osma, rebuilt and redecorated it, transferring the chapter meanwhile to Santa María la Antigua (1236). Its architecture is of the Transition period and of the sixteenth century, describes with enthusiasm its magnificent cloister. When the diocese was erected, Philip II engaged Juan de Herrera, the famous architect of the Escorial, to make the plans of the new cathedral. Herrera began the construction, but was obliged to go back to the Escorial,
FAÇADE OF THE CHURCH OF S. PABLO, VALLADOLID
The Cathedral, Valladolid

This one was never built beyond the first story, and the other which was finished collapsed in 1841. The Inferior is imposing; along the top is an open gallery shed with a balustrade. The tabernacle built by Juan de Arfe (1590) and the choir stalls, which were bought from the Dominican church, are two of the most precious possessions of this cathedral. The Dominican Convent of San Pablo, founded in 1576 by Doña Violante, wife of Alfonso X, the Wise, deserves special mention. Juan II lived there, and was temporarily buried there until his remains could be transferred to the Cartuja de Miraflores. It is a simple building, the most notable feature of which is the façade of its church, built at the expense of Cardinal Juan de Torquemada and Fr. Alonso de Burgos, Bishop of Palencia. Beside it is the Dominican College of San Gregorio, founded in 1488 by Fr. Alonso de Burgos, confessore of Isabella the Catholic. The famous Luis de Granada studied there. Its design is the best of its kind on account of its original stone design. Its cloister, with a double gallery, is also noble. The ancient College of Santa Cruz, founded by Cardinal Mendoza, a building in the plateresque style, has been converted into a museum, and contains many beautiful samples of religious sculptures.

The ancient palacio real serves as a court building. It has a beautiful façade, with a tower at each side, and finished with a colonnade of alternating arches and square openings. The episcopal palace is a handsome building, and the conical seminary, added by D. Bartolomé de la Plaza in 1597 and rebuilt in 1847 by D. José Antonio Ribadeneyra, was made a pontifical university by Leo XIII in 1897.

Valladolid has secondary and normal schools, archeological and art museums, and a library of 30,000 volumes. The Spanish cavalry school is situated here also. Among the charitable establishments may be mentioned the Hospital de la Resurrección, the military hospital, formerly a convent of the Carmelites; the hospital of Escalada, the hospicio de Mesavenda, occupying the ancient palace of the counts of Benavente; the asylums for men and women.

University of Valladolid.—The name of the founder and the date of foundation of the University of Valladolid are not known with certainty. Its origin probably dates from 1260-64; in 1293 the university was in a most flourishing condition. Alfonso XI was the patron of Valladolid, just as Alfonso the Wise and students of botany. He provided a fixed revenue for the estudios, on one third the tithes received from Valladolid and its surrounding hamlets, conferred many honours on its professors, and finally petitioned Clement VI for papal authorization, which was given in the Bull of 30 July, 1316. All the courses embraced by the great universities, including medicine and surgery, were installed, the latter branch being later separated and constituted a special course. According to Morejón (see bibl.), medical science in Spain substituted the system of Hippocrates for Arab methods much earlier than foreign writers have asserted. In 1513 the physician Barnabino Montanera of Montserrat, in his book "Libro de la anatomia del hombre" (folio 2), said that there was no necessity to go to either Montpellier, Bologna, or Valladolid. At Valladolid the lectures were so famous that Montanera at the age of seventy was carried in a litter to hear the lectures of Prof. Alfonso Rodriguez de Cardona. The professor of surgery made twenty-five dissections in the general hospital each term. The professor and students of botany went into the country to make a practical study of plant life. The influence of the university was very great in both State and Church.

From the catalogue of famous students in the "Historia de Valladolid" the following names are taken: Juan Auvres, doctor of canon law, librarian of Santa Cruz, and Bishop of Ciudad Real; Fr. Antonio Andrade, first Rector of the city; Antonio Antolín, Augustinian, professor of the university and of that of Salamanca; Tomás Arizamendi, counsellor of Castile; Lorenzo Arrazola, chief counsellor to the Crown; Pedro Avila y Soto, professor of the university, counsellor of the Indies and of Castile, criminal prosecutor for the Crown, and counsellor of the army; Gasparr, Bravo de Salamanca, professor and Physician to Philip IV and Charles II; Breton y Simancas, Bishop and Viceroys of Naples; Pedro Cevallos, minister of Ferdinand VII; Agustín Esteban Collantes, minister of Isabel II; Dionisio Daza y Chacón, distinguished physician who rendered valuable services at Augsburg during the plague of 1564, the hospital of S. Pancracio; the Casa di Misericordia, physician of Don Carlos and Don Juan of Austria in the battle of Alcazar; Diego Escudero, compiler of the "Nueva Recopilación"; José Larra (Figaro), celebrated literator; Luis Mercado, prof., and physician to Philip II during the last twenty years of his life, an eminent writer greatly misunderstood by Sprengel; Claudio Moyano, educational professor, and afterward professor of Isabel II; José Zorrilla, noted poet. The controversy between the Jesuits and the Dominicans with regard to grace and free will, which interested all the universities of Spain, involved the University of Valladolid even
more deeply, as Diego Alvarez, one of its professors, and Avendaño, both Dominicans, opposed the doctrine of Molina. Of all the religious orders the Augustinians alone maintained an independent position. Their moderation contributed to dissipate much ill feeling aroused by the discussion. In 1770 certain royal privileges gave rise to heated controversy.

The early days of the university were mostly unpromising; it had only seven courses, the deplorable state of the times not permitting anything else. The residence of the Court of Valladolid contributed to its development. In the various grants of privileges given by the king to the services rendered by this university to the Crown are explicitly stated. In the time of Charles V and Philip II the rank of a university was conferred upon it. In the time of Charles III the colleges which had grown up around the university were dealt their death blow by the ministry of Roda, and since then the university has suffered from the changes, reforms, and systems which the central government of Spain has imposed on all the universities.

Valle, Pietro della, Italian traveller in the Orient, b. at Rome, 2 April, 1566; d. there, 21 April, 1652. He belonged to a noble family and received an excellent education. As a young man he was a poet, orator, a soldier in the papal service, and a member of the Roman Academy of the Umbristi. In 1611 he took part in a campaign against the Barbary States. An unknown misprint caused the course of a pilgrimage, lasting eleven years. On 8 June, 1614, he started from Venice by sea and went first to Constantinople where he remained a year and learned both Turkish and Arabic. On 25 September, 1615, he travelled to Alexandria, thence to Cairo, and in the spring of 1616 on to Jerusalem. After visiting the Holy Places he continued his journey to Damascus, Aleppo, and Bagdad. Here he married a Syrian Christian named Maani who accompanied him on his travels during the succeeding years. It was probably on account of his marriage that he visited Persia, for the parents of his wife had been killed by Kurds. In 1618 he was hospitably received in Northern Persia by the Shah Abbas the Great whom he followed to the capital Isphahan. He acted as mediator between the shah and the Christians of Persia.

During the next four years he explored Persia. Then, in October, 1621, he started for Perseopolis and Schiras. He was prevented from continuing his journey as far as India by the war between the Portuguese and Persians. His life ended on 30 December, 1621, and he kept her body with him until his return. In 1622 he took part in the siege of Ormus from which the Portuguese were driven. He was made president of the College of the Jesuits and supervised the missions which were sent to Java and China, until his death in 1632. His book was published in 1624 in India, where his headquarters were Surat and Goa. In 1625 he started on the return journey by way of Muscat, Basra, and Persia, and reached Rome, 28 March, 1626. Urban VIII appointed him a papal chamberlain. The rest of his life was spent peacefully. His second wife was a Georgian orphan, Marie, who accompanied him on his travels. The most important of his works is his account of his travels (Viaggi) in fifty-four friendly letters (Lettere famigliari) addressed to Maria Schipano, a professor of medicine at Naples. They appeared first at Rome in three volumes (1650-53) and were translated later into English, French, German, and Dutch. The narratives are distinguished by learning and keen observation, but incline to garrulity and stories of marvellous occurrences.

Klemens Löffler.

Valleé-Poussin, Charles-Louis-Joseph-Xavier de la, professor of geology and mineralogy at the Catholic University of Louvain (1863), doctor honoris causa of the same university (1876), foreign member of the Académie Royale de Belgique (1885), vice-president of the directing council of the geological map of Belgium (1893), b. at Namur in 1827; d. at Brussels, 1903. de la Vallée-Poussin made his studies at the College Notre-Dame-de-la-Paix at Namur, studied mathematics at Paris, and for ten years devoted himself to literature and philosophy. He attracted attention by his literary and scientific criticisms in various reviews. Appointed professor in 1863 on the recommendation of Omnium d’Halloy, he was the real creator of the teaching of geology and mineralogy at Louvain. He published scientific publications, scattered through numerous reviews from 1876 till 1903, placed him in the foremost ranks of Belgian geologists and crystallographers. Especially noteworthy were his memoirs on the microscopic study of the crystalline rocks of Belgium and
French Ardenne, several in collaboration with A. F. Thurt, particularly the first (1870), which was known by the Royal Academy of Belgium and has come a classic; his numerous articles on Belgian cari-ferous limestone, which are the true stratigraphical bases of its beds and destroy Dupont's theory.

J. Valliscaulian Architecture. — The Valliscaulian architecture is the name given to the first university, 4 asylum schools of physical education; finally his share in the preparation of the geological chart of Belgium.

C. DE LA VALLEE-POUSIN.

Valleyfield, Diocese of (Campivallensis). — Valleyfield is a thriving city of about 10,000 inhabitants, situated at the outlet of Lake St. Francis, on the north shore of the St. Lawrence. Founded in 1853, under the name of St. Cecilia, in 1874 it became legally known as Salaberry or Valleyfield. The first pioneers were chiefly French-Canadians and lumbermen. Today Valleyfield has developed into an important manufacturing centre (cotton, paper, bronze, paper, etc.); the motive energy being derived from one of the most beautiful water powers of the Province of Quebec. The Diocese of Valleyfield (erected May 5, 1892) comprises the counties of Beaupre, Chateauguay, Huntingdon, Vaudreuil, and a part of the county of Quebec. The Diocese of Valleyfield (erected May 5, 1892) comprises the counties

The Cathedral, Valleyfield.

Soulages. The first and most important, viz. Joseph-Médard Enarr (b. at St.-Constant, March, 1653, educated at St.-Thérèse and other seminaries, ordained priest, 18 June, 1865, appointed curate at Mile End). He continued his theological studies at Rome, and after five years received the degree of Doctor of Theology in the University of Paris. He was appointed curate at St. John's Church, Montreal, 1868, and was made Archdeacon of the archdiocese, 1891, when he entered the duties of vicar-general. He gave lectures on ecclesiastical history at Laval University, became successor of the archbishop, 1891, and was consecrated Bishop of Valleyfield, 9 June, 1892. He is the author of: "Voyage en Terre Sainte"; "Mespris de Chrétiens, de la vie religieuse, de l'Église"; "La justice, Devoir électoral, l'Emancipation, L'Eglise Française, Congrès Eucharistique de Montréal", which last quoted at length by Cardinal Vanuteli during festivities of the Eucharistic Congress held at Montreal, 1910. Bishop Enarr founded a classical college affiliated with Laval University, a "jardin de l'Église," a monaster for cloistered nuns (Clarisses), and a normal school for young ladies, took an active part in the first Synod of Quebec (1900), and is supervising the restoration of the cathedral of the diocese, which contains admirable life-size portraits of the twenty-four Knights of the Order of the Holy Sepulchre in Canada, and is conspicuous for its beauty architecture. The Diocese of Valleyfield is composed chiefly of French Canadian families distributed among forty parishes. There are many Irish Catholic families in the parishes of Valleyfield, Huntington, Ormstown, Hemingford, where the services are largely given in English. The descendants of the Iroquois Indians are ministered to by a resident missionary priest at St. Regis. There are in the dio- cese: 14 convents and academies, 2 classical colleges, 12 academies. For the instruction of children in the parochial schools and other institutions is confided to lay and religious professors and to secular priests. The religious orders are: men—Frisé Viateurs; women—Sœurs de la Congrégation Notre-Dame; Sœurs de Jésus Marie; Sœurs de la Providence; Sœurs Gruge; Sœurs de Ste-Anne. The Diocese has a flourishing Séminaire and a Family. Among the secular organizations are: the St. Vincent de Paul Society; Les Arts; Société St. Jean Baptiste; Catholic Foresters; and Knights of Columbus.

J. DORANS.

Vallgornera, Thomas de, Dominican theologian and ascetical writer, renowned for his learning and piety, in Catalonia about 1395; d. 15 Sept., 1665. He was a member of the convent of Barcelona, and for some time, while Catalonia was subject to the French, was its vicar-general, about 1642. His principal work is a mystical theology first published at Barcelona in 1662 under the title "Mystica theologica D. Thomas, utriusque theologice scolastica et mysticae principis", etc. Three years later, 1665, a new and augmented edition appeared. The second edition exceeded the first by eighty-five pages. The work having become rare and difficult to obtain, a new edition was brought out by the Dominican Father Berthier at Turin, 1700. The latter edition contains the text of the original edition of 1662 in the body of the work, and the additions which appeared in the edition of 1665 in the form of added notes are given in an appendix. The doctrine of the book is the doctrine of St. Thomas, of which the author writes in his prologue, "The mystical doctrine of St. Thomas is of such great authority, precisely because it is founded on Scholastic doctrine, that it can scarcely be expressed in words. That mystical doctrine which is not repugnant to the principles of scholastic doctrine has a firm foundation, and therefore readers who study mystical theology in St. Thomas find it firm and well-established; on the contrary, those who read it in other books which treat of mystical matters alone, and without any teacher of Scholastic theology, receive devotion in somewhat severe words, absorb material for errors." Besides his "Mystical Theology" Vallgornera is the author of a book on the Rosary of the Blessed Virgin, "De Rosario B. Mariae Virginis", which appeared at Barcelona about 1662. It consists of pious meditations.

A. O'NEILL.

Valliscaulian Order ("Vallis Caullium", or "Val-des-Choux", the name of the first monastery of the order, in Burgundy) was founded towards the end of the twelfth century by Viard, a lay brother of the Cistercian priory of Loubigny, in the Diocese of Langres. Viard was an eloquent man who devoted himself by his ascetical observance. The order of the "Brethren of the Cabbage-Valley" was formally confirmed by Pope
Innocent III, on 12 February, 1205, in a rescript preserved (in connexion with one of the Scottish houses) in the Register of Moray, and entitled “Protectio Apostolica”. In the same year Odo III, Duke of Burgundy, gave the brethren a large grant of forest land round the priory, which was further endowed by the Duke's successors, by the Bishops of Langres, and other benefactors. Hence states, on the authority of Chopolin (Tractés des droits religieux et des monastères, II. tit. 1. no. 20), that there were thirty dependent houses of the order, but the names of only twenty are known. Seventeen of these were in France, the principal one being at Val-Croissant, in the Diocese of Autum; and the remaining three were in Scotland. References in the statutes of 1208 and elsewhere show that the three Scottish houses existed also in Germany. A complete list of the priors-general has been preserved, from the founder Viard (also styled Guido), who died after 1213, to Dorothee Jallontz, who was also abbot of the Cistercian house of Sept-Fons, and was the last grand-prior of Val-des-Choux before the absorption of the Vallaiscalan brotherhood into the Cistercian order. In the middle of the 15th century there were but three months of the monastery; the revenues had greatly diminished, and there had been no profession in the order for twenty-four years. Gilbert, Bishop of Langres, strongly urged the remaining members to unite with the Cistercians, whose rule they had originally, in great part, adopted. The proposal was agreed to, the change was authorized by the Bull of Clement of XIII in 1764, and Val-des-Choux was formally incorporated with Sept-Fons in March, 1764, the Parliament of Burgundy having previously ratified the arrangement. For the next quarter of a century the monastery flourished under its new conditions; but it was swept away in the Revolution of 1789, with the other religious houses of France. In the order of the houses of Ardéch, Beauty, and Pluscarden, the first two became Cistercian priories, and the third a cell of the Benedictine Abbey of Dunfermline, a century before the dissolution of the monasteries in Scotland. (See ARDECHTAN, THE PRIORY OF; PLUSCARDEN PRIORY.)

Vallo. See Capaccio and Vallo, Diocese of.

Vallumbrosan Order.—The name is derived from the mother-house, Vallumbrosa (Latin Vallis umbrosa, shady valley), situated 20 miles from Florence on the north-west slope of Monte Sechieta in the Pratomagno chain, 3140 feet above the sea.

I. THE FOUNDER.—St. John Guibert, son of the noble family of Arderigh, was born at Chambéry in 985 (or 995), and died at Passignano, 12 July, 1073, on which day his feast is kept; he was canonized in 1193. One of his relatives having been murdered, it became his duty to avenge the deceased. He met the murderer in a narrow lane and was about to slay him, but when the man threw himself upon the ground with the words: “O God, save me!” he bore him to the love of Christ. On his way home, he entered the Benedictine Church at San Miniato to pray, and the figure on the crucifix bowed its head to him in recognition of his generosity. This story forms the subject of Burne-Jones's picture “The Merryfyld Knight”, and has been adapted by Short Hoe in John Inglesfield's. John Guibert became a Benedictine at San Miniato, but left that monastery to lead a more perfect life. His attraction was for the cenobitic not eremitic life, so after staying for some time with the monks at Camaldoli, he settled at Vallombrosa, where he founded his monastery. Mabillon places the foundation a little before 1058. Here it is said he and his first companions lived for some years as hermits, but this is rejected by Martène as inconsistent with his reason for leaving Camaldoli. The chronology of the early days of Vallumbrosa has been much disputed. The dates given for the founder's conversion vary between 1004 and 1030, and a recent Vallumbrosan writer places his arrival at Vallombrosa as early as 1008. We reach sure ground with the consecration of the church by Bl. Rotho,

Bishop of Paderborn, in 1038, and the donation by Hta, Abbess of the neighbouring monastery of Sant' Elerio, of the site of the new foundation in 1039. The abbess retained the privilege of nominating the superiors, but this right was granted to the monks by Victor II, who confirmed the order in 1056. Two centuries later, in the time of Alexander IV, the nunry was united to Vallombrosa in spite of the protests of the nuns.

The holy lives of the first monks at Vallombrosa attracted considerable attention and brought many requests for new foundations, but there were few patrons, since few could endure the extraordinary austerity of the life. Thus only one other monastery, that of San Salvi at Florence, was founded during this period. But when the founder had mitigated his rule somewhat, three more monasteries were founded and three others reformed and united to the order during his lifetime. In the struggle of the popes against simony the early Vallumbrosans took a considerable part, of which the most famous incident is the ordeal by fire undertaken successfully by St. Peter Ignatius in 1068 (see Peter Ignatius, Blessed, and Della Compagnia, styled by the community the apple of the anti-reform party. These events still further increased the reputation of Vallombrosa.

II. DEVELOPMENT OF THE ORDER.—After the founder's death the order spread rapidly. A Bull of Urban II in 1099, which takes Vallumbrosa under the protection of the Holy See, enumerates fifteen monasteries besides the mother-house. Twelve more are mentioned in a Bull of Paschal II in 1115, and twenty-four others in those of Anastasius IV (1153) and Adrian IV (1156). By the time of Innocent III they numbered over sixty. All were situated in Italy, except two monasteries in Sardinia. About 1087 Bl. Andrew of Vallumbrosa of 1117 founded the monastery of Cornally in the Diocese of Orilans, and in 1163 the Abbey of Chezal-Benoit, which became later the head of a considerable Benedictine congregation.
there is no ground for the legend given by some
of the order of a great Vallumbrosan Congrega-
tion in France with an abbey near Paris, founded by St.
Omar. The Vallumbrosan Congregation was reformed
in the middle of the fifteenth century by Cassinese
Cistercians, and again by Bl. John Leonardi at the
beginning of the seventeenth century. In 1485 cer-
tain abbeys with that of San Salvii at Florence were
reunited to the mother-house by Innocent VIII.
At the beginning of the sixteenth century an attempt
was made by Abbot-General Milanese to found a
house of studies on university lines at Vallombrosa;
it in 1527 the monastery was burned by the troops
of Charles V. It was rebuilt by Abbot Nicolin in
1554, and in 1573, after another abbot had been
abducted, the order was united to the celi
line. In 1808 Napoleon's troops plundered Val-
umbrosa, and the monastery lay deserted till 1815.
It was finally suppressed by the Italian Government
1866.

A few monks remain to look after the church
and meteorological station, but the abbey buildings
have become a school of forestry founded in 1870 on
the same lines as in the eleventh century, and is
now a health resort. Vallumbrosa is also a health
sanctuary.

The list of the order may be ascribed to the hard
work of the mother-house, to commendams, and to
the perpetual wars which ravaged Italy. Practically all
the surviving monasteries were suppressed during
the course of the eighteenth and nineteenth centuries.

In 1756 the modern monastery of San Salvii, near
Florence, was founded by the Florentine Government
and has been used as a military hospital. The
present abbot-general is Franco Tarini. The
hospitals now number about 100. The shield of the
order shows the founder's arm in a tawny-coloured
shirt grasping a golden cruciform crozier on a
blue ground. The services rendered by the order are
practically of no use in the modern world, except
that they are employed for the benefit of the sick.

Abbot-General Tamburini's works on canon
law are well known. Galvii was for a time a novice
at Vallumbrosa and received part of his education
there.

III. RULE.—St. John adopted the Rule of St.
Benedict almost in its entirety and supplemented
it by the ascetic rules he had formed into a separate congregation. The
monks were to live on the lands of the prior's
patrimony, on the income of which they were to
be supported. The cells of enclosure were so strict that the monks
might not go out even on an errand of mercy. The
community was necessarily small, for the annual work, which is prescribed by St. Benedict,
was among the first to systematize this institution,
and it is probable that it was largely popularized
by the Vallumbrosans. The term general chapter (lay
fraternity) occurs for the first time in Abbot Andrew of
Rumi's Life of St. John, written at the beginning of
the twelfth century. The Vallumbrosans do not, strictly
speaking, form a separate order, but a Benedictine
congregation, though they are not united to the con-

The oldest extant MS. of the customs of Vallumbrosa shows a close relationship with those of Cluny. The Val-
umbrosans should be regarded only as Benedictines
who followed the customs observed at that time by the Black Benedictines. The practice of simony was a special bond between them and Cluny, and it was only some special circumstances which caused
them later to be looked upon as a peculiar institute
within the Benedictine order" (Albers, op. cit. infra).

The habit, originally grey, then tawny coloured, is
now that of the Black Monks. The abbots were
originally elected for life but are now elected for
the general chapter, every seven years.

The Abbot-General of Vallumbrosa, the superior of the whole order, had formerly
a seat in the Florentine Senate and bore the additional
title of Count of Monte Verde and Guakol.

IV. NUNS.—Shortly after the founder's death we
find attached to the monastery of Vallumbrosa lay
sisters who, under the charge of an aged lay brother, lived in a separate house and performed various house-
duties. This institute survived for less than a cen-
tury, but when they ceased to be attached to the monas-
terius of monks, these sisters probably continued to
lead a conventual life. Bl. Bertha (d. 1163) entered the Vallumbrosan Order at Florence and reformed the
convent of Cavriglia in 1153. St. Umtila is usually
regarded as the founder of the Vallumbrosan Nuns.
She became a nun at Faenza in 1226, with the consent of her husband, who became a monk,
entered a monastery of canoneces and afterwards
became an anchorite in a cell attached to the Vallun-
mbrosian church of Faenza, where she lived for two
years. At the request of the abbot-general she then
founded a monastery outside Faenza and became its
first mother. She was elected the second convent of
Florence, where she died in 1310. She left a number
of mystic writings. In 1521 the nuns obtained the
Abbey of S. Salvi, Florence. There are still Val-
umbrosan nunneries at Faenza and S. Gimignano,
besides two at Florence. The relics of Bl. Umtila
and her disciple Bl. Margherita are venerated at the
church of S. Stefano a Faenza, and at Faenza and a
largo.

The habit is similar to that of the Benedictine Nuns.

Raymond Webster.

Valois, Henri (Henricus Valensis), philologist,
b. at Paris, 10 Sept., 1603; d. at Paris, 7 May, 1656.

He belonged to a family of Norman gentlemen settled near Bayeux and Lisieux; his grandfather, the young-
and father, became the friends of Henri. Henri Valois made excellent studies with the Jesuits, first at
Verdun and then at the Collège de Clermont at Paris, where he had Pitan as professor of rhetoric.

He studied law at Bourges (1622-24) and returned to
Paris, where, to please his father, he practised law against his inclination for seven years. When
he regained his liberty he plunged into study, which he
had never entirely abandoned. Poiret had purchas-
ed a MS. in Cyprus containing the work of Con-
stantine Porphyrogenitus on virtue and vice. Valois took from it numerous unedited fragments which he published in 1634: "Polybii, Diodori Siculi ... Nicolai Damasceni, Dionysi Halicarn., Appiani, Alexandri, Dionis et Ioannis antiacheni excepta." In 1636 he edited "Amnian surveillance regum gestorum lib. XVIII," with abundant notes which illuminated all the history of that period and its institutions. He was so much occupied in annotating the rhythm of the phrases in the establishment of the text, at the same time making no display of his discovery. In 1650 the assembly of the French clergy commissioned him to publish the ecclesiastical historians, after Mgr Monchel of Toulouse was compelled to resign the task. In 1639 he issued Eusebius of Cesarea's "Chronicon," which is the most complete and perfect work of Constantine, as well as Constantine's discourse in the assembly. The text was accompanied by a new Latin translation, scholarly notes, four dissertations on Donatism, Anastasius, the Septuagint, and the Roman Martyrology. In 1668 he published Socrates and Sozomen with three books of observations on the history of St. Athanasius, on that of Paul, Bishop of Constantinople, and the sixth canon of Nicea (against Laumon). In 1673 he completed his book with Theodoret, Evagrius, and the excerpts from Philostorgius and Theodore the Lector. In 1664 he had married a young girl who bore him seven children. At first he had only the slender means left him by his father, but later pensions from President de Moresches, the Archbishop of Turin, and Louis XIV provided him with the necessary leisure and the assistance of a secretary, for his sight was never good, and as early as 1637 he ceased to have the use of his right eye. Yet he did important work, and though the MSS, at his disposal were not always the best, we cannot but admire the tact and certainty of his criticism and the excellence of his work. For no other writer has produced a body of excellent documents of the French learning of the seventeenth century. Valois was associated with the greatest scholars of his time, with whom however he always maintained his liberty of judgment. He wrote the funeral orations of Simond, Pierre Depuy, and Pétau. He also wrote several occasional Latin poems, but to posterity he is remembered and exacted of for his translations and revised translations of ecclesiastical historians.

DE VALOS, De vita Henrici Valos in the 2nd. ed. of Eckhartz (Paris, 1627), also in the Cambridge edition (1720); Schwartz, Eusebii Werke, Die Kirchengeschicht. (Leipzig, 1861); Paul Lejay.

Valona, titular see, suffragan of Dyrrachium, in Epirus Nova. The ancient name was Aulon, mentioned for the first time by Ptolemy (Geograph. III, xii, 2). Other geographical documents, such as Peutinger's "Tabula" and the "Syeneedamus" of Hierocles, also mention it. Among the known bishops are Nazarius, in 458, and Soter, in 553 (Farlati, "Hieron. sacrarium," VII, 397-401). The diocese at that time belonged to the Patriarchate of Rome. In 733 it was annexed to all ecclesiastical Byzantium, to the Patriarchate of Constantinople, a title which it has always preserved in any "Notitia episcopatum" of that Church. The bishops of this see had been suppressed for, though the Bulgarians had been in possession of this country for some time, Aulon is not mentioned in the "Notitia episcopatum" of the Patriarchate of Achaia. During the Latin domination by the Franks it was placed under the chief of the Catholicus medi, ni, i, 121) mentions several of its bishops, Valona, or Vlora, in Albania, is now a caza of the sandjak of Berat in the vilayet of Janina. The city, which has a port on the Adriatic, has about 10,000 inhabitants; there is a Catholic parish, which belongs to the Archdiocese of Durazzo. Several of the Latin bishops mentioned by Ptolemy (Geograph. III, 855-8), and whom Eulal (op. cit. I, 541) mentions under the see of Valea in Syria, belong either to Aulon in Greece (now Salona) or to Aulon in Albania (Valona).

S. Vailhé.

Valroger, Hyacinthe de, French Oratorian, b. at Caen, 6 Jan., 1811; d. 10 Oct., 1876. He first studied medicine, and was later ordained priest (1837), and made director of the lesser seminary of Bayeux. In 1817 he became titular canon of the cathedral of Bayeux. In 1852 he joined Père Gratry in the work of restoring the French Oratory, where he became professor of theology, master of novices, and assistant general. He was a man of great learning, but being equally modest, seemed to publish his works lest they should not be overpowered by sufficiently exact. Besides many articles in Catholic reviews he published: "Études critiques sur le rationalisme contemporain" (Paris, 1846); "Essai sur la crédibilité de l'histoire évangélique en réponse au Dr. Strauss" (Paris, 1847); "Du christianisme et du paganisme dans l'enseignement" (Paris, 1852); "Introduction historique et critique aux livres du Nouveau Testament" (Paris, 1861); "L'âge du monde et de l'homme d'après la Bible et l'Église" (Paris, 1869); "La genèse des espèces, études philosophiques et religieuses" (Paris, 1873); "Pensees philosophiques et religieuses du Comte de Maistre" (Paris, 1879). His works in French are as follows: "Lettres inédites de gesuaco, 1679-87" (Paris, 1886); "Essais de correspondance (25 July, 1879); Ingold, Essais de bibliographie orientalienne, 177-89 A. M. P. Ingold.

Valva and Sulmona, Dioceses of (Valven, et Sulmones), Italy, united aequae principatibus. Valva, a medieval castle belonging to the Bishop of Sulmona, Baron of Valva, is situated near the ancient Corinnum, chief town of the Peligni, a Samnite tribe. In the Social War it was the capital of the Itali, who subdued it at that time, and became one of the ancient city there remains the Church of St. Pelino, which recalls the race of the Peligni rather than a saint. The ruins contained a great number of inscriptions. Corinnum, like Valva, had apparently its own bishop; St. Pelino was the cathedral. In the vicinity of Valva is the sanctuary of S. Michele, near which is a large natural grotto. Sulmona, formerly Sulmo, is situated in a fertile plain, watered by the Sirino, a tributary of the Pescara, at the base of the Maiella and Monte Morrone. The inhabitants are engaged in agriculture, the manufacture of liquors, confetti, and musical strings, and tanning. Among the churches are S. Maria della Tomba, the Annunziata, S. Francesco. Near the city is the monastery of the Spirito Santo, erected by Guillaume de la Guerre, and noted for its architecture. The town hall dates from the fifteenth century. Sulmona was a Pelignian city, and is first mentioned in the wars of Hannibal, during which it remained faithful to the Romans. In the Social War it was destroyed by Sulla. Ovid, who celebrates the salubrity of its climate, was born there. There are ruins of temples and ancient buildings in the vicinity. In the later ages the city was subject to the Duchy of Spoleto; later it belonged to the counts of the Marsi. When the Normans conquered the Abruzzi, Sulmona increased in importance. Frederick II made it the capital of the "Gran Giustiziaro" of the Abruzzi. In 1451 Alfonso of Aragon defeated there Count Ruggicione, an ally of René of Anjou, who had the Duchy of Spoleto, and by his death the count was left defeated and slain by Ferdinand I. Legend associates the evangelization of the district with the name of St. Britius, Bishop of Spoleto, in the second century. The first known Bishop of Sulmona is Palladius (499); in 503 a Fortunatus Valvensis is mentioned. St. Paumillus, Bishop of Valva, remains for his sanctity and miracles, but rather, as he was buried in the cathedral of Sulmona, the see had possibly been united then. Four or five other
Valverde, Vincent de, b. at Oropesa, Spain, towards the close of the fifteenth century; d. at the island of Puná, near Guaquial, 31 Oct., 1541. He was the son of a knight who gave birth to the city of Alcalá, and was related to many noble families, in particular, to that of Pizarro, the conqueror of Peru, and that of Cortés, the conqueror of Mexico. Valverde became a professor of the Dominicans at the convent of San Esteban, Salamanca, April, 1524. In 1529 he accompanied Pizarro as a missionary, on his expedition to the conquest of the kingdom of Peru. He began already to have been charged with the office of Protector of the Natives. This forced him to cross the rude frontier constantly, as the adventurers who made up the Spanish armies had no thought of justice or mercy to the Indians. He strove to settle the feud between Almagro and Pizarro and after the assassination of the latter returned to Spain. He was forced to flee from Peru. Making his way to Panama, he halted for a brief stay at the island of San Juan, where he was put to death by the Indians. The name of Bishop Valverde depends on his conduct at Juxacara. If the tradition be true that the Spanish monk addressed Atahualpa with haughtiness and disdain, and when his words were not heeded killed his own countrymen to attack the unoffending Inca, then Valverde merits great censure. The great religious historians, however, such as Alera, Melendez, Remesal, deny the charge as false. Serves, an eye-witness, in his account (Seville, 1534) states that when the Inca refused to yield, Valverde turned and informed Pizarro, who then ordered his men to advance; he makes no mention of anything worthy in the friar's conduct, nor does Pedro Pizarro, one of the earliest writers (his "Relación" being dated 1571). Particularly bitter to Valverde are Onoro Enrique and Oviedo, who gives the account of Almagro, a soldier of the expedition, but both these were partisans of Almagro. Later writers differ in their views. The case is not proven either way. In consideration of the extraordinary completeness of the details of Valverde's actions, one must conclude that they are not authentic but the result of political or personal bias.

