KEY TO PRONUNCIATION

Three methods are used to indicate the pronunciation of the words forming the headings of the separate articles:

(1) By dividing the word into syllables, and indicating the syllable or syllables to be accented. This method alone is followed where the pronunciation is entirely obvious. Where accent marks are omitted, the omission indicates that all syllables are given substantially the same value.

(2) Where the pronunciation differs from the spelling, the word is re-spelled phonetically, in addition to the accentuation.

(3) Where the sound values of the vowels are not sufficiently indicated merely by an attempt at phonetic spelling, the following system of diacritical marks is additionally employed to approximate the proper sounds as closely as may be done:

- "", as in fate, or in bare.
- "", as in aims, Fr. âme, Ger. Böhn = à of Indian names.
- , the same sound short or medium, as in Fr. bat, Ger. Mann.
- "", as in fat.
- "", as in fall.
- "", obscure, as in rural, similar to u in buy; é in her; common in Indian names.
- , as in me= f in machine.
- "", as in met.
- "", as in her.
- "", as in pine, or as ci in Ger. Mein.
- "", as in pin, also used for the short sound corresponding to ç, as in French and Italian words.
- "", a long sound as in Fr. jeûne, = Ger. long ò, as in Söhne, Göthe. (Goethe).
- "", corresponding sound short or medium, as in Fr. pes = Ger. ö short.
- "", as in note, mouth.
- "", as in not, frog—that is, short or medium.
- "", as in move, two.
- "", as in tube.
- u, as in tub; similar to é and also to a. 
- y, as in bull.
- "", as in Sc Shume = Fr. â as in dâ, Ger. ö long as in grün, Bühne.
- û, the corresponding short or medium sound, as in Fr. but, Ger. Müller.
- "", as in oil.
- ou, as in pound; or as au in Ger. Hans.

The consonants, b, d, f, h, j, k, l, m, n, ng, p, sh, t, v, and z, when printed in Roman type, are always given their common English values in the transliteration of foreign words. The letter c is indicated by s or k, as the case may be. For the remaining consonant sounds the following symbols are employed:

- ch is always as in rich.
- å, nearly as th in this = Sp. ð in Madrid, etc.
- ã is always hard, as in go.
- A represents the guttural in Scotch lock, Ger. nach, also other similar gutturals.
- â, Fr. nasal a as in box.
- å, represents both English r, and r in foreign words, in which it is gener-
Chicken-breasted, having that form of breast, resulting from malformation or from various disease or spinal weakness, in which the vertebrate column is curved forwards, giving rise to projection of the sternum or breast-bone.

Chicken-pox (varicella), an infectious disease mainly confined to children. It commences with feverishness, and an eruption of pimples, which speedily become blisters filled with clear fluid and as large as split peas. Within a week these dry up into dark-colored scabs, which within another week have fallen off. The disease is never fatal, and has no evil results. A little opening medicine and a mild diet is all the treatment required.

Chick'pea, the popular name of Vicia sativa, which grows wild along the shores of the Mediterranean and in many parts of the East, producing a short, puffy pod with one or generally two small, wrinkled seeds. It is an important article in French and Spanish cookery, and the plant is cultivated in Europe, Egypt, Syria, India, Mexico, etc. When roasted it is the common parched pulse of the East. The herbage serves as fodder for cattle.

Chick'weed, the popular name of Stellaria media, order Caryophyllaceae, one of the most common weeds in cultivated and waste ground in Europe, flowering throughout the year. It has a procumbent more or less hairy stem, with ovate, pointed leaves, and many small white flowers. It is much used for feeding cage-birds, which are very fond both of its leaves and seeds.

Chiclana (chík-lá'nah), a town of Spain, in Andalusia, 12 miles s. e. of Cadiz, built of snow-white stone, contains a magnificent hospital, and has manufactures of linen, earthenware, etc. The sulphur baths, temperature 60°, are efficacious in cutaneous affections, and are much frequented. Pop. 10,938.

Chicopee (chik'-o-pé), a town of Massachusetts, Hampden County, on the river Connecticut, at the south of the Chicopee, 4 miles N. of Springfield, with manufactures of cotton, machinery, paper, etc. Pop. 26,401.

Chicory (chik'-o-ry; Cichorium), a genus of composite plants, including the two important species of Cichorium (endive) and Cichorium intybus (chicory or succory). The former, a native of the East Indies, is known under two sorts—the curled and the Batavian—both forming well-known salads by the blanching of their leaves. The C. intybus or chicory is a common perennial plant, from 2 to 3 feet high, from the lower part of which milky leaves rise. The leaves are sometimes blanched, to be used as salad, in the same way as C. endivia. But the most important part of the plant is its long, fleshy and milky root, which when roasted and ground is extensively used in Britain for mixing with coffee. Its presence in coffee may easily be detected by putting a spoonful of the mixture into a glass.
of clear cold water, when the coffee will float on the surface, and the chicory separate and discolor the water as it stands.

Chicoutimi (ábé-kó-témél), a town of Quebec province, Canada, on Saguenay River, at head of navigation. Pop. (1914) 6500.

Chieri (ké-éˈrē), an old town of North Italy, 8 miles N. E. of Turin, with a very large Gothic church, and manufactures of cotton, silk, etc. Pop. 15,464.

Chieti (ké́ˈé-té), a town of Southern Italy, capital of province of same name, on a hill near the right bank of the Pescara. It is well built, is the see of an archbishop, and has manufactures of woolens, etc. Pop. 26,368.

Chigoe (chíˈgō), or Jiggers, a very curious insect (Pulex or Sarcoptes peneitrans), closely resembling the common flea, but of minute proportions, found in the West Indies and South America. It burrows beneath the skin of the foot, and soon acquires the size of a pea, its abdomen becoming distended with eggs. If these eggs remain to be hatched beneath the skin, great irritation and even trouble-some sores are sure to result. The insect must be extracted entire, and with great care, as soon as its presence is indicated by a slight itching or tingling.

Chihuahua (chĕ-wáˈwā), a city of Mexico, capital of the state of the same name, generally well-built, and supplied with water by a notable aqueduct. It is surrounded by silver mines, and is an important entrepôt of trade. Pop. about 40,000. — The State is bounded on the N. by the United States and on the N.E. by the Rio Grande del Norte; has a healthy climate, and is rich in silver mines. Pop. 405,236.

Chilaw (chíˈlŏŏ), a seaport town on the west coast of Ceylon, 49 miles N. by W. of Colombo, formerly a place of greater importance than it is now. Pop. about 3000.

Chilblains (chilˈblēnz) are painful inflammatory swellings, of a deep purple or leaden color, to which the fingers, toes, heels, and other extreme parts of the body are subject on being exposed to a severe degree of cold. The pain is not constant, but rather pungent and shooting at particular times, and an insupportable itching attends it. In some instances the skin remains entire, but in others it breaks and discharges a skin fluid. The general treatment should be one prescribed, and extremes of heat and cold avoided.

Childbirth. See Birth.

Child Labor. Only within quite recent years has the necessity for strict regulation under State and Federal laws been recognized in the matter of children's labor. It was as late as 1884 before the State of Massachusetts crystallized into law the demands of the social workers for an adequate measure of protection for the children employed in industries. This pioneer law limited the employment of children under thirteen in textile mills. Soon after, Connecticut and then Pennsylvania and New York followed suit, until to-day twenty-six States have passed highly protective laws. With the question of Child Labor is involved that of illiteracy, which is largely governed by the character of the legislation in the various States. In 1900 there were 510,678 illiterate children in thirteen States, in which relatively backward legislation existed, as compared with 19,269 such children in the remaining 39 States. The advocates of strict legislation urge the evil physical effects upon young children engaged in work for several hours daily and those which develop as a result in later years. The first broad consideration of Federal legislation was due to the Beveridge Child Labor Bill. This bill was substantially the same in principle as that passed by Congress in 1916, but it failed of passage. It was only in 1912 that a Children's Bureau was established in the Department of Commerce and Labor. The laws of the different States vary in detail, generally in the South they are less favorable, though in Tennessee and Louisiana, the restrictions on the employment of children are stricter than in some other Southern States. The general tendency of legislation has been to lessen the employment of children under fourteen. The chief objections raised to the Federal law of 1916 are based on the economic condition of the cotton mill industry, which has been so largely developed in that section in recent years, and which it is claimed must have access to ample cheap labor to maintain itself in the face of advantages possessed by the mills of New England. The constitutionality of the Federal bill has been challenged and Judge Boyd, of the Federal Court of Virginia, on August 31, on the eve of the Act's coming into operation, decided that it was unconstitutional. The Woman's
Council of National Defense has opened an active campaign to secure the potential benefits of the new legislation by an increase of schools and the betterment of those established, by securing full-time school, well-equipped teachers, and adequate provision for educating the illiterate children in rural areas.

Childebert (chil-de-bért), the name of three kings of the Merovingian dynasty, France. The first, a son of Clovis, 496–558; the second, a son of Siegbert and Brunehaut, 570–596; the third, assumed the Just, a son of Thierry I, 683–711.

Children’s Bureau, a government bureau in the Department of Commerce and Labor, established by act of Congress in 1912, and placed under the management of Miss Julia C. Lathrop. Its purpose is to investigate and report to the Department upon all matters relating to the welfare of children and child life among all classes of people in the United States.

Childs, George W., American publisher, born in 1829; died in 1894. In 1864 he bought out a small Philadelphia paper, the Public Ledger, and during his lifetime made it the most popular newspaper of his city. He was widely known for his public spirit and philanthropy. His Personal Recollections were published in 1890.

Chili, or Chile (chē‘lī), or Pe-chi-hi, a northern province of China, traversed by the Peiho and containing Peking, the imperial capital. Area about 100,000 sq. miles; pop. about 20,000,000.

Chili, or Chile, America, extending along the Pacific coast from lat. 18° S., nearly to Cape Horn, and including Chiloé and many other islands and part of Tierra del Fuego. It is bounded on the N. by Peru (the river Sama being the boundary), on the E. and N. by Bolivia and the Argentine Republic, from which it is separated by the chief range of the Cordilleras. Its length from N. to S. is about 2800 miles; its breadth, on an average, 120 miles; area 307,620 sq. miles, divided into twenty-three provinces and one territory; population, about 5,000,000. By the war with Peru and Bolivia, which terminated in 1882, Chile gained all the seaboard of Bolivia, and annexed also the Peruvian provinces of Tarapaca, Tacna and Arica (the latter two for ten years, after which a plebiscite was to decide whether they should go to Chile or Peru. Chile still retains them). The chief towns are Santiago (the capital) and Valparaiso. The rivers are numerous; the principal ones are the Biobío, the Valdivia, Lontue, Maule, Itata and Chuapa or Illapel. The surface is greatly diversified, but rises in elevation as it recedes from the coast and approaches the Andes, along the watershed of which a great part of the boundary runs. Some of the summits here rise to 20,000 feet or more, but the elevation decreases towards the south. Chiloé and numerous other islands fringe the coast in the south. Earthquakes are common, those of 1822, 1835 and 1906 being particularly violent. In the Chilean Andes there are twenty volcanoes at least, some of which are still in a state of intermittent activity. The climate is remarkably salubrious. In the northern provinces it rarely rains—in some parts perhaps never; in the central parts rain is sufficiently abundant, while in the extreme south there is even an excess of moisture. Among the minerals of Chile are gold, silver, copper, lead, iron, zinc, antimony, manganese, arsenic, tin, sulphur, alum, salt and cubic niter. Silver and copper are the two most important metals. The copper mines are most numerous in the northern districts. Nitrate of soda or Chile saltpeter, is a great source of wealth. Coal is mined at several places. Though possessing many fertile tracts, a great portion of Chile is incapable of cultivation, being naked and mountainous. The province of Atacama is especially destitute of vegetation. From the 20th degree of latitude southwards green valleys and fertile tracts appear. The character of the vegetation getting always richer, till in the southern provinces we find the sides of the Andes clothed with forests and with herbaceous plants and flowers of the richest and most beautiful hues. In some of the northern districts maize is cultivated; in the southern districts wheat and barley are the chief agricultural products. Fruits are abundant—apples, pears, apricots, peaches, figs, grapes, oranges, watermelons, etc. The spread of European plants has been so great in some places as to crowd out native species, and cultivation is rapidly carrying this farther. The wild animals include the guanaco, puma, or American lion, the chinchilla, coypu, deer, etc. Cattle are raised in great numbers, from 4000 to 20,000 being sometimes reared on one ranch. The manufactures are of little importance, but include cordage, soap, copper wares, leather, brandy, etc. The commerce is increasing rapidly. By far the greater part of the commerce of Chile is with Great Britain. Mineral products form five-sixths of the total exports; the principal article being the native nitrate of soda, the value of which alone was
Chili

$22,500,000 in 1884 and $75,000,000 in 1910. The value of exports in 1912 was $139,878,201, and of imports $122,079,994, a total of $261,954,195. Accounts are in pesos, the gold peso being the monetary unit, having a value of about 36 cents. In 1912 Chile's railway system had a total length in miles of 6,728.

Chile is a republic, and is considered the best regulated in South America. It is under a president elected for five years and a council of state. The legislature is composed of a senate elected for six years, and a house of deputies elected for three years. The estimated revenue for 1912 was $198,261,000, the estimated expenditure $375,147,000, with an estimated war strength of 260,000. The total debt, home and foreign, 1911, was $638,322,000. The net revenue of the army is $80,000. There is an efficient navy of 6 battleships and cruisers, and a fleet of torpedo boats and submarines. The Chileans are mostly of Spanish or Indian descent. They are generally fond of agricultural pursuits, and a considerable amount of energy and enterprise. Schools and colleges have been established, and the extension of the benefits of education has been of late one of the constant aims of the government, elementary education being now gratuitous. The Roman Catholic is the established religion of Chile, but the members of other denominations are allowed to erect edifices in which to worship. The part of Chile lying s. of the river Biobio (or about lat. 38° s.) is inhabited chiefly by Indians. The Araucanians inhabit the region lying between the rivers Biobio and Valdivia, and long maintained their independence, till in 1882 they became subjects of the Chilean government.

Chile originally belonged to the Incas of Peru, from whom it was wrested by the Spaniards under Pizarro and Almagro in 1535. From this period Chile continued a colony of Spain till 1810, when a revolution commenced, which terminated in 1817 in its independence. Several internal commotions have since occurred; but the country has been free from these compared with other South American states. A war, begun with Spain in 1865, led to the blockade of the coast by the Spanish fleet, and the bombardment of Valparaiso in 1866. In 1879 a war broke out with Bolivia and Peru, in reference to the rights of Chile in the mineral district of Atacama. This war was virtually finished in 1881, and the victorious Chileans gained a large accession of territory from both Bolivia and Peru. In 1891 an insurrection, headed by influential members of Congress, caused by dissatisfaction with President Balmaceda's administration, resulted in his overthrow. Jorge Montt succeeded him. In 1896 Federico Errázuriz became president. During the presidency of German Riesco (1901-06) the boundary dispute with Argentina was settled. Ramon Barros Luco became president in 1911, in which year the Alspo Claim, a dispute of 25 years' standing between Chile and the United States, was settled, and was succeeded by Juan Luis Santfuentes in 1916. Chile remained neutral during the European wars.

Chilkoot Pass, a pass over the coast range of the Rocky Mountains in Alaska. It begins at the town of Dyea and attains a height of 3,052 ft. It was once a principal route from the Alaskan coast to the Yukon gold fields.

Chillan (chil-yan'), a town of Chile, capital of the province of Nuble, in an angle between the Chillan and Nuble, connected by rail with Talcahuano and Santiago. It is a thriving place, with a large trade in cattle and grain. Pop. (1910) 45,000.

Chilled Iron, iron cast in metal molds called chillies, where, on account of the rapid conducting of the heat, the iron cools more quickly on the surface than it would do if cast in sand. Chilled iron is whiter and has a harder surface than iron cast in any other way.

Chillicothe (chil-i-koth'ë), a city of Ohio, county seat of Ross County, on the Scioto River, 50 miles from Columbus. Has manufactures of paper, shoes, pottery, etc., and was the capital of Ohio, 1800-1810. Pop. 14,508.

Chillicothe, a city of Missouri, capital of Livingston Co., 87 miles N.E. of Kansas City, with good railroad service. Has packing plant, foundry, machine-shop, etc. Pop. 9,635.

Chillies (chill'ëz), the fruits of the capsicum, used to make cayenne pepper, pickles and chilli vinegar.

Chillingworth (chil'ing-worth), William, an English divine, born at Oxford in 1602, and educated at Trinity College. He was made chancellor of the bishopric of Salisbury, and on the outbreak of the civil war supported the king's cause. He died in 1644. Sermons and other works were published by him, but his Religion of Protestants, which formed an epoch in English theology, is what has given him lasting fame.

Chillon (shei-yon), a castle of Switzerland, on the lake of Geneva. 6¼ miles S.E. of Vevey, once an important stronghold of the Counts of Savoy, and the prison-house of Francis

Chillon

Chillon
Bonnivard, prior of St. Victor, Geneva, from 1530 to 1536. It has acquired interest from Byron’s poem, The Prisoner of Chillon.

Chilo (ki’lo). See Chiloe.

Chiloé (chël-wä’), a province and island of Chile. The province comprehends the island of Chiloé, together with a number of other islands, and a portion of the mainland. The island of Chiloé is for the most part covered with dense forests, but large tracts of it are still unexplored. The chief town is San Carlos, or Ancud. The exports consist chiefly of timber from the forests of the island and the mainland. The climate is healthy but very wet. Area of the province, 8893 sq. miles; pop. 91,022.

Chilognatha, CHILOPODA. See Chilognatha.

Chilon (ki’lon), or Chilo, one of the so-called seven wise men of Greece. He flourished about the beginning of the sixth century B.C., and was a native of Sparta, and one of the Ephors, or chief magistrates. A collection of his sayings is extant.

Chimera, CHIMERA (ki-më’ra), in classical myth, a fire-breathing monster, the foreparts of whose body were those of a lion, the middle of a goat, and the hinder part of a dragon. Thus the name came to be used for an unnatural production of the fancy.

Chimera (ki-më’ra), a genus of cartilaginous fishes. Almost the only known species is the Chimëra monstrosa, which inhabits the northern seas, and is sometimes called king of the herrings, and, from its two pairs of large teeth, rabbit-fish. There is but one gill-opening, and the tail terminates in a point, the fish having, on the whole, a singular appearance. It seldom exceeds 3 feet in length.

Chimborado (chim-ba-rä’do), a mountain of Ecuador, in the province of Quito, about 90 miles s. by w. of Quito; lat. about 2° s. Though not the loftiest summit of the Andes, it rises to the height of 20,708 feet above the level of the sea, and is covered with perpetual snow 2600 feet from the summit and upwards. In 1880 it was ascended to the top for the first time by Mr. E. Whymper.

Chimere (si-mär’), the upper robe to which the lawn sleeves of a bishop are attached.

Chimes (chims), a species of music, mechanically produced by the strokes of hammers against a series of bells, tuned agreeably to a given musical scale. The hammers are lifted by levers acted upon by metallic pins, or wooden pegs, stuck into a large barrel, which is made to revolve by clockwork, and is so connected with the striking part of the clock mechanism that it is set in motion by it at certain intervals of time, usually every hour, or every quarter of an hour. The chime mechanism is sometimes so constructed that it may be played like a piano, but with the fist instead of the fingers.

Chimney (chim’ni), an erection generally of stone or brick containing a passage by which the smoke of a fire or furnace escapes to the open air. In this sense the first chimneys we hear of are no earlier than the middle ages. The longer a chimney is the more perfect is its draught, provided the fire is great enough to heat the column of air in it, because the tendency of the smoke to draw upwards is in proportion to the difference of weight between the heated air in a chimney and an equal column of external air. Smoky chimneys may be caused either by the presence of other buildings obstructing the wind and giving rise to irregular currents of air, or by improper construction of the fireplace and adjacent parts of the chimney. The first may generally be cured by fixing a chimney-pot of a particular construction, or a revolving cow, on the chimney top, in order to prevent the wind blowing down; in the second case the narrowing of the chimney throat will generally create a better draught.

Chimney-piece, the assemblage of architectural dressings around the open recess constituting the fireplace in a room.

Chimney-swallow. See Swallow.

Chimpanzee (chim-pan’zé), the native Guinea name of a large West and Central African ape (Tropidactylus niger) belonging to the anthropoid or manlike monkeys, and to the same genus as the gorilla. When full grown it is sometimes about 5 feet high, with black hair, and is not so large and powerful as the gorilla. Like
the orang, it has the hair on its fore-arm turned backwards, but differs from it in having an additional dorsal vertebra and a thirteenth pair of ribs. It walks erect better than most of the apes. It feeds on fruits, often robs the gardens of the natives, and constructs a sort of nest among the branches. It is common in menageries, where it shows much intelligence and docility.

China, Republic of, a political division of Asia, extending from latitude 18° to 50° N, and from longitude 74° to 134° E, area 3,541,515 square miles, which is greater than that of the continent of Europe. It consists of China Proper (which now includes Manchuria), and the outlying dependencies of Sinkiang, Chinese Turkestan and Tibet. It is bounded N.W., N. and N.E. by Asiatic Russia, along a frontier extending some 6000 miles, E. by Korea and those parts of the Pacific known as the Yellow Sea and China Sea; S. and S.W. by the China Sea, French Indo-China, Upper Burma and the Himalayan states. It is narrowest in the extreme west. Chinese Turkestan, along the meridian of Kashgar (76° E.), has a breadth of but 250 miles. It rapidly broadens and for the greater part of its area is over 1800 miles across in a direct N. and S. line. Its greater length is from the N. E. corner of Manchuria to the s. w. confines of Tibet, a distance of 3100 miles in a direct line. Its seaboard, about 5000 miles following the indentations of the coast, is wholly in China Proper. China Proper occupies the eastern and southeastern part of the republic, and including the three Manchurian provinces of Feng-tien, Kirin, and Hei-lung-chiang, is divided into twenty-one provinces.

</table>

Peking is the capital. There are many large and populous cities.

**Physical Features.**—Great part of the country is not well known. The coast line forms an irregular curve of about 2500 miles. It is not deeply penetrated by gulfs, the only one of great extent being that of Pe-chi-le in the northeast, but numerous indentations of sufficient dimensions to form safe and capacious roadsteads are found in every quarter. It is characterised by a fringe of islands and inlets, the largest of which are Formosa and Hainan. The Gulf of Pe-chi-le, the Yellow Sea and the China Sea wash the eastern and southeastern shores, and are subject to the destructive storms called typhoons. The inland boundaries are formed mainly by Tonquin, Burmah, Tibet, and, on the north, partly by the Great Wall separating China from Mongolia, one of the most remarkable of human structures, being an artificial barrier 1500 miles long. Two-thirds of the interior are estimated to be mountainous. The general slope is from west to east, and the mountains are a continuation of those of Tibet and central Asia. The great Kuen-lun range throws off branches, the Tsing-Ling, Fu-niu-shan and Mu-lung, which, running eastward between the great valleys of the Hoang-ho and Yang-tze-kiang, traverse almost the whole breadth of China. Further north the Nan-shan branch of the Kuen-lun range runs under various
names (Kuliang, Alashan, Inshan, etc.) along the northeast of China till it reaches the frontier of Manchuria, north of Peking. The third great mountain system of China is in the southeast, where extensive chains such as the Nan-shan, the Ta-yu-ling, and Fu-ling stretch on the south side of the Yang-tze-kiang all the way from the highlands of Yunnan to the eastern seaboard. Between these mountain systems, and following courses which may be roughly described as parallel, run the two great rivers of China, the Hoang-ho and the Yang-tze-kiang. Here lie the central and richest provinces of China. On both sides of the lower Hoang-ho is an immense delta plain, consisting generally of a deep alluvial soil of unparalleled fertility. As they approach the seacoast the two rivers are connected by a Grand Canal, 700 miles in length, thus completing a magnificent system of inland navigation. The Hoang-ho has changed its lower course several times, and is subject to tremendous and disastrous floods. Beside these rivers and their numerous tributaries, the most deserving of notice are the Se-kiang in the south, of considerable size, but still more commercial importance, having at or near its embouchure Canton, Hong-Kong and Macao; and the Pie-ho, which, though much smaller, forms a waterway between Peking and the Gulf of Pe-chi-le. There are a number of lakes, mostly of no great size; the largest is Tung-ting, near the center of China, with a circumference of about 270 miles. A remarkable feature of the surface of Northern China is the deposit of loess, a brownish-yellow earth of great fertility, which covers an immense area both of mountain and valley, and enables agriculture to be successfully carried to the height of 7000 or 8000 feet.

Climate.—The greater part of China belongs to the temperate zone, but it has what is called an excessive climate. At Peking in summer the heat ranges from 90° to 100° in the shade, while the winter is so cold that the rivers are usually frozen from December to March. At Shanghai, lat. 31° 20', the maximum temperature reaches 100°, and the minimum falls at least to 20° below freezing point (12° Fahr.). In the south the climate is of a different character, the summer heat rising to 120°. Here the southwest and northeast monsoons blow with great regularity, and divide the year between them. Among the greatest scourges of the country are the dreadful gales known as typhoons, from the Chinese Ta-fung, or “great wind.” They never fail to commit great devastation, though happily they always give such timely notice of their approach that preparations can be made. The Hoang-ho and Yang-tze-kiang basins have a pretty equable temperature, due to the soft moist winds of the Pacific.

Productions.—China is well supplied with minerals, including gold, silver, copper, iron and other metals, and there are very extensive coal-fields, though the quantity raised from them is comparatively small. Salt is abundant, and there are inexhaustible beds of kaolin, or porcelain earth. Among animals it is difficult to mention any that are characteristic of the country; many of them are identical with or differ but little from those of Europe. In the south and southwest the tiger, the rhinoceros and elephant are found; bears are common in many parts; other carnivores are the wild cat, badger, lynx, marten, etc. Camels and elephants are used in a domestic state, but the chief domesticated animal is the buffalo. The horses are of a poor breed. Among birds the most beautiful are the gold and silver pheasants. Fish swarm in all inland waters as well as on the coast, the natural supply being immensely increased by artificial means. As regards the flora of China, it is tropical in the south (cocoa and sago palms, banana, pandanus, etc.), subtropical farther north, and still farther north a number of plants and trees prevail identical with or closely akin to those of middle Europe. Flowering plants, shrubs and trees are so exceedingly abundant as to form a feature. The bamboo, from the immense number of uses to which it is put, is one of the most valuable trees. Oaks, the chestnut, hazel, pine, yew, walnut, etc., are among forest trees. Wax and camphor trees abound. Azaleas are exceedingly numerous; other flowering plants are the camellia, rose, passion-flower, cactus, lagerstroemia, etc. Fruits are abundant and varied. The soil, especially of the country comprising the two great river basins, is extremely fertile, and agriculture has always been held in high estimation in China. Rice, as the principal food of the people, is the staple crop. The rich alluvial plains which cover a great part of the surface are admirably adapted for its culture, and by careful management yield amazing crops. In the north there is a variety called dry-soil rice, which is cultivated like any other cereal. Wheat, barley, and millet are the other chief grain crops. Other crops are maise, buckwheat, a great variety of beans, peas and pulse gener-
ally, sugar-cane, tobacco and vegetables in endless variety, including potatoes, turnips, etc., and at the ports the best European and American vegetables. Varieties of the cabbage tribe are extensively cultivated for the oil extracted from the seeds. Three plants of the greatest economical importance to China are the mulberry, cultivated to provide food for silkworms, cotton and tea, the last formerly regarded as exclusively a Chinese product. The opium poppy was extensively grown until recent years, when awakened public sentiment enforced legislation to prohibit its cultivation.

Manufactures.—In arts and industry the Chinese have made considerable progress. One peculiar feature in their processes is the general absence of machinery, and the preponderance of manual labor. Among the chief industries is the silk manufacture, which produces some varieties of stuffs unsurpassed anywhere. Everybody wears silks; it is the prescribed attire of high officers. The finer kinds of it form the ordinary dresses of the opulent, while the poorest manage to deck themselves in coarser, if not on common, at least on gala days. The embroidery of silk is carried on to an amazing extent. Cotton goods are also largely made, though great quantities of European and American manufactures are also imported. Flax is not grown, but a good substitute for it is found in the fibers of two or three plants, from which the beautiful grass-cloth, similar in appearance to linen, is extensively woven. Woollens are made only to a limited extent. The porcelain of China has been famous from the earliest periods, and the manufacture of the finest forms of it was long known to the Chinese alone, though their productions are now surpassed by those of Europe. In lacquered ware the Chinese continue unsurpassed. In working in metals they have not been attainted to mediocrity. The metallic products most deserving of notice are gongs, mirrors, statuettes in copper and bronze, and various kinds of carved, chased and filigree work, both in gold and silver. In a great number of minor articles the workmanship is exquisite—fans, card-cases, seals, combs, ch-samien of wood, ivory, mother-of-pearl, tortoise-shell, etc. Paper is made of a great variety of substances, and the art of making it—like various others—was practised in China long before Europe acquired it.

Commerce.—The inland trade of China, aided by its vast system of water communication, is of incalculable magnitude, the rivers and canals literally swarming with junks, large, and boats of all sizes. Roads, however, are few and bad, though railways recently have received an impetus. Telegraphs are being rapidly constructed by the government and the telephone has been introduced. Under a new postal system letters can be sent all over the provinces at a uniform rate. Prior to 1842 China rigorously opposed foreign trade; but the number of treaty ports has been gradually increased, and commerce has shown a steady growth. The chief ports are Shanghai, Canton, Hankow, Swatow, Tientsin, Ningpo and Foochow. The main articles of export are raw and manufactured silk and the soya bean; the main imports, clothing, tobacco, metals and metal goods. Tea, formerly the staple of China's export trade, has suffered a decline through Indian competition and is now only third on the list of exports. The total exports and imports usually amount to more than $400,000,000. In the year 1911 the exports amounted to $377,000,000; the imports, $471,000,000. The usual unit of money is the tael, the value of which varies from year to year; in 1912 the Canton tael was worth $0.738. According to the new currency system (February 10, 1914) only the central government has the power of minting money. The system includes the silver yuan or dollar, half yuan, 20-cent piece, 10-cent piece (chiao); the nickel 6-cent piece; and the copper 2-cent, 1-cent (fen), 5-li, 2-li and 1-li pieces.

People.—The Chinese belong to the Mongolian race, but in them its harsher features, as represented in the genuine Tartars, are considerably softened. They are generally of low stature, have small hands and feet (the last artificially made so small in the women as to cause deformity), a dark complexion, a wide forehead, black hair, eyes and eyebrows obliquely turned upwards at the outer extremities. In bodily strength they are inferior to Europeans, but superior to most Asians, and their composure and patient endurance of fatigue make them valuable as laborers. In their moral qualities there is much that is admirable. They are strongly attached to their homes, hold age in respect, toil hard for the support of their families, and in the interior, where the want of knowledge of foreign intercourse has not debased them, exhibit an unsophisticated simplicity of manners which recalls the age of the patriarchs. The Chinese use great politeness in their intercourse with each other; but there is perhaps not much frankness and sincerity. They scrupulously avoid all contradiction and offensive expressions in conversation. Gam-
In writing or printing the characters are arranged in vertical columns, to be read from top to bottom. A new alphabet for China is significant of the present spirit of progress. The old system required the student to memorise no fewer than 8000 ideograms. Steps were taken some time ago to construct a phonetic alphabet, the task being entrusted to a learned committee composed of Chow-Hi-Chu, the Secretary of the Chinese Levation at Rome, the adjunct secretaries Wan and Chou, and Solonello, professor of Chinese and Japanese at the School of Oriental Languages in Naples and one of the greatest polyglots in the world. These gentlemen have studied all known alphabets and combined them to form one which shall represent every sound in the Chinese tongue. The alphabet adopted by them consists of forty-two characters, of which twenty-three are vowels and nineteen are consonants. With these characters it is possible to write all the words used in the vulgar tongue in any part of China. The art of making paper is said to have been known in the first century after Christ; printing from wooden blocks in the seventh or eighth century, hundreds of years before these valuable arts were re-invented in Europe.

The Chinese literature is now very extensive. It is remarkable for its antiquity, for the variety of subjects presented, for the accuracy of historical statements and for its ennobling ideals. For convenience the literature is divided into four classes—first, the Chinese classics, together with lexicographical and philological work; second, histories of various kinds; third, philosophy, religion, the arts and sciences; fourth, poetry and works dealing with poetry. As literary eminence has been for ages the sure avenue to the highest honors and offices of the state, the literati have been the gentry, the magistrates, the governors, the negotiators and the ministers of China.

The Chinese classics are the Confucian books and a few others, on which an amount of painstaking commentary has
been expended; the histories are those of China herself and of the few foreign peoples with whom she has had any intercourse; the works of the third class are those of the literati of many ages and include the works of Taoism and Buddhism; the poetry is rich in narrative, lyrical and descriptive pieces, eulogies and elegies, but contains no great epic. Some of the historical romances and novels are of very high order, although fiction has never been regarded by the Chinese as an integral part of literature proper.

**Education.** Persistent missionary zeal and the necessity of military reorganisation must be given the credit for recent progress in education. Until 1905 the time-honored study of the Chinese classics formed the only passport to State employment, and these were therefore the textbooks in general use. Gradually, however, European methods supplanted Chinese. One of the first problems of the new republic was to adopt a sound educational system, and in 1912 the Ministry of Education summoned a conference of teachers and educators, upon the recommendations of which the present system is based. Every city, town and village is required to establish primary schools, which, with the 'middle' schools, are to be controlled by the provinces in which they are located. Technical and normal schools are also provided, these to be controlled by the Ministry of Education. The plan includes four government universities—at Peking, Canton, Nanking and Wu-chang, with courses in literature, science, medicine, law, commerce, agriculture. Education is made compulsory and emphasis is laid on the education of girls, on manual training and hygiene, and on the observance of Sunday as a school holiday.

**Religion.** The chief religions in China are Confucianism, Taoism and Buddhism, the last of latest origin. Among the great masses of the people a form of Buddhism prevails, or a curious mixture of religious ideas and forms. Attempts to introduce Christianity were made by the Nestorians as early as the 6th century, but it was not until the arrival of the Jesuits with Father Ricci in 1582 that the faith gained any foothold. The first Protestant minister was Robert Morrison, who arrived in 1807. Christian missions, both Roman Catholic and Protestant, are established in every province of China, and freedom to embrace the Christian faith has been guaranteed by the Chinese government since 1890. The number of Roman Catho-

ics in China is estimated at 1,000,000; the number of Protestants at 250,000. In 1914 a bill prescribing the worship of Heaven and of Confucius was passed by the Administration Council, thus establishing a state religion, though not precluding freedom of worship.

**Government.** The Chinese government, based upon that of the family, was for many centuries an absolute monarchy. The emperor united in his person the attribute of supreme magistrate and sovereign priest. The 'Son of Heaven' was in theory accountable only to heaven. For more than 2000 years he was the supreme head of the state, legislating by edict in matters great and small. In the seventeenth century the Ming Dynasty was overthrown by the Manchus of the north. The traditions of the old autocracy were preserved by the Manchus, but for many years previous to the revolution of 1911, the Civil Service had become the real power in the empire, while the central authority was but little extended over the provincial and district administration. Many reforms were initiated or promised in the last few years of the empire; an executive body was created and a legislative body promised. By the revolution of 1911-12 the autocracy of the emperor and the power of the bureaucracy were merged into a republican form of government. The executive power is vested in a president and vice-president, a premier and five secretaries of state. The legislative is an **Advisory Council** of 128 members (five from each of the twenty-five territorial divisions and one from the district of Koko-Nor).

**Railways.** Doctor Sun Yat Sen, formerly provisional President of the Chinese Republic, has been authorised by the new Government to organize a corporation for the construction of 70,000 miles of railways in China. In 1875 there was not a mile of railway in China; in 1912 the total mileage was 8000, of which some 6000 miles were operated and 2000 miles more projected. About two-thirds of the mileage is under foreign control—one-third in the hands of Russia and Japan, another third divided among France, Germany, England, Belgium and the United States. Of lines built chiefly with Chinese capital by Chinese engineers, the most significant is the Peking-Kalgan Frontier Railway, built under the direction of a Chinese graduate of Yale. The valuation of all lines not owned by China, the sum which China would be obliged to pay were the Government to secure control, is estimated at $280,000,000, or about one-third of the outstanding debt of the republic.
Army and Navy. In the matter of armed strength China is far behind European nations. The Chinese military force consists of 150,000: reserve of 100,000, making a total of 250,000 war strength. Under English officers their training and discipline have much improved of late, and the newest kinds of rifles and cannons have been imported from Europe. Within a few years China will have a standing army of well-drilled and well-equipped soldiers 350,000 strong, and this army will probably be rapidly increased; so that in any future war this country will be able to take care of its interests in the most approved modern style. The soldiers are being taught to read and write, another innovation, and military and naval schools have been established, where officers may be instructed in the principles of their profession. The navy consists of two fleets—one for rivers and another for sea; but, though its numbers and vessels, it is not very efficient, and is scarcely able to clear the Chinese coast from the pirates who infest the numerous creeks and islands. It has lately, however, been much strengthened by a number of steel corvettes built in England and Germany. The full complement of the navy is about 2500. A scheme for the reorganization of the Chinese navy provides for the overhauling of the dockyards, colleges, schools, and the personnel generally, and later for the building of new battleships, cruisers, etc.

History.—The early history of the Chinese is shrouded in fable, but it is certain that civilization had advanced much among them when it was only beginning to dawn on the nations of Europe. The Chow dynasty, which was founded by Woo-wang, and lasted from about 1100 B.C. to 258 B.C., is perhaps the earliest that can be regarded as historic, and even of it not much more is known. In 221 B.C. the emperor Chou-shiang, one of the sovereigns of this dynasty, Confucius is said to have been born, some time in the sixth century B.C. During the latter half of the period during which this line of sovereigns held sway there appeared to have been a number of rival kings in China, who lived in strife with one another. Chow-shiang, who was the founder of the Tsin dynasty, from which China takes its name, gained the superiority over his rivals. He died in 251 B.C. His great-grandson, a national hero of the Chinese, was the first to assume the title of "Hoang" (emporer), and called himself Che-Hoang-ti. He ruled over an empire nearly co-terminous with modern China proper.

In his reign the great wall (which see), designed as a protection against marauding Tartars, was begun in 214 B.C. Buddhism was introduced in 65 A.D. Subsequently the empire broke up into three or more states, and a long period of confusion and weak government ensued. In 930 a strong ruler managed to consolidate the empire, but the attacks of the Tartars were now causing much trouble. In the thirteenth century the Mongols under Jenghis Khan and his son Ogdei conquered China, and in 1259 the celebrated Kublai Khan, a nephew of the latter, ascended the throne and founded the Mongol dynasty. His ninth descendant was driven from the throne, and a native dynasty called Ming again succeeded in 1368 in the person of Hungwu. A long period of peace ensued, but was broken about 1618, when the Manchus gained the ascendancy, and after a war of twenty-seven years founded the recent Tartar dynasty in the person of Tungchi, establishing their capital in the northern city of Peking, which was nearer their native country and resources than the old capital Nanking. The earliest authentic accounts of China published in Europe are those of Marco Polo, who visited the country in the thirteenth century. The first British intercourse was attempted under Queen Elizabeth in 1596, and a trade was subsequently established by the East India Company, but no direct intercourse between the governments took place till the embassy of Lord Macartney in 1792. A source of trouble arose when British merchants began to send opium from India to China and established a large trade in this deleterious drug in defiance of the protests of the Chinese authorities. The trouble reached a climax in 1839, when $20,000,000 worth of opium was seized and destroyed. This led in 1840 to the 'Opium war,' in which the Chinese were defeated. In the treaty of 1842 the defeated nation consented to the opening of the five ports of Canton, Amoy, Foochow, Ningpo and Shanghai to British merchants, the cession of the island of Hong Kong to the British in perpetuity, and the payment of $21,000,000 indemnity by the Chinese. In 1850 an insurrection, headed by Hung-seu-tseuan or Tien-te, broke out in the provinces adjoining Canton, with the object of expelling the Manchu dynasty from the throne, as well as of restoring the ancient national religion of Shan-ti, and of making Tien-te the founder of a new dynasty, which he called that of Tai ping, or Universal Peace. After a long
period of civil war the Tai-ping rebellion was at length suppressed in 1865, chiefly by the exertions of General Gordon and other British and American officers at the head of the Chinese army. In October, 1860, the crew of a vessel belonging to Hong-Kong were seized by the Chinese. The men were afterwards brought back, but all reparation or apology was refused by the British. The day of arbitration between strong and weak nations had not yet come. A war with China commenced, in which the French took part with the British. The war ended in 1868 with the concession of new advantages by China, but it broke out again a year later and in 1870 the British and French forces occupied Peking, this being followed by the ruthless destruction of the summer palace of the emperor. There was a second revolt that began in 1864, continuing until 1868. War was declared between China and Japan on July 31, 1894. Japan, by a series of brilliant victories, both on land and sea, brought the war to an end in April, 1895. Corea was declared independent, Formosa ceded to Japan, and China was forced to pay a very large war indemnity. Trouble of a different kind came in 1900, when an organization of Chinese called the Boxers, infected by the general hatred of foreigners by the people, and apparently secretly instigated by the government, attacked the embassies in Peking. The unwarranted occupation of Chinese territory by Germany, Great Britain, France and Russia, may have been an inspiring cause of this antiforeign sentiment. As the Chinese authorities took no steps to suppress the outrages, an army of rescue, composed of troops of the various powers, marched upon and took Peking, rescuing the ministers and holding that city until China had agreed to pay a large indemnity and to punish the principal offenders. The indemnity amounted to an enormous sum of $387,000,000, an exaggerated amount of which the United States remitted its share some years later, much to the gratitude of China. Russia had occupied the Chinese province of Manchuria during the rebellion, and its disinclination to restore it led to the great war of 1904-05 with Japan, ending in Russian defeat. During this recent period the spirit of reform and progress above spoken of was active in China, the telegraph became a common need, many railroads were built or projected, and the ancient empire showed a pronounced purpose to adopt the institutions of the western world. In 1908 the emperor Kwang-See, who had succeeded as a child in 1875, died, and with him the dowager empress Tse-hi Hsi An, who for many years had been the actual ruler in China. A new emperor P'u Yi, a young child, succeeded, under the regency of Prince Chun, his father.

Under the heading Government the important legislative events of 1910 have been given. In 1911 a series of historical events took place of so momentous a character as to call for more extended description. The discontent with Manchu domination, which had given rise to the Tai-ping rebellion, now made itself manifest in an insurrection that promised to effect a radical change in the governmental conditions of the Chinese Empire. An important step was taken in this direction in the spring of 1911, when the newly-constituted legislative body, called as a 'consultative council' in 1910, but which assumed the position of a parliament from the start, forced the Grand Council of the empire to acknowledge itself a ministry responsible to the National Assembly. The government had agreed to change the date of the promised parliament from 1916 to 1915, and the assembly undertook to work out a national budget, embracing a regulation for popular parliamentary elections. Those steps towards the inauguration of a constitutional monarchy doubtless aided to develop the insurrectionary sentiment latent in the populace, and in August, 1911, an outbreak of a threatening character took place in the southern province of Szechuen, its ostensible cause being a popular protest against the government programme of nationalising the railways and arming them with the aid of foreign loans. The insurrection soon gained head and spread with remarkable rapidity through Southern China, quickly becoming a declared purpose of overthrowing the Manchu dynasty and restoring the old Chinese sovereignty. The rebels, though radical in their views and almost from the start the project of replacing the monarchy by a republic was openly broached, City after city was taken by the rebels, until nearly the whole of China south of the Yang-tse-Kiang was in their hands. The government, dismayed by the growing revolt, hastily offered concessions of amazing character, but the rebellion went on. New cities were occupied, many of the imperial troops joined its ranks, and the fleet was surrendered. Severe fighting took place at Hankow, which was retaken from the rebels by the imperialists, many of its inhabitants massacred and great
part of the city burnt. At the end of November, the contest centered around the city of Nanking, in which a similar massacre and conflagration by the imperialists had taken place. Yuan Shi-kai, a man of striking ability and the creator of the modern Chinese army, accepted the post of prime minister, and vigorous steps were taken to recover the lost ground. The insurrection also was engineered by men of great ability, among them Wu Ting Fang, former Chinese minister to the United States. Nanking, the last stronghold held by the imperialists in Southern China, was taken by the revolutionists after a severe struggle. The province of Shan-tung, of which Canton is the capital, declared itself an independent republic, electing as president its former viceroy, and Yuan Shi-Kai, apparently hopeless of saving the Manchu dynasty, agreed to an armistice and the holding of a convention at Nanking for the purpose of seeking a satisfactory solution of the governmental problem. On February 12, 1912, the Manchu dynasty abdicated. The revolutionary delegates at Nanking elected as provincial president of China Dr. Sun Yat Sen, a reformer who had been active in organizing the revolt. Yuan Shi-Kai, premier of the empire, was subsequently made president of the republic. In April, 1913, China definitely assumed her place among the nations. The representatives met at Peking and constituted the House of Parliament—the House of Representatives with 596 members and the Senate with 274 members. In December, 1915, the President announced himself as emperor. This led to a rebellion and a speedy restoration of the republic. He died in June, 1916, and was succeeded by Li Yuan Hung. A second attempt to restore the empire was made by an ambitious general in 1917, but this also quickly failed. Later in 1917 China joined the nations in war with Germany, but took no active part.

China Aster, Callistephus chinensis, a composite plant, hardy and free flowering. See Aster.

China Grass, Boehmeria nivea, a plant of the nettle family, a native of Southern and Eastern Asia and the Atlantic islands, and now more or less cultivated in many other countries. It yields a root which possesses most valuable properties, and has long been made in China into a beautiful cloth. It is very strong, presents unusual resistance to the effects of moisture, and is fine and silky in appearance. As to its full capabilities these are hardly as yet known, though many trials have been made with it as a subject of manufacture. Recently considerable quantities have been used in France, and woven both pure and mixed into various beautiful fabrics. In England such articles as Ladies' scarfs, handkerchiefs, umbrella-covers, etc., are made of it. Hitherto, however, its high price, owing to the difficulties of preparing it in a suitable form for manufacture, has been against its use, but a sufficiently cheap process of preparation is said to have been recently invented. Called also Rheo, Rheo, Ramie, or Ramce.

China, Great Wall of, est artificial structure on the face of the earth, a barrier extending for about 1500 miles in the north of China proper, of which it partly forms the northern boundary. It is generally thought to be about 214 B.C. It is carried over height and hollow, and avoids all inequalities of the ground, reaching in one place the height of over 6000 feet above the sea. Earth, gravel, brick and stone were used in its construction, and in some places it is much more substantial than in others. Its greatest height, including a parapet on top, is about 80 feet, and it is strengthened by towers at regular distances.

China Ink, a black substance, which, when rubbed down with water, forms a very pure black indelible ink. It has been used in China from time immemorial. There are different accounts of the process, but it appears to be made by boiling the juices of certain plants with water to a syrup, adding to this a quantity of gelatine, and then thoroughly incorporating it with a bonaceous matter. There is generally added some perfume—a little musk or camphor. The mass is then made into square columns of different sizes, which are often decorated with figures and Chinese characters. Many attempts have been made to imitate Chinese ink, some of which have been tolerably successful. Good Chinese ink should have a velvety-black appearance, with a gloss which becomes very conspicuous on rubbing. The color it gives on paper should be pure black and homogeneous, and if water be passed over it it should not run or become streaky. It is indelible by ordinary solvents, but may be removed sometimes mechanically.

Chinandega (chín-a-ná-da'gá), a town of Central America, Nicaragua, 20 miles northwest of
Leon, connected by railway with the port of Corinto, and carrying on a considerable trade. Pop., about 12,000.

China Root, the root or rhizome of *Smilax China*, a climbing shrubby plant closely allied to sarsaparilla, for which it is sometimes used.

China Rose, the name given to a number of varieties of garden rose chiefly derived from *Rosa indica* and *R. semperflorens*, both natives of China. Also a name sometimes given to *Hibiscus rosa-sinensis*, one of the mallow tribe, common in China and the East Indies, and an ornament in hot-houses.

China Sea, that part of the North Pacific Ocean bounded N. by Formosa, N.W. by China, W. by Anam and the Malay Peninsula, S. by Borneo, and E. by the Philippines. It contains numerous islands, receives several considerable rivers, and forms the important Gulfs of Siam and Tonquin.

Chi'na-ware, porcelain, the finest and most beautiful of all the kinds of earthenware, so-called from China being the country which first supplied it to Europeans. When broken it presents a granular surface, with a texture compact, dense, firm, hard, vitreous and durable. It is semitransparent, with a covering of white glass, clear, smooth, unaffected by all acids excepting the hydrofluoric, and resisting uninjured sudden changes of temperature. For the process of manufacture see Pottery.

China Wax, a sort of wax deposited by insects on a deciduous tree with light-green, ovate, serrated leaves, cultivated in the province of Si-chuen (Sau-chuan) in southwestern China. The insects, a species of coccus, are bred in balls which are formed on a different tree, an evergreen (a species of Ligustrum or privet), and these balls are transported in great quantities to the districts where the wax trees are grown, to the branches of which they are suspended. Having emerged from the balls the insects spread themselves over the branches, which gradually become coated with a white, waxy substance, reaching in 90 or 100 days the thickness of a quarter of an inch. The branches are then lopped off and the wax removed. It is white in color and is chiefly made into candles; it melts at 100°, whereas tallow melts at about 96°.

Chinch, the popular name of certain fethid American insects, genus *Rhiparochromus*, resembling the bedbug, very destructive to wheat, maize, etc., in the Southern and Western States. Also applied to the common bedbug, *Cimex lectularius*.

Chincha Islands (chin'cha), a group of small islands off the coast of Peru, lat. 13° 38' s.; lon. 76° 28' w. They are granitic, arid, and destitute of vegetation; and the coasts bold and difficult of access. Immense deposits of guano used to exist here, but are now exhausted. Guano from these islands began to be imported into Europe on an experimental scale about 1832, and the trade rapidly grew into importance. The Peruvian government retained the monopoly of the export, and made it one of the chief sources of its revenue.

Chinchilla (chin-chil'a), a genus of S. American herbivorous rodents very closely allied to the rabbit, which they resemble in the general shape of the body, in the limbs being longer behind than before, in the conformation of the rootless molars, and by the nature of the fur, which is more woolly than silky; but differing from the rabbit in the number of their incisors and molars, in a greater length of tail, and also in having broader and more rounded ears. *C. lanigera*, a species about 15 inches long, is covered with a beautiful pearly-gray fur, which is highly esteemed as stuff for muff's, pelisses, linings, etc. The chinchilla lives gregariously in the mountains of most parts of South America, and makes numerous and very deep burrows. It is of a gentle nature and very sportive.

Chinese Exclusion. The rapid increase of Chinese immigration into the United States and the bitter opposition aroused by it among the laboring classes in California, led to a treaty with China in 1880, partly restricting this immigration. As the number of Chinese in this coun-
Chingleput (ching’-əl-put), or Chennap-pat, a coast district, and its capital, Hindustan, presidency of Madras. The district, which lies s. of Arcot and Madras—area, about 2842 square miles—has generally a bad soil, broken up frequently by granite rocks. Pop. 1,312,122. This tract of country was in 1750 and 1763 obtained by the East India Company from the Nabh of Arcot. The town is 12 miles w. from the Bay of Bengal, and has a pop. of 10,551.

Chiniot (chin’-ət), a town of Hindustan, in the Punjab, near the Chenab. Pop. about 15,000.

Chinking (chink’-ə-pin), the American dwarf chestnut. See Chestnut.

Chin-kiang (chin-k’-kē-ang’), or Tchang-Kiang, a city, China, province of Kiangsu, right bank of the Yang-tse-kiang, near the junction of the Imperial Canal; one of the British treaty ports, advantageously situated for trade. In 1842 it was taken by the British, after a determined resistance on the part of the Manchu garrison. It suffered severely in the Tai-ping rebellion. Pop. est. about 168,000.

Chinoline (kin’-ə-lin; C₉H₆N), an oily liquid obtained by distilling quinine with potash and a small water, or by the dry distillation of coal. It is used in medicine as an antiseptic and as a remedy in intermittent fevers, etc.

Chinon (chē-nōn), a town in France, dep. Indre-et-Loire, on the Vienne, 28 miles s. w. of Tours. Rabelais was born in its vicinity. Pop. (1906) 4071.

Chinook Winds (chin’-o-k), warm westerly winds experienced in some parts of the western United States.

Chinsura (chin-su’-rə), a former town of Bengal, on the Hugli, now part of the city of Hugli. It was the chief Dutch settlement in Bengal and was ceded to the British in 1824.

Chintz, cotton cloth or calico printed with flowers or other devices in various colors and generally glazed.

Chioccoca (kl-ō-kōk’-kə), a genus of tropical plants, nat. order Rubiaceae, consisting of small, often climbing shrubs, with funnel-shaped, yellowish flowers; fruit a white berry with two seeds. The bark of the root of C. angnifuga is a violent emetic and purgative.

Chiochiglia (kē-o-jē’-gə), a seaport town in Italy, on one of the lagoon islands of the Adriatic, 15 miles from Venice. It is built partly on pilings, and has some handsome edifices. Its harbor is fortified, and it has ship yards, fisheries and a coating trade. Pop. 26,220.

Chimpunk, Chimp’-muck, the popular name in America of the ground squirrel, genus Tamias.

Chippendale (chip’en-dāl), a style of furniture made by Thomas Chippendale and his son in the eighteenth century, and since frequently copied. It is distinguished by elaboration of ornament and harmony of proportion, and though solidly built gives a general effect of lightness. The chairs are of great variety and many of them are very beautiful. Chippendale introduced the cabriole leg from Holland, the claw and ball foot of the Orient, the straight, square Georgian leg, the lattice-work Chinese leg, the fret-work Gothic leg, etc. The chair-backs are equally varied.

Chippenham (chip’en-nam), a municipal and parliamentary borough of England, Wiltshire, 12 m. n. e. of Bath, on the Avon. Pop. 5332.

Chippewa (chip’-wä), Falls, a city of Wisconsin country seat of Chippewa Co., 12 miles n. e. of Eau Claire. The Chippewa River supplies waterpower, which is employed to furnish electrical power for shoe factories, lumber interests, etc. Pop. 8833.

Chippewayans (chip’-e-wa-anz), a race of Indians in the northwest territories of Canada.

Chippeways (chip’-e-wäz), or Ojib-ways, a tribe of North American Indians, United States and Canada. They are distributed in bands round both sides of the basin of Lake Superior, where they once owned vast tracts. They are of the Algonquin stock, tall, and active, subsist chiefly by hunting and fishing, and number about 18,000.

Chipping Sparrow (Spizella soci-a), a common N. American bird, some five or six inches long.

Chipping-Wycombe. See Wy-combe.

Chiquimula (chi-kim’-m’-lə), a department of the Central American State of Guatemala; area 4000 sq. miles. Pop. 45,000. Its capital, of the same name, has about 4000.
Chiquitos (chí-kê'tôs), an Indian people of Bolivia, about the headwaters of the Madeira and Paraguay. They number about 22,000, distributed among ten missions established by the Jesuits.

Chiragra (ki-rag'ra), that species of gout which attacks and stiffens the joints of the hand.

Chiratta (ki-ret'ta), or CHitra'ta, an Indian bitter derived from the stems of Agathôs Chirâta (or Ophelia Chirâta), a gentianaceous plant from the north of India. It is similar in its medicinal properties to gentian.

Chiriqui (chê-re-kê'), a district in Panama, Central America. It is naturally very fertile, and has good harbors both on the Caribbean and Pacific coasts. The name is also given to a lagoon and an archipelago on the coast of this state. Pop. about 40,000.

Chiron (ki-rôn), the most famous of the Centaurs, a race fabled as half-men, half-horses. He lived at the foot of Mt. Pelion in Thessaly, and was celebrated throughout all Greece for his wisdom and acquirements, particularly for his skill in medicine and music, and the greatest men of the time—Æsculapius, Jason, Hercules, Achilles, etc.—were represented as his pupils.

Chironectes. See Chironectes.

Chiroprody (ki-rôp's-dî), the art of treating diseases, callosities or excrescences of the hands and feet.

Chiropractic (ki-rô-prak-tîk), a method of treating disease, defined by its practitioners as the study and application of a universal philosophy of biology, theology, theosophy, health, disease and death. Mechanically it consists in adjusting by hand (hence the name) all subluxations of the 300articulations of the human skeletal frame, more especially those of the spinal column, for the purpose of permitting the re-creation of all normal cyclic currents through nerves that have been impinged. The first chiropractic adjustment of vertebrae was made in September, 1895, by Dr. D. D. Palmer but the method was not developed until 1903, when his son, B. J. Palmer, D.C., worked out a well defined system of philosophy and practice. Chiropractic is based upon the hypothesis that man is a spiritual being as well as mechanical and chemical, and claims that it is the Innate Intellectuality residing within the body of the patient that does the healing; the mechanical adjustments simply open the channels. There are a number of chiropractic schools in the United States, including the Palmer School at Davenport, Iowa.

Chiru (chê'rû), Antilope Hodgsoni, a fine large species of antelope found in Tibet, somewhat larger than the chamois.

Chisholm (chis'hûm), a village in St. Louis Co., Minnesota, 75 miles n.w. of Duluth. In a lumber and mining region. Pop. 3000.

Chislehurst (chîz'el-hûrst), a parish and village of England, in Kent, where (at Camden Place) Napoleon III lived after the Franco-German war. Pop. 8068.

Chisleu (kis'lu), or KISLEW, the ninth month of the Jewish year, corresponding to December. On the 25th of Chisleu commence the Hanukkah festival, which lasts eight days.

Chitaldrug (chît-al-drög'), a district and town of India, Mysore, native state. The district, which is arid and stony, has an area of 4022 sq. miles; pop. 408,795. The town has fortifications constructed by Haider Ali. Pop. 5792.

Chitin (kt'in), the chief tissue-forming ingredient of the wing-cases of insects and the shells of crabs and other crustaceans. From these sources it can be obtained by successive treatment with different solvents to remove inorganic matter, fat, etc. It is solid, transparent and horny.

Chitonidae (ki-ton-a), a family of gasteropods, affording the only instance known of a molluscan shell formed of many successive portions, often in contact and overlapping each other, but never truly articulated. The shell in the typical genus Chiton is composed of eight pieces, the animal adhering to rocks or stones after the fashion of the limpet.

Chittagong (chît'a-gong), a district of Hindustan, in the s.e. of Bengal, having the Bay of Bengal on the w.; area, 2567 sq. miles; pop. 1,353,250. The level lands, chiefly on the coast, and the valleys are very fertile. A considerable majority of the inhabitants are Mohammedans. Chittagong is also the name of a commission-ship or division of Bengal. Area, 12,118 square miles; pop. 4,737,731.
Chittagong

The city of Chittagong, chief town of the district and second port in Bengal, is situated on the Karnaphuli about 12 miles from its mouth. Though very unhealthy, its trade has of late been steadily increasing. Pop. 24,100.

Chittagong Wood, the wood of several Indian trees, especially of *Chickrassia tabulata*, order Cedrelaceae, a light-colored, beautifully-grained wood used by cabinet-makers. Also Cedrela Toona. See Toon.

Chitteldroog. See Chitaldurg.

Chittoor (chítʔtőːr), or CHITOER, a town of India, capital of the North Arcot District, Madras Presidency. Pop. 11,500. — Also a town of India, in the state of Cochin. Pop. about 10,000.

Chiusa (kë-sëː), two Italian towns, one in N. Italy, province of Cunio, pop. 5728; the other in Sicily, provincePalermo, pop. 6505.

Chiusi (kë-sëː), the Clusium of the Romans; a town of Italy, provinceSienna, and 43 miles s. from Arezzo. It was the capital of Lars Por-sensa, and has collections of Etruscan and Roman antiquities. Pop. 6011.

Chivalry (chí-val'-ri; French cheval-erî, from cheval, a horse), a term which indicates strictly the organization of knighthood as it existed in the middle ages, and in a general sense the spirit and aims which distinguished the knights of those times. The chief characteristics of the chivalric ages were a warlike spirit, a lofty devotion to the female sex (the latter somewhat questionable), a love of adventure, and an undefinable thirst for glory. The Crusades gave for a time a religious turn to the spirit of chivalry, and various religious orders of knighthood arose, such as the Knights of St. John, the Templars, the Teutonic Knights, etc. The education of a knight in the days of chivalry was as follows: In his twelfth year he was sent to the court of some baron or noble knight, where he spent his time chiefly in attending on the ladies, and acquiring skill in the use of arms, in riding, etc. When advancing age and experience in the use of arms had qualified the page for war, he became an esquire, or squire. This word is from *L. scutum*, a shield, it being among other offices the squire's business to carry the shield of the knight whom he served. The third and highest rank of chivalry was that of knighthood, which was not conferred but by the very first Gar except in the case of distinguished birth or great achievements. The individual prepared himself by confessing, fasting, etc.; religious rites were performed; and then, after promising to be faithful, to protect ladies and orphans, never to lie nor utter slander, etc., he received the accolade, a slight blow on the neck with the flat of the sword from the person who dubbed him a knight. This was often done on the eve of battle, to stimulate the new knight to deeds of valor; or after the combat, to reward signal bravery. Though chivalry had its defects, chief among which, perhaps, we may note a tendency to certain affectations of sentiment and profession, yet it is to be regarded as tempering in a very beneficial manner the natural rudeness of feudal society. As a system of education for the nobles it filled a place in civilization which as yet the arts and letters could hardly occupy.

Chivasso (kë-vässëː), a town of Italy, 14 miles N. E. of Turin. Pop. 4299.

Chive, or CIFE (chiv, áv), a small perennial garden plant (*Allium Schoenoprasum*) of the same genus as the leek and onion, and used for flavoring soups, etc. It is a rare native of Britain, where it is often cultivated as an edging for garden plots.

Chladni (kla'dné), FREDERICK FLORENT FRIEDRICH, a German physicist, born in 1756; died in 1827. He investigated the laws of sound and made important experiments on the vibration of metallic and glass plates of various forms. His works include *Discoveries Concerning the Theory of Sound*, 1787; *Acoustics*, 1802; *Contributions to Practical Acoustics, with Remarks on the Making of Instruments*, 1822; etc.

Chladni's Figures, the figures formed by sand strewn on a horizontal glass or metal plate, or a slip of wood, when it is clamped firmly at one point, and set in vibration by means of a violin-bow.

Chlamydosaurus (kla-mi-du'-sär'us). See Frilled Lizard.

Chlamyphorus (kla-mi-fö'rus), a genus of quadrupeds of the order Edentata. The only species, *C. trunotitii*, or pichiagi, resembles the mole in its habits; it is about 5 inches long, and its back is covered over with a coat of mail, consisting of twenty-four rows of tough, leathery plates. The internal skeleton in several respects resembles that of birds. It is a native of South America, allied to the armadillo.

Chlamys (kla-mis), a light and free-flowing scarf or plaid worn by the Greeks as an outer garment. It was oblong in shape, generally twice as long as its width.
Choisy-le-roi, a handsome town, France, 7 miles s. of Paris on the Seine. In its cemetery is the tomb of Rouget de l’Isle, author of the Marseillaise. Pop. (1906) 12,000.

Choke-cherry, a popular name for one or more species of cherry (such as Prunus or Cerasus bocellis, Prunus Virginiana), distinguished by their astrigency.

Choke-damp, or AFTER-DAMP, the name given to the irraspirable gas (carbonic acid) found in coal-mines after an explosion of fire-damp or light carburetted hydrogen.

Cholagogue (ko’i-a-gog), a medicine which has the property of stimulating the liver and producing a secretion of bile thereby.

Cholera (kol’er-a), Asiatic, a deadly parasitic endemic and epidemic disease, characterized by acute diarrhoea, vomiting, febrile circulation, coldness of limbs and pulse. The victims of cholera are those whose intestines are weakened by previous illness, bad feeding, exhaustion, or excess in eating or drinking. In an epidemic, cases vary from those rapidly fatal to those of hardly recognizable diarrhoea; but with the typical pronounced case, in the course of a few hours after diarrhoea begins the stools have the typical ‘rice-water’ appearance, caused by quantities of floating white particles like rice, which are shreds of intestinal mucous membrane. Vomiting begins, at first of the stomach contents, and later of ‘rice-water’ material. The patient suffers severely from intense cramps of the limbs and unquenchable thirst; and unless reaction soon takes place, he falls into a collapsed condition, unable to help himself in any way, although generally quite clear-headed.

This disease is endemic in certain parts of Asia, and is liable to spread to other parts of the world, usually by the ordinary channels of commercial intercourse. It first appeared in Europe in 1829, and reached Britain in 1831, spreading thence to America.

The primary and essential element in the production of cholera has been ascertained to be a constituent of the excreta of cholera patients. Dr. Koch asserts that the essential cause is a bacillus, having the form of a curved rod. Hence called the comma bacillus, discovered by himself, and that the disease is caused by the multiplication of this organism in the small intestines, it being due usually to drinking impure water.

A cholera antitoxin was discovered by Professor Vincent, head of the Grace Military Hospital, Paris, who also discovered a typhoid antitoxin, and details were presented before the Academy of Medicine in March, 1915.

What is called cholera morbus is a bilious disease, long known in most countries, and is characterized by copious vomiting and purging, with violent griping, cramps of the muscles of the abdomen and lower extremities, and great depression of strength. It is most prevalent at the end of summer or the beginning of autumn. Cholera infantum (infants’ cholera) is the name sometimes given to a severe and dangerous diarrhoea to which infants are liable in hot climates or in the hot season, and usually due to improper methods of feeding and caring for the food.

Cholesterin (ko’les’ter-in); CeH₄O₇, a monatomic alcohol found in bile, blood, etc., which may be obtained in the form of beautiful, pearly crystalline scales, without taste and odor. It is widely distributed in the animal economy, being essential to the brain and nerve substance, and having been found in milk, and many portions of the body, both as a normal and a pathological constituent.

Cholet (ko’let), a town of N. W. France, dep. Maine-et-Loire, 32 miles s. w. of Angers, with manufactories of cotton goods and woolen stuffs, and a brisk trade. Pop. (1906) 16,554.

Cholochrome (kö lo’-kröm), Chorochromatic (kö lo’-kröm), the brown coloring matter contained in bile and in the intestines, and the substance coloring the feces and the skin in jaundice.

Cholos (chöl’s), in Peru, the name as for those who are partly of white, partly of Indian parentage, the most numerous class of the community.
Chloroform (klō′rō-form; CHCl₃), the perchloride of formic acid, a volatile colorless liquid of an agreeable, fragrant, sweetish apple taste and smell, of the specific gravity of 1.48, and discovered by Soubeiran and Liebig in 1832. It is prepared by cautiously distilling together a mixture of alcohol, water and chloride of lime or bleaching powder. Its use as an anesthetic was introduced in 1847 by Professor (afterwards Sir) James Y. Simpson of Edinburgh. For this purpose its vapor is inhaled. The inhalation of chloroform first produces slight intoxication; then, frequently, slight muscular contractions, untruthfulness and thinking; then loss of voluntary motion and consciousness, the patient appearing as if sound asleep; and at last, if too much be given, death by coma and syncope. When skillfully administered in proper cases it is considered one of the safest of anesthetics; but it requires to be used under certain precautions, as its application has frequently proved fatal. Chloroform is a powerful solvent, dissolving resins, wax, iodine, etc., as well as strychnine and other alkaloids.

Chlorophane (klō′rō-fān), a mineral, a variety of fluor spar, which exhibits a bright-green phosphorescent light when heated.

Chlorophyll (klō′rō-fil), the green coloring matter of plants. It plays an important part in the life of the plant, as it breaks up the carbonic acid gas taken in by the stomata of the leaves into its two elements, carbon and oxygen, returning the oxygen to the air, and converting the carbon with the water obtained from the roots into starch. Light is indispensable to the formation of chlorophyll, and hence to the etiolation or blanching of plants by privation of light, either by the art of the gardener or from accidental causes.

Chlorosis (klō′rōsis; Greek chlōros, yellowish green), or Green Sickness, a disease especially affecting young girls, is characterized by a greenish or yellowish hue of the skin, languor, indigestion and general debility, and disarrangement of the system. The pathological condition of chlorosis is a diminution in quantity of the red globules of the blood, an important constituent of which is iron, and accordingly the administration of iron forms a leading part of the treatment of this disease. — The term is also applied to a disease of plants in which a deficiency of chlorophyll causes a blanched and yellow appearance instead of a healthy green in the plant.

Choate (chōt), Joseph Hodges, lawyer, born at Salem, Massachusetts, in 1832. Was graduated at Harvard in 1852, and at Harvard Law School in 1854. A member of the bar in Massachusetts, he removed to New York City in 1856 and was admitted to the bar of that city. A gifted orator and noted jurist, he was appointed ambassador to Great Britain by President McKinley, 1899-1906. He died May 14, 1917.

Choate, Rufus, lawyer, born in Ipswich, Massachusetts, in 1799; died in 1859. In 1830 he was elected to Congress; also in 1832. In 1841 he succeeded Daniel Webster in the U. S. Senate, serving until 1845. In many respects he was the most scholarly of American public men, and among the greatest forensic advocates America has produced.

Chocolate (chok′ō-lāt; from Mexican chokollatl), a paste composed of the kernels of the Theobroma cacao or cacao-tree, ground and combined with sugar and vanilla, cinnamon, or other flavoring substance; also a beverage made by dissolving chocolate in boiling water or milk. It was used in Mexico long before the arrival of the Spaniards, and is now extensively used in Europe and America as a beverage and confection.

Choctaws (chok′tas), a North American Indian tribe now settled on a portion of Oklahoma, about 16,000 in all. They formerly inhabited what is now the w. part of Alabama and s. part of Mississippi. They cultivate the soil, are partially civilized, having a regular constitution prefixed with a bill of rights, courts of justice, books and newspapers.

Chocozim (ho′tisim). See Khottis.

Choir (gwir), that part of a cruciform church extending eastward from the nave to the altar, frequently inclosed by a screen, and set apart for the performance of the ordinary service. The name is also given to the organized body of singers in church services.

Choiseul (sō′wē-śew′l), an ancient French family which has furnished many distinguished individuals. One of the best known is Etienne Francois, Duke of Choiseul-Amboise, born in 1719; died in 1785. He entered the army in early life, and after distinguishing himself on various occasions in the Aus-
Chorda Dorsalis

Chorda Dorsalis, the notochord or dorsal chord. See Notochord.

Chordae-Vocales, or cords. See the vocal chords Larynx.

Chorea (kô-rë'a). See Vitis Dance, St.

Choriambus (kô'ri-am-bus), in pros. a foot consisting of four syllables, of which the first and last are long, and the others short; that is, a chorous, or trochee, and an iambus united.

Chorion (kôr'ë-on), in anatomy the external vascular membrane, covered with numerous villi or shaggy tufts, which invests the fetus in utero.

Chorley (chôr'il), a municipal borough and market town, England, Lancashire, on the Yarrow, 20 miles n.w. of Manchester, with manufactures of cotton goods, calico-printing and dye-wood works, floor-cloth works, iron-foundries, etc. In the vicinity are coal, lead and iron mines. Chorley gives name to a parliamentary division of the county. Pop. (1911) 30,317.

Choroid (kôr'oid), Chor'œm, a term applied in anatomy to various textures; as the choroid membrane, one of the membranes of the eye, of a very dark color, situated between the sclerotic and the retina, and terminating anteriorly at the great circumference of the iris.

Chorus (kô-rus), originally an ancient Greek term for a troop of singers and dancers, intended to heighten the pomp and solemnity of festivals. During the most flourishing period of ancient tragedy (B.C. 500-400) the Greek chorus was a troop of males and females, who, during the whole representation, were spectators of the action, never quitting the stage. In the intervals of the action the chorus chanted songs, which related to the subject of the performance. Sometimes it even took part in the performance, by observations on the conduct of the personages, by advice, consolation, exhortation, or dissuasion. In the beginning it consisted of a great number of persons, sometimes as many as fifty; but the number was afterwards limited to fifteen. The exhibition of a chorus was in Athens an honorable civil charge, and was called choragy. (See Choragus.) Sometimes the chorus was divided into two parts, who sung alternately. The divisions of the chorus were not stationary, but moved from one side of the stage to the other; from which circumstance the names of the portions of verse which they recited, strophe, antistrophe and epode, are derived.—In music, the chorus is that part of a compositional performance which is executed by the whole body of the singers in contradistinction to the solo airs, and concerted pieces for selected voices. The singers who join in the chorus are also called the chorus. The term is also applied to the verses of a song in which the company join the singer, or the union of a company with a singer in repeating certain couplets or verses at certain periods in a song.

Chose (shôz; French, a thing), in law, property; a right to possession; or that which may be demanded and recovered by suit or action at law. Thus money due on a bond or compensation for damage done is a chose in action; the former proceeding from an express, the latter from an impiety contract. A chose is annexed to a place, as a mill or the like; a chose transitory is a thing which is movable.

Chosen (chô'sen), the ancient name of Corea, now restored by Japan as the legal name.

Chosroes I (kos'tro-es), surnamed the Just, the greatest of the Sassanid kings of Persia, reigned A.D. 531-579. At his accession Persia was involved in a war with the Emperor Justinian, which Chosroes terminated successfully, obliging Justinian to purchase peace by the payment of a large sum of money. In 540, however, jealous of the renown of Belisarius, the general of the Empire, Constantine violated the peace, invaded Syria, laid Antioch in ashes, and returned home laden with spoils. The war continued till 562, when the emperor was again obliged to purchase peace by an annual tribute of gold. The peace continued for ten years, when the war was renewed with Justin, the successor of Justinian, Chosroes II. The latter was again defeated, and obliged to sign a treaty of peace. The following emperor, Tiberius, at length completely defeated the Persians in 578.

Chota Nagpore (chu'ta nô-g-pur), Chuttia Nagpur, a division of British India, province of Bengal, divided into the districts of Ranchi, Palamau, Hazaribagh, Singbbum and Manbhüm; and two feudatory states. Total area, 43,020 sq. miles. Pop. 4,903,001.

Chotin (hô'tin). See Khotin.

Chouans (shô-än), a name given to the royalist peasantry of Brittany and Lower Maine, who carried on a petty warfare against the republican
government from an early period of the French revolution. The name was finally extended to all the Vendéans. The name was derived from the first chief of the Chouans, Jean Cottéreau, who with his three brothers organized these bands in 1792. Cottéreau had joined a band of dealers in contraband salt, and acquired the surname Chouan from the cry of the screech-owl (Fr. chat-huant) which he used as a signal with his companions. He was killed in an engagement with the republican troops in 1794. The Chouans were not suppressed till 1799, and even after that occasional spurs of insurrection occurred down till 1830, when they were fully put down.

Chough (chut), Cornish Cough, or Hedlegged Crow, a bird belonging to the genus Fretilus, of the crow family, but nearly allied to the starlings. *F. gracilis* is the only European species, and frequent, in England, chiefly the coasts of Cornwall. Its general color is black, contrasting well with the vermilion-red of the beak, legs and toes. There are other species, natives of Australia, Java, etc.

Chrétiens de Troyes (krah-tay), a French trouvère, born at Troyes about 1150; died about the end of the twelfth or beginning of the thirteenth century. His fame rests upon six romances still extant, viz., *Iris et Guide*, *Perceval le Gallois*, *Le Chevalier au Lion*, *Cligès*, *Chevalier de la Table Ronde*, *Lancelot du Lac*, and *Guillaume d'Angièitte*. Other two of his works, *Tristan*, or *Le Roi Marc et la Reine Yséut*, and *Le Chevalier à l'Épée*, have been apparently lost.

Chrysm (kriizm; Greek *chrism*, salve), the holy oil prepared by the R.C. Catholic bishops, and used in baptism, confirmation, ordination of priests, and the extreme unction. The name is derived from the Greek word 'to anoint.'

Chrisom (kriiz'om), a white garment formerly laid upon a child at baptism in token of innocence.

Christ (krist; from Greek *Christos*, the anointed; Messiah, from the Hebrew, has the same significance), a title of our Saviour, now used almost as a name or part of his name. See Christianity and Jesus Christ.

Christadelphians (krist-adelfi-anz), a religious body of recent origin, who believe that God will raise all who love him to an endless life in this world, but that those who do not shall absolutely perish in death; that Christ is the Son of God, inheriting moral perfection from the Deity, our human nature from his mother; and that there is no personal devil.

**Christchurch** (krist'church), a parliamentary borough, England, county of Hampshire, 21 miles southwest of Southampton, pleasantly situated at the confluence of the Avon and Stour, about 1 mile from the sea. There is a fine old priory church, dating from the time of William Rufus, with a magnificent stone altar-screen. Pop. 6104.

**Christchurch**, a town of New Zealand, land, capital of the province of Canterbury, and the see of the primate of New Zealand, is situated on the Avon River, 7 miles from Port Lyttelton, with which it has railway communication. It contains a number of handsome buildings, among which are the provincial government offices, the Cathedral, St. Michael's Church, the supreme court, hospital, museum, town library, etc. There are a fine park, a botanical garden, and high-class educational and other institutions. Pop. 49,928, or including extensive suburbs, 67,878.

**Christian** (krist'yan), the name of ten Danish kings, CHRISTIAN II, King of Denmark, Norway, and Sweden, was born 1480; died 1559. He attained the throne in 1513, and in 1518 usurped the throne of Sweden, from which he was expelled by Gustavus Vasa in 1522. He was deposed by his Danish subjects in 1523, and retired to the Netherlands, whence he returned in 1531 with an army, but was defeated, and kept in confinement till his death.—CHRISTIAN IV, King of Denmark, son of Frederick II, born in 1577, succeeded to the throne as a minor in 1588; died 1648.—CHRISTIAN IX, King of Denmark.—CHRISTIAN X, born in 1870, succeeded his father, Frederick VIII, in 1912.

**Christian Endeavor, United Society of**, for the promotion of Protestant denomina tions, originating in 1881, has now about 75,000 societies and 4,000,000 members, represented in all parts of the world. Its purpose is to make the young people loyal and efficient members of the church.

**Christian Era**, the great era now almost universally employed in Christian countries for the computation of time. It is generally supposed to begin with the year of the birth of Christ; but that event seems to have taken place four years before the present established beginning of the era. Time before Christ is marked B.C., after Christ A.D. The era is computed from January
Christiania

1st, in the fourth year of the 104th Olympic, and 733d year from the building of Rome. It was first used by Dionysius, a Syrian monk, in the sixth century, but did not become general until about the middle of the fifteenth century.

Christiania (kris-ti-a’ni-a), a city and port, the capital of Norway, province Aggerahuus or Christiania, at the head of the long narrow inlet called Christiania Fjord, about 60 miles from the open sea or Skagerrack. The houses are mostly of brick and stone, generally plain buildings, devoid of architectural pretension. Important public buildings are the royal palace, the house of representatives or Storting, the governor’s palace and the cathedral.

The first community of the followers of Jesus was formed at Jerusalem soon after the death of their Master. Another at Antioch in Syria first assumed (about 65) the name of Christians; and the travels of the apostles spread Christianity through the provinces of the Roman Empire. Palestine, Syria, Asia Minor, Greece, the islands of the Mediterranean, Italy, and the northern coast of Africa, as early as the first century, contained societies of Christians. At the end of the third century almost half of the inhabitants of the Roman Empire, and of several neighboring countries, professed this belief. While Christianity as a system was thus spreading, many heretical branches had sprung from the main trunk. From the Gnostics, who date from the days of the apostles, to the Nestorians of the fifth century the number of sects was large; some of them exist to the present day. The most important events in the subsequent history of Christianity are the separation of the Eastern and Western churches early in the eighth century; and the Western reformation, which may be said to have commenced with the sectaries of the thirteenth century and ended with the establishment of Protestantism in the sixteenth. The number of Christians now in the world is computed at 870,000,000. Of these about 275,000,000 are Roman Catholics, 120,000,000 belong to the Greek Church, and 175,000,000 are Protestants.

Christians (krist’yans), or Christian Connection, the name of a denomination in the United States and Canada, adopted to express their renunciation of all sectarianism. They are to be met with in all parts of the country, the number of their churches being estimated at about 1200. Each church is an independent body; the Scriptures are their only rule of faith, and admission to the church is obtained by a simple profession of belief in Christianity. The sect is also known as the Christian Church.

Christiania (kris’ta-ri-ti), the religion instituted by Jesus Christ. Though the great moral principles which it reveals and teaches, and the main doctrines of the gospel, have been preserved without interruption, the genius of the different nations and ages have materially colored its character.

Christian Science, by Mary Baker Eddy to her interpretation of the Christian religion. Christian Science dates from 1866, but Mrs. Eddy relates in her memoirs that she had been, for twenty years before 1866, ‘trying to trace all physical effects to a mental cause.’ The written statement of Christian
Christians of St. John

Science dates from 1875, when Mrs. Eddy published the Christian Science textbook, Science and Health With Key to the Scriptures. This is a mature of a commentary on the Bible, and purports to contain a complete statement of "divine metaphysics," including directions for practice. We read on page 135: "The same power which heals sin heals also sickness"; also on page 146, with reference to "scientific healing": "Its ethical and physical effects are indissolubly connected." As a religious teaching, Christian Science is presented as the restoration of original Christianity, with its absolutely spiritual understanding of all true being, and its consequent power over all unspiritual conditions, including disease. As a religious movement, Christian Science is notable for the rapidity of its growth. The First Church of Christ, Scientist, was organized in 1879 at Boston. In 1914 there were over 1400 Christian Science churches or societies. A majority of these are located in the United States, but they are numerous wherever the English language is spoken, and a considerable number are to be found in foreign countries. The Christian Science Church is distinctive because it does not employ rites or ceremonies, and does not rely on the personality of preachers. Each church of this denomination elects two readers from its members for stated terms, who conduct its services. On Sundays they read a "lesson-sermon" composed of selections from the Bible and from Science and Health With Key to the Scriptures, by Mrs. Eddy. These lesson-sermons are uniform throughout the world. The remainder of a Sunday service is made up of hymns, a solo, silent prayer, and a responsive reading from the Bible. Wednesday evening meetings include testimonies of Christian Science healing from voluntary speakers.

Christians of St. John, a sect of religionists found in Asiatic Turkey, chiefly in the neighborhood of Bassora. They profess to follow the teaching of John the Baptist, and are wrongly called Christians since they reject Christ, and are practically heathen. Women, deities were darkness and light. Also called Zabians.

Christians of St. Thomas, or Syrian Church of India, the name of a sect of Christians on the coast of Malabar, in India, numbering some 500,000. The church is doubtless an offshoot of the Nestorian Church of Persia, transplanted to India about the beginning of the sixth century. The yoke of Rome was thrown off in 1683.

Christianstad (k r i s s’t e-ån-ståd), a town of Sweden, capital of the land or government of same name, on a peninsula in the Helge Lake, about 10 miles from the Baltic, with manufactures of gloves, linen and woolen fabrics, and some trade through the port of Ahus, at the mouth of the Helge. Pop. 10,318.

Christiansted (-ståd), a fortified town, capital of the island of St. Croix, Danish West Indies, with a good harbor and some trade. Pop. about 6000.

Christiansund (-sund), a seaport town on the N. W. coast of Norway, 82 miles a. w. of Trondheim, on three islands which inclose its beautiful landlocked harbor, with a trade in dried and salted fish. Pop. 11,982.

Christina (kris-tä:na), Queen of Sweden, daughter of Gustavus Adolphus, born in 1626; died in 1639. After the death of Gustavus, at Lützen, in 1632, the states-general appointed guardians to the Queen Christina, then but six years old. Her education was continued according to the plan of Gustavus Adolphus. She learned the ancient languages, history, geography, politics, and renounced the pleasures of her age in order to devote herself entirely to study. In 1644 she took upon herself the government. A great talent for business, and great firmness of purpose, distinguished her first steps. She terminated the war with Denmark begun in 1644, and obtained several provinces by the treaty concluded at Bromsebro in 1645. Her subjects wished that she should choose a husband, but she manifested a constant aversion to marriage. During this time her patronage of learned men, artists, and the like was lavish. In 1680 she caused herself to be crowned with great pomp, and with the title of King. From that time a striking change in her conduct was perceptible. She neglected her ancient ministers, and listened to the advice of ambitious favorites. Intrigues and base passions succeeded to her former noble and useful views. The public treasure was squandered with extravagant profusion. In 1354 she abdicated in favor of her cousin Charles Gustavus, reserving to herself a certain income, entire independence, and full power over her suite and household. A few days after she left Sweden and went to Brussels, where she made a public entry and remained for some time. There she made a secret profession of the Catholic religion, which she afterwards publicly confirmed in Innsbruck. From
Innsbruck she went to Rome, which she entered on horseback in the costume of an Amazon, with great pomp. When the Pope, Alexander VII, confirmed her crown, she adopted the surname of Alessandra. For some time she resided at Paris, and incurred great odium by the execution of her Italian equerry Monaldeschi for betrayal of confidence. Subsequently attempts which she made to resume the crown of Sweden failed, and she spent the rest of her life in artistic and other studies at Rome. She left an immense art collection and a large number of valuable MSS. Her writings were collected and published in 1752.

Christison (kris'tsun), Sir Robert, an eminent physician, born at Edinburgh 1797; died 1852. A specialist in toxicology, he was appointed to the chair of medical jurisprudence in Edinburgh, in 1822, and in 1832 he was prominent in that of materia medica. He was twice president of the Royal College of Physicians, president of the Royal Society of Scotland, and ordinary physician to the Queen in Scotland. He was D.C.L. of Oxford and LL.D. of Edinburgh, and was elected rector of the latter university in 1880.

Christmas (kris'mas), the festival of the Christian Church observed annually on December 25th in memory of the birth of Christ, and celebrated by a particular church service. The time when the festival was first observed is not known with certainty; but it is spoken of in the beginning of the third century by Clement of Alexandria; in the latter part of the fourth century Chrysostom speaks of it as of great antiquity. As to the day on which it was celebrated, there was long considerable diversity, but by the time of Chrysostom the Western Church had fixed on the 26th of December, though no certain knowledge of the day of Christ's birth existed. The Eastern Church, which previously had generally favored the 6th of January, gradually adopted the same date. Many believe that the existence of heathen festivals celebrated on or about this day had great influence on its being selected; and the Brumalia, a Roman festival held at the winter solstice, when the sun is as it were born anew, has often been instanced as having a strong bearing on the question. In the Roman Catholic, Greek, Anglican and Lutheran churches there is a special religious service for Christmas Day; and, contrary to the general rule, a Roman Catholic priest can celebrate three masses on this day. Most other churches hold special service, but almost everywhere through-out Christendom it is kept as a holiday and occasion of social enjoyment. In modern times it is the most widely observed of all festivals, extending throughout Christendom and being a season of good fare, present giving and family reunion.

Christmas Boxes, boxes in which presents were deposited at Christmas; hence a Christmas gift. The custom of bestowing Christmas boxes arose in the early days of the church, when boxes were placed in the churches for the reception of offerings; these boxes were opened on Christmas Day, and their contents distributed by the priests on the morrow (boxing day).

Christmas Cards, ornamental cards containing words of Christmas greeting to friends to whom they are sent. The first of them appeared about 1852, and consisted of pictures of robin, holly, etc.; since then highly artistic designs have been introduced, and their manufacture is considerable in the United States, Germany, France and England. Immense quantities of them pass through the post office every Christmas.

Christmas Carol, a carol or song descriptive of the birth of Christ, of incidents connected with it, sung specially at Christmas.

Christmas Rose, the Helleborus niger (black hellebore), so called from its flower, which resembles a large white single rose; its foliage is dark and evergreen, and the plant blossoms during the winter months.

Christmas Tree, a small fir-tree lighted up by means of tiny candles of colored wax or small Christmas Rose (Hel- Chinese lanterns, lebores niger), ornamented with flags, tinsel, ornaments, etc., and hung all over with gifts for children.

Christology (kris-tol'or-ji), that branch of the study of divinity which deals directly with the doctrine of the person of Christ.

Christophe (kris-tuf), Henri, King of Hayti, was born in the West Indies in 1767, and was employed as a slave in St. Domingo on the outbreak of the blacks against the French in 1793. From the commencement of the troubles he signalized himself by his
energy, boldness and activity in many bloody engagements. Toussaint-l'Ouverture gave him the commission of brigadier-general and he was largely instrumental in driving the French from the island. After the death of Dessalines Christophe became master of the northern part of the island. In 1811 he himself proclaimed King of Hayti by the name of Henri I. He also sought to perpetuate his name by the compilation of the Code Henri—a digest founded upon the Code Napoleon. His cruelty provoked a revolt, which being unable to quell he shot himself, 1820.

Christopher, St., a martyr of the early church, beheaded in Asia Minor, according to tradition in the year 250. The Eastern Church celebrates his festival on the 9th of May, the Western on the 25th of July.

Christopher, St. (commonly called St. Kitts) a British island in the West Indies, one of the Leeward Islands, 23 miles in length, and in general about 6 in breadth; area 68 sq. miles, devoted to sugar and pasture. The interior consists of many rugged precipices and barren mountains. The chief town, a seaport with open roadstead, is Basseterre. The island has a legislature of its own, with an executive subordinate to the governor of the Leeward Islands, resident in Antigua. It was discovered by Columbus in 1493 and colonized by the English in 1628. Pop. 29,127.

Christopolus (krı's-tös-pölıs), Atebasia, the best of modern Greek lyric poets, born in 1772 at Kastoria, in Macedonia; died 1847. His reputation as a poet rests on his Erotika and Bacchika, or Love and Drinking Songs, which have been several times translated and printed under the title of Lyrika. He is also the author of an Æolian-Doric Grammar, and translated into modern Greek parts of the Iliad and of Herodotus.

Christ's Hospital (generally known by the name of Blue-Coat School, the title having reference to the costume of the children educated there), a school in London, founded by Edward VI for supporting poor orphans. Its present income is about $50,000 annually; the education is classical, by modern languages, literature, etc., are also taught. There is a mathematical school attached, and scholarships are given either to Oxford or Cambridge. The average number of pupils in London and at the preparatory school at Hertford, which includes girls, is upwards of 1000. The London School occupied the site of the old Greyfriars monastery. Here Camden, Richardson, the novelist, Coleridge, Charles Lamb and Leigh Hunt received their education.

Christ's Thorn, the Paliurus aculeatus, a small thorny shrub, order Rhamnaceae, with small, shining, ovate leaves and yellowish-green, clustered flowers. It is common in the southeast of Europe and Asia Minor, and some suppose it to have been the plant from which the Jews platted the crown of thorns for our Saviour. See also Jujube.

Chromate (krö'mat). See Chrome Iron Ore, Chrome Yellow.

Chromatic. Chromatic, in music, a term applied to notes and peculiarities not belonging to the diatonic scale. Thus a chromatic chord is a chord which contains a note or notes foreign to diatonic progression; chromatic harmony, harmony consisting of chromatic chords. The chromatic scale is a scale made up of thirteen successive semitones, that is, the eight diatonic tones and the five intermediate tones.

Chromatic Printing. See Color Printing.

Chromatics, the science of colors; that part of optics which treats of the properties of the colors of light and of natural bodies.