Joseph V. Molloy.

Van Beethoven, Ludwig, b. at Bonn, probably on 16 Dec., 1770; d. at Vienna, 26 March, 1827. The date of his birth has never been positively ascertained but is inferred from the fact that the baptismal records of his parish church of the Holy Ghost were destroyed in 1787. His father was a man of moderately high position, and was able to foster the study of music, and to procure for his son the instruction of the organist and music-master of the court of Mexico. Before the age of five years his father began to instruct him in violin playing, and at eight the musical director, Pfeifer, undertook to teach him the piano. While the court organist Van den Eden, and his successor, Christian Gottlob Neefe, instructed him in organ playing, harmony, and composition. As a pianist he made such rapid progress that in a few years he was able to interpret Bach's "Well-tempered Clavier" and improvise in a masterly fashion. At thirteen years of age he was able to play through the complete works of Scarlatti and a few sonatas. These and other productions of his early youth he later repudiated and destroyed. When he was fifteen, Elector Maximilian, whose assistant court organist he had in the meantime become, enabled young Beethoven to visit Vienna. A short sojourn in the imperial city served the good purpose of causing him to realize the incompleteness of his musical education; as well as his general lack of education. In 1792, in 1792, Beethoven's father removed to Vienna with his son. There, while the latter attended the courses of Charles Anna Sulmona, he was studied under the direction of the leading composers, and the private study of J. J. Fux's treatise of theory and counterpoint, "Gradus ad Parnassum," he acquired the solidity and freedom of style which soon commanded the admiration of the musical world. Assiduous study of the works of Handel, Haydn, and Mozart completed what Bach had begun for him in the creative domain. The protection of his patron, the Elector Maximilian, brother of Joseph II, and his striking gifts as player and improvisor served to secure him, in a comparatively short time, a prominent position in the social and artistic world of Vienna. Archduke Rudolph, afterwards a cardinal, became his pupil and lifelong friend, while numerous music-loving nobles patronized him. As a composer he attracted more and more attention, not only in Austria and Germany but throughout the world. Beethoven's position in life at this time was probably more congenial and agreeable than was that of any contemporary or preceding master. He was enabled to live in comparative ease without the necessity of accepting a fixed engagement or of regularly giving instruction; he was much sought after as an instructor, but he entertained an intense aversion to teaching. His productions of this period, while bearing more and more the stamp of his individuality, yet reflect the influence and manner of his contemporaries, Mozart and Haydn. It was probably more on account of the success of the oratorios of the former than because he realized the sublimity of the subject that Beethoven undertook the composition of a work in
this form, his "Christ on the Mount of Olives". It is well known that in after years he regretted having published it. Especially was he dissatisfied with his treatment of the part of Christ. He had not yet risen to the height of his capacity, or superior to the conventional standard of his superficial surroundings.

When Beethoven was about thirty years old, he contracted a cold which at first impaired his hearing and at length, through neglectful treatment and his careless and irregular manner of living, resulted in almost total deafness. This affliction was destined to have a momentous effect on his life and to determine in a large measure the character of his productions. To be shut off to a great extent from social intercourse, for a considerable period of time, put his mental nature, where he always had a craving, and to be unable to hear even his own creations, was his painful lot till the end of his days. The isolation and suffering brought about by his infirmity, the deception on the part of people whom he had trusted, and the misconduct of the nephew whom he had adopted, involving him in all kinds of money troubles, caused him to experience years of depression which almost bordered on despair. Extreme sensitiveness, irritability, and a suspicion of almost everybody was obliged to have dealings with, added to his increasing misfortunes. General ill health gradually developed into dropsey. In the last stages of his sickness he was operated on four times without obtaining relief; but he continued to write many fine works which he was composing. Even on his death-bed he sketched a new symphony. He died during a terrific bad storm after having devoutly received the last sacraments.

Beethoven has left us some 135 works, among them chamber music in every form, 9 symphonies, 1 oratorio, 1 opera, and 23 violin sonatas. Compared with the greatest musical compositions the human mind has produced. In Beethoven, instrumental music, the vehicle of subjectivism par excellence, finds its culmination after a gradual development extending over almost three centuries. In his hands it becomes the most powerful voice of the preceding Zeitgeist. Living in an age and a country in conflict with Christianity, he was acquainted with the greatest musical compositions the human mind has produced. In Beethoven, instrumental music, the vehicle of subjectivism par excellence, finds its culmination after a gradual development extending over almost three centuries. In his hands it becomes the most powerful voice of the prevailing Zeitgeist. Living in an age and a country in conflict with Christianity, he was acquainted with the greatest musical compositions the human mind has produced.

The other direction in which van Beneden's activities found a vent was connected with the vertebrate division of the animal kingdom. During the excavations rendered necessary by the fortifying of Antwerp a number of bones of fossil whales were exposed to view. These attracted van Beneden's attention, and as the writer describes a detailed study of the group, whose characteristics were at that time very imperfectly known. On the subject of the cetacea, living and extinct, he published a number of papers and several large works. The most important of his is "Osteographie des cetacees vivants et fossiles," which was written in collaboration with Paul Gervais and published in 1842-1845. From this work it appears that the extinct species found near Antwerp were published in the "Annales du musee royal d'histoire naturelle de Bruxelles", and with them was incorporated a description of the fossil seals which were discovered in the same neighbourhood. Van Beneden attended the celebration of the tercentenary of Edinburgh University, and the society now called the Royal Academy LL.D. He was foreign member of the Royal Society and also of the Linnean, Geological, and Zoological Societies of London. He was President of the Royal Belgian Academy in 1851, and was created Grand Officer of the Order of Leopold on the occasion of his professional jubilee. He was always a devoted and convinced adherent of the Catholic Church, and in his obituary for the Royal Society particularly states, always exhibiting "the widest toleration for the views of others".

Joseph Otten.

Van Beneden, Pierre-Joseph, b. at Mechlin, Belgium, 19 Dec., 1804; d. at Louvain, 8 Jan., 1894. Educated for the medical profession, he was appointed curator of the natural history museum at the University of Louvain in 1831. Five years later he became professor of zoology and comparative anatomy in the Catholic University at Louvain. This chair he held until the time of his death. He was thus able to celebrate the jubilee of his appointment to his chair and the occasion was duly honoured both in his native and his university cities. Throughout his life he was a most diligent worker, and the list of his contributions to scientific periodicals amounts to over two hundred papers. In the earlier part of his career he directed his attention especially to invertebrates and particularly to marine invertebrates, which he studied at Ostend. In 1843 he established at his own expense a marine laboratory and an aquarium for the further prosecution of these studies, and this institution is believed to have been one of the earliest if not actually the first example of a place of study of the kind in any part of the world. Associated with this part of his work were his classical studies published in the 'Quart. Journal of Science' on the development, transformations, and life-histories of which he very fully investigated; indeed, as early as 1858 a memoir of his on this subject was successful in gaining the "Grand prix des sciences physiques" of the Institute of France. It was issued in the "International Scientific Series" (1873), under the title, "Les commensaux et les parasites des spermophiles," and was translated into English and German.

gon, to the mainland of British Columbia. These missionaries founded a mission in Okanagan in 1859. About this time, immediately after the discovery of gold in the Cariboo district, the city of New Westminster was founded on the estuary of the Fraser, and here the Oblates organized a central mission in 1860, conducted by St. Mary's Mission, hospitals in 1863, from which they evangelized the lower Fraser Indians and the Secullamins of the coast.

Father L. J. D'Herbez, O. M. I., was consecrated Bishop of Metolopolis, 9 October, 1864, and appointed to the Vicariate Apostolic of British Colum-

267 VANCOUVER

VANCOUVER, ARCHIDIOCESE OF (VANCeTOVRENSIS), includes that part of the mainland of the Province of British Columbia south of 54° N. lat. and west the Straits of Georgia, together with the Queen charlotte Islands. It comprises about 150,000 square miles. The first resident of what is now British Columbia was a Catholic and so were the great explorers, Father Robert Halkett, Bishop of the New York Academy of Medicine, and corresponding member of the Société de Chirurgie of Paris, an honour that had been conferred on only one American before him.

KEYES, New York Academy of Medicine Memorial Address in F. Med., Journal, XXXVII (1883); Smith, Surgery of New York, Mid-nineteenth century in N. Y. Med., Record (July 2, 1890).

JAMES J. WALSH.
Superior General of the Oblate Congregation and resigned the archbishopric, 21 Sept., 1908, being appointed later titular Archbishop of Ptolemais, and since then resident at Rome. Rt. Rev. Neil McNeil, Bishop of St. George's, Newfoundland, was transferred to the See of Vancouver and raised to the archiepiscopal dignity, January, 1908, in succession to Bishop McNeil. The Vicar-Apostolic of Victoria and 3 cathedral sees with 6 parochial churches and five mission churches have been erected, and the Religious of the Sacred Heart placed in charge of the higher education of girls in Vancouver. Archbishop McNeil was born in Hillsborough, Nova Scotia, 25 Nov., 1851. He is a son of the late Malcolm McNeil and Ellen Meagher, educated at St. Francis Xavier College, Antigonish; and in 1873 sent to the College of Propaganda, Rome. He was ordained priest in 1879, joined the teaching staff of St. Francis Xavier College in 1880, became rector of the college in 1884, and Bishop of Nipalosis and Vicar-Apostolic of St. George's, Newfoundland, in 1891. He was consecrated at Antigonish, 20 October, 1895.

Statistics.—The diocesan property is by Act of the Provincial Legislature, owned by a corporation: sole: Title, "The R. C. Archbishop of Vancouver". There are in the diocese: 15 secular, and 34 religious priests; 26 churches with resident priests; 50 missions with churches; 60 chapels where Mass is said; 1 college, 40 students; 8 industrial and parochial schools, with 500 pupils; 2 girls' schools, with 800 pupils; 1570 young people under Catholic care; 5 hospitals; 1 orphanage; 1 House of Refuge; and about 35,000 Catholics.

Money, History of the Catholic Church in Western Canada (2 vols., Toronto, 1910); Cooke, Sketches of the life of Mr. de Mazend (2 vols., London, 1870); Annales des Oblats; Catholic Directory (New York, 1912); Catholic Year Book for B. C. (1911).

WM. P. O'BROYLE.

Vandals, Albert, French writer, b. at Paris, 7 July, 1853; d. there, 30 Aug., 1910. His father was director general of the postal service under the Second Empire. At first Albert Vandal entered the Council of State as auditor. Of moderate temperament and liberal opinions, the Government found that his family traditions prevented him from being devoted with sufficient warmth to Republican institutions and obliged him to resign. At this period Albert Sorel was professor of diplomatic history at the Ecole des Sciences Politiques. Vandal was his disciple and later his friend, prior to replacing him in his chair. His first book is entitled "En Karrode à travers la Suède et la Norvège" (1876). It was followed by an important historical work, "Louis XV et l'Église de Russie" (1882). Vandal subsequently published "Papa Honneval" (1885), "Le chevalier de l'Empire de la paix", and "Les grands et les seconds de la France" (1887). But the work which permanently established his reputation was "Napoléon et Alexandre I". This splendid book twice won the Grand prix and opened to Vandal the door of the French Academy, which he entered without competition (1897). He afterwards published "Les voyage du marquis de Naoutin" (1901), and "Les Contes de l'empereur de Chine, l'Empereur de la Chine, and the "L'aventure de la robe". He was a collector and friend of Brumière, and one of those Catholics who, after the passage of the law separating Church and State, wrote to the pope asking him to accept the associations culturelles. GEORGES BERTRIN.
of the severest weather. He made arduous and dangerous journeys of two hundred miles, to minister to his Menominee and Winnebago Indians.

He had no income outside of his own resources; he built his first church himself, with the aid of his Indians. He was both priest and physician to the Indians at Buttes des Morts, Fort Winnebago, Fond du Lac, Prairie du Chien, Lake Poygan, Cahument, and even the Indian village on the Milwaukee River. He civilized the Indians, worked with them, showed them the use of tools, how to cultivate the land, and with their help he built a church seventy feet long, which he dedicated to St. John Nepomucene. Between 1836 and 1844 he converted and baptized over eight hundred Indians. In 1847, having obtained a priest to temporarily replace him, he sailed for Holland, arriving at Amsterdam, 15 August, 1847.

Roger Van der Weyden, Royal Gallery, Berlin

*Van der Weyden*
was De la Pasture, which was transformed in Flemish style by Van de Weyden. His family, settled in Tour- nai since 1250, was a rich one of Flemish burghers, and it is supposed to have commenced his artistic life as a goldsmith, and his figures show that he understood some kind of sculpture. He was apprenticed to Robert Campin in 1427, became a master painter, was admitted into the Guild of St. Luke in 1432, and three years later was painter in ordinary to the municipality of Brussels. He only had a workshop, however, for a long time when the office of town painter was abolished. He was said to have been a pupil of van Eyck, e.g. by Vasari and other writers, but the researches of Weale in Flemish documents proved this incorrect, and showed that Campin was Rogier's master. His work is far more religious than that of van Eyck, and the figures move in a more dramatically animated, and at times almost tragic. He was full of employment and obtained high prices. He lived at Brussels, and had four children, Cornelius, who became a Carthusian, Peter, who was a painter, John, who was a goldsmith, and one daughter, Margaret. He was a generous benefactor, especially to the Carthusian house of his importance, and now in Berlin, was painted for the Cartuja of Miraflores in Spain, another, now in the Escorial, for the Carthusian house at Scheut, a third, at Antwerp, for the Bishop of Tournai, who desired to give it to a Carthusian house, and a fourth for the Carthusian monastery of St. Hermines, where Cornelius resided. The "Juesta de Nuestra Senora de los Dolores" now in Mons, the "Seven Sacraments", at Antwerp, the "Adoration of the Magi", at Berlin, and the marvellous triptych in the Prado, are his greatest works. There are also paintings by him at Frankfort and Munich, and others attributed to him elsewhere.

GEORGE CHARLES WILLIAMSON.

Van de Velde, Peter (Pedro Campaña), painter, b. at Brussels, 1503; d. in that city in 1558. This artist should really be grouped under the head of the Spanish School, and is more generally known by his Spanish name. His actual birth-name was Pedro de Letoupenier, translated into French as Champagne. His family, settled in Seville in 1540, where he carefully studied the paintings of Raphael, and declared himself as his pupil. In 1530 he was at work at some scene-painting, representing a triumphal arch to be erected on the occasion of the coronation of Charles V, and he then left for Spain, on the advice, it is said, of Cardinal Grimani, and passed the rest of his life in that country, eventually returning to Brussels about 1563 or 1565. Between 1537 and 1562 he was associated with Luis de Vargas and the Italian sculptor Torregiano in establishing a school of painting in Seville, which eventually became the academy of the place; amongst the pupils educated in it was the celebrated Morales. He painted for the monastery of Santa Maria de Grazial of the Church of the city, an altar-piece representing the "Descent from the Cross", which is now in the cathedral, having been removed there when the church fell into ruins. This is dated 1548, and is regarded as his masterpiece. There are other works by the same painter in Seville cathedral, especially two representing the "Purification of the Virgin" and the "Resurrection", and the various churches of the city, S. Isidoro, S. Pedro, S. Catalina, and S. Juan, all possess paintings by this artist. One of his last works was the restoration and repainting of a chapel belonging to Hernando de Jaen, an important resident in Seville. Murillo requested that he should be buried near Campaña's picture; and his burial took place in the Church of Santa Cruz, close underneath the "Descent from the Cross", but the whole building was burned to the ground during the French war, and the tomb petitioned.

GEORGE CHARLES WILLIAMSON.

Van de Ven, Cornelius. See Natchitoches, Diocese of.

Van De Vyver, Augustine, sixth Bishop of Richmond, Virginia; b. at Hassleoneck, East Flanders, Belgium, 1 Dec., 1844; d. at Richmond, 16 Oct., 1911. His parents were John Ferdinand Van De Vyver and Sophia (De Schepper). He was educated in the city of St. Nicholas, Brussels, Van De Vyver moved and at the American College, Lou- vaym (1867-70), Ordained priest, 24 July, 1870, he served successively as assistant at St. Peter's Cathedral, Richmond, pastor of Harper's Ferry (1873-81), pastor of the cathedral, and vicar-general of the Diocese of Richmond (1881-89), assigned with the Rev. Dennis J. O'Connell, D.D., who was desired to become his successor in the See of Richmond. Father Van De Vyver's appointment by Rome to succeed Bishop Keane as Bishop of Richmond, 16 July, 1889, was furthered by a petition of the priests of the diocese. He was consecrated, 1 Oct., 1889, as assistant to Bishop van De Vyver, and on 20 Oct., he was consecrated the bishop of his second predeccessor, His Eminence James Cardinal Gibbons and Bishop J. J. Keane (afterwards archbishop), then rector of the Catholic University, Washington. During Bishop Van De Vyver's administration Mr. and Mrs. Thomas Fortune Ryan of New York donated the Sacred Heart Cathedral, the former the building, the latter the furnishing, and the creation of nearly a half million dollars. His Eminence Cardinal (then Apostolic Delegate and Archbishop) Dionede Falconio, laid the corner stone of the new cathedral, 4 June, 1903, and consecrated the same, 29 November, 1906. In a quasi-synod held by the bishop, 12 November, 1907, new laws were enacted to meet the needs of the diocese. Guided by a model city, Bishop Van De Vyver made several ineffectual attempts to resign his see. The first, in 1903, and the second, in 1905, were frustrated by the Church authorities, priests and people being ignorant of his intention. The bishop's third and almost successful attempt to resign (1908) came to the knowledge of the people, who held a great mass meeting, expressing their love and support, aided by the public Press. The efforts of clergy and laity caused the final withdrawal of his resignation.

In 1910 Bishop Van De Vyver acted as spiritual director of a pilgrimage to Rome. He had already made two "ad limina" visits to the Eternal City, one shortly after consecration, the other in 1903. Among the later works which he inaugurated may be mentioned the erection of the Metcalf Catholic Union and the Knights of Columbus home. At his sug-
VAN DYCK, ANTHONY. See Dyck, Anton van.

Vane, Thomas, the place and time of his birth and death are not known; but he was educated at Christ's College, Cambridge, and took the degree of Doctor of Divinity in that university. Having taken Anglican orders, he was made chaplain extraordinary to King Charles I and rector of Crayford. On becoming a Catholic, he resigned these preferments, and went to Paris, where he practised as a physician, taking the degree of M.D. There, or at some other foreign university. At Paris he wrote an account of his conversion, the preface of which bears date 4 August, 1642, which was published in 1643 under the title, A Lost Sheep returned Home; or, The Motives of the Conversion of Thomas Vane. This book ran through several editions and was answered by the English writer Edward Chiswell (1635). He also wrote "An answer to a libell written by D. Cosens against the great General Council of Lateran under pope Innocent III" (Paris, 1646), and "Wisdom and Innocence or Prudence and Simplicity in the Examples of the Serpent and the Dove." (See Richmond, Diocese of; VIRGINIA.)

VANES, DIACROE OF (VENETENIS), comprises the eparchies of Morbihan, and was re-established by the Concordat of 1802; it was formed: (1) from the former eparchies of Vannes, including the parishes in the parish diocese of Morbihan, situated on the Oust, which were transferred in 1786 to the Archdiocese of Rennes; (2) from the District of Roche-Bernard, detached from the Diocese of Vannes; (3) from the southern part of the former eparchies of St. Malo; (4) from the District of Gourin, detached from the Diocese of Quimper. It was a separate eparchie till 1850 and, since that time, forms a part of the Diocese of Quimper. The Department of Morbihan is one of the most beautiful departments of France where the greatest number of monuments of the old Gallic church are preserved; the ancient avenues of menhirs at Carnac are famous.

According to tradition, St. Clair, first Bishop of Rennes, died in the third century during the course of events occurring in the Diocese of Vannes. The synod of the Angers, on 4 October, 453, recognizes the names of four Breton prelates, one of whom is certainly Bishop of Vannes. St. Paterius, whose reign is much discussed by hagiographers, and who became bishop between 451 and 490, is the chief patron of the diocese. No document previous to the Charter of Quimper, which dates from the twelfth century, gives us bishops of Vannes, the saints Dominus, Clemens, Ananus, Saturninus, Gutinnus (Guenn), Vignoreus, Budocus, Hingithenus, Meriodocus, Meldrocus, Conclusus, and Justocus, who probably, without episcopal character, were engaged in evangelizing the country. Bishop Susannes was expelled from his see by the Breton king Nominoe (SIS) because the latter wished to reorganize ecclesiastical Brittany. Among the subsequent bishops are mentioned: Pierre de Poix (1475-90), cardinal in 1476; Cardinal Laurent Pucci (1511-31); Card-

THE CATHEDRAL, VANNES

The Cathedral, Vannes, the Basilica of St. Peter, is the chief and most important ecclesiastical building of Brittany. It was founded by St. Corentin, Bishop of Quimper, and dedicato to the Virgin Mary, in 531, and then enlarged and rebuilt in 931 by St. Dalmau. It is a large and magnificent edifice, in the Gothic style, with a high central tower. The church contains many fine monuments and tombs, among which are those of the bishops of Vannes, and a chapel in the tower is dedicated to the Virgin Mary, in which the bones of St. Corentin are preserved. The cathedral is a place of pilgrimage and devotion, and is visited by many thousands of pilgrims and worshippers each year. It is the seat of the Bishop of Vannes, who is the spiritual and temporal ruler of the diocese. The cathedral church is surrounded by a large and beautiful park, with many fine trees and gardens, and is a delightful place of residence and residence, even in the midst of the city. It is a place of great beauty and charm, and is a fitting setting for the grandeur of the cathedral and the glory of the Virgin Mary, to whom it is dedicated.
Charles of Blois was killed, put an end to the struggle between the two families of Blois and of Montfort. An army of omögues, commanded by Puisaye, Sombreuil, and d'Hervilly, landed, June, 1793, on the Peninsula of Quiberon, was there joined by 10,000 Chouans, and was attacked by Hoche, who completely annihilated it, 16 July, 1793. Here's Bishop of Dol, was shot at Vannes by the Republican troops, on 3 July, 1793; 900 omögues, who had landed at Quiberon, were shot at Blech, near Auray; their bones are kept at the Carthusian monastery of Auray, the ancient collegiate church founded in the fourteenth century by Jean de Montfort.

Councils were held at Vannes in 461 or 465, 818, 842. The Viscount of Rohan, in the diocese, was erected in 1603, by Henri IV, into a duchy-peerge for Henri de Rohan (1574-1658), who became one of the leaders of the Protestant party under Louis XIII. A certain number of saints are connected with the history of the diocese: St. Eugenier or Guyomard (Guigencus), martyr at Ploërmel in 990, St. Albumus (Aubin), Bishop of Angers from 520 to 546, native of the Diocese of Vannes; St. Solomon, Duke or King of the Bretons, martyr (ninth century); St. Gozlan (Gulstams), lay brother of the monastery of St. Gildas, d. about 1000; St. Vincent Ferrer (1357-1419), who died at Vannes, where he is buried, is patron of the episcopal city; Blessed Françoise d'Amboise, Duchess of Brittany, who, having become a nun in the Carmelites, in which Louis XI suggested to her, founded the Carmelites of Vannes, and died in 1485. The chief pilgrimages of the diocese are: Notre-Dame de Larmor; Notre-Dame de Quellen, at Guern; Notre-Dame du Roncer, at Josselin; Notre-Dame du Veen, at Hennebont; and above all the pilgrimage of Saint Anne d'Auray. From the earliest centuries Brittany had erected a chapel to appear the site was destroyed at the close of the eighth century, but popular tradition forbade the sawing of the field of Boceno, where the chapel had been erected. In 1623 and 1624, after visions, the farmer Yves Nicolazic obtained from the bishop permission for a new chapel. The image of St. Anne, which was venerated there, was burned in 1789; but a new statue of Saint Anne was solemnly consecrated by order of Pius IX, 30 September, 1868.

Before the application of the Law of 1901 to the congregations, there were in the Diocese of Vannes, Capuchins, Jesuits, missionary priests of the Society of Mary, Benedictines, Picpusians, Fathers of the Holy Spirit and of the Sacred Heart of Mary, and lay Brothers of St. Francis Regis. The power of the Brothers of Christian Instruction had its mother-house at Ploermel, in the diocese (see Christian Instruction, Brothers of the). Many communities of women were originally of the diocese: the Sisters of Charity of St. Louis, hospitalers and teachers, founded in 1805 by Mme de Malesherbes, widow of the defender of Louis XVI, and her daughter, St. Louise de la Merci, at Vannes; the Daughters of Jesus, with the mother-house at Kermaria. At the end of the nineteenth century, the religious congregations conducted in the Diocese of Vannes: 2 infant asylums; 44 day nurseries; 1 school for deaf mutes; 3 orphan asylums for boys; 8 orphan asylums for girls; 4 industrial rooms; 1 home for unprotected young girls in hospitals or refuges; many hospitals of religious for the care of the sick at their homes; 1 insane asylum. The Diocese of Vannes had in 1905 (at the end of the administration of the Concordat): 583,465 inhabitants; 38 livings; 283 parochial chapels; 279 vicarates, recompensed by the State.

GEORGES GAYAU.

Vanni, Andrea, painter and statesman, b. at Siena, 1320; d. 1414. He entered politics after the democratic overthrow of the government of the city. A letter written to him by St. Catherine, his countrywoman and friend, concerning the administration of the country, is still preserved. He was elected to the Council and conducted sent as Sienese ambassador to the pope at Avignon and Naples. As an artist he was a weak imitator of Simone Martini and of Lorenzetti. With his brother Lippo Vanni, Bartolo di Fredi, and Taddeo di Bartolo, he introduced early Sicene art into the fifteenth century. His chief authenticated work is a large polyptych in the Church of Santo Stefano at Siena. This painting depicts the Virgin enthroned between Sts. Stephen, James the Less, John the Baptist, and Bartholomew; in the niches above are the figures of the Evangelists, while several saints and an Annunciation are painted in five higher projecting compartments. The small heads and the gestures betray a certain stiffness. A very agreeable and carefully painted picture is a "Madonna and Child" in the church of San Michele. A "Birth of the Virgin," representing James, Catherine, Bartholomew, and Elizabeth, in the gallery at Siena, is the joint work of Vanni and Bartolo di Fredi, who often worked together both in art and politics. A "Crucifixion" with two saints by Vanni is in the Academy at Siena, an "Annunciation" in two panels in the Palazzo Saraceni, and a "S. Sebastian" at the museum. Vanni celebrated St. Catherine in the frescoes of San Domenico at Siena. He also painted at Naples.

PERKINS in the Burlington Magazine, VI (1908), no. 2; MILANESI in Academia della Belle Arti, Lettere Sienesi, I (Siena, 1752); CHOWE AND CAVALLASSELL, New History of Painting in Italy, II (London, 1864—); RICHTER, Siena (Leipzig, 1901).

G. GEITMANN.

Vanni, Francesco, painter, b. at Siena, 1565; d. there, 1609. Vanni was one of the better class of artists of the Ecclectic School of painting of his era. He shared, indeed, in the weaknesses of this school, yet many regard him as the restorer of Italian painting in the second half of the sixteenth century. The artistic value of his work does not always equal his fertility in production. However, by temper and example he exerted a lasting influence, and trained capable pupils, among whom were his sons Michelangelo and Raffaello Vanni. His first teachers were Salimbene and Pasquorotti, and at an early age he studied the works of Raphael at Rome under the direction of de Vecchi. But at Siena the style thus created did not prove popular, and he devoted himself to Parma and Bologna and adopted the style of Barocci, the Umbrian leader in the Baroque style of painting. After this, on the recommendation of Baroni, he was called to Rome by Pope
Clement VIII and commissioned to paint the great altar picture for St. Peter’s, “Simon Magnus rebuked by St. Peter”. It is his best work; a remarkable fact is the good preservation of the colours in this very carefully painted picture. The pope rewarded him richly and made him a knight. He was less successful at Rome in the execution of some other pictures, as “The Assumption of the Virgin”, two pictures of Clement VIII, etc. The Cecchi number of Vanni’s frescoes and panel paintings are to be found at Siena, among these are: “The Sienese on the Crusade”, “The Council of Siena”, “The Demonic”, “Calvary”, “St. Gaetano in the Wilderness”, “St. Francis Xavier”, “Baptism of Constantine”, “Martyrdoms of St. Lucia and Catherine”, etc. His works are also to be found in Pisa, Genoa, Venice, Florence, and various cities outside of Italy. Highly esteemed among his engravings are a “Madonna and Child”, “St. Francis in Ecstasy”, and a “St. Catherine Receiving the Stigmata”. Vanni had also a reputation as architect and mechanic, but of his architectural work nothing important remains.

Vargas, Luis de. painter, b. at Seville, in 1502; d. here in 1568. He has two claims upon our attention; he was not only a great painter, but was also a man of strong devotional temperament, and known as a holy man. His great desire was to use his talent for the great end of salvation, and in fulfilling this admirable wish, he made use of his great altar-pieces to go to confession and receive the Holy Communion. He is also stated to have been one of his contemporaries that he kept a cell in his room to remind him of the approach of death, and that one of his pictures, “Christ Bearing the Cross”, a fresco, painted in a street in Seville (known as the Street of Bitterness, “la Calle de la Amargura”), was so notable in the city that condemned criminals were brought there on the way to the scene of execution in order to make their devotions before it and to receive the last offices of the Church. Vargas lived a simple and almost hermit-like life; he was quiet, mild, benevolent, disliked by many of the people of his own rank, but worshipped by the poor, to whom he was extremely generous.

He was trained in Seville, and the works of Campana greatly influenced him. He first painted on the rough canvas curtains used to cover up the pictures on the altars in Holy Week, but owing to the generosity of a friend he was able to visit Italy. There, during his stay of twenty-eight years, mainly spent in Rome, he closely studied the works of Perino del Vaga and Francia, and came into contact with Vasari. The first picture he painted after his return is still in Seville Cathedral; it is dated 1555, and in the records of the chapter it is said to have been discovered by Bermudez. Of his secu work very little remains. His two greatest pictures represent the “Purification of the Virgin” and the “Omen of Our Lord,” the latter being an allegorical composition showing Adam and Eve adoring the Infant Christ, Who is in the arms of the Virgin. This is the picture generally known as “La Gamba” because of the wonderful foreshortening of the leg of Adam. The Italian artist Perez de Alesio, when painting (1548) the giant figure of St. Christopher on the southern portal of the cathedral, exclaimed, that the whole of his figure was of less merit than was the leg of Adam in the “Generation” by De Vargas. De Vargas was one of the few Spanish artists who were really eminent in draughtsmanship. He painted many portraits, but none of them is of any special merit.

See the writings of Bermudez on the Spanish artists, notably the Corte (Cádiz, 1806), the Cathedral Guide (Seville, 1844), and the Dictionary (6 vols., Madrid). MAXWELL, Annals of the Artists of Spain, MADRID in España (1875); HARLEY, Spanish Painting (London, 1940), and various works on Murillo.

GEORGE CHARLES WILLIAMSON.

Vargas y Mexia, CRISTOPHANO, Spanish diplomat and ecclesiastical writer, b. at Madrid, date unknown; d. at the Hieronymite monastery of la Cisla in 1566. He belonged to an old family of the lower nobility and studied law at the University of Alcalá, receiving the degree of licentiate in law. He became a government official, and by his energy and education, especially by his excellent knowledge of law, rose to the position of fiscal of the Council of Castile (Fisco del Consejo de Castilla), that is, attorney-general. In 1541 Charles V sent him to the Council of Trent. In January, 1548, he protested, as Charles’s representative at the council, against its transfer to Bologna, and in 1551 he congratulated the council on its return to Trent. During the years 1552–59 he was the Spanish ambassador at Venice; in 1558 he negotiated at Rome with Paul IV regarding the recognition of Ferdinand I as emperor, and in reference to the founding of new dioceses in the Netherlands. From 1550 he succeeded Figueras as the Spanish ambassador to the Curia. As he took an important part in the election of Pius IV. When Pius IV brought suit against the relatives of Paul IV, Vargas exerted himself to save the Carafa. For some time he was not regarded favourably by the pope, who tried to have him recalled by Spain; however, Vargas again obtained the confidence of Pius IV, and was commissioned by the latter in 1563 to prepare an opinion on the question of the papal jurisdiction, as to which the Council of Trent had become involved in a dispute. The document Vargas prepared was published at Rome in the same year under the title of “De episcoporum jurisdictione et de pontificis maximis auctoritate responsum.” In this Vargas speaks as a strict supporter of papal supremacy. Another theological question that he took up was that of granting the cup to the laity; to this he was decidedly opposed. His reports and letters are important for the information they contain on the doings of the Council of Trent; still, he cannot be regarded as an entirely unprejudiced witness, because his interest was that of a diplomat in the service of his king. His keen powers of observation were also every directed to the scrutiny of earthly motives, and of the evidences of human weaknesses and short-sightedness. He was prominent in the affairs of the council for the last time when, in conjunction with the Spanish ambassador at Trent, he tried to postpone the close of the council. After his return to Spain he was made state councillor, but soon resigned all his offices and retired to the Hieronymite monastery of la Cisla near Toledo, in order to prepare himself for
Le Vassor, Lettres et ménemoures de François de Fargus touchant le Conseil de Trente (Amsterdam, 1700); Weiss, Papires d’estat du Cardinal de Granvelle, VI (Paris, 1846); Villarino, Vida literaria, III (London, 1829); Colección de documentación. During the last two years a large number of letters and documents by and relating to Vasari have been discovered; a summary of these private archives at Florence, belonging to Count Luciano Raspioni-Spinelli, was published in April, 1910. In 1912 Mr. Sidney J. A. Churchill of Naples, has issued, for private circulation, his "Bibliografia Vasariana", the first serious attempt to make an accurate bibliography of the works of Vasari, and chronicling 107 separate editions, as well as references to his drawings, engravings, and MSS.