Chrome Green (kröm), the green oxide or sesquioxide of chromium, forming a green pigment used by enameler.

Chrome Iron Ore, an ore of chromium, mium, is a mineral of very considerable importance as affording chromate of potash, whence are obtained various other preparations of this metal used in the arts.

Chrome-steel, a steel in which the carbon is partly or wholly replaced by chromium. It is asserted that this will bear a higher degree of heat than ordinary steel, and is less likely to become oxidized, or burnt, in working, and also rolls much more smoothly than ordinary steel.

Chrome Yellow, a chromate of lead, a beautiful pigment, varying in shade from deep orange to very pale canary yellow, much used in the arts.

Chromium (krö'mi-üm; ch e m i c a l s y m b o l, Cr; a t o m i c weight, 52.4), a metal which forms very hard, steel-gray masses; it never occurs native, but may be obtained by reducing the oxide. In its highest degree of oxidation it forms a compound of a ruby-
Chromolithography (kro'-mō-lith-ə-gra-fi). A method of producing a colored or tinted lithographic picture by using various stones having different portions of the picture drawn upon them with inks of various colors and so arranged as to blend into a complete picture. Sometimes as many as twenty different colors are employed. In printing, the lighter shades are tinted off first and the darkest last. In the three-color process the use of the three primary colors suffices for all shades, and it is done on a printing press with photo-electrotype instead of stones.

Chromosphere (kro'-mō-sfār). The name given to the gaseous envelope which exists round the body of the sun, through which the light of the photosphere, an inner envelope of incandescent matter, passes. During total eclipses it had been observed that a red-colored envelope surrounded the sun, shooting up to great distances from the surface. It seems to have been first recognized by Secchi; and the projecting portions of it are commonly described as 'red-colored protuberances,' and 'red flames.' To this red envelope the name chromosphere was given by Mr. Lockyer. The light from it is much fainter than that from the photosphere; and till 1868, when H. Janssen and Mr. Lockyer almost simultaneously pointed out a method of viewing it, it was never seen except during eclipses. The chromosphere and its prominences, when examined with the telescroscope, exhibit a spectrum of bright lines, due to incandescent gases. The most elevated portions consist entirely of gases of hydrogen, the lightest of the gases. Lower down are found the gases or vapors of the heavier metals—of sodium, magnesium, barium, iron and others. The lower layer of the chromosphere examined the more densely is the spectrum filled with lines of metals, and in the prominences the red hydrogen flames tower high above all.

Chronic (kron'ık; from Greek chro-nos, time), a term applied to diseases which are inerent or of long continuance, in distinction to acute diseases, which speedily terminate.

Chronicle (kron'-ik), a history digested according to the order of time. In this sense it differs but little from annals. The term is mostly used in reference to the old histories of nations written when they were comparatively rude. The histories written in the middle ages, some in verse, some in prose, are known as chronicles. Well-known examples are the works of Froissart, Monstrelet, Fabian, Hardyn, Hall, Hollinshed, Stowe and Baker.

Chronicles, Books of, two books of the Old Testament which formed only one book in the Hebrew canon, in which it is placed last. Its division into two parts is the work of the Seventy. (See Septuagint.) The Hebrew name means 'acts of the days,' and is thus much the same as our 'Journals.' The title given to it by the Seventy was Paralipomena, meaning 'things omitted.' The name Chronicles was given to it by Jerome. The book is one of the latest compositions of the Old Testament, and is supposed to have been written by the same hand as Ezra and Nehemiah. According to its contents the book forms three great parts:—1, genealogical tables; 2, the history of the reigns of David and Solomon; 3, the history of the kingdom of Judah from the separation under Rehoboam to the Babylonian captivity, with a notice in the last two verses of the permission granted by Cyrus to the exiles to return home and rebuild their temple. The Chronicles present many points of contact with the earlier Scriptures, historical and prophetic, more especially, however, with the books of Samuel and of Kings.

Chronogram (kro'-ngram), a device by which a date is given in numeral letters by selecting certain letters of an inscription and setting them larger than the others, as in the motto of a medal struck by Gustavus Adolphus in 1632:—ChristVs DVX: ergo trIVMphVs: where the values of C and the other capitals regarded as Roman numerals gives the required figure when added together.

Chronograph (kro'-ngraf), the name given to various devices for measuring and registering very minute portions of time with extreme precision. Bennett's chronograph is, in principle, a lever watch with a double second hand, the one superimposed on the other. The outer end of the lower-
most hand has a small cup filled with a black viscid fluid, with a minute hole at the bottom, while the corresponding end of the uppermost is bent down so as just to reach the hole. At the starting (say) of a horse race, the observer pulls a string, whereupon the bent end of the upper hand passes through the hole and makes a black mark on the dial, instantly rebounding. Again, as each horse passes the winning-post the string is redrawn and a dot made, and thus the time occupied by each horse is noted. This chronograph registers to onetenth of a second. Strange's chronograph is connected with the pendulum of an astronomical clock, which makes a mark on a sheet of paper at the beginning and end of each swing. By touching a spring on the appearance (say) of a particular star in the field of a telescope, an additional dot is made intermediate between the two extreme ones, and by measuring the distance of this from either of these extremes the exact time can be ascertained to one-hundredth of a second. Schultz's chronograph, in which electricity is applied, is yet far more precise, registering time to the fivehundred-thousandth part of a second.

**Chronology** (kron'-o-lö; Gr. chro-nos, time, and logos, discourse), the science which treats of time, and has for its object the arrangement and exhibition of historical events in order of time and the ascertaining of the intervals between them. Its basis is necessarily the method of measuring or computing time by regular divisions or periods, according to the revolutions of the earth or moon. The motions of these bodies produce the natural division of time into years, months, and days. As there can be no exact computation of time or placing of events without a fixed point from which to start, dates are fixed from an arbitrary point or epoch, which forms the beginning of an era. The most important of these are the creation of the world among the Jews; the birth of Christ among Christians; the Olympiads among the Greeks; the building of Rome among the Romans; the Hijira, or flight of Mohammed, among the Mohammedans, etc. See **Epoch, Calendar**.

**Chronometer** (kron'-om-e-tér), any instrument that measures time, as a clock, watch, or dial; but, specifically, this term is applied to those timekeepers which are used for determining the longitude at sea; or for any other purpose where an accurate measure of time is required, with great portability in the instrument. The chronometer differs from the ordinary watch in the principle of its escapement, which is so constructed that the balance is free from the wheels during the greater part of its vibration, and also in being fitted with a 'compensation adjustment,' calculated to prevent the expansion and contraction of the metal by the action of heat and cold from affecting its movements. Marine chronometers generally beat half-seconds, and are hung in gimbal in boxes 6 to 8 inches square. The pocket chronometer does not differ in appearance from a watch except that it is somewhat larger.

**Chronoscope** (kron'-o-skóp), an instrument for measuring the duration of extremely short-lived phenomena, such as the electric spark; more especially the name given instruments of various forms for measuring the velocity of projectiles.

**Chrudim** (kró-dim), a town of Bohemia, 63 miles s. e. of Prague, with some manufactories and large horse-markets. Pop. 13,017.

**Chrysalis** (kris'-a-lis), a form which butterflies, moths, flies, and other insects assume when they change from the state of larva or caterpillar and before they arrive at their winged or perfect state. In the chrysalis form the animal is in a state of rest or insensi-

---

1. 2. Chrysalis of the White Butterfly-moth; a, Palpi or feelers; b, wing-cases; c, wings; x, antennae.
3. Chrysalis of the Oak Egger-moth.
Chryselephantine and the corn-marigold, C. Scelatum, are common weeds in Europe.

Chryselephantine (kri-sel-e-fan'tin; Gr. ohrysos, gold; elephas, ivory), made of gold and ivory combined, a term applied to statues executed in these two substances by the ancient Greeks, as Pheidias' great statue of Athena.

Chrysippus (kri-sip'us), an ancient Greek philosopher belonging to Cilicia, lived about B.C. 282-209. He was the principal opponent of the Epicureans, and is said to have written 700 different works, mostly of a dialectical character; but only a variety of fragments are extant.

Chrysoberyl (kris'o-ber'il; sometimes called cynophane, and, by the jewelers, oriental chrysolite), a gem, of a pale yellowish-green color, usually found in round pieces about the size of a pea, but also crystallized in eight-sided prisms. It is an aluminate of beryllium, is next to the sapphire in hardness, and is employed in jewelry, the specimens which present an opalescent play of light being especially admired.

Chrysolite (kris'o-litt), a mineral composed of silica, magnesium and iron. Its prevailing color is some shade of green. It is harder than glass, but less hard than quartz; often transparent, sometimes only translucent. Very fine specimens are found in Egypt and Brazil, but it is not of high repute as a jeweler's stone.

Chrysoloras (kris-o-lo'ras), Manuel, a distinguished Greek of Constantinople, born in the fourteenth century; died in 1415. He settled as a teacher of Greek literature at Florence, about 1335. He also taught at Milan, Pavia and Rome, thus becoming a chief promoter of the great revival of learning.

Chrysophanic Acid, the yellow coloring matter of rhubarb. With potash it gives a fine purple solution, and thus affords a delicate test for the presence of alkalies.

Chrysoprase (prä'es), a kind of quartz, being merely a variety of chalcedony. Its color is commonly apple-green, and often extremely beautiful, so that it is much esteemed in jewelry. It is translucent, or sometimes semi-transparent, and of a hardness little inferior to that of flint.

Chrysostom (kris-os'tom), John St. ("golden-mouthed"), a celebrated Greek father of the church, born in Antioch about A.D. 344; died at Comana in Pontus in 407. Secundus, his father, who had the command of the imperial troops in Syria, died soon after the birth of his son, whose early education devolved upon Anthusa, his mother. Chrysostom studied eloquence with Libanius, the most famous orator of his time, and soon excelled his master. After having studied philosophy with Andragathius he devoted himself to the Holy Scriptures, and determined upon quitting the world and consecrating his life to God in the deserts of Syria. He spent several years in solitary retirement, studying and meditating with a view to the church. Having completed his voluntary probation he returned to Antioch in 381, when he was appointed deacon by the Bishop of Antioch, and in 386 consecrated priest. He was chosen vicar by the same dignitary, and commissioned to preach the Word of God to the people. He became so celebrated for the beneficence of his preaching that the Emperor Arcadius determined, in 397, to place him in the archiepiscopal see of Constantinople. He now exerted himself so zealously in repressing heresy, paganism and immorality, and in enforcing the obligations of monachism, that he raised up many enemies, and Theophilus, patriarch of Alexandria, aided and encouraged by the Empress Eudoxia, caused him to be deposed at a synod held at Chalcedon. The emperor banished him from Constantinople, and Chrysostom purposed retiring to Bithynia; but the people threatened a revolt. In the following night an earthquake gave general alarm. In this dilemma Arcadius recalled his orders, and Eudoxia herself invited Chrysostom to return. The people accompanied him triumphantly to the citi, his enemies fled, and peace was restored, but only for a short time. A feast given by the empress on the consecration of a statue, and attended with many banquets, ceremonies, roused the zeal of the archbishop, who publicly exclaimed against it; and Eudoxia, violently incensed, recalled the prelates devoted to her will, and Chrysostom was condemned and exiled to Armenia. Here he continued to exert his pious zeal until the emperor ordered him to be conveyed to a town on the most distant shore of the Black Sea. The officers who had him in charge obliged the old man to perform his journey on foot, and he died at Comana, by the way. Here he was buried; but in 438 his body was conveyed solemnly to Constantinople, and there interred in the Church of the Apostles, in the sepulcher of the emperor. At a later period his remains were placed in the Vatican at Rome. The Greek Church celebrates his feast on the
13th of November, the Roman on the 27th of January. His works, which consist of sermons, commentaries and treatises, abound with information as to the manners and characteristics of his age.

Chub, a European river fish, of the genus *Cyprinus* or carps; or, as some regard it, of the subgenus *Leuciscus* (*L. cephalus*). The body is oblong, nearly round; the head and back green, the sides silvery, and the belly white. It frequents deep holes in rivers shaded by trees, but in warm weather floats near the surface, and furnishes sport for anglers. It is indifferent food, and rarely attains the weight of 5 lbs. Allied American species receive the same name.

Chubb, Thomas, English writer, born in 1679; died in 1746. Although engaged as a glover and chandler, he gave his chief attention to philosophical and theological study, and was celebrated in the Arian controversy for his argumentative keenness. In this connection he published in 1715 *The Supremacy of the Father Asserted*, besides various other moral and theological tracts.

Chubb Lock, a lock so named from the name of its inventor, a London locksmith. It has more tumblers than usual, with the addition of a lever called the detector, which is so fixed that while it does not act under the ordinary application of the key, it cannot fail to move if any one of the tumblers be lifted a little too high, as must be the case in any attempt at picking. This movement fixes the bolt immovably, and renders all further attempts at picking useless.

Chuck Will's Widow, a popular name in the United States for a bird of the goat-sucker family, *Antrostomus carolinensis*, so called from its cry.

Chumbul (chum'bul), a river of N.W. Hindistan, which rises in the Vindhy Mountains, and falls into the Jumna about 90 miles southeast of Agra, after a course of 650 miles.

Chunam (chū-nam), in the East Indies a name given to a very fine kind of quicklime made from calcined shells or from very pure limestone, and used for chewing with betel.

Chunar (chun'är), a town and fortress, of Hindustan, 26 miles southwest of Benares, on the Ganges. The fortress stands on a lofty rock rising abruptly from the river. Pop. 9926.

Chung-Kiang, an important com,

Chuprah or Chapra (chup'rá), a town of Hindustan on an affluent of the Ganges. Has an active commerce. Pop. 48,000.

Chuquisaca (chū-ki'sā'kā), or Sucre, a city of South America, the capital of Bolivia; well situated on a plateau between the Amazon and La Plata rivers, 9343 feet above sea-level. It has a cathedral and a university. It was founded by one of Pizarro's officers in 1555. Pop. formerly 27,000, now estimated 12,000. The province of Chuquisaca has an area of 26,410 square miles; a pop. of 300,000.

Chur (hör), the capital of the Swiss canton of Grisons. See Coire.

Church (from Gr. kyriakon, from kyrios, 'lord'), a word which in its widest sense denotes the whole community of Christians, and was thus used by the New Testament writers. In more restricted significations it denotes a particular section of the Christian com-

Islip Church, Northamptonshire.

Church

Church of Women

Community differing in doctrinal matters from the remainder, as the Roman Catholic Church, the Protestant Church, etc.; or to designate the recognized leading

Churchill, Charles, an English poet and satirist, was born in 1731, and died in 1764. An early and imprudent marriage was followed by his admission to holy orders. In 1761 he published anonymously a poem called The Roscian, a clever satire on the chief actors of the day, and The Apology, a reply to his critics. A course of dissipation and intemperance followed, which excited much animadversion, and elicited from him his satire, Night. Churchill now threw aside all regard for his profession, and became a complete man about town and a professional political satirist. His other productions include The Ghost, The Prophecy of Famine, Epistle to Hogarth, etc.

Churchill, Randolph Henry Spencer, 8th Lord, second son of the sixth Duke of Marlborough, born in 1849; died in 1895. By 1884 he had risen to the position of leader of the Conservative party, and in 1885 became Indian secretary in Lord Salisbury's government. On the defeat of Gladstone's Irish Bill in 1886, Churchill became leader of the House of Commons and Chancellor of the Exchequer, but resigned at the close of the year.

Churchill, Winston, an American author, born in St. Louis, Missouri, November 10, 1871; graduated at the Naval Academy, Annapolis, but devoted himself to literature. His novels include Richard Carvel (1899), The Crisis (1901), The Crossing (1904), Comiston (1905), and Mr. Crewe's Career (1908).

Churchill, Winston Leonard Spencer, eldest son of Lord Randolph Churchill, born November 30, 1874. He joined the army and took part in a number of important operations. In 1908 he became president of the Board of Trade in Asquith's cabinet. In 1910 he was made Home Secretary; in 1912 First Lord of the Admiralty, serving through a part of the Great War. He was appointed minister of munitions in 1916.

Churchill River, a river of the Northwest Territories of Canada, which rises in La Crossing Lake, forms or passes through various lakes or lake-like expansions, and enters Hudson Bay after a north-easterly course of about 800 miles. It is called also Missinippi or English river.

Churchnng of Women, a form of thanksgiv-
Church-rate

ing after childbirth, adopted from the Jewish ceremony of purification, and practised still in the Roman Catholic and Anglican churches, the latter having a special service in the Prayer Book.

Church-rate, in England a rate raised by resolution of a majority of the parishioners in vestry assembled, from the occupiers of land and houses within a parish, for the purpose of maintaining the church and its services. In 1868 an act was passed abolishing compulsory church-rates, except such as, under the name of church-rates, were applicable to secular purposes.

Churchwardens (church-war'dens), officers, generally two for each parish in England, who superintend the church, its property and concerns. They are annually chosen by the minister and parishioners, according to the custom of each parish.

Churchyard (church'yard), ground in which dead are buried, adjoining a church.

Church-yard Beetle, the Bisspa morsidiaga, a very common insect found in dark, damp and dirty places; it is black, but little shining, and the tip of the elytra forms a short, obtuse point.

Churn, a vessel in which milk or cream is agitated, to separate the oily globules from other parts and gather them as butter. In the older forms a plunger worked vertically in a tub; in some of the modern forms dashers are turned by a crank, while in others the tub itself is swung to and fro, causing the milk to dash against the ends and sides. In the combined churn and butter-worker the butter can be partly or wholly worked after the buttermilk is drawn off; it is operated by power and used to considerable extent in creameries.

Churrus. See Charras.

Churubusco (chu-roo-bus'ko), a village 6 miles S. of Mexico, the scene of a battle between the Mexicans under Santa Anna and the Americans under Scott, Aug. 20, 1847, in which the former were defeated.

Chusan Islands, (chü-sun'), a group of islands on the east coast of China, the largest in the archipelago having the name Chusan, and being about 21 miles long, and from 6 to 11 broad. Pop. about 200,000. Chief town Ting-hae, pop. 40,000. Rice and tea are the principal products. From its situation near the mouths of the Yangtse-kiang, which river forms the great channel of communication with the capital of the empire, Chusan is considered as the key of China, and was temporarily taken possession of by the British in 1840, 1841 and 1860. The sacred island of Pu-tu to the east of the above is covered with Buddhist temples, monasteries, etc., and is entirely inhabited by priests.

Chutia Nagpur. See Chota Nag- 

Chutny, or CHUTNEE (chut'në), in the East Indies a condiment compounded of sweets and acids. Ripe fruit (mangoes, raisins, etc.), spices, sour herbs, cayenne, lemon-juice, are the ordinary ingredients. They are pounded and boiled together, and then bottled for use.

Chyle (ki'l), in physiology, a white or milky fluid separated from aliment by means of digestion. Chyle is absorbed by the lacteal vessels, terminating in the inner surface of the small intestines, chiefly the jejunum, and thence passes by numerous converging streams into the main trunk of the absorbent system, called the thoracic duct, through which it is gradually poured into the blood of the left subclavian vein at a short distance before it enters the right side of the heart. The chemical constituents of chyle are nearly the same as those of the blood itself.

Chyme (k'm), food after it has been digested in the stomach. In the stomach it forms a pulpy mass which passes on into the small intestine, and being acted on by the bile, pancreatic fluid and intestinal juice, is separated into chyle and non-nutritious matters, which latter are carried off by the evacuations.

Cibber (sib'ber), COLLEY, a dramatic writer and actor, born at London in 1671; died in 1707. He took to the stage in 1699. His first dramatic effort, Love's Last Shift, appeared in 1695; and it was followed by Woman's Wit, the Careless Husband and the Nen-juror, of which the Hypocrite of the modern stage is a new version. A court pension and the appointment of poet-laureate drew upon him the rancor of the wits and poets of the day, including Pope. He is author of about twenty-five dramas, the amusing Apology for the Life of Colley Cibber, etc.—His son THEOPHILUS, born in 1705; drowned in his passage to Ireland 1707, was an actor and dramatic writer. He was much inferior to his father in capacity.—SUSANNA MARIA, wife of Theophillus Cibber (born 1716; died 1786), was one of the best actresses on the English stage. She was sister of Dr. Arne (composer of Rule, Britannia), who taught her music, and introduced her
Cibol (sib'ul; Allium fistulosum), a perennial plant of the onion genus, a native of Siberia, with hollow stems larger than those of the chive; used for culinary purposes.

Ciborium (si-bō'-ri-um), in the Roman Catholic Church, a kind of cup or chalice made of gold or silver and containing the bread used in the sacrament. Also a sort of canopy over an altar.

Cicada (si-kā'da), the popular and generic name of certain insects belonging to the order Hemiptera, a suborder Homoptera, of many species. The males have on each side of the body a kind of drum, with which they can make a considerable noise. This, regarded as the insects' song, was much admired by the ancients, and is frequently referred to by their poets. The largest European species are about an inch long, but some American species are much larger, and their note much louder. They are nearly all natives of tropical or warm temperate regions. The female has the posterior extremity of the abdomen furnished with two serrated horned plates, by means of which it pierces the branches of trees to deposit its eggs. An English species (C. anglica) is found in the New Forest. The seventeen years' locust (Cicada septemdecim) occurs in many parts of the United States.

Cicada (chi-kā'ta). The cicada.

Cicely (sī'se-ll), a popular name applied to several umbelliferous plants. Sweet cicely, or sweet chervil, is Myrrhis odorata, a plant common in Britain and in other parts of Europe. It was formerly used in medicine, and in some parts of Europe is used as an ingredient in soups. Sweet cicely is found in our woods from Canada to Virginia.

Cicero (sī'e-rō), Marcus Tullius, the greatest of the Roman orators, was born 106 B.C. at Arpinum. His family was of equestrian rank, and his father, though living in retirement, was a friend of some of the chief public men. He received the best education available, studied philosophy and law, became familiar with Greek literature, and acquired some military knowledge from serving a campaign in the Marsean war. At the age of twenty-five he came forward as a pleader, and having undertaken the defense of Sextus Roscius, who was accused of parricide, procured his acquittal. He visited Greece B.C. 79, conversed with the philosophers of all the schools, and profited by the instruction of the masters of oratory. Here he formed that close friendship with Atticus of which his letters furnish such interesting evidence. He also made a tour in Asia Minor and remained some time at Rhodes, Cicero.—Antique Grotto, where he visited the most distinguished orators and took part in their exercises. On his return to Rome his displays of eloquence proved the value of his Grecian instruction, and he became one of the most distinguished orators in the forum. In B.C. 76 he was appointed questor of Sicily, and behaved with such justice that the Sicilians gratefully remembered him and requested that he would conduct their suit against their governor Verres. He appeared against this powerful robber, and the crimes of Verres were painted in the liveliest colors in his immortal speeches. Seven of the Verrine orations are preserved, but only two of them were delivered, and Verres went into voluntary exile. After this suit Cicero was elected to the office of aedile, B.C. 70, became praetor in 67, and consul in 63. It was now that he succeeded in defeating the conspiracy of Catiline (see Caius), after whose fall he received greater honors than had ever before been bestowed upon a Roman citizen. He was hailed as the saviour of the state and the father of his country (pater patriae), and thanksgivings in his name were voted to the gods. But Cicero's fortune had now reached the culminating point, and soon was to decline. The Catilinian conspirators who had been executed had not been sentenced according to law, and Cicero, as chief magistrate, was responsible for the irregularity. Publius Clodius, the tribune of the people, raised such a storm against him that he was obliged to go into exile (B.C. 58). On the fall of the Clodian faction he was recalled to Rome, but he never succeeded in regaining the influence he had once possessed. In B.C. 52 he be-
THE TRANSFORMATION OF THE EMERGED PERIODICAL CICADA

Fig. 1.—Pupa ready for transformation. Fig. 2.—Adult beginning to issue from pupal shell. Fig. 3.—Adult nearly free from pupal shell. Fig. 4.—Freshly transformed adult, the coloring immature. Fig. 5.—Adult, several hours after transformation, the coloring mature. About natural size.
came proconsul of Cilicia, a province which he administered with eminent success. As soon as his term of office had expired he returned to Rome (B.C. 49), which was threatened with serious disturbances owing to the rupture between Caesar and Pompey. He espoused the cause of Pompey, but after the battle of Pharsalia he made his peace with Caesar, with whom he continued to all appearance friendly, and by whom he was kindly treated, until the assassination of the latter (44 B.C.). He now hoped to regain his political influence. The conspirators shared with him the honor of an enterprise in which no part had been assigned him; and the less he had contributed to it himself the more anxious was he to justify the need he purveyed the advantages which it offered. Antony having taken Caesar's place, Cicero composed those admirable orations against him, delivered in B.C. 43, which are known to us by the name of Philippics (after the speeches of Demosthenes against Philip of Macedon). His implacable enmity towards Antony induced him to favor young Octavianus, who professed to entertain the most friendly feelings towards him. Octavianus, however, having possessed himself of the consulate, and formed an alliance with Antony and Lepidus, Cicero was proscribed. In endeavoring to escape from Tusculum, where he was living when the news of the proscription arrived, he was overtaken and murdered by a party of soldiers; and his head and hands were publicly exhibited in the forum at Rome. He died in his sixty-fourth year, B.C. 43. Cicero's eloquence has always remained a model. After the revival of learning he was the most admired of the ancient writers; and the purity and elegance of his style will always place him in the first rank of Roman classics. His works, which are very numerous, consist of orations; philosophical, rhetorical and moral treatises; and letters to Atticus and other friends. The life of Cicero was written by Plutarch, and there are modern lives by Middleton, Forsyth and others. Cicero left a son of the same name by his wife Terentia. Young Marcus was born in B.C. 65, was carefully educated, and distinguished himself in philosophy. At the age of 30, Octavianus (Augustus) assumed him as his colleague in the consulate, and he was afterwards governor of Asia or Syria.—Cicero's younger brother, Quintus, was a man of some note both as a public character and as a writer. He was married to a sister of Atticus, and was put to death at the same time as the orator.

Cicindela (si-sin-de'la), a genus of insects to which U. campestris, the tiger-beetle, one of the most common of American species, belongs.

Ciconia (si-kö'ni-a), the genus of birds to which the stork belongs.

Cicuta (si-kü'ta), a genus of umbelliferous plants, including U. virósa, water-hemlock or cowbane. See Hemlock.

Cid (sid), an epithet (from the Ar. seid, a lord, a chief, a commander) applied to Ruy or Rodrigo Diaz, Count of Bivar (born in 1026; died in 1099), the national hero of Spain. He publicized himself by his exploits in the reigns of Ferdinand, Sancho and Alphonso VI of Leon and Castile; but the facts of his career have been so mixed with glorifying myths that it is scarcely possible to separate them. His life, however, appears to have been entirely spent in fierce warfare with the Moors, then masters of a great part of Spain. His exploits are set forth in a special chronicle, and in a Castilian poem, probably composed about the end of the twelfth century. The story of his love for Ximena is the subject of Le Cid of Corneille. Whatever chronicles and songs have conveyed to us of the history of the Cid is collected in Southev's Chronicle of the Cid.

Cider (si'dær), a liquor made from the expressed juice of apples. The apples are ground and crushed until they are reduced to a pulp, the juice is allowed to run into casks, where it is freely exposed to the air until fermentation takes place, when a clear liquor of a pale-brown or amber color is the result. It contains from 4 to 8 per cent. of alcohol. Winter varieties of apples make the most desirable cider.

Cienfuegos (thē-ên-fō'gōs), a seaport of Cuba, on the south coast of the island, with a safe and capacious harbor on the Bay of Jaga, 130 miles S.W. of Havana, with which (and other towns) it is connected by railway. It is among the finest towns of the island, and exports sugar, wax, timber, cocoa, molasses and tobacco. Pop. (1907) 30,100.

Cieza (thē'-sē'ā), a town of Sprin, in the province and 24 miles N.W. of Murcia, on an eminence near the right bank of the Segura. Pop. 13,628.

Cigar (si-gahr'), a small roll of manufactured tobacco leaves carefully made up, and intended to be
Cigarette

smoked by lighting at one end and drawing the smoke through it. The choicest cigars are those made in and imported from Havana. Cigars are consumed in enormous quantities in America and Europe. Medicated cigars, or cigars made of some substance having remedial properties, are often used for certain complaints, as stramonium cigars for asthma. Cicerolls are peculiarly-shaped cigars much thicker at one end than the other, and are largely imported from Manila.

Cigarette (sig-a-ret)'a, a sort of small cigar made by rolling fine-cut tobacco in thin paper specially prepared for the purpose. It is now a favorite form with smokers and immense numbers are used.

Cignani (chē-nyā'nē), CARLO, an Italian painter, born at Bologna in 1628; died 1719; the last great painter of the Bolognese school. His finest paintings are frescoes in the saloon of the Farnese Palace, Bologna, and in the cupola of the Church of the Madonna del Fuoco at Forlì. His paintings have been engraved by various artists.

Cigoli (chē-go-lē), LUDOVICO CARDI DA. See Cardi.

Cilia (sil-lē; L. 'eyelashes'), small generally microscopic, hairlike organs or appendages, averaging 1/100 of an inch in length, found on the surface of the tissues of most animals, and in some vegetable organisms (as Volvox), chiefly on tissues which are in contact with water, or which produce fluid secretions. They are constantly in a state of active movement, and communicate to the fluid with which they are in contact a corresponding motion. This is called vibratile or ciliary motion. In most of the lower aquatic animals the respiratory function is aided by means of the vibratile cilia; many animals move by a similar mechanism; and in the highest classes of animals cilia have a share in the performance of some important functions.

Cilicia (si-lish'-ē-a), in ancient geography, the region between Pamphylia and Syria, lying s. of Mount Taurus. Alexander made Cilicia a Macedonian province; it then passed to the Syrians. Under Augustus it became an imperial province. It now forms the Turkish vilayet of Adana.

Cimabue (chē-mā-bō'ē), GIOVANNI, ITALIAN painter, born at Florence in 1240; died probably in 1302. Two Greek artists, who were invited to Florence to paint a chapel in the Church of Santa Maria Novella, were his first masters. He is considered one of the chief restorers of the art of painting in Italy, which at that time had degenerated into mechanical conventionalisms. His best paintings are in the Church of Santa Maria Novello at Florence, and in the Sacro Convento at Assisi. Among his pupils was Giotto, whom he discovered in a boy shepherd drawing figures on the smooth surface of a rock while tending his sheep.

Cimarosa (chē-mā-rō'ē-sā), DOMENICO, a composer, born at Naples in 1745, -54, or -55; died at Venice 1801. He composed about 120 operas, most of which are comic. His best-known work is Il Matrimonio Segreto ("The Secret Marriage").

Cimbri (sim'bri), a tribe of ancient Europe, the origin of which is involved in obscurity. They were regarded as Germans by the Romans, who gave the name Ceraunos Cimbrica to what is now Jutland. Greek writers connected them with the Scythian Cimmerii of the Crimea; while modern writers suppose that they were Celtic, and that Cimbri is the same as the Cumri of Britain. In the second century B.C. they made formidable incursions into Gaul and Spain, but were finally routed by the Consul Marius at Vercelli B.C. 101.

Cimex (si'mēks). See Bug.

Cimmerians (si-mē'ri-ans), an ancient nomadic tribe that occupied the Tauric Chersonese (Crimea) and Asiatic Sarmatia (the country of the lower Volga). They are said, in pre-Homeric times, to have ravaged Asia Minor, and in a second invasion to have penetrated to Æolia and Ionia, and to have held possession of Sardis. A mythical people mentioned in the Odyssey as dwelling beyond the ocean-stream in the thickest gloom were also termed Cimmerii, a tale which gave rise to the phrase "Cimmerian darkness."
Cimolian Earth, or Cimolite (si'mə-līt), a species of clay or hydrous silicate of alumina, named in ancient times from Cimólis or Argentíera, one of the Cyclades, where it is still to be found. It is of whitish and soft texture, molders into a fine powder, and effervesces with acids. In classical times it was used as a detergent, as a soap for cleaning delicate fabrics, and by the bath-keepers.

Cimolos (si-mō'lōs). See Argentíera.

Cimon (si'mon, kī'mon), an ancient Athenian general and statesman, was a son of the great Miltiades. He fought against the Persians in the battle of Salamis (480 B.C.), and shared with Aristides the chief command of the fleet sent to drive the Persians and the Greek colonies from the Persian yoke. The return of Aristides to Athens soon after left Cimon at the head of the whole naval force of Greece. He distinguished himself by his achievements in Thrace, having defeated the Persians by the Strymon, and made himself master of the country. He conquered the pirate-island of Scyros, subdued all the cities on the coast of Asia Minor, pursued the Persian fleet up the Eurymedon, destroyed more than 200 of their ships, and then, having landed, on the same day entirely defeated their army (B.C. 469). He employed the spoil which he had taken in the embellishment of Athens, and in 463 reduced the revolted Thasians; but the popular leaders, beginning to fear his power, charged him on his return with having been corrupted by the King of Macedon. The charge was dropped, but when Cimon's policy of friendship to the Lacedemonians ended in the latter insulting the troops sent by Athens to their aid, his opponents secured his banishment. He retired into Boeotia, and his request to be allowed to fight with the Athenians against the Lacedemonians in 467 at Tanagra was refused by the suspicious generals. Eventually Cimon was recalled at the instance of Pericles to conclude a peace with Lacedemon. He died shortly after, in 449, while besieging Citium in Cyprus.

Cinchona (sin-kō'na or sin-chō'na; the name is from the Countess of Chinchon, wife of a viceroy of Peru) is a shrub, a herb, or a tree, found in the Andes of Peru and Bolivia. Its bark is the source of quinine, cinchonine (sin-kō'na), a vegetable base from which quinine is prepared. The stem of the plant is black and contains a bitter principle. The cinchona is a popular remedy for fever, malaria, and other tropical diseases. It is used in the form of quinine, which is extracted from the bark of the tree. Quinine is an antimalarial drug that has been used for centuries to treat malaria.

Cincinnati (sin-sin'ə-ti), a city of Ohio, ranking thirteenth in population in the United States, on the north bank of the Ohio River, opposite the mouth of the Licking and 476 miles by water below Pittsburgh. Founded in 1788, it began to flourish after 1794. It stands partly in a valley, partly on hills, and has an area of 70 sq. miles; the central part is very compact, and a great portion of the houses are handsomely built of freestone, blue limestone, or brick. Noteworthy buildings are the United States Government Building, the old City Hospital, the new City Hospital, the Chamber of Commerce, the City Work-
house, the new House of Refuge, etc. St. Peter's Roman Catholic Cathedral is one of the finest buildings in the Western States. The city is liberally provided with parks, of which, Eden Park (popularly styled the 'Garden of Eden') contains 209 acres, and Burnet Woods 166 acres. Spring Grove Cemetery is one of the most beautiful in the country. Cincinnati ranks high as a manufacturing city, the annual output of its industries ranging from $150,000,000 to $200,000,000. The products include railway materials and supplies, carriages, furniture, leather, boots and shoes, clothing, candles, soap and oils, liquors, etc. Next to Chicago, it is the greatest pork market in the Union. It is also an important horse market and a leading exchange for grain and pig iron. It is favorably situated for a distributing center, since, in addition to the river, railways and canals stretch from it in every direction, connecting it with every port on the great lakes of America, Chicago, and with the principal eastern cities. It is connected by several bridges with Covington and Newport on the Kentucky side of the Ohio, the most noted being the fine suspension bridge erected in 1866 and reconstructed in 1897. Pop. 402,176.

Cincinnati, Society of the, an organization originating among the officers of the American revolutionary army in 1783. It is essentially of an exclusive and aristocratic character, the right of membership being restricted to the eldest male in descent from the original members; or, the direct line becoming extinct, to the eldest male of the next collateral branch. The name is after the illustrious Roman, Lucius Quinticius Cincinnatius.

Cincinnatus, Lucius Quinctius, a wealthy Roman patrician, born about 519 B.C. He succeeded in 490 to the consulship, and then retired to cultivate his small estate beyond the Tiber. In 435 B.C. the messengers of the senate found him at work when they came to summon him to the dictatorship. He rescued the army, defeated the Æquils, and returned quietly to his farm. At the age of eighty he was again appointed dictator to oppose the ambitious designs of Spurius Maelius.

Cinematograph (sin-é-ma-té'g-ráf), an instrument consisting of a lantern with mechanism for projecting photographs on a screen in such rapid succession that the objects photographed appear to be in motion. These pictures are on a long film which is wound from one spool to another, each film being before the objective for an instant, when a powerful light passes through it. See Moving Picture Machine.

Cineraria (sin-rå'ri-a), a genus of plants, nat. order Compositae, chiefly found in South Africa.

Cinna (sin'na), Lucius Cornelius, an eminent Roman, an adherent of Marius, who, obtaining the consulship B.C. 87, along with Gneus Octavius, impeached Sulla and endeavored to secure the recall of Marius. Being driven from the city of Octavius, he found aid in the other Italian cities, and invested Rome while Marius blockaded it from the sea. On its capture the friends of Sulla were massacred, and Cinna and Marius made themselves consuls (B.C. 86); but after the death of Marius the army refused to follow Cinna against Sulla, and put him to death in B.C. 84.

Cinnabar (sin'a-bar), red sulphide of mercury, the principal ore from which that metal is obtained, occurring abundantly in Spain, California, China, etc. It is of a cochenille-red color, and is used as a pigment under the name of vermillion. See Mercury and Vermilion.

Cinnamomum (sin-a-mó'mum), a genus of plants, nat. order Lauraceae, natives of tropical Asia and the Polynesian Islands. All the species possess an aromatic volatile oil, and one of them yields true cinnamon, while others yield cassia.

Cinnamon (sin'a-món), the bark of the under branches of a species of laurel (Cinnamomum zeplaniyum—see Cinnamomum) which is chiefly found in Ceylon, but grows also in Malabar and other parts of the East Indies. The tree attains the height of 20 or 30 feet, has oval leaves, pale yellow flowers, and acorn-shaped fruit. The Ceylonese bark their trees in April and November, the bark curling up into rolls or quills in the process of drying; the smaller quills being introduced into the larger ones. These are then assorted according to quality by tasters, and made up into bundles. An oil of cinnamon is prepared in Ceylon, but the oil of cassia is generally substituted for it; indeed, the cassia bark is often substituted for cinnamon, to which it has some resemblance,
although in its qualities it is much weaker. The leaves, the fruit, and the root of the cinnamon plant all yield oil of considerable value; that from the fruit, being highly fragrant and of thick consistence, was formerly made into candles for the sole use of the King of Ceylon.

**Cinnamon-stone**, a variety of garnet, of a cinnamon, byacinth-red, yellowish-brown, or honey-yellow color, found in Scotland, Ireland, Ceylon, etc. The finer kinds are used as gems.

**Cino da Pistoia** (chē'no da pes-to'ya), an Italian jurist and poet, born in 1270 at Pistoia. He was the friend of Petrarch and of Dante, and ranks among the best of the early Italian poets. His poems were first published at Rome in 1558.

**Cinque-Mars** (sank-mārs). Henri Coiffier de Ruze, Marquis de, favorite of Louis XIII, born in 1620, and introduced at court by Cardinal Richelieu. The king made him master of the robes and grand squerry of France when only in his nineteenth year, and he soon aspired, not only to a share in the management of public affairs, but even to the hand of the beautiful Maria di Gonzaga, Princess of Mantua. Thwarted, however, by the cardinal, Cinque-Mars concocted a plot for the overthrow of Richelieu, and entered into treaty with Spain. To propitiate Richelieu the king conve ed to sacrifice his favorite, who was arrested at Narbonne and beheaded with his friend, the young counselor De Thou, at Lyons in 1642.

**Cinque-cesto** (chēnkwā-chēn-tō; it., lit. 500, but used as a contraction for 1500, the century in which the revival took place), a term employed in reference to the decorative art and architecture belonging to that attempt at purification of style and reversion to classical forms introduced after the beginning of the sixteenth century in Italy. The term is often applied to ornament of the sixteenth century in general, properly included in the term Renaissance.

**Cinque-foil** (singk'fōil), in architecture, an ornament in the Gothic style, consisting of five foliated divisions, often seen in circular windows.

**Cinque Ports** (singk), originally the five English Channel ports of Hastings, Romney, Hythe, Dover and Sandwich, on the S. E. coast of England, to which were added subsequently the towns of Winchelsea, Rye, and Seaford. They were granted special privileges by the later Saxon and earlier Norman kings, on condition of providing a certain number of ships during war, there being no permanent English navy previous to the reign of Henry VII. Each port returned two members to parliament, but after the Reform Act of 1832, Hastings, Dover, and Sandwich alone retained this privilege, Rye and Hythe returning one each, and the remaining towns none. Sandwich was afterwards disfranchised for corruption, and by the act of 1885, Hastings and Dover were each deprived of a member, and Rye ceased to be a borough. They are, collectively, in the jurisdiction of a lord warden, who receives $15,000 a year for his sinecure.

**Cintra** (sin'tra), a town of Portugal, 15 miles W. N. W. Lisbon, finely situated on the slope of the Sierra de Cintra, and much resorted to by the wealthier inhabitants of Lisbon. The kings of Portugal had a palace with fine gardens at Cintra. The town is celebrated for the convention entered into there in 1908, by which the French, after their defeat at Vimiera, were conveyed to France. Pop. 5914.

**Cione** (chi-nā), ANDREA DI. See Orcagna.

**Ciotat** (sēō-tā), LA, a seaport of France, on the Mediterranean, 15 miles S. E. of Marseilles, surrounded by an old rampart, and having well-built houses and spacious streets. Shipbuilding is carried on and an extensive coasting trade. Pop. 10,034.

**Ciphers** (sīf'ars), signs used to represent numbers, whether borrowed signs, as letters, with which the Greeks designated their numbers, or peculiar characters, as the modern or Arabic ones. The ciphers, such as they are at present, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, did not come into common European use until the eleventh century. For cipher as applied to methods of secret writing see Cryptography.

**Cippus** (sī'pus), in Roman antiquities, a low column generally rectangular and sculptured, and often bearing an inscription. They served as sepulchral monuments, as milestones and boundaries, and in some cases to receive the inscribed decrees of the senate.

**Cipriani** (chē-aprē-kānē), GIAMBATTISTA, an Italian painter and engraver, born at Pistoia in 1722; went to England in 1741; died at London in 1785. He was one of the first fellows of the Royal Academy, the diploma of which he designed. He furnished Bartolozzi with the subjects of some of his finest engravings.
Circassia

Circassia (sîr-kash′-ə), or Tcher-
Kessia, a mountainous region in the southeast of European Russia, lying chiefly on the north slope of the Caucasus, partly also on the south, and bounded on the west by the Black Sea, and now forming part of the lieute-

nancy of the Caucasus. The moun-
tains, of which the culmination heights are those of Mount Elbrus, are intersected everywhere with steep ravines and clothed with thick forests, and the ter-

ritory is principally drained by the Kuban and its tributaries. Its climate is temperate, its inhabitants healthy and long-
lived. The people call themselves Adighi, the name Tcherkess (robbers) being of Tatar origin. They are divided into several tribes north and east, however, diver-
dialects. While they retained their inde-

pendence their government was of a
patriarchal character, but every free Cir-
cassian had the right of expressing his
opinion in the assemblies. They pos-
sessed nomad but traditional annals and
laws. Polygamy was prevalent but in
theory, but not common. The duties of
hospitality and vengeance were alike
binding, and a Spartan morality existed
in the matter of theft. Their religion,
which is nominally Moslem, is in many
cases a jumble of Christian, Jewish, and
heathen traditions and ceremonies. As a
race the Circassians are comely, the men
being prized by the Russians as warri-
ors, and the women by the Turks as inmates
of the harems, a position generally desired
by the women themselves. The early
history of Circassia is obscure. Between
the 10th and 13th centuries it formed
a portion of the empire of Georgia, but
in 1424 the Circassians were an inde-

pendent people, and at war with the Tatars of the Crimes, etc., to whose
khans, however, some were occasionally tributary. In 1705 the Tatars were
defeated in a decisive battle, but shortly
after the territorial encroachments of the
Russians on the Caucasian regions be-
gan, and in 1828 the country was formally
annexed by them. A long and heroic re-
sistance was made by the Circassians un-
der their leader Schamyl, and on being re-
duced to submission numbers of the in-

habitants emigrated to the Turkish prov-
inces. In the north and east, however, the
tribes of the Circassian stock remain.

The Circassians, properly so called, have
been estimated to number from 500,000
to 600,000.

Circe (sîr′kē), a famed sorceress of
Greek mythology, who lived in
the island of Æaea, represented by Homer
as having converted the companions of
Ulysses into swine after causing them
to partake of an enchanted beverage.
Ulysses under the guidance of Hermes
compelled her to restore his companions,
and afterwards had two sons by her.

Circensian Games (sîr-sen′si-an).
See Circus.

Circinate (sîr′sî-nāt) in botany, said
of leaves or fronds, as those
of ferns, that are rolled up like a watch-
spring before expanding.

Circle (sîr′kl), a plane figure con-
tained by one line, which is
called the circumference, and is such that
all straight lines drawn from a certain
point (the center) within the figure to
the circumference are equal to one an-
other. The properties of the circle are
investigated in books on geometry and
trigonometry. A proper circle belongs
to the class of conic sections, and
is a curve of the second order. A great
circle of a sphere is one that has its
center coinciding with that of the sphere.
The celebrated problem of squaring the
circle is to find a square whose area
shall be equal to the area of any given
circle. It is not possible to do so. All
that can be done is to express approxi-
mately the ratio of the length of the
circumference of the circle to the
diameter, and to deduce the area of the
figure from this approximation. If the
diameter be called unity, the length of the
circumference of the circle is
3.1415926535...; and the area of the
circle is found by multiplying this num-

ber by the square of the radius. Thus
the area of a circle of 2 feet radius is
3.14159 × 4, or 12.56636 square feet
approximately. For trigonometrical cal-
culations the circumference of the circle
is divided into 360 equal parts called de-
grees, each degree is divided into 60
minutes, and each minute into 60 seconds.