We now come to Vasari's paintings. Vasari was a kinsman of the celebrated Cardinal Granvelle, and Luca's words, "Study well, little kinsman", were remembered by him all his life, although spoken when he was only a child, and when these words were submitted to the old painter some drawings by the little boy. He was trained at Arezzo; he was an infant prodigy, exhibiting some of his drawings to Cardinal Pasquini when only twelve years old, and reciting a great part of Virgil's Eloge of Man. Vasari was placed under Michelangelo, and later became a great friend of Baccio Bandinelli. Afterwards he went to Rome with Cardinal de' Medici, worked there for some time, and then returned to Arezzo in poor health; eventually he went back to Florence in 1541. He met Cardinal Farnese at Rome, and he it was who urged the painter to write his famous book, which was dedicated to Cosimo de' Medici, the Duke of Florence, whose service Vasari entered in 1533, and whom he served faithfully to the end of his life. He was responsible for the greater part of the historical decoration of the Sala Regia at Rome, and commenced frescoes for the cupola of the cathedral at Florence, which he never completed. Several buildings at Pistoia were built after his designs, and his architectural work was intimately associated with the Church of Santa Maria Novella in Florence, with the Palaces of the Ufizzi and the celebrated corridor connecting it with the Pitti palace.
Vasquez, Gabriel, theologian, b. at Villasecuca de Lara, near Belmonte, Cuenca, 1549 or 1551; d. at Alcalá, 23 Sept., 1604. He made his primary and grammar school at Belmonte, and went to Alcalá for philosophy, where he entered the Society of Jesus on 9 April, 1569. Having completed his novitiate he continued his theological studies there, closing with a public defence of his thesis. At the Fifth Provincial Congregation at Toledo he also defended the decisions of the lecturers of the Jesuit students on the "De Animá", and returned to Alcalá to study Hebrew. Following this he taught moral theology two years at the college of Ocaña, two more at Madrid, and for some time at Alcalá. From there, although not yet thirty years of age, he was called to Rome to fill the same post at the Roman College, from which he was transferred to the ordinary of Toledo. He remained six years in Rome, then returned to Alcalá, where he taught theology until his death. In him, according to Haringer, virtue and science combined, with doctrine, obedience with genius, and piety with learning. The Duke de Lerma, favourite of Philip III, frequently consulted him in the most important matters, and Benedict XIV called him the "prince of theology". He was noted for his exact knowledge of the opinions and theories of the different Schools and authors, and commendable for clearness of expression and a strict philosophical method. He made a complete study of the writings of St. Augustine, and whom he professed great devotion, as well as those of the other Fathers of the Church and St. Thomas. He composed a general view of the Schools, defending private opinions, among which the following deserve to be mentioned: (1) The natural law consists in rational nature considered in itself and in the recognition that certain actions are necessarily in accord with it and others are repugnant to it. Nevertheless, he does not deny that the natural law might have been changed, and he sometimes envisions a state of things in which the Divine law and moral law are united, therefore, be the principle of a Divine obligation. In this he is in opposition to Kant, who holds that the whole binding force of the moral law should come from man and not from God. (2) The Divine law is not the essence of God, so far as that essence or nature is known or imitable or to be imitated; that is to say, that the species expressa of possible and future creatures as a principle of self. These ideas thereby concur remotely in the creation of beings; their proximate principle being the Divine creative potency by which God actually and effectually creates. (3) In the section dedicated to the discussion of the existence of God he cites the ontological proof of St. Anselm, the definiteness and demonstrative value of which he appears to accept absolutely. Eternity is, according to him, duratio perpetua, uniform, sine principio et fine, mensura certa, a definition which differs somewhat from that adopted by Boethius and followed in the Schools. (4) Grace is necessary for performing all good actions and overcoming temptation. By grace he understands the "gracia" of the Schoolmen, or the gift of God which is given to the elect and for a supernatural end. Hence it is called grace. (5) Predestination, he maintains, is a præsupra merita, but children who die without being in any way whatsoever possible for them to receive baptism were not, after original sin was forgiven, included in the salutary will of God. (6) In Christology he held the following opinions: that the Adamists are not Nestorians; that Christ cannot be called the servant of God; that Christ was under a command to die, but that He was free to choose the circumstances of His death; that the regular or formal dignity of the priesthood of Christ will last forever, because Christ is a priest according to His substance, and this remains immutable. (7) The ratio formalis of the Sacrifice of the Mass lies in the mystic separation of the Body and Blood of Christ effected by the words of consecration. (8) It is probable that in the new birth of baptism the guilt of sin is not made away, but rather that we are freed from it. (9) Baptism, he says, is for children only the means of salvation; for them martyrdom has the virtue of justification instar baptismis; but in adults it justifies only on account of the act of charity. (10) Episcopal consecration does not impart a new character, but does it in reality extend or increase the character sacerdotal character and effectual power of the one thereby conferred, which is nothing else than the Divine appointment to a new ministry. (11) In the Sacrament of Matrimony the bodies of the contracting parties constitute the matter, and their consent, expressed verbally or by signs, the form. In treating the existence of God he notes the number of atheists who lived in his time, and attributes it to the influence of Protestantism, and also mentions some of the most influential atheists who consider God and religion only as government expedients to hold the people in check. Vasquez was a rival of Suárez, whom he sometimes designates as one of the moderns. He established a School, and the disputes between his disciples and those of the Dominican Juan de Santo Tomas concerning the difference between the Schoolmen and the School of the Augustinians are the main subjects of his discussion. Divine knowledge and the Divine idea were, according to Menéndez y Pelayo, curios. Luis de Torres and Diego de Alcaraz were the most notable disciples of the School, and, although it was short-lived, all modern theologians hold Vasquez in high esteem and frequently quote him. Two principal charges are urged against him: his independent opinions and his discussion of useless questions. It cannot be denied that these censure have some foundation. His independence, as Hurter remarks, led him at times to defend less safe and even erroneous opinions. His first volume on the first part of St. Thomas was held back two years by the censors of the Society. Among the questions he discusses is that of the following: "Unum est extra divinam speciem esse posse, ut ante mundi creationem alicubi fuerit". Nicolaus Antonio, who thoroughly examined the questions and characteristics of those times when all theologians discussed questions which are to-day considered useless, says that some excuse can be made for this defect if one considers the energy and vigour of his genius, "vir fort asper ac ingeniosus".

Vatable, François (or better, Watebled, the name is also written Gastebled or Ouateblé), French Hellenist and Hebraist of the eighteenth century, b. at Gamaes (85 miles north-west of Paris), Picardy, probably in the latter years of the fifteenth century; d. Paris, 16 March, 1547. He was for a time rector of Bramet in Valois, in 1530 or 1531. King Francis I appointed him to the chair of Hebrew at the newly-founded (1530) "College of the Three Languages", afterwards better known as "College of completeus". In 1539-45 he attended, with the benevolence attached thereto, theComic and the Inquisitors, regarded as the rector of Hebrew scholarship in France, and his lectures in Paris were largely attended, even by Jews. Yet he published nothing during his lifetime. He had, however, completed a Latin translation of Aristotle's "Meteorika", which appeared at Lyons in 1548, and another of the same author's "Parva naturalia", which was published in Paris (1619). From the lecture notes taken by Vatable's pupils Robert Stephens drew the material for the schola in which he added to his edition of the "Institutio" Latin translation of the Bible by Leo of Juda (4 vols., Paris, 1539-45); but it has been proven beyond doubt, that these notes had been shamefully garbled by the Protestants of Zurich. The Sorbonne doctors sharply inveighed against the Lutheran tendencies of the notes of Stephens's Bible, and Vatable himself disowned them; yet, as they are a model of clear, concise, literary, and critical exegesis, they are included in the Vulgatam, and the authorization of the Spanish Inquisition, issued a new thoroughly-revised edition of them in their Latin Bible of 1584. From the edition of 1729 Migne republished, in his "Scripturae sacrae cursus completus" (XII, Paris, 1841), the schola on the Books of Esdras and Nehemiah. The (garbled) notes on the Psalms, re-edited in R. Stephens's "Libri Psalmatorum Davidis" (1557), were recast anew, together with remarks of H. Grotius, by Vogel under the misleading title: "Francisci Vatable annotatio in Psalmo" (Halle, 1767).

Charles L. Souvay

Vatican, the.—This subject will be treated under the following heads: I. Introduction; II. Architectural History of the Vatican; III. The Description of the Gardens; IV. The Chapels of the Vatican; V. The Palace as a Place of Residence; VI. The Palace as a Treasury of Art; VII. The Palace as a Scientific Institute; VIII. The State-Halls of the Vatican; IX. The State Staircases of the Vatican; X. The Adminis- trative Boards of the Vatican; XII. The Juridical and Hygienic Boards of the Vatican; XIII. The Policing of the Vatican; XIV. The Vatican as a Business-Centre; XV. The Topography of the Vatican; XVI. The Legal Position of the Vatican. As much as by this disposition of the subject analogous things may be treated together, regardless of their various locations in the Palace, this has an advantage over others which follow a topographical and historical method.

I. Introduction.—The territory on the right bank of the Tiber between Monte Mario and Gianicolense (Janiculum) was known to antiquity as the Agor Vaticanus, and, owing to its marshy character, the low-lying portion of this district enjoyed an ill repute. The origin of the name Vaticanus is uncertain; some claim that the name comes from a vanished Etruscan town called Vatium. This district did not belong to ancient Rome, nor was it included within the city walls built by Emperor Aurelian. In so prospering gardens situated in this section was the Circus of Nero. At the foot of the Vatican Hill lay the ancient Basilica of St. Peter. By extensive purchases of land the medieval popes acquired possession of the whole hill, thus preparing the way for building activity. Communication with the city was established by the Porta degli Esuli. In the time of Hadrian. Between S.18 and S.52 Leo IV surrounded the whole settlement with a wall, which included it within the city boundaries. Until the pontificate of Sixtus V this section of Rome remained a private papal possession and was entrusted to a special administration. Sixtus, however, placed it under the jurisdiction of the urban authorities as the fourteenth region.

II. Architectural History of the Vatican Palace.—It is certain that Pope Symmachus (498-514) built a residence to the right and left of St. Peter's and immediately contiguous to it. There was probably a former residence, since, from the very beginning, the popes must have found a house of accommodation necessary in the city. Toward a basilica as St. Peter's. By the end of the thirteenth century the building activity of Eugene III, Alexander III, and Innocent III had developed the residence of Symmachus into a palatium which lay between the portico of St. Peter's and the Vatican Hill. Nicolaus III began building on the Vatican Hill a palace of extensive dimensions, which was not completed by his immediate successors. He also secured land for the Vatican Gardens. The group of buildings then erected correspond more or less with the ancient portions of the present palace which extend around the Cortile del Maresciallo and the eastern, southern, and western sides of the Cortile del Papa-gallo. These buildings were scarcely finished when the popes moved for a time to Avignon, and from 13 05 to 1377 no pope resided permanently in the Vatican Palace. Urban V spent a short time in Rome, and Gregory XI died there. When Urban V resolved to return to Rome, the Lateran Palace having been destroyed by fire, the ordinary papal residence was fixed at the Vatican. The apartments, roofs, gardens, and chapels of the Vatican have been destroyed, and a few hallowed, so grievous had been the decay and ruin into which the buildings had fallen within sixty years (see Kirsch, "Die Ruhm der Papiete Urban V. u. Gregor XI."). Paleologus, 1908). The funds devoted to the repairs of the Vatican during the residence at Avignon had been entirely inadequate. When Urban VI began his pontificate, it was restored to the palace a degree of comfort as a place of residence, so that, when Martin V came from Constance to Rome (28 September, 1420), little remained to be under-
From the Portone di Bronzo downwards run the powerful buttresses of the palace around the eastern and northern sides of the hill as far as the Galleria Lapidaria (Corridoio delle Iscrizioni). These buttresses are interrupted by the Torrione, which was formerly of great strategic importance and now serves as a magazine. At the rear of the Cortile del Forno is the entrance to the Nicchieone and the museum buildings, which are the most elevated portions of the palace.

From the eponym of St. Peter's may be seen the whole collection of buildings included under the name of Vatican Palace, a long stretch of edifices with many courts, ending in a row of smaller connected buildings before which stands a great loggia, known as the Nicchieone. To the right and left of the loggia and at right angles to it are two narrow buildings, which are connected transversely by the Braccio Nuovo at a distance of 328 feet from the loggia. These four buildings enclose the Giardino della Pigna, so called because in the loggia stands a gigantic pine-cone of bronze, preserved from old St. Peter's. Except the few unsightly buildings lying immediately to the left, all the buildings behind the loggia are given over to the museum—especially to sculptures and to the Egyptian and Etruscan museums. In the longitudinal wing to the left are accommodated a portion of the library, the Galleria dei Candeliari, and Raphael's tapestries; the right wing forms the Museo Charamonti, while the transverse building, or Braccio Nuovo, also belongs to the museum of sculpture. After the Giardino della Pigna succeeds the Cortile della Stamperia, a narrow building deriving its name from the fact that it served as the seat of the Vatican Press (founded by Sixtus V) until 1909. At the back of this court stands the Braccio Nuovo, to the left lies the library, the Galleria delle Carte Geografiche, and the Torre dei Quattro Venti; to the right the library and the Galleria Lapidaria; and in the transverse building in front, the library. The third huge court, Cortile di Belvedere, lies on a much lower level in an exact line with the other two. At the rear and to the left is the library, to the right the Galleria Lapidaria, and in the transverse wing in front the Appartamento...
Borgia, the Stanze of Raphael, and the Museum of Modern Paintings. Between these two long stretches of the palace with the three courts and the Basilica of St. Peter lie a large number of courts, surrounded in a somewhat irregular fashion by a group of buildings of which we shall mention the most important. The Sistine Chapel to the extreme left adjoins the Cortile della Sentinella and the Cortile del Portoncino; opposite to this ends the left wing of the library. To the right from the chapel is the Sala Regia, beyond which, extending towards St. Peter's, is the Cappella Paolina. Running somewhat obliquely from the Sala Regia is the Sala Dura, which, with the Stanze di Raffaello and the Appartamento Borgia, encloses the Cortile del Papalato on the north and south sides. The eastern side of this court is bordered by the group of buildings containing the Camere dei Paramenti (with the Loggie di Giovanni da Udine extending in front) and the Cappella di Niccolò V (one story higher), situated before which is the Loggia di Raffaello. The above-mentioned loggie form the western side of the Cortile di San Damaso; the northern side is also composed of loggie, behind which, on the second floor, is the Sala Madre and on the third a portion of the old picture-gallery. The eastern side of the loggie stands in front of that portion of the palace occupied by the pope and the secretary of state. There are some lesser courts on the east side.

The exterior of the palace presents an imposing ensemble. Architectural decorativeness is found nowhere else. Extreme simplicity characterizes the exterior walls. According as necessity dictated, aesthetic effect being little considered, new buildings and annexes were erected, roofs raised, external passages laid out, lofty halls divided horizontally and pierced for the upper half of windows which disfigure the lines of the buildings. Those who seek for uniformity find much to censure in the palace, but the general effect, viewed from an historical standpoint, is most pleasing. The Cortile di San Damaso, the view towards St. Peter's of graceful arcades opening out before the staircase leading to the Sala Regia by the Portal of Paul II, the lofty entrance door to the library of Sixtus IV, in the Cortile del Papagallo, the Cortile del Portoncino and della Sentinella are all magnificent. The Portone della Sentinella leads to the Cortile di Belvedere, decorated with a beautiful fountain. The view to the right from the windows and galleries of the Appartamento Borgia and the Stanze di Raffaello is admirable. An added story replaced the turret of the palace of Nicholas V; the adjacent Torre Borgia has lost its ancient windows, its roof thereby losing the character of a tower. Above the transverse wing is the Torre dei Quattro Venti, where was the Specola Gregoriana, the observatory dating from the days of Gregory XIII, with its paintings by the Zucari.

The Giardino della Pigna, lying to the north, is beautifully laid out. In the centre of the court has stood since 1856, mounted on a marble column, a bronze statue of St. Peter, in commemoration of the Vatican Council of 1570; numerous fragments of statues and reliefs are artistically placed standing or flat along the walls. The quarters of the Swiss Guards on the east side consist of two narrow parallel buildings, which, with the Sistine Palace and the Torrione di Niccolò V, form two courts. The inner court is adjacent to the palace; in the other is a gate leading directly to the city by the colonnades. Beyond this gate is the covered passage from the palace called Angualto, which leads up to the point where it leaves the Vatican territory. The uniforms and a coat of arms give evidence that Alexander VI initiated here extensive works of improvement and decoration. In the immediate vicinity of the Torrione di Niccolò V farther lay the Cavallerizza, the riding ground for the Noble Guard. Between this building and the quarters of the Swiss Guards is another large building, known as the Rione Pigna. The east wing of this huge house which Pius X reconstructed for the maried officials and the servants of the palace. It is solidly built, conveniently divided, and fitted with the best sanitary requirements.

The palace forms a special parish, the administration of which is entrusted to the Monsignor Sagrista, sacristan of the pope, assisted by the sottosagrista, who has charge of the vestry. The chapel of the Sagrista contains five chapels of the palace. The chaplain of the Swiss Guards attends to the vestments of their chapel. The Cappella Paolina is regarded as the parish church, and is thus one of the churches of Rome where the Forty Hours' Adoration is inaugurated at the beginning of each ecclesiastical year. By the Bull, "Ad servum ordinis," of 15 October, 1496, the papacy established the custom of selecting the Prefect of the Apostolic Chapel (the sagrista) from the Augustinian Order was given a legal foundation. The sagrista is Titular Bishop of Porphyreion, assistant at the throne, and domestic prelate, and before 1870 was pastor of the Vatican Palace, of the Quirinal, and of the Lateran. The Quirinal was divided into three parishes of SS. Vincenzo ed Anastasio, and in the Lateran the sagrista was represented in parochial affairs by the pastor of the basilica. In addition to other privileges the sagrista has the right of administering Extreme Unction to the dying pope. Since the reign of Pius IV he is an ex officio member of the Conclave. Although, as a bishop, the sagrista enjoys the use of the crozier, but it always remains a casula, and he is always wearing the mozzetta over the mantelletta. His appointment is for life, so that he is not affected by a change of pontificate.

IV. THE VATICAN GARDENS.—Enclosed between the city walls, the zecca (the mint) with the adjacent houses, and the Viale del Museo lie the Vatican Gardens of Pope Pius IV, opened to the public only with the special permission of the sub-Prefect of the Vatican Palace. They are reached through the museum entrance on the western side of the palace. To the left of the entrance below is the English Garden, in which the palm grove (the tallest palm in Rome) and fine citron and orange trees grow under a painted glass dome. At the southern end of the garden is a walk, bordered by boxwood trees fifteen to twenty feet high, which leads between oaks and ilex trees up the hill on which stands the Casino of Leo XIII, resting on one of the huge towers of the Leo-
THE COURTYARD OF S. DAMASO, VATICAN PALACE

Ancient and Modern, and its Environs", II, Rome, 1844.)

V. THE CHAPELS OF THE VATICAN.—In the papal palace there are a large number of chapels which serve various purposes. By far the largest and the most famous of these is the Sistine Chapel.

A. The Sistine Chapel is the papal residence and court chapel, where all papal ceremonies and functions and papal elections are held. It was built between 1473 and 1481 by Giovanni de' Dolci at the commission of Sixtus IV. In length 133 feet and in breadth 46, it has at each side six stained-glass windows, given by the Prince Regent Leopold of Bavaria in 1411. The lower third of the chapel is separated by a grid of beautiful marble barriers, which divide the space reserved for invited visitors on the occasion of great solemnities from that reserved for the pope, the cardinals, and the papal family. On the wall to the right is the box for the singers of the famous Sistine Choir. The marble barriers and the balustrade of the box are by Mino da Fiesole and his assistants.

The rear wall of the chapel is now without a window, being broken only by a small door on the right, which leads to the sacristy of the chapel. Almost the whole of this space is occupied by the painting of the Last Judgment (see Bonar-
obligation quickly to give to the Church her ablest son as ruler and guide. The cardinals then withdraw to the Sistine Chapel. In the Cappella Paolina are sung daily the conclusive Solemn Masses "De Spiritu Sancto," at which all members of the conclave must be present.

C. The Chapel of Nicholas V.—While the two above-named chapels are situated on the first floor of the palace, which bounds the Cortile di San Damaso, the Chapel of Nicholas V (chapel of San Lorenzo) lies on the second floor in the immediate vicinity of the Stanz and Loggie of Raphael. Built by Nicholas V, the chapel was adorned (1450-55) by Fra Angelico with frescoes, depicting chiefly scenes from the lives of St. Peter and St. Stephen. Among the delightful series of paintings is Angelico's greatest work.

D. The Pope's Private Chapel.—In the reception rooms of the pope, between the Sala degli Arazzi and the Sala del Trono, lies a smaller room, from which a door leads to the private chapel of the pope, where the Sacred Sacrament is always reserved. Here the pope usually celebrates his Mass, and likewise are held those weekly services, which are accorded the privilege of receiving Communion from his hand. The lay members of the papal family usually make their Easter Communion in this chapel on the Monday in Holy Week; the prelates of Rome make theirs on Holy Thursday. On both these occasions the pope celebrates. After Mass all are entertained at breakfast in the Sala del Segreto, the majordomo representing the pope as host.

E. Cappella della Sala Matilde.—On days when a larger number of strangers are admitted to assist at the pope's Mass, the Holy Father uses the Cappella della Sala Matilde, a simple but tastefully decorated chapel which Pius X had erected in the Sala Matilde on the second floor of the same building.

F. The Chancery—On the second floor, at the foot of the portico, is the office of the Swiss Guards, of which the pope is the chief. From this office, which is in the immediate vicinity of the Portone di Bronzo and the quarters of the Swiss Guards, and in it the services for the Guards are celebrated by their special chaplain. This Chapel of the Holy Spirit and Saint Sebastian dates from the sixteenth century, and has a special charm.

G. The Palace as a Place of Residence.—The Vatican Palace was not intended and built as a residence. Only a comparatively small portion of the palace is residential; all the remainder serves the purposes of art and science, or is employed for the administration of the official business of the Church and for the management of the palace. The rooms formerly intended specially for residence are to-day used as a long wall of the palace. Hence, the Vatican can more properly be regarded as a museum and a centre of scientific investigation than as a residence. The residential portion of the palace is around the Cortile di San Damaso, and includes also the quarters of the Swiss Guards and of the gendarmes situated at the foot of this building. There are some 1000 rooms in the whole palace and about 200 so-called residential apartments for the pope, the secretary of state, the highest court officials, the high officials in close attendance on the pope, and some scientific and administrative officials. This limited number could be increased only with the most costly and extensive alterations. When the temporal government of the pope came to an end in 1797, a large number of the minor officials and servants of the Quirinal Palace had to be sustained during the confusion of the time; these latter were temporarily assigned previously unused rooms of the Vatican. Pius X executed the plan of erecting in the immediate vicinity of the Vatican a special large residence for all these families, where they are now accommodated. This practical innovation affords them pleasant and commodious quarters.

In the eastern wing (facing towards Rome) of the residential section the pope occupies two floors. On the upper floor (the third) he resides with his two private secretaries and some servants; on the second floor he works and receives visitors. One suite of rooms receives the morning, and the other the midday and afternoon sun. The second floor includes the reception rooms, which the visitor enters through the Sala del Vescovado. On the floor below is the Sistine Chapel, the most important room in the palace. The Swiss Guards keep watch at the entrance to the papal apartments. The next room is the Anticamera Bassa, in which the servants stand, and in which all summoned to an audience lay aside their wraps. An air-trap opens into the Sala dei Gendarmi, so called because two gendarmes in court uniform are there stationed. A covered way leads backwards through a court to the entrance of the palace. At the end of this hall is known as the Sala del Cantone or Sala della Guardia Palatina, as it is a corner room where during the reception a division of the Palatine Guards are drawn up. The eastern suite of rooms begins with the Sala degli Arazzi, in which three huge Gobelin tapestries presented by Louis XV adorn the walls. Between this room and the Sala di San Pio V lies a small room which serves to accommodate the Noble Guard, and leads to the pope's private chapel. The floor of the throne room is covered with a specially manufactured and costly Spanish carpet presented to Leo XIII. The room is simply fitted, giving a very impressive and restful effect.

Here stands the Anticamera Segreta, at the entrance of which a member of the Noble Guard stands. The old and very valuable Gobelin tapestry which covers the floor is practically indestructible, but is tended with great care. In this room wait the majordomo or the maestro di camera and one or more spiritual chamberlains, when audiences are to be given. Here also wait the cardinals and persons of rank in the rank of a cardinal. The floor is entirely carpeted, while the others summoned to the audience wait in the throne room or in the other above-named halls. Situated on a corner, this room offers a wonderful view of the city and the Campagna to the east, the Piazza S. Pietro and the Janiculum to the south. Two smaller rooms and the Sala del Tronetto lie between the Anticamera and the library, which is both the working-room and the reception room for current private audiences. Not far from the entrance of the library stands the pope's unpretentious, large writing-desk, beside which are some seats for visitors. In the middle of this large room, which is splendidly lighted by three windows, stands a broad mahogany table several yards long. The library is filled with the collection of books and manuscripts above them hang twelve exquisite paintings of animals. Other decorations and fittings of the room combine in perfect harmony; it is an ideal working-room.

Over the Anticamera Segreta, the Sala del Tronetto and the two adjoining rooms is the pope's private chancellery, accessible only by a staircase from the main vestibule of the palace. Here is the pope's direction. In the pope's direction, two secretaries with a staff of assistants transact all the unofficial affairs of the pontiff.

Immediately under these working and reception rooms of the pope is the suite of the secretary of state, who under Pius IX and Leo XIII occupied what are now the private rooms of the pope. Leo XIII assigned this suite temporarily to Cardinal Ledochowski, when he came to Rome from the prison of Ostrowo. These neglected rooms were recently renovated by a Spanish ecclesiastic of wealthy
VATICAN

CAPITOLINI. Here the secretary of state receives twice weekly the diplomats accredited to the Holy See and numerous other visitors. Along the Scala Pia, built and covered by Pius IX, which leads from the Portone Bronzo to the Court of St. Damasus, lie the extensive apartments of the maestro di camera and the papal chamberlains (a Dominican, theological adviser of the Pope and censor of the books printed in Rome). Under-secretary of state, prefect of the Vatican Library, household administrator of the Apostolic Palace, other court and administrative officials, and a few servants.

VII. THE PALACE AS A TREASURY OF ART.—The Vatican contains an abundance of works of art, which

1, 502): "Let the statues be retained merely as the works of great masters; as such they may constitute the greatest ornament of our native town (Rome) without the musing of an art which serves the wicked contumacy of these memorials." In accordance with this spirit of the Church, the early Christian emperors issued repeatedly laws against the destroyers of ancient works of art, and medieval Rome saw on all sides—in its public squares, in the ruins of the ancient palaces, and in the halls of the neighbourhood—numberless statues of gods, emperors, and renowned men. It is true that during a period of unparalleled barbarism when the popes transferred their residence from Rome to Avignon, works in marble found their way to the line-skins; but scarcely were these times past, during which Petrarch declares the Romanes had degenerated to a nation of cowards, than the popes, in accordance with their full conviction that the Church was the first-called protector and patroness of art, devoted their attention to the preservation of the ancient objects of art. The papal palaces thus possess an abundance of masterpieces of all ages for the instruction and enjoyment of both the friends and the enemies of the papacy that, were it all the other collections of the world destroyed by some catastrophe, the Vatican collection would suffice for the perpetuation of aesthetic culture, both ancient and Christian. The popes were not alone to make the first to establish museums, but they have also by their examples spurred all other governments of Europe to imitation, and thereby performed a great service in the refining of artistic taste among all modern nations. For the Vatican museums, in contrast to so many others, were instituted purely from an aesthetic, not from historical considerations. These important remarks apply not alone to the museums, but likewise to all the Vatican collections and scientific institutions. The Vatican museums are: (1) The Museo Pio-Clementino; (2) the Galleria Chiaramonti; (3) the Braccio Nuovo; (4) the Egyptian Museum; (5) the Etruscan Museum.

THE VATICAN MUSEUMS.—The first collection of antiquities in the world was made by Popes Julius II, Leo X, Clement VII, and Paul III in the Belvedere. Of the treasures there collected, most of which were a few decades later (especially by Pius V) given away or removed, only a few of the prominent objects maintain their place in the Vatican to-day. To these belong, for example, the Torso of Hercules, the Belvedere Apollo, and the Daniel. The XIV's activity in collecting antiquities was continued by Pius VI with such great success that their combined, arranged by Ennio Quirino Visconti, were united in one large museum, named for these popes, the Museo Pio-Clementino. It contains eleven separate rooms, filled with celebrated antiquities. (a) Sala della Piazza.—The expense of half a million lire ($100,000) Pius VI had the two gigantic porphyry sarcophagi of Sts. Helen and Constantia, the mother and daughter of Constantine the Great, repaired and transferred to this museum, built by Simonetti. Conspicuous among the statues is that of the youthful Octavian, one of the very few ancient statues of which the head was never separated from the trunk. Among the few masterpieces is the Cnidian Venus, which is esteemed the most perfect copy of the masterpiece of Praxiteles. (b) Sala della Bega.—The masterly restoration of an ancient two-wheeled racing chariot, drawn by two horses, by the sculptor Franzoni has given its name to the beautiful circular room erected by Camporesi. The wheels and one of the horses are new, a fact which only the learned can discern. In this room are also a bearded Bacchus, two discus-throwers, a bearded athlete, sarcophagi, and other works of art.

(c) Galleria dei Candelabri.—Under Pius VI the very long Hall of Bramante was closed on this side,
and was divided into six compartments by arches resting on Dorian columns of vari-coloured marble. In the hill of the Belvedere, the magnificent candelabra of white marble, after which this hall is named, are especially conspicuous. The exquisitely fine tracings and arabesques are among the finest examples of this form of art. A Ganyne ride carried away by an eagle, a local goddess of a town in Antiochia, a Greek runner, and a fighting Persian are the most important among the numerous sculptures. Especially remarkable are sarcophagi with a representation in mezzo-relieve of the tragedy of the daughters of Niobe. This hall was selected by Leo XIII. to immortalize, through Ludwig Seitz, some of the most important acts of his pontificate. In a deeply thoughtful composition the artist represented St. Thomas Aquinas as the teacher of Christian philosophy, the agreement between religion and science, the union of ancient pagan and Christian art, the Rosary and the battle of Lepanto, and Divine grace in its various activities as working in Sts. Clara of Montefalco, Benedetto Labre, Laurence of Brindisi, and John Baptist de Rossi, canonized in 1881. Seitz also painted a symbolic representation of four ideas taken from the Encyclicals of Leo XIII: Christian marriage, the reformation of Freemasonry, the condemnation of Freemasonry, and the agreement between secular and religious authority. This classical cycle of paintings is important (cf. Sene, "Gal- leria dei Candelabri, affreschi di Ludovico Seitz", Rome, 1891).

(d) Sala rotonda.—Built after the model of the Pantheon, it was opened in 1646. This hall contains as its most precious object the bust of the Zeus of Otricoli, Pius IX paid 268,000 lire ($33,600) for the colossal gilt bronze statue of Hercules. The Barberini Hera, as it is called, is an exquisite work of art. The great mosaics in the floor, in the centre of which is a monster phaethon shell, was discovered at Otricoli in 1780.

(e) Sala delle Muse.—This eight-sided hall, which was commissioned by Simonetti to build, intended to receive the nine Museus under the leadership of Apollo, as well as busts of all those who should have acquired renown in the service of the same. Pius VI here paid brilliant homage to art and science, representing truth with a noble magnanimity against the brutal caricatures of culture of the waning eighteenth century. The Sala delle Muse contains the richest collection in the world of about 150 representations of animals from classical antiquity, many of the works of art being of high importance.

(g) Galleria delle statue.—Innocent VIII (1484–92) had a summer house erected in the vicinity of the Belvedere, and had it adorned with frescoes by Mantegna and Pinturicchio. Clement XIV and Pius VI had this building altered, and transformed into that important treasure as the Weeping Penelope, the Apollo Saurokomos, the Amazon from the Villa Mattei, a Greek monumental stele, the Sleeping Ariadne, and the Barberini Candelabra.

(b) Sala dei Bisti.—In this second division of the former summer-house are over 100 busts of Romans, gods and goddesses, etc. (c) Gabinetti del Belvedere. In this hall were discovered the Villa Hadruma at Tivoli in 1780, which is considered the most magnificent group of the Nile, on whose body play sixteen children representing the sixteen events in the ancient life of the river. (Consult Anna Longhi, "Die Skulpturen des vatikanischen Museums", 2 vols., with charts, Berlin, 1907–08.)

(1) The Egyptian Museum.—The collection of Egyptian objects was begun by Pius VII, but the museum was not opened until 1888, during the pontificate of Gregory XVI. The Caravaggio of Fabris superintended the decoration in this hall, while the Barnabite Father Aloys Ungarelli arranged the objects for exhibition. The basis of the museum was supplied by the collections of Andrea Gaudi and Cardinal Borgia of Velletti, and by the objects of public property distributed throughout the Papal States. Other valuable objects were acquired by purchase. Most of the pyramids manuscripts were brought hither in 1858 by the Franciscan Angelo de Poi. Although the ten halls full of statues, sarcophagi, mummies, sacred animals, and other things, do not attain the importance of the Egyptian museums in Berlin, Paris, London, Turin, and Hildesheim, the Roman is among the first Egyptian collections of second rank. Particularly notable are the sculptures of Apollo, discovered near Grotta Ferrata about 1490, Canova was allowed to exhibit his Persius and the statue of Diadumenos and Cardinal de Poi, which were not seen to advantage. In the fourth temple is the well-known Hermes dating from the fourth century before Christ; formerly this statue was thought to represent Antinous. (d) Gabinetti del Belvedere.

—in the three cabinets, or atria, are conspicuous the statue of Melek, the above-mentioned Torso of Belvedere, and the sarcophagi and inscriptions relating to the Soppe family.

(2) The Galleria Chiaramonti.—Thirty-four pilasters indicate the thirty sections into which the Gal- leria Chiaramonti is divided in the corridor 492 feet long. More than 300 sculptures, mostly of smaller dimensions, and of a variety of subjects, are here artistically exhibited. They are chiefly the work of Greek sculptors living in Rome, and are carved after Greek models. Prominent among the original Greek works are the Daughters of Niobe, a relief in Boetian limestone, and the head of Neptune.

(3) The Braccio Nuovo.—Although many of the halls of the Museo Pio-Clementino, especially those built by Simonetti, viewed from the purely architectural standpoint, make a very brilliant impression and are capable of comparison with those of the Vatican, the Braccio Nuovo is incontestably the crown of the museum buildings. The general impression of perfect perfection and symmetry is effectuated by the harmonious proportions of the long hall, the method of lighting, and the arrangement of the masterpieces exhibited. This hall was erected by Raphael Scine at the command of Pius XII, and was begun in 1740, and completed in 1770. The magnificent barrel-vault is decorated with richly gilt cassettes; the cornices, the fourteen antique columns of giallo antico, cipollino, alabaster, and Egyptian granite, the transverse hall equally dividing the whole, the marble floor, all contribute an appropriate setting for the masterpieces. In this museum stand twenty-eight statues in as many niches, while the transverse halls are filled more. Between the niches on marble consoles are twenty-eight busts; others rest on mural consoles; between these and the cornice beautiful bas-reliefs are set in the walls. At the rear of the hall stands the statue of the Athlete (Apoxomones) cleaning himself of sweat and dust with a scraper. This statue, as well as that of the Athenian Amazon by Papei, is an exact copy of the Greek originals of Lysippus and Polykleitos. The majestic statue of Augustus haranguing his soldiers bears evident traces of having once been painted. Among the abundance of treasures here exhibited is the colossal recumbent figure of the Nile, on whose body play sixteen children representing the sixteen events in the ancient life of the river. (Consult Anna Longhi, "Die Skulpturen des vatikanischen Museums", 2 vols., with charts, Berlin, 1907–08.)
the modern period and the monuments (interesting for their style) which were prepared during the reign of Hadrian for his villa near Tivoli. (Consult Ma-

The Vatican Pinacotheca.—Among the valuable

treasures of art, manuscripts, archives, and collec-
tions which Napoleon confiscated on his campaigns

In Paris were the most prominent as trea-

ures of the Vatican and the churches in the Papal

State. When these treasures were brought back from

Italy in 1815, Pius VII formed them into a collection,

the rooms were not architecturally fitted for a picture-galler-
y and the constant stream of visitors caused annoyance.

C. The Gallery of Modern Paintings.—Not so much

artistic value, which is comparatively small, as the
glory of the Church is seen in the majority of the pic-
tures collected in the small Gallery of Modern Paintings.

With few exceptions they are estimable achieve-

ments of Roman artists, and are devoted to the glorifi-
cation of those saints who have been canonized in the
second half of the past century. They hang in a single
large hall, beside which is accommodated the colossal
canvas of Matteo representing the saving of Vienna
by John Sobieski in 1683. This unique painting was
purchased for Leo XIII in 1881 with a subscription
started by a wealthy Pole. In a third hall are exhib-
itted the frescoes of Podesti, among which is conspicu-
sous the great picture (the heads of all the personages
are painted from portraits) depicting the promul-
gation of the doctrine of the Immaculate Conception by
Pius IX. Before this painting stands a magnificent

harmionous. The collection of paintings in the
Pinacotheca is priceless in value. (Concerning the
origin of the Vatican Pinacotheca consult Platen-

venezia, Fra-

nentico da Polignano, Matteo da Forlì, Valen-
tino, Marofo, Bartolomeo Mantenga, Murillo, Francesco
Francesco, Perugino, Benfazio, Domenichino, Titian,
Serafini, Pinturicchio, Giusto Romano, Francesco
Bonaventura, il Pataore, lo Spagna, Sassoferato,
Lombardie, the picture of Averacchi da Carac-
 ngo; the French by Pierre Valentin’s "Mar-
dom of Sts. Processus and Martinianus"; and other
works by various canvases. Altogether 56 master-
cases had to be transferred from the old to the new
library. In 1901, when the Greek abbey of Grot-
tacelebrated its nineteenth century with an exhibi-
tion of its forgotten treasures, 181 valuable Byzantine
paintings were there acquired for the Vatican. To
these were added 40 taken from the Lateran and other
collections in the Apostolic palaces, making an addi-
tion of 221 besides the 56 from the old gallery. All
the paintings which were not judged worthy to be
exhibited side by side with the masterpieces of the
earlier collection have been transferred to a magazine
adjoining the gallery, where they may be examined
by artists. A very simple opening celebration was held
at the end of 1900. In the gallery itself is the marble
bust of Pius X, by Seebock, which is the pope’s favour-

VATICAN

283
shrine, in which the text of the Bull of Prolongation, translated into many languages, is preserved. The shrine was presented to Pius IX by the French clergy in 1878.

D. The Appartamento Borgia.—On the first floor of the palace, looking towards the north and the Cortile del Belvedere, one may enter from the Loggia of Giovanni da Udine those apartments which Alexander VI had erected in what is called the Odal Palace (or Borgia Palace). These rooms received their title from Alexander’s family name, Borgia. Here on 18 January, 1995, Alexander received King Charles VIII of France, and entered into long negotiations with him. Here also Charles V was accommodated, when, a few years after the sack of Rome, he returned victorious with his arms and was received by the pope as the conqueror of the Turk. Succeeding popes did not occupy this suite, utilizing the Stanze di Raffaello, because there they had better light and air. From many sources it appears that, until the close of the seventeenth century, the Appartamento Borgia was occupied by the cardinal nephews, or, as they were later called, the secretaries of state. After the Palace of S. Angelo V was transferred under Clement VIII (cf. Cohabrimi, “Ruedo degli appartamenti e delle stanze nel Palazzo Vaticano al tempo di Clemente VIII”, Rome, 1865), the Stanze di Raffaello and the apartments of Alexander VI were neglected, and during the seventeenth and eighteenth centuries they were used only for conclave purposes. About the middle of the eighteenth century, they were used only as a refectory for the lower officials of the palace during Holy Week. During the French occupation of Rome, these rooms suffered much injury from the soldiery, so that immense sums had to be spent by Pius VII for architectural repair. When the Appartamento Borgia was used as the Pinacoteca (see above), the marble cross-beams were removed, and the stairway and the ceiling were used for the exhibition of paintings. Everything was done to secure suitable lighting for the works of art. As every endeavour proved unsatisfactory, the paintings were removed in 1821 to the third story, and the pope then established here a museum of statues, known as the Museo Miscellaneo (for a detailed description see Platter-Bunsen, op. cit., 1822), and also Massi, “Indicazioni antiguarie delle Sale Borgia”, Rome, 1830.

As the Appartamento Borgia consisted of six rooms, and only the first four were employed for the museum, the remaining two were turned over to the Vatican Library, to which they are adjacent. In the winter of 1838–39 the museum was limited to the first two rooms, and the two which were then vacated were likewise transferred to the library. Finally, Pius IX added also the last two halls to the library, distributing the marble works between the Vatican and the Lateran museums. Having acquired the renowned library of Cardinal Angelo Mai on 8 September, 1854, the pope had housed in the first two rooms of the Appartamento, closing them to the public. The artistic creations of Pinturicchio which adorn the walls were, however, restored to the admiration of the public when Leo XIII opened the Borgia suite, establishing there the consulting library of printed books by Decree of 20 April, 1889. The ceilings and lunettes, which preserve the paintings of the great Umbrian artist, had suffered little despite the vicissitudes of the sale Borgia, but the walls and the floor had received serious damage. Louis Seitz maintained, however, that a thorough cleaning and the covering of the damaged places with colour would sufficiently restore the frescoes, so that Pinturicchio’s original work remains.

General architectural restoration was successfully undertaken. The doors which had been broken through the walls were closed up, and the former doors reopened. After the removal of the white colouring which covered the walls, extensive traces of the old ornamentation were revealed, and the whole restored in the spirit of the Alexandrine epoch. Plaster blisters which had formed on the paintings were secured in place without the slightest damage to the frescoes. The floor required complete reconstruction. Remnants of the original majolica floor were discovered, and with the aid of technical studies, a new parquetry for the floor was elaborated in perfect harmony with the remaining fittings of the Borgia suite. The complete fitting of the rooms was not attempted; but the huge walls were beautifully furnished in exquisite taste. In 1897 Leo XIII solemnly opened the Appartamento Borgia, declaring restored the value which the Venetian and other popes had always attributed to it. The rooms were accessible to the general visitor. Simultaneously with this manifestation of the pope’s sympathy with art appeared the following work, dedicated to him: “Gli affreschi del Pinturicchio nell’appartamento Borgia del Palazzo Apostolico Vaticano, riprodotti in Fototipia e accompagnati da un Commentario di Francesco Ehrl, S.J., prefetto della Biblioteca Vaticana, e del Commentatore Enrico Stevenson, direttore del Museo Numismatico Vaticano” (Rome, 1897). When Pius X occupied the former suite of the secretary of state, the Appartamento Borgia was temporarily devoted to the secretariate. The rooms were then beautifully furnished for residence, thus restoring them to those presented in the time of Alexander VI and his heirs (cf. Ehrl, op. cit., pp. 20–27). When a special suite of rooms was later prepared for the secretary of state, the Appartamento Borgia was again opened to the public.

1) The first of the six rooms, Sala dei Pontefici, was not part of the pope’s private apartments, being a public hall in which audiences were given and consistory held. The beautiful stucco decorations harmonizing with the wall paintings and those of the adjoining rooms, the ceiling frescoes by the famous Sibille, and Perrin del Vaga, who painted the Zodiace and some representations of stars. (2) In the second hall, Sala dei Misteri, the mysteries of the life of Christ are depicted. Here are the Annunciation, the Nativity, the Adoration of the Magi, the Resurrection and the Ascension of Christ, the Descent of the Holy Ghost, the Visit of the Assumption of the Virgin, the seven virtues, and the general sketch for the pictures and other decorations in this hall, the life-like figure of Alexander VI is from Pinturicchio’s hand, as are also the figures of the prelates represented in the Assumption. All the rest was painted by his assistants; attempts have been made to prove that these belonged to the Italian school. (3) Sala dei matti is the now given the name of the third hall, which contains a series of scenes from the lives of Sts. Catherine of Siena, Barbara, Paul and Anthony, and Sebastian. All these glorious frescoes were executed by Pinturicchio himself, as was the beautiful circular picture of the Madonna and the scene of the Visitation. (4) Grammar, dialectics, rhetoric, geometry, arithmetic, music, and astrology, all are the subject of these frescoes, painted by Pinturicchio, with the extensive aid of his assistants, in the fourth hall, Sala delle arti liberali. These paintings have suffered more from dampness than those in the other rooms. (5–6) The last two rooms, del Credo and delle Silile, are situated in the Torre Borgia. The decorations in these rooms are not by Pinturicchio and have become, in a Latin inscription records the munificence of Leo XIII, who “restored this dwelling . . . to its pristine dignity and dedicated it in the twentieth year of his pontificate” (Cf. Jesorno, “L’antico Pavimento delle Logge di Raffaello in Vaticano”, Naples, 1891; Volpini, “L’appartamento Borgia”, Rome, 1887.)

E. Stanze di Raffaello.—These are an exact reproduction of the Appartamento, but are situated one floor higher. They thus include four
rooms in the Palace of Nicholas V and two in the Torre Borgia, which serve for the Exhibition of Modern Paintings. As explained above, the popes, who once occupied the Appartamento Borgia, later removed one story higher, into the rooms which are known today as the Stanze di Raffaello, because they were painted by Raphael. Julius II desired a comparatively simple pietradura decoration of his suite, and entrusted the task to the painters Piero della Francesca, Luca da Cortona, Bartolomeo della Gatta, Pietro Perugino, and Bramantino da Milano.

During the progress of the work the architect Bramante Lazzari of Urbino persuaded the pope to summon his nephew Raphael Sanzio from Florence to assist the others. One of the walls of the third room, the Stanza della Segnatura, was assigned to the young Raphael, who between 1508 and 1511 painted here "Theology" and the "Disputa"; these works so delighted the pope that he entrusted to Raphael the decoration of the entire Stanza. All other paintings were removed with the exception of those in the vault of the fourth room, where Piero Perugino, Raphael's teacher, had, in four parts, depicted: the adoration of the Blessed Trinity by the Twelve Apostles, the Saviour with Mercy and Justice at his side, the Father enthroned on the rainbow, and the Redeemer between Moses and Jacob. Raphael could not accomplish this task, with his other commissions, unaided. The sketches are all his, but many of the paintings were executed by his assistants and pupils, some after his death in 1520.

(1) The first hall is called the Sala di Costantino. The frescoes were executed after Raphael's death by Giulio Romano, Francesco Penni, and Raffaello da Volterra. The chief incident depicted on the longitudinal wall is the battle of Milwan Bridge, which Constantine the Great fought against Maxentius. The dynasty of Constantine, the presentation of Rome to Sylvester I by the emperor, and the latter's address to his troops concerning his dream (In hoc signo vinces) are all important compositions. The smaller pictures and the sole paintings are of a simpler kind. The painting of the ceiling was not finished until the reign of Sixtus V. (2) The paintings in the second hall, the Stanza d'Eleodoro, are almost exclusively by Raphael. His most important fresco is the "Mass of Bolsena", which represents how a priest, who did not believe in transubstantiation, was converted when the Blood ran from the Host after the Consecration. "The Retreat of Attila" represents Leo I (beside whom stand the Apostles Peter and Paul), with the features of Leo X, and the pope's attendants are to some extent contemporary portraits. This is an extremely effective and superbly colored painting. The light effects in the third fresco, "The Deliverance of St. Peter", are wonderful. From the fourth
of knowledge are represented and powerfully characterized. Plato and Aristotle are the centres of the organically arranged groups; Socrates, Diogenes, Plutarch, and Zoarcest are also easily recognizable. Other forms are not clearly distinguishable, except the portraits of some contemporaries. To the extreme right Raphael has painted himself beside Solon. On the wall containing the windows are some smaller paintings and the glorification of canon and civil law. Here again are portraits of contemporaries, especially those of Julius II and Leo X. (1)

In the fourth hall, the Stanza dell' Incendio, Perin del Vaga and some contemporaries, have painted a portion of the ceiling of the Loggia; Giulio Romano, the victor of Leo III over the Saracens at Osta; Francesco Penni, the fire in the Borgo, a painting from which the room has taken its name. The crowning of Charlemagne at old St. Peter's is more conventional and superficial in conception. Raphael's sketches for this hall reveal the summit of his artistic development (1517). Numerous smaller works are painted beside and under the chief paintings in the Stanzae. The majority of the frescoes still remain in an almost perfect condition, due to the seclusive solitude with which the works are cared for.

F. Loggia di Raphael.—Immediately adjacent to the Loggie di Giovanni da Udine, which begin on the second story of the Loggie of the Court of St. Damasus, lie the well-known Loggie named after the Umbrian master. They were unprotected from all inclemencies of the weather until 1873, when Pius VII erected large windows. The wonderful frescoes were painted in accordance with the sketches of Raphael and under his constant personal supervision, by Giulio Romano, Giovanni da Udine, and some of their contemporaries. The whole plasterwork is by Giovanni da Udine, who also painted all the ornaments. The long passage is divided by thirteen vaults into as many sections. The frescoes of the ceiling in the vaults, twelve of which contain scenes from the Old Testament, and one from the New Testament, are the chief attraction of the Loggie. These quaint paintings, framed paintings, four in each vault, display rich imagination and marvellous beauty of composition, and are among the most characteristic creations of the master. The graceful and charming reliefs, the delicate ornaments, the sitting, standing, hopping, and dancing figures, and the numerous other admirable details make the Loggie an inexhaustible source of the richest inspiration for every art.

G. The Loggie di Giovanni da Udine.—Immediately under the Loggie of Raphael, on the first floor, are the Loggie of Giovanni da Udine. The general scheme for this suite is likewise due to Raphael, but the execution was the independent task of Giovanni. The caps of the vaults are beautifully decorated with leaf and tendril-work, enlivened by animals of all kinds. In the rear of the Loggie, under a magnificent Renaissance portal of great delicacy, dating from the time of Leo X, the marble bust of Giovanni is exhibited. The other portions of the Loggie of the first and second floors were painted in entirely unpretensions fashion by Clement VIII and Alexander VII. by Longhi, Pasquino da Foenza, Paolino School, Cozza, and Mantovani. These are not accessible to the general public.

H. Galleria degli Arazzi.—In a modestly decorated hall, immediately adjacent to the Galleria dei Cameebr, hang the famous twenty-seven pieces of tapestry —called arazzi.—Woven of silk, wool, and gold thread by van Orley and van Cocke, the price of each piece was stated to be $12,000; these tapestries have always been the subject of great admiration, and numerous copies may be found in Berlin, Loreto, Dresden, Paris, and other places. Raphael made cartoons for ten of the Galleria tapestries; his pupils Penni and Perin del Vaga executed twelve others in accordance with smaller sketches of the master; five are works of more recent date. The first series formerly adorned the unpainted lower portion of the walls of the Sistine Chapel; the second series were intended for the Consistorial Hall. Seven of the original cartoons of Raphael were purchased in France by Charles I of England, and they may now be seen in the South Kensington Museum. During the sack of Rome in 1527 the tapestries were stolen, but Julius III succeeded in having them restored. When Rome was occupied by the French in 1798, they were seized by the French, and in 1808, ten of them were purchased in Rome by the Vatican. They were returned to the Vatican in 1871, and they are now carefully preserved. (Consult Farabulini, "L'arte degli Arazzi e la nuova Galleria dei Gobelini al Vaticano", Rome, 1884.)

1. Studio del Musico.—The Vatican possesses an extensive studio for mosaic painting. The number of different coloured glass-gastes used exceeds 11,000. Almost all the altars in St. Peter's furnish evidence of the perfection to which this art has been carried in the imitation of renowned paintings. In the studio, which is at once an exhibition and salesroom for the mosaics manufactured, the visitor can see the work in progress, and the patient labour of many years. The pope is wont to choose a specially beautiful example of mosaic work as a present for royalty.

At the conclusion of this section it may be said that there is a vast number of other works of art distributed here and there throughout the Vatican Palace, but not accessible to the general public. To these belong the paintings of Zucchi in the Torre dei Quattro Venti, the Bathroom of Cardinal Bibiena, the chiaroscuro in a hall on the second floor, etc.

VIII. THE PALACE AS A SCIENTIFIC INSTITUTE.—Regarded from the point of view of scientific productivity, the Vatican is the busiest scientific workshop in Rome. Scientific materials of the highest order and in astonishing abundance are stored up in the palace, access to them is easily obtained, and the conditions for work are most favourable. Apart from the most modern scientific theories, for which of course the Vatican treasures offer no materials, information on all branches of human knowledge may be found there. The sources which the Vatican affords for the history of science have been studied from the beginning, and to some extent absolute, neglect. This remark applies with special force to philosophy, theology, history, literature, philology in all its branches, jurisprudence, geography, ethnology, and art, for all of which categories the most important materials are to be found here. (Concerning the manner of handling these sources, see INSTITUTES, ROMAN HISTORICAL.)

Despite the depressed financial position of the Curia, the pope annually increases his appropriations for the cultivation of science within the walls of the Vatican; this offers clear testimony as to the attitude of the Church towards scientific pursuits. Over this research she exercises only remote supervision; the investigator is at perfect liberty to pursue his studies, and any studies with the result of any smaller works demand only recall the names of Bethmann, Munch, Mommsen, Duchesne, Kehr, Lammer, Sickel, Pastor, and dozens of others, turn to their works, and learn their views, to be convinced of the scientific liberality of the Vatican. (Cf. Walsh, "The Popes and Science. The History of the Papal Relations to Science during the Middle Ages and Down to our Time", New York, 1911.)

A. The Vatican Archives. (1) The Contents of the Archives.—It was only natural that the Church from the first centuries of her existence should devote great care to the collection of all important documents
The existence of the Vatican secret archives really began with Innocent III (1198), so that it possesses documents of seven centuries. The abundance of materials requires, in view of the prime importance to scholarly investigation (see Brom, op. cit., 7-14). Passing over the Guardaroba and Biblioteca Segreta, "which have none other than a nominal existence," and the still uninvestigated portions of the Archivi dei Memoriali, del Buon Governo, and dell' Editore SSno., the following are the chief groups of the archival materials: (a) Archivio Segreto; (b) Archive of Avignon; (c) Archive of the Apostolic Chamber; (d) Archive of Sant' Angelo; (e) Archive of the Dataria; (f) Consistorial Archive; (g) Archive of the Secretariate of State; (h) Various Collections.

(a) Archivio Segreto.—The whole archive is called Archivio Segreto, from the name of its oldest portion, which, however, retains its specific name. It contains seventy-four armari, or presses, in which are: (i) the volumes of the Vatican Registers (Armar. 1-28); (ii) the "Diversa Camera" (29-30) and "Collectoria camera apostolicae" (57); (iii) the Registers of Transcripts (31-37, 46-49, 52-54, 59-61); (iv) the Register of Briefs (38-45); (v) the Indexes (50-51, 56, 58); (vi) the "Triennales" and "Diversa Germaniae" (62-64); (vii) the "Introitus et Exitus Camera" (65-74); (viii) the "Instrumenta Miscellanea".

(b) Archive of Avignon.—It consists of two main series: (a) the "Archives of Avignon" collected materials, collected by the Avignon obedience during the Avignon exile (1305-76) and the time of the Schism, together with various other archival collections; (b) the "Introitus et Exitus Camera" (1705) and the "Instrumenta Miscellanea".

(c) Archive of the Apostolic Chamber.—The chief portions of this archive have been mentioned. These are by no means four complete series of volumes; on the contrary, very important and extensive portions of this archive are bound up with the volumes of the Avignon Registers, while other documents remain unbound in other places. Consequently, the making of an exact inventory of all camerale acts is urgently called for. In the section "Obligationes et Solutiones" some of the volumes belong to the Apostolic Chamber and some to the Chamber of the College of Cardinals.

(d) Archive of Sant' Angelo.—Sixth IV, Leo X, and Clement VIII are the founders of this archive, since it was their opinion that the many imperial documents and titles of possession of the Roman Curia would be best preserved in Sant' Angelo, as the strongest bulwark of Rome. In 1798 the contents of the archives were transferred to the Vatican, where they received special quarters under the name of "Archivio di Castello," and are still kept separate. In the registers of this archive there is a variety of things treated: (e) Archive of the Dataria.—The three great sections of this archive contain: (i) the Register of Petitions (Register Suppli- cationum), which begin with 1342; (ii) the Lateran...
Register of Bulls, which contains the Bulls sent out by the Dataria between 1389 and 1823; (iii) the Briefs of the Dataria, a name which is not quite exact. These Briefs, as distinguished from those mentioned above (a, 4), were issued in answer to petitions. (f) Consistorial Archive.—Such of the archival materials as are found in the secret archives, other parts are in the archives of the Consistorial Congregation in the library consist of the “Acta Camera” (1489-1600), “Acta Cancellarii” (1517-64), “Acta Miscelanea” (1409-1692), and “Acta Consistoriali” (1592-1668; 1736-49). (g) Archive of the Secretariate of State.—-Despite the great gaps which are found in the secret archives, this archive possesses the greatest importance for the political and ecclesiastico-civil history of modern times. It includes the following subdivisions: (i) Nunciations and Legations—Germany (1515-1809), France (1517-1809), Spagna (1563-1796), Polonia (1576-1873), Portugal (1535-1809), Inghilterra (1665-1693), 1702-91; Genova (1752-81; 1793-1804), Venezia (1822-42), Genova 1590-1796, Napoli (1570-1809), Colonia (1575-1799), Monaco di Baviera (1768-1809).—Paci, that is negotiations for various treaties (1628-1715).—Svizzera (1522-1803).—Fi- renze (1572-1809),—-Savona (1580-1796),—Avignone (1564-1789),—Flandria (1553-1796); to which section also belong five bundles of letters embracing the years 1750-1815. Of these bundles and the secret archives, Bologna (1553-1791),—Ferrara (1597-1740),—Romagna (1570-1710),—Urbino (1664-1740),—Diversi, that is copies of letters and other things, all of which refer to the sixteenth and seventeenth centuries. From this list one may see both the richness and the great importance of this division. (ii) Letters of Cardinals.—This contains the correspondence between the Holy See and the cardinals, the various archbishops, and for the period from 1523 to 1803. Here are thus contained both the minutes of the letters dispatched and the originals of letters received from the cardinals. There are, besides, in this collection numerous letters from princes, legates, bishops, etc. (iii) Letters of the bishops and prelates.—The letters of the bishops and prelates are included in the above-named categories, but also purely ecclesiastical-political but also purely political information, so that they possess a high value for profane history. The original letters and the minutes of the answers dispatched extend from 1515 to 1797. (iv) Letters of princes and titled persons.—Many distinguished personages including bishops and prelates) are found among the writers of this collection of letters, which contains a large series of volumes with answers. The division extends over the years 1513-1815, and has been as yet little availed of. (v) Letters of private individuals.—Most of the documents of this collection emanate from the pens of those who, while in communication with the Curia, do not belong to the above-named categories. To a great extent the writers are not indicated. There are letters from bishops, prelates, and nobles, which should have been included elsewhere. The letters extend from 1519 to 1803. (vi) Letters of military men.—Here are collected all the documents connected with the history of the Curial wars between 1572 and 1713. (vii) Varia Miscellanea (not to be confounded with other Vatican Miscellanea).—Besides numerous volumes of scripts of Acts of the sixteenth and seventeenth centuries, there are here collected all those documents which could not well be included in the other divisions: instructions, travelling experiences, concordats, tracts of all kinds, diaries of concilists, etc. The whole collection is of great importance. 4. Various Collections.—The “Varia Miscellanea” have absorbed the Biblioteca Cevia as well as the chief portion of the Biblioteca Campani. The Biblioteca Spada, in so far as it is yet in the archives, was embodied in the nunciature of France. The following, however, remain independent collections: (i) Biblioteca Pio, manuscripts of Cardinal Pio Carlo di Savoia, purchased by Benedict XIV in 1753. They should consist of 428 volumes, but many are missing. (ii) Biblioteca Carpena, the library of manuscripts of Cardinal Gaspare Carpena, which originally consisted of 229 volumes. The scientific interest of these volumes is not very great. (iii) Biblioteca Bolognetti, consisting mainly of copies of documents of the sixteenth and seventeenth centuries. This belonged to the Bolognetti-Cenci family, which assigned it to the Vatican archives in 1810. (iv) Biblioteca Rospigliosi, a portion of the original manuscripts, which belonged to a former official of the archives. (v) Papers of Cardinal Garanpi, the 251 bundles of Acts belonging to the efforts of Cardinal Garanpi and containing partly originals and partly copies of documents pertaining to his diplomatic activity in Poland and Germany. (vi) Manuscripts of G. B. Gonfalonieri, eighty-nine volumes which belonged to important custodians of the archives. (vii) Batt. “Diario d'Angelo”, the diplomatic correspondence of Cardinal Danini for the years 1541-59 in six volumes. (viii) “De caritate S. Sedis Apostolicae erga Gallos”, forty-two volumes and a number of volumes transferred to the Vatican archives. (ix) of the manuscript journals and newspapers of the seventeenth century. (x) Naranese papers, twenty- two bundles of documents which disappeared in some unknown manner from the Neapolitan Carta Naranese, and were purchased and placed in this archive by Leo XIII in 1890. They do not contain any important diplomatic papers. (xi) Biblioteca Borgia.—The huge Borgiae Archive may be termed “an integral portion of the Secretaria di Stato during the pontificates of Clement VIII, Leo XI, and Paul V”. Leo XIII acquired this great archive in 1892. With the aid of the inventories of the Vatican Archives and the Vatican Library some guidance as to the 2000 volumes may be obtained (xii) Biblioteca Borgia. In addition to the other series of this kind which stand in the “Varia Miscellanea” there is this third, which extends from 1525 to 1854. The printing on the title pages possesses a high value for the history of culture. (xiv) “Varia Diplomata” includes all the archives of orders and monasteries to be found in the Secret Archives. Some are of exceptional interest and deserve a considerable amount of care, yet not generally accessible. (2) Statistics.—The estimate of 60,000 volumes, cassettes, and bundles of Acts, contained in the archives, does not include such huge collections as that of the Buon Governo and other smaller collections. The following list, giving the number of volumes arranged according to the collections, conveys an idea of the extent of the archives:—

that the Registers of Briefs, mentioned above (a, iv), have not passed definitively into the possession of the archives, but have only been deposited there; while the Indices, without which the use of the former is scarcely possible, have been again withdrawn. Those engaged in research must, therefore, apply to the archivist of Briefs, one of the officials in the Secretariate of State.

(3) The Administration of the Archives.—The scientific management of the archives is entrusted to a cardinal with the title of archivist of the Vatican Secret Archives. All economical questions, such as the salaries of the officials and the expenditure necessary from time to time, are referred to the Prefecture of the Apostolic Palace. The archives are therefore, no regular budget for expenditure. The principal administration is entrusted to the assistant archivist, who issues all the communications to the other officials. He is assisted by a secretary, who, besides fulfilling other duties, supplies information concerning research work and other scientific questions. Five writers (scribitori) are engaged on the making of inventories and the transcription of individual documents, in the service of scholars dwelling outside Rome. To these officials is also entrusted the administration of a certain number of sections of the archives. The work-room is placed under the charge of a custodian (custode), of whom one is the director of the National Palaeography of the archives. Of the five custodes, one is called the custode alla cattedra, that is, it is his special task to register the number of the manuscript required, to deliver it to the student, and to receive it back at the conclusion of the period of study. For the repair and re-binding of injured volumes and the restoration of documents two restauratori have been appointed. A special clerk is employed exclusively with the pasting on of the numbers labels and with the pagination of all the papers which previously bore numbers. Finally, there is a porter who watches over the entrance door in the Torre dei Quattro Venti.

Besides the work-room, the office of the assistant archivist, and the old work-room, fifty rooms (including a large number of very extensive halls) are under the charge of the administration. The sixty usual offices all occupied in the work-room can be increased to eighty to accommodate an unusually large body of investigators. In exceptional cases, women are permitted to study in the archives. The working year extends from 1 October to 27 June. During the working year 1909-10, 150,000 applications forms for volumes were received; during the year 1910-11 only 120,000. The difference is due to the fact that since October, 1910, it has been allowed to send to each individual or even three successive manuscripts on the same form—a privilege which was not previously allowed. The last inventory was made in July, 1910.

(4) History.—Concerning the earliest attempts to create archives in the Vatican, the reader is referred to the work of the present writer on the Camera Colleoniensis and the Camera Tardia (1892). All these considerations render the Secret Archives of the Curia by far the most important archives in the world. Other collections not mentioned by Brom have been acquired in recent times. From the Santini effects 200 volumes of Acts (the Dataria were purchased in 1890). On 13 April, 1910, a number of parchment documents were acquired, and the record office in Terni. The last volume of the series of the Secret Archives of the Curia, from the pen of Cardinal Scipione of the Sacred College. In the years 1611-13 Paul V had the present archives constructed by the cardinal librarian, Bartolomeo Cesè; these are situated at the western narrow side of the Palazzo Farnese, the hall of state built by Sixtus for the Church, the pontiff devoted large sums to the perfecting and restoring of the materials. The Secret Archives of the Vatican were from the very beginning regarded as an administrative institution for the facilitation of Curial affairs. Consequently, it was so planned as to answer the needs it was intended to fill. When subsequently, during the heated literary warfare against the Protestant innovations, it became necessary to make the collected treasures accessible to the great historians of that age, it lost nothing of its original character. In his work, "Costituzione dell'archivio Vaticano e suo primo indice sotto il Ponti-
The Vatican Library is the first among the great libraries of the world in the importance of its materials, but it carries on the important work of making them accessible to scholars. This is made possible by the system of secret archives, which has been in operation since the establishment of the library.

(1) The Manuscripts.—The whole fund of manuscripts may be divided into closed (historical) and open collections. The former are the collections which are not open to the public, and are only accessible to the librarian and his assistants. The latter comprises all the manuscripts which are available for consultation by scholars.

The library contains a vast collection of manuscripts, which have been deposited by various countries and institutions. These manuscripts are kept in the archives, which are divided into two main groups: the historical archives and the research archives. The historical archives contain the official documents of the church, while the research archives contain the manuscripts of scholars and bibliographers.

The library also contains a large collection of printed books, which are available for consultation by scholars. These books are kept in the reading room, which is open to the public.