Circle, Mural. See Mural Circle.

Circleville (sîr′kl-vîl), a city, capital
of Pickaway Co., Ohio, on the Scioto
River, 23 miles s. of Columbus. Its
name is derived from a

large circular earthenwork, ascribed to the
Mound Builders. It has canning, pack-
ing and other industries. Pop. 6744.

Circuit (sîr′kit), a division of a
country for judicial purposes.
to some towns or towns in which judges
come at regular periods to administer jus-
tice.

Circuit Courts, a term applied dis-
tinctively to a class
of the Federal courts of the United
States, of which terms are held in two or
more places successively, in the various
circuits into which the country is divided for the purpose.
Circular Notes

Circular Notes (sir'kə-lər̩), notes or letters of credit furnished by bankers to persons about to travel abroad. Along with the notes the traveler receives a "letter of indication" bearing the names of certain foreign bankers who will cash such notes on presentation, in which letter the traveler must write his name. On presentation the foreign banker can demand to see the letter of indication, and by causing the presenter to write his name can compare the signature thus made with that in the letter, and so far satisfy himself as to the identity of the person presenting the note.

Circulating Medium. See CURRENT.

Circulation (sir-kə-là-shən), in an organism, the flowing of sap or blood through the veins or channels, by means of which the unceasing and simultaneous movements of composition and decomposition manifested in organic life are carried on. Although Galen, who had observed the opposite directions of the blood in the arteries and veins, may be said to have been upon the very point of discovering its circulation, the discovery was reserved for William Harvey, who in 1628 pointed out the continuity of the connections between the heart, arteries, and veins, the reverse directions taken by the blood in the different vessels, the arrangements of valves in the heart and veins so that the blood could flow only in one direction, and the necessity of the return of a large proportion of blood to the heart to maintain the supply. In 1661 Malpighi exhibited microscopically the circulation in the web of a frog's foot, and showed that the blood passed from arteries to veins by capillaries or intermediate vessels. This finally established the theory with regard to animals, but the movements of sap in vegetables were only traced with difficulty and after numerous experiments. Many physiologists indeed are still disposed to refuse the term 'circulation' to this portion of the economy of plants; but though sap, unlike the blood, does not exhibit movements in determining vessels to and from a common center, a definite course is observable. In the stem of a dicotyledonous tree, for example, the sap describes a sort of circle, passing upwards from the roots through the newer woody tissue to the leaves, where it is elaborated under the action of air and light; and thence descending through the bark towards the root, where what remains of it is either excreted or mixed with the new fluid, entering from the soil for a new period of circulation. In infusorial animalcules the movement of the fluids of the body is maintained by that of the animal itself and by the disturbing influence of nutritive absorption. In the Coelenterata (zoophytes, etc.) the movement receives aid besides from the action of cilia on the inner walls of the body. The Annelida, as the earthworm, possess contractile vessels traversing the length of the body. The Insecta, Crustaceans, Myriapods, and Spiders have a dorsal tube, a portion of which may be specially developed as a heart. The blood is driven to the tissues, in some cases along arterial trunks, being distributed not in special vessels, but simply through the interstices of the tissues. From the tissues it is conveyed, it may be, by special venous trunks to the heart, and which surrounds the heart and opens into it by valvular apertures. The molluscs have the heart provided with an auricle and a ventricle, as in the small and whose; two auricles, one on either side of the ventricle, as in the fresh-water mussel; or two auricles and two ventricles, as in the ark-shells. Among the ascidians, which stand low in that division of animals to which the molluscs belong, the remarkable phenomenon is encountered of an alternating current, which is rhythmically propelled for equal periods in opposite directions. All vertebrate animals (except Amphioxus) have a heart, which in most fishes consists of an auricle and ventricle, but in the mudfishes (Lepidosteus) there are two auricles and one ventricle; and this trilocular heart is found in the amphibia, and in most reptiles except the crocodiles, which, like birds and mammals, have a four-chambered organ consisting of two auricles and two ventricles. In these two last-named classes the venous and arterial blood are kept apart; in the trilocular hearts the two currents are mixed in the ventricle. For circulation in man and the higher animals see Heart.

Circumcision (sir'kəm-sish'ən), the operation for the removal of the foreskin from the male generative organ, a surgical operation sometimes required by anatomical conditions. Also a rite common among the Semites, though by no means peculiar to them, and possibly derived by them from the Egyptians or from some non-Semitic source. At any rate, the antiquity of its institution in Egypt is fully established by the monuments, which make it evident that it was practised at a period very much earlier than the Exodus. It was, however, a primitive Arab custom, and its practise among the Jews may with equal probability be assigned to an Arab
source. Whatever its origin, the rite is associated to no single race. It was practised by the Aztecs and other peoples of Central America, and is still to be found among tribes on the Amazon, among the Australian tribes, the Papuans, the inhabitants of New Caledonia, and those of the New Hebrides. In Africa it is common among the Kaffirs and other tribes widely removed from Semitic influence. It is practised also by the Abyssinian Christians, and although not enjoined in the Koran has been adopted by the Mohammedans on the example of Mohammed himself. It was possibly in its origin a sacrifice to the deity presiding over generation, though in certain nations the rite has acquired a new symbolic significance according to the stage of their spiritual development. Circumcision is also the name of a feast, celebrated on the 1st of January, in commemoration of the circumcision of our Saviour. It was anciently kept as a fast, in opposition to the pagan feast on that day in honor of Janus.

Circumnavigation (sir-kum-naw-lə-gă-shən), a term signifying a sailing round the earth. Earliest to succeed in this was Magellan, a Portuguese in the service of Spain, who headed the first expedition which succeeded in circumnavigating the globe, though he did not live to complete the voyage. He sailed with five ships from San Lucar September 20, 1519, passed the straits named after him in November, 1520, and was killed in the Philippine Islands in April, 1521, Juan Sebastian del Cano continuing the voyage and reaching San Lucar with the only remaining ship in September, 1522. The principal early navigators, after Magellan, who succeeded in making the voyage round the globe were Cabot (Italian), 1477; Mendana (Spanish), 1567; Drake (English), 1577-80; Cavendish, 1586-88; Le Maire (Dutch), 1615-17; Quiros (Spanish), 1562; Tasman (Dutch), 1642; Cowley, 1653; Dampier, 1689; Cooke, 1703; Clipperton, 1719; Roggeveen (Dutch), 1721-23; Anson, 1740-44; Byron, 1764-66; Wallis, 1766-68; Carteret, 1766-69; Bougainville, 1766-69; Cooke, 1768-71; and Portlocke, 1788.

Circummutation ('nu-thənUSHIN; līt.' a nodding round about'), a name given by Darwin to the continuous motion of every growing part of every plant, in which it describes irregular elliptical or oval figures. The apex of the stem, for instance, after pointing in one direction, moves round till it points in the opposite direction, and so on continuously.

Circumstantial Evidence. See Evidence.

Circumvallation (və-la'shən), or Line of Circumvallation, in military affairs, a line of field-works consisting of a rampart or parapet, with a trench surrounding a besieged place, or the camp of a besieging army.

Circus (sərkəs), among the Romans, a nearly oblong building without a roof, in which public chariot-races and exhibitions of pugilism and wrestling, etc., took place. It was rectangular, except that one short side formed a half-circle; and on both sides, and on the semicircular end, were the seats of the spectators, rising gradually one above another, like steps. On the outside the circus was surrounded with colonnades, galleries, shops, and public places. The largest of these buildings in Rome was the Circus Maximus, capable, according to Pliny, of containing 290,000, and according to Aurelius Victor, 335,000 spectators. At present, however, but few vestiges of it remain, and the circus of Caracalla is in the best preservation. The games celebrated in these structures were known collectively by the name of ludi circenses, circenian games, or games of the circus, which under the emperors attained the greatest magnificence. The principal games of the circus were the ludi Romani or magni (Roman or Great Games), which were celebrated from the 4th to the 14th of September, in honor of the great gods, so called. The passion of the common or poorer class of people for these shows appears from the cry with which they addressed their rulers—Panem et circenses! (bread and the games!). The festival was opened by a splendid procession, or pomps. In it were the magistrates, senate, priests, augurs, vestal virgins, and athletes took part, carrying with them the images of the great gods, the Sibylline books, and sometimes the spoils of war. On reaching the circus the procession went round once in a circle, the sacrifices were performed, the spectators took their places, and the games commenced. These were: 1. Races with horses and chariots, in which men of the highest rank engaged. 2. The gymnastic contests. 3. The Trojan games, prize contests on horseback, revived by Julius Cæsar. 4. The combats with wild beasts, in which beasts fought with beasts or with men (criminals or volunteers). 5. Representations of naval engagements (nauemachia), for which purpose the circus could be filled with water. The expense of these games was
Cirencester

often immense. Pompey, in his second consulship, brought forward 500 lions at one combat of wild beasts, which, with eighteen elephants, were slain in five days. The modern circus is a place where horses are trained to perform, and where exhibitions of acrobats and various pageantries, and the tricks of clowns or buffoons, are presented. Menageries of wild beasts usually accompany the traveling circus.

Cirencester, or CICESTER (pron. colloquially sis-te-r or sis-es-te-r), a town of England, county of Gloucester; founded by the ancient Britons, and subsequently, under the name of Corinium, a Roman station. It has a well-known Royal Agricultural College. The trade is chiefly by barges on the Thames, and parliamentarian borough till 1886, and now gives name to a parl. div. of the county. Pop. 7632.

Cirrhosis (si-r'o-sis), a disease characterized by growth of fibrous tissue which gradually encroaches on and hyperplasia of the true structure of the organ attacked. It is very frequent in the liver as a consequence of spirit-drinking; and hence the term 'drunkard's liver.'

Cirripedes (si-r'I-pëds). Cirripedia, or Cirrhopoda, a class of marine invertebrate animals, having a soft body provided with very long, articulated, tendril-like limbs (cirri), which are protruded and rapidly withdrawn within the multivalve shell. They are crustaceans which have undergone retrograde metamorphosis, being free-swimming in the larva form, but becoming after a time attached by the head. When adult they are affixed to some substance, either set directly upon it, as in the genus Balanus; or placed on a foot-stalk, as the barnacle; or sunk into the supporting substance, as the whale-barnacle. See Balanus, Barnacle.

Cirrus (si-r'rus; in plural Cirri), the tendril of a plant by means of which it climbs, usually a modified leaf or the prolongation of a midrib.

Cirrus. See Cloud.

Cirta (si-r'ta), the capital of the ancient Mas-syl-i in Numidia. After the defeat of Jugurtha it passed into the hands of the Romans, and was taken by Constantine, who gave it his own name. See Constantina.

Cisalpine (si-al'pin) REPUBLIC, a state set up in 1797 by Napoleon I in North Italy, recognized by Germany as an independent power at the Peace of Campo Formio. It comprised Austrian Lombardy, together with the Mantuan and the Venetian provinces, Bergamo, Brescia, Crema, Verona, and Rovigo, the duchy of Modena, the principality of Massa and Carrara, Bologna, Ferrara, and Romagna, and eventually its area was 16,337 square miles; its pop. 3,500,000. The legislative body held its sessions in Milan. On January 25, 1802, it received the name of the Italian Republic; from 1805 to 1814 it formed part of the kingdom of Italy; and it was given to Austria by the Congress of Vienna in 1815 as the Lombardo-Venetian Kingdom.

Cisleithania (sis-lith'n-a), Cisleithania Provinces, Austria proper or Austria west of the river Leitha, which partly forms the boundary between it and Hungary. See Austria.

Cispadane Republic (si-spad'n), a state on the south of the Po set up by Napoleon I, but speedily united with the Transpadane Republic to form the Cisalpine Republic.

Cist (sist), a place of interment of an early or primitive period, the clumping of a rectangular stone chest or enclosure formed of rows of stones set up right, and covered by similar flat stones. Such cists are found in barrows or mounds, enclosing bones. In rocky districts cists were sometimes hewn in the rock itself.

Cistaceae (sis-të-se-ë), a natural order of polypetalous exogenous, consisting of low, shrubby plants or herbs with entire leaves and crumpled, generally ephemeral, showy flowers. Some exude a balsamic resin, such as ladanum, from a Levant species of Cistus. See Cistus.

Cistercians (sis-tër'zhanz), a religious order named from its original convent, Citeaux (Cistercium), not far from Dijon, in Eastern France, where the society was formed in 1098 by Robert, Abbot of Molesme, under the strictest observance of the rule of St. Benedict. The Cistercians led a severely ascetic and contemplative life, and having freed themselves from episcopal supervision, formed a kind of spiritual republic under a high council of twenty-five members, with the Abbot of Citeaux as president. Next to Citeaux the four chief monasteries were La Ferté, Pon-tigny, Clairvaux (founded by the celebrated St. Bernard in 1115) and Mori-
Cistus

mond. In France they called themselves Bernardines in honor of St. Bernard. Among the fraternities emanating from them the most remarkable were the Bare-footed monks, or Feuillants, and the nuns of Port Royal, in France; the Recollets, or reformed Cistercians; and the monks of La Trappe. There were a hundred Cistercian houses in England at the dissolution of monasteries. The general fate of religious orders during the French revolution reduced the Cistercians to a few convents in Spain, Poland, Austria, etc. There are still two or three houses in the British Isles. The Cistercians wear white robes with black scapularies.

Cistus (sis'tus), the rock-rose, a genus of plants of many species, order Cistaceae, natives of Europe, or of the countries bordering the Mediterranean. Some of them are beautiful evergreen flowering shrubs, ornamental in gardens or shrubberies. Gum ladanum is obtained from C. creticus and C. ladaniferus.

Citadel (sit'a-del), a strong fortress in or near a city intended to keep the inhabitants in subjection, or to form a final point of defense in case of an attack of enemies.

Citation (si-ta'shun), a summons or official notice given to a person to appear in a court as a party or witness in a cause.

Citeaux (si-tō'), a village of Eastern France, dep. Côte-d'Or. See Cistercians.

Cithæron (si-thê'ron), the modern Elatea, a mountain of Greece, which, stretching N. W., separates Boeotia from Megaris and Attica. Its loftiest summit is 4620 feet in height. On its northern slope stood the city of Platea.

Cithern, or Cit'tern (sit'ern, Latin cithara, Greek kithara), an old instrument of the guitar kind, strung with wire instead of gut. Its eight strings were tuned to 4 notes, G, B, D, and E. It was frequently to be found in barbers' shops for the amusement of the waiting customers.

Cities of Refuge, Cithern, in South America.

Cithæron, in South America. Cithern, in South America, was a sect of the law of Moses as places of refuge for the manslaughter or accidental homicide. Their names were Kedesh, Shechem, and Hebron on the west side of Jordan; and Bezer, Ramoth-Gilead, and Golan on the east.

Cities of the Plain. See Bodom and Gomorrah.

Citric (sit'rık) ACID (C₆H₈O₇), the acid of lemons, limes, and other citrus fruits. It is generally prepared from lemon-juice, and when pure is white, inodorous, and extremely sharp in its taste. In combination with metals it forms crystalline salts known as citrates. The acid is used as a discharge in calico printing and as a substitute for lemon in making beverages.

Citron (sit'ron), Citrus medica, a small evergreen shrub yielding a fruit which is candied with sugar. The rind is considered superior to the pulp; it is imported in a preserved state, and is used in confectionery. The juice is less acid than that of the lemon. See Citrus.

Citronella (sit'ron-el-a), OIL, an oil obtained from a kind of grass (Andropogon nardus), cultivated at Singapore and in Ceylon. It is used for scenting soap and driving away mosquitoes.

Citruillus (sit-ri'il-us). See Colognith.

Citrus (sit'rus), an important genus of trees, nat. order Aurantiacæ, or that of the orange, characterised by simple ovate acuminate leaves or leaflets united by a distinct joint to the leaf-like stalk; by having the stamens united by their filaments into several irregular bundles, and by yielding a pulpy fruit with a spongy rind.—Citrus medica

Citrus
Cittadella

is the citron. Other species are the lemon (Citrus limónum), the sweet orange (Citrus aurantium), the bitter orange (Citrus vulgaris), the shaddock (Citrus decumana), and the forbidden fruit (Citrus paradisi), sometimes used as an ornamental addition to dessert. The genus Citrus furnishes the essential oils of orange and lemon peels, of orange flowers, of citron peel, of bergamot, and oil of orange leaves—all much esteemed in perfumery. See Lemon, Orange, etc. Cittadella (cht-tdáp-tl), an old town of North Italy, province of Padua, surrounded by walls. Pop. 3627.

Città-di-Castello (d-kást-tél-ó), a town of Italy, province of Perugia, on the Tiber, the seat of a bishop, with a cathedral containing valuable paintings. Pop. 6000.

Città-Vecchia (vek-tla, old city), a fortified town of Malta, near the center and almost on the highest point of the island, 7 miles W. S. W. Valetta. The rise of the latter town has almost ruined it, and its magnificent houses and palaces are almost deserted. It has a large cathedral and interesting catacombs. The ancient palace of the Grand Masters of the Order of Malta also remains. Pop. (1801) 7515.

City (sitl; Latin, civitas) in a general sense, a town holding, from extent of population, favorable situation, or other causes, a leading place in the community in which it is situated. Popularly, also, it is used to designate the old and central nucleus as distinguished from the suburban growths of later times. The ecclesiastical sense of the term city is a town which is, or has been, the see of a bishop. This seems to be the historical use of the term in England, and still possesses some authority there, but to a considerable extent it has been superseded by the wider sense. In America the application of the term is dependent upon the nature and extent of the municipal privileges possessed by corporations, and a town is raised to the dignity of a city by special charter. Generally the term implies the existence of a mayor at the head of the municipality.

Ciudad (thi-8-dâd''), the Spanish word for city, appearing in many names of Spanish places.

Ciudad Bolivar (thi-8-dâd' bo-l'é-vár). See Angostura.

Ciudadela (thi-8-dâd-8-lâ'), a walled city and seaport, Spain, on the west side of the island of Minorca. Chief industries: weaving woolen fabrics, expressing oil and wine, and husbandry. Pop. 3045.

Ciudad-Real (thi-8-dâd-râ-thl), 'royal town'), a town of Spain, capital of the province of same name, on a low plain near the Guadiana, 100 miles south of Madrid. The principal edifice is the Church of Santa Maria, a magnificent structure, though consisting only of a single nave. Pop. 16,327. The province occupies the south extremity of New Castile, between the parallel ranges of the Sierra Toledo and Sierra Morena; area, 7840 square miles. Pop. 320,560.

Ciudad-Rodrigo (thi-8-dâd-rod-e-go', Rodericktown), a fortress in Spain, in Leon, on the river Aguada, was a place of considerable importance in early Spanish history as a fortress on the Portuguese frontier, and was of some importance in the Peninsular war, being taken by storm by the British under Wellington, after a siege of eleven days. The Cortes gave Wellington the title of Duke of Ciudad-Rodrigo. Pop. 8630.

Cive (siv'). See Chive.

Civet (siv'; Viverra), a genus of carnivorous mammals found in N. Africa, and in Asia from Arabia to Malabar and Java, and distinguished by having a secretory apparatus in which collects the odoriferous fatty substance known as civet. The animal, which in form is intermediate between the weasel and the fox, and from 2 to 3 feet long by 10 inches high, is of a cinereous color, tinged with yellow and marked by dusky spots disposed in rows. They are nocturnal, and prey upon birds and small animals, and may be considered as forming the transition from the musteline or marten kind to the feline race. The genus has been divided into two subgenera—the true civet (Viverra) large and well marked; and the genets, in which there is a simple depression instead of a pouch. Two species of the first and eight of the second are at present known, the chief scent-yielding species being the common civet (Viverra civetta) of N. Africa and the sibeth (V. sibetha) of Asia. The pouch is situated between the anus and the genitals, and the odorous matter obtained from it is, when good, of a clear yellowish or brown color. The smell is powerful and very offensive, but when diluted with oil or other materials is an agreeable perfume. The American variety of the civet (civet cat) is easily tamed.
Civic Crown (sīv’ik), among the Romans, the highest military reward, assigned to him who had preserved the life of a citizen. It bore the inscription "Ob divem scutum," that is, "for saving a citizen," and was made of oak leaves. The person who received the crown wore it in the theater, and sat next the senators, and when he came in all the assembly rose up as a mark of respect.

Civics (sīv’iks), the science that treats of citizenship and the relations between citizens and the government. It embraces ethics, or social duties; civil law, or governmental methods; economics, or the principles of finance and exchange; and the history of municipal development.

Cividale (chē-vē-dā’lā), a walled town, Italy, Venetia, 8 miles N. E. of Udine. It has a large cathedral dating from the eighth century. Pop. 4174.

Civil Death. See Death, Civil.

Civilization (sī-vil-i-za’shun), the sum at any given time of the attainments and tendencies by which the human race or any section of it is removed from the savage state. The history of progress in civilization is usually presented from one of two points of view—the first conceiving the race as starting from a high civilization, to which in point of intellectual and moral power it has yet to return; the second viewing the civilization of any period as the result of a constant and increasingly-successful stream of effort upwards from an origin comparable with the condition of the lower animals. The latter is the prevailing scientific theory, which finds the secret of progress in the interaction of function and environment. According to it, primitive man, at first feeding on wild fruits and berries, and sheltering himself under overhanging rocks or caves, early in the stone age, in which, as the contemporary of the mammoth and cave-bear, he made himself sharp-edged tools by chipping the flakes of flint found in the drift under gravel and clay. In the newer stone age he learned the art of polishing these rough implements, with which he cut down trees to make canoes, killed wild animals for food, and broke their bones for marrow, or shaped them into weapons. Fire he turned to account to hollow out trees, to cook his food, to fashion clay ware. Artificial means of shelter were constructed by piling rude huts of stones, by digging holes in the ground, or by driving piles into the beds of lakes and raising dwellings on them. The artistic instincts found expression in drawings of animals scratched upon bone or slate. The discovery of metals constituted a great step in advance. Gold and copper came early into use, and bronze was soon discovered, though a long time passed before iron was smelted and substituted for bronze where hardness was required. Gradually the roving savage became a nomadic shepherd and herdsman, or a tiller of the soil, according to his environment. The practice of barter was in part superseded by the beginnings of some sort of currency. Gesture language gave place in part to an enlarged vocabulary, and picture-writing to the use of phonetic signs. In the meantime man had begun to question himself and the world on profounder issues, entering upon the myth-making age, in which was projected outwards on the chief phenomena of nature some shadow of his own personality. The worship of the sun, moon and stars, a faith in a future life, the worship of dead ancestors, fetishes, animals, etc., the belief in magic and witchcraft, all sprang into being. Prayer came spontaneously to him; the idea of propitiation by sacrifice would arise from his dealings with his fellows and his foes; the sacred books began to shape themselves. Tribal and national relations, arising from ties of family and exigencies of defense, were cemented by unity of faith, and the higher social unit began to perfect itself under the rule of the patriarch, the bravest warrior, etc. With varying needs, arising from diversity of environment, distinctions of nationality became more and more emphatic, and the history of civilization becomes the history of the nation viewed from the standpoint of moral, political, scientific, mechanical, and general intellectual progress.

City Planning, a system now being widely adopted in the United States for the betterment and adornment of cities, definite plans being adopted in a few, and plans are up to date so that the development of the cities may be in definite lines. Comprehensive plans of this kind have been made in many cities and in some instances much has been done in carrying them out. An exhibition of such plans was made in the City Hall, Philadelphia in the spring of 1911, and showed that highly encouraging progress was being made, not only in that city, but in many other communities.

Civil Law (jūs civīle), among the Romans the term nearly corresponding to what in modern times is implied by the phrase positive law, that is, the rules of right established by any government. They contradistinguished it
from natural law (*jus naturale*), by which they meant a certain natural order followed by all living beings; also from the general laws of mankind established by the agreement of all nations and governments (*jus gentium*). With the growth and multiplication of the edicts issued by the pretors (in whose hands was the supreme administration of justice) for the modification and extension of the positive enactments, a further distinction became necessary, the whole body of this pretorian law being known by the name of *jus honorarium* as opposed to the strict formal law (*jus civile*). The latter, however, included both the private law (*jus privatum*), which relates to the various legal relations of the different members of the state—the citizens—and the public law (*jus publicum*), that is, the rules respecting the limits, rights, obligations, etc., of the public authorities. The final digest of Roman law was made in the sixth century A.D. under the Emperor Justinian, but at first was only admitted as formally binding in a small part of Italy. After the eleventh century, in Upper Italy, particularly in the school of Bologna, the body of the Roman law, put together by Justinian, was formed by degrees into a system applicable to the wants of all nations; and on this model the ecclesiastical and papal decrees were arranged, and to a considerable degree the native laws of the new Teutonic states. From all these the Roman law was distinguished under the name of civil law. In this sense, therefore, civil law means ancient Roman law; and it is contradistinguished from canon law and feudal law, though the feudal codes of the Lombards have been received into the *corpus juris civilis*, or body of civil law. As the Roman code exercised the greatest influence on the private law of modern Europe, the expression civil law is used also to embrace all the rules relating to the private rights of citizens. Under the term civil law, therefore, in America and Europe, is to be understood not only the Roman law, but also the modern private law of the various countries; for example, in Germany, *Das gemeine Deutsche Privatrecht*; in France the *Code civil des Français* or *Code Napoléon*. In this sense it is chiefly opposed to criminal law, particularly in reference to the administration of justice, which is to be divided into civil justice and criminal justice.

**Civil List.** In Britain, formerly the whole expenses of the government, with the exception of those of the army, navy, and other military departments. It is now limited to the expenses proper to the maintenance of the household of the sovereign. It was once a principle in England, as in other Teutonic nations, that the monarch was to pay all the expenses of government, even including those of the army, from the possessions of the crown, and until the Restoration the whole expense of the government continued to be defrayed out of the royal revenue. In the reign of William, the Commons adopted the principle of separating the regular and domestic expenses of the king from the public expenditure, and establishing a systematic and periodical control over the latter. The amount voted to the king for life in 1697 was $3,500,000 annually and the same vote was made at the commencement of the reign of Queen Anne and George I. By the beginning of the reign of George II the revenue appropriated to the civil list was found to have produced $150,000, and this sum was voted on the accession of George II. Besides the regular vote, grants had been frequently made to the king in aid of the expenditure of the sovereign. On the accession of George III the civil list was fixed at $4,000,000, but instead of being paid out of appropriated revenues in which the crown lands were included, these were surrendered, and it was charged on the ordinary taxation. Large extra grants had to be made during this reign. In the reign of William IV the list was cleared of all salaries, etc., upon it, and placed at $2,550,000, including a pension list of $375,000. Other variations in the amount were made on the accessions of Victoria, Edward VII and George V. Many continental states have a fixed civil list; that of Russia is $7,060,000; of Turkey $4,600,000; of Austria, $3,650,000; of Prussia, $3,375,000, to which an additional grant of $1,125,000 has recently been added, making a total of $4,500,000.

**Civil Service.** under government except those directly connected with the army and navy. Formerly appointments to the civil service in Great Britain were entirely in the gift of the executive government, and were obtained by influence, while the bestowal of them was used as a means of gaining parliamentary support on behalf of the government, but in 1855 a system of examinations was instituted to test the efficiency of candidates, and in 1870, it was directed that appointments in the civil service should (with certain exceptions) be filled by open competition. In the United States civil service a system was inaugurated by President Jackson by which the party in
Civil War. See United States.

Clackmannan (klak-man'an), the smallest county of Scotland, containing little more than 47 square miles, situate on the north side of the Forth, by which it is bounded s. w., while on nearly all the other sides it is inclosed by the countries of Perth and Stirling. The north part of the county is occupied by the Ochil Hills, which are largely given up to sheep-farming, but the other portions are comparatively level and exceedingly fertile, yielding large crops of wheat and beans. The minerals are valuable, especially coal, which abounds. There are also some extensive ironworks, and some large breweries and distilleries; woolens are also manufactured, and tanning, glass-blowing, etc., carried on. The principal towns are Alloa, Tillicoultry, Dollar, and Clackmannan, the county town. Pop. 32,029.

Cladium (klad'ium), a genus of plants, consisting of twenty-one species of wide distribution, nat. order Cyperaceae (or sedges). The C. Mariscus, or twig-rush, is a British perennial with kelled leaves, having a sharp point and prickly serratures. It is very common in certain fen districts in Cambridgeshire, etc., and is used for thatching.

Clairac (klä-räk), a town of France, department Lot-et-Garonne, on the Lot. It was the first town in the south of France to declare in favor of the Reformation. Pop. about 3000.

Clairaut (klä-ro), Alexis Claude, mathematician, born at Paris in 1713. In his eleventh year he composed a treatise on the four curves of the third order, which, with his subsequent Recherches sur les Courbes a double Courbure, 1731, procured him a seat in the academy at the age of eighteen. He accompanied Maupertuis to Lapland, to assist in measuring an arc of the meridian, and obtained the materials for his work Sur la Figure de la Terre. In 1752 he published his Théorie de la Lune, and in 1759 calculated the perihelion of Halley's comet. He died in 1765. A brother, who died at the age of twelve, published in his ninth year a treatise entitled Diverses Quadratures Circulaires Elliptiques.

Clare (klär), St., or Santa Clara, Order of, founded in 1212 by a lady of this name, of noble birth, born at Spoleto, Italy, in 1193; died in 1258, and canonized in 1255. The order is divided into a severe sect, the Da- manists, and a more moderate sect, the Urbanists. It has numerous convents in Europe and America.

Clairvaux (klärv-vä), a village of France, department of Aube, celebrated for its magnificent abbey, founded in 1114 or 1115, by St. Bernard, but suppressed at the revolution. The existing buildings have been converted into an immense house of correction. See Cistercians.

Clairvoyance (klärv-voi'ans; that is 'clear-see-ing'), an alleged faculty by which certain persons in certain states, or under certain conditions, are said to be able to see things by some sort of mental or spiritual vision apart altogether from the sense of sight.

Clam, the common name for the bivalves of the genus Chama, and some other allied genera. In the eastern United States the clams of market are of two kinds: the hard or round clam (Venus mercenaria) and the soft clam (Mya arenaria). The former are known in New England by the Indian name 'quobog'; they live on sandy bottoms, and are obtained by raking or dredging. The 'little necks' are young clams of this sort. The soft clam is the Mya—the species used on the American Atlantic coast being M. arenaria, while that of Europe is M. truncata. It has thin, elongated, white shells, is found deeply buried in mud or sand near shore, and obtained by digging. The largest bivalve mollusc known is the giant clam (Tridacna) of the South Pacific region, whose valves may measure two feet across and weigh 500 pounds.

Clamecy (klä-mè-se), a town of France, department Nièvre, on the Yonne. It has a fine church, founded in
Clan

1497. Wood rafts for the supply of Paris with firewood are made up here, and floated down the Yonne and Seine. Pop. 53,113.

Clap-net

was frequently formed of that of the original progenitor with suffix mao (son); thus the MacDonals were the sons of Donald, and every individual of this name was considered a descendant of the clan, and a brother of every one of its members. The chief exercised his authority by right of primogeniture, as the father of his clan; the clansmen revered and served the chief with the blind devotion of children. The clans each occupied a certain portion of the country, and hostilities with neighboring clans were extremely common. Next in rank to the chief were a certain number of persons, commonly near relations of the chief, to whom portions of land were assigned during pleasure or on short leases. Each of these usually had a subdivision of the clan under him, of which he was chieftain, subject, however, to the general head of the sept. The jurisdiction of the chiefs was not very accurately defined, and it was necessary to consult, in some measure, the opinions of the most influential clansmen and the general wishes of the whole body. It was latterly the policy of the government in Scotland to oblige the clans to find a representative of rank to become security at court for their good behavior; the clans who could not procure a suitable representative, or who were unwilling to do so, were called broken clans, and existed in a sort of outlawry. The most notable instance of a proscribed and persecuted clan was that of the ancient clan MacGregor, who long continued to hold their lands by the sword, or right of the sword. The rebellions of 1715 and 1745 induced the British government to break up the connections which subsisted between the chiefs and the clansmen. The hereditary jurisdiction of the chiefs was therefore abolished, the people disarmed, and even compelled to relinquish their national dress. Few traces of this institution now remain, except such as have a merely sentimental character; thus all those who possess the same clan name may still talk of their 'chief,' though the latter have now neither land nor influence.

Clapham (clap’em), a southern suburban district and parl. borough of London. Clapham Common is a fine open space of over 200 acres. Pop. 58,596.

Clap-net, a ground-net used by bird-catchers, consisting of two equal parts about 12 yards long by 2½ wide, and each having a slight frame. They are placed about four yards apart, and are pulled over by a string so as to inclose any birds on the intervening space.
Clapperton (clap‘er-tun), Hugh, an African traveler, born in Annan, Dumfriesshire, in 1788. He entered the merchant service, but was impressed into the navy, in which he became a lieutenant in 1816. He then accompanied Dr. Oudney and Lieutenant Denham to Africa, where he remained till 1822, returning with valuable information, although the disputed question of the course of the Niger was left undecided. On his return to England Clapperton received the rank of captain, and immediately engaged in a second expedition, to start from the Bight of Benin. Leaving Badagry, Dec., 1826, he penetrated to Katunga, within thirty miles of the Quorra or Niger, but was not permitted to visit it. At Soccato the Sultan Bello refused to allow him to proceed to Bornu, and detained him a long time in his capital. The disappointment preyed upon him, and he died, April 12, 1857, at Chungawa, a village near Soccato. He was the first European who traversed the whole of Central Africa from the Bight of Benin to the Mediterranean.

Claqueurs (klā-k′ørz), the name given in Paris to a company of persons paid for applauding theatrical performances, more especially on the production of any new piece. They were sometimes called chevaliers-du-lustre, from mustering in great force near the center of the pit, below the chandelier.

Clara, SANTA. See Claira.

Clare (klär), a maritime county of Ireland, province Munster, between Galway Bay and the Shannon estuary; area, 827,094 acres, of which 140 acres are under tillage. The surface is irregular, rising in many places into mountains of considerable elevation, particularly in the E., W., and N.W. districts. Oats, potatoes, wheat, and barley are the principal crops. The chief minerals are lead, silver, coal, and iron, and the produce of the county is almost wholly agricultural. Lakes are numerous, but generally of small size, and the county is deficient in wood. The salmon-fisheries are valuable, and there are immense oyster-beds. In some places, Capital, Ennis. It has lost largely in population through the miserable condition of the peasantry. Pop. in 1841, 298,394; in 1901, 112,109.

Clarendon (klär‘en-dun), Constitution of, a code of laws adopted in the tenth year of Henry II (January, 1164), at a council of prelates and barons held at the village of Clarendon, Wiltshire. These laws, which were finally digested into sixteen articles, were brought forward by the king as "the ancient customs of the realm," and were enacted as such by the council, but they really involved a great scheme of administrative reform in the assertion of the supremacy of the state over clergy and laity alike. The power of the ecclesi-
astical courts was restricted, the crown secured the right of interference in elections to ecclesiastical offices, appeals to Rome were made dependent on the king's leave, ecclesiastical dignitaries were deprived of their freedom to leave the country without the royal permission, etc. Becket signed them, but retracted his signature on the refusal of the Pope Alexander III to countenance them. Becket's murder followed, and to effect a reconciliation with the pope Henry promised the amendment of the Constitutions of Clarendon. They were accordingly modified in 1176 at Northampton in favor of the church, but they are not less to be regarded as containing the germ of the ecclesiastical policy of Henry II.

Clarendon, Edward Hyde, Earl of, Lord High-chancellor of England, son of a private gentleman of Dineton, Wilts, where he was born in 1609. After studying at Oxford and at the Middle Temple he married, in 1629, the daughter of Sir George Ayliffe, and, in 1632, Frances, daughter of Sir Thomas Aylesbury. He commenced his political career in 1640 as member for Wootton-Basset, and was again returned to the Long Parliament (November, 1640) by the borough of Saltash, at first acting with the more moderate of the popular party, but gradually separating himself from the democratic movement until, by the autumn of 1641, he was recognized as the real leader of the king's party in the house. Upon the breaking out of the civil war he joined the king at York, was knighted, made privy-council, and appointed chancellor of the exchequer. After vainly attempting to bring about a reconciliation between the contending parties he accompanied Prince Charles to Jersey, where he began his History of the Rebellion, and wrote answers in the king's name to the manifestoes of the parliaments. In Sept. 1649, he rejoined Charles at The Hague, and was sent by him on an embassy to Madrid. Soon after his return he resumed the business of the exiled court, first at Paris, and afterwards at The Hague, where, in 1657, Charles II appointed him lord-chancellor. After Cromwell's death he contributed more than any other man to promote the Restoration, when he was placed at the head of the English administration. In 1660 he was elected chancellor of the University of Oxford, and in 1661 was created Baron Hyde, Viscount Cornbury, and Earl of Clarendon. The marriage of the Duke of York with his daughter, Anne Hyde, confirmed for a time his power, but in 1663 Lord Bristol made an unsuccessful attempt to impeach him, his influence with the king declined, and his station as prime-minister made the situation regard him as unimpeachable. The ill success of the war against Holland, the sale of Dunkirk, etc. The king's displeasure deepened when his plan of repudiating his wife and marrying the beautiful Lady Stuart was defeated by Clarendon, who effected a marriage between this lady and the Duke of Richmond. The king deprived him of his offices, an impeachment for high treason was commenced against him, and he was compelled to seek refuge in Calais. He lived six years at Montpellier, Moulins, and Rouen, where he died in 1674. His remains were afterwards removed to Westminster Abbey. During his second exile he completed his History of the Rebellion in autobiographical form, wrote a biographical Continuation in defense of his administration, and sought to vindicate Lord Ormonde by a History of the Rebellion in Ireland.

Clarendon, George William Frederick, Viscount Villiers, Earl of, eldest son of the Hon. George Villiers. He was educated at Cambridge, entered the civil service at an early age, and in 1820 was attached to the embassy at St. Petersburg. In 1834, as minister to Madrid, he aided in negotiating the Quadruple Alliance. He succeeded to his uncle's title in 1838 and in 1840, was appointed lord privy-seal, and in October chancellor of the duchy of Lancaster. He supported the repeal of the corn-laws and the reduction of duties, and in 1846 was appointed president of the board of trade in Lord J. Russell's ministry, and in the following year lord-lieutenant of Ireland. He resigned with his party in 1852, when the Earl of Derby took office, but soon after the formation of the Aberdeen ministry he was appointed to the foreign secretaryship, which he held until Jan., 1855. After a few intervals he returned to the post under Lord Palmerston, and retained it until 1858, being one of the signatories of the Treaty of Paris. In 1861 Clarendon was sent as ambassador-extraordinary to the coronation of the King of Persia, and in 1864 was again appointed chancellor of the duchy of Lancaster. In the following administration, under Russell, he resumed the direction of the foreign office. He was sent in 1868 on a special mission to the pope and the King of Italy, and again occupied the post of foreign secretary in the Gladstone ministry till his death, in June, 1870.
Claret, established in 1586. Here all the printing for that university is done.

Claret (klar'et), the name given in Britain, America, etc., to the red wines of Bordeaux. A large quantity of wine produced in California is also called by this name, and is of a very excellent quality. The name has become generic. See Bordeaux Wines.

Clarichord (klar'i-kord'), or CLAVICHOORD, an old keyed instrument, somewhat in the form of a spinet. Sometimes called the dambo spinet.

Clarification (klär'i-fik'sha'n), or the separation of the insoluble particles that prevent a liquor from being transparent, may be performed by depuration, in which the liquor is allowed to stand until the particles are precipitated, and then decanted; by filtration, or straining through wood, sand, charcoal, etc.; or by coagulation, in which the albumen contained in or added to the liquid is solidified and precipitated, the extraneous substances being precipitated with it. Now commonly effected by centrifugal machines. See also Fencing.

Clarinet (klär'niet), or CLARIONET, a wind-instrument of the reed kind, played by holes and keys. Its lowest note is E below the F clef, from which it is capable, in the hands of good performers, of ascending more than three octaves. The keys of G and F, however, are those in which it is heard to most advantage, though there are B-flat, A, D, B, and G clarinets.

Claron (klär'an), a musical instrument of the trumpet kind, with a narrower tube and a higher and shriller tone than the common trumpet.

Clark, ALVIN, born in Ashfield, Massachusetts, in 1806; died 1887. He gained distinction as a skillful maker of telescopes and achromatic object-glasses.—His son, ALVIN GRAHAM CLARK (1832–1897), succeeded him in business and completed the Lack 36-inch refracting telescope in 1886 and the Yerkes 40-inch in 1887. He made many discoveries in double stars.

Clark, CHAMP, Congressman, was born in Anderson Co., Kentucky, in 1860. He became president of Marshall College, W. Va., in 1873, and afterwards engaged in legal practice. He was elected to Congress from Missouri in 1886, 1895, and since 1897 has served continuously. He was permanent chairman of the Democratic National Convention in 1904, and in 1911 was elected by the Democrats in Congress to succeed Cannon as Speaker of the House.

Clark, GEORGE ROGERS, born in Virginia in 1752, settled in 1776 in Kentucky, where he soon became a leader among the settlers. In December, 1777, he secured approval of a plan to conquer the British posts in the Northwest. In 1778 he invaded the Illinois country, and completed the conquest in 1779. As a result England gave up the Northwest Territory by the treaty of 1783. Died in 1818.

Clark, WILLIAM. See Lewis and Clark.

Clark University, an educational institution at Worcester, Massachusetts, chartered in 1887, and devoted exclusively to postgraduate work in the sciences. It was founded by Jonas G. Clark. There is an institution of the same name at Atlanta, Georgia, founded in 1870, and confined to colored students.

Clarke, CHARLES COWDEN, an English writer, born at Enfield, Middlesex, in 1737. He was one of the minor members of the Shelley, Keats, and Leigh Hunt group. His publications include his Hundred Wonders (1814), Adam the Gardener (1834), Shakespeare Characters (1863), and Molière Characters (1865). He is best known, however, by the edition of Shakespeare which he annotated in conjunction with his wife, and by the Shakespeare Key (1879). He died in 1877.

Clarke, CHARLES HERES, an American humorist, born at Berlin, Md., July 11, 1841. Under the pen-name of Max Adeler he was the author of several amusing books. His works include Out of the Hurly Burly, Captain Blount, In Happy Hollow, The Quackers, etc. He died in August, 1915.

Clarke, EDWARD DANIEL, an English traveler and mineralogist, born in Sussex in 1769, entered Jesus College, Cambridge, in 1790: and was a fellow in 1798. In 1799 he set out on an extensive tour through Europe, Asia Minor, Syria, Egypt, etc., securing for English institutions many valuable objects, such as the celebrated manuscript of Plato's works, with nearly 100 others, a colossal statue of the Greek goddess Demeter (Ceres), and the famous sarcophagus of Alexander the Great. In 1807 he commenced a course of lectures on mineralogy at Cambridge, and in 1808 a professorship of mineralogy was instituted there in his favor. He died in 1822. A complete edition of his works appeared in 1819-24, under the title of Travels in Various Countries of Europe, Asia, and Africa.
Clarke, Samuel, an English theological and philosophical writer, born in 1615 at Norwich, where his father was an alderman; educated at Caius College, Cambridge. He became chaplain to Dr. More, bishop of Norwich, and between 1699 and 1701 published Essays on Baptism, Confirmation, and Repentance, replied to Toland's Amynstor, and issued a paraphrase of the Gospels. He was then presented with two livings, and in 1704 and 1706 twice delivered the Boyle lectures at Oxford on The Being and Attributes of God, and on The Evidence of Natural and Revealed Religion. In 1706 he published a letter to Mr. Doddridge on the Immortality of the Soul, and a Latin version of Newton's Optics. He was then appointed rector of St. Bennet's, London, and shortly afterwards rector of St. James' and chaplain to Queen Anne. In 1712 he edited Caesar's Commentaries, and added to St. John's Apocalypse Doctrine of the Trinity, which became a subject of much controversy and of complaint in the Lower House of Convocation. His chief subsequent productions were his discussions with Leibnitz and Collins on the Freedom of the Will, his Latin version of part of the Iliad, and a considerable number of sermons. He died in 1729. His philosophic fame rests on his a priori argument for the existence of God, his theory of the nature and obligation of virtue as conformity to certain relations involved in the eternal fitness of things, and his opposition to Hobbes, Spinoza, Locke, Leibnitz, and others.

Clarke's River, a river of the United States, rising in the Rocky Mountains, and after a winding N. W. course of about 700 miles, falling into the Columbia, in Washington.

Clarksburg, a city, capital of Harrison Co., center of the gas fields of West Virginia, 52 miles E. of Parkersburg. Woods and miscellaneous iron, etc., are produced. Pop. 9201.

Clarkson, Thomas, an English emancipator, born in 1780 at Wisbeach, Cambridgeshire. He was originally intended for the church, and studied at St. John's College, Cambridge, where he gained the vice-chancellor's prize for a Latin essay on the theme, 'Annis licet invictus in servitutem dare?' (Is it lawful to make slaves of men against their will?) His researches for this dissertation roused in him a passionate antagonism to the slave trade, and he allied himself with the Quakers and with Wilberforce. While the latter advocated the cause in parliament, Clarkson conducted the agitation throughout England, even crossing to France to obtain the co-operation of the National Convention. His labors were far to secure the prohibition of the slave trade in 1807 and the emancipation act of 1833. His death took place in 1846. His literary works comprise: A Portrait of Quakerism (1806); History of the Abolition of the Slave Trade (1808).