</table>

The total of printed books is thus in round numbers 350,000, which may be said to constitute a very considerable library. The Consultation Library is, as its name suggests, composed of works which immediately promote or facilitate the study of the manuscripts. The Rinvia collects the collection of books which was formed in the Vatican between 1620 and 1630; in the Rinvia Generale are gathered all the works (arranged according to the various branches of knowledge) which have been secured by the Vatican at any period. If it hereafter be secured, probably that they do not specially pertain to the Consultation Library. The name of the other collections is quickly explained: Barberini, because it emanated from the princely house of that name; Palatini, because it came from Rome from the Heidelberger library of the Elector Palatine (Palatinus elector); Zeladiana, because it belonged to the effects of Cardinal Zelada; Mai, part of the effects of Cardinal Mai. Among all these books are found a considerable percentage of rarities than is usual in comprehensive libraries.

(3) The Accommodation of the Manuscripts and Books.—The manuscripts are accommodated in their old, low-sized, painted wooden cases, which are distributed along the walls of the halls of the library. When removed from the cases, the greatest care is necessary lest anything should be lost. As there are no plans by which damage might be done to the manuscripts, the library administration has prevailed on the Prefect of the Apostolic Palaces to establish eight fire-proof magazines into which they may be transferred. For these magazines have been utilized a portion of the old reading room, the room of the cardinal librarian, and two other rooms. This accommodation was made possible only by the removal of the Vatican Printing Office into new quarters (see below, section XV). As the halls of the reading room office lay below the old reading-room, and right beside the rooms in which the Biblioteca Barberini has been accommodated, these halls were easily annexed to the library. The new reading-room was then established on the ground floor, and fitted with a water-power elevator for the transferring of manuscripts from the magazines situated immediately overhead; this afforded greater security and convenience, the manuscripts being more promptly procured. All these innovations were of great importance for the promotion of studies. The reading-room is convenient to the Consultation Library, and contains almost twice as many desks as the old reading-room.

All the work in the new magazines was completed at the beginning of 1912, and the transference of the manuscripts begun. The two Barberini Archives now stand on the third floor of the new magazines. In consequence of this reconstruction work, the printed books will be arranged as follows: Among the smaller rooms of the former printing office is a cabinet for the Prefect of the Library, a hall for the Biblioteca Mai, and other rooms in which the Heidelberger books (Palatini) and portions of the Riva Generale are accommodated. Two halls will be devoted to the Biblioteca Barberini, a book collection of very high value. In the hall of the Consultation Library with its two ante-chambers will be placed, in addition to the Consultation Library branch, the Autore Chaseni and the two departments of biography and history (the Collezioni Generali). To the old presses for the manuscripts in the state-halls of the library, now vacated, will be transferred the collections on canon and civil law, the works on art and its history, and the remainder of the Riva Generale, in so far as it is not accommodated in the old printing offices.

(4) Inventories and Catalogues, which are essential for the guidance of the reader, are available for both manuscripts and printed books. They are either in manuscript or printed. Those for the manuscripts consist of 170 volumes of manuscript and 17 volumes...
of printed inventories. The preparation of the Latin inventories was begun in 1594. All the inventories are in the reading-room; catalogues for the printed books are to be found partly in the reading-room, and partly in the Consultation Library.

The preparation of manuscript catalogues for special divisions of the manuscripts was begun at an early date. All of these are still retained in their manuscript form; their printing was commenced as early as the seventeenth century. For example, Anastasius Kirsch released a catalogue of the Copia Vat. Lat. 1089, which was executed in 1630. In the years 1675-93 a detailed catalogue of the Hebrew library by Giulio Bartoleoni, in 1747 the catalogue of the Capponiana, and in 1821 that of the Cicognara collection. Apart from these and similar publications, there are in the reading-room fifteen volumes of printed inventories of manuscripts: (1) Mai, "Catalogus codicum Bibliothecae Vaticane (Origitalia)" (1832). (2-4) Assmann, S. E. and J. S., "Bibliotheca apostolicae Vaticane Codicium Manuscriptorum Catalogui": I, "Codices Ebraici et Samaritani" (1756); II, III, "Codices chaldaeici sive syriaci" (1758, 1759), (5) Stevenson (sen.), "Codices Palatini graeci" (1825). (1825). (6) Syllaburgus, "Catalogus librorum manuscriptorum graecorum in Bibliotheca Palatina Electorum Moguntini" (1888), (7) Feron, "Codicum graecorum in Bibliotheca Vaticana manusciptorum Catalogus" (1910). (8) Frankfort-on-the-Main, "Codices graeci Regnum Sueciae et Pii III" (1888). (9) Feron and Battaglini, "Codices ottoboniani graeci" (1893). (10) Stornajolo, "Codices Urbaniens graeci" (1895). (11) Stevenson (jun.), "Codices Palatini latini", I (1880), II (1884), (12) Salvo-Cozzo, "Codici Italicorum romanorum" (1898), (13) Stornajolo, "Codices Frenchi de Cavaleri, Codices Vaticani latini", I (codd. 1-678), 1902, (11-12) Stornajolo, "Codices Urbaniens latini", I (codd. 1-500), 1912, 500-1000, 13-15) Marucchi, "Monumenta papyracea egyptia" (1891). (14) Marucchi, "Monumenta papyracea latina" (1895). (15) "Il grande papiro egizio della Biblioteca Vaticana" (1888). (16) "Codici Arabi, nuovo fondo della Biblioteca Vaticana" (Palermo, 1900).

The volumes by Stevenson on the Codices Palatini have been revised by de Rossi, who prefixed his renowned treatise: "De Origine, Historia, Individibus Serimii et Bibliothecae Sedis Apostolicae Commentatio" (Rome, 1881-1884). Other inventories on the Codices latini, Urbaniens graeci, and Vaticani graeci are in the press. A further volume on the Vaticani latini and on the Vaticani graeci are also in preparation. For the books of the consultation library there is an exhaustive card catalogue according to the system of Staderini. For the collections of the Prima Raccolta there are seven folio volumes of Indices, and for these two volumes of inventories. A manuscript catalogue of the incunabula ("Editiones Secundi XV Bibliothecae Vaticanae") in large folio, in three volumes with appendix, also stands in the consultation library. Of the exceedingly valuable Nisselliana bequeathed by de Rossi there is a bulky manuscript inventory of 1898 and an alphabetic index. The Biblioteca Barberini has its old excellent catalogue in imperial folio, ten of the volumes being accessible to the public. For the other departments there are also catalogues, e.g. twenty volumes for the Raccolta Generale, a catalogue of the Zebulana in Cod. Vat. Lat. 1898, etc., which upon request is placed at the disposition of scholars in exceptional cases. Among the printed catalogues of books is that of Enrico Stevenson, jun., "Inventario dei libri stampati Palatino-Vaticani" (1886-91). The authorities of the Vatican Library are preparing (1912) a "Catalogo dei cataloghi e libri della Biblioteca Vaticana", which will be of high scientific and practical interest. It will show the development of the library. In this century the Vatican Library possessed catalogues of such perfection that we admire them even to-day.

All readers who wish to use only printed literature are carefully excluded from the library. In view of the exclusively manuscript character of the Vatican as a scientific institute, this is readily comprehensible. The accommodations of the Vatican Library are entirely inadequate to the requirements of its general public in search of printed books. Should the Vatican Library thus lose its unique position, the other large libraries of Rome, instituted for the consultation of printed books, would suffer. Furthermore, the present conditions have been sanctioned by the past, and have been fully tested by experience. Of course it is a result of the "Katalogisierung der Vaticana" in "Historisches Jahrbuch der Gesellschaft", 1890, 718-27.

(5) Manuscript-repairing and Bookbinding Department.—The Vatican has always possessed a bookbinding department, and also a department for renovating manuscripts as well as the skill of the present-day scribes. During the last century scientific attention has been devoted to the preservation and freshening of faded parchment manuscripts as well as to the preservation of paper manuscripts whose existence is wholly or partially threatened by a corroding ink. One of the most successful library boards in these investigations is that of the Vatican, which has since 1899 extensively employed every discovery that has contributed to the demands of its manuscript treasures. At the proposal of the prefect of the Vatican an international conference to consider the question of the preservation of manuscripts assembled at St. Gall in the summer of 1898, and its consultations were attended with the greatest success (cf. Poss, "Handschriften-Konservierung, nach den Berichten und Vorschlägen der Konferenz zur Erlangung und Ausbesserung alter Handschriften von 1898, sowie der Dresdener Konferenz des Archivare von 1899", Dresden, 1899). A series of model restorations were made in the Vatican repair-shop, not only of its own valuable manuscripts, but also those of ecclesiastical possession elsewhere. In his "Note upon the Present State of the Vercelli Gospel" in the "Second Report of the Revision of the Vulgate" (Rome, 1911, p. 20 sqq.), Abbé Gasquet describes a particularly difficult work of this kind. Besides these works, which are performed by specially trained and careful workers, the binding of the manuscripts is also undertaken, the arms of the reigning pope and of the present cardinal are affixed. In some cases the arms of popes are omitted from the covers of printed books. A fire, which broke out in this shop some years ago, caused little damage, but it led to the introduction throughout the whole library of mechanical appliances against fire. In this respect the Vatican surpasses every other library.

The Publications of the Vatican Library.—The administration of the Vatican Library makes it its aim, since the fundamental reorganization of the whole institution by the prefect, Father Ehle, S.J., (who resigned his place voluntarily to Father Ratti of Milan in 1912), to employ officials with a view to their own literary productions. This policy, which
VATICAN

a comparatively short time has produced splendid results, has made possible six great undertakings of fundamental importance for science. The first collection bears the title: "Codices e Vaticanis selecti, typographically expressed, jussu Pi Bapini, consili and opera procuratorum Bibliotheca Vaticana: Serie. The first three contain the most important and beautiful manuscripts of the Vatican; by photograph reproduction, these become accessible to persons unable to visit Rome. Eleven volumes of this collection have appeared: (1) "Fragmenta et Pictura Vergiliana codices Vaticani 3225" (60 pages; edition exhausted); (2) "Pictura, ornamenta, compitura, atque representationes altissimi sacrosancti Romani pontificis: "Le Pictura e Vaticanis" (300 pages); (3) "Portae et murae Romanae audit" (100 pages; edition exhausted); (3) "Miniature del Pontificale: "Codices Vat. Ottobon. 501" (25 pages); (4) "Bibiliomm S. Graecorum codices Vaticani 1209 (codex B) Pars prima: "Vetus Testamentum"; 1, 1-394 (230 pages); 2, 385-944 (320 pages); 3, 945-1234 (150 pages); 4, 1236-1612 (170 pages). The first five, which introduces to this work appears, was published in 1912; (5) "Il Rotulo di Giosuce, codex Vat. Palat. Marc. 431" (100 pages); (6) "L’origine del Canzoniere di F. Petrarca, codex Vat. 3195" (100 pages); (7) "Frontoni alborumque fragmenta, que codice latino 5750 scriptum comprehenduntur" (300 pages); (8) "Il monumento greco dell’imperatrice III (99-112), (codex B) Pars prima: "N. Dionisius"; (9) "Caesi Dionisio Coeciliis Historiae Romanorun lib. LXXX. LXXX. quae superant, cod. Vat. gr. 1288. Prefixus est Pius IV. "Novellae de Cavaliere" (50 pages); (10) "Le Miniature della Topografia Cristiana di Cosimo Indecens, codex Vat. gr. 699. Con introduzione di M. A. Bannister. Codex Vat. gr. 1424. Con introduzione del Prof. Dott. C. Riccobu (100 pages). Three volumes are already in the press and to be issued during 1912: (1) "Paleografia Vaticana: Con introduzione di M. A. Bannister M. A.; (2) "Ciceronis Liber: De Republica: Con introduzione di R. Chedid, Codex Vat. Palat. Marc. 431" (100 pages). With this Series major is associated as a second undertakings the Series minor, of which the following four volumes have appeared: (1) "Miniature delle famiglie di Giacomo Monaco (codex Vat. Urb. gr. 1662) e dell’Evangeliario Greco urbanae (codex Vat. Urb. gr. 1663). Con breve prefazione e sommario (2) "Con brevissima prefazione e sommario "Elogia del codice di Francesco Volpi"; (3) "Pagine singole di due codici appartenenti alla Badia di S. Maria di Comari-Angius in Scozia. Con breve descrizione di R. H. M. Bannister M. A. Con contributo alla storia della scrittura isolata" (50 pages). On the third undertaking, the "Collezione Paleografica Vaticana", a single fascicle has appeared: "Le miniatures du siècle de la fin del Salario: Codex Vat. Palat. Marc. 383" (55 pages). The fourth collection is called "Collezioni di cartologiche, Artistico e Numismatici dei Palazzi apostolici, pubblicate per ordine di Sua Santità, a cura della Bibliotheca Vaticana, dei Musei e delle gallerie Pontificie". For this work the collaboration was obtained by the officials not alone of the library, but also of the "Biblioteca Medica of the "Biblioteca di Storia” (codex Vat. gr. 1424). In the four volumes have already appeared: (1) "Gli avori di Musei Profano e Sacro della Bibliotheca Vaticana, pubblicati per cura della medesima, con introduzione del Barone Rodolfo Kanzler" (edition exhausted); (2) "Le Nozze Allemandine, i passeggi con scene di accadimenti, dall’Odissesea e le altre pitture murali antiche conservate presso il Museo del territorio (vol. I); (3) "Introduzione al cono del Com. R. Nogara" (250 pages); (4) "Le Monete e le Bolli Plancio Pontificale del "Deliberande Vaticane, descritti ed illustrati dal Cav. Serafini. Tome I (615-1575)" (80 pages), with introduction by Le Grelle, "Saggio di storia delle collezioni numismatiche Vaticane"; (4) "I Mosacchi antichi conservati nei Palazzi Pontifici del Vaticano e del Laterano. Con introduzione del Comm. B. Nogara" (200 pages). In the press are: (1) Nogara and Pinza, "La Tomba Regolini-Galassi e i materiali provvisori del Museo Gregoriano-Etrusco" Vol. 4 (3 di testo ed 1 di tavolo); (2) Nogara, "I vasi antichi del Museo Etrusco e della Biblioteca Vaticana".

The fifth collection, "Le Pianta Maggiore di Roma nel secolo XVI e XVII, riprodotte in fototipia a cura della Bibliotheca Vaticana. Con introduzione di Francesco Volpi" (codex B) Pars prima: "Vera Roma" (vol. I); (2) "Roma prima di Sisto V. La Pianta di Roma Du Pérac-Laffrey del 1577. Contributo Storia di Roma: Con la facies, che si ritrovano nei rilievi di Roma nel secolo XVI e XVIII" (15 pages); (3) "Roma al tempo di Urbano VIII (1623-1644). La Pianta di Roma Maggi-Maupin-Losi, di quarta fogli, riprodata per la prima volta dalla stampa originale" (20 pages); (4) "Roma prima di Sisto V. La Pianta di Roma Du Pérac-Laffrey del 1577. Contributo Storia di Roma: Con la facies, che si ritrovano nei rilievi di Roma nel secolo XVI e XVIII" (15 pages). The last and most comprehensive, and furthermore, on account of the austere expense of the edition, the most accessible, collection is the "Studi e Testi". The. The twenty-three fascicles which have already appeared contain either the results of systematic research among the Vatican manuscripts with a definite purpose, or savagery and parings which fall from the work-table while more important works are being accomplished. From the following arrangements, however, the part of the work which the most distinction becomes apparent: Marco Vatassa has published fascicles 1, 2, 4, 10, 14, 16, 17, 18, and 20: (1) "Antonio Flaminio e le principali poesie dell’autografo Vaticano 2570; (2) "Le due Bibbie di Bovino, ora codice Vaticano latini 10510, 10511, e le loro note storiche; (3) "Aneddoti in dialetto romanese del secolo XVII, tratti dal codice Vat. 1632"; (4) "Per la storia del dramma sacro in Italia"; (5) "Del Petrarcha e di alcuni suoi amici"; (6) "Introduzione a codice latino 10968; (7) "Introduzione al codice "Petrarcha e della Biblioteca Vaticana". Piu Franchi e de’ Cavaliere published fascicles 3, 6, 8, 9, 19, and 22: (1) "La Passio SS. Mariani et Jacobi"; (2) "I Martiri di S. Teodoto di Acre e di S. Ariade di Primoresso con un appendice sulle testo originale del Martirio di S. Eleutherio"; (3) "Note agiografiche: a. Ancora del martirio di S. Ariade; b. Gli Atti di S. Ginestino"; (4) "Note agiografiche: a. Nuove note aggiuntive del martirio di Arape, Irene e Chione; d. Gli Atti di S. Crispina; e. I Martiri della Massa Candida. f. Di una probable fonte della leggenda"; (5) "Hagiographica: a. Osservazioni sulle
legende dei SS. Martini Mena e Trifone. b. Della legenda di San Pancrazio Romano. c. Intorno ad alcune reminiscenze classiche nelle leggende agiografiche del secolo IV.

(6) "Note agiografiche, fascicolo terzo.

Giovanni Mercati published the fascicules 5, 7, 11, 12, and 15: (1) "Note di letteratura biblica e cristiana antica"; (2) "Antiche relazioni ambrosiane-romane, con un esercizio sui frammenti dogmatici ariani del Mai"; (3) "Varia Sacra: Fase. I. a. Anonimi: Libri contenenti eugenetica in Matthaeum Fragmenta. b. Autore stesso del precedente e J. C. Cinn. Flavio Alessandri"; (4) a. "Un frammento delle isopitosi di Clemente Alessandri. b. Paralipomena Ambrosiana con alcuni appunti sulle benedizioni del Cero pasquale"; (5) "Opuscoli inediti del Beato Cardinal Giuseppe Tommasi tratti in luce". Enrico Carusi published fascicole 21: "Disques e lettere di Gioacino Gherardi, maestro Pontificale a Firenze e Milano 1457-1490". Eugene Tisserant published fascicole 23: "Codex Zuminensis rescriptus Veteris Testamenti. Texte grec des manuscipta Vaticana Syriacae. 162 et Mus. Brit." Additional 1465, editate aiutando inter-duction et notes. Of the published fascicules there remain: "Catalogo sumarico de la Esposizione Gregoriana apertito al pubblico il 27 Aprile 1904, a cura della Direzione della medesima Biblioteca, Ediz. seconda." In the press is: Mercati e Ferrini, "Basilicorum paratitla." The following are in preparation: (1) Mercati, "Psalmorum hexapolorum reliqui et codice rescripto Ambrosiano"; (2) VATASSO, "Cronache Forlivesi di Maestro Giovanni de Pedrini, canonico di Forlì nella seconda metà del sec. XVII e XIV delle Armonie evangeliche d’Annamio"; (3) Carusi, "Diario di Fiorenza dall’anno 1582, di Giusto d’Anghieri"; (4) NOGARA, "Il libro XXXVI della Storia d’Italia di Flavio Biondo dai codici Vatic. 1940-1946". All these collections may advantageously be used as works of reference on the Vatican Library. The Vatican Library has always been one of the world’s great libraries in its number of scientific publications, despite its comparatively small staff and insufficient funds.

(7) The Administration of the Vatican Library.—Since the time of Marcello Cervini, the first cardinal who was named (1548) librarian of the Apostolic Library, this office has borne the honorary title of Protomastorium. The librarian, named by the pope, is in general the supreme direction of the library, which he represents in all questions and under all circumstances relating to the library as a whole or to the administration in general. Under him there is, for the technical and scientific management of the library, a prefect—formerly there were two—who has to decide all questions referring to the ordinary administration and to issue such instructions as these questions may demand. The position of assistant librarian, revived by Leo XIII, is at present vacant. For the chief language or groups of languages represented in the Vatican manuscripts there are six ordinary and five honorary scriptores, to whom is entrusted the scientific cultivation of the departments corresponding. Thus, besides the ordinary staff, there are twelve scientific general officials. For the collections connected with the library, e.g. the Cabinet of Coins and Medals (Il Medagliere) and the Christian Museum (Museo Sacro), there are four directors, whose duty is the scientific supervision of their collections. Under the supervision of one of the scriptores, who is in charge of all the duties connected with the printed books, besides superintending special portions of the library. The prefect is assisted by a secretary, who has in addition the duty of keeping the accounts. Seven bidelli (library attendants) bring the manuscripts and books to the readers, transfer the departments to their new quarters when a change has been determined on, and keep everything in order in the Consultation Library. In the repair-shop and book-bindery four men are permanently employed. The salaries of the officials are exceedingly modest. No official, even in the highest stations, receives more than fifty dollars a month. The title of "Scriptor of the Vatican Library" has been held by such men as Giovanni de Rossi, Mariano Rampa dell’uomo, Stevenson, and many others, and is to-day borne by such world-famous scholars as Mercati, Franchi de’ Cavaliere, VATASSO, etc. The annual budget of the library is the reduced annual rate of about 600 dollars. On extraordinary occasions great loans have been secured—e.g., $100,000 when the Barberini Library was purchased. During his term of office, Father Ehrl raised the budget to about 7000 dollars by obtaining contributions from his friends and acquaintances. In all financial questions the library is subordinate to the Prefecture of the Apostolic Palaces, and the archives of the library contain no acts extending back beyond the time of the first cardinal librarian; more recent administrative acts are, however, complete. In earlier times all manuscripts whose publication was adjudged untimely, dangerous, likely to cause misunderstandings etc., were marked on the back with a small black cross. When such a codex was asked for, permission to consult it was refused to the reader and referred to the particular scholar. This custom led to distinctions not always of a very agreeable kind, and was entirely discontinued by Father Ehrl, so that any scholar can procure without further ceremony any manuscript which he desires. In the case of the exceptionally valuable codices or those which have to be reserved for the library, the readers must observe all the directions which the prefect has found it necessary to impose.

The administration shows the greatest complaisance in its dealings with scholars, and admits outside the regular four-hour period of study those whose time is very limited. The same rule applies to Thursday, which is a free day, and to the holiday libri. The library is open from 1 October to 27 June—in winter from 9 a.m. to 1 p.m., and in summer from 8 a.m. to 12 noon. On all Thursdays, feasts, certain memorial days, the holidays of Christmas, the Carnival and Easter, and on some other occasions, it is closed. The library ordnances issued by Sixtus V are carved in marble at the entrance. These books are kept under lock and key in the "Chirographs" of Clement XII, Benedict XIV, and Clement XIII, as well as in the Decree "Ex audientia Sanctissimi" of Pins IX; in particular, a number of the holidays which proved especially burdensome to strangers have been abolished. By Motu Proprio of 8 September, 1878, Leo XIII made further alterations, among which the revival of the office of assistant librarian. Finally, on 21 March, 1885, the same pontiff issued a new "Regolamento della Biblioteca Vaticana" together with a "Calendario per l’apratura e per lo studio e servizio della B. Vaticana". After these regulations had remained in force for a three years’ trial, they were revised and raised to a permanent law by Motu Proprio of 11 October, 1888, which is still binding.

(8) The Collections connected with the Library.—The exhibition in the library halls of the costly presents received by the popes in the course of the last hundred years from emperors, kings, princes, and rich private persons, has converted some of these halls into a museum, which, while possessing great attraction for strangers and decorating the rooms, is without any real scientific value. Countless other objects, however, have been collected for scientific reasons. A beginning was made by Benedict XIV (1740-58), when in 1741 he bought the magnificent collection of old Christian glasses belonging to Cardinal Gaspare Carpegna and transferred them to the library. This collection forms the basis of the cele-
VATICAN

The above-named Vettori was the first custodian of this collection, which was last being placed immediately under the prefect of the library. Under Leo XIII Giovanni Battista de Rossi was named prefect of the museum, an honour intended only for him. To-day the directors of this division are again subordinate to the prefect of the library.

The Medagliere or numismatic collection was first exhibited in 1555 under Marcellus H. Clement XII (1734-40) transferred to the collection of Benedict XIV (1740-48) became its great benefactor, for acquiring the incomparable Albani collection. This glorious cabinet of coins is described by Venuti in “Antiqua Numismata maximi moduli ex Museo Cardinalis Albani in Vaticano Bibliotheca transfusa” (2 vols., Rome, 1739-44). The acquisition of medals was only interrupted during the nineteenth century. Many of the objects were sold by the Swiss, to enrich or—a fact which could not be detected in individual cases—were secretly incorporated in the Paris collection, so that the Medagliere returned to Rome greatly diminished. Pius X resumed the task of collecting, and the department was continuously enlarged. Many works were bought (1901) at the expense of 64,000 lire ($12,800). After the discarding of valuable duplicates, for which 10,000 lire was obtained, the Medagliere stands again in the grand total of 70,000 pieces. Among its most celebrated exhibits are the unimpaired as graces and the oldest papal coins. The custodian Serrani has recently issued the first volume of the scientific description of this collection.

The objects of pagan art in gold, silver, amber, etc., which came to the Holy See with the Museo Carpegna, the carved stones, enamels, glasses, carved ivories, urines, titles, etc., and the small bronze busts and tablets are accumulated by Pius VI in magnificent cases at the end of the long manuscript gallery at the entrance to the museum. Such was the foundation of the Pagan Museum, which to-day stands under the protection of Comandatore Nogara, and to which other media were later added. The department is subdiest to the prefecture of the library. Connected with this department (although not in the same building) is the collection of ancient pagan frescoes begun under Pius V, when he purchased the Aldobrandini "Marriage". Under Gregory XVI and Pius IX further frescoes, obtained from the walls of the old human houses, were added. The hall in which these frescoes are exhibited was painted by Guido Reni. Beside them are the brick stamps (classified and illustrated by Marini), a kind of factory mark stamped on the bricks of the most important buildings for the chronology of each.

Under Gregory XVI and Pius IX further frescoes, obtained from the walls of the old human houses, were added. The hall in which these frescoes are exhibited was painted by Guido Reni. Beside them are the brick stamps (classified and illustrated by Marini), a kind of factory mark stamped on the bricks of the most important buildings for the chronology of each.

Concerning the Aldobrandini "Marriage" and analogous objects Nogara has published an édition de luxe.

The hall for the Latin papyrus documents, richly fitted with costly marbles, was magnificently painted by Raphael Mengs. Here are collected documents belonging to the period 411 to 534, which are mentioned in any of the collections of the world. This collection was begun by Paul V, continued by Clement XII and Benedict XIV, while the costly decorations were completed by Pius VII. In each of the twenty-four receptacles in the walls are from one to three papyrus fragments. Besides the monumental work of Gaetano Marini, "Papyri diplomatici", Marucchi "Papi"ræae Latinae" (see above). The Cabinet of Drawings and Engravings contains originals by Sandro Botticelli, Raphael, Mantegna, and many other woodcuts and steel engravings, extending back to the time of Albrecht Dürer. This is a small but excellent collection. In the former Chapel of Pius V were once the address books received by Pius IX, Leo XIII, and Pius X from all the countries of Europe. Begun in 1867, the collection was recently transferred to the Casino di Pio IV in the Vatican Gardens when this hall had to be used for the special purposes of the library, but still remains under the direction of the prefect of the library. In similar manner the pre-Raphaelite paintings of the thirteenth and fourteenth centuries and a number of other bronzes of ancient authors, which were accommodated in special halls of the library, have been transferred to the picture-gallery.

(9) History of the Library.—Like every great church, that of Rome found it necessary from the beginning to form a collection of archival materials and books. This was of the greatest importance for the transaction of business, the payment of bills, the keeping of accounts, the conduct of the various departments of State, and the pursuit of theology, for reference etc. Owing to the frequent change of the Curial headquarters, the wars and sieges of Rome, and numerous other vicissitudes, the collections of this kind have suffered great damage. The fate of the old papal library has been the subject of many inquiries, of which the most scholarly is that of de Rossi (referred to above) and the most extensive that of Ehrle ("Die Frangipani und deren des Archives und der Bibliothek der Papste am Anfang des 13. Jahrhunderts" in "Mitteilungen der Historische Gesellschaft" (1890)). The following may be also consulted: Zancoli, "La Biblioteca Vaticana della sua origine fino al presente" (Rome, 1857), and Fauzio, "La Biblioteca dei papi dalla nascita alla composition, ses catalogues" (1316-1429) (Paris, 1857). For the new acquisitions made down to the present day the only reliable source is Carini, "La Biblioteca Vaticana proprieta della Santa Sedet Memoria Storica" (Rome, 1892). (Cf. Crispo Moncada, "La Biblioteca Vaticana e Monsignor Isidoro Carpinia, Palermo, 1845). Under Pius V, in the year 1465, the treasures of the Holy See at the end of the thirteenth century, where they came, how a new library was formed at Avignon, and how this library attained its greatest extent under Clement VI, may be learned from the above works, as may also the fate of these collections.

Martin V restored the seat of the Curia to Rome, and, both by exercising the right of spoil (see J.-J. Scellier) and also by purchases, laid the foundation of a library, which was extended and enriched by Eugene IV. Under the latter pontiff the library contained 340 manuscripts, of which traces are still found in the "Fondazione Vaticana". But the great humanist pope, Nicholas V (1447-55), was the true founder of the Vaticana, and the officer in the fourth papal library. This pontiff acquired the remains of the imperial library of Constantinople which had been scattered by the Turks, and was able to bequeath at this death 521 codices, of which a large
The succeeding popes added smaller collections, and Sixtus IV gave a permanent basis to the library by the construction of its glorious halls. On the ground floor of the palace in the Cortile del Papalago and under the Appartamento Borghia he had four halls painted by Melozzo da Forlì and his pupil Ghirlandaio, with coloured windows by Bernardino Tettuccio. In three of these halls stood work tables, to which (as was then customary) the manuscripts were fastened with chains, while in the fourth were twelve chest-like receptacles and five presses filled with codices; the furniture of inlaid wood adorns to-day the Appartamento Borghia. The pope purchased thelibrary, which Giovanni III called, Gasparo, and encouraged numerous copyists, and encouraged his librarian Platina (appointed in 1475) to restore the Vatican to its former position of renown. The library had a public division for the Latin and Greek languages, and a private section (afterwards transferred to Sant'Angelo), in which the documentary treasures of the Raro constituted the plan of a new library. Thus the collection grew to 2527 codices, of which 770 were Greek and 1757 Latin. (Cf. Fabre, "La Biblioteca della Biblioteca Vaticana" in "Mélanges d’archéol., et d’hist.", XV.)

The great growth of the Biblioteca Palatina, as it was called, continued, and under Innocent VIII it included 3563 manuscripts and printed works. Besides other acquisitions from Tommaso Inghirami, Julius II added new rooms to the four halls to provide sufficient space for the collection. Leo X donated to the library his own Greek codices (cf. Hecher, "Les premiers manuscrits grecs de la Bibliothèque Papale", Copenhagen, 1892), so that under him the library contained 4070 books and manuscripts—a number unequalled at that time in any library in Christendom. The interregnum of the library, which office had previously been managed only by prelates, was Marcello Cervini, who was appointed in 1548. Cardinal Cervini (afterwards Marcellus II) presented to the library more than 210 codices and many books; about 250 others were added before the reign of Gregory XIII (1572-85), who included in the plan the purchase of the prints. This plan was realized by Sixtus V (1585-90) in 1588, through the instrumentality of Fontagna. The new building divided the huge court of the Belvedere into two parts, and thus originated the famous Salone Sistino della Biblioteca Vaticana—giving to the library the name by which it is hitherto known. Cesare Nebbia, and his successor, Cardinal SJ, worked to make the library a part of the palatial complex and equipped it in elegant cases the treasures of the Vaticana. (Cf. Pansa, "Della Biblioteca Vaticana Ragionamenti", Rome, 1582; Rocca a Camerino, "Bibliotheca Apostolica Vaticana a Sisto V P. M. ..., translata", Rome, 1591; Muntz, "La Bibliothèque du Vatican au XVIe siècle", Paris, 1861; Idem, "La Bibliothèque du Vatican au XVIIe siècle", Rome, 1870.)

Sixtus V had a work-room erected beside the Salone, and this was decorated with the paintings of the sibyls by Marco da Fanzaga and the landscapes of Paul Bril. All these were transferred the wooden panels, which had been used for the decoration of the palace, were carved by Giovannino dei Dolci. The brothers Guglielmo and Tommaso Sirlie, Antonio Carafa, and Marcellantonio Colonna transferred their entire collections of manuscripts and prints to the Vatican. The renowned scholar Orsini, who possessed the greatest private collection of the sixteenth century, was convinced (cf. Satriani, op. cit. 178, 181) to give 315 manuscripts (30 Italian, 270 Latin, and 113 Greek) with many printed works (cf. De Nolhac, "La Bibliothèque de Fulvio Orsini", Paris, 1887). The number of the Greek Codices Vaticani thus mounted from 1287 to 1400. Paul V transferred to the library 212 Greek and Latin Codices, 30 Bobbiosensi (presented by Silvarezza), and 100 manuscripts from the Biblioteca Aetemps. He also purchased for 1574 scudi (8000) 83 manuscripts from the effects of Prospero Podiani (1616), 25 Captie from the effects of Cardinal Massimo (1854), the whole library of Cardinal Pole, and many other collections (see Batiffol, "La Biblioteca di Paul III et Paul V", Paris, 1890; Idem, "L'abbaye de Rossano. Contribution à l'histoire de la Vaticane", Paris, 1891). Under Urban VIII the Latin codices grew to 6026 in 1627, and to 6438 in 1640; the number of Greek in 1630 was 1596. This pontiff added a room to the Salone Sistino, and continued the construction of the library of the Archives from that of custodian of the library. He made great purchases of books, and, owing to the pressure brought upon him by the Ethiopian Hospice behind St. Peter's, donated his thirty-nine parchment manuscripts and some printed works to the Vaticana.

In 1622 the Vaticana was presented with the Heidelberg Library (as the Pandion) by the council of Milan of Bavaria. This was accommodated in a newly-erected side wing of the palace, to the left of, and adjacent to, the Salone Sistino. To-day this collection contains 1996 Latin and 432 Greek codices, besides numerous printed works. (Cf. the inventories mentioned above; Theiner, "Schenkung der Heidelberger Bibliothek an die Vatikanische", in "Gesch. der Heidelberger Bücherabkommen", 1817; Bahr, "Die Entführung der Heidelberger Bibliothek nach Rom", 1845; Wille, "Aus Abbild und neuer Zutritter der Vatikanischen Bibliothek", 1900; Kireich, "Handlexis", s. v. "Heidelberg").

Less than forty years after this great acquisition followed a second, when Alexander VII added to the Vaticana the manuscripts of the valuable library of the dukes of Urbino; the printed works were used as the nucleus for the library of the university founded by the popes (Sapienza), which consequently is even better than the Vatican automobiles. The library of the dukes of Urbino was included in 1741 in the library of the Vaticana, to the right of the Salone Sistino. The valuable library of Christina of Sweden, which passed from her her Cardinal Decio Azzolini to his nephew Pompeo Azzolini, was purchased from the latter by Alexander VII (1689-91) and added to the Vaticana. The manuscripts were purchased from the pope's nephew Cardinal Ottoboni, and the codices transferred to the Vatican archives. To the Vaticana the then accredited 2102 Latin and 190 Greek manuscripts, which were placed in the gallery to the right of the Salone Sistino. In the same collection are still found 45 "Codices graeci Pii Papar XII", added in 1761. (Cf. Manteyer, "Les manuscrits de la Reine Christine aux archives du Vatican", in "Mélanges d’archéol., et d’hist.", XVII, 1897.)

Although a number of Orientalia were formerly to be found in the Vaticana, Clement XI (1700-21) may be regarded as the real founder of the very extensive Oriental section of the library. He procured for it several hundreds of these manuscripts, which he had purchased throughout the entire East through Oriental scholars specially commissioned for this purpose. (Cf. Chran, "Orientalia".) Clement XII added the whole collection of manuscripts belonging to the brothers Assenian and consisting of 292 Syro-Chaldean, 180 Arabic, and 6 Turkish manuscripts. Numerous smaller acquisitions were made, amounting in all to...
about 500 manuscripts. On 7 Dec., 1746, Benedict XIV purchased the "Fondo Cappellani" (288) for 90 gold scudi; he later purchased the whole collection of Cardinal Pietro Ottoboni (d. 1745), who possessed 3500 manuscripts, obtained partly from the Deposits of the Pius-IX and the Lateran closed collections; there are manuscripts of the highest value. (Cf. Ruggieri-Marinii, Memorie storiche degli Archivi della Santa Sede e della Biblioteca Ottoboniana ora rinunata alla Vaticana, Rome, 1825.) Under Clement XIV and Pius VI, the Vatican collections were associated with it. Among its many acquisitions, in 1797, 500 manuscripts were the result of a joint purchase of the Avignon library, which had found its way via various hands to the Vatican Library, about a century later. A further acquisition of the Biblioteca Vaticana selecti progregatoribus Galliarum sive fuere, Leipzig, 1803—very rare). Of these manuscripts all except 36 were restored to the Vatican. In the sixteenth century the Vatican acquired several hundred manuscripts, the papers of Galeotto, Gaetano Marini, Visconti, Mazzucchelli, de Rossi, and a portion of the Maurinist correspondence through Cardinal Gesualdo. Through the minutes of the Regio XIII, of the manuscripts belonging to the Borghese family, nearly 300 codices from the Avignon library, which had found their way via various hands to the Vatican Library, were obtained by the Vatican Library; furthermore, 100 real ghisiani, purchased by the Borghese, were found in the collection. These acquisitions, with the archival materials which are found in the secret archives, reached 225,000 francs. A still more extensive library was purchased by Leo XIII for 325,000 francs in 1902. Barberini Archivio being then added to the Vatican Library, the Biblioteca Vaticana selecti progregatoribus Galliarum a sive fuere, Leipzig, 1803—very rare). Of these manuscripts all except 36 were restored to the Vatican: Propaganda to the Vatican brought a very notable addition to the collection of Orientalia, besides the Latin and Greek sections (see Borgia Propaganda). Those important additions of the Propaganda to the Vatican brought a very notable addition to the collection of Orientalia, besides the Latin and Greek sections (see Borgia Propaganda). These important additions of the Vaticana, together with the acquisition of the Codices Cappellani, Capponiani, Urbinates, and Ottoboniani, joined with the great Vatican collection to form the apostolic Library of the Vatican. (Cf. Carini, "Di mea laborvi ed acquistiti della Biblioteca Vaticana nel secolo del Leone XIII," Rome, 1802.)

(10) The Legal Status of the Library.—The assertion that the Vatican Library was the property of the Church or of the Holy See, but of the last estimate, this claim must be rejected. The Vatican Library, while it did draw its income from ecclesiastical properties or private charters of the popes, that the library derived its income from ecclesiastical properties or private charters of the popes, that the library was not wholly dependent on the state treasury, but from the major-domo (a papal court official), that in fine, a sound argument could be brought forward to discount the Vatican from its position in the Papal State, to the present day. The demonstration was successful at every point.

2. The Speculae Vaticanae.—A third centre of research into the subject of the Vatican at the Vatican is the observatory of the Vatican Observatory.

3. The Biblioteca Vaticana.—A centre of research into the subject of the Vatican at the Vatican is the observatory of the Vatican Observatory.

4. The Galleria Lapidaria (Carlolele delle Iscrizioni e delle Piastre di Marmo).—Stimuli to scientific study are offered in abundance within the walls of the Gallery of Inscriptions of the Vatican, which are of great importance in the history of the Church.
of bishops, when (as rarely happens) this is undertaken by the pope, or is used for the accommodation of specified divisions of the papal household, when the pope holds a consistory in the Sala Regia, proceeds to the Sistine Chapel, or sets out with great solemnity for St. Peter's. C. The Sala dei Pappaldi lies a little to the left of the Sala Ducale, and adjoins immediately the Sala Clementina. At the head of Via della Conciliazione it receives its name from the fact that the pope assumes the pontifical vestments in one room of this suite before attending Divine service in the Cappella Sistina. The Sacred College assembles in another room to accommodate the pope. Both rooms, which are not accessible to the public, are decorated with tapestries of beautifully rich design, and in the Sala Clementina, one of the Swiss Guard is posted. The doors to the right lead to the apartments of the pope, those on the left to the Loggie, and those in the rear immediately to the Consistorial Hall. The magnificent marble wainscoting is over six feet; above it rise bold ornamental frescoes of splendid perspective, extending along the rounded ceiling. From the middle of the ceiling hangs a chandelier, whose crystal pendants have been designed to catch the light of the candle beneath and the ceiling richly gilt. Here the members of the papal court assemble for breakfast after receiving their Easter Communion from the pope (see above, section IV).

D. The Sala Clementina is a gigantic hall, two stories high, situated on the second floor, at the entrance to the papal apartments, and reached by the Scala Nobilis and the Beatrice. It is large, and to fashionable occasions. The poor light afforded by the northern exposure of the room is still further reduced by dark red hangings on the walls. Some large oil paintings, representing religious subjects, give life to the walls, and the coffered ceiling is richly girt. Between the ceiling and the oil paintings are, besides rich ornamental painting, a number of coffered panels. The rear of the hall stands a more elaborate than beautiful throne, which dates from the Vatican Exhibition; simple, but monumental, wooden stalls extend along the walls.

F. The Sala degli Arazzi receives its name from the vast framed Flemish tapestries which decorate every wall. As these magnificent pieces hang very low, the visitor can easily examine the fineness of the workmanship. Above the tapestries have been painted, since the time of Paul V, landscape frescoes, which alternate with the arms of this pope. A beautifully carved cornice supports the rich gilt coffered ceiling, which looks down on a mosaic marble floor. Curtains of white silk, with outside curtains of ungathered green silk, surround the light. Perfect taste and harmony of colour exist throughout this immense hall. G. The Sala del Trono.—Reference has already been made to the Throne Room. It may be added that to the right and left of the throne on two great marble tables stand two very valuable ancient cibors. Between the two windows, exactly opposite the throne, is a mixture of extraordinary dimensions and artistic value.

X. The State Staircases of the Vatican.—There are three state staircases in the Vatican. The first and best-known is the Scala Regia, which leads up to the Sala Regia. It was built under Alexander VII by Bernini, who, by the skilful arrangement of the columns supporting the curves, has entirely concealed the narrowing of the staircase towards the top. The second staircase, erected by Pius IX, leads from the Portone di Bronzo, the chief entrance to the Vatican, directly up to the Cortile di San Damaso. Constructed of granite steps several yards wide, it has on the outer side a marble balustrade of corresponding bulk; the base is of Breccia marble, and above it as far as the ceiling extends artificial marble. A large painted window adorns the side looking towards the Piazza S. Pietro. Half-way up is the apartment of the sub-prefect of the Apostolic Palace, which, from its red doors and yellow facade, is called the Scala di San Damaso, is the apartment occupied by the maestro di camera. This staircase is called after the name of its builder, Scala Pia. The third state staircase is the Scala Nobile, which leads from the Cortile di San Damaso to the third story, to the suite of the secretary of state, and runs past the papal apartments to the apartment of the Pope, which extends from the ground to the first floor. Both the Scala Nobile and Scala Pia are admitted on the ground floor by the painted windows renovated by the Prince Regent of Bavaria after the powder explosion of 1882, and on the second floor by those donated by the Collegium Germanicum at the same period. The steps are of white marble; yellow artificial marble covers the walls, while the balustrades and the floor of the staircase are covered with artificial marble. The whole well of the staircase is simple, but of rare impressiveness and pleasing colour.

XI. The Administrative Boards of the Vatican.—The supreme board of administration within the palace is the Prefettura dei Sacri Palazzi Apostolic, at the head of which stands as prefect the secretary of state, who is also the chief of the Papal Chancery, and is assisted by the sub-prefect, who as executive and supervising official possesses extensive authority. All artistic and scientific undertakings are subject, in so far as their economic aspect is concerned, to the decision of the prefect. The departments of building, furnishing, administration of the magazine, household management, fire brigades, and gardening, and some other divisions are administered, under the supervision of the prefect, by more or less independent boards, whose directors—e.g., the foriere maggiore and the cavallerrizzo maggiore—in some cases hold a high rank at Court (cf. Die kathol. Kirche unserer Zeit, I, pp. 286-88). Both the house- and the safety fire-brigades take part in many other public works, which, according to the Pope's wishes, are carried on. The departments of building, which under Leo XIII was rather neglected, is now busy with perfecting the architectural condition of the palace. The sub-prefect is restoring to their former condition a large number of magnificent halls, which during the course of the last century were subdivided vertically and horizontally to make smaller rooms. In the execution of these works some important discoveries have been made. Very important and thorough repairs were made throughout the palace. The floor of the Galleria Lapidaria was laid with bricks, the windows closed very badly, and the general condition of this magnificent corridor left very much to be desired. Repairs being thus urgently needed, a mere rectification of the damages would not be sufficient. It was not enough to simply proceed to the execution of the tasks assigned to them by the papal authorities, in accordance with the traditions of the Curia, which executes in monumental fashion whatever it undertakes. When the floor, windows, arches, and masonry were all overhauled in the Appartamento Borgia, the collections of ancient

begun carvings, which were exhibited along the walls under the inscriptions, received an unusual increase. The reduction of the studio was begun under Leo XIII and completed under Pius X, so that the pope now possesses comparatively few horses. The extremely strict discipline which Pius X has introduced into all the Vatican administration, has met with splendid success.

XII. The Juridical and Hygienic Boards of the Vatican.—Experience has proved it necessary at the Curia should maintain a tribunal before which the dispute of any citizen may be brought to the Vatican administration might be decided. The Italian courts are in such cases powerless and inefficient, because their jurisdiction ceases at the face gates. As there must ever be reifications whenever there are numerous relations with the commercial world, there are crowds of clerks who are thus obstructed. The Commission has in the exercises per decertum interno alle controversie e constazioni con le amministrazioni galatine were created by Decree of 20 February, 1882, to decide all cases made against the Curial administration. The office possesses a juristic interest; the official bodies are named commissioni, not tribunali; decreto, and not giudizio is the objection to the term of the formed controversie e contazioni. Although the decree manifestly gives the name of court of justice to the new institution, it is such de facto. The two commissions then created are each composed of three prelates, who have the decision of processes both first and second instance. The court of second instance is formed by the union of two commissions, the president of the general auditor of the Apostolic Chamber. All the prelates have a legal training, and in each of the first two courts are a president and two colleagues. Each court has a prelate petitioner and a secretary. It is a notable feature, for the execution of all judgments which are finally given against the Vatican administration, that the president of the general auditor is the judge of the appeals. The procedure of these courts is as follows: The process is begun by written documents placed in the hands of the president. The defendant lodges a written answer within a certain interval, after which further pleas and counterpleas may continue. On the conclusion of the written explanations or after the date of the appeal, the president calls upon the paper counterpleas are forthcoming, the decision is written and published by exhibition in the Secretariate. The interval for appeal is six months, dating from the date of the publication of judgment. These courts employ every means to establish the facts as they actually are: the examination of witnesses, the administration of oath to suspects, the examination of experts, etc. The costs of court are regulated on the basis of the provisions of the Papal Laws. The tribunal of the prefecture, of which the competence cannot be exactly established, has an apurator and a secretary. Before this court are tried criminal charges.

The sanitary service and the hygienic department were created by the Pope on 11 November, 1893. In accordance with modern requirements, exhaustive measures are taken in all matters connected with these departments. In particular, the water service was thoroughly renovated. The sanitary corps is under the direction of the physician in ordinary to the pope, under whom also stand five other physicians and some assistant medical officers. Two of the physicians are appointed for duty, and two for night; the fifth attends the Swiss Guards. The assistants represent the physicians, when these are unable to attend, but on solemn occasions, when an unusually great number of persons assemble, they must take the physician's place always in attendance. The sanitary service and hygienic department are subordinate to the Prefecture of the Apostolic Palaces, The Vatican dispensary, which was formerly in the Cortile di San Damaso, was recently transferred to the quarters of the Swiss Guards, and lies at the door of the Torre di Nicolo V which leads to the city. Consequently it is easily accessible to the inhabitants of the Borgo, who avail themselves very freely of it. It is entrusted to three Brothers of Mercy, and delivers all medicines at the rates appointed by the urban council of Rome in favour of the poor. A list hanging up in the dispensary shows to what residents and servants of the palace medicines are to be given gratis.

XIII. The Policing of the Vatican.—There is within the Vatican a well-organized service of police and guards. Military and police bodies protect persons and property, and the fire department prevents damage from fire. The special military guards of the palace are the Swiss Guards; entrusted with the specifically police duties are the gendarmes. The Palatine Guards are a guard of honour, and the Noble Guard a mounted bodyguard with very limited service. The fire brigade is formed by the Guardia del Fuoco. In view of the peculiar political position of the pope in Rome, the careful guarding of the Vatican presents special difficulties; but, according to the regulations of the Sacred College, the guards in the Borgo, few contremears are to be complained of. For among the great throngs to the papal assemblages there are always some ready to seize the opportunity to create a disturbance, if the slightest pretext offers itself.

The Swiss Guards.—The commander of the Swiss has the rank of one of the regular troops and is addressed with this title. The other officers, therefore, have a rank three grades higher than their name indicates, and all the guards without exception possess the rank of sergeant in the regular troops. The quartermaster acts as secretary of the commanding officer and as ordnance officer. The corps has its special chaplain and chaplain, S. Martino e San Filippo (see above, section V). The other officers are in 1508. Every candidate for the Guards must be a native Swiss, a Catholic, of legitimate birth, unmarried, under twenty-five years of age, at least five feet and eight inches in height, healthy, and free from bodily disfigurements. Whoever is not eligible for military service in Switzerland, is likewise refused admission into the Guardia del Fuoco. The candidate must produce a certificate, or baptismal certificate, and testimonial as to character, all signed by the authorities of his parish. After a year of good conduct the cost of the journey to Rome is refunded; this refund may, however, be paid in instalments after a period of seven months. Applications for admission are to be addressed directly to the commanding officer. The Swiss Guard is required to retire from the Guards may freely do so after giving three months' notice. After eighteen years' service each member of the Guards is entitled to a pension for life amounting to one-half of his pay, after twenty years to a pension amounting to two-thirds of his pay, after twenty-five years to five-sixths of his pay, and after thirty years to all his pay.

The duties of the Guards are as follows: They are responsible for the guarding of the sacred person of the pope and the protection of the Apostolic Palaces, all exits from the palace to the city and the entrance doors to the papal apartments being entrusted to their charge. They have also to take up their position in the papal chapels and in the city, and have other religious functions both within and without the Apostolic Palaces (the latter are now confined to St. Peter's) at which the pope assists. They have also other duties regulated by ancient traditions or more recent decrees. In addition, they have to appear for service at the order of the prefect of the Apostolic Palaces (the majordomo) and the maestro di camera.
C. The Guardia d’Onore.—The Palatine Guard, as it exists to-day, extends back to Pius IX. In the Regolamento of 14 December, 1850, he decreed that the two bodies of militia, the civici scelti and the caporali, should be united into one body under the new name of the Guardia Palatina d’Onore. In 1860 this guard was increased and placed on the footing of a regiment. 774 men were enlisted and 152 commissioned. Before 1870 the services of this regiment were not confined to the palace, watch-dues in the city and military operations in war being assigned them. After 1870 the regimental band of 63 men was disbanded, and the corps greatly diminished. The lieutenant-colonel in command has the rank of colonel. As distinguished from the Swiss Guards, who are armed and armed, and form the body-guard to the Holy See, the Palatine Guard perform such duties in the papal service as are detailed in the directions of the major-domo and the maestro di camera. All the members of the corps are Roman citizens; they perform their few duties gratis, but receive 80 lire annually for their uniforms. During the conclave a company of the Swiss Guards is stationed Pius VII for admission of the hereditary Marshal of the Conclave, Prince Chigi.

D. The Guardia Noble.—This most distinguished corps of the papal military service has an interesting history. The mounted guard of the popes was formerly formed of the corps of cavalleggeri (light cavalry) and of Muty (auxiliary) guards. These mounted guards a new organization, axing their number at 90. After the disbanding of these troops during the confusion of the French Revolution, Pius VII formed a new body-guard composed of the remainder of the cavalleggeri and the old cavalieri delle lance speziate. A Decree of 11 May, 1807, ordered the guardie nobili dei corps, the Spanish noble guards being taken as the model. The political revolutions under Napoleon I prevented the proper formation of the new corps, so that the reorganization effected by warrant of the Cardinal-Secretary of State, Ercole Consalvi, of 8 November, 1815, was found necessary. The petition of Count Giovanni Mastani Ferrari, that 100 men from the corps into the Guards (26 June, 1814), which was rejected on account of his weak health, is still preserved in the archives of the Noble Guard. Leo XIII amalgamated the existing two companies, and in accordance with the changed conditions of the time, gave them new regulations, and declared that the corps must consist of 1 captain, 1 major, 2 lieutenants, 8 lance-corporals, 1 lance-corporal as corps adjutant, 8 cadets, 1 cadet as adjutant, 48 guards, 1 quarter-master, 1 esquire, 1 armourer, 1 master of ordinance, and 4 trumpeters. The whole corps thus numbered 77 men. The captain ranks as a lieutenant-general of regulars, and the other grades accordingly. On-the-first days of the year the corps enjoy the rank of captain, one-third that of lieutenant, and the remaining third that of sub-lieutenant.

In place of the earlier cabinet couriers, the Noble Guards have the exclusive right of conveying the tidings of their elevation to the “crown cardinals” in Catholic lands, as well as to members of the first class when raised to the ranks of archbishops and also of bringing to their residences the red hat. Conditions for reception into the corps are as follows: age, 21–25; testimonial as to good character from the parish-priest, bishop, or other ecclesiastical authorities; 60 years line of a nobility recognized in the Papal States, with the same tests as in the Order of Malta; height, at least five feet seven inches; and good bodily health. The post of commander lies at the free disposal of the pope, and is always entrusted to a Roman prince. Otherwise promotion is regulated exclusively by length of service.
The Noble Guard makes its appearance in public only when the pope takes part in a public function; when the pope withdraws, he is followed by the Noble Guard. During a vacancy of the Holy See, the corps stands at the service of the College of Cardinals, or of the successor to the Holy Roman Church, with the rank of lieutenant-general, has the right of wearing the uniform of the Noble Guard. (Cf. Baumgarten, "Kathol. Kirche unter der sogenannter Zeit", I, 290-93.)

The Vatican as a Business Centre.

The Vatican must be regarded as the administrative centre of the Catholic Church, since it is the residence of the supreme head of that Church, and from it the whole Church is governed. The pope, for example, has the right to ordain cardinals, and to create new congregations. He also has the right to appoint bishops and to consecrate new churches. The pope also has the right to issue decrees and motu proprio, and to appoint consistory lists.

The Vatican is also the seat of the Holy See, which is the supreme authority of the Catholic Church. The pope is the head of the Church, and he is also the head of the State of the Vatican City. The Vatican is therefore the centre of the Catholic Church, and it is also the centre of the State of the Vatican City.

The Vatican has a number of important institutions, including the Holy See, the Secretariat of State, the Congregation for the Oriental Churches, the Congregation for the Congregation of the Propaganda, and the Congregation for the Congregation of the Propaganda.

The Vatican is also the seat of the Holy See, which is the supreme authority of the Catholic Church. The pope is the head of the Church, and he is also the head of the State of the Vatican City. The Vatican is therefore the centre of the Catholic Church, and it is also the centre of the State of the Vatican City.

The Vatican has a number of important institutions, including the Holy See, the Secretariat of State, the Congregation for the Oriental Churches, the Congregation for the Congregation of the Propaganda, and the Congregation for the Congregation of the Propaganda.

The Vatican is also the seat of the Holy See, which is the supreme authority of the Catholic Church. The pope is the head of the Church, and he is also the head of the State of the Vatican City. The Vatican is therefore the centre of the Catholic Church, and it is also the centre of the State of the Vatican City.

The Vatican has a number of important institutions, including the Holy See, the Secretariat of State, the Congregation for the Oriental Churches, the Congregation for the Congregation of the Propaganda, and the Congregation for the Congregation of the Propaganda.
printing-office, which, in accordance with the needs of the missions, soon developed into a Typographia Poliglotta (cf. Prior, 'Die kathol. Kirche unserer Zeit', I, 406-07). After enjoying an epoch of uninterrupted repute, this institution had in recent years fallen to a low level owing to the absence of expert management and sufficient funds. Pius X therefore resolved to unite it with the Vatican Press. This amalgamation was effected when the Vatican Press, whose printing machines were to a great extent out-of-date and whose quarters were inadequate, was thoroughly organized and transferred to new quarters (1910).

The old riding-school of the Noble Guard, known as the Cavallerizza, lying on the Torrione di Nicolo V, was completely reconstructed in 1909 and fitted for the reception of a great first-class printing-office. The latest and best machines were procured, the lighting splendidly regulated, and the arrangement of the offices made in the most practical way. Thereafter was transferred the Typographia Vaticana with all the valuable type of the Poliglotta of the Propaganda, and given the new name of 'Typographia Poliglotta Vaticana'. At the same time there was inaugurated an improvement of methods, which guaranteed an extraordinary increase in the printing-office's capacity as compared with former arrangements. The newly formed department of the new printing-offices was established in the high basement and ground-floor; the secret department on the first floor of the new building. The staffs of the two departments are completely separate, both departments having different entrances, which are closed during working hours. The printing-offices serve in the first place for the various official purposes of the Curia. Then, according to its capacity, it undertakes printing commissions entrusted to it by outsiders. Thus, for example, a portion of the monumental work of the Gorgesellschaft on the Council of Trent was printed here. The Acta Apostolicae Sedis, the circulation of which amounts in some years to 100,000 copies, the Generalissima Cattolica, the new choral editions, and similar works are the best-known of the official productions of the Vatican Press.

XVI. THE LEGAL POSITION OF THE VATICAN.—In the Law of Guarantees of the Italian State, which came into force on 13 May, 1871, it was explicitly declared that the rights of the Vatican should enjoy immunity and should be extraterritorial. It follows that the Vatican Palace must be immune and extraterritorial in the eyes of the Italian authorities. Consequently, all action of the Italian authorities must stop at the gates of the Vatican; the inhabitants of the palace cannot be taxed, subpoenaed, or summoned to defend themselves. All consequences directed expressly to the administration of the palace are duty-free, and all letters addressed to the pope from Italy require no stamps. The official telegrams of the Vatican authorities are sent gratis to all parts of the world. These and other exceptions from the ordinary laws of Italy are the consequences of the Law of Guarantees, in so far as they are not expressly included in the laws. The Freemasons have already frequently demanded the abrogation of the Law of Guarantees, urging that it is a purely Italian law, and may therefore be abrogated by the same agents as made it. This statement is false. The Vatican is extraterritorial, not according to Italian, but according to international law, as is clearly shown in the negotiations preceding its adoption. Both the Lower Chamber and the Senate voted on the law with the clear intention of bringing it to pass through international law that the Catholices of the whole world should to a certain extent be set at ease as to the position of their supreme head. The Italian legislative agents freely assumed obligations towards the Papacy and all Catholices, as was an absolute necessity of the politics of the day. These obligations can under no circumstances be set aside at the wishes of one party. The plea that the pope did not recognize the law is entirely beside the question; his refusal was foreseen by the legislators, and notwithstanding it, as the premier then declared, Italy was under an obligation to pass the law. It thus follows incontestably that it is not in the power of the Italian legislative agents to alter in any way the present legal position of the Vatican Palace. The scope is, however, personally indifferent as to whether the laws should be rendered incapable, by the social intercourse of the present day. The pope is, therefore, no obstacle to the cultivation of certain relations between the Vatican and Italian authorities, such as indeed being rendered indispensable by the social intercourse of the present day. For example, since the pope refuses to exercise de facto the right of punishment theoretically vested in him, malefactors (should any crime be committed) are turned over to the Italian authorities for the thorough investigation of their cases. Warnings on various points are sent to the Italian to the Vatican authorities, so that the latter may order or require Communications of a confidential nature may be exchanged, but in such a manner that neither of the parties enters into any obligation nor prejudices its position; when necessary it is effected through recognized channels unofficially. When the pope attends a solemnity in St. Peter's, the basilica is then and there only regarded as belonging to the best interests of the occasion; it is regarded as a monument nazionale. By tacit agreement the whole policing during these services lies in the hands of the Vatican authorities. But there are also a great number of Italian detectives in civilian dress, who, assisted by the Vatican authorities, bar objectionable persons from the edifice and either remove them or else allow them to enter, without obtaining entrance. The ambulance stations in St. Peter's, rendered necessary by the assemblage of from thirty to forty thousand persons, are established by the sanitary board of the Vatican. The above information makes sufficiently clear both the theoretical juristic and the practical position of the Holy See and Italian authorities. In the article Guaran-tees, on this see will be found a more explicit statement of the relations between the Holy See and the Italian Government. Pius IX at the time of the violent occupation in 1870 by the troops of Victor Emmanuel refused to recognize the right of the Italian Government, and his successors, Leo XIII and Pius X, constantly maintained the same attitude. Both pontiffs have, on various occasions, declared themselves as unalterably opposed to the recognition of the claim of the Italian Government to temporal sovereignty in Rome.

In addition to works given at the end of certain sections, an abundance of literature on the Vatican Palace will be found in comprehensive works on the history of the popes, as those by Pastora, Pascual Brines, Cardinal Lasabel, and numerous works by Crow and CavaUaseUelle, VerboUloU, Schmarsow, Vassall, chronicles, by Burkhard and Inferrera; Annals conscript. compen. historio patriae, and other collections of documents; and BAX, Bibliographie italienne-française, ou Catalogue methodique de l'imprimerie des publications de l'Italie de la révolution moderne (1787-1833) (2 vols., Paris, 1886-87). Numerous works for tourists and pilgrims contain a great quantity of more or less reliable information. Among these are:5 Nicola, Guide pittoresque et historique de Rome (1868-72); the more correct, Racine, Dictionnaire historique et pittoressque de l'histoire de Rome (1879); and the more accurate works may be mentioned: CHATTARD, Nouveaux documents pour l'histoire de la Republique des Papstes (1874-75); TAV, Description du Palais Apostolique Vatican (Rome, 1730); e Beschi, Il Palazzo della Repubblica Pontificia, Roma (with numerous plates and illustrations); DONOVAN, Rome Ancient and Modern and Its Environs (Rome, 1841).

Vatican Council. The twentieth and up to now the last ecumenical council, opened on 8 Dec., 1869, and closed on 20 Oct., 1870. It met three hundred days after the Council of Trent.

I. Introductory History.—A. Previous to the Ecumenical Council.—On 6 Dec., 1864, two days before the publication of the Syllabus of Errors, Pius IX announced, in a session of the Congregation of Rites, his intention of assembling the cardinals residing at Rome to express their views as to the opportuneness of the scheme, and also name the subjects which, in their opinion, should be laid before the council for discussion. Of the twenty-one reports sent in, only one, that of Cardinal Caprini, expressed the opinion that there was no occasion for the holding of an ecumenical council. The council was held at the invitation of such an assembly, although five did not consider the time suitable, early all sent lists of questions that seemed to need an answer. Early in March, 1865, the pope appointed a commission of five cardinals to discuss preliminary questions in regard to the council. This was the important "Congregazione speciale direttrice presidiata da Mons. l'Abate Pier Antonio Fossarola," which was assisted by the directing preparatory committee, or the central commission. Four more cardinals were added to the number of its members, and besides a secretary, it was first goconvened. It held numerous meetings in the interval between 9 March, 1865, and 20 Oct., 1869. Its first motion was that bishops of various nations should be called upon to discuss points as to matters for discussion. On 27 March, 1865, the pope commanded thirty-six bishops of the Eastern Rite designated by him to express their views in a letter of silence. Early in 1866 he also designated several bishops of the Oriental Rite under the same conditions. It was now necessary to form commissions for the more thorough discussion of the subjects. At this time, several bishops and canons, belonging to the secular and regular clergy, were summoned to Rome from the various countries to co-operate in the work.

As early as 1865 the nuncios were asked to suggest names of suitable people for these preliminary commissions. The war between Austria and Italy in 1866 caused a temporary suspension of the work. As soon as peace was restored, the pope, on 11 Dec., of the same year, caused an adjournment of the preparatory councils. They were then adjourned to 12 June, 1867, possible. However, the pope made use of the opportunity to visit Rome of nearly five hundred bishops, who came to attend the centennial celebration, to make the first public announcement of the council at consistory held on 26 June, 1867. The bishops pressed their agreement with joy in an address dated July. After the return of the French army of occupation on 30 Oct., 1867, the constituent preparatory commissions and the holding of the council itself seemed to be necessary. The assembly now debated exhaustively the question who should be invited to attend the council. That the cardinals and secular bishops should be summoned was self-evident. It was also decided that the titular bishops had a right to be called, and that of the heads of the religious orders an invitation should be given to the abbots of St. Gall, and the abbot general of the monasteries formed several monasteries, and lastly, to the generals of the religious orders. It was considered wiser, on account of the state of affairs at the time, not to send any formal invitation to Catholic princes, yet it was intended to grant admission to them or their representatives on demand. In this sense, therefore, the Bull of Convocation, "Eterni Patris," was promulgated, 29 June, 1868; it appointed 8 Dec., 1869, as the date for the opening of the council. The objects of the council were to be the correction of modern errors and a reasonable revision of the legislation of the Church. A special Brief, "Arunco divina providentia," of 8 Sept., 1868, invited non-Uniate Orientals to appear. A third Brief, "Jam vos omnes," of 13 Sept., 1868, notified Protestants also of the convoking of the council, and exhorted them to use the occasion to reflect on the return to the one household of faith.

The Reception of the Bull. Although the Bull convoking the council was received cordially by the bulk of the Catholic masses, it aroused much discontent in many places, especially in Germany, France, and England. In these countries it was feared that the council would promulgate an exact determination of the primatial prerogatives of the popes and the definition of papal infallibility. The Declaration of the theological faculty of Paris, Bishop Marec, wrote in opposition to these doctrines the work "Du concile de Rome et de la paix religieuse" (2 vols., Paris, 1869). Bishop Dupanloup of Orleans published the work "Observations sur la controverse soulevée relativement à la définition de l'Infallibilité au prochain concile" (Paris, Nov., 1869). Marec's "Deuxième Bull du Pape Pie IX" was prefixed by Archbishop Manning. Archbishop Dechamps of Mechlin, Belgium, who had written a book in favour of the definition entitled "L'Infallibilité et le concile générale" (Paris, 1869), became involved in a controversy with Dupanloup. In England a book entitled "The Condemnation of Pope Honorius" (London, 1869) written by the convert, Le Page Renoux, aroused much discussion. Meanwhile, the councilors continued to work.