Clarksville, a city of Tennessee, capital of Montgomery Co., on the Cumberland River, 65 miles below Nashville. Here is the Southwestern (Presbyterian) University. The city is largely engaged in the tobacco trade and has other industries. Pop. 8548.

Clary (klā'ri; Salvia scortonis), a plant of the Salvia or sage genus, used for flavoring soups and confectionery. Its flowers were used with brandy, sugar, cinnamon, and a little aniseed to make clary water, regarded as a help to digestion.

Class (klas'is), a term derived from L. classis, the name given to the citizens belonging to the first or highest of the six classes into which the Romans were divided. Hence the Greek and Roman authors have been in modern times called classics, that is, the excellent, the models. The Germans, however, soon gave the word Klassische (classical), a wider sense, making it embrace: 1, the standard works of any nation; and 2, ancient literature and art, in contradistinction to the modern; and their example was followed by other nations. A third use of the term, in contradistinction to romantic, is scarcely comprised under those cited, implying adherence to the established literary or artistic convention of some previous period, as opposed to the emergence of new elements shaping a new convention. In this sense classic usually implies the predominance of form over emotion and thought, while its antonym romantic implies the predominance of emotion and the departure from the old formal standards. From its vagueness in this regard many writers, such as G. H. Lewes, have vainly proposed to dispense with the term.

Classification (klas'i-fi-kā'shun), is commonly defined as the arrangement of things, or of our notions of them, according to their resemblances or identities; and its general object is to provide that things shall be thought of in such groups, and the groups in such an order, as will best promote the remembrance and ascertainment of their laws. As any collection of objects may be classified in a variety of ways,
Claude

no fixed method can be laid down; but it will be obvious that in correct classification the definition of any group must hold exactly true of all the members and of that group and not of the members of any other group. The best classification again will be that which shall enable the greatest possible number of general assertions to be made; a criterion which distinguishes between a natural and an artificial system of classification. Classification is perhaps of most importance in natural history—for example, botany and zoology. In the former the artificial or Linnaean system long prevailed, in opposition to the modern or natural.

Claude (klød), JEAN, a French protestant preacher and professor of the college at Nimes, born in 1619. He entered into controversy with Arnauld and Bossuet, and on the revocation of the Edict of Nantes took refuge in The Hague, where he died in 1697. His chief work was the Défense de la Réformation (1673).

Claude (klød), St., a town of France, department of the Jura, at the confluence of the Bienne and Tacon. It is the seat of a bishop, and has a handsome cathedral and communal college, and a fine promenade along the Bienne. It is celebrated for turnery, hardware, musical boxes, etc. Pop. 9024.

Claude Lorrainé (klaud, or klɔd, lor-rain'), a landscape painter whose real name was Claude Gellée, but who was called Lorrainé from the province where he was born in 1600. When twelve years old he went to live with his brother, an engraver in wood at Friburg, went from him to study under Godfrey Wants at Naples, and was afterwards employed at Rome by the painter Agostino Tassi, to grind his colors and do the household drudgery. On leaving Tassi he traveled in Italy, France and Germany, but settled in 1627 in Rome, where his works were greatly sought for and where he lived much at his ease until 1682, when he died of the gout. The principal galleries of Italy, France, England, Spain and Germany are adorned with his paintings, that on which he himself set the greatest value being the painting of a small wood belonging to the Villa Madama (Rome). He excelled in luminous atmospheric effects, of which he made loving and elaborate studies. His figure work, however, was inferior, and the figures in many of his paintings were supplied by Lauri and Francesco Allegrini. He made small copies of all his pictures in six books known as Libri di Verità (Books of Truth), which form a work of great value (usually called the Liber Veritatis), and much esteemed by students.

Claudianus (klasd-an'us), CLAUDIUS (commonly called Claudian), a Latin poet, native of Alexandria, lived the end of the fourth and beginning of the fifth century after Christ. under the Emperor Theodosius and his sons. He did much to recall to dying Rome the splendors of the Augustan literature, ranking considerably above any other of the later poets. Besides several panegyric poems on Honorius, Stilicho, and others, we possess two of his epic poems, the Rape of Proserpine, and an unfinished War of the Giants, eclogues, epigrams, and occasional poems.

Claudius (klod-us), often also called Clodius, the name of a distinguished Roman family of antiquity. See Appius Claudius.

Claudius, or, in full, TIBERIUS GERMANICUS, a Roman emperor, son of Claudius Drusus Nero Germanicus, a Roman emperor, son of Claudius Drusus Nero, stepson of Augustus and Antonia, the daughter of Augustus' sister; born at Lyons (10 B.C.). He lived in privacy, occupying himself with literature, the composition of a Roman history, and other works, until the murder of Caligula, when he was dragged from his hiding-place and proclaimed emperor (41 A.D.). The early years of his reign were marked by the restoration of the exiles, the embellishment of Rome, the addition of Mauritania to the Roman provinces, and successes in Germany and Britain. But later he became debauched, left the government to his wives, and in particular to Messalina, who with his freedmen committed the greatest enormities. He was poisoned by his fourth wife, Agrippina (mother of Nero), A.D. 54.

Claudius, MATTHIAS, a German poet, born in 1741 near Lißbeck. His works, which are on a great variety of subjects, are all of a popular character. any many of his songs have become a part of the national melodies. In later life he became a convert to religious mysticism, and died at Hamburg in 1815, after having filled several public offices.
Clausenburg. See Klausenburg.
Clausthal. See Klausthal.
Claustrophobia (klaus-trö-fö'biä), the fear of being shut in. Like agoraphobia it is a symptom of some cases of neurasthenia.
Clava'ria, a genus of fungi, some species of which are edible.
Claverhouse. See Graham, John.
Clavichord. See Clarichord.
Clavicle (klav'i-kl), the collar-bone a bone forming one of the elements of the shoulder girdle in vertebrate animals. In man and sundry quadrupeds there are two clavicles each joined at one end to the scapula or shoulder-bone, and at the other end of the sternum or breast-bone. In many quadrupeds the clavicles are absent or rudimentary, while in birds they are united in one piece.
Clavicorn Beetles (Clavicorne), a large family of coleopterous insects, distinguished by the club-shaped character of the antennae. Burying-beetles and bacon-beetles are typical examples, and there are aquatic as well as terrestrial species.
Clavijero (kla-vey-eró), Francisco Saverio, a Spanish historian, born at Vera Cruz, Mexico, about 1720. He was educated as an ecclesiastic, and resided thirty-six years in the provinces of New Spain, where he acquired the languages of the Mexicans and other indigenous nations, collected many of their traditions, and studied their historical paintings and other monuments of antiquity. On the suppression of the Jesuits by the Spanish government in 1767 he went to Italy, where he wrote his Memorias, and died in 1783.
Clay (klá), the name of various earths, which consist of hydrated silicate of aluminium, with small proportions of the silicates of iron, calcium, magnesia, potassium and sodium. All the varieties are characterised by being firmly coherent, weighty, compact, and hard when dry, but plastic when moist, smooth to touch, not readily disusable in water, but when mixed not readily subsiding in it. Their tenacity and ductility when moist and their hardness when dry have made them from the earliest times the materials of bricks, tiles, pottery, etc. Of the chief varieties porous-clay, kaolins, or china-clay, a white clay with occasional gray and yellow tones, is the purest. Potter's clay and pipe-clay, which are similar but less pure, are generally of a yellowish or grayish color, from the presence of iron. Fire-clay is a very refractory variety, always found lying immediately below the coal; it is used for making fire-bricks, crucibles, etc. Loam is the same substance mixed with sand, oxide of iron, and various other foreign ingredients. The boles, which are of a red or yellow color from the presence of oxide of iron, are distinguished by their conchoal fracture. The ochers are similar to the boles, containing more oxide of iron. Other varieties are fuller's earth, Tripoli, and bowlder-clay, the last a hard clay of a dark-brown color, with rounded masses of rock of all sizes embedded in it, the result of glacial action. The distinctive property of clays as ingredients of the soil is their power of absorbing ammonia and other gases and vapors generated on fertile and manured lands; indeed no soil will long remain fertile unless it has a fair proportion of clay in its composition. The best wheats are grown on calcareous clays, as also the finest fruits and flowers of the rosaceous kind. See the separate articles on the chief varieties.
Clay, Henry, statesman, born in Hanover Co., Virginia, in 1777. After acting as clerk in two or three state offices he commenced business in 1797 as a lawyer at Lexington, Kentucky. He soon became famous as a public speaker, and at the age of twenty-six was a member of the Kentucky legislature. In 1806 he was elected to the United States Senate; and in 1811 to the House of Representatives, where he was at once made speaker. In 1814 he proceeded to Europe and acted as one of the commissioners for adjusting the treaty of peace at Ghent between America and Great Britain. In 1825 he was appointed by President Adams to the diplomatic service. He was an unsuccessful candidate for the presidency in 1824, 1832 and 1844. He is best known for his endeavors to shut out European influences from America, and in connection with the Missouri Compromise of 1820, restricting slavery only to the states south of lat. 36° 30' n.; the Compromise Tariff of 1832, and a compromise in 1850 regarding the admission of California, and establishment of territorial government in New Mexico, Utah, etc. This postponed the slavery contest between the sections of the country for ten years. He died at Washington in 1852. Clay was unquestionably one of the greatest orators America has produced and a splendid party chief, idolised by his followers.
Claymore (klá'mör), formerly the large two-handed, double-
Clay-slate, in geology, a rock consisting of clay which has been hardened and otherwise changed, for the most part extremely thinly and often affording good roofing-slate. In color it varies from greenish or bluish gray to lead color.

Clayton, John Middleton, jurist, born in Sussex Co., Delaware, in 1796. He was educated at Yale, studied law, represented Delaware in the United States Senate 1845-49, and in 1849 was appointed Secretary of State by President Taylor. He negotiated an important treaty with England (see next article). He died in 1856.

Clayton-Bulwer Treaty, a treaty between Britain and the United States concluded in 1850, and having reference to the construction of a ship canal across Nicaragua. Both parties agreed not to erect fortifications there, nor to acquire any part of the Central American territory. This treaty was amended in 1901 by the Hay-Pauncefote treaty.

Cleane (kli-an-thes), a Greek Stoic philosopher, born at Assos about 300 B.C. He was a disciple of Zeno for nineteen years, and succeeded him in his school. He died of voluntary starvation at the age of eighty. Only some fragments of his works are extant.

Clear, Cape, a promontory 400 feet high at the southern extremity of Clear Island, and the most southern point of Ireland, about 7 1/2 miles south-east of Baltimore, County Cork.

Clearance of Vessels (kli-er'ana), the examination of vessels by the proper custom-house officers, and the giving of a certificate that the regulations have been duly complied with. Vessels are said to clear inwards or outwards according as they arrive or set sail.

Clearfield (kli'er-feld), a borough, county seat of Clearfield Co., Pennsylvania, on the w. branch of the Susquehanna, 40 miles N. of Altoona. It has products of brick, sewer-pipe, clay, coal, machinery, etc. Pop. 8000.

Clearing House (kli-er'ing), an institution connected with banks and railways. In the former case it is an establishment in large cities where there are many banks, to which each bank connected with it sends every day in order to have its business with the other banks adjusted. The sums due by and to the banks among themselves are here set off against each other and the balance paid or received. In London the balance used to be settled in cash or Bank of England notes. Now, however, the various banking companies and the clearing house itself have accounts at the Bank of England, and the balances are settled by transfers from one account to another. The clearing-house system was introduced by the London city private banking firms in 1775, but the joint-stock companies were in 1854 permitted to share its advantages, and it has been extended to the provincial banks through their London agents. The system has also been adopted in the larger provincial towns, and in New York and other large American cities it is in full operation. —The Railway Clearing House is an association instituted to allow the various companies to carry on their traffic over different lines. Thus a passenger can purchase one single ticket which will carry him over lines belonging to several companies, and parcels are conveyed through without additional booking. Fresh entries, and consequent delay, the claims of different companies being adjusted in the clearing house, which is maintained at the common expense.

Clearing-nut (Strychonos gos to rum), a small tree of the same genus as the nux vomica, common in Indian forests. Its seeds being rubbed on the inside of a vessel containing turbid water speedily precipitate the impurities, this result being due, it is said, to the clarifying effect of the albumen and casein they contain.

Clear'story. See Clerestory.

Cleator Moor (kli-e-ater mör), a town of England in Cumberland, 4 miles S. E. of Whitehaven, with coal-mines and iron furnaces. Pop. 8302.

Cleavage (kli-vij), the manner or direction in which substances regularly cleave or split. The regular structure of most crystallised bodies becomes manifest as soon as they are broken. Each fragment presents the form of a small polyhedron, and the very dust appears under the microscope an assemblage of minute solids, regularly terminated. The directions in which such bodies thus break up are called their planes of cleavage; and the cleaving is called basal, cubic, diagonal, or lateral (or peritomous), according as it is parallel to the base of a crystal, to the faces of a cube, to a diagonal plane, or to the lateral planes. In certain rocks again there is a tendency to split along planes which may coincide with the original plane of stratification, but which more frequently cross it at an angle. This tendency is the consequence of
readjustment by pressure and heat of the components of rocks, which is one of the phases of metamorphism.

Cleburne (klûr'burn), a town, capital of Johnson County, Texas, 53 miles s.w. of Dallas. It has large railroad shops, cotton compresses, cottonseed oil mills, etc. Pop. 15,000.

Checkheath (kîk'é-ton), a town of England, County York, West Riding, 10 miles w. of Leeds. The industries include the worsted and machine-card trades, machine making, engineering works, etc. Pop. 12,567.

Clef (kîf; French for key), in music, a sign placed on a line of a staff, and which determines the pitch of the staff and the name of the note on its lines. There are three clefs now in use: the treble or G clef, written on the second line; the mean or C clef, which may be placed on the first, second, third, or fourth lines; and the bass or F clef, seated on the fourth line. The mean clef is seldom used in vocal music except in part songs.

Cleg, a name applied to various insects, sects which are troublesome to horses, cattle, and even to man from their blood-sucking propensities. Such are the great horsefly, gadfly, or bogs (Tabanus cornutus, the Chrysops, exuviae, and the Hematopota pluvialis).

Clematis (klem'a-tis), a genus of woody climbing plants of the order Ranunculaceae. The most common species, C. Vitalba, virgin's bower or traveler's joy, is conspicuous in British hedges, first by its copious clusters of white blossoms, and afterwards by its feather-tailed silky tufts attached to the fruits. Among the exotic species in greatest favor with horticulturists are C. Jackmanni, which produces abundant panicles of small, white flowers, and has a fine perfume; C. ciriifoia, remarkable for its large, greenish-white flowers; and C. viticella, with its festooning branches adorned with pink or purple bells. C. Virginiana is an American species known by the same name as the English; C. Jackmanni, is a well-known garden hybrid. The fruit and leaves of the common clematis are acrid and vesicant.

Clemenceau (kle'män-sô'), Georges B. E., a French statesman, born in La Vendee in 1841. He dwelt for some years in the United States, returned to France as a physician, was elected to the National Assembly in 1871, but was ousted by the Commune. He afterwards became a member of the Chamber of Deputies and finally leader of the extreme left. He prevented France from joining England in the Egyptian campaign, and was an active supporter of the accused in the Dreyfus case. From 1883 to 1898 he exercised large influence in the Chamber and was looked upon as the maker of ministries. He became Premier and Minister of the Interior in this office in 1917. M. Clemenceau is a brilliant speaker and writer, not only on political subjects but also in the field of plays, novels and philosophical essays.

Clemens (klîm'enz), Samuel Langhorne, humorist, nor, generally known by his pseudonym 'Mark Twain,' born in Missouri in 1835. He worked for some time as a compositor in Philadelphia and New York, and then in 1851 learned the business of piloting on the Mississippi. He afterwards w. to Nevada and California, working in the mines and editing a newspaper in Virginia City. He subsequently engaged in lecturing, edited for a time a paper in Buffalo, and finally married and settled in Hartford, Connecticut, making this his home for the remainder of his life. Losing his fortune by the failure of a publishing firm into which he had entered, he made a tour of the world in 1886-97, giving lectures and readings, and paying the debts of the firm with the proceeds. He early made his mark as a humorist, and is undoubtedly regarded as the greatest humorist of the period. He died in 1910. His best known works of humor are The Jumping Frog, etc. (1867); Roughing It (1873); The Innocents Abroad (1869); Tom Sawyer (1876); A Tramp Abroad (1880); The Prince and the Pauper (1882); Life on the Mississippi (1883); and The Mysterious Island (1885).

Clement (kle'ment), properly Trus Flavius Clemens, commonly known as Clement of Alexandria, one of the most famous teachers of the Christian Church in the second and the beginning of the third century. He was converted from paganism to Christianity; and after traveling in Greece, Italy, and the East, became presbyter of the church of Alexandria, and teacher of the celebrated school in that city, in which place he succeeded Pantenus, his teacher, and was succeeded by Origen, his pupil. His chief remaining works are the Protrep-
Clement and Cleopatra

tikos, Paidagogos, and Strómatheia or Stró-
mata (latch-work); the first an exhorta-
tion to the Greeks to turn to the one
tue God, the second a work on Christ,
the last a collection of brief discussions in
chronology, philosophy, poetry, etc. Few
of the early Christians had so wide a
knowledge of Greek philosophy and liter-
ature and it is as a higher philosophic
scheme that he mainly discusses Chris-
tianity. He was regarded as a saint until
Benedict XIV struck him off the calendar.

Clement, CLEMENS ROMANUS, or Cle-
ment, a saint of Rome, one of the
-Apostolic Fathers,' is said to have been
the second or the third successor of Peter
as bishop of Rome, and the first of the
numerous popes named Clement. He is
perhaps identical with Consul Flavius
Clemens, put to death under Domitian
A.D. 95. Various writings are attributed
to him, but the only one that can be re-
garded as genuine is an Epistle to the
Corinthians, first obtained in a complete
form in 1676. It is of importance as ex-
hibiting the first attempt of the Church of
Rome to exercise ecclesiastical authority
over other churches.

Clement (kle-män), Jacques, the
assassin of Henry III of
France, born in 1567, became a Domin-
ican, and the fanatical tool of the Dukes
of Mayenne and Aumale, and the Duchess
Montpensier. Having fatally stabbed the
king, he was at once killed by the courtiers;
but the populace, instigated by the
priests, regarded him as a martyr;
and Pope Sixtus V even pronounced his
panegyric.

Clementi (klám-än'té), Muzio, pianist
and composer, born at
Rome in 1732. As early as his twelfth
year he wrote a successful mass for
four voices, and had made such progress
in the pianoforte that an Englishman,
Mr. Beckford, took him to England to
complete his studies. He was then en-
gaged as director of the orchestra of the
opera in London, and his fame having
rapidly increased he went in 1780 to
Paris, and in 1781 to Vienna, where he
played with Mozart before the emperor.
In 1784 he repeated his visit to Paris,
but after that remained in England till
1802, when he went back to the con-
tinent. He returned in 1810 to Eng-
land, where he settled down as superin-
tendent of one of the principal musical
establishments in London. He died in
1832, and was interred in Westminster
Abbey. His most important compositions
were his six sonatas for the pianoforte
and the great collection of studies known
as the Gradus ad Parnassum, a work
of high educative value. He represented
perhaps the highest point of technique
of his day, and his influence upon modern
execution has led to his being char-
acterized as 'the father of pianoforte
playing.'

Cleobulus (kle-ō-bůl'ús), one of the
seven wise men of ancient
Greece, a native of Lindus, who traveled
to Egypt to learn wisdom, and became
King of Rhodes. He flourished B.C.
560.

Cleomenes (kle-o'mé-nèz), the name
of three kings of Sparta,
the most distinguished of whom is
Cleomenes III, the last of the Heraclidae,
king from 236 to 220 B.C. He intended
to reform Sparta and to restore the
institutions of Lycurgus, and therefore put
to death the ephor, made a new
division of lands, introduced again the old
Spartan system of education, made his
brother his colleague, and extended the
franchise. He was defeated by the allied
Macedonians and Achaeans at the battle
of Sellasia (B.C. 222), and fled to Egypt,
where he was supported by Ptolemy
Euergetes, but was kept in confinement
by the succeeding Ptolemies. He escaped
and attempted to raise a revolt, but
failing, committed suicide.

Cleon (kle'ŏn), an Athenian dema-
gogue, originally a tanner by
trade. He was well known in public be-
fore the death of Pericles, and in 427
B.C. distinguished himself by the proposal
to put to death the adult males of the
revolted Mytileneans and sell the women
and children as slaves. In 423 he took
Sphacteria from the Spartans; but in
422 and 421 he was violently attacked
by Aristophanes in the Knights and in the
Wasp. He was sent, however, in
422 against Brasidas, but allowed him-
selves to be taken unawares, and was slain
while attempting to flee.

Cleopatra (klé-o-pâ'tra), a Greek
queen of Egypt, born B.C.
69, the eldest daughter of Ptolemy
Aulëtêa. When she was seventeen her
father died, leaving her joint-heir to the
throne with his eldest son Ptolemy, whom
she was to marry—such marriages being
common among the Ptolemies. Being
deprived of her part in the government
(B.C. 49), she won Caesar to her cause,
and was reinstated by his influence. In
a second disturbance Ptolemy lost his life
and Caesar proclaimed Cleopatra Queen
of Egypt; though she was compelled to take
her brother the younger Ptolemy, then
eleven years old, as husband and colleague.
Caeasar continued some time at Cleopatra's
court, had a son by her named Caesarion
Cleopatra's Needles

(afterwards put to death by Augustus), and gave her a magnificent reception when she subsequently visited him at Rome. By poisoning her brother she remained sole possessor of the regal power, took part in the triumvir in the civil war at Rome, and after the battle of Philippi sailed to join Antony at Tarsus. Their meeting was celebrated by splendid festivals; she accompanied him to Tyre, and was followed by him on her return to Egypt. After his conquest of Armenia he again returned to her and made his three sons by her, and also Cesarion, kings. On the commencement of the war between Augustus and Antony the latter lost a whole year in festivals and amusements with Cleopatra at Ephesius, Samos, and Athens, and when at last the fleets met at Actium, Cleopatra suddenly took to flight, with all her ships, and Antony, as if under the influence of frenzy, immediately followed her. They fled to Egypt, and declared to Augustus that if Egypt were left to Cleopatra's children they would thenceforth live in retirement. Augustus, however, demanded Antony's death and advanced on Alexandria. Believing Cleopatra who had taken refuge in her mausoleum, to be treacherous and dead, Antony threw himself on his sword, and shortly afterwards Cleopatra killed herself by applying an asp to her arm to escape the ignominy of being led in a Roman triumph (B.C. 30). With her the dynasty of the Ptolemies ended.

Cleopatra's Needles, the name given to two Egyptian obelisks, formerly at Alexandria, but one of which is now in London, the other in New York. They are made of the rose-red granite of Syene, and were originally erected by the Egyptian king Thothmes III in front of the great temple of Heliopolis, the On of the Scriptures, where Moses was born and brought up. They were taken to Alexandria shortly before the commencement of the Christian era, and after the death of Cleopatra, but possibly in pursuance of a design originated by her. The London obelisk, which stands on the Thames embankment, was presented to the British government in 1820, but was long left uncared for. In 1877-78, however, it was brought to England by the private munificence of Sir Erasmus Wilson, and erected in its place at a cost of some $50,000. The New York obelisk was presented to the United States by the Khedive of Egypt, and was set up in the Central Park in 1881. Each is about 70 feet high and inscribed with numerous hieroglyphics.

Clepsydra (kle'psi-drá), or WATER-CLOCK, an ancient instru-

ment for the measurement of time by the escape of water from a vessel through an orifice. In the older ones the hours were estimated simply by the sinking of the surface of the water, in others the water surface is connected with a dial-plate and hand by a system of weights and floats. In the accompanying figure the float A is attached to the end of a chain which is wound round the spindle B, and has at its other extremity the counter-weight C. On water being admitted from the cistern D the float rises, the counter-weight descends and turns the spindle, which again turns the hand that marks the hours.

Clerestory (kler'stö-ri), or CLEAN-STORY, the upper part of the nave in Gothic churches, above the triforium where a triforium is present,
Clergy (klėr'ji; from Greek klēros, a lot, through the Latin, Clericus and Low Latin clericia), the body of ecclesiastical persons, in contradistinction to the laity. The Greek word came into use to indicate that this class was to be considered as the particular inherantance and property of God, or else, which is more probable, because it was customary to select by lot those set apart for special religious functions. At first there was no strongly-marked distinction between clergy and laity, but the former soon drew apart, consisting, after the apostolic age, of bishops, priests, and deacons, and in the fourth century of many additional inferior orders, such as sub-deacons, acolytes, etc. With the increased complexity of the hierarchy there was a steady accretion of privileges until the burden of these became intolerable to the laity. In England few of these now remain, the clergy being generally regarded as invested with no inherent claim to regard. A clergyman cannot, however, be compelled to serve as jurymen, he is exempted from arrest while celebrating divine worship, from acting as bailiff, constable, or like office, from attendance at a court leet; but on the other hand he cannot accept a seat in the House of Commons, engage in trade or farm lands of more than eighty acres without his bishop's consent. The Episcopalians recognise three classes of clergy—bishops, priests and deacons; and generally hold the doctrine of the apostolic succession. Large numbers of Protestants, however, reject this dogma, and believe in the ministry of only one order. The Catholic clergyman, according to the doctrine of the Roman Catholic Church, is endowed in his spiritual character with a supernatural power, which distinguishes him essentially from the layman. Regular clergy are those who live according to monastic rule, secular clergy those who do not.

Clergy, Benefit of. See Benefit of Clergy.

Clergy Pensions have been adopted recently by many of the large denominations in the United States. The plans for establishing funds vary, but in general they depend on contributions from the clergy, supplemented by endowments and gifts from local church organizations.

Clerk, John, of Eldin, near Edingburgh, born 1728; died 1812, a naval tactician, for whom is claimed the invention of the maneuver of breaking the enemy's line.

Clerk, Parish, a lay officer of the Church of England, appointed ers. It is his duty to lead the responses and assist in public worship, at funerals, etc.

Clermont-de-Lodève (klār-mɔ̃-də lo-ðe-və) a town of France, dep. of Hérault, 23 miles west by north of Montpellier. Pop. 5187.

Clermont-Ferrand (klār-mɔ̃-fɛ̃-ʁaʁ), a town of France, capital of department Puy-de-Dôme, on a hill at the foot of the volcanic range in which the summit of the Puy is conspicuous. It possessed considerable importance under the Romans, and became a bishop's see at a very early period. It is an antique and gloomy town built of dark volcanic stone. The most remarkable edifices are the cathedral, a huge, irregular, gloomy pile, and the Church of Notre Dame, founded in 580. It is visited for its mineral waters and has various manufactures, including chemicals, ropes, hats, etc. Pop. 44,113.

Clermont-Tonnerre (klär-mɔ̃-ton-nəʁ), the name of a noble French family of whom one of the most celebrated was Count Stanislas, born in 1747. At the breaking out of the revolution of 1789 he endeavored to promote the establishment of a constitutional monarchy, founding with Malouet the Monarchical Club, and with Fontanes the Journal des Impartiaux. In 1791 he was charged with assisting the king in his attempt to escape, but was set free on swearing fidelity to the assembly. In 1792, however, he was murdered by the mob at the house of the Countess de Brissac.

Cleveland (kləv'land), a city, the largest of Ohio in population, on the south shore of Lake Erie, 120 miles northeast from Cincinnati. It is the county seat of Cuyahoga Co., and is divided into two parts by the river Cuyahoga. It is beautifully situated, chiefly on an elevated plain above the lake, and for the most part handsomely laid out with streets crossing each other at right angles. The abundance of trees gives it the name of 'The Forest City.' The Cuyahoga is spanned by several bridges, and in particular by the Viaduct, an elevated street and bridge erected at great expense. Two other viaducts cross the river valley, one of them 100 feet high and 5061 long. The city has an area
The dwellings of a race of Indians known as "Cliff Dwellers." The dwellings were built high in the cliffs, often two or more stories high and having many rooms, and are almost inaccessible.
Cleveland

of 33 sq. miles extending 10 miles along the lake front and 6 miles in depth along the river. In the center of the shopping district is the public square, 10 acres in extent, containing a fine soldiers' monument and a statue of Moses Cleveland, after whom the city is named. It is surrounded by public buildings—the custom house, post office, courthouse, churches, stores, etc. From the square extends Euclid Avenue, with the reputation of being the most beautiful street in the world. It is lined with stately mansions on a gentle eminence several hundred feet back from the street, with before them a park-like stretch of shade trees, lawns, flower-beds and winding walks. It extends to Wade Park, 4½ miles out. A mile farther is the beautiful Lake View Cemetery, in which is a monument to President Garfield. The interesting edifice of the city is a large music hall, an excellent public library, the Western Reserve University, the Case School of Applied Sciences and various others. The chief industries of Cleveland are its various manufactures of iron, the refining of petroleum, wood-working factories and a great variety of others. It is an important railroad center, all the trunk lines between New York and Chicago running through or near it, and other lines terminating in the city. Its lake commerce is very large, being the greatest receiving point for iron-ore in America, if not in the world, one of the largest lumber markets in the United States, an important coal market, and very closely associated with the petroleum industry of this country. It is also one of the chief shipbuilding centers of the country. Slaughtering and meat-packing are also industries of leading importance. The position of Cleveland on Lake Erie brings it a very large lake commerce, which is greatly added to by its rail connections. Founded in 1796, and with a population of 10,966 in 1830, it had in 1914, 639,431.

Cleveland, a town, capital of Bradley Co., Tennessee, 29 miles N.E. of Chattanooga. It has iron foundries, woolen mills, a paper mill, breweries and other mills; also flour mills and canning factory. Pop. 5549.

Cleveland, Stephen Grover, 22d and 24th president of the United States, born at Caldwell, New Jersey, in 1837; died in 1908. He settled in Buffalo, and having acquired an excellent position as a lawyer was elected mayor in 1881. His record for honesty and efficiency as mayor brought him in 1882 the Democratic nomination for governor of New York, followed by his election; and in 1884 he was nominated for the presidency by the Democratic national convention at Chicago, and was elected on November 4. Civil service reform and tariff reform were advocated by him during his tenure of office, which came to an end in 1889. In 1892 he was again placed in nomination for the presidency by the Democratic party and was a second time elected, his being the first instance of a return to the presidency after an interval of private life. President Cleveland's unflinching honesty and his diligent effort to promote the best interests of the country gave him a high place in public estimation.

Cleves (klēvz; in German Klève), formerly the capital of the dukedom of Cleves, a town in Rhenish Prussia, 70 miles N.W. of Cologne, about a league from the Rhine, with which it is connected by a canal. It has manufactures of tobacco, leather, and cottons, and a mineral spring with baths, etc. Pop. 14,084.

Clew Bay, of Ireland, County Mayo, a bay on the west coast containing a vast number of islets, many of them fertile and cultivated.

Cliché (klē'šā), an electrotype or a stereotype cast from an engraving, especially from a woodcut.

Clichy (klē'šē), a town about 4 miles N.W. of Paris, of which it now forms a suburb. Pop. 41,516.

Click-bettle. See Blister.

Clients (klī'ents), in ancient Rome, were citizens of the lower ranks who chose a patron from the higher classes, whose duty it was to advise and assist them, particularly in legal cases, and in general to protect them. The clients, on the other hand, were obliged to portion the daughters of the patron if he had not sufficient fortune; to follow him to the wars; to sue for him if he was candidate for an office, etc. This relation continued till the time of the emperors. The term is now applied to one who engages the services of a lawyer.

Cliff-dwellers, a race or family of Indians, now extinct or varied in habit, who formerly dwelt in recesses of cliffs in the valleys of the Rio Grande and Rio Colorado and its tributaries. Their dwelling-places were so far up the sides of steep cliffs as to be almost inaccessible, many of them being skilfully built of stones in the rock openings. The stones are rudely dressed and laid in clay mortar. A coat of clay being spread on the walls outside and often one of plaster on the
inside. Many of the houses are small, but where large recesses existed communal dwellings of many rooms were built, not infrequently two, and at times three, stories in height. Many relics of the inhabitants have been found in these edifices, which are supposed to have been built as places of refuge from enemies. How these people lived we cannot tell, as the region is now rainless and necessarily destitute of food plants. It must have been less barren in former times.

Clifford (cliffrd), the name of a very old English family, several members of which have played an important part in history. The founder of the family, Walter, son of Richard Fitz-Ponce, a Norman baron, acquired the castle of Clifford, in Herefordshire, under Henry II, and hence took the name of Clifford. In 1523 the Cliffords became Earls of Cumberland, but in 1643 this title became extinct.

Clifford, William Kingdon, an English mathematician, born in 1845; educated at King's College, London, and at Trinity College, Cambridge, where he was graduated as second wrangler. In 1871 he was appointed professor of applied mathematics at University College, London. In 1876 his health gave way, but was restored by a summer spent in Spain and Algiers, though not permanently, for two years later he again broke down, and died soon afterwards at Madeira, March 3, 1879. In mathematics his teaching and writings are regarded as marking an epoch in the history of the science in England. His Canonical Dissection of a Riemann's Surface and his theory of Biquadrate, are well known works.

Clifton (cliffrn), a handsome residential suburb of Bristol, England, with the limits of which it is included. A suspension bridge here crosses the river Avon 246 feet above its bed, uniting the counties of Gloucester and Somerset. There is here a tepid mineral spring which formerly attracted visitors. Pop. 44,400.

Clifton Forge, a city of Allegheny Co., Virginia, 35 miles E. of White Sulphur Springs. It has iron mining and large railway industries. Pop. 5748.

Climacteric (klin-mak'terik; annus climactericus), according to an old theory, a critical period in human life in which some great alteration is supposed to take place in the constitution. The first climacteric is, according to some, the seventh year; the others are multiples of the first, as 14, 21, etc.; 63 is called the grand climacteric.

Climate (climat), the character of the weather or atmospheric phenomena peculiar to every country as respects heat and cold, humidity and dryness, the direction and force of the prevailing winds, the alteration of the seasons, etc., especially as such conditions affect animal and vegetable life. In general, geographical latitude is the principal circumstance to be taken into view in considering the climate of a country, and thus the torrid, temperate, and frigid zones may each be said roughly to have a climate of its own. The highest degree of heat is found in the equatorial regions, and the lowest, or the greatest degree of cold, at the poles. In the former the temperature continues practically the same all the year round, though there may be alternating rainy seasons and dry seasons. The variations in temperature are very considerable in the temperate zones, and increase as we approach the polar circles. The heat of the higher latitudes, especially around 59° or 60°, is, in July, greater than that of countries 10° nearer the equator, and at Torne, in Lapland, where the sun's rays are very oblique even in summer, the heat is sometimes equal to that of the torrid zone, because the sun is almost always above the horizon. But even in the equatorial regions, and still more in intermediate regions, the temperature is affected by local configuration and circumstances. In the deserts of Africa, for instance, owing to the exceptional radiating power of sandy plains and the absence of aqueous vapor in the atmosphere, the heat is excessive; in the corresponding latitudes of South America the mountainous character of the country makes the climate more moderate. Altitude above the sea indeed has everywhere the same effect as removal to a greater distance from the equator, and thus in the Andes we may have a tropical climate at sea-level and an Arctic one on the mountain summits. The winds to which a country is most exposed by its situation have also a great influence on the climate. In the northern hemisphere if north and east winds blow frequently in any region it will be colder, the latitude being the same, than another which is often swept by milder breezes from the south and west. The climate of Southern Europe, for instance, is decidedly affected by the warm south winds which blow from the hot deserts of Africa. The greater or lesser extent of coast-line a country
Climax possesses in proportion to its area has a decided influence on the climate. The almost unvarying temperature of the ocean equalizes in some degree the periodic distribution of heat among the different seasons of the year, and the proximity of a great mass of water moderates, by its action on the atmosphere, the heat of summer and the cold of winter. Hence the more equable temperature of islands and coasts as compared with that of places far inland, and hence the terms insular climate and continental climate. The British Isles, Tasmania, and New Zealand enjoy a mild or insular climate as compared with, say, Central Russia or Central Asia. Thus it happens that London has a milder winter and a cooler summer than Paris, though the latter is nearly 3° farther south. Similarly, though Warsaw and Amsterdam are almost in the same latitude, the mean annual temperature of the former is 46.48° while it reaches at the latter 54.4° Fahr. The proximity of large masses of water involves also the presence of much aqueous vapor in the atmosphere, which may be condensed in abundant rains so as to greatly influence the plant-life of a country. Direction of mountain chains, set of ocean currents, and nature of soil are other modifying elements. In exhibiting graphically the chief climate facts of a region various methods may be adopted, but in all the use of isothermal lines is one of the most instructive features. These are lines drawn on a map or chart connecting those places which have the same mean annual temperature or same mean summer and mean winter temperature. In this way we may divide the earth into zones of temperature which by no means coincide with the limits of the zones into which the earth is astronomically divided, and when compared with these on a map show interesting and instructive differences. Geology teaches that vast changes have taken place in the climate of most if not of all countries, the causes of which are not fully understood.

Climax (kl'maks; Greek, klimax, a ladder or stairs), a rhetorical figure in which a series of propositions or objects are presented in such a way that the least impressive comes first, and there is a regular gradation from this to the most impressive or final.

Climbing Perch (klim'ing; Anabas ascendens), a singular fish, type of the family Anabasidae, remarkable for having the pharyngeal bones enlarged and modified into a series of cells and duplications so that they can retain sufficient water to keep the gills moist and enable the fish to live out of water six days. The climbing perch of India proceeds long distances over land in search of water when the pools in which it has been living have dried up. It is also credited with a power of climbing the rough stems of palm-trees, but as to this latter point authorities disagree.

Climbing Plants, are plants of weak stems which naturally seek support from their surroundings to rise from the ground. Some are twining plants, rising by winding themselves or their tendrils (cirri) round the trunks of trees, etc. Such are the honeysuckle and scarlet runner. Others, like the ivy, attach themselves by small roots developed from the stem as they ascend. Some in climbing always twine spirally from right to left, others again always take the opposite direction.

Clincher-built, (klin'er-built), (klin'asher, klin'ker), a term in shipbuilding applied to that method whereby the plants are so arranged that the lower edge of the plank above overlies the upper edge of that below it.

Clinical (klin'kal) Medicine, (from the Greek klinē, a bed), that department of medicine which teaches how to investigate, at the bedside of the sick, the nature of diseases, to note their course and termination, and to study the effects of the various modes of treatment to which they are subjected. A clinical lecture is the instruction which the teacher gives at the bedside of the patient, and a clinical the examination of a patient before students by a doctor, who remarks on the nature of the disease and the particular case.

Clinton (klin'tun), a city, capital of Dewitt Co., Illinois, 22 miles s. of Bloomington. It has bridge and ironworks, etc. Pop. 5166.

Clinton, a city of Vermillion Co., Indiana, on the Wabash River, 15 miles N. of Terre Haute. There are coal mines in the vicinity. Pop. 9000.

Clinton, a city, capital of Clinton Co., Iowa, on the Mississippi River; 42 miles above Davenport, and 138 miles by railroad w. of Chicago. The river is crossed by an iron bridge, about 4000 feet long and costing $600,000. The cars of three lines of railroads pass over
the bridge, making the city a considerable railroad center. It contains large repair shops, foundries, sash and blind factories, sawmills, etc. Pop. 23,577.

Clinton, a city of Worcester Co., Massachusetts. 45 miles N.W. of Boston. It has extensive manufactures of carpets, gingham cloths and wire cloth. Pop. 13,075.

Clinton, a city, county seat of Henry Co., Missouri. 85 miles S.E. of Kansas City. It has flour and cornmeal mills, iron works, etc. Pop. 5,600.

Clinton, De Witt, lawyer and statesman, born in Orange Co., New York, in 1760; died in 1828. Winning eminence in Democratic politics, he was elected United States Senator in 1801. Mayor of New York in 1803, lieutenant-governor of that state in 1811 and governor in 1817. It was due to his influence that the Erie canal was begun and he lived to see it completed and the prosperity which it produced.

Clinton, Sir Henry, a British general who served in the Indian war, and was sent to America in 1775 with the rank of major-general, where he distinguished himself in the Battle of Bunker Hill. He died in 1795.

Clio (klī′ō), a genus of pteropodous molluscs of which one species, O. borealis, is extremely abundant in the northern seas, constituting the principal part of the food of the whale, and hence often called whale's food.

Clipper (klip′er), a modern built of sailing ship, having a long, sharp bow, the greatest beam abaft the center, and a great rate of speed.

Clitheroe (klī′th-rō), a municipal borough, England, County Lancaster, 28 miles N.N.W. of Manchester, giving name to a parl. div. of the county. It is the seat of some large cotton-spinning and weaving establishments, paper manufactories, foundries, and large print-works. Pop. 11,414.

Clitoria (klī-tor′i-a), a genus of tropical leguminous plants, mostly climbers, one of which, C. Ternata, with beautiful blue flowers, has long been grown in England.

Clitus (klī′tēs), the foster-brother of Alexander the Great. He saved Alexander's life at the Granicus, but was afterwards slain by him in a fit of intoxication, an act for which Alexander always showed the bitterest remorse.

Clive (klī′v), Robert, Lord Clive and Baron of Plassey, English general and statesman, was born in 1725 in Shropshire. In his nineteenth year he entered the East India Company's service at Madras as a writer, but in 1747 quitted the civil for the military service. It was a perilous time for British interests in India. The French under Dupleix had gained important privileges and large grants of territory, and in alliance with Chundra Sahib, Nabob of Arcot were threatening the very existence of the British establishments. In 1751 Clive, who had already a reputation for skill and courage, marched on the large city of Arcot with 200 British troops and 300 Sepoys, and took it, although strongly garrisoned, without a blow, withstood a siege by Chundra Sahib for nearly two months, and at last routed the enemy, took possession of important posts, and returned to Madras completely victorious. In 1753 he sailed to England to recover his health, and was received with much honor. Two years later he was back in India, in his governorship of St. David's, from which he was soon summoned to command the expedition sent to Bengal, where the Nabob Suraj-ud-Dowlah had attacked the British, destroyed their factories, taken Calcutta, and suffocated over 120 of his prisoners in the Black Hole. Clive soon took possession of Calcutta and brought Suraj-ud-Dowlah to terms, but having no trust in the loyal intentions of the nabob he resolved to dethrone him. With the help of Meer Jaffier, one of the nabob's officers, he effected his purpose, and in the battle of Plassey completely overthrew Suraj-ud-Dowlah's forces. Meer Jaffier now became the new nabob, and Clive was made Governor of Calcutta. Here he was equally successful against the encroachments of the Dutch, defeating their forces both by sea and
Clivers

Clive now visited England again, where his success was highly applauded without much inquiry as to the means; and in 1761 he was raised to the Irish peerage with the title of Lord Clive, Baron of Plassey. In 1764 fresh troubles in India brought him back, but now as President of Bengal, with command of the troops there. Before his arrival, however, Major Adams had already defeated the Nabob of Oude, and Lord Clive had only the arranging of the treaty by which the company obtained the disposal of all the revenues of Bengal, Bahar, and Orissa. In 1767 he finally returned to England. In 1773 a motion supported by the minister was made in the House of Commons that 'the Clive had abused the powers with which he was entrusted,' but it was rejected for a resolution that 'Lord Clive had rendered great and meritorious services to his country.' His health was by this time broken, and in one of his habitual fits of melancholy he put an end to his life, November 22, 1774. Clive was of a reserved temper, although among his intimate friends he could be lively and pleasant. He was always self-directed and secret in his decisions, but inspired those under his command with the utmost confidence, owing to his bravery and presence of mind. In private life he was kind and exceedingly liberal. He married the sister of the astronomer-royal Dr. Maskelyne, by whom he had two sons and three daughters.

Clivers. See Cleavers.

Cloaca (klo-ak-a), an underground conduit for drainage, of which the oldest known example is the Cloaca Maxima, or great sewer at Rome, built some 2500 years ago. A portion of it is still standing. It is about 13 feet high and as many wide.—The term is also applied to the excrementory cavity in birds, reptiles, snakes, and lower mammals (Monotremata), formed by the extremity of the intestinal canal, and conveying forwards the feces, urine, etc.