II. Preparatory Councils.—The Constitutions of Councils, a work edited by Father Botalla, S.J., in "Honorius Reconsidered with Reference to Recent Apologies" (London, 1869). Letters from French correspondents in the first number for Feb., 1869, of the "Civiltà Cattolica," which stated that the majority of French Catholics desired the definition of infallibility, evoked fresh storm. In particular, it led to the appearance in the discussion of Ignaz Dollinger, provost of St. Cajetan and professor of church history at Munich. From now onwards Dollinger was the leading spirit of the movement in Germany hostile to the council. He disputed most passionately the Syllabus and the doctrine on the form of infallibility. He published several anonymous articles that were published in March, 1869, in the "Zeitung" of Augsburg. A large number of Catholic scholars opposed him vigorously, especially after he published his articles in book form under the pseudonym of "Janus," "Der Papst und das Konzil" (Leipzig, 1869). Among these was Professor Joseph Hergenhahn of Wurzburg, who issued in reply to "Anti-Janus" (Freiburg, 1870). Still the excitement over the matter grew in such measure that fourteen of the twenty-two German bishops who met at Fulda early in Sept., 1869, felt themselves constrained to call the attention of the Holy Father to it in a special address, stating that on account of the excitement the time was not opportune for defining papal infallibility. The central commission on the definition of the Oriental and the Protestants did not produce the desired effect. The European Governments received from Prince Hohenlohe, president of the Bavarian ministry, a circular letter drawn up by Dollinger, designed to prejudice the different Courts against the coming council; but they decided to remain neutral for the time being. Russia alone forbade its Catholic bishops to attend the council.

C. Preparatory Details.—In the meantime zealous work had been done at Rome in preparation for the council. Besides the general direction that it exercised, the preparatory commission had to draw up an exhaustive order of procedure for the debates of
VATICAN

the council. Five special committees, each presided over by a cardinal and having together eighty-eight consultants, prepared the plan (schema) to be laid before the council. These committees were appointed to consider respectively: (1) dogmas; (2) church discipline; (3) orders; (4) Oriental Churches and missions; (5) ecclesiastico-political questions.

It may justly be doubted whether the preliminary preparations for any council had ever been made more thoroughly, or more clearly directed to the aim to be attained. As the day of its opening approached, the following drafts were ready for discussion: (1) three great dogmatical drafts, (a) on the Catholic dogmas, strictly to be maintained against all errors, especially springing from Rationalism, (b) on the Church of Christ and, (c) on Christian marriage; (2) twenty-eight drafts treating matters of church discipline. These had reference to bishops, episcopal sees, the different grades of the other clergy, seminaries, the arrangement of philosophical and theological studies, sermons, the catechism, civil marriage, mixed marriages, improvement of Christian morals, feast days, fasts and abstinence, duelling, magnetism, spiritualism, secret societies, etc.; (3) eighteen drafts of decrees had reference to the religious orders; (4) two more on the Oriental Rites and missions; these subjects had also been discussed by other delegates at five or six sessions. In addition a large number of subjects for discussion had been sent by the bishops of various countries. Thus, for instance, the bishops of the church provinces of Quebec and Halifax demanded the lessening of the impediments to marriage, revision of the Breviary, and, above all, the reform and codification of the entire canon law. The petition of Archbishop Spaun, the president of the Germans, that he and his fellow prelates should be allowed to attend in the persons of their deputations, was referred to the council. The definition of the relations between Church and State, religious indifference, secret societies, and the infallibility of the pope. The definition of this last was demanded by various bishops. Others desired a revision of the index of forbidden books. No less than nine petitions bearing nearly two hundred signatures demanded the definition of the bodily Assumption of the Blessed Virgin. Over three hundred fathers of the council requested the elevation of St. Joseph as patron saint of the Universal Church.

H. PROCEEDINGS OF THE COUNCIL.—A. PRESIDING OFFICERS, ORDER OF PROCESSION, NUMBER OF MEMBERS.—On 2 Dec., 1869, the pope held a preliminary session in the Apostolic Palace. This was awaited by about five hundred bishops. The procedure of the session was then announced and the conciliar procedure was made known. The council received five presidents. The chief presiding officer was to have been Cardinal Reissac, but as he died on 22 Dec., Cardinal Filippo de Angelis took his place, 3 Jan., 1870. The other presiding officers were Cardinals Antonio de Luca, Andrea Bizzari, Alessio Pisto, and Amadeo Caprilli. Bishop Joseph Fessler of Sankt Polten, Lower Austria, was secretary to the council, and Monsignor Luigi Jacobini under-secretary. The Constitution "Multiples inter" announcing the conciliar procedure contained ten paragraphs. According to this the sessions of the council were to be of two kinds: private sessions, during which the drafts and motions, under the presidency of a cardinal president, and public sessions, presided over by the pope himself for the promulgation of the decrees of the council. The first drafts of decrees debated to be the dogmatic and disciplinary ones laid before the assembly by the pope. Proposals offered by members of the council were to be sent to a congregation of petitions; these were discussed by the committee and then recommended to the pope for admission or not. If the draft of a decree was found by the general congregation to need amendments, it was sent with the proposed amendments to the respective sub-committee or deputatio, either to the one for dogmas, or for discipline, or religious orders, or for Oriental Rites. Each of these four sub-committees or deputations was to consist of twenty-four persons selected from the members of the council, and a cardinal president appointed by the pope. The deputatio examined the proposed amendments, altered the draft as seemed best, and presented to the general congregation a printed report on its work that was to be orally explained by a member of the deputation. This procedure was to continue until the draft met with the approval of the majority.

The voting in the congregation was by placet, non placet (by each of the members, with the name of the members), and non placet. Secrecy was to be observed in regard to the proceedings of the council. In the public sessions the voting could only be by placet or non placet. The Decrees promulgated by the pope were to bear the title, "Pius Episcopus, servus servorum Dei: quae approbatum Concilii ad perpetuam memoriam," etc.

I. FROM THE OFFICIAL OPENING TO THE DEFINITION OF THE CONSTITUTION ON THE CATHOLIC FAITH IN THE THIRD PUBLIC SESSION.—(1) The First Debates.—After the formal opening of the council by the pope at the first public session on 8 Dec., 1869, the meetings of the general congregation began on 10 Dec. Their sessions were generally held between the hours of nine and one. The afternoons were reserved for the sessions of the deputations. They met in the Hall of Christ, and each of the members of the congregation was entitled to make an address to the pope. These addresses were made to the pope whereby the drives of the congregation were communicated; this was followed by the elections to the four deputations. The first matter brought up for debate was the dogmatic draft of Catholic doctrine against the manifold errors due to Rationalism, "De doctrina catholicn contra multiplices errores ex rationalismo derivatas." The debate on it was open on 2 Dec., in the fourth general congregation. After a debate lasting seven days, during which thirty-five members spoke, it was sent by the tenth general congregation held on 10 Jan., 1870, to the deputation on faith for revision. There had been held in the meantime on 6 Jan, the second public session. This had been previously determined upon, 25 Oct., 1869, by the central committee of the discussion of the constitution of the faith by the members of the council. The subjects discussed from the tenth to the twenty-ninth meeting of the general congregation (on 22 Feb., 269) were the drafts of four disciplinary decrees, namely, on bishops, on vacant episcopal sees, on the morals of ecclesiastics, and on the smaller Catechism. Finally the drafts of decrees were determined for further revision to the deputation on discipline.

II. FROM THE OFFICIAL OPENING TO THE DEFINITION OF THE CONSTITUTION ON THE CATHOLIC FAITH IN THE THIRD PUBLIC SESSION.—(2) The Parties.—Such slow progress of the work had probably not been expected. The reason of the disagreeable delay was to be found in the question
of infallibility, which had called forth much excitement even before the council. Directly after the opening of the session its influence was evident in the election of the deputations. It divided the fathers of the council into two, it might almost be said, hostile camps on all occasions through different modes of action of each of these parties were determined by its attitude to this question. On account of the violent disputes which had been carried on everywhere for the past year over the question of papal infallibility, the overwhelming majority considered the conciliar discussion and decision of the question an important step forward. If the minority, comprising about one-fifth of the total number, feared the worst from the definition, the apostasy of many wavering Catholics, an increased estrangement of those separated from the Church, and interference with the affairs of the Church by the Governments of the different countries. The minority, therefore, allowed itself to be guided by that consideration only a few of its members appear to have had doubts as to the dogma itself. Both parties sought to gain the victory for their opinions. As however the minority was soon obliged to recognize its powerlessness, it endeavoured by protracting the discussions of the council at least to delay, or even to prevent, a decision as long as possible. The discussions of all kinds carried on by the representatives of the council were against the definition, as well as nearly half of the American and about one-third of the French fathers. About 7 of the Italian bishops, 2 of each of the English and Irish bishops, 3 of bishops from British North America, and 1 of Swiss bishop, Groith, belonged to the minority. While only a few of the fathers of the council were against the definition of the Chaldean and Greek Melchites sided with the minority. It had no opponents among the bishops from Spain, Portugal, Belgium, Holland, and Central and South America. The most prominent members of the minority from the United States were Archbishops Kenrick of St. Louis and Purcell of Cincinnati, and Bishop Verot of St. Augustine; these were joined by Archbishop Connolly of Halifax, Nova Scotia. Prominent members of the majority who were Archbishop Spalding of Baltimore, Bishops Williams of Boston, Wood ofPhiladelphia, and Conroy of Albany.

Conspicuous members of the council from other countries were: France: among the minority, Archbishops Darboy of Paris, Ginoullian of Lyons, and Bishop Chatard of Grenoble, Bishops Brieux and Brieux; among the majority, Archbishop Guibert of Tours, Bishops Pie de Potiers, Preppel of Angiers, Plantier of Nantes, Rauss of Strasburg. Germany: minority, Bishops Hefele of Rottenburg, Keteler of Mainz, Dinkel of Augsburg; majority, Bishops Martin of Paderborn, Bonestry of Ratiborn, Stuhl of Wurzburg, Austria Hungary: minority, Archbishops Cardinal Rauscher of Vienna, Cardinal Schwarzberg of Prague, Hayndall of Kalocsa, and Bishop Strossmayer of Diakovar; majority, Bishops Gasser of Brixen, Fessler of Sankt Pölten, Riccobona of Trent, Zwergers of Seekan. Italy: minority, Archbishop Nazari di Cunabiani of Milan, Bishops Moreno of Avila, Lomana of Velletri; majority, Valerga, Latin of Turin, Cornaro of Cuneo, Carafa of Genoa. Spain: minority, Bishops Gorr in St. Gall; majority, Bishop Mennillo of Geneva. Important champions of the definition from the countries which sent no members of the minority were Archbishop Dechamps of Mechlin, Belgium, and Bishop Payà y Rico of Cuenca, Spain.

(3) Change of Procedure: the Hall of Assembly Reduced in Size.—Various memorials were now sent the Holy Father petitioning for new rules of debate for the sake of a corresponding progress in the proceedings of the council. Consequently, the conciliar procedure was more strictly defined by the Decree "Apostolica littera," issued on 20 Feb., 1870. According to this Decree, any member of the council who wished to raise an objection to the draft under discussion was to send in his proposed amendments in writing, in order that they might be thoroughly considered by the respective deputation. In the general congregation the discussion of the individual parts of the draft of a decree. The members of a deputation received the right to speak in explanation or corretion when not on the list of speakers. Speakers who wandered from the subject were to be called back to it. If a subject had been sufficiently debated the president, on the motion of at least ten members of the council, could put the question whether the council desired to continue the discussion or not, and then close the debate at the wish of the majority. Although these rules made for an evident improvement, still the minority was not satisfied with them, especially in so far as they contemplated a possible shortening of the debates. They expressed their dissatisfaction in several petitions which the second council had to decide.

On the other hand, every effort was made to satisfy another complaint which had reference to the bad acoustics of the council hall. Between 22 Feb. and 18 March, that is between the twenty-ninth and thirty-third sessions of the general congregation, the council hall was reduced about one-third in size for the use of the general congregation. The few fathers who were thus brought closer together could understand the speakers better. The hall was restored to its original size for each of the public sessions.

(4) Completion of the First Constitution.—The interruption thus caused was used by the deputation on Faith to revise the draft of the decree "De doctrina catholica," in accordance with the wishes of the general congregation. At the request of the Bishop of Paderborn laid before the deputation the first part of the revision, the work of Father Joseph Ketteler, S.J. It consisted of an introduction and four chapters with the corresponding canons. After an exhaustive discussion in the deputation, it was ready to be distributed to the fathers of the council on 18 March as the "Constitution on the Faith" in the following form: writing was also added by the deputation. Archbishop Simon of Gran gave the oral report on 18 March in the thirty-third general congregation. The debate began on the same day, and was closed after seventeen sessions on 19 April, in the forty-sixth general congregation. Over three hundred proposed amendments were brought up and discussed. Although many objections were made by both sides, yet the new rules of procedure made possible a relatively smooth course to the debates. The only disturbing incident was the passionate speech of Bishop Strossmayer of Diakovar on 22 March in the thirty-first general congregation; it called forth a storm of indignation from the majority, which finally forced the speaker to leave the session hall. On 29 March, the President of the council, Archbishops "Constitution on Faith," was unanimously adopted in the third public session by the 667 fathers present and was formally confirmed and promulgated by the pope.

C. The Question of Papal Infalibility. (1) Motions calling for and opposing Definition.—The opponents of infallibility constantly assert that the council has never defined the faith of the Church solely to have papal infallibility proclaimed. Everywhere there was merely an excuse and for the sake of appearances. This assertion contradicts the actual facts. Not a single one of the numerous drafts drawn up by the preparatory commission bore on papal infallibility.
Only two of the twenty-one opinions sent in by the Roman cardinals mentioned it. It is true that a large number of the episcopal memorials recommended the definition, but these were not taken into consideration in the preparations for the council. It was not until the contest over papal infallibility outside of the council grew constantly more violent that various groups of members of the council began to urge conciliar discussion of the question of infallibility. The first motion for the definition was made on Christmas, 1860, by Archbishop Dechamps of Mechlin. He was supported by all the other Belgian bishops, who presented a formal opinion of the University of Louvain, which expressed the opinion of the faculty for the definition. The formal petition for the definition was first circulated among the fathers of the council on New Year's Day, 1870. Several petitions from smaller groups also appeared, and the petitions soon received altogether five hundred signatures, although quite a number of the friends of the definition were not among the number of subscribers. Five opposing memorials circulated by the minority finally obtained 136 names. Upon this, early in Feb., the congregation for petitions unanimously, with exception of Cardinal Rauscher, requested the pope to consider the petition for definition. Pius IX was also in favour of the definition. Therefore, on 6 March, the draft of the decree on the Council was submitted to the pope. In the meantime, the fathers on 21 Jan., was given a new twelfth chapter entitled "Romanum Pontificem in rebus fidei et morum definienti errare non posse" (The Roman Pontiff cannot err in defining matters of faith and morals). With this the matter dropped again in the council.

23. The Agitation Outside the Council — The petitions concerning infallibility called forth once more outside the council a large number of pamphlets and innumerable articles in the daily papers and periodicals. About this time the French Oratorian Gruty and Archbishop Dechamps of Mechlin opposed each other in controversial pamphlets. A letter published by Count Montalembert on 27 Feb., 1870, in which he reproved the Pope for the infallibility definition, was read in the French Chamber of Deputies. On the other hand the conciliar speech published under the name of Bishop Strossmayer is a forgery perpetrated by an apostate Augustinian monk from Mexico, José Agostino de Escudero, who was then in Italy (cf. Granderath-Kirch, 11, 189). The majority were chiefly represented by the French writer De Verot, the Belgian, Proppel; the English, Manning; the Irish, Cullen; the Italian, Castaldi and Valerga; the Spanish, Paya y Rico; the Austrian, Gasser; the German members, Martin and Senestry; the American, Spalding. Several members of the minority as Kenrick, Rauscher, Hefele, Schwarzengren, and Ketteler discussed the question of infallibility in pamphlets that they individually issued, to which naturally the majority were not slow to reply. The most important of these answers was the "Animadversiones" of the conciliar theologian, W. Wilbers, J.S. In which the writers of the last four of the antagonists just mentioned were, in succession, violently denounced. The conciliar movement have important matters ever been subjected to as much discussion as was the question of papal infallibility in the Vatican Council. In the course of two months all the reasons pro and con had been again and again discussed, and only what had been already often said could now be repeated. Consequently in the eighty-four sessions the council finally on 4 July, most of those who still had the right to speak, not only of the majority, but also of the minority, denounced the privilege, and the cardinal president was able, amid general applause, to close the debates.

(4) Final Voting and Definition — The time of the
A GROUP OF THE VATICAN COUNCIL IN SPECIAL SESSION

PAINTING BY RIEFSTAHL IN THE STADEL INSTITUTE, FRANKFORT
eighty-third, eighty-fourth, and eighty-fifth general congregations was almost entirely occupied with the reports of the deputation on faith concerning the last two chapters. The report of Prince Bishop Pius von Bismarck, in the city of Mechelen, was read in the council on the morning of 1 July, 1879, and was repeated ten times why this city seemed suitable for such sessions. Unfortunately the general condition of affairs was such that a continuation of the council even at the most suitable place could not be thought of.

II. Acceptance of the Decrees of the Council.—After the council had made its decision every council, naturally looked to the Pope to inaugurate the work of the minority who had maintained their opposition to the definition of infallibility up to the last moment. Would they recognize the decision of the council, or, as the enemies of the council desired, would they persist in opposition? As a matter of fact, not a single one of them was disposed to yield to its sacred duties. As long as the discussions lasted they expressed their views freely and without molestation, and sought to carry them into effect. After the decision, without exception, they came over to it. The two bishops who on 18 July had voted *non placet* advanced to the papal throne at the same session and acknowledged their acceptance of the truth thus defined. The Bishop of Little Rock, however, still held with true greatness—"Holy Father, now I believe." It is not possible in this brief space to mention the accession of each member of the minority. As concerns the members from North America who are of special interest here, Bishop Vérot of St. Augustine gave his adhesion to the dogma while still at Rome in a letter addressed on 27 July to the secretary of the council. Bishop Macquaid of Rochester, if not earlier, announced his adhesion to the dogma by its formal and public promulgation. When Archbishop Kenrick of St. Louis returned to his diocese on 30 December, 1870, he made public his acceptance of the declaration of adherence at the latest by Jan. 1872. A year later Bishop Domene of Pittsburgh did the same.

In 1875 Bishop Macquaid of Rochester, if not earlier, announced his adhesion to the dogma by its formal and public promulgation. When Archbishop Kenrick of St. Louis returned to his diocese on 30 December, 1870, he made public his acceptance of the declaration of adherence at the latest by Jan. 1872. A year later Bishop Domene of Pittsburgh did the same.

D. The Council from the Fourth Public Session until the Prorogation.—At the close of the eighty-fifth general congregation a *Monitum* was read which directed the council to proceed without interruption after the fourth public session. Still, the members received a general permission to leave Rome for some months. They had only to notify the secretary in writing of their departure. By 11 Nov., St. Martin's day, all were to be back again. So many of the fathers made use of this permission that only a few more than 100 remained at Rome. Naturally these could not take up any new questions. Consequently the draft of the decree on vacant episcopal sees, which had been amended in the meantime by the deputation of discipline, was again brought forward, and debated in three further general congregations. The eighty-ninth, which was also to be the last, was held on 1 March, 1872. This day was the day after the Piedmontese decree had been issued organizing the Patrimony of Peter as a Roman province. A circular letter issued by the Italian minister, Visconti Venosta, on 22 Oct., to assure the council of the freedom of meeting, naturally met with no censure. A very remarkable letter was sent from London on the same day by Archbishop Spalding to Cardinal Barnabo, prefect of the Propaganda at Rome. In this letter he made the proposition, which met the approval of Cardinal Cullen, Archbishop Manning, and Archbishop De La Salle, to continue the council in the belief of the minority who had maintained their opposition to the definition of infallibility up to the last moment. Would they recognize the decision of the council, or, as the enemies of the council desired, would they persist in opposition? As a matter of fact, not a single one of them was disposed to yield to its sacred duties. As long as the discussions lasted they expressed their views freely and without molestation, and sought to carry them into effect. After the decision, without exception, they came over to it. The two bishops who on 18 July had voted *non placet* advanced to the papal throne at the same session and acknowledged their acceptance of the truth thus defined. The Bishop of Little Rock, however, still held with true greatness—"Holy Father, now I believe." It is not possible in this brief space to mention the accession of each member of the minority. As concerns the members from North America who are of special interest here, Bishop Vérot of St. Augustine gave his adhesion to the dogma while still at Rome in a letter addressed on 27 July to the secretary of the council. Bishop Macquaid of Rochester, if not earlier, announced his adhesion to the dogma by its formal and public promulgation. When Archbishop Kenrick of St. Louis returned to his diocese on 30 December, 1870, he made public his acceptance of the declaration of adherence at the latest by Jan. 1872. A year later Bishop Domene of Pittsburgh did the same. In 1875 Bishop Macquaid of Rochester, if not earlier, announced his adhesion to the dogma by its formal and public promulgation. When Archbishop Kenrick of St. Louis returned to his diocese on 30 December, 1870, he made public his acceptance of the declaration of adherence at the latest by Jan. 1872. A year later Bishop Domene of Pittsburgh did the same.
See was annullèd. Excepting in a few Swiss cantons, the promulgation of the decision of the council did not encounter any actual difficulties elsewhere.

IV. The Results.—In comparison with the large scope of the preparations for the council, and with the great amount of material laid before it for discussion, in the numerous drafts and proposals, the immediate result of its labours must be called small. But the council was only in its beginnings when the outbreak of war brought it to a sudden close. It is also true, as is known, that reasons within the council prevented a larger result from its sessions. Thus it was that in the end only two very large Constitutions could be promulgated. If, in contrast, the contents of these two constitutions be examined, their great importance is unmistakable. The contents meet in a striking manner the needs of the times.

A. The dogmatic Constitution on the Catholic Faith defends the fundamental principles of Christianity against the errors of modern Rationalism, Materialism, and reason; and these truths, for all time, maintain the doctrine of the existence of a personal God, Who of His own free volition for the revelation of His perfection, has created all things out of nothing, Who foresees all things, even the future free actions of reasonable creatures, and Who through His Providence leads all things to the intended end. The second chapter treats of the natural and supernatural knowledge of God. It then declares that God, the beginning and end of all things, can also be known with certainty by the natural light of reason. It then treats the actuality and necessity of a supernatural revelation, of the two sources of Revelation, Scripture and tradition, of the inspiration and interpretation of the Holy Scriptures. The third chapter treats of the necessity of an infallible, supernatural, and necessary belief in the truths of the Church. And finally, the Constitution proclaims the infallibility of the faithful, and the infallible faith, and it can never be contradicted. The fourth chapter contains the doctrine, especially important up to the present time, to-day, on the connexion between faith and reason, and how faith cannot be fully grasped by natural reason, but revealed truth can never contradict the positive results of the investigation of reason.

Contrariwise, however, every assertion is false that contradicts the truth of enlightened faith. Faith and true learning are not in hostile opposition; they rather support each other in their own respective places.

Yet the Church, not the schools and schools, but the schools, and the Church, in the Fifth Ecumenical, and the Second Council of Constantinople, 680 (Sixth Ecumenical), of the Second Council of Lyons, 1271 (Fourteenth Ecumenical), and of the Council of Florence, 1439 (Seventeenth Ecumenical), are repeated and confirmed. It is pointed out further, that at all times the popes, in the consciousness of their infallibility in matters of faith for the preservation of the purity of the Apostolic tradition, have acted as the court of last resort, and have been called upon as such. Then follows the important tenet, that the Church of Christ, has been infallible since the days of the Church of Christ, and the Church has been infallible. The Constitution closes with the following words: "Faithfully adhering, therefore, to the tradition inherited from the beginning of the Christian Faith, we, with the approbation of the sacred council, for the glory of God, and the salvation of His people, teach and define, as a Divinely revealed dogma, that the Roman pontiff, when he speaks ex cathedra, that is, when he, in the exercise of his office as shepherd and doctor of all Christians, by virtue of his supreme Apostolic authority, decides that a doctrine concerning faith or morals is a dogma, and his successors in the whole Church, possess, in consequence of the Divine power granted him by the Holy Ghost, that infallibility with which the Church wished to have His Church furnished for the definition of doctrine concerning faith or morals, and that such definitions of the Roman pontiff are of themselves, and not in consequence of the Council itself, conclusions of faith.

What is given above is essentially the contents of the two Constitutions of the Vatican Council. Their import may be briefly expressed thus: in opposition to the Rationalism and Free-thinking of the present day, the first Constitution gives authoritative and clear expression of the fundamental principles of
natural and supernatural understanding of right and true faith, their possibility, necessity, their sources, and of their relations to each other. Thus it offers to all of honest intention a guide and a firm foothold, both in solving the great question of life and in all the investigations of learning. The second Constitution settles finally a question which had kept the minds of men disturbed from the time of the Great Schism and the Council of Constance, and more especially from the appearance of the four Gallican articles of BzS2, the question of the relation between the pope and the Church. According to the dogmatic decision of the Vatican Council, the papacy founded by Christ is the crown and centre of the entire constitution of the Catholic Church. The papacy includes the fullness of the power of administration and teaching bestowed by Christ upon His Church. Thus ecclesiastical particularism and the theory of national Churches are forever overthrown. On the other hand, this years hence and unjust to say that by the definition of the primacy of jurisdiction and of the infallibility of the pope the ecumenical councils have lost the drafts and proposals which were essential to their importance. The ecumenical councils have never been absolutely necessary. Even before the Vatican Council I have expressed the opinion that the general currency only was the approval of the pope. The increasing difficulty of their convocation as time went on is shown by the interval of three hundred years between the nineteenth and twentieth ecumenical councils. The definitions of the last council have, therefore, brought about the alleviation that was desirable and the necessary legal certainty. Apart from this, however, the hierarchy united with the pope in a general council is, now as formerly, the most complete representation of the Catholic Church. The Vatican Council regards the pope as the first of the council for discussion, and the first to be heard from. As a result of the law of the Vatican Council, a number of these were revived and brought to completion by Pius IX and his two successors. To mention a few: Pius IX made St. Joseph the patron saint of the Universal Church on 8 Dec., 1870, the same year as the council. Moral and religious problems, which it was its duty to decide, the council for discussion, are treated in the encyclicals of Leo XIII on the origin of the civil power (1881), on freemasonry (1884), on human freedom (1888), on Christian marriage (1880), etc. Leo XIII also issued in 1900 new regulations regarding the index of forbidden books. From the beginning of his administration Pius X seems to have had in view in his legislative labours the completion of the laws left by the Vatican Council. The most striking proofs of this are: the reform of the Italian diocesan seminaries, the regulation of the philosophical and theological studies of candidates for the priesthood, the introduction of one catechism for the Roman church province, the laws concerning the form of ritual for betrothal and marriage, the revision of the Missal, and the codification of the whole of modern canon law.

and the acceptance of its decrees, have been preserved in the Vatican Palace, in two rooms which were set apart for them. The speeches made at the general congregation and the notes and handwriting, in addition, Pius IX also arranged to have them printed. The first four folio volumes were issued by the Vatican Press in 1878, the 40th and final volume in 1881. About a dozen copies of each volume are in the archives. (2) Collections of Official Documents: Cecconi, Storia del Concilio ecumenico Vaticano seconda (4 vols., Rome, 1874); Fries, Documents ut illustrandum Concordiam Vaticana (2 pt., Nordiningen, 1874); Fries, Geschichte des vaterlichen Konzils mit einem Grundriss der Geschichte desselben (2 vols., Padua, 1872); Martis, Origines Concilii Vaticanorum et doctrinarum et disciplinarum pontificum (2 vols., Freiburg, 1874); Francke, Geschichte des vaterlichen Konzils (2 vols., Freiburg, 1874); Goerke, Dokumenten aus dem vaterlichen Konzil (2 vols., Freiburg, 1872); the most complete collection is Acts of decrees monstracis accumulatoris Concilii Vaticanis (2 vols., Freiburg, 1879); Schmelzer, Geschichte des vaterlichen Konzils (2 vols., Freiburg, 1879); the collection is in the Commentarii Concordi (Vienna, 1875). The decrees of the council have often been published, as at Rome by the Propaganda, at Freiburg, and ratification.

(3) Historical Accounts: (a) Catholic: by the secretary of the council, Fussler, Das vatikanische Concilium, dokumentation und innere Verhael (Vienna, 1871); Manning, The Treatise on the Vatican Council (1872); Ollivier, L'histoire du concile du Vatican (1879); Grandet and Kirch, Geschicht der vatikanischen Konzils von seiner ersten Anhangung bis zu seinen Verhandlungen (2 vols., Freiburg, 1898); Fries, Acts and history of the concile ecumenique de Vatican (2 vols., Freiburg, 1891), numerous illustrations; Grandet in Wezler and Weis, Kirchenlexikon, s. el. Vatican, Council, (b) Non-Catholic: Friederich, Tagebuch während des vatikanischen Konzils ge- fahren von einer franzosischen Journalisten (2 vols., Nurnberg, 1873); Rom, Geschicht der vatikanischen Konzils, (3 vols., Bein, 1877-57); Morey, Letters from Rome on the Occasion of the Ecumenical Council 1869-1870 (2 vols., London, 1872).

Vatican Observatory.—The Vatican Observatory now bears the official title, "Specola Astronomica Vaticana." To understand its history it is necessary to remark that the designs observatorio or specola are not restricted to astronomy, but may mean any elevated locality from which aerial phenomena are observed. From this point of view the history of the Specola Vaticana has passed through four successive stages. (1) The first period of the Vatican Observatory is thus described in the Motu Proprio of 1891 by Leo XIII: "Gregory XIII ordered a tower to be erected in a convenient part of the Vatican buildings, and to be fitted out with the greatest and best instruments of the time. There he held the meetings of the learned men to whom the reform of the calendar had been entrusted. The tower stands to this day, a witness to the munificence of its author. It contains a meridian line by Ignazio Danti of Perugia, with a round marble plate in the centre, adorned with scientific designs. When touched by the rays of the sun that are allowed to enter from above, the designs brightly, or the old, for the correctness of the reform." The first half of this narration is based upon a tradition supported by Gili and Calandrelli (see Lillius); it is connected
with the Vatican Observatory, at least as far as the locality is concerned. The tower is 75 metres above sea level and stands over the museum and library, between the courtyards Belvedere and della Pigna. It is often called the "Tower of the Winds." The second period of the Vatican Observatory deals mainly with the person of Mgr. Filippo Luigi Gili, whose life has been written by Lais. Gili was born in Corneto, in 1756, and died in Rome, in 1821, a beneficed clergyman of St. Peter's Basilica. He was a universal genius, well versed in physics and in biology, in archeology and in the Hebrew language.

(3) The revival of the Vatican Observatory in its third period was occasioned, on the one hand, by the loss to the Church of the Roman College and its observatory in 1870, and on the other, by the exposure of instruments presented to Leo XIII by the Italian clergy for the celebration of his golden jubilee of priesthood, in 1888. The Barnabite Father Denza, well-known as founder of the Italian Meteorological Union, then offered the Vatican Observatory new instruments in the Gregorian Tower, and to restore that locality to its former purposes. The plan was accepted and a series of the best instruments was procured, partly from donations by Hicks in London, partly by purchase of self-registering apparatus from Richard in Paris. From the observatory of the late Marquis of Montevecchioli in Montecatini, when he had been director, a four-inch equatorial, a three-inch transit instrument, and four pendulum clocks with two chronometers, were acquired. Father Denza had still broader plans. The year before, in 1887, Mouchez had organized the co-operation of a number of observatories for continuing Argelander's observations to fainter magnitudes by means of photography. At the second meeting of the committee in Paris, in 1888, Denza declared his intention to join in the work. For this purpose, Leo XIII ceded to the Vatican Observatory a second tower, more than 400 metres distant from the Gregorian. It is the western of the two towers remaining from the Leonine Fortress which had been built for defence against the Saracens in 518-53. With a diameter of 17 metres and a thickness of 4.5 metres in the lower walls, it seemed large and strong enough to support the thirteen-inch photographic refractor, which was ordered from Gautier in Paris. During the four years following the observatory remained in charge of the vice-director, Father Lais, of the Oratory, who has conducted the photographic work from the beginning, till at his own expense, in 1905, he deposited in the hands of the Augustinian Father Rodriguez, a specialist in meteorology. Seven volumes were published during the third period of the observatory, four under Denza, the fifth under Lais, and the last two under Rodriguez.

(4) The fourth and present period of the Vatican Observatory began with the appointment in November, 1901, by Pius X of Archbishop (now Cardinal) Maffi as President of the Specola. His first step was to remedy the great difficulty caused by the separation of the two towers. According to his plans, the Gregorian Tower was to be abandoned to historical archives, and the second round tower of the old Leonine Fortress, with the adjoining summer residence of Leo XIII, was to be given over to the Museum. The two old towers were to be connected with each other by a passage over the fortification wall, with an iron bridge spanning a gap of 85 metres in length. For carrying out these plans, the author of the present article was designated in the audience given to Cardinal Maffi on 14 March, 1906, and officially appointed on 20 April. The fortification wall, a thousand years old, which extends about 100 metres, is now crowned with four rotatory domes, covering the astrographic refractor in the Leonine Tower, and a new sixteen-inch visual telescope in the second tower, called Torre Pio X. A four-inch equatorial stands on a half round bastion, at the west end of the bridge, and a photoheliograph at the east end of the old wall.
over the barracks of the gendarmes. The old transit instrument is mounted on a wall over the main walls of the new residence. After the material restoration of the observatory, the main problems were a library and the measuring of the astrographic plates. The rich meteorological library was consigned to the Pontifical Academy Lincei, and the old meteorological and seismological instruments were sent to the observatory in Valletta. An astronomical library is now filling two rooms of the new residence; old treasures were secured to it by the loan of the scientific collection from the Vatican Library, the latter confining itself to historical and literary branches. The astrographic plates are being measured with two new Reapold machines, which are much better in performance than those sent to the Van Beuren Sisters. For nearly four years the director enjoyed the co-operation of Father Stein, S.J., by which it was possible to publish the first three numbers of the new series, besides minor essays, and the last two series of the atlas of variable stars. At the reunion of the Astrographic Congress at Paris in 1906, L. P. Lus present-sent these last reproductions by himself on silver-bromide paper.

VAUDREUIL, PHILIPPE DE RIGAUD, MARQUIS DE, GOVERNOR OF CANADA, b. in Languedoc, France, in the first half of the seventeenth century, of Louis R. de Vaudreuil and Marie de Chateau-Vendun; d. at Fort St. Louis, in 1745. In 1706 he obtained a commission in which he served (1650-76), he ranked as brigadier and finally as colonel. He went to Canada (1657) in command of a marine detachment. After the massacre of Laehine he prevented the Iroquois from assailing Montreal (1689). In 1690 he shared in the defence of Quebec against ships. In 1698 he received the command of Quebec, and replaced, as Governor of Montreal, Callières, who was promoted Governor-General of Canada. In 1702 the fleet still bearing his name was given him. He again succeeded Callières (1703), his prudence and experience fitting him to govern the colony at that trying period. He was loved by the people and feared by the Indians with whom he conversed to strengthen an alliance, while the English complained against its being made a regular post by the French. In 1710 he was raised to Royal governor of Montreal, and the skyline of Quebec, and was later appointed as superior of the missions of the country. In 1719 he fortified Quebec against the threatened attack of Admiral Walker, whose fleet was shipwrecked off Egg Island (1711). Peace was concluded between France and Great Britain (1713), and the boundaries were fixed (1714). The remaining territory was divided into 82 parishes, Montreal was fortified by a wall, and a census taken, giving an entire population of 25,000 souls, of which 7000 were in Quebec and 3000 in Montreal. He received the Grand Cross of St. Louis (1721), and ordered the construction of Fort Louis de la Savanna. His wife, Louise Elizabeth Joybert, who bore him twelve children, had been appointed (1708) under-governor to the royal children.

LOUIS PHILIPPE, COMTE DE VAUDREUIL, second son of preceding, b. at Montreal, 1691; d. 27 Nov., 1763. Entering the army at the age of seven he ranked as captain in 1738, and received the Grand Cross of St. Louis (1745). Transferred to the navy as chief of staff under Louis II, Duke of Bourbon, to the fleet of the North Sea, and later to Sardinia, where he captured the English fleet of the Niobe. In 1755 he was appointed governor of Quebec, and in 1756 he was appointed governor of Canada and New York.

LOUIS PHILIPPE, GOVERNOR OF CANADA, b. at Quebec, 1698; d. at Quebec, 1738. In 1706 he was appointed governor of Canada, and in 1711 he was promoted governor-general of Canada. In 1719 he was appointed governor of the island of Orleans, and in 1723 he was appointed governor of New York. He was succeeded by his son, Louis Philippe, count of Vaudreuil.

VAUGHAN, HERBERT, cardinal, and third Archibishop of Westminster, b. at Gloucester, 15 April, 1872; d. at St. Joseph’s College, Mill Hill, Middlesex, 19 June, 1963; he was born in the family of Sir Philip Vaughan, a prominent English politician. He was educated at Mill Hill, where he was one of the most brilliant students of the school. He entered the Society of Jesus in 1891, and was ordained a priest in 1898. He was made a cardinal in 1931, and was archbishop of Westminster in 1939. He was a man of great learning, and was noted for his devotion to the Catholic Faith all through the ages of the persecution. His members had suffered for their faith in fines and imprisonment and double land taxes. Sometimes, too, they suffered for their politics. In the Civil War they sided with Charles I and were nearly ruined. After the Stuart rising in 1679 John Vaughan of Oflield refused to take the oath of allegiance to the House of Hanover, and two years later his name appears in a list of ‘Popish
Receivants Convict". When "Prince Charlie" in 1745 ranred south to Derby, two of the Vaughan's rode back with him to Scotland and fought by his side at Culloden. Driven into exile, both took service under the Spanish king, and the younger rose to the rank of Field Marshal. The son of the elder brother, the great-great-grandfather of the cardinal, was allowed to come back to England and to resume possession of the family estates at Courtfield, in Herefordshire.

Colonel John Vaughan, the cardinal's father, married, in 1830, Eliza, daughter of Mr. John Rolls, of the Hereford, Monmouthshire, and a aunt of the future Cardinal Wiseman. He himself was a convert to the Catholic Faith shortly before her marriage and was, in many ways, a remarkable woman. It was her habit to spend an hour every day in prayer before the Blessed Sacrament, begging of God that He would call her children to serve Him in the church or in the sanctuary. In the event all her five daughters became priests, three of them bishops. Herbert, the eldest born, went to the Jesuit College at Stonyhurst in the spring of 1841, and remained until the summer of 1847. From Stonyhurst he went to the Jesuit College at Bruggelette, in Belgium, for three years. From an early age his thoughts had been turned to the priesthood. His mother and father had decided that he was to become a priest and she was confident that he would be a priest. His father's dearest wish was to see him win distinction as an English soldier, but when he was only sixteen he had made up his mind to give himself to the Church. On leaving Bruggelette he went to the Benedictines at Downside Abbey for twelve months as an ecclesiastical student. In the autumn of 1849 he attended the lectures at the Collegio Romano, and there for a time he shared lodgings with the poet, Aubrey de Vere. The student years in Rome were a time of trial and difficulty. Wretched and incapacitating health made the labour of study a constant strain. At length Vaughan's friends, fearing that he would not live to reach the canonical age for the priesthood, sought and obtained from the Holy See permission for him to be ordained before the usual time. But with this delicacy of health went something of the energy which was so characteristic of his after career. In the intimate diary which he kept at this time he constantly reproaches himself for his excessive impetuosity in speech and action. He wrote that he was not twenty years of age on September 20, 1851, at Lucca, and said his first Mass in Florence at the Church of the Annunziata on the following day.

During all his student years he had hoped to be a missionary in Wales, but at Cardinal Wiseman's call he now accepted the position of vice-president at St. Edmund's College, Ware, the principal ecclesiastical seminary for the south of England. He went there in the autumn of 1855, after spending some months in a voyage of discovery among the seminaries of Italy, France, and Germany. Though not yet at the canonical age for the priesthood, and younger than some of the students, he was already vice-president at St. Edmund's. The position, a difficult one in any case, was made more so when St. Edmund's had recently become an Oblate of St. Charles and therefore was a disciple of Manning. At once he was involved in the controversy between Wiseman and his chapter which darkened and embittered the last years of the cardinal's life. Wiseman was the friend and protector of Manning, and Vaughan was regarded as the representative of a man suspected of bringing all the ecclesiastical education of Southern England under the control of the Oblates. Litigation followed in Rome, and the Oblates eventually withdrew from St. Edmund's. Vaughan looked back upon his work at St. Edmund's with a sad sense of frustration. The disappointment worked in two ways. He began to look for external work in the immediate present and, for the future, he dreamed dreams. He collected money and built a church in the county town, Hertford, and founded a mission at Enfield, but had no confidant to whom he could go for God. Since he was a boy his constant prayer had been that whatever else was withheld he might live an intense life. He resolved to consecrate himself to the service of the Foreign Missions. Blessed Peter Chaver was his ideal hero and saint, and his first purpose was to go himself to Africa or Japan. But, gradually, as his own sense of the demand of his indiscipline, he came to want something which should be more permanent than anything dependent on the life of an individual. A great college which should send out an unending stream of missionaries to all the heathen lands seemed a worthier object of effort. He had no money but he had a sublime faith, a perfect courage, and he determined to go abroad and beg, and with his back to the Americas. With the approval of Wiseman and the blessing of the pope he set sail for the Caribbean Sea in December, 1863. Landing at Colon, he crossed the Isthmus of Panama, then part of New Granada. The Government was at war with the Church, and the clergy were forbidden to say Mass or to administer the sacraments until they had sworn an oath. Vaughan's mission was to gather what was required as an acknowledgment of the supremacy of the civil power in spiritual matters. The churches were all closed and, though hundreds of people were dying of small-pox, they were left to die without the help of a priest. That was enough for Vaughan. He threw himself into the work, and at every profession of faith, without the least regard for the government prohibition. He was summoned before the president and told to desist. He had promised, but was taken before the prefect of the town. His offence being admitted he was required to give bail, and then he was given that he should not be allowed to leave the port. It was clear that he could do no more good in Panama, so, forfeiting his bail, he at once went on board a United States steamer and sailed for San Francisco. Here, in spite of the limitations put to his appeals for money, during a stay of five months he succeeded in collecting $25,000. From California he sailed for the Mediterranean; and there he passed his way through Peru and Chili, then ride across the Andes into Brazil and thence to sail for home or for Australia. In Peru he collected $15,000, and nearly twice as much in Chili. In March, 1865, he left the cities of the Pacific but, instead of crossing the Cordilleras, he sailed round the Horn in "H. M. S. Charybdis". In Rio he had an interview with the emperor and money came in fast. In June his campaign was brought to an abrupt close by a letter of recall from Manning, who had just been appointed Archbishop of Westminster, and Vaughan sailed for England in June, 1865.

In the following March the College for Foreign Missions was started at a hired house at Mill Hill, some eight miles from London. It began in a very humble way. Vaughan determined to keep the money he had collected in America as a permanent endowment for the college, as a fund for the maintenance of the students; and when the growing numbers of the students made it necessary to build there was nothing for it but to beg again. Happily friends came to his aid, as they did in all the ecclesiastical life, and in March, 1871, a new college, built on a freehold site, was opened with a community of thirty-four. In the autumn of the same year St. Joseph's Missionary Society had assigned to it its first sphere of work among the coloured population of the United States. To make himself familiar with the conditions of the problem on the spot
HERBERT CARDINAL VAUGHAN
PAINTING BY MADAME CECILIA DE WENTWORTH
VAUGHAN went back to America, and travelled all through the southern states. He was away seven months, and in that time he visited St. Louis, New Orleans, Mobile, Savannah, Memphis, Natchez, and Harleston, making careful investigation in each place as to the spiritual provision for the negro race. Shortly after his return to England his direct supervision of St. Joseph’s College was brought to an end by his appointment as Bishop of Salford. But though St. Joseph’s now had its local superior, Vaughan, to the end of his life, was the head of the Venerable Society. He may have done more conspicuous and important work in his life, but there was no one to do it. He convincingly carried on the great college, which is still doing the things he planned. His missionaries are at work in the Philippines, in Uganda, in Madras, in New Zealand, in Borneo, in Labuan, in the Basin of the Congo, in Kashmir, and in Kaffiristan. In 1910 they gave baptism to more than 10,000 pagans.

One with him for a year and while his first visit to the United States must be reckoned a new appreciation of the power of the Press. He came back resolved to own a paper of his own, and eventually bought “The Tablet”. It proved a fortunate investment from every point of view. During the time of the great controversy which preceded the definition of papal infallibility, and which finally brought Bishop Vaughan, “The Tablet”, for services to the Catholic house, received the special thanks of the Holy See.

Bishop Vaughan was consecrated Bishop of Salford on October 18, 1872. His first concern was for ecclesiastical education and the proper supply of priests for the diocese. The seminaries were scattered about in different colleges, some in England, some in Scotland, and others in foreign lands. At Ushaw, or in Rome, Paris, Valladolid, or Lisbon, they turned to the diocese almost as strangers to each other and to their bishop. Bishop Vaughan planned that he called a pastoral synod. It was to be attached to his own house, and when clerical students came from Ushaw or seminaries abroad, they were to be trained in the diocese. In 1872, when they had completed their theological studies at Ushaw, or in Rome, Paris, Valladolid, or Lisbon, they turned to the diocese almost as strangers to each other and to their bishop. Bishop Vaughan planned that he called a pastoral synod. It was to be attached to his own house, and when clerical students came from Ushaw or seminaries abroad, they were to be trained in the diocese. The system of administering the affairs of the diocese was such that it was impossible for Bishop Vaughan’s activities and labors to be extended, the diocese being made responsible for the proper administration of the missions within the limits of his diocese. A Board of Temporal Administration was formed to advise the bishop on all matters connected with finance. Vaughan was always eager to identify himself in every possible way with the public life of the people of Manchester, with every movement for social reform, and the demand made in behalf of temperance, or sanitation, or the improvement of the houses of the working classes. Lancashire soon came to recognize in him a large-hearted citizen to whom the interests of no class or creed were alien. When he went to Westminster, the proposal to commemorate a great episcopate by placing a marble bust of the bishop was carried without a dissentient voice.

In the autumn of 1881 “a terrible suspicion forced itself on his mind” that every year a multitude of children were being lost to Catholicism, through the neglect of parents, from the operation of the workhouse system, and through the efforts of presbyteralizing societies. A house-to-house census of the whole Catholic population of Manchester and Salford was at once undertaken, and every child in every family was to be traced and accounted for, in whatever part of the country it might have migrated. The bishop instructed his clergy to throw aside all other occupations that were not imperative, for the sake of this work. “Let them have fewer services in the churches if there were a hindrance in hunting those who were astray.” By May, 1886, the census was complete, and of an estimated Catholic population of 100,000 in Manchester and Salford, 74,000 persons were individually registered. Of the children under sixteen no less than 11,015 were reported as in danger of losing their faith, and of these 2,663 were described as being in extreme danger. Both the Child and Protection Society started. The bishop gave £2,000 to its funds on the spot, and the episcopal income for the same object, during the time he remained in Salford. His example was contagious and the people gave generously in money and service. At the outset
the bishop issued a public challenge to the Protestant philanthropic societies of the city. Their plea for accepting and detaining Catholic children in their orphanages was unsuccessful, and it was then that the Bishop Vaughan himself boldly undertook to maintain every destitute Catholic child in Manchester and Salford. Public opinion instantly sided with the bishop. In some cases, however, the societies were obdurate, and time after time the law courts had to vindicate the right of poor Catholic parents to recover their children from the orphanages. One by one the Protestant institutions were emptied of their Catholic inmates.

A greater task remained. The whole workhouse system of Lancashire had to be changed. In the year 1886 it was found that there were over 1000 Catholic children in the fourteen workhouses of Manchester and the neighbourhood and that, on the average, 103 Catholic children left the workhouse schools every year. The bishop's report showed that 80 per cent of these were lost to the Catholic Church. It was no part of the duty of the Lancashire guardians when they placed these children out in service to take care that they were placed in Catholic families. The bishop did not blame the guardians. The faith of a workhouse child was generally weak and was easily lost amid new Protestant surroundings. At that time London was far ahead of Lancashire in the fairness of its treatment of Catholic Poor Law children. In Middlesex it was already the custom to hand over Catholic children to Catholic Certified Homes with an agreed sum for their maintenance. In Lancashire there were no Catholic Certified Homes for the children. To create such homes the bishop knew would require a vast sum, but his faith in the inexhaustible charity of his people was once more justified. Two great homes were quickly provided and in each case the certificate of the Local Government Board was obtained. There remained the task of persuading the Boards of Guardians to utilize the opportunity now brought to their doors. It was a strong card in the bishop's hand that he could promise that every child handed over to a Catholic Home should cost the guardians considerably less than if it stayed in the workhouse. The more economical working of the Catholic homes was, of course, due to the fact that the members of the religious orders who made up their services without payment.

Finally, homes were provided for Catholic waifs and strays of whatever sort, whether they came within the reach of the Poor Law or not. Before the bishop left Salford the Rescue and Protection Society had caught up with its work and was fairly abreast with the evil. It is possible even for one who writes under the shadow of Westminster Cathedral, and remembers St. Bede's and the missionary College at Mill Hill, to think that it was then Cardinal Vaughan achieved the greatest work of his life.

Cardinal Manning died on 14 January, 1892. There never was any doubt in the public mind as to who would succeed him. Vaughan faced the prospect with the same cheerful spirit. Before the year was over his strength was nearly done, and that at sixty he was too old to be transplanted to the new world of Westminster. He wrote privately to the pope protesting that he was better fitted to be a Lancashire bishop than the English metropolitan. Rome gave no heed to the letter, and Vaughan was appointed Archbishop of Westminster on 29 March, 1892. In May he was enthroned, in August he received the sacred pallium, and in December he knew that he was to be made a cardinal. He received the red hat from the hands of Leo XIII on 9 January, 1893, with the presbyterial title of Sts. Andrew and Gregory on the Gelnham. One of the first works to which the archbishop set his hand was to try to improve the education of the clergy by uniting all the resources in men and money of several dioceses for the support of a central seminary at Oscott. In the autumn of 1894 he took steps to reverse the policy which had sought to separate the two universities. He was received with open arms by the universities of Oxford and Cambridge. The bishop's prohibition was being disregarded and evaded, and he thought it better that it should be withdrawn, and steps taken to secure for the Catholic undergraduates such safeguards for their faith in the way of chaplains and special courses of lectures which could not otherwise be obtained. One by one the promises were enough to be assured that the change for which he was responsible had been completely successful.

During the next few years a great deal of the cardinal's time and attention was taken up by a controversy which arose out of the movement in favour of corporate reunion associated with the name of Lord Halifax. Representing a small fraction of the Anglican body, Lord Halifax and his friends were encouraged by certain French ecclesiastics, thought the way to reconciliation would be made easier if what they called "a point of contact" could be found which might serve to bring the parties together. It was thought, for instance, that a consideration of the question of Anglican orders might lead to discussion on the mutual respect which might be based on an understanding could be arrived at in regard to the validity of the orders of the English Church, other conferences might be arranged dealing with more difficult points. The cardinal felt that the subject chosen for discussion was unhappily selected. The validity of Anglican orders was mainly a question of fact, and was not one which admitted of any compromise. Moreover even if the orders of the Anglican Church were admitted to be valid, that body would still be as much outside the unity of the Church as the Arians and Nestorians of the past or the Greeks of to-day. However, he was quite willing that all the facts of the case should be investigated and all he insisted on was that the investigation should be as thorough as possible and made by a body of historical experts. A strong commission was appointed consisting of Father de Augustinis, S.J., M. l'Abbe Duchesne, Mgr. Gasparri, Abbot Gasquet, O.S.B., Rev. David Fleming, O.S.F., Canon Moyes, Rev. Dr. J. Scannell, and Rev. Jose de Llamanones. The commission held its first conference on 21 March, 1896. When after a series of meetings the process of investigation was finished, the collected evidence was laid before the cardinals of the Holy Office, who delivered judgment on 16 July, 1896, and declared the orders of the Anglican Church to be certainly null and void. This decision was confirmed by the Bull "Apostolica Sedis", published on the thirteenth of the following September.

When the cardinal came to Westminster he came resolved to build a great cathedral. His predecessor had secured a site, but the site was mortgaged for £20,000, and there was no money for building. Few men ever collected more money than Cardinal Vaughan, though to him it was always "hateful work". Few men ever spent more money than he. The project stood at £100,848. A little later the sale of a city church which the shifting of the population had made superfluous enabled the cardinal, after setting aside £20,000 for a new church, to add £48,000 to the credit of the cathedral building fund. In May, 1898, he made his last appeal. He asked for another £10,000, and it came. The cathedral was opened for public worship a year later, and Cardinal
Vaughan was there before the high altar in his coffin. During the last years of his life the cardinal suffered from almost continuous ill-health. He laboured strenuously to the last, especially in the cause of the denominational schools. He had fought their fight for a quarter of a century and had the satisfaction of seeing a great deal of good accomplished. He died at Louvain, 25 March, 1903. He was the last of the English bishops to have died in his own diocese. When the body was laid out for burial an iron circle was found driven into the flesh of the left arm. Cardinal Vaughan was a man of strong vitality, and his energies were devoted, with rare singleness of purpose, to one end—the salvation of souls. He lived directly in thought and speech, and had the taste for speculation or analysis. He knew how to win and to hold the allegiance. Principles and the proudest extracts from his intimate diary which were published after his death showed him to have been a man of exceptional and unsuspected humility.

J. G. Snead-CoX.

fession he was appointed sub-prior; and when the prior resigned in 1577, to pass over to the Carthusians, there was a strong movement to elect Vaux in his stead. Some, however, apparently feared that he would use his position to introduce a large number of his fellow-countrymen with a view to training them for the English Mission; a marginal note in the "Priori Chronic" records, "Canobium nostrum in seminariarum pace erection Anglarum." Three years later at the instance of Allen, he was summoned to Rome and was consecrated Bishop of Chertsey by Cardinal Wolsey (1531). His post as Prior was filled by a peripatetic missionary work in England; the Chronicle notes his departure "with the blessing and leave of his Prior," 24 June, 1580. Vaux left Reims on 1 Aug., and Boulogne on the 12th, arriving that day at Dover in company with a Catholic soldier named Tichborne and a Frenchman, who turned traitor. Escaping detection at Dover, the two Englishmen passed on to Canterbury, and thence to Rochester, where they were arrested on information lodged by the spy. After several examinations Vaux was finally committed by the Bishop of London to the Gatehouse Prison, Westminster. According to an account of the arrest in the "Doux Diaries", Bishop Aylmer demanded: "What relation are you to that Vaux who was a Benedictine in England and a few further that your priest admitted the authorship and that confession settled his fate.

For the first three years of his imprisonment, owing chiefly to the wealth and influence of noble friends, Vaux was treated with comparative mildness. In a letter which he sent to the Prior of St. Martin's a month after his arrest he asked for a pardon and for the inspection of his papers and books. In 1583, he was transferred to the Clink. According to Strype, he was brought up again before the relentless Aylmer, in 1585, and found guilty of "so in danger of death." What happened further we do not know; if actually sentenced, he must have been reprieved. In all probability he was abandoned to the mercy of his prison, and in his prison life representation is by this contemporary item from St. Martin's Chronicle: "The venerable Father Lawrence Vaux, martyr... for the confession of the Catholic Faith thrown into prison, where he was starved to death, and so gained the crown of martyrdom, 1585." Vaux's catechism, to which we may fairly attribute his imprisonment and death, was first published in Leuven, in 1594. Six further editions in rapid succession, emanating from Antwerp and Liége, testified to its widespread popularity and usefulness.

The Liége, 1585, issue was reprinted with an excellent biographical introduction for the Chetham Society by Thomas Graves Law, in 1885. This edition contains also Vaux's paper on "The Use and Meaning of "PapalEEs". This treatise on instruction added by the Liége publisher. The catechism is practically formed on the same lines as its successor of to-day, explaining in sequence the Apostles' Creed, the Pater and Ave (but the latter has not the second half, Holy Mary), the Commandments (these at considerable length), the sacraments, and the offices of Christian practice. The treatment on the ceremonies discusses the use of holy water, candles, incense, vestments, etc. The style is old-fashioned, but the matter in both is as useful and edifying to-day as it was for four centuries ago.

Catholic Record Society's 'Macclesfield, H. Dord, Ch. Hist. of Eng., Dovvuy Dutres; Gilmour, Revü, Dott. of Eng. Cath., etc., A New Introduction to Vaux's Catechism (Chetham Society,
received a licence from the College of Physicians of London to practise for two years. His house was “by the common school house” in the city of York; there Mass was said in 1570. In 1572 he was accused of Heresy, and was confined in the prison of St. Edmund Campion.

In Nov., 1571, after he had been confined to his own house in the city of York for nearly nine months, he was sent into solitary confinement in Hull Castle. Grindal describes him as “sophistical, disdainful, and indulging arguments with irration, when he was not able to solve the same by learning”, and adds that “his great anchor-hold was in urging the literal sense how est corpus annum, thereby to prove transubstantiation”. By June, 1570, he was back again in his house, where Mass was again said. Later on he was in the Gatehouse, Westminster, from which he was released on submitting to acknowledge the royal supremacy in religious matters; but he was again imprisoned as a recusant in Hull, York, where he died. His wife, Dorothy, died in the New Counter, Ousebridge, York, 26 Oct., 1587.

JOHN B. WAINWRIGHT.

VAVASSEUR, FRANÇOIS, humanist and controversialist, b. at Paris-de-Monial, 8 Dec., 1605; d. at Paris, 16 Dec., 1684. He entered the Society of Jesus in 1621, taking the name of S. Joseph, and for seven years, then positive theology and Scripture at Bourges, and later at Paris. His first work was a paraphrase of the Book of Job in Latin hexameters (1637), resumed and accompanied by a commentary in 1629. He published also: “Theurgicon” (1604), on the miracles of Christ, “Elegarum liber” (1659), “De ludere dictatione” (1656), took an active part in the Jansenite controversy (“Cornelius Jansenius typresis suspectus”), Paris, 1650), and defended himself against the charge of having written pamphlets concerning the Calagahn affair (De libello suppositio dissertatio, 1653). In this last work he defined accurately the style of the Port-Royal writers before the “Proviencales”, a monotonous, colourless, complicated style, burdened with complications. He wrote a sharp and learned criticism of the “Epigrammata delectus” of Port-Royal (1659), “De epigrammate liber et epigrammatum fibri tres” (1699), showing delicate and solid knowledge of Catullus, Martial, and the Greek anthology. He was sensitive on this subject and took issue with his adversary, the Marquis de Vauvenargues, who had practically declared that no modern had written a good epigram. Remarques sur les nouvelles reflexions du R. P. Rapijn (1695), De Lamoignon, Rapijn’s protector, had Vavasseur’s pamphlet suppressed. “Père Vavasseur was a learned man, one of those critical and severe minds which find something to bite in every thing in good company,” wrote his admiring friend, Father Sancerre, “Port-Royal”, III, 528. His other works include sermons, a commentary on Osee, and a dissertation on the beauty of Christ. All his writings were collected by Jean le Clerc (Amsterdam, 1709).

His Latin writings had appeared previously in Paris (1683).

CERVISIUS, Bibl. de la compagnie de Jesus, VIII (Paris, 1899), 493; SAINT-HEURTE, Port-Royal, III, 49, 28, 625.

PAUL LEJAY.

Vaz, Joseph, a Goanese priest, Apostle of Ceylon, b. at Goa, 21 April, 1651; d. at Kandy, 16 Jan., 1711. His parents were Christians of the Konkani Brahmin caste. He learned Portuguese in Seraico, his father’s village, and Latin in Baflion, his mother’s village, studied rhetoric at the Jesuit college and philosophy and theology at the College of St. Thomas Aquinas, Goa, was ordained in 1676, and became a favourite preacher and confessor. Hearing of the oppressed state of the Catholics of Ceylon under the Dutch, Father Vaz desired to go to their rescue, but was for the time being appointed Superior Mission, a post which he occupied for three years. On his return to Goa in 1684 he spent his time preaching in the villages, and joined the Oratorians then recently established in Goa, of which congregation he was soon made superior. In 1686 he obtained permission to give up this office and to proceed to Ceylon. On landing at Jaffna, June 26, he found active and unrelieved propaganda going on in the island, and the Catholic religion proscribed and under persecution. He was therefore forced to wear disguise, and to do his work in secret. Afterwards, taking up his residence in a village called Silhale where the Catholics were numerous and resolute, he succeeded in reviving the spirit of the faithful. But his work was accompanied with the vigilance of the Dutch, and he was forced to change his quarters for Putlam, where he worked with great success for a whole year. He then fixed on Kandy, the capital of a native independent state, as his centre of operations. Being on his arrival denounced as a Portuguese spy, he was quickly put into prison, where, however, the Catholics gained access to him, thus enabling him to continue his good work. In the end he was arrested and taken to the court of the king, regained his liberty, and began to extend his operations to other parts of the island.

About 1690 several Oratorians and other priests were sent to help him in his labours. The news of his success having reached Rome, Mgr de Tournon, the papal legate, was directed to enter into communication with him. The legate conceived the plan of erecting Ceylon into a diocese with Father Vaz as first bishop, but the latter dissuaded him from this. In his later years Father Vaz had much to suffer from declining health, and in 1710 was unable to leave Kandy. The subject of his beatification was first urged upon the consideration of the Holy See by Dom Francisco De Nuncie, S.J., Bishop of Cochin, who also claimed jurisdiction over Ceylon. The process was begun in Goa, and a number of miracles were registered. But the non-fulfilment of certain essential formalities led Benedict XIV to cancel the proceedings, with an order, however, that they should be re-instituted. In South Kanara, he is generally known as Venerable Father Joseph Vaz, Mgr Zalak, Delegate of the Congregation of R.S.J., of Goa, who, at the time of his death in 1891, that he has “unfortunately been almost entirely forgotten. In Europe and even in India, there are still some who remember his name, and in Ceylon, the theatre of his Apostolic labours, his name is still mentioned by the older generation; but the rising generation hardly know what they owe to him. And yet, his is a name that ought to endure for ever”.

Do ROY, L’Apostole di Ceylon—P. Giuseppe Vaz della Congregazione di Oratori di S. Filippo Neri (Venice, 1553), tr. A. J. Meech, Life of Padre Joseph Zaleski (Calcutta, 1896); MAGAZINE, (1865-66). Two pamphlets on the life of Father Vaz have been recently printed with the object of reviving his memory among his countrymen.

ERNEST R. HOLL.

Vecchietta, Lorenzo di Pietro, painter, sculptor, goldsmith, and architect, b. at Castiglione di Val d’Orcia, 1412; d. there, 1480. He is said to have been the pupil of Taddeo Bartoli and Giacomo della Quercia. In sculpture he was influenced largely by Donatello, with whom he came into personal contact; in painting he adhered to the traditions of Sienese. His noblest work is the at the Hospital of Santa Maria della Scala, Siena, to which he gave a chapel dedicated to Our Lady and decorated with painting and sculpture by his own hand. The frescoes include an Annunciation, a Nativity, a Last Judgment, all badly damaged, and an allegory of the Ladder with
children ascending to heaven, which records the tradition of a local foundation and gives its name to the institution. Over the high altar is the striking bronze figure of the Risen Christ keyed to Donatello’s harsher manner, also two angels bearing candles.

The fine bronze tabernacle was removed by Pandello Petrucci and is upon the high altar of the cathedral. A series of frescoes in the Baptistry of S. Giovanni were executed with the assistance of pupils, and identified as Vecchietta’s own: the Evangelists, the Four Articles of the Creed, the Assumption, containing some beautiful angels’ heads, and symbolical figures of Virtues. In the Galleria di belle Arti are a Madonna and some minor works; also, in the Pinacoteca di Siena were a Madonna and some minor works, and a beautiful Our Lady of Piety. The asetic and rather formal figures of Sts. Peter and Paul in the old Mercanzia, Loggia de’ Nobi, date about 1485 to 1490. A silver bust or statue of St. Catherine of Siena is known to have been made by Vecchietta at the time of the saint’s canonization, disappeared after the siege of Siena (1555). Outside Siena the artist’s chief painting, an Assumption, of (1515), is in the church at Pienza; in Florence a Madonna panel and the bronze tomb statue of Marianus Scervini the Elder (removing from S. Domenico, Siena), a noted Sienese jurist, are in the Uffizi. Vecchietta was the master of Francesco di Giorgio and Neroccio.

M. L. HANDLEY.

VEDAS, the sacred books of ancient India. The Sanskrit word vedā means “knowledge”, more particularly “sacred book”. In its widest sense the term designates not only the sacred texts, but also the voluminous theological and philosophical literature attached thereto, the Brahmanas, Aranyakas, Upanishads, and Sutras (see BRHMANISM). Usually the term vedā applies only to the four collections (Sānghitā) of hymns and prayers composed for different ritualistic purposes: the Rig-Veda, Sāma-Veda, Yajur-Veda, and Atharvā-Veda. Of these only the first three were originally regarded as canonical; the fourth attained to this position after a long struggle. The language of the Vedas is a persifled literary language fully perfected, and is not a mere popular dialect. In this respect it resembles the later classical Sanskrit, from which it differs considerably in phonology and inflections. Though differences exist in the language of the four Vedas, still there is such agreement on cardinal points as against later Sanskrit that the term Veda, which is in common use for the oldest form of the language of India, is amply justified.

1. The Rig-Veda (“veda of verses”); from rīc, or before sonants rīg, “laudatory stanza”) is the oldest and most voluminous of the Vedas. In present form it contains 1028 hymns (including eleven supplementary ones in the eighth book), arranged in ten mandalas (cycles), or books, which vary in extent, only the first and tenth being approximately equal. The poems themselves are of different authorship and date from widely different periods. According to the generally accepted view, they date back to 1500 B.C., when the Aryan conquerors spread over the Punjab in Northern India and occupied the land on both sides of the Indus. The texts themselves show that the collection is the result of the work of generations of poets, extending over many centuries. Books II to VII inclusive are each the work of a single poet, or rājā (seer), and his descendants hence they are usually called “family hymns”.

The monotonous character of the Rig-Veda is due not only to the nature of its mythological content, but also to the fact that hymns to the same deity are usually grouped together. Thus, approximately, 500 hymns are addressed to two gods alone: Indra, the god of lightning and storms, and Agni, the god of fire. The hymns are a meeting of devotional hymns and a part of the hymns, which are invocations of different deities. The value of the great collection as presenting the earliest record of the mythology of an Indo-European people is apparent. Several of the gods go back to the time of Indo-Iranian unity, e.g. Yama (the Avestan Yima), Soma (Haoma), Mitra (the later Vedic Mithra), and others, such as Soma, Tāṇa (the later Vedic Puraṇa), are deified, and are among the highest in the collection. Next to Indra stands Agni. The hymns in his praise are often obscure in thought, and represent the deities. The ancient Greeks, Romans, and Persians, however, and the terminology, which is in use in many of the hymns, is an important part of the collection. The hymns and prayers are sometimes addressed to the ancient Greek, Roman, and Persians, and are also sometimes addressed to the gods of other nations. The hymns are in honour of Soma. Other gods invoked are the two Ashas, somewhat resembling the Dharma-Veda. The hymns are a part of the collection of prayers, and the poems are of exceptional literary merit.

The number of secular hymns is small, but many of them are of particular interest. They are of various content. In one book (X, 94) a gambler laments his ill luck at dice and pleads the evil passion that both his gānta (praises of gifts) are in most cases