Clock, an instrument for measuring time and indicating hours, minutes, and usually seconds, by means of hands moving, and differing from a watch mainly in having the movement of its machinery regulated by a pendulum, and in not being portable. The largest and most typical clocks also differ in having their machinery set in motion by means of a falling weight or weights, the watch wheel work being moved by the force of an uncoupling spring; but many clocks also have a spring setting their works in motion. The use of a horologium, or hour-teller, was common even among the ancients, but their timepieces were nothing else than sun-dials, hour-glasses, and clepsydras. In the earlier half of our era we have accounts of several attempts at clock construction: that of Boethius in the 6th century, the clock sent by Harun al Rashid to Charlemagne in 800, that made by Pacinicus, Archdeacon of Verona, in the 9th century, and that of Pope Sylvester II in the 10th century. It is doubtful, however, if any of these was a wheel-and-weight clock, and it is probably to the monks that we owe the invention of clocks set in motion by wheels and weights. In the 12th century clocks were made use of in the monasteries, which announced the end of every hour by the sound of a bell put in motion by means of wheels. From this time forward the expression, the clock struck, is often met with. The hand for marking the time is also made mention of. In the 14th century there are stronger traces of the present system of clockwork. Dante particularly mentions clocks. Richard, Abbot of St. Albans in England, made a clock in 1326 such as had never been heard of till then. It not only indicated the course of the sun and moon, but also the ebb and flood tide. Large clocks on steeples likewise were first made use of in the 14th century. Watches are a much later invention, although they have likewise been said to have been invented as early as the 14th century. A celebrated clock, the construction of which is well known, was set up in Paris for Charles V in 1379, the maker being Henry de Vick, a German. It probably formed a model on which clocks were constructed for nearly 300 years, and until Huyghens applied the pendulum to clockwork as the regulating power about 1657. The secret advantage of the pendulum is that the beats or oscillations of a pendulum all occupy substantially the same time (the time depending on its length), hence its utility in imparting regularity to a time-measurer. The mechanism by which comparative regularity was previously attained, though ingenious and simple, was far less perfect; and the first pendulum escapement, that is, the contrivance by which the pendulum was connected with the clock-work, was also less perfect than others subsequently introduced, especially Graham's dead-beat escapement, invented in 1700. (See Escape-ment.) In a watch the balance-wheel
and spring serve the same purpose as the pendulum, and the honor of being the inventor of the balance-spring was contested between Huyghens and the English philosopher Dr. Hooke. Various improvements followed, such as the chronometer escapement, and the addition of a compensation adjustment, by which two metals having unequal rates of expansion and contraction under variations of temperature are combined in the pendulum or the balance-wheel, so that, each metal counteracting the other, the vibrations are isochronous, under any change of temperature. This arrangement was perfected by Harrison in 1728, and is especially useful in navigation. The accompanying cut shows the going part of a clock in its simplest form. A is a drum on which is fixed the cord P, to which the weight is attached, the drum having a projecting axis with a square end to receive the key in winding up the clock. The drum is connected with N, the first wheel of the train, by means of the ratchet-wheel R, and catch K, which allow the clock to be wound up without turning B. The wheel B drives the pinion C and the wheel D, the latter called the minute wheel; and there is a similar connection between D, E, F, G, and H. The last is named the escapement-wheel, and into its teeth work the pallets of the anchor K, which swings backward and forward with the pendulum. The wheel D turns once in an hour, the wheel H, 60 times (the pendulum marking seconds), and by means of other wheels, and one axis working inside another, the clock hands and dial show hours, minutes, and seconds. The striking machinery of a clock, or that by which hours, quarters, etc., are sounded, is no necessary part of a clock, and forms indeed a separate portion of the works, usually driven by a separate falling weight, and coming into play at certain times, when there is a temporary connection between the two portions of the clock machinery. See also Watch.

Clodius (klō'dē-us), Publius, a notorious public character of ancient Rome, son of Appius Claudius Pulcher, who was consul about 79 B.C. He served in the third Mithridatic war under Sulla, and filled different high posts in the provinces of the East, where his turbulence was the cause of serious disturbances. Returning to Rome, he became a popular demagogue, was elected tribune in 59 B.C., was the means of procuring Cicero's banishment, and continued to be a ringleader in all the seditions of the time till killed in an encounter between his followers and those of Titus Annius Milo. One of Cicero's orations was written in defense of Milo.

Clog-almanac, an almanac or calendar, made by cutting notches or characters on analog or block, generally of wood. The block had generally four sides, three months for each edge. The number of days is marked by notches, while various symbols are used to denote saints' days, the golden number, etc.

Clogher (klóg'ger), a village and old episcopal see of Ireland in County Tyrone, with cathedral and bishop's palace. The see, of which St. Patrick is said to have been the first bishop, is united with that of Armagh. Pop. about 250.

Cloisonné (klé-son'. See Enamel.

Cloister (klois'tér), an arched way or gallery, often forming part of certain portions of monastic and collegiate buildings, usually having a wall of the building on one side, and an open colonnade, or a series of windows with piers and columns adjoining an interior yard or court on the other side. Such galleries were originally intended as places of exercise and recreation, the persons using them being under cover. The term is also used as equivalent to convent or monastery.

Clonakilty (klo-na-kilt'), a sea port of Ireland, County Cork, with a considerable trade in grain. Pop. 3676.

Clonmel (kloon'meł), a municipal and until 1888, parliamentary borough of Ireland, partly in County Waterford and partly in County Tipperary. It lies in a beautiful valley on both sides of, and on two islands in, the river Suir, and has a jail, barracks, courthouse, etc.; carries on tanning, brewing, and flour-milling, and has a trade in agricultural produce. It was the birthplace of Sterne. Pop. about 10,200.
Clontarf (klon'turf), a town of Ireland, County Dublin, on the northern shore of Dublin Bay. It is a much-frequented watering-place and is historically interesting as the scene of Brian Boruimhe's victory over the Danes in 1014. Pop. 5105.

Cloots (klots), JEAN BAPTISTE, BARON, a singular character well known during the revolutionary scenes in France under the appellation of Aascharis Cloots. He was born at Cleves in 1755, and was brought up at Paris. He became possessed of a considerable fortune, which he partly dissipated in fantastic schemes for the union of all peoples and races in one democratic brotherhood. The outbreak of the French revolution afforded him the kind of career he sought. In 1790, Cloots presented himself at the bar of the national assembly, accompanied by a considerable number of enthusiastic followers of various nationalities, English, German, Italian, Spanish, Arabian—or Parisians dressed up as such. He described himself as the orator of the human race, and demanded the right of confederation, which was granted him. His enthusiasm for radical reforms, his hate of Christianity and of royalty, and a gift of 12,000 livres on behalf of the national defense, gained him in Sept., 1792, election to the national convention, in which he voted for the death of Louis XVI in the name of the human race. But becoming an object of suspicion to Robespierre, he was arrested and guillotined March 24, 1794. He met his fate with great indifference.

Cloquet (klo'kwet), a village of Carlton Co., Minnesota, 30 miles w. of Duluth. It has lumber and paper mills, etc. Pop. 7031.

Close Corporation, a corporation which fills up its own vacancies, the election of members not being open to the public.

Close-hauled, a ship when the general arrangement or trim of the sails is such as to enable her to sail as nearly against the wind as possible.

Closure (klo'shr), a rule in British parliamentary procedure, adopted in 1887 by which, at any time after a question has been proposed, a motion may be made with the speaker's or chairman's consent 'That the question be now put,' when the motion is immediately put and decided without debate or amendment. So also if a clause of a bill is under debate a motion that it stand or be added may be put and carried in the same way. The motion must be supported by more than 100 members and opposed by less than 40, or have the support of 200 members. The introduction of the closure was intended to prevent debates from being too long continued.

Cloth, ing threads or fibers of animal or vegetable origin, as wool, hair, cotton, flax, hemp, etc. Cloth may also be made by felting as well as by weaving. See Cotton, Woolen, Silk, etc.

Clothes-moth, several moths of the genus Tinea, whose larvae are destructive to woolen fabrics, feathers, furs, etc., upon which they feed. Using at the same time the material for the construction of the cases in which they assume the chrysalis state.

Clothing (klô'thing), the clothes or dress, that is, the artificial coverings, collectively, which people wear. Nothing is more necessary to comfort than that the body should be kept in nearly a uniform temperature, thus preventing the disturbance of the important excretory functions of the skin by the influence of heat or cold. A considerable degree of cold often lays the foundation of the whole host of chronic diseases, foremost among which are found scrofula and consumption. The only kind of dress that can afford the protection required by the changes of temperature to which the cooler or temperate climates are liable is woolen. Those who would receive the advantage which the wearing of wool is capable of affording must wear it next to the skin; for it is in this situation only that its health-preserving power can be felt. The great advantages of woolen cloth are briefly these:—the readiness with which it allows the evaporation of sweat through its texture; its power of preserving the sensation of warmth to the skin under all circumstances; the slowness with which it conducts heat; the softness, lightness, and pliability of its texture. Cotton cloth, though it differs but little from linen, approaches nearer to the nature of woolen, and on that account must be esteemed as the next best substance of which clothing may be made. Silk is the next in point of excellence, but it is very inferior to cotton in every respect. Linen possesses the contrary of most of the properties enumerated as excellencies in woolen. It retains the matter of perspiration in its texture, and it conducts heat too rapidly.

Clotho (klôthô), in Greek mythology, one of the three Fates of Parcae whose duty it was to spin the thread of life, while Lachesis assigned the lot, and Atropos, the Inflexible, cut the
Cloture. The three appear in Hesiod as the daughters of Zeus and Themis. In art Clotho was represented by the spindle, Lachesis by the globe, and Atropos by a sundial.

Cloture, the closing of debate in a legislative body. The lack of any provision for this in the Senate of the United States has often led to interminable debates, and in certain cases to the defeat of important bills with majorities in their favor, through being talked to death by a minority. On March 8, 1917, a bill was passed establishing the right to close debate under certain conditions. It provided that in two days after notice in writing has been given by 16 Senators the closing of debate on a particular bill shall be called for, and, if settled in the affirmative by a two-thirds vote, that bill shall be held before the Senate until its final disposition, each Senator being limited to one hour's debate in all on the bill, with its amendments and motions arising from it. Also after the two-thirds vote no amendment shall be offered without unanimous consent.

Cloud, a collection of visible vapor or watery particles suspended in the atmosphere at some altitude. They differ from fogs only by their height and less degree of transparency. The average height of clouds is calculated to be 2 1/2 miles, thin and light clouds being much higher than the highest mountains, while conical heaps, resting on a flattish base; called also summer-cloud. Under ordinary circumstances these clouds accompany fine weather, especially in the heat of summer, and accompany a brisk wind. Each cumulus cloud is at the top of a column of ascending warm, aqueous vapor. They attain their greatest size early in the afternoon and gradually decrease towards sunset. The stratus, so named from its spreading out uniformly in a horizontal layer, which receives all its augmentations of volume from below. It belongs essentially to the night, and is frequently seen on calm summer evenings after sunset ascending from the lower to the higher grounds, and dispersing in the form of a cumulus at sunrise. These three primary forms of clouds are subdivided as follows:—1. The cirro-cumulus, composed of a collection of cirrus, and spreading itself fre-
Cloud

Clouds frequently over the sky in the form of beds of delicate snowflakes. 2. The cirrus-"stratus or "wan-cloud, so called from its being generally seen slowly sinking, and in a state of transformation; when seen in the distance, a collection of these clouds suggests the resemblance of a shoal of fish, and the sky, when thickly mottled with them, is called in popular language a "mackerel sky. 3. The cumulo-"stratus or "twin-cloud, one of the grandest and most beautiful of clouds, and consisting of a collection of large, feathery clouds overhanging a flat stratum or base. 4. The nimbus, cumulo-"cirrus-"stratus, or "rain-cloud, recognizable, according to Mr. Howard, by its fibrous border and uniformly gray aspect. It is an especially leading-out of a crown of cirrus and passing beneath into a shower. It presents one of the least attractive appearances among clouds, but it is only when the dark surface of this cloud forms its background that the splendid phenomenon of the rainbow is exhibited in perfection.

Cloud (kloth), St., a town, France, department Seine-et-Oise, 6 miles s. w. from Paris, charmingly situated on the slope of a hill overlooking the river Seine. It is celebrated for its château and its magnificent park, a favorite holiday resort of the Parisians. As the residence of the monarchs of France, St. Cloud is historically interesting. Louis XIV bought the old château and presented it to his brother, the Duke of Orleans, who enlarged and transformed it into a splendid palace, which became the residence of Henrietta, queen of Charles I of England, during her exile. It was sold by Louis Philippe to Orleans to Marie Antoinette, and after the revolution chosen by Napoleon for his residence. It was the summer residence of Napoleon III, and was greatly damaged in the Franco-German War. Pop. 7186.

Clothberry (cloud ber-i), or Mountain Bramble (Rubus ohemambrus), a fruit found plentifully in the north of Europe, Asia, and America, of the same genus with the bramble or blackberry. The plant is from 4 to 8 or 10 inches high, with a rather large handsome leaf, indented and serrated at the edges. The flowers are large and white, and the berries, which have a very fine flavor, are orange yellow in color, and about the size of a Brambleberry.

Cloug (klu'), Arthur Hugh, an English poet, born at Liverpool, 1819. He studied under Dr. Arnold at Rugby, and then at Oxford, where he highly distinguished himself. On his return from a tour in America (1852) he was appointed an examiner attached to the educational branch of the privy-council office. He died in 1861, at Florence, while returning from a journey to Greece. His poems, of which the best known are Bothie of Toder-na-Yoich, Amours de Voyages, and the Tragedy of Dyspychus, were published, along with a memoir, in 1862.

Clove Bark, or Culissawen Bark, is furnished by a tree of the Molucca Islands (Cinnamomum Culissawen). It is in pieces more or less long, almost flat, thick, fibrous, covered with a white epidermis of a reddish-yellow inside, of a nutmeg and clove odor, and of an aromatic and sharp taste, and commerce the name is also given to the bark of the Myrtus caryophyllata. It is of a deep-brown color, very thin and hard, and has similar properties to cinnamom.

Clove-gillyflower (kloy-jil'lflower), the carnation, or a clove-scented variety of it.

Clove, or Trefoil (kloy-ver, trë'-foil), a name of different species of plants of the genus Trifolium, nat. order Leguminose. There are about 150 species. Some are weeds, but many species are valued as food for cattle. T. pratense, or common red clover, is a biennial, and sometimes, especially on chalky soils, a triennial plant. This is the kind most commonly cultivated, as it yields a larger product than any of the other sorts. Trifolium repens, or white clover, is a most valuable plant for pasture over the whole of Europe, Central Asia, and North America, and has also been introduced into South America. The bee gathers much of its honey from the flowers of this species. T. hybridum, alike, hybrid, or Swedish clover, has been long cultivated in the south of Sweden, and for some time also in other countries; it is strongly recommended for cold, moist, stiff soils. It resembles the common red clover in duration, stature and mode of growth. T. medium, perennial red or meadow clover, much resembles the common red, but differs somewhat in habit, and for some time also in other countries; it bears oblong or cylindrical spikes of rich crimson flowers, and is sometimes planted for decorative purposes in flower gar-
Clover-weevil

dens. The name clover is often applied to plants like medick and melilot, cultivated for the same purpose and belonging to the same natural order, although not of the same genus.

Clover-weevil, a kind of weevil, genus Apion, different species of which, or their larvae, feed on the leaves and seeds of the clover, as also on tares and other leguminous plants. *A. apricaxis*, of a bluish-black color, and little more than a line in length, is especially destructive.

Cloves (klövz), a very pungent aromatic spice, the dried flower-buds of Caryophylus aromaticus, a native of the Molucca Islands, belonging to the myrtle tribe, now cultivated in Sumatra, Mauritius, Malacca, Jamaica, etc. The tree is a handsome evergreen from 15 to 30 feet high, with large, elliptical, smooth leaves and numerous purplish flowers on jointed stalks. Every part of the plant abounds in the volatile oil for which the flower-buds are prized. The spice yields a very fragrant odor, and has a bitterish, pungent, and warm taste. It is sometimes employed as a hot and stimulating medicine, but is more frequently used in culinary preparations.

Clovis (klövis; from old Ger. Chlodwic, mod. Ger. Ludwig, Fr. Louis), King of the Franks, born 405, succeeded his father Childeric in the year 481, as chief of the warlike tribe of Salian Franks, who inhabited Northern Gaul. In 488 he overthrew the Roman governor at Soissons and occupied the country between the Somme and the Loire. The influence of his wife Clotilda, a Burgundian princess, at length converted him to Christianity, and on Dec. 25, 496, he was baptized with several thousands of his Franks at Rheims, and was saluted by Pope Anastasius as 'most Christian king,' he being orthodox, while most of the western princes were Arians. It now became his object to rid himself by any means of all the other Frankish rulers, in order that he might leave the whole territory of the Franks to his children; and in this purpose he succeeded by treachery and cruelty. He died at Paris, which he had made his capital, on Nov. 27, 511, in the thirteenth year of his reign. In the last year of his reign Clovis had called a council at Orleans, from which are dated the peculiar privileges claimed by the kings of France in opposition to the pope.

Clown, the buffoon or practical jester, in pantomime and circus performances. On the old English stage the clown was the privileged laughter-provoker, who, without taking any part in the dramatic development of the piece, represented various jokes and tricks with the actors, often addressing himself directly to the audience instead of confining himself to the scheduled play upon the stage. In Shakespeare's dramas a distinct part is assigned to the clown, who no longer appears as an extempore jester, although the part he plays is to a certain extent in keeping with his traditional functions. He is now confined to the pantomime and the circus, in the former of which he plays a part allied to that of the French *pièce*.

Cloyne (kloin), a town in Ireland, 16 miles E. by S. of Cork, the seat of a Roman Catholic bishop. From 1688 to 1838 it was the see of a bishop of the Established Church, but in the latter year it was united with Cork and Ross. Pop. about 1400.

Club, a select number of persons in the habit of meeting for the promotion of some common object, as social intercourse, literature, politics, etc. It is a peculiarly English institution, which can scarcely be said to have taken root in any other country except America. The coffee-houses of the 17th and 18th centuries are the best representatives of what is meant by a modern club, while the clubs of that time were commonly nothing but a kind of restaurants or taverns where people resorted to take their meals. But while anybody was free to enter a coffee-house, it was necessary that a person should have been formerly received as a member of a club, according to its regulations, before he was at liberty to enter it. Among the earliest of the London clubs was the Kitcat Club, formed in the reign of Queen Anne, among whose forty members were dukes, earls, and the leading authors.
of the day. Another club formed about the same time was the Beefsteak Club. Originally these two clubs had no pronounced political views, but in the end they began to occupy themselves with politics, the Kitcat Club being Whig, and the Beefsteak Club, Tory. Perhaps the most celebrated club of last century was that which was first called The Club par excellence, and numbered among its members Dr. Johnson, Sir Joshua Reynolds, Edmund Burke, Oliver Goldsmith, Edward Gibbon, and others. The most important London political clubs of the present day are the Carlton Club, a sort of headquarters for the Conservative party, and the Reform Club, the building belonging to which stands next to that of the Carlton Club, the great club of the Liberal party. Similar clubs exist also in Edinburgh, Glasgow, and other cities of the kingdom. Some of the London clubs are for ladies as well as gentlemen, and one or two for ladies alone. Clubs are often provided with reading-room and library, smoking-room, billiard-room, coffee-room, dining-room, drawing-room, etc., and also may have a certain number of bedrooms. Besides being convenient for social intercourse, members may obtain their meals in them, served in the best style and at moderate cost. New members are admitted by ballot, and pay a certain entrance fee as well as an annual subscription. The English clubs have been imitated in different countries in Europe, but not with great success, but clubs are widely spread through the United States, even in many comparatively small cities. The large cities are well provided with them, while women's clubs are so numerous that they have long ceased to be an innovation. In France, where clubs were introduced at an early period, they soon became associated only with political in their nature, and had no uniform and regular form, as they were only tolerated during revolutionary epochs. The Club des Jacobins, the Club des Feuillants, the Club des Cordeliers, and the Club de Montrouge, were the most famous clubs of the time of the first French revolution. After the revolutions of 1848 hosts of clubs started into existence in France, Germany, and Italy; but the institution has always failed to take a deep hold on European continental society.

Clubbing, a diseased condition of plants of the cabbage family, produced by the myxomycetous fungus known as Plasmodiophora brassicae, consisting in the lower part of the stem becoming swollen and misshapen. Lime is used as an antidote.

Clubfoot (Lat., talipes), a congenital distortion of the foot. There are several varieties. Sometimes the foot is twisted inwards (T. varus); sometimes the heel is raised and the toes only touch the ground (T. equinus); sometimes the foot is twisted outwards (T. valgus); or it rests only on the heel (T. calcaneus). In most cases the deformity is curable by modern surgery.

Club-hauling, a method of tacking by letting go the lee-anchor as soon as the wind is out of the sails, her head being thus brought to the wind, and then cutting the cable and trimming the sails as soon as she pays off.

Club-moss, the common name of the plants of the order Lycopodiaceae, or more particularly of the genus Lycopodium. See Lycopodium. 

Clue (klo), of a square sail, is the lower corner; and hence clue-lines and clue-garnets, tackles to truss the clues up to the yard.

Clunes (klunes), a mining town in the Australian colony of Victoria, 120 miles northwest of Melbourne. Pop. 2426.

Cluny (klüh-né), a town of Eastern France, dep. Saône-et-Loire, 11 miles N. W. Macon, pop. 3691. Here was a Benedictine abbey, founded in 910, at one time the most celebrated in France, having 2000 monastic communities directly under its sway in France, Italy, Spain, England, etc., the inmates of which formed the congregation of Cluniac monks. Most of it was destroyed in 1789, and the present town is to some extent built of its débris and occupies its site.

Clupeidae (klú-pé-é-dé), the herrings, a family of fishes which includes the herring, sprat, white-bait, pilchard, etc.

Clusiaceae. See Guttiervar.

Clustered Column, in architecture, a pier which seems to consist of several columns or shafts clustered together; they are sometimes attached to each other throughout their whole height, and sometimes only at the capital and base.

Clutha (klutha), the largest river in New Zealand, in the southern part of the Middle Island. It receives the waters of Lakes Hawea, Wanaka, and Wakatipu, and flows in a S. E. direction, having a length of 150 miles. It is called also Moloney.
Clyde (klid), a river of Scotland, which has its sources amid the hills that separate Lanarkshire from the countries of Peebles and Dumfries and forms an extensive estuary or firth before it enters the Irish Sea, at the southern extremity of the island of Bute. From its source to Glasgow, where navigation begins, its length is 70 or 80 miles. Near Lanark it has three celebrated falls—the uppermost, Bonnington Linn, about 30 feet high; the next, Cora Linn, where the water takes three distinct leaps, each about as high; and the lowest, Stonebyres, also three distinct falls, altogether about 80 feet. The Clyde, by artificial deepening, has been made navigable for large vessels up to Glasgow, and is the most valuable river in Scotland for commerce. See Glasgow. 

Clyde, Lord, Sir Colin Campbell, was born in Glasgow, in 1739, where his father, John McLiver, a native of Mull, worked as a cabinet-maker. His mother's maiden name was Campbell, and she was the daughter of a small proprietor in Islay. By the assistance of his mother's relations he was educated at the High School of Glasgow, and afterwards at the Military Academy, Gosport. In 1808 he received an ensign's commission in the 9th Regiment of Foot, having previously changed his name to Campbell, at the suggestion of his maternal uncle, an officer in the army. He served in Spain under Sir John Moore and Wellington, being engaged in the battles of Barossa and Vittoria, and having displayed distinguished gallantry at the siege of San Sebastian, where, as well as at the Bidassoa, he was severely wounded. In 1812, 25 he was in the West Indies. In 1830 he attained the rank of lieutenant-colonel. In 1842 he was in China in command of the 88th Regiment, and on the termination of the Chinese war took active service in India, where he acquired such reputation in the second Sikh war as to receive the thanks of Parliament and the title of K.C.B. In 1854 he became major-general, with the command of the Highland Brigade in the Crimean war. His services at the battles of Alma and Balaklava, and during the war generally, were conspicuous, so that on the outbreak of the Indian mutiny he was appointed to the chief command there. Landing at Calcutta on August 29, 1857, he relieved Havelock and Outram at Lucknow, and crushed the rebellion entirely before the end of the year. For his services here Sir Colin received the thanks of both houses of Parliament, was created a baronet, and received the title of Baron Clyde, and had an income of $10,000 a year allotted him. In 1862 he was made field-marshall. He died August 14, 1863, and was buried in Westminster Abbey.

Clyster (klistər), an injection or enema, a medicated substance introduced into the lower bowel, usually for the purpose of expelling its contents, but sometimes also for the purpose of being retained, as when opium is thus administered in cases of diarrhoea.

Clytemnestra (klt-əm-nestə), in Greek mythology, daughter of King Tyndareus and Leda, and half-sister of Helen. During the absence of Agamemnon in the war against Troy she bestowed her favors on Aegisthus, and, in connection with him, murdered Agamemnon on his return from Troy, and, together with her paramour, governed Mycenae for seven years. Her son Orestes killed them both. See Agamemnon and Orestes.

Cnidus (nɪdəs), or Gnidus, an ancient Greek town in Caria, a province of Asia Minor, a great seat of the worship of Aphrodite (Venus), who had three temples here, in one of which was a famous statue of the goddess by Praxiteles.

Coach (kōch), a general name for all covered carriages drawn by horses and intended for the rapid conveyance of passengers. The earliest carriages appear to have been all open, if we may judge from the figures of Assyrian and Babylonian chariots found on the monuments discovered amid the ruins of Nineveh and Babylon. At Rome both covered and uncovered carriages were in use. After the fall of the Roman Empire they went out of use again, and during the feudal ages the custom was
FLOOR MACHINES can be moved to any part of the dock to which steamers are moored and four machines can be unloading simultaneously. The motive power is electric.

Four cranes can be operated on the four tracks, which run from the hold of the steamer and deposit it either on the dock or in cars.

HAROLDING COAL

Corning, of the Link Belt Co., Chicago.
Coadjutor (kō-a-jō' tor), a Latin term, nearly synonymous in its original meaning with assistant. The term is especially applied to an assistant bishop appointed to act for and succeed one who is too old or infirm for duty.

Coagulation (kō-ag-ō-la' shun), the changing of a fluid into a more or less solid substance, or the separation of a substance from a solution, through the substance becoming more or less solid. Thus, albumin of egg can be dissolved in cold water, but if the solution be warmed, the albumin undergoes a change, separates out in white, fleshy masses, and cannot again be redissolved in the water. Coagulation is well exemplified by the 'cooking' of milk and 'clotting' of blood.

Coahuila (kō-ah-wē' lā), a state of Mexico, on the frontier of the United States, rich in woods and pastures, and having several silver mines; area, 63,569 square miles; pop. 367,662.

Coaita (kō' a-tē' lē), Atelès pantecus, one of the largest of the S. American monkeys, belonging to those known as spider monkeys, black in color, and very docile in captivity.

Coal is formed from vast deposits of vegetable matter of the carboniferous age, during which the growth of plants was luxuriant. In course of time decay took place in the fallen plants and succeeding centuries covered them with a sediment of mud and sand that arrested their destruction and exerted a pressure that combined with heat, and chemical action slowly drove off most of the hydrogen and oxygen contained in the vegetation, leaving the carbon behind. Hence there are few traces of its vegetable origin found in coal. Nevertheless the outlines of leaves and stems that have entered into its formation are sometimes seen, and in sandstones, clays and shales with which coal is found the plants from which it originated are found distributed freely in the fossil state. And, most rarely, the trunks of trees with roots extending down into the subjacent clay formation. These, though replaced by mineral substances, have preserved their structural features so perfectly that botanists have been able to establish their affinity with existing species. Tree fossils of large size so recognized have been found to be related closely to the araucaria as found in South America and Australia. The commoner forms of vegetable life found in the rocks of the coal formation include the sigillaria and stigmaria, the lepidodendron, the calamite and tree ferns. From the animal fossils in coal it is to be assumed that some deposits occurred in fresh water, probably lakes, while others appear to have occurred at the mouths of rivers reaching salt water. The period during which the transformation of the vegetable into the mineral substance was
Coal

affected was of long duration, so long as to be quite undeterminable.

Anthracite, or hard coal, has undergone a greater degree of decomposition than bituminous or soft coal. It is the oldest of the coal formations and contains most uncombined carbon, the percentage being from 90 to 94%, the remainder consisting of hydrogen, oxygen and ash. It is pure black, or with a bluish metallic lustre and has a specific gravity of 1.46 or about the same as that of the hard woods. It burns_as its name indicates, it contains bitumen, a soft, mineral substance, a native mixture of hydrocarbons, oxygenated, that oozes out when it is subjected to heat. It contains from 75% to 85% of carbon, with traces of sulphur, and a greater percentage of hydrogen and oxygen than anthracite. It is black and on its smooth surfaces is glossy, but lacks the bluish lustre that sometimes appears in hard coal. It is also softer than anthracite. Its specific gravity is 1.27. In burning it emits a yellowish flame, much greater than that given out by hard coal, and gives less heat, while its imperfect combustion produces heavy, black smoke and diffuses disagreeable gases. The hydro-carbons can be driven off as gases by heating the coal without access of air. In this way one kind of illuminating gas is made and the carbonaceous residue is coke.

Cannel, or gas coal, is of the bituminous variety, but contains less uncombined carbon than the coking or furnace kinds; it burns freely and is used largely in making illuminating gas.

Lignite is of comparatively very recent formation, intermediate between bituminous and peat; indeed, a period of less than five hundred years is known to have converted timber into a sort of lignite. The percentage of carbon in lignite, which is brownish in color, never exceeds 70%, and the ash shows that a considerable quantity of earthy matter enters into its composition. It exhibits much of the structure of the wood from which it is formed. Its heat-giving property is low, hence it can be used only where a hot fire is not needed, but it is very volatile.

Peat is the latest of the coal formations. It has undergone but a partial change from its original state and the slight pressure to which it has been subjected by the small covering of sediment has given it but little density; it contains over 50% of volatile matter. It forms in boggy ground from plants undergoing decay and covered by water. The roots and stems of plants become matted and, mixed with earthy matter, form peat. It contains much water, especially near the top of the layer when removed from the bog, but the bottom greatly resembles lignite in appearance. As a fuel it is chiefly used where coal and wood are scarce and high in price. Many experiments have been made to treat this substance for more general use as a fuel, and considerable success has followed the method of saturating it with petroleum, which is adopted in Southern Russia, where there is an abundance of peat and a cheap supply of petroleum. See Coal Mining.
Coal Brass, the iron pyrites found in coal measures, so named on account of its brassy appearance. Coal containing much pyrites is bad for iron smelting, and is unpleasant for domestic use on account of the sulphurous acid which it gives off on burning. Coal brass is useful in the manufacture of copperas, and in alkali works.

Coalbrookdale (kōlˈbrok-dāl), an English coal and iron producing district in Salop, along the bank of the Severn.

Coaldale, a borough in Schuylkill county, Pennsylvania, near Tamaqua. It has coal-mining interests. Pop. 5154.

Coal-fish, a species of the cod genus (Gadus carbonarius), named from the color of its back. It grows to a length of 2 1/2 feet, and is found in great numbers about the Orkneys and the northern parts of Britain. In Scotland it is generally known as the sethe or seats.

Coal Gas, the variety of carburetted hydrogen, produced from coal, which is used for common gaslight.

Coaling Stations, stations established at various important points over the ocean, where ships, both of the navy and the mercantile marine, may obtain supplies of coal. The utility of such stations, when properly fortified, as points of refuge, defense, and repair in the event of war can hardly be over-estimated. Britain has very many of them in accordance with the width of its interests, the United States, as yet, comparatively few.

Coalition (kō-a-liˈshun), a term used in diplomacy and politics to denote a union between different parties not of the same opinions, but who agree to act together for a particular object. Among states it is understood to mean theoretically something less general in its ends and less deeply founded than an alliance.

Coal Measures, the upper division of the carboniferous system, consisting of beds of sandstone, shale, etc., between which are coal-seams.

Coal Mining. The depth, thickness and direction of the coal seams having been determined by prospecting, the next step is the provision of shafts. Several considerations govern their location, such as the contour of the surface, the adjacency and availability of transportation, the facility of generating power, the inclination of the strata, the presence of faults and the method of working the coal. In cases where the seams outcrop at the surface, drifts are driven directly into them, and in hilly sections tunnels are opened to them through the intervening rock. It is, however, far more general to have recourse to the sinking of shafts, by which entrance the transmission of power to the workings, their ventilation and the pumping of water is effected. The shafts are driven with particular regard to the depth and the dip of the seam. Where the depth is only moderate and the dip is gentle, it is economical to locate the shafts at the lower level of the seam, whereas where the seam is deep and without inclination it is found advantageous to locate the shafts as near to the centre of the mine as may be, so as to facilitate operations to the greatest possible extent. Shafts vary in size and shape, the determination of which depends particularly on the extent and depth of the workings and somewhat upon the locality. They are either rectangular, which is more common in the United States, owing to the readier supply of timber for lining, elliptical, or circular, the latter shape being now more generally favored because of their greater inherent strength. An important advantage of the circular shaft is that it offers the least resistance to the passage of ventilating air currents. The size of the shafts depends on the depth and output of the mine and the number of cages to be hoisted. A shaft of sufficient size for an output of 1200 to 1500 tons a day should have a diameter of about 20 feet. Two shafts are necessary for each mine, and these must be furnished with a winding gear at the surface. The bottom of the shafts are arched over, forming what is termed the ‘porch,’ in order to strengthen it, the thickness being proportionate to the weight and pressure that it may be expected to bear, and wooden blocks are sometimes also built into it to give elasticity under sudden pressure and in addition an inverted arch is built into the floor. Still further protection of the shafts and strengthening against surface weight is afforded by leaving a pillar of solid coal surrounding the shaft. The depth at which coal may be profitably mined is about 3000 feet, although in some cases, as in Belgium, mines are worked at a depth of 4000 feet. The regulations governing the mining of coal vary considerably in different countries and in the United States there is likewise a lack of uniformity and changes are frequently made, so that only general statements are useful here.

Working is carried on by practically two methods, known as pillar work and long-wall work. The first comprises
Coal Mining

'pillar-and-stall,' 'bord-and-pillar' and 'room-and-pillar' and is done by driving roads or stalls through the coal and connecting them by cross-passages, leaving pillars of coal between them to support the roof as the workings advance. When sufficient work has been effected in this manner the pillars are cut away and the roof is supported by heavy timbers. In the second, or long-wall work, all the coal is removed as the work proceeds from the pillar at the shaft, the face gradually extending. The waste or 'goaf' is stacked behind, and through this communicating roads are left open. This is what is known as long-wall working forward. The opposite plan, or long-wall working back, is effected by driving the roads to the outside or boundary of the mine and then taking the coal backward towards the shaft. This plan avoids the necessity of keeping roads open through the waste coal and is so far more desirable, but, of course, it involves greater capital outlay. Where spontaneous combustion is probable this plan is chiefly used. Long-wall working is best adapted to thin seams; where the seams are thick, or near the surface, or beneath towns, indeed in all cases where there is danger of subsidence the pillar-and-stall method is practised. In the United States it is the one largely used. In getting the coal it is indispensable that the workings be properly supported. This is carried out by timbering the roofs and sides of roadways and the coal faces, and for this purpose the best materials are pine, fir, and oak, which are creosoted. In the pillar method there is, of course, less need for timber support, the pillars themselves affording the chief protection, but timber roof props are also used to prevent the fall of loose portions, and at the roadways adjacent to the faces cross-pieces are used, supported by props or hitches in the side wall. Still other strengthening is effected in the haulage ways with steel and iron supports, brick arch work or brick walls and girders.

Getting the Coal. The first stage is bringing down the coal, which is done either by blasting without preliminary work, and is called 'shooting off the solid'; or by blasting preceded by undercutting or 'shearing,' so as to give more than one face to the action of the explosive; this requires that grooves be cut vertically parallel to the walls. In the former, called 'holing,' a notch or groove is cut in the floor of the seam, extending about three feet back from the face, leaving the overhanging rock supported by timbers called 'sprags,' to fall of itself or by blasting. All coal seams, except anthracite, have planes of cleavage which admit of ready splitting. Roads driven in the direction of such planes are known as 'ends,' and those driven across them are styled 'bords,' or 'boards,' the latter enabling easier working than from the 'ends.' Cutting by mechanical means is used chiefly in thin seams because of the increased output they allow, the greater speed of the operation, that they produce less small coal, and that there is the minimum risk of the falling of the roof. The principles of operation in the two types of cutters used in the United States are those of a pick or drill and a chain-cutter. The former gives a rapid succession of sharp blows with a long, chisel-like pick; the latter operates with a series of cutting wheels rotating on an endless chain driven by a motor, either compressed air or electricity. Gunpowder is used in making the blast in wet mines where there is no gas present, but in dry and dusty ones, or where gas is present, it is necessary to use some flameless high explosive, which in exploding discharges an aqueous vapor that destroys any tendency to ignite coal dust or gas, if present.

Hauling. Coal is hauled from the workings to the shaft by hand labor, horses, or mechanical power; hand labor, obviously, is used only in small mines. Mechanical power systems are: (1) the jig or self-acting incline, feasible only where the shaft's bottom is at the lowest point of the coal seam, in which case the cars loaded with coal running down the incline pull up the empty ones, the wire rope attached to the descending load being fastened over a pulley or drum at the upper end of the incline and its other end attached to the returning empty cars. Friction rollers set at intervals between the rails on the incline carry the rope. Where a double line of rails cannot be used, the single track is provided with a pass half-way where the descending and ascending cars meet and pass. Sometimes a single line is employed throughout, when a balance weight runs between the rails alternately, being drawn up by a loaded cars and drawing up an empty one. (2) Single rope haulage is employed where the shaft's bottom is at the top of an incline; in this case the full cars are hauled up by a winding engine and the empty set run back by gravity. The most generally used system is the endless rope, which is adapted not only to level seams but may be advantageously used on steep roads. Usually, a double line of road is better. The cars run in sets of ten or twelve, and a stretching pulley is used to
Coal Mining

keep the rope taut when the pull of the load lightens. The endless chain system replaces the double rope system, one of which accommodates the full car, and the other is used when the cage is empty. The chain passes over a pulley driven by an engine so placed that the chain rests on the top of the car and passes round a second similar pulley at the far end of the plane. The endless rope system overhand is substantially similar to the endless chain plan. Main and tail rope haulage is employed where the incline is insufficient or not uniform, and a second rope is needed to haul back the empty cars. One road only is required, as in the case of single rope haulage. A second rope, the tail rope, supplements the main rope that runs direct from the engine drum to the head of the loaded cars; the tail rope runs from a drum on the same shaft as the main rope drum, along the side of the roof or roadway, and passes around a return pulley at the end of the road to the end of the set of loaded cars. This rope draws back the empty cars as the main rope hauls in the loaded ones. Besides these methods underground haulage is done in the United States and in Europe in mines where mine roadways are flat or have only slight inclines by locomotives operated by compressed air, electricity and internal combustion. In the case of seams too shallow to admit of using cars for hauling, conveyors are used, operated by compressed air or electricity; these conveyors are low wagons jointed in sections, from which the coal is discharged into cars at the bottom of the shaft.

Raising the Coal to the Surface from the bottom of the shaft on the arrival of the cars from the workings is effected by running them into the cage over rails to which they are locked. The cage is constructed of a framework of vertical iron or steel bars and has a top bar to which the hoisting rope is attached. The cage is provided with a deck or decks, in some cases as many as five, and each deck will hold two cars. The cage runs within guides of wood or other material affixed to the walls of the shaft; sometimes four guides are used, but more frequently three, two on one side of the shaft and on one on the opposite side, placed intermediate as related to the guides on the wall facing. By some managers only two guides are provided, which they consider safest. The hoist is effected by means of wire rope of steel, with a diameter of about two inches; this rope is attached by tallowing chains to the cage. The hauling or drawing rope is carried from a drum at the bottom of the shaft and then around a drum of like diameter driven by the winding engine. This gear or frame is from 80 to 100 feet above the surface level to give head room to the cage, the landing platform being generally placed at some height above the ground. The head gear is provided with automatic devices to avoid disaster, such as detaching hooks that operate in case of overwinding; safety catches are also furnished to hold the cage should it get out of control or become detached from the rope. On reaching the platform at the top of the shaft the cars move by gravity to a weighing machine and then to the 'tipple,' a cage turning upon a horizontal axis that is designed to discharge the load in the first half of the rotation and restore the car to its normal position in the second, after which it is drawn by an endless chain, or creeper, fitted with grips or hooks, to the cage, to resume its trip to the workings.

Ventilation is one of the most important of the problems with which coal mine operators have to grapple. Not merely has the impure air to be drawn from the workings, but the possible presence of gases must be considered. Ventilation is obtained by keeping in movement in the same direction a large volume of air which is brought from the surface by the 'downcast' and is carried out of the workings by the 'upcast' shaft. To effect this, powerful mechanical means are needed. The method principally used is exhaustion by machinery. It is sometimes done by the rarefaction of the air in the 'upcast' shaft by means of a furnace at the bottom of the shaft. The furnace may be worked by the return air where there is no gas, but it is far better to take fresh air directly from the 'downcast,' and never must the return air from any mine be allowed to reach the furnace.

Ventilation by exhaustion is conducted by two methods, direct exhaustion and centrifugal displacement of the air to be removed. The latter is more generally adopted, as the weight of the machines required by the former results in too slow a rotation. This method drives the heated air at the bottom of the shaft forward and upward through it, through the pressure of the colder air behind it. In centrifugal displacement, fans are placed at the top of the 'downcast' shaft in some cases. There are several kinds of centrifugal fans, but the main essential is to secure great speed with a minimum of weight and size. In furnishing an indispensable volume of fresh air to the workings at all times, calculations must include the presence of a fan, in order that all the workings may be supplied with fresh air, it becomes necessary to split or divide the current at different
Coal Mining

points in its path and convey it directly to the places where it is needed. It is further necessary to prevent the mixing of air intake current with a return current; this is done by passing one current over the other by means of an air-crossing, and providing temporary partitions, 'brattices,' constructed with wood or with wood and cloth, in cases where the intake and return airways pass along the same passage, thus separating the currents. Where the workings reach great distances from the shaft, very powerful ventilating fans must be used to overcome air resistance and from 250 to 500 H. P. engines are employed.

Lighting fills an important part in the operation of collieries. In mines that are free from gas naked lights may be used; oil lamps are commonly used in some parts of Europe, but electricity is fast displacing it.

Gas constitutes a great hazard to workers in coal mines. Explosions due to a sudden release of stored-up gas in coal masses, 'blowers' as they are called, are often given off at high tension and are too great for dilution by the ventilating current. Methane, marsh gas, or fire-damp, is the chief gas to be provided against. When diluted in from four to twelve times its volume of atmospheric air, it is explosive, but it burns quietly when the air dilution is greater or less than the proportions mentioned. Coal dust also constitutes a serious danger in dry mines. Although it is not likely to be ignited by a naked light or flame, it may explode, even though not usually, in the absence of gas. Against such dangers constant precaution is exercised, and protective measures are always under consideration.

Pumping. In different mines the pumping of the water is of greater or less concern, depending on the depth of the workings. To keep the workings free of water it is drawn off into the shafts and from there pumped to the surface. Where, however, there is but a small quantity it is raised in tanks operated with the cage or independently of it. Sometimes the water is removed by syphoning, but this method, as well as that by tank removal, is quite unimportant in comparison with the method of continuous pumping. For this purpose a pump or engine at the surface operates rods that pass down the shaft to the pumps, or the water may be forced to the surface by means of steam, compressed air, hydraulic pressure, or electric pumps set at the bottom of the shaft. To bring the water from the workings to the shaft, intakes and pumps are also employed, of which there are several designs.

For the transmission of power to the workings use is made of steam or compressed air, or water under pressure in pipes, electricity, or wooden or iron rods. Steam power is generally used, however, to operate the winding and hauling machinery, but it is less advantageously used in transmitting underground power. Compressed air is a desirable agent for cutting, drilling, hauling and pumping machines, but it offers the disadvantages of greater cost and low efficiency. Hydraulic pressure is made use of also in underground pumping as a means of transmitting power. A system of endless wire ropes or chains operated from the surface has likewise been used for underground hauling, as well as to operate dynamos and drive ventilating fans. But electricity is displacing other powers for underground work, as well as for ventilating, lighting and hauling. It has its drawbacks in the liability of sparking at the motor and of short circuiting, but experience and care minimize these and its employment is rapidly extending in colliery working.

Grading. As the coal leaves the tipple it falls on screens which sort it into various sizes, after which it is carried on a long travelling belt, three to five feet wide, and is then sorted by hand and the waste removed. The grades usual in the American market are: rice, pea, chestnut, stove, egg, broken and steam sizes. There are also buckwheat, which is smaller than pea, and cherry, which is larger. Coal is sometimes put through a washing process, which is effected by conveying it by bucket-elevator to a stream of water, or by passing a stream of water through and over the coal which has been placed in a trough or tank. By this means the dirt, being heavier, sinks to the bottom, while the coal passes away with the water.

The most extensive coal fields in the world are located in the United States. Its distribution in quantities of commercial value extends to twenty-eight States and the Territory of Alaska. Anthracite is produced only in Pennsylvania, New Mexico and Arizona, the last two furnishing only about 100,000 tons per year. The States in which bituminous coal is worked are: Alabama, Arkansas, California, Colorado, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Missouri, Montana, New Mexico, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Tennessee, Texas, Utah, Virginia, Washington, West Virginia and Wyoming. The chief producing of these are Pennsylvania, yielding over one-third of the total, and West Virginia, over one-seventh, Illinois, nearly one-ninth, and Ohio, nearly one-twelfth,
the last three together yielding a little over nine-tenths of the product of Pennsylvania. The total, in long tons, of anthracite yielded by Pennsylvania in 1915 was 79,459,836, and in value, $184,653,498. The aggregate output in the United States of bituminous in the same year included brown coal and lignite, and the small output of anthracite outside of Pennsylvania was 442,626,426 short tons, of the value of $502,037,668. It may be noted that of the coal-bearing formations in the four great producing States mentioned, Illinois possesses about 42,000 square miles, West Virginia, 17,000, Pennsylvania, 15,800, and Ohio, 12,000, together about 87,000 out of a total coal-bearing area in the United States of about 200,000 square miles, and that their annual output is over two-thirds of the total yield of the United States. The other important producing States are Indiana, about 10,000,000 tons, Alabama, 13,000,000, Kentucky, 13,000,000, Colorado, 10,600,000, Iowa, 7,000,000, Wyoming, 6,700,000, Tennessee, 6,300,000, and, Virginia, 5,800,000.

Comparing the yield of the United States with that of Europe, it will be seen that Great Britain only approaches with a total of 300,000,000 tons in 1914, while Germany furnished in the same year 175,000,000 tons. France, Russia and Belgium each have large coal-bearing areas, the product of which has been of great importance in contributing to their manufacturing and industrial progress. China, Japan and India also contain large coal fields, in all almost equal to the coal-bearing area of the United States. Discussions are frequently recurring as to the period of exhaustion of the coal supply. In the United States, broadly speaking, the resources are so great that such a crisis need not be very seriously considered. But in Europe, where the reserves are so much less, the subject has created serious discussion and official investigation.

Coal-plants, such plants as have by their remains formed coal, chiefly allied to the ferns, lycopsids, and horse-tails. See Coal.

Coal Tar, or Gas-tar, a substance obtained in the distillation of coal for the manufacture of illuminating gas, a dark-colored more or less viscid mass, consisting principally of oily hydrocarbons. It passes over with the gas into the condensers along with ammonia liquor, but being heavier than the latter, it is caught by the condenser and the whole is allowed to stand. It was formerly of comparatively little use; but in recent years a great number of valuable products have been derived from it by distillation, such as ammonia, naphtha, creosote, carboxyl acid and benzene, while it is also the source of the whole series of aniline colors, and other dyes, of alizarine, salicylic acid, etc.

Coanza (kō-an'za'), a large river of West Africa, entering the Atlantic near 9° 10' S.

Coast Artillery, the term applied to guns of heaviest caliber, used for the assualt of permanent works, chiefly on the seacoast. Their carriages do not subserve the purposes of transportation. Four systems of mounting are used with such artillery, i. e., the disappearing, the turret, the barbette and the mortar-carriage.

In the United States these guns constitute the only system of permanent fortification. For purposes of administration and instruction the coast artillery of the continental United States is organized into three districts—the North Atlantic, including all the forts from Maine to New York harbor, inclusive; the South Atlantic, including those from Delaware Bay to Texas, inclusive; and the South Pacific, including those from California to Washington, inclusive. These districts are commanded by colonels of the Coast Artillery Corps or by brigadier-generals appointed from that branch of the U. S. A. The forts of each harbor are grouped into commands called Coast Defenses, each designated by the name of the harbor on which located. In the outlying possessions of the United States the seacoast forts are organized into separate coast defenses. The Coast Artillery Corps is that part of the U. S. A. which is engaged in serving the seacoast guns.

Coast Defense, the systematic protection of a country against hostile attack along its coast lines. In providing such defense a nation will consider not only the safety of its territory, but also the security of its commercial interests. In any system of coast defense a good navy is the most important feature; and so essential is it considered, that all other means are regarded as adjuncts or auxiliaries of the navy. Along a well-defended coast, in suitable places, are stations or points of support where is stored the requisite material for building, equipping, repairing, and supplying naval vessels, and where provision is made for furnishing men when additional force is needed. Forts are built in places where the coast artillery may co-operate with the navy in obstructing the advance of
Coast Guard Service

an enemy intending to capture a city or to invade the country; where his guns may be turned on the entrance to a harbor or other approach by water; wherever they may cripple the enemy's attack on the defensive fleet, leaving it free to attack the enemy in turn; where forts may assist each other and co-operate in repelling an invasion or preventing a blockade or a bombardment; where minor channels of approach may be closed or guarded, thus enabling the navy to give entire attention to the main channel, etc. Torpedo-boats, harbor-mines and the searchlight are all valuable aids for the forts. The unfortified coast, as well as the land approaches to cities, must be defended in time of war by whatever means are at command. National policy determines the character and extent of coast defense, and long-continued friendly relations with other countries may make extensive protection unnecessary.

The history of modern coast defense in the United States begins with the creation of the Gun Foundry Board in 1884, which was succeeded by the so-called Endicott Board in 1886. In its final report the Endicott Board fully and clearly set forth the general principles governing coast defense, and elaborated a suitable system. The changed conditions since 1886, due to the development of guns, smokeless powder, and all kinds of munitions of war, made it advisable to revise the system of the Endicott Board, and the National Coast Defense Board, composed of distinguished army and navy officers, under the presidency of W. H. Taft, then Secretary of War, was convened. This board, known as the Taft Board, submitted its report early in 1906. The Taft Board recommended the fortification of 29 ports in the United States (7 more than under the plans of the Endicott Board), 8 in the insular possessions, and 2 in the Canal Zone.

Coast Guard Service, U. S., the name applied to the service created by an act of Congress in 1915, merging the Revenue Cutter and Life-saving Services of the United States. In general the duties of the Revenue Cutter Service, which devolved upon the Coast Guard, were: Assistance of vessels in distress; co-operation with the navy when directed by the President; destruction of derelicts and other menaces to navigation; protection of the customs revenue; enforcement of the navigation and other laws governing merchant vessels and motor boats; international control of the ice fields in the North Atlantic; regulation and policing of regattas and marine parades; enforcement of laws relating to anchorage of vessels, neutrality, quarantine, and immigration laws; suppression of smuggling and board merchant vessels; protection of game, and the seal and other fisheries in Alaska; suppression of illegal traffic in firearms, ammunition, and spirits in Alaska; medical aid to seamen of the deep-sea-fishing fleets.

Coast and Geodetic Survey, a scientific department of the government of the United States, for the purpose of making geodetic and hydrographic surveys to determine the coast-line; of making charts of harbors and tide waters, and of the bottom of the ocean along the coast; of indicating positions for the erection of lighthouses; and the making of various meteorological and other observations. It extends its observations to all parts of the globe, as serviceable to navigation.

Coast Mountains, COAST RANGE, a range or series of ranges extending along the west of California, Oregon, Washington and British Columbia, at no great distance from the Pacific coast, and rising to the height of 11,000 feet.

Coastwise Trade, or COASTING TRADE, the maritime commerce between ports of the same country, usually limited by law to ships of domestic ownership. The coastwise trade of Great Britain is not so limited, but that of Canada is limited to British-built vessels, and that of the United States to American vessels (vessels built within the United States, forfeited for breach of laws, or captured in war). The coastwise trade of the United States, always of great importance because of the enormous coast-line, was stimulated by the opening of the Panama Canal in 1914.

Coatbridge (kōt’brid’), a town in Scotland, Lanarkshire, 9½ miles east of Glasgow. The district abounds in coal and ironstone, and the place is a thriving town, supported chiefly by the ironworks, engineering establishments, etc., in the neighborhood. Pop. (1911) 43,527.

Coatesville (kō’tesvil’), a borough of Chester Co., Pennsylvania, 38 miles w. of Philadelphia. It has rolling mills, steel plants, silk and woolen mills, etc. Pop. 11,084.

Coati, or COATI-MONDI (kō’ta-ti mun’-di), a name of South American plantigrade carnivorous mammals of the genus Nasua, belonging to the Ursidae or bears, but recalling rather the raccoon or civet, and having a long proboscis or
COAST DEFENSE GUN

A modern 14-inch coast defense gun at Sandy Hook. The gun is mounted on a disappearing carriage, which lowers it out of sight behind the breastworks after firing. This is one of the most powerful guns in the world, firing a projectile weighing 1,000 pounds with a muzzle velocity of 2,300 feet per second, and a range of over ten miles.
Coat of Arms. See Arma and Heraldry.

Coat of Mail, a piece of armor in the form of a shirt, consisting of a network of iron or steel rings, or of small lameine or plates, usually of tempered iron, laid over each other like the scales of a fish, and fastened to a strong linen or leather jacket.

Cobalt (kō'balt; G. kobalt, kobolt, the same word as kobold, a goblin, the demon of the mines, so called by miners because cobalt was troublesome to miners, and at first its value was not known), a metal with the symbol Co, specific gravity 8.5, of a grayish-white color, very brittle, of a fine close grain, compact, but easily reducible to powder. It crystallizes in parallel bundles of needles. It is never found in a pure state, but usually as an oxide, or combined with arsenic or its acid, with sulphur, iron, etc. Its ores are arranged under the following species, viz., arsenical cobalt, of a white color, passing to steel gray; its texture is granular, and when heated it exhales the odor of garlic; gray cobalt, a compound of cobalt, arsenic, iron and sulphur, of a white color, with a tinge of red; its structure is foliated, and its crystals have a cube for their primitive form; sulphide of cobalt, compact and massive in its structure; oxide of cobalt, brown or brownish black, generally friable and earthy; sulphate and arsenate of cobalt, both of a red color, the former soluble in water. The great use of cobalt is to give a permanent blue color to glass and enamels upon metals, porcelain, and earthenware.

Cobalt, a town of Ontario province, Canada. Pop. (1911) 3629.

Cobalt-blue, a compound of alumina and oxide of cobalt, forming a beautiful and useful pigment.

Cobalt-green, a permanent green pigment prepared by precipitating a mixture of the sulphates of zinc and cobalt with carbonate of soda and igniting the precipitate.

Colan (kō-vi'n), or Vera Paz, a cathedral city, state of and 90 miles northeast of Guatemala. It is the center of a rich coffee and cane producing region and a trade in hides, skins, rubber and sarsaparilla. Pop. about 31,000.

Cobbett (kō'bēt), William, an English writer and politician, was the son of a farmer and publican at Farnham in Surrey, and born there on March 9, 1762. In 1783 he sought his way to London and obtained a situation as copying-clerk to an attorney, but after nine months he enlisted in the 54th Foot, and shortly after went with the regiment to Nova Scotia. His regular habits and attention to his duties soon brought him promotion, and he was sergeant-major when the regiment four years after returned to England (1791). During his service in the army Cobbett had employed all his spare time in improving his education. He now obtained his discharge, married, and proceeded to America to commence as a political writer. Under the signature of 'Peter Porcupine' he wrote papers and pamphlets of a strongly anti-republican tendency. In June, 1800, he sailed for England, and on his arrival started first the Porcupine, a daily paper, which had small success, then the Weekly Political Register, which soon acquired a great circulation. The Register had started as a Tory paper in support of Pitt, but gradually changed its politics till it became known as the most daring and uncompromising of the government's opponents. Three times heavily fined for libel, Cobbett continued his attacks on the government, in consequence of which he deemed it prudent to retreat to the United States (1817), transmitting his articles regularly, however, for the Register. In 1819 he returned to England, and made an unsuccessful attempt to get into Parliament for Coventry. About the same period he commenced a series of papers entitled Rural Rides, afterwards reprinted, which contain charming pictures of English country scenery, and are among the best of his productions. In 1824-27 appeared his History of the Reformation, in which he vilifies Queen Elizabeth and the leading reformers. On the passing of the Reform Bill in 1832 he was returned as member for Oldham, but was indifferently successful in his new seat. He died June 18, 1835. Cobbett is also the author of a Parliamentary History of England from the Conquest to 1803; Advice to Young Men and Women; Village Sermons, etc. He wrote in a pure and vigorous English style, and his writings contain much useful information, and show a sound judgment wherever the matter did not go beyond his strong practical sense.

Cobden (kō'den). Richard, an English politician, the 'apostle of free trade,' born in Sussex in 1804; died at London in 1865. After receiving a very meager education he was taken as an apprentice into a warehouse in London belonging to his uncle, and in this situation he rapidly made up for the defects of his education by his own diligence. In 1830, being left by the failure of his
Cobden uncle to his own resources, along with
some relatives he started a cotton manu-
factory in Manchester, which in a few
years was very successful. His first
political writing was a pamphlet on En-
gland, Ireland and America, which was
followed by another on Russia. In both
of these he gave clear utterance to the
political views to which he continued
through his life rigidly to adhere, advocat-
ing non-intervention in the disputes of
other nations, and maintaining it to be
the only proper object of the foreign
policy of England to increase and

strengthen her connections with foreign
countries in the way of trade and peace-
ful intercourse. Having joined the Anti-
Corn-Law League, formed in 1838, it was
chiefly the extraordinary activity of Cob-
den, together with Bright and other
zealous fellow-workers, which won victory
for the movement. In 1841 Cobden
entered Parliament as member for Stock-
port, and after several years of unwearied
efforts at last induced Sir Robert Peel,
then prime minister, to bring in a bill for
the repeal of the corn laws, a measure
which became law in 1846. Next year he
was chosen member for the W. Riding of
York, a constituency which he repre-
sented for ten years. His business, once
highly prosperous, had suffered while he
devoted himself to the agitation, and as
a compensation for the loss he had thus
sustained a national subscription was
made, and a sum of about $350,000 pre-
sented to him. Cobden continued his
labors as an advocate of parliamentary
reform, economy, and retrenchment, and
a policy of non-intervention, in all of
which he found a firm and ready ally in
Bright, both being strong opponents of
the Crimean war. In 1859 he was chosen
member for Rochdale, and was offered,
for the second time, a place in the
government, but again preferred to keep
his independent position. He refused
also a baronetcy and several other digni-
ties. His last great work was the com-
mmercial treaty which he was the means
of bringing about between Britain and
France in 1860. During his later years
he lived a great deal in retirement.

Cobden Club, an association formed
about a year after the
dearth of Mr. Cobden, mainly by the in-
fluence of Mr. Bright and Mr. T. B. Pot-
ter, for the purpose of encouraging the
growth and diffusion of those economical
and political principles with which Mr.
Cobden's name is associated. The Cob-
den Club has distributed a vast number
of books and pamphlets.

Cobija (kô-bê'hâ), or Puerto La Mar,
a seaport formerly of Bolivia,
now in the territory of Antofagasta,
Chile. Its population has fallen off from
about 4000 to less than 500.

Coble, or Cobble (kôb'l), a low,
flat-bottomed boat with a square stern,
used in salmon-fishery.

Coblentz (kô'blentz; anciently Con-
fuentes, from its situation at the confluence of the Rhine and
Moselle), a fortified town of Germany,
capital of Rhenish Prussia, finely situated
on the left bank of the Rhine in the
angle between it and the Moselle, and
connected by a pontoon-bridge over the
Rhine with the fortress of Ehrenbreit-
stein, this, along with its other fortifica-
tions, rendering it one of the strongest
places in Germany, and capable of ac-
commodating 100,000 men. The new
part of the town is well built with broad
streets and fine squares. The palace of
the Elector of Treves is now a Prussian
royal residence. Its industries embrace
cigars, machinery, champagne-wines,
pianos, and it has an important trade in
Rhine and Moselle wines. Pop. 53,902.

Cobnut, a large variety of the hazel-
nut.

Cobourg (kô'bourg), a port of Canada,
province of Ontario, on Lake
Ontario, 69 miles E. by N. of Toronto. It
is well built, has sundry manufactures,
a good harbor, and an increasing trade.
Pop. (1911) 5073.

Cobra di Capello (kôbra di kapêl-lo: that is, 'snake
of the hood'), the Portuguese name of the
hooded or spectacled snake Naja
tripudians, which is found in Southern
Asia, a closely allied species (Naja
naja), also called Cobra, or asp, being
found in Egypt. It is called spectacled
snake from a singular marking on the
back of the neck, while its other name
Coburg

is given from the remarkable manner in which it spreads out its skin on the sides of the neck and head when disturbed or irritated, raising the anterior part of its body so as to appear to stand erect, and expanding its hood. So exceedingly poisonous is its bite that in numerous instances death has followed within a few minutes, and under ordinary circumstances a few hours is the longest term where prompt measures have not been taken. But indeed recovery rarely takes place, though injection of potash into the veins is said to be a remedy. In India thousands of natives lose their lives yearly through cobra bites. Its food consists of small reptiles, birds, frogs, fishes (being an excellent swimmer), etc. Its great enemy is the ichneumon. It is one of the snakes that the snake-charmers perform tricks with.

Coburg (kōb'ərg), a town of Germany, capital of the duchy of Saxe-Coburg-Gotha, finely situated on the left bank of the Ilz, 106 miles N. by N. of Frankfort-on-the-Main. The principal buildings are the palace of the Duke of Saxe-Coburg-Gotha, and on an eminence overhanging the town the ancient castle of the dukes of Coburg, in which are still shown the rooms occupied by Luther during his concealment here, with his bedstead and pulpit. The Duke of Edinburgh has a residence here. Coburg has various manufactures, also extensive breweries. Pop. (1906) 22,483.

Coburg, a thin fabric of worsted and cotton, or worsted and silk, twilled on one side, for ladies' dresses, intended as a substitute for merino.

Coburg Peninsula, a peninsula on the north coast of Australia in the Northern Territory of Southern Australia.

Cobweb (kōb'web), the web or network spun by spiders to catch their prey.

Coca (kō'səkə), Erythroxylon Coca, a South American plant, nat. order Erythroxylaceae. The leaf contains a stimulating anesthetic, and is chewed by the inhabitants of countries on the Pacific side of South America, mixed with finely-powdered chalk. It has effects somewhat similar to those of opium. A small quantity of it enables a person to bear up against fatigue even when receiving less food than usual; and it prevents the difficulty of respiration experienced in climbing high mountains. Used in excess it brings on various disordered states, and the desire for it increases so much with indulgence that a confirmed coca-chewer is said never to have been reclaimed. Coca-leaves depend for their influence on a crystallizable alkaloid called cocaine (C₉H₁₄NO₄), which, besides having effects similar to the leaf, possesses valuable anesthetic properties. Applied to the skin cocaine has little effect, but applied to mucous membranes in the form of a solution of the hydrochloride, it produces complete local anesthesia, lasting for about ten minutes. It is much used in operations on the eyes, nose, tonsils and throat, etc. It is also administered hypodermically for such minor operations as the amputation of a finger, etc. The stimulating effect which the drug produces on the brain tends to the formation of the cocaine habit, which completely undermines the nervous system. Stringent laws governing the sale of cocaine have been enacted.

Cocaine (kō-kān', kō'ka-in). See Coca.

Cocinella (kok-sin'ələ), the lady-bird genus of insects. See Ladybird.

Coccolite (kok'ə-lit). See Augite.

Cocco (kōk'ō) Root, the name for the corms of several plants of the genus Colocasia (order Araceae), used as food in tropical America.

Cocceus (kok'sətəs), a genus of fossil fishes of the Old Red Sandstone, having small berry-like tubercles studding the plates of their cranial buckler and body. It differs from Cephalaspis in having its back and belly both covered with a cuirass.

Coccus (kok'səs), a genus of East Indian menispermaceous plants, consisting of climbers with heart-shaped leaves and small flowers. The species are generally powdered by febrifuges. The fruit of the Coccus Indicus forms a considerable article of commerce, and is sometimes added to malt liquors to give bitterness.

Coccus (kok'us), a genus of insects of the order Hemiptera, family Coccideae, or scale insects. The males are elongated in their form, have large wings, and are destitute of any obvious means of suction; the females, on the contrary, are of a rounded or oval form, about an eighth of an inch in diameter, have no wings, but possess a beak or sucker, by which they suck up the juices of the plants on which they live. At a certain period of their life the females attach themselves to the plant or tree which they inhabit, and remain thereon immovable during the rest of their existence. In this situation they are impregnated by the male; after which their body increases considerably, in many species losing its original form and as-
sarming that of a gall, and, after depositing the eggs, drying up and forming a habitation for the young. Some of these insects are troublesome in gardens, plantations, and hot-houses, while others are of great value. For example, kermes, cochineal, lac-lake, lac-dye, and gum-lac are either the perfect insects dried or the secretions which they form. Kermes consist of the dried females of *Coccus ciliis*, found in great abundance upon a species of oak (*Quercus cocciifera*), a native of the Mediterranean basin, and gathered before the eggs are hatched. It was known as a dyestuff in the earliest times, but has partly fallen into disuse since the introduction of cochineal. Cochineal consists of the bodies of the females of the *Coccus coccic*, a native of Mexico, which feeds on various species of cactus, particularly on one called *nopal* (*Opuntia cochinillifera*). See Cochineal, Lac, and China Wax. Spherical bacteria are also called cocci.

**Coccyx** (kok'siks), in anatomy, an assemblage of small bones constituting the lower extremity of the backbone, consisting of the last four vertebrae, in a rudimentary form, costified. It is triangular in shape, and convexo-concave. It is the homologue in man of the tail in animals.

**Cochabamba** (koch'a-bam'ba), a town in the interior of Bolivia, capital of the province of Cochabamba, situated in a fertile valley 8435 feet above the level of the sea, with a good trade and considerable manufactures. Pop. 21,888.—The province has an area of 26,810 sq. miles; pop. 328,163.

**Cochin** (ko'chin), a seaport of Hindustan, Malabar district, Madras Presidency, on a small island; a picturesque place with many quaint old Dutch buildings. Its harbor, although sometimes inaccessible during the s. w. monsoon, is the best on this coast. Its trade, however, has for some years been declining. Cochin was one of the first places in India visited by Europeans. In 1502 Vasco da Gama established a factory, and soon after Albuquerque built a fort; he also died here in 1524. In 1663 the Dutch took the place. In 1795 the British. Pop. (1901) 18,274. See also next article.

**Cochin**, a small native state of India, on the s. w. or Malabar coast, connected with the Presidency of Madras, intersected by numerous rapid streams descending from the Western Ghauts, and having several shallow lakes or backwaters along the coast. Chief products: timber and rice. The rajah has to pay

$100,000 annually to the Indian government. Area, 1341 sq. miles; pop. (1901), 815,200, of whom about 150,000 were Christians, partly belonging to the Jacobite and Nestorian churches established here in early times. The capital is Ernakulam. Formerly Cochin was the capital, a town on the Travancore estuary, within half a mile of the British town of Cochin (which see).

**Cochin-China** (kô'chên-ch'in-ch'în'â), a country forming part of the peninsula of Southeastern Asia, and formerly regarded as comprising the whole of Anam (which see) and Lower or French Cochin-China. The latter belonged to Anam till, in 1863, a portion of it was finally ceded to France after a war occasioned by the persecution of French missionaries; other portions were gradually acquired, the territory obtained covering 23,082 sq. miles, with a population of 2,968,529. It is now organized in departments, prefectures, subprefectures and cantons. The northern and eastern parts are hilly, but the rest of the territory consists almost entirely of well-watered, low, alluvial land. In the low and wet grounds much rice is grown. In the more elevated districts are grown tobacco, sugar-cane, maize, indigo and betel. Among the other products are tea, gums, coconuts, oil, silk, spices. The climate is hot and unsuited for Europeans. Industrial arts are as yet limited among the natives. But they excel in the use of wood, of which their temples, pagodas, and tombs are built, being ornamented with elaborate carving. They live in villages adjacent to the rivers, which form almost the only means of communication. The only roads at present existing are those connecting Saigon, the capital, with the principal towns of the country, which connects Saigon and Mytyp. The principal export is rice, mainly to China; cotton and silk are also exported. The export and import trade is mostly carried on by British vessels, while the local trade is chiefly in the hands of the Chinese. The French number only several hundreds. The majority of the inhabitants are Anamese. In their monosyllabic language, their religious tendencies towards Buddhism or the system of Confucius and in their social customs they much resemble the Chinese.

—**UPPER COCHIN-CHINA** is the name sometimes given to the narrow strip of land on the east coast of Anam between the mountains and the sea extending from Tongquin on the north to Champa on the south, or from about 13° to 11° N. See Anam.
Cochineal (koch′in-eul), a dyestuff consisting of the dried bodies of the females of a species of insect, the Coccus cacti (see Coccus), a native of the warmer parts of America, particularly Mexico, and found living on a species of cactus called the cochineal fig. The insects are softly brushed off, and killed by being placed in ovens or dried in the sun, having then the appearance of small berries or seeds. A pound of cochineal contains about 70,000 of them. The finest cochineal is prepared in Mexico, where it was first discovered, and Guatemala; but Peru, Brazil, Algiers, the East and West Indies, and the Canary Islands have also entered into this industry with more or less success. Cochineal produces crimson and scarlet colors, and is used in making Carmine and lake.

Cochlea (kok′le-a), an important part of the internal ear, so called from its shape, which resembles that of a small shell.

Cochlearia (kok′le-ə-r′i-a), a genus of cruciferous plants, including the horseradish and common scurry-grass.

Cochrane, John, born in Palatine, New York, in 1813; died in 1898. He studied law, became interested in politics; and was surveyor of the port of New York, 1853-57. During the Civil War he fought as colonel of the 1st United States Chasseurs. In 1864 he was nominated vice-president, and in 1865 became attorney-general of New York.

Cochrane, Lorn. See Dundonald.

Cock. See Fowl.

Cockade (ko-käd′), a plume of cock's feathers, with which the Crets in the service of the French in the seventeenth century adorned their caps. A bow of colored ribbons was adopted for the cockade in France, and during the French revolution the tricolored cockade—red, white and blue—became the national distinction. National cockades are now to be found over all Europe.

Cockatoo (kok-a-tō′), the name of a number of climbing birds belonging to the family of the parrots, and Ptilacidae, or regarded as forming a distinct family Ptiloptophidae or Cacatuidae. They have a large, hard bill; a crest capable of being raised and lowered at the will of the bird, commonly white, but sometimes yellow, red, or blue; a tail somewhat longer than that of the parrot, and square or rounded; long wings; and, for the most part, a white plumage, though in some genera the plumage is dark. They are found especially in the Eastern Archipelago and Australia. They live on roots, fruits, grain, insects, etc., and usually congregate in flocks. These birds are easily tamed, and when domesticated become very familiar. The sulphur-crested cockatoo (Ptilopterus galerita) of Australia and Tasmania is a favorite cage-bird. So are the white-crested cockatoo (P. aitua) and Leadbeater's cockatoo (P. Leadbeaters), the pink cockatoo, whose crest is barred with crimson, yellow and white. The Kaka of New Zealand (Nestor meridionalis) belongs to this family.

Cockatrice (kok′a-tris), a fabulous monster anciently believed to be hatched from a cock's egg. It is often simply another name for the basilisk. See Basilisk.

Cockburn (ko′burn), Henry Dundas, Lord, a distinguished Scottish judge, was the son of Archibald Cockburn, one of the barons of the Court of Exchequer, and born in 1779. He studied for the Scottish bar, and was admitted a member of the Faculty of Advocates in 1800. He attached himself to the Liberal party, rose to eminence in his profession, and became, under Earl Grey, solicitor-general, for Scotland. He was a good example of the blending of wit, law and learning common enough at the old Scots bar. He died in 1834. His Memorials of His Time (published in 1856) is an invaluable record of the social history of Scotland. Not less interesting is his life of his friend Lord Jeffrey, published in 1834.

Cockchafer (kok′cha-fer), a species of lamellicorn beetle, genus Melolontha, remarkable for the length of its life in the worm or larva state, as well as for the injury it does
Cocker

to vegetation after it has attained its perfect condition. The common cockchafer (*Melolontha vulgaris*) is hatched from an egg which the parent deposits in a hole about 6 inches deep, which she digs for the purpose. At the end of about three months the insect emerges as a small grub or maggot, and feeds on the roots of vegetables in the vicinity with great voracity. When full grown it is over an inch in length; it makes its way underground with ease, and commits great devastation on grass and corn. In the fourth year the insect appears as a perfect coleopterous insect—a beetle over an inch long, of a black color, with a whitish down. It usually emerges from the ground about the beginning of May, from which circumstance the English name *May bug* or *beetle* has been given it. In its perfect state it is very destructive to the leaves of various trees.

Cocker (kok'ær), a dog of the spaniel kind, allied to the Blenheim dog, used for raising woodcocks and snipes from their haunts in woods and marshes.

Cocker, Edward, an English engraver and teacher of writing and arithmetic in the seventeenth century, born about 1631. His work, *Cocker's Arithmetic*, upon which many succeeding treatises were framed, was published in 1677.

Cockermouth (kök'ær-mouth), a town of Cumberland, England, at the mouth of the Cocker, 24 miles s. w. of Carlisle, now giving name to a parl. div. of the county. It has an old ruined castle, supposed to have been built soon after the conquest. The lead and tawds are manufactured; and there are coal-mines in the neighborhood. Cockermouth was the birthplace of the poet Wordsworth. Pop. 1911, 5203.

Cockfighting, an amusement practiced in various countries, first perhaps among the Greeks and Romans. At Athens there were annual cockfights, and among the Romans quills and partridges were also used for this purpose. It was long a favorite sport with the British, and the training, dieting, and breeding of cocks for fighting was the subject of many treatises. It is a favorite sport in the island of Cuba, in the Philippine Islands, and some other localities.

Cock-Lane Ghost, an impudent hoax by which many Londoners were deceived in 1762, consisting in certain knockings heard in the house of a Mr. Parsons, in Cock Lane, Smithfield. Dr. Johnson was among those who believed in the super-
natural character of the manifestations; but it was found out that the knockings were produced by a girl employed by Parsons.

Cockle (kokl), a name for the bivalve molluscs of the genus *Cardium*, especially *Cardium edule*, common on the sandy shores of the ocean, much used as food. The general characteristics are: shells nearly equilateral and equivalvular; hinge with two small teeth, one on each side near the beak, and two larger remote lateral teeth, one on each side; prominent ribs running from the hinge to the edge of the valve.

Cockle. See Corn-cockle.

Cockle Stove, a stove in which the fire-chamber is surrounded by air-currents, which, after being heated sufficiently, are admitted into the apartments to be warmed.

Cockney (kok'ni), a nickname for a London citizen, as to the origin of which there has been much dispute. The word is often, but not always, employed slightly as implying a peculiar limitation of taste or judgment. The epithet is as old at least as the time of Henry II.

Cock of the Plains (*Oenocercus urophasianus*), a large North American species of grouse, inhabiting desolate plains in the western States.

Cock of the Rock (*Rupicola arantia*), a South American bird of a rich orange color with a beautiful crest, belonging to the manakin family.

Cock of the Woods. See Capercaillie.

Cockpit (kok'pit), in a man-of-war, the place where the wounded were dressed in battle or at other times, and where medicines were kept.

Cockroach (kok'rōch; *Blatt*), a genus of insects belonging to the Orthopterous or straight-winged order, characterized by an oval, elongated,
Cockscomb

depressed body, which is smooth on its superior surface. They have parchment-like elytra, and in the female the wings are imperfectly developed. They are nocturnal in their habits, exceedingly agile, and devoid of provisions of all kinds. Cockroaches, like other orthopterous insects, do not undergo a complete metamorphosis; the larvae and nymphs resemble the perfect insects, except that they have merely rudiments of wings. The eggs are carried below the abdomen of the female for seven or eight days till she finally attaches them to some solid body by means of a gummy fluid. The species are numerous. The Blatta orientalis, or common kitchen cockroach (in England commonly called black beetle), was originally brought from Asia to Europe, and thence to America, where it is now common. The Blatta americana, or American cockroach, grows to be 2 or 3 inches long, including the antennae. Throughout the southern portion of North America and in the West India Islands this species invades houses and is very troublesome.

Cockscomb (koks'kôm), a name given to flowering plants of various genera. By gardeners it is properly confined to Celosia cristata; but it is popularly applied to Pedicularis or lousewort, Rhinanthus cristatus or yellow rattle, as also to Erythrina cristagalli.

Cock's-foot, Cock's-foot GRASS, a perennial pasture-grass (Dactylis glomerata) of a coarse, harsh, wiry texture, but capable of growing on barren, sandy places, and yielding a valuable food for sheep very early in the spring. It is a native of Europe generally, also of Asia and America. The name has been given to it because of the resemblance of its three-branched panicle to the foot of a fowl.

Cockspur Thorn, the Cra ta gus crus-galli, a North American shrub which has long been cultivated in Britain as a shrubbery ornament. There are several varieties, which are admired for their snowly blossoms in May.

Cockswain (kok'swân; colloquially cok'ân), the officer who manages and steers a boat and has the command of the boat's crew.

Cocles. See Horatius.

Cocoa (kôk'kô), a name given to the ground kernels of the cacao or chocolate tree prepared to be made into a beverage. See Cacao.

Cocoanut (kôk'kô-nut), or Coconuut, a woody fruit of an oval shape, from 3 or 4 to 6 or 8 inches in length, covered with a fibrous husk, and lined internally with a white, firm, and fleshy kernel. The tree (Cocos nucifera) which produces the cocoanut is a palm, from 60 to 100 feet high. The trunk is straight and naked, and surmounted by a crown of feather-like leaves. The nuts hang from the summit of the tree in clusters of a dozen or more together. The external rind of the nuts has a smooth surface. This encloses an extremely fibrous substance, of considerable thickness, which immediately surrounds the nut. The latter has a thick and hard shell, with three black scars at one end, through one of which the embryo of the future tree pushes its way. This scar may be pierced with a pin; the others are as hard as the rest of the shell. The kernel incloses a considerable quantity of sweet and watery liquid, of a whitish color, which has the name of milk. This palm is a native of Africa, the East and West Indies, and South America, and is now grown almost everywhere in tropical countries. Food, clothing, and the means of shelter and protection are all afforded by the cocoanut tree. The kernels are used as food in various modes of dressing, and yield on pressure an oil which is largely imported into various countries. (See Cocoanut Oil.) When dried before the oil is expressed they are known as copra. The fibrous coat of the nut is made into the well-known cocoanut matting; the coarse yarn obtained from it is called coir, which is also used for cordage. The hard shell of the nut is polished and made into a cup or other domestic utensil. The fronds are wrought into baskets, brooms, mats, saks, and many other useful articles; the leaves are made into boats or furnish timber for the construction of houses. By boiling the tree a white, sweetish liquid called toddy exudes from the wound, and yields by distillation one of the varieties of the spirit called arak. A kind of sugar called jaggery is also obtained from the juice by inspissation.

Cocoanut Beetle (Batocera rubus), a large beetle of the family Longicornes, the larvae of which inhabit cocoanut trees and eat into the stema.

Cocoanut Oil, a solid vegetable fat, largely used in candle-making and in the manufacture of soaps and pomatum. This fat is got by pressure from the cocoanut kernel, and is as white as lard, and somewhat firmer. Manila and Ceylon export large quantities of this useful oil.
Cocoa-plum, the fruit of *Chrysobalanus ioaco* family Rosaceae, which is eaten in the West Indies. It is about the size of a plum, with a sweet and pleasant though somewhat austere pulp.

**Cocoon** (ko-kōn'), the name given to the web or ball spun by caterpillars before passing into the chrysalis state. The valuable product thus obtained from the silkworm is well known.

**Cocos** (ko'kōs) Islands. See *Keeling Islands*.

---

**Codfish** (*Gadus morhua*).

**Codum (ko'kum) Butter, Codum-oil.** A pale, greenish-yellow solid oil obtained from the seeds of *Garcinia purpurata*, a tree of the same genus with mangosteen, used in India to adulterate ghee or fluid butter. It is sometimes mixed with bear's-grease in pomatum.

**Cocythus** (ko-k'tus; from Greek ko-keüm, to lament), a river of ancient Epirus. Also, among the ancient Greeks, one of the rivers of the lower world.

**Cod** (*Gadus*), a genus of well-known soft-finned fishes, of the same family as the haddock, whiting, ling, etc., distinguished by the following characters:—A smooth, oblong, or fusiform body, covered with small, soft scales; ventrals attached beneath the throat; gills large, seven-rayed, and opening laterally; a small beard at the tip of the lower jaw; generally two or three dorsal fins, one or two anal, and one distinct caudal fin. The most interesting species is the common or bank cod (*G. morhua*). Though found plentifully on the coasts of other northern regions, as Britain, Scandinavia and Iceland, a stretch of sea near the coast of Newfoundland is the favorite annual resort of countless multitudes of cod, which visit the Grand Banks to feed upon the crustaceous and molluscan animals abundant in such situations, and thus attract fleets of fishermen. Few members of the animal creation are more universally serviceable to man than the codfish. Both in its fresh state and when salted and dried it is a substantial and wholesome article of diet; the tongue is considered a delicacy, and the swimming-bladders or sounders, besides being highly nutritious, supply, if rightly prepared, an isinglass equal to the best Russian. The oil extracted by heat and pressure from the liver is of great medicinal value, and contributes considerably to the high economic value of the cod. The cod is enormous and prolific, the ovaries of each female containing more than 9,000,000 of eggs; but the numbers are kept down by a host of enemies. The spawning season, on the banks of Newfoundland begins about the month of March and terminates in June; but the regular period of fishing does not commence before April on account of the storms, ice and fogs. The season lasts till the end of June, when the cod commence their migrations. The average length of the common cod is about 2½ or 3 feet, and the weight between 30 and 50 lbs., though sometimes cod are caught weighing three times this. The color is a yellowish gray on the back, spotted with yellow and brown; the belly white or red, with golden spots in young individuals. It is caught by lines and hooks.

**Cod, Cape.** See Cape Cod.

**Coda** (ko'da), in music, an adjunct to the close of a composition for the purpose of enforcing the final character of the movement.

**Code** (kōd), in jurisprudence, is a name given to a systematic collection or digest of laws. The following
are the chief codes which have affected the laws of Europe: The Theodosian Code (Codex Theodossianus), a compilation executed in 429 by a commission on behalf of Theodosius the Younger, and promulgated as law throughout the eastern and western empires. The Justinian Code (Codex Justinianus), a code compiled in 528, in the reign of the Emperor Justinian, incorporating all the codes, rescripts, edicts previously in use (see Civil Laws). The Code Napoléon, or Code Civil, undertaken under the consulsiphip of Napoléon by the most eminent jurists of France, and published in 1804. The Code Napoléon (under which name other four codes of commercial law, criminal law, penal law, and law of procedure, drawn up at the same time, are often included) was a code in the strictest sense, that is, not merely a collection of laws, but a complete and exclusive statement of the law, virtually amounting to a recasting of the laws of the country. In this country one of the most complete codes which has been enacted is that of Louisiana, made after its cession to the United States and superseded by a new one in 1824. In the way of revision of existing law an admirable example is that of the Revised Statutes of the State of New York, which started the inauguration of a widespread reform in jurisprudence, extending to England, India, Australia, and most of the American States. The principal reforms were the abolition of the distinction between legal and equitable practice, and the simplification of procedure in general. Congress has a committee engaged in a codification of United States laws.

**Codeine** (kōdēn; Gr. kōdeta, a poppy-head), a crystallizable alkaloid obtained from opium, in which it exists to the amount of 0.8 or 8 oz. per 100 lbs. It is used to produce sleepey and to soothe irritable coughs; and is sometimes the chief remedy in diabetes; dose, ½ grain and upwards to 1 grain. It is a poison in excessive doses.

**Codetta** (kō-dēt’a), in music, a short section which connects one section with another.

**Codex** (kōdēks), an ancient written book; an important ancient MS., as one of the Scriptures or of some classical writer. A collection of laws was also called a Codex. Codex Theodosianus, Codex Justinianus (see Code).—Codex Alexandrinus. See Alexandrian Version.—Codex Sinaiticus, a very ancient and valuable manuscript of the Greek Septuagint version of the Old Testament (including the Apocrypha), the whole of the New Testament, the Epistle of Barnabas, and a part of the Shepherd of Hermas, discovered in the monastery of St. Catherine, on Mount Sinai, by Tischendorf, in 1869, and now at St. Petersburg. It is written on parchment in four columns, in early uncial characters, and bears every mark of being of great antiquity, perhaps even older than the Vatican MS. It is assigned by Tischendorf to the fourth century. The Old Testament is defective, but the New Testament is complete, not a word being wanting, which is the more remarkable inasmuch as it is the only manuscript of the New Testament which is complete, being from this and its early life of the highest value. It has been published in facsimile.—Codex Vaticanus, an ancient Greek MS. of the Old and New Testaments, so called from being contained in the Vatican Library at Rome. It is written on thin vellum, in small uncial characters. The manuscript is assigned to the fourth century, and until the discovery of the Sinaitic was regarded as the best manuscript of the Old and New Testaments. The greater part of Genesis in the Old Testament, and the whole of the pastoral epistles and the Revelation in the New Testament are wanting. A facsimile of it was published in 1868.

**Codex Medicus**, a periodical character, containing a list of therapeutic agents, methods of manufacture, etc. There are several now published, some containing information particularly to a specialty in medical science and art. The name of the French pharmacopoeia.

**Codicil** (kod’i-sil), in law, a supplement to a will, to be considered as a part of it, either for the purpose of explaining or altering, or of adding to or subtracting from the testator’s former dispositions. A codicil may not only be written on the same paper or affixed to or folded up with the will, but may be written on a different paper and deposited in a different place. In general the law relating to codicils is the same as that relating to wills, and the same proofs of genuineness must be furnished by signature, and attestation by witnesses. A man may make as many codicils as he pleases, and, if not contradictory, all are equally valid.

**Codillia** (kō-dī-lē’ā), the coarsest part of hemp, which is sorted out by itself; also, the coarsest part of flax.

**Codlin** (kōd’lin), CODLING, a name for several varieties of kitchen apple with large or medium-sized fruit.
Codling-moth, a small moth the larva of which feeds on the codling apple.

Cod Liver Oil, an oil extracted from the livers of different kinds of cod—the Gadus morrhua (common cod) being specified in the pharmacopia—and allied species. The finest and palest oil is got from fresh and carefully-cleaned liver, the oil being extracted either in the cold or by a gentle heat. The darker kinds are got at a higher temperature, and often from the livers in a putrefying state. Only the pale oils are used in medicine; the dark oils are too rank and acrid, and they are only used in dressing leather. Cod-liver oil is a somewhat complex substance, but the main ingredients appear to be olein and margarin. Acetic, butyric and phosphoric acids, iodine, bromine and phosphorus are also present, and to these the oil may owe some of its odor. This oil is now a recognized agent in the treatment of rheumatism, gout, scrofula and especially of consumption, being taken internally and containing easily-assimilated nutritive matter.

Codogno (ko-dō’nyō), a town in North Italy, province of Milan, in a fertile district between the Po and Adda, with a large trade in Parmesan cheese. Pop. 10,053.

Codrus (kō’drus), according to Greek legend the last king of Athens. Having learned that the enemies of his country would be victorious, according to the declaration of an oracle, if they did not kill the Athenian king, he voluntarily entered their camp, provoked a quarrel and was slain. The grateful Athenians abolished the royal dignity, substituting that of archon, esteeming no one worthy to be the successor of Codrus.

Cody, William Frederick, scout and showman, known as 'Buffalo Bill,' born in Scott county, Iowa, in 1845; became a pony express rider and a government scout and guide (1861-85). During the construction of the Kansas Pacific Railroad he contracted to furnish the laborers with meat and killed in eighteen months (1867-88) over 4000 buffaloes. Subsequently he engaged in a great number of Indian fights, and in 1883 produced and toured with his 'Wild West Show.' Author of several books. He died January 10, 1917.

Coefficient (kō’s-ē’shent), in algebra, a multiplier of a quantity. Thus in the expression 3x we should understand as the coefficient of x, 3a, and as the coefficient of ax, 3.

Coehorn (kō’horn), Menno, Baron, Van, a Dutch military engineer, born 1641; died 1704. Having entered the Dutch military service he distinguished himself by his invention of small mortars, called after him coehorns, but more by his eminence as a master of the art of fortification, whence he has been called the Dutch Vauban. He fortified almost all the strong places in Holland.

Coel. See Algark.

Celesterata (sē-le-ter-ā’ta; Gr. koilos, hollow, enteron, an intestine), a subkingdom of animals, including those whose alimentary canal communicates freely with the general cavity of the body ('the somatic cavity'). The body is essentially composed of two layers or membranes, an outer layer or 'ectoderm' and an inner layer of 'endoderm.' No circulatory organs exist, and in most there are no traces of a nervous system. Peculiar stinging organs or 'thread-cells' are usually, if not always, present, and in most cases there is a radiate or starlike arrangement of the organs, which is especially perceptible in the tentacles, which are in most instances placed round the mouth. Distinguish reproductive organs exist in all, but multiplication also takes place by fission and budding. The Celesterata are divided into two great sections, the Actinospa and the Hydrozoa, and include the medusas, corals, sea-anemones, etc. They are nearly all marine animals.

Celestin (sē-lēs-tin). See Celestine.

Coele-Syria ('sě'le sir'-i-a; that is, Hollow Syria), the large valley lying between the Lebanon and Anti-Lebanon mountain ranges in Syria. Near its center are the ruins of Nailebek.

Cenobite (sēn'ə-bit). See Anchorite.

Coethen, or Köthen (keə’ten), a town of Germany, formerly capital of the duchy of Anhalt-Coethen, now forming part of the duchy of Anhalt, 80 miles s. w. Berlin. The ducale castle is now occupied as a gymnasium and otherwise. Beet-root sugar is a staple article of manufacture and commerce. Pop. 22,083.

Coffee (kōf’ē), is the seed of an evergreen shrub which is cultivated in hot climates, and is a native of Abyssinia and of Arabia. This shrub (Coffee Arabica) is from 15 to 20 feet in height, and belongs to the Rubiaceae. The leaves are green, glossy on the upper surface, and the flowers are white and sweet-scented. The fruit is of an oval shape, about the size of a cherry, and of
a dark-red color when ripe. Each of these contains two cells, and each cell a single seed, which is the coffee as we see it before it undergoes the process of roasting. Great attention is paid to the culture of coffee in Arabia. The trees are raised from seed sown in nurseries and afterwards planted out in moist and shady situations, on sloping grounds or at the foot of mountains. Care is taken to conduct little rills of water to their roots, which at certain seasons require to be kept constantly moist. When the fruit has attained its maturity cloths are placed under the trees, and upon these the laborers shake it down. They afterwards spread the berries on mats, and expose them to the sun to dry. The husk is then broken off by large and heavy rollers of wood or iron. When the coffee has been thus cleared of its husk it is again dried in the sun, and, finally winnowed with a large fan, for the purpose of clearing it from the pieces of husks with which it is intermingled. A pound of coffee is generally more than the produce of one tree; but a tree in great vigor will produce 8 or 4 lbs. The best coffee is imported from Mocha, on the Red Sea. It is packed in large bales, each containing a number of smaller bales, and when good appears fresh and of a greenish-olive color. Next in quality to the Mocha coffee may perhaps be ranked that of Southern India and Ceylon, which is strong and well flavored. Java and Central America also produce large quantities of excellent coffee, and Mexico, in one district a crop which ranks with Mocha. Brazilian coffee, though produced much more abundantly than any other, varies very greatly in quality, though its best does not take rank with some of those mentioned. Liberian coffee is esteemed by many. Of the best Mocha coffee grown in the province of Yemen little or none is said to reach the Western markets. Arabia itself, Syria and Egypt consume fully two-thirds, and the remainder is exclusively absorbed by Turkish or Armenian buyers. The only other coffee which holds a first rank in Eastern opinion is that of Abyssinia. Then comes the produce of India, which those accustomed to the Arabian variety are said to consider hardly drinkable. American coffee holds in the judgment of Orientals the very last rank. The Dutch were the first to extend the cultivation of coffee beyond the countries to which it is native. About 1600 some coffee seeds were brought to Java, where they were planted and produced fruit. By 1718 the Dutch planters of Surinam had entered on the cultivation of coffee with success, and ten years after it was introduced from that colony by the English into Jamaica, and by the French into Martinique. It was not till 1774 that the planters of Brazil, now the greatest producers of coffee in the world, commenced its cultivation. Coffee as an article of diet is of but comparatively recent introduction. To the Greeks and Romans it was wholly unknown. From Arabia it passed to Egypt and Turkey, whence it was introduced into England by a Turkey merchant named Edwards in 1652, whose Greek servant, named Pasqua, first opened a coffee-house in London. In 1671 an Armenian named Pashan set up a coffee-house in Paris. In Great Britain much less is drunk than on the continent of Europe or in the United States and Canada, tea being the British national beverage, while coffee is the favorite American beverage. The excellence of coffee depends in a great measure on the skill and attention exercised in roasting it. If it be too little roasted it is devoid of flavor, and if too much it becomes acrid, and has a disagreeable, burned taste. Coffee is used in the form either of an infusion or decoction, of which the former is decidedly preferable, both as regards flavor and strength. The fine aromatic oil which produces the flavor and strength of coffee is lost by boiling. The best mode is to pour boiling water through the coffee in a strainer, which is found to extract nearly all the strength; or to pour boiling water upon it and set it upon the fire, not to exceed ten minutes. Prepared in either way it is fine and strong. In the Asiatic mode of preparing coffee the beans are pounded, not ground; and to the Turks and Arabs boil the coffee, they boil each cup by itself and only for a moment, so that the effect is much the same as that of infusion. In Arabia some additional spicing, generally of saffron or some aromatic seeds, is considered indispensable: but neither Turks nor Arabs use sugar or cream with coffee. Since the middle of the eighteenth century both the culture and consumption of coffee have continually increased. The prin-
Cohesion

cipal supply of the United States is derived from Brazil, which furnishes 75 per cent. of the whole import. It is known in commerce as 'Rio.' Coffee acts as a nervous stimulant, a property which it owes mainly to the alkaloid caffeine (which see). It thus promotes cheerfulness and removes languor, and also aids digestion; but in some constitutions it induces sleeplessness headache, and nervous tremblings, particularly after over-indulgence.

Coffee-bug, *Leccanium coffeae*, an insect of the Coccus family, very destructive in coffee plantations.

Coffee (kôfèr), in architecture, a sunk panel or compartment in a ceiling of an ornamental character, and usually enriched with moldings, and having a rose, pomegranate, etc., in the center.

Coffee-dam, a temporary wooden enclosure formed in water in order to obtain a firm and dry foundation for bridges, piers, etc.

Coffeeville, a city in Montgomery Co., Kansas, on the Verdigris River, 19 miles S. of Independence. It has oil refineries, brick and tile plants, zinc oxide plant, paper and flour mills, sash and door factories, etc. Both electric light and water plants are owned and operated by the city. Pop. 15,815.

Coffin (kofìn), the chest or box in which a dead body is enclosed for burial. Coffins were used by the ancients mostly to receive the bodies of persons of distinction. Among the Romans it was early the almost universal custom to consume the bodies with fire, and deposit the ashes in urns. In Egypt coffins seem to have been used in ancient times universally. They were of stone, earthenware, glass, wood, etc. A sort of ancient coffin is known as a sarcophagus. Coffins among Christians were introduced with the custom of burying. (See Burial.) Modern coffins are usually made of wood.

Coffin, Sir ISAAC, admiral, born in Massachusetts, in 1759; died in 1839; entered the British navy when 14 years old under Sir John Montague, becoming commander in 1782. During the Revolution he remained loyal to the mother country. He founded the famous Coffin School, Nantucket, Mass., 'to be a perpetual tree of knowledge in this sterile spot.' In January, 1889, the foundation was valued at $50,000, and it was decided to allow an emergency fund to accumulate.

Cognac (kon-räk), a town in France, dep. Charente, and near the river Charente, 22 miles W. Angoulême, pleasantly situated on a hill, crowned by the remains of an old castle. It is famous for the brandy which bears its name, and which is exported to all parts of the world. Pop. 18,389.

Cognates (kog'nåts), relations by the mother's side. See Agnates.

Cognizance (kog'ni-sanz, kon'li-sanz), in heraldry, a crest, coat of arms, or similar badge of distinction appertaining to a person or family; in law, judicial or formal notice or acknowledgment of a fact.

Cognomen (kog'nō'men), the hereditary family name (such as Cicero, Cato, etc.) among the ancient Romans. The other two names generally borne by every well-born Roman, viz. the praenomen and nomen (as in Marcus Tullius Cicero), served to denote the individual (Marcus), and the gens (Tullius) or clan to which his family belonged.

Cognovit (kog-nō'vit), in law, is a written confession given by the defendant that the action of the plaintiff is just, or that he has no available defense.

Cog-wheel, a wheel with cogs or teeth.

Coheir, COHEIRESS (kō-ar', kō-ar'ēs), a joint heir or heiress, one who succeeds to an inheritance that is to be divided among two or more.

Coheleth. See Ecclesiastes.

Cohesion (kō-bē'shun), the force by which the various particles of the same material are kept in contact, forming one continuous mass. Its action is seen in a solid mass of matter, the parts of which cohere with a certain force which resists any mechanical action that would tend to separate them. In different bodies it is exerted with different degrees of strength, and it is measured by the force necessary to pull them asunder. Cohesion acts at insensible distances, or between particles in contact, and is thus distinguished from the attraction of gravitation. It unites particles into a single mass, and that without producing any change of properties, and is thus distinguished from adhesion, which takes place between different masses or substances, and from chemical attraction one affinity, which unites particles of a different kind together and produces a new substance. Hardness, softness, tenacity, elasticity, malleability and ductility are to be considered as modifications of cohesion. The great antagonist of cohesion is heat.
ELECTRIC COINING PRESS, U. S. MINT, PHILADELPHIA

Woman feeding planchets, or coin blanks, to brass tubes from the bottom of which they are carried to the steel dies which form the coins.
Cohesion Figures, a class of figures produced by the attraction of liquids for other liquids or solids with which they are in contact, and divided into surface, submersion, breath, and electric cohesion figures. Thus a drop of an independent liquid, as oil or alcohol, will spread itself out on the surface of water always in a definite figure, but differing with each fluid dropped on the water. Breath figures are produced by putting a drop of the liquid to be examined on a slip of mica, and breathing on it, when each fluid takes a distinct characteristic shape. Electric cohesion figures are produced by electrifying drops of various liquids placed on a plate of glass.

Cohabation (kō-hō-bā'shun), the repeated distillation of the same liquid from the same materials.

Cohoes (ko-hōz'), a city of Albany County, New York, on the west bank of the Hudson River, at the mouth of the Mohawk, with great water power derived from the Mohawk falls. There are large cotton and other mills. Pop. 24,709.

Cohort (kō-hort). See Legion.

Cohune Oil (ko-hōn'), a product of the kernel of Attalea funifera, a palm-tree found in S. America. It resembles cocoanut oil, but is more oleaginous, burning, it is said, twice as long.

Coimbatore (ko-im-ba-tōr'), a town of Hindustan, Madras Presidency, capital of district to which it gives name, situated on the river Noyil, with wide streets, abundant water, and a healthy climate. Pop. 53,080.—The district has an area of 7800 square miles. It is fertile, producing sugar, cotton, rice, and tobacco; and well watered by several rivers.

Coinage (kōn-aj), the system of coins used in a country. The metallic coinage of the United States consists at present of gold double-eagles, eagles, half-eagles, and quarter-eagles; silver dollars, half dollars, quarter dollars and dimes; the nickel five-cent piece and the bronze cent. Under the first coinage act of 1792 the gold eagle weighed 270 grs., 916 2/3 fine. It was reduced in weight to 258 grs. in 1834, and the fineness was changed to 900. The early half-eagle weighed 135 grs., but now weighs 128 grs., 900 fine; the quarter-eagle, 64.5 grs. The silver dollar of 1792 weighed 416 grs., but is now 412 1/2 grs., 900 fine: the half-dollar, 192.9 grs.; the quarter-dollar, 96.45 grs.; the dime, 38.88 grs. The five-cent piece weighs 77.16 grs., 75 per cent copper, 25 per cent nickel. The cent weighs 48 grs., 95 per cent copper.

Coining (kōn-ing), the art of converting pieces of metal into current coins for the purposes of commerce, usually performed in a government establishment called a mint. It is one of the prerogatives of the supreme power in all states, and counterfeiting or otherwise tampering with the coin is severely punished. In the United States the Bureau of the Mint was established as a division of the Treasury Department in 1873. It has charge of the coinage for the government and makes assays of precious metals for private owners. The process of converting the precious metals into coins is an interesting one. The rolling machines through which the ingots are passed are adjustable, the space between the rollers being governed by the operator. About two hundred ingots are run through per hour on each pair of rollers. When the rolling is completed the strip of metal is about six feet long. As it is impossible to roll perfectly true it is necessary to 'draw' these strips, after being softened by annealing. The drawing benches resemble long tables, with a bench on either side, at one end of which is an iron box secured to the table. In this are fastened two perpendicular steel cylinders. These are at the same distance apart that the thickness of the strip is required to be. It is drawn between the cylinders, which reduces the width to an equal thickness. These strips are now taken to the cutting machines, each of which will cut 225 planchets per minute. The press used consists of a vertical frame. From a strip worth $1100 about $500 of planchets will be cut. These are then removed to the adjusting room, where they are adjusted. After inspection they are weighed on very accurate scales. If a planchet is too heavy, or near the weight, it is filed off at the edges; if too heavy for filing, it is thrown aside with the light ones to be remelted. The planchets, after being adjusted, are taken to the coining and milling rooms, and are passed through the milling machine. They are fed to this machine through an upright tube, and as they pass over they are caught upon the edge of a revolving wheel and carried about a quarter of a revolution, during which the edge is compressed and forced up. By this apparatus 600 nickels can be milled in a minute: for large pieces the average is 120. The massive but delicate coinage presses coin from 80 to 100 pieces
Coir

a minute. These presses do their work in a perfect manner. After being stamped the coins are taken to the coiner's room. The light and heavy coins are kept separate in coining, and when delivered to the treasurer they are mixed in such proportions as to give him fuel weight in every delivery. By law, the deviation from the standard weight, in delivering to him, must not exceed three pennyweights in one thousand double eagles. The coinage of the United States mints since the organization of the government has amounted to nearly 6,000,000,000 pieces, valued at over $4,000,000,000.

Coir (koir), cocoanut fiber, fiber from the husk of the nut, from which are manufactured matting, bagging, ropes and cables. Coir cordage, from lasting well in salt-water, as also from its lightness, strength, and elasticity, is preferable in many respects to ropes of hemp. Mats and matting are now largely made of coir, which is also used in coarse brushes, for stuffing purposes, etc.

Coire (kwär), or Chur (Aör), the capital of the Swiss canton of the Grisons, on the rivers Plessur and Rhine. It is irregularly built, and possesses many houses in the ancient style of architecture. Not far from Coire the Rhine begins to be navigable for small vessels. Pop. 11,718.

Cox, genus of grasses. See Job's Tears.

Coke (kök), the carbonaceous residue of coal which has been heated in an oven or retort, or in any way by which little air is admitted, until all volatile matter has been expelled. The simplest method of producing coke is based on the preparation of wood charcoal, the coal being arranged in heaps which are smothered with clay or coal-dust, and then set on fire, sufficient air being admitted to keep the mass at the proper temperature for decomposition without wasting the coke. After the volatile portions are got rid of, the heap is allowed to cool, or is extinguished with water, and the coke is then ready. Methods of heating the coal in close or open ovens until the gaseous and fluid products are driven off are also commonly used. Gas-coke is that which remains in the retorts after the gas has been given off. Good oven-coke has an iron-gray color, submetallic luster, is hard, and somewhat vesicular; but gas-coke has rather a ragged and cindery look, and is more porous. Coke contains about 90 per cent. of carbon, and is used where a strong heat is wanted without smoke and flame as in smelting. The retort or by-product oven has been recently greatly developed so as to eliminate waste, the yield of coke averaging 75 per cent. the weight of coal used, while in the 'beehive' oven the average is only 65 per cent. Sometimes two kinds of coal are mixed to get a coking combination.

Coke, Sir Edward, an eminent English lawyer, was the son of a Norfolkshire gentleman and was born in 1551. After finishing his education at Cambridge he went to London, and entered the Inner Temple. His reputation and practice rapidly increased. He was chosen recorder of the cities of Norwich and of Coventry, knight of the shire of his county, and, in spite of the rivalship of Bacon, attorney-general. As such he conducted the prosecutions for the crown in all great state cases, notably those of Essex and Sir Walter Raleigh, which Coke conducted with great racour and asperity. In 1613 he became Chief-Justice of the Court of King's Bench; but his rough temper and staunch support of constitutional liberties brought him into disfavor with King James and his courtiers. In 1621 he was committed to the Tower, and soon after expelled from the privy-council. In 1628 he was chosen member for Buckinghamshire, and greatly distinguished himself by his vindication of the rights of the Commons, and by the proposing and framing the famous Petition of Rights. This was the last of his public acts. On the dissolution of the Parliament he retired to his seat in Buckinghamshire, where he died. September, 1634. His principal works are Reports, from 1600 to 1613: Institutes of the Laws of England, in four parts: the first of which contains the celebrated commentary on Littleton's Tenures
Col (French, neck), an elevated mountain pass between two higher summits. The name is used principally in those parts of the Alps where French is commonly spoken.

Cola. See cola.

Colander (kol'an-der), a vessel with a bottom perforated with little holes for straining liquors.

Colberg (kol'berg), or KOLBERG, a Prussian fortified seaport in Pomerania, on the river Persante, 1 mile from the sea, with a good shipping trade and well-frequented baths. Formerly a regular fortress, it has often been held against strong armies. Pop. 20,200.

Colbert (kol-bär), JEAN BAPTISTE, a celebrated French minister of finances, born at Rheims in 1619. After serving in various subordinate departments Colbert was made intendant, and at length comptroller-general of the finances. His task was a difficult one. He found disorder and corruption everywhere. The state was the prey of the farmers-general, and at the same time maintained only by their aid. The people were obliged to pay 90,000,000 livres of taxes, of which the king received scarcely 35,000,000, the revenues were anticipated for two years, and the treasury empty. Colbert at once commanded a system of stringent reforms, abolishing useless offices, retracting burdensome privileges, diminishing salaries, and distributing and collecting the taxes by improved methods till he had reduced the latter almost to one-half. To his talents, activity, and enlarged views the development and rapid progress of industry and commerce in France were largely due. He constructed the Canal of Languedoc; declared Marseilles and Dunkirk free ports; granted premiums on goods exported and imported; regulated the tolls; established insurance offices; made uniform laws for the regulation of commerce, labored to render the pursuit of it well esteemed, and invited the nobility to engage in it. The French colonies in Canada, Martinique, etc., showed new signs of life; new colonies were established in Cayenne and Madagascar, and to support these Colbert created a considerable naval force. Under the protection and in the house of the minister (1663) the Academy of Inscriptions was founded. Three years afterwards he founded the Academy of Sciences, and in 1671 the Academy of Architecture. He enlarged the Royal Library and the Garden of Plants and built an observatory in which he employed Huygens and Cassini. He began the measurement of the meridian in France, and sent men of science to Cayenne. After having conferred the greatest benefits on his country he died in 1683, out of favor with the king and the people.

Colburn (kol'burn), ZECHARI, 'the calculating boy,' born in Vermont, in 1804; died in 1840. Before his sixth year he began to manifest wonderful powers of arithmetical computation, and in public exhibitions astounded learned mathematicians by the rapidity and accuracy of his processes, but the faculty left him when he grew up. After acting as a teacher and itinerant preacher, he was latterly professor of languages at Norwich University, Vermont. Others besides him have possessed this remarkable faculty, which indicates powers in the brain little understood.

Colchester (kol'chester), a borough and river-port of England, County Essex, 51 miles N. E. by E. London, mostly situated on the summit and sides of an eminence rising from the river Colne: well built and amply supplied with water. It has a good coating trade and employs a great number of small craft in the oyster-fishery. It is a place of high antiquity, there being no place in the kingdom where so great a quantity and variety of Roman remains have been found as here. It is supposed to be the Camalodunum of the Romans, and was called Colne Coster, from its situation on the Colne, by the Anglo-Saxons. Pop. (1911) 42,465.

Colchester, a town (township) of Chittenden Co., Vermont. The town includes Colchester and Winooski villages. Pop. 6450.

Colchicine (kol'chi-sin), an alkaloid obtained from colchicum, used for the alleviation of the symptoms of rheumatism. It acts as an emetic, diuretic, and cholagogue cathartic, and in large doses as a narcotic-acrid poison.

Colchicum (kol'ki-kum), a genus of plants, order Melanthiaceae, allied to the lilies. The Colchicum autumnale, or meadow saffron, is a bulbous-rooted, stemless, perennial plant, which grows in various parts of Europe. From a small corn or bulb buried about 6 inches deep, and covered with a brittle brown skin, there rises in the early autumn a tuft of flowers having much the appearance of crocuses, flesh-colored, white, or even variegated. They soon wither, and the plant disappears till the succeeding spring, when some broad
leaves are thrown up by each corn along with a triangular oblong seed-vessel. The plant is acrid and poisonous, and cattle are injured by eating it, but it yields a medicine valuable in gout and rheumatism. See Colchisica.

Colchis (kol'kis), the ancient name of a region at the eastern extremity of the Black Sea, resting on the Caucasus, famous in Greek mythology as the destination of the Argonauts, and the native country of Medea.

Colcothar (kol'ko-thar), an impure brownish-red oxide of iron, which forms a durable color, but is most used in polishing glass and metals.

Cold, the absence of sensible heat, especially such a want of heat as causes some discomfort or uneasiness. The temperature in which man and other animals live is generally below the natural heat of the body, but this is easily kept up in ordinary cases by means of the food taken in and digested. A high degree of cold, however, produces bodily depression, and is a frequent source of disease, or even of death. For the aliment called a cold, see Catarrh.

Cold-blooded Animals, a term applied to those animals, such as reptiles, the temperature of whose blood ranges from the freezing-point, or near it, to 90° Fahn., in accordance with that of the surrounding medium.

Cold Cream, a white, semisolid, unctuous ointment for dermal application to soothe irritated, excoriated, roughened, or abraded skin and softening hard, harsh, or dry skin. It is composed of spermaceti, expressed oil of olives, white wax, oil of rose, sodium borate and water. The first three ingredients are melted together carefully by the aid of gentle heat, the oil of rose and spermaceti are added into the rosewater, and with the aid of the sodium borate the two liquids are mixed together and stirred until cold. With it may be incorporated medicinal and coloring substances.

Cold Storage, a method of preserving materials by keeping them in a low temperature until needed for consumption. This is done by the aid of freezing machines similar in principle to those used in making artificial ice and by which the temperature can be reduced to and kept at the requisite degree. Cold storage warehouses are in use in all our principal cities, in which fruits and meats are kept for long periods, while the unsold material of one market day can be kept unspoiled for another. In transporting perishable material by ship or car the same process is used. Meats thus kept need to be used quickly after being thawed, since they spoil more rapidly than in their original state, and in some cases prove injurious from putrefactive changes.

Coldstream, a village of Scotland in Berwicksire, on the Tweed. When General Monk quartered here in 1659-60 he raised an infantry regiment called the Coldstream Guards.

Coldwater (kold'wa-ter), a city, capital of Branch Co., Michigan, 55 miles w. of Adrian. Has manufactures of leather, furniture, cement, etc., and a State school for orphans. Pop. 5094.

Cold Wave, the name given in the United States to spells of severe depression of temperature, as that of hot wave is given to the opposite condition. Cold waves are due to persistent winds from the northwest, which spread over the country the chill conditions of the great plains and mountain ranges of Western Canada.

Cole, Thomas, a landscape painter.

Cole, Timothy, an American wood-engraver, born in London, England, in 1852; came to America with his parents in 1857. He entered the employment of the Century Magazine (then Scribner's) in 1875, and in 1883 went to Europe, beginning his remarkable series of Old Masters. These represent the work of many years and include Italian, Dutch, Flemish, English, Spanish, French and American masters.

Colebrooke (kol'bruk), Henry Thomas, an Oriental scholar, born at London in 1765; died there in 1837. He became professor of Sanskrit at Calcutta and director of the Bengal Asiatic Society. His translations from the Sanskrit and his essays on Hindu subjects are valuable.

Colenso (kol-len'so), John William, Bishop of Natal, born in 1814; educated at Cambridge; assistantmaster at Harrow, till 1842; appointed in 1853 first Bishop of Natal, South Africa. His works on the Pentateuch and Book of Joshua, which called in question the historical accuracy of these books, involved the author in a conflict with his ecclesiastical superiors, and he was deposed by the Bishop of
Coleoptera

Cape Town. But the decisions of the privy-council and Court of Chancery were in his favor, and he continued to officiate as bishop. He died in 1883.

Coleoptera (ko- lá-sa'u-te-ra; Greek kolesa, a sheath, and pteron, a wing), an order of insects, commonly known as beetles. They have four wings, of which the two superior (elytra) are not suited to flight, but form a covering and protection to the two inferior, and are of a hard and horny or parchment-like nature. The inferior wings when not in use, are folded transversely under the superior. The coleoptera undergo a perfect metamorphosis. The larva generally resembles a short, thick, worm, with six legs and a scaly head and mouth.

Coleraine (kol-rain'), a town of Ireland, county of Londonderry, on both sides of the river Bann, 47 miles N.W. of Belfast. Its trade, chiefly in linen, agricultural produce and provisions, is considerable. There are extensive salmon fisheries. Pop. about 7000.

Coleridge (kol-rig'), Hartley, eldest son of Samuel Coleridge, was born at Clevendon, near Bristol, on September 19, 1796. In 1815 he went to Oxford, where, three years after, he took his degree with high honors. Unfortunately he had contracted a propensity for drinking, and was deprived, on account of his intemperate habits, of a fellowship he had obtained from Oriel College. He then left Oxford and took up his residence at London, but later he resided in the lake country, where he occupied himself with literary composition. In verse, his sonnets, and in prose his biographies (Worthies of Yorkshire and Lancashire and Life of Mausinius) are the most important of his works. He died January 6, 1849. His life was written by his brother, Derwent, born 1800; died 1883. In 1841-44 he was the vicarial of St. Mark's College, Chelsea, in 1864-80 rector of Hanwell.

Coleridge, Samuel Taylor, a celebrated English poet and philosopher, was born October 21, 1772, at Ottery St. Mary, Devonshire, of which place his father was vicar. Sent to school at Christ's Church Hospital, to which he had obtained a representation, young Coleridge took little interest in the ordinary sports of childhood, and was noted for a dreamy, abstracted manner, though he made considerable progress in classical studies, and was known even at that early age as a devourer of metaphysical and theological works. From Christ's Church he went with a scholarship to Jesus College, Cambridge, where he remained for two years, but without achieving much distinction. At this time, too, his ultra-radical and rationalistic opinions made the idea of academic preferment hopeless, and perhaps it was partly to escape the difficulties and perplexities gathering about his future that Coleridge suddenly quitted Cambridge and enlisted in the 16th Dragoons. Rescued by his friends from this position, he took up his residence at Bristol with two congenial spirits, Robert Southey, who had just been obliged to quit Oxford for his Unitarian opinions, and Lovell, a young Quaker. The three conceived a project of emigrating to America, and establishing a pantisocracy, as they termed it, or community in which all should be equal, on the banks of the Susquehanna. This scheme, however, never became anything more than a theory, and was finally disposed of when, in 1785, the three friends married three sisters, the Misses Fricket of Bristol. Coleridge about this time started a periodical, the Watchman, which did not live beyond the ninth number. In 1796 he took a cottage at Nether Stowey, in Somersetshire, where soothed and supported by the companionship of Wordsworth, who came to reside at Allfoxden, he wrote much of his best poetry, in particular the Ancient Mariner, and the first part of Christabel. While residing at Nether Stowey he was used to officiate in a Unitarian chapel at Taunton, and in 1798 received an invitation to take the charge of a congregation of this denomination at Shrewsbury, where, however, he did nothing further than preach the probation sermon. An annuity bestowed on him by some friends (the Wedgewoods) furnished him with the means of making a tour to Germany, where he studied at the University of Göttingen. In 1800 he returned to England and took up his residence beside Southey at Keswick, while Wordsworth lived at Grasmere in the same neighborhood. From this fact, and a certain common vein in their poetry, arose the epithet of 'Lake School', applied to their works. About 1804 Coleridge went to Malta to re-establish his health, seriously impaired by opium-eating. In 1806 he returned to
England, and after ten years of desultory literary work, took refuge from the world in the house of Mr. Gillman at Highgate, London. Here he passed the rest of his days, holding weekly conversations in which he poured himself forth in eloquent monologues. His views on religious and political subjects had become mainly orthodox and conservative, and a great work on the Logos, which should reconcile reason and faith, was one of the dreams of his later years. But Coleridge had long been incapable of concentrating his energies on anything, and of the many years he spent in the leisure and quietness of Highgate nothing remains but the Table Talk and the fragmentary notes and criticism gathered together, and edited by his nephew. He died July 25, 1834. The dreamy and transcendental character of Coleridge's poetry eminently exhibits the man. In her he has a fine sublimity of thought and expression not surpassed by Milton; but he is often turpid and verbose. As a critic, especially of Shakespeare, Coleridge's work is of the highest rank, combining a comprehensive grasp of large critical principles and a singularly subtle insight into details. Coleridge's poetic works include The Ancient Mariner, Christabel (incomplete), Remorse, a tragedy, Kubla Khan, a translation of Schiller's Wallenstein, etc.; his prose works, Biographia Literaria, The Friend, The Statesman's Manual, Aids to Reflection, On the Constitution of Church and State, etc.

Coleridge-Taylor, Samuel, a musical composer of Anglo-African descent, born in London in 1875; died in 1912. He studied at the Royal College of Music, and soon began his brief but brilliant career. His works include Scenes from the Song of Hiawatha, The Blind Girl of Castile Cuitte, Meg Blane, The Atonement, and Kubla Khan. He also composed incidental music for several of Stephen Phillips' dramas. He was the first negro to achieve fame as a creative musician.

Coloseed (köl'séd), a name for a variety of cabbage (Brassica Napus) and its seed, which is made into oil-cake for feeding cattle.

Colet (köl'et), John, an eminent divine, dean of St. Paul's, and founder of St. Paul's School, London, born in 1466; died in 1519.

Colfax (köl'faks), Schuyler, statesman, born at New York in 1823; died in 1885. About 1834 he established at South Bend, Indiana, a weekly paper, the St. Joseph Valley Register, an organ of the Whig party, which he edited for many years. He was elected to Congress in 1854 and served at three different times chosen Speaker of the House. In 1868 he received the Republican nomination for the vice-presidency and was elected with President Grant. He served one term.

Colic (köl'ik; from colon, a portion of the large intestine), a painful disorder of the bowels, usually of a spasmodic character, una accompanied by diarrheea, and presenting itself in various forms. When the pain is accompanied with a vomiting of bile or with obstinate costiveness it is called a bilious colic; if with windy distension, it takes the name of flatulent or windy colic; if with heat and inflammation, it takes the name of inflammatory colic, or enteritis. There are many other varieties of this complaint, some of which are peculiar to certain occupations or districts, as the painters' colic (see Lead Poisoning), the Devonshire colic.

Coligny (kol-in-yé), Gaspard de, a renowned Huguenot chief of France, born in 1517, distinguished himself under Francis I and Henry II, who made him in 1552 Admiral of France. After the death of Henry II Coligny took the Protestant side in the religious strife of the time, and became the head of the Huguenot party. He was generally unfortunate in the battles he fought, but speedily repaired his defeats by prudence and good management. When peace was made Coligny was received with apparent favor at court. But this was only a blind; and on the night of St. Bartholomeus' (Aug. 24, 1572) Coligny was basely slaughtered, and his corpse given up to the outrages of the mob.

Colima (kó-lé-má), a town of Mexico, capital of the state of same name, situated in a fertile plain encircled by hills above which rise the lofty volcano of Colima. Pop. 20,608. On the coast about 30 miles s. w. of the city is the port, Puerto de Colima, or Manzanillo. The state has an area of 2272 miles; pop. 65,115.

Coliseum (kol-i-sé'um). See Colosseum.

Coll, an island on the west coast of Scotland, off Mull, County Argyle, one of the Hebrides, about 12 miles long and from 3 to 3 1/2 miles broad. A great portion of it is moor, incapable of cultivation; but there are some tracts of light and sandy soil which are tolerably productive. Gaelic is universally spoken. Pop. 643.

Collation (kol-a'shun), a comparison of one copy or thing
of a like kind with another, especially manuscripts and editions of books.—In canon law, the presentation of a clergyman to a benefice by a bishop who has the right of patronage. In such a case the combination of the act of presentation and institution constitute collation.

Collect (kol'lect), a term applied to certain short prayers in the liturgies of various churches. Some of the collects of the English Church are taken from the old Roman Missal, and are supposed to have been written by St. Jerome. Others are still more ancient; while a few have been added after the Reformation. There is a collect for every Sunday in the year, and a corresponding epistle and gospel.

College (kol'ij).—In a general sense, a body or society of persons invested with certain powers and rights, performing certain duties, or engaged in some common employment or pursuit. In Great Britain and America some societies of physicians are called colleges. So, also, there are colleges of surgeons, a college of heralds, etc. The most familiar application of the term college, however, is to a society of persons engaged in the pursuits of literature, including the professors, lecturers, or other officers, and the students. As applied to an educational institution the name is somewhat loosely used. The higher class of colleges are those in which the students engage in study for the purpose of taking a degree in arts, medicine, or other subjects, and are connected with, or have more or less the character of universities. The early history of these institutions is somewhat obscure; the probability is that they were originally founded in the various universities of the middle ages, with similar objects and from the same charitable motives. Hotels or boarding-houses were provided (principally by the religious orders, for the benefit of those of their own fraternity), in which the scholars lived under a certain superintendence, and the endowment of these hostels by charitable persons for the support of poor scholars completed the foundation of a college. Out of this has developed the modern English college as seen at Oxford and Cambridge, where each college, though a member or component part of the university, is a separate establishment whose fellows, tutors, and students live together under a particular head, called master, principal, wardens, etc., of the college. In the United States and Germany the college is practically one with the university, the latter body performing all the functions alike, of teaching, examining, degree-confering, etc.

Collie (kol'I), a variety of dog especially common in Scotland, though now popular among American dog-fanciers, and from its intelligence of much use to shepherds. It is of medium size and varies much in coloring, black and white being common, and black with tan-colored legs, muzzle, etc., being highly esteemed. The head is somewhat fox-shaped, the ears erect, but with drooping points, the tail rather long, bushy and with a pronounced curl.

Collier (kol'yer), JEREMY, an English divine and political writer, born in 1660. He was educated at Cambridge, and having entered into orders obtained the rectory of Ampton in Suffolk in 1689. He was a zealous opponent of the Revolution of 1688, and was repeatedly imprisoned for his political writings. He is chiefly remembered now for his Short View of the Immorality and Profaneness of the English Stage—a work of considerable merit which is said to have effected a decided reform in the sentiments and language of the theater. He died in 1726.

Collier, JOHN PITRE, an English Shakesperian critic, born in London in 1759; died in 1833. He became known as a critical essayist on old English dramatic literature, and was editor of the new edition of Dodsley's Old Plays in 1825. In 1831 his best work, the History of English Dramatic Poetry, was published. In 1842-44 he published an annotated edition of Shakespeare in 8 vols.; in 1844 Shakespeare's Library. Subsequently he published several editions of Shakespeare, and an excellent edition of Spenser (5 vols., 1862). He made himself notorious by claiming that he possessed a copy of the 2d Folio Shakespeare, 1632, with many marginal emendations and annotations written in the middle of the seventeenth century, though, as was discovered, these notes were fabrications probably by himself.

Collimation (kol-i-ma'shun), LIN or, in an astronomical instrument, such as a telescope or transit instrument, the straight line which passes through the center of the object-glass and intersects at right angles a system of spider-threads placed at
the focus of the eyepiece. The proper adjustment of the line of collimation of the instrument is necessary to accurate observation of the time at which movements of the heavenly bodies take place.

Collimators (k o l i m a t o r s), two small, subsidiary telescopes used for collimating astronomical instruments; that is, for adjusting the line of collimation, and for determining the collimation error.

Collins, William, an English painter, noted for his landscapes and domestic scenes, born in London in 1787, and elected Royal Academician in 1820. He died in 1847.

Collins, William Wilkie, son of the preceding, born in London in 1824. He was educated for the bar, but turned aside to literature, in which he especially distinguished himself as a novelist of great dramatic and constructive power. Among his best known works are Antonina (1850), Basil (1852), The Woman in White (1860), The Moonstone (1868), The New Magdalen (1873), The Evil Genius (1880), etc. He died in 1889.

Collinsville, a city in Madison Co., Illinois, 12 miles N. N. W. of St. Louis. It has coal mines, brick yards, hosierly mills, etc. Pop. 9000.

Collins, Anthony, an English delitical writer, born in 1676; died in 1729. He was a friend of Locke, who described him as a man who had ‘an estate in the country, a library in town, and friends everywhere.’ His chief works are Discourse of Free Thinking; Philosophical Inquiry Concerning Human Liberty; Discourse on the Grounds and Reasons of the Christian Religion;Literal Scheme of Prophecy Considered.

Collins, William, an English poet, born in 1721 at Chichester. While studying at Oxford he wrote his Oriental Eclogues, the moderate success of which encouraged him to try a literary career in London. In 1746 he published his Odes, containing pieces which now rank among the finest lyrics in the language. Disappointed with the reception his poems met with, and unprouded by irregular habits and excitement, he fell into a nervous melancholy, from which he never quite recovered. He died in 1769.
Collodion

If one vessel is overtaking another she must keep out of the way of the last-named vessel.

Collodion (ko-lō'di-on), a substance prepared by dissolving pyroxiline (guncotton) in ether, or in a mixture of ether and alcohol, which forms a useful substitute for adhesive plaster in the case of slight wounds. When the fluid solution is applied to the cut or wound it immediately dries into a semitransparent, tenacious film, which adheres firmly to the part, and under it the wound or abrasion heals without inflammation. In a slightly modified form collodion is also employed as the basis of a photographic process called the collodion process. See Photography. Colloids (kol-'oids), non-crystallizable substances such as gelatine, gum, etc. See Dialysis.

Collot d'Herbois (kol-ō dar-bwa), Jean Marie, a leader in the French revolution, born in 1750; died in 1796. He became prominent as a leader of the Mountain or extreme party. He was sent by Robespierre along with Fouche to Lyons in 1793, with almost unlimited powers, and was guilty of the most flagrant enormities. Returning to Paris he became a determined opponent of Robespierre, and being chosen president of the Convention (July 19, 1794), contributed to his fall. He was later banished to Cayenne.

Collusion (ko-lă'shun), in law, a secret agreement between opposing litigants to obtain a particular judicial decision on a preconcerted statement of facts, whether true or false, to the injury of a third party. Collusion, when proved to exist, nullifies the judgment obtained through it.

Collyer, Robert, an American Unitarian clergyman, born at Keighly, Yorkshire, England, in 1823, and died in New York in 1912. He learned the blacksmith trade, which he practiced for some time after coming to America in 1850. He was at first a Methodist local preacher, but became a Unitarian in 1859. He founded Unity Church, Chicago, and was for many years pastor of the Church of the Messiah, New York. His books include Nature and Life (1884), The Simple Truth (1878), Talks to Young Men (1886), Things New and Old (1893).

Colman (kol-man), George, an English dramatic writer and theatrical manager, born at Florence in 1753; died in 1794. He is the author of Polly Honeycombe, The Jealous Wife, and The Clandestine Marriage (in conjunction with Garrick). From 1777 till 1791 he conducted the little theater in the Haymarket, London.

Colman, George ('the Younger'), son of the preceding, was born in London in 1762; died there in 1836. He assisted his father as director of the Haymarket Theater, and succeeded him as patentee. His dramas include John Bull, The Heir-at-Law, Poor Gentleman and Love Laughs at Locksmiths.

Colmar, or Kolmar (kōl'mar), a city of Germany, in Upper Alsace, formerly in the French department of Haut Rhin, 98 miles s.s.w. Strasbourg. It has manufactures of printed goods, calicoes, silks, etc., besides cotton-mills, tanneries, etc. It was united to France in 1681, and surrendered to Germany by the Treaty of Versailles, February 26, 1871. Pop. (1890) 41,882.

Coln. See Cologne.

Colne (köln), a town of England, in Lancashire, 34¼ miles n. by E of the city of Manchester. The chief manufactures are cotton and woolen goods. Pop. 26,293.

Colocasia (kol-ō-kä's-i-a), a genus of plants, nat. order Araceae, the leaves and tubers of which are acrid. The latter contain much starchy matter, and they are used as food in the south of Europe after the acrid matter is separated by washing or boiling. C. esculenta, C. macrorhiza, and others furnish the taro of the Pacific islands. See Cocoa Root.

Colocynth (kol-ō-sinth), the fruit of Cucumis (or Citrillus Colocynthis), a species of cucumber, the dried and powdered pulp of which is the colocynth of the shops. It is used in medicine as an aperient.

Cologne (kö-lön), (changed officially to Köln in 1901), German, Köln (köln), a city of Rhine Prussia, on the left bank of the Rhine, a fortress of the first rank and important commercial city, is 358 miles by rail s.w. of Berlin and 24 miles s.e. of Düsseldorf. The old fortifications, dating from the middle ages, are being recently swept away, new works being constructed in accordance with the principles of modern fortification. The town itself has been improved and extended, and streets once dark and filthy have been opened up or otherwise improved, but Cologne is still irregularly built and largely in the antique style. There are many fine old buildings as well as excellent modern ones; the churches in particular are interesting.
Cologne

The most important edifice of all is the cathedral, begun in 1248, one of the finest and largest Gothic structures in Europe. It was completed only in the 19th century, there being expended on it in 1828-84 over $5,000,000. It is in the form of a cross; its entire length is about 450 feet; breadth, 282 feet; height to ridge of roof, 202 feet; height of the two western towers, between which is a grand portal, 520 feet, being importance was greatly diminished when it was taken by the French in 1794, ceded to them by the Treaty of Lunéville in 1801, and restored to Prussia in 1814. Pop. (1910) 516,167.

Cologne Earth, a kind of ocher, of a deep-brown color, transparent, and durable in water-color painting. It is an earthy variety of lignite or partially fossilized wood.

Cologne Water, Aqua Coloniensis, Eau de Cologne, Spiritus Odoratus, is a yellowish liquid perfume composed of spirits of wine, and a few drops of various essential oils, so blended as to yield a fine fragrance. It was first produced in Cologne by Jean Farina, in 1700, and is still manufactured there by persons bearing or assuming the same name. Its formula is a secret.

Cologne Yellow, a pigment consisting of yellow chromate of lead, sulphate of lead, and sulphate of lime.

Colombia (kō-lom'bē-ə), Republic of, formerly called New Granada, a republic, fourth in size among the countries of South America, consisting of 15 departments, four territories...
and a federal district. The population in 1912 was 5,476,801; area approximately 441,000. The chief towns are Bogotá, capital; Medellín, and Cartagena. The territory of the republic formerly included the Isthmus of Panama, but Panama declared its independence in November, 1903 and there is much disputed boundary territory in the inland regions towards the south and east. According to surface conformation, the country may be divided into the elevated region of the Cordilleras in the west, and that of the low-lying lands in the east. The former occupies the greater portion of the country, and presents a richly-diversified surface, being formed chiefly of three mountain chains which stretch north and south in a nearly parallel direction, inclosing between them the valleys of the rivers Cauca and Magdalena. These, the two great navigable rivers of the country, flow northwards, joining their waters about 120 miles from their embouchure in the Caribbean Sea. In the central ridge is the culminating point of Colombia, the volcano of Tolima, 18,432 feet high. The low lands of the east form a transitional region between the plains of North Brazil and the llanos of the Orinoco region, the drainage being carried to the Amazon and Orinoco. The central coast indentation are small and dangerously exposed bays. The climate is naturally as varied as the surface of the country, there being portions perpetually covered with snow, but over a great part of the republic it is very hot. The rainfall is very heavy on the coast. At some places on the Caribbean Sea, and on the Pacific coast, yellow fever is endemic; but for the most part in the elevated country, as the Plain of Bogotá, 8000 feet above the sea, the climate is perfectly salubrious, and the temperature seems that of eternal spring. The flora is rich and luxuriant. A great part of the country is still covered with virgin forests, which yield excellent building-wood, Peruvian bark, caoutchouc, vanilla, etc. The fauna include the jaguar, puma, tapir, armadillo, sloth, various species of deer, and the gigantic condor. The mineral wealth is various and abundant, though still imperfectly explored. It comprises coal, gold, silver (both now largely worked by foreign companies), emeralds and salt. Industry is at a very low stage. Maize, bananas, and plantains are the chief articles of food. Tobacco and coffee are cultivated and exported. Sugar-cane is also grown. Manufactures can scarcely be said to exist. Panama hats, mats, and coarse cotton cloths being almost the only articles that can be mentioned in this class. Chief ports are Barranquilla, Cartagena and Santa Marta, none important. The possession of the Isthmus of Panama, and the small line of railway (48 miles long) which runs between Panamá on the Pacific and Colon on the Atlantic once gave Colombia considerable commercial importance, but this has ceased with the secession of Panamá and its conversion into an independent republic. (See Panamá.)

The foreign trade is chiefly with Britain and the United States. The exports are mainly precious metals, hides, coffee, tobacco; etc.; the imports, manufactured goods. The exports and imports together were in 1912, $32,221,000 and $23,964,000 respectively. There are several short lines of railway. The money standard is the peso or dollar, nominal value $1. — Colombia is divided into 15 departments, 4 territories and a federal district. The government is carried on by a president, a supreme court, and a legislative consisting of an upper and lower house; the former chosen by electoral colleges, the latter by direct votes. The departments have appointed governors and biennial assemblies. The constitution dates from 1886, with some changes adopted in 1905 whereby the powers of the president were enlarged. The finances of the republic have shown considerable improvement in recent years.— New Granada was discovered by Alonso de Ojeda in 1499, and it was visited by Columbus in 1502. The natives were Indians, who were practically annihilated by the Spanish conquerors. New Granada declared its independence of Spain in 1811, and after eleven years of warfare succeeded with the help of Venezuela in effecting its liberation. Both states then united with Ecuador, also freed from the Spanish domination, to form the first republic of Colombia; but internal dissensions arising the three states again separated in 1831, forming three independent republics, which have had a very troubled existence. In 1851 the states forming New Granada by agreement adopted a new constitution, the republic to be called the United States of Colombia. This title was retained till, by the new constitution of 1886, the state ceased to be a federal republic and became a unitary republic with the name of Republic of Colombia. There is a president, supreme court, and legislature of two houses.

Colombo (kō-lom′bo), a seaport town, on the southwest coast, and about 70 miles west by south of Kandy, with which it is connected by railway. It is a pleasant town with an extensive fort, within which are some of the best houses, and which occupies a projecting point of
land. On the north side of the fort, on the margin of the sea, is the Pettah or Black Town, inhabited chiefly by Sinhalese, while in the environs are most of the houses occupied by the English. The public buildings comprise the government offices, government house, supreme court, museum, etc. Through the construction of a breakwater and other works there is now excellent harbor accommodation and numerous vessels calling here. Pop. (1911), 213,396.

Colombo. See Columba.

Colon (kōl'ən; Gr. kolon), the middle portion of the large intestine, or that which lies between the cecum and the rectum or terminal portion. In man it is about 4½ feet long, and forms a series of pouches in which the digested food is for a time detained. It is itself believed to have some digestive power.

Colon, a punctuation mark, consisting of two dots, one above the other, thus: used to mark a pause in the sense that sometimes might also be indicated by a full stop. It also indicates a connection between a preceding phrase and a following one, and is used preceding a quotation.

Colon, formerly ASPINALL, a seaport of Panama, on Manzanillo Island, on the north side of the Isthmus of Panama, at the Atlantic extremity of the interoceanic railway, and near that of the Panama Canal. Established in connection with the railway, it had an important transit trade before the canal was begun, and since then the place has been entirely transformed. Since 1903 the United States has had jurisdiction over sanitation and quarantine, and by a treaty in 1914 was given control of the harbor. There is extensive harbor accommodation. Pop. (1912) 17,748.

Colon, a town of Cuba, Province of Matanzas, 40 miles N.E. from Cardenas. It is in a sugar-growing region. Pop. 7,124.

Colonel (kōr'nel), the commander of a regiment, whether of horse, foot, or artillery. Any rank above a colonel constitutes the bearer of it a general officer. In the British service the rank of colonel is honorary, except in the artillery and engineers, and is usually bestowed upon officers of superior rank and princes of the blood. In the German, Austrian, and Russian armies, when the regiments are very large, the colonels are mostly honorary posts, held by royal or distinguished persons. In the United States army a colonel is the chief commander of a regiment of troops, ranking below a brigadier-general, and above a lieutenant-colonel.

Colonna (kö-lô'nə), an Italian family that had become important as early as the 8th century. Its fame during the middle ages eclipsed that of every other Roman family except the great rival house of the Orsini. The Colonna family is at present represented by several branches, the Colonna-Sclarras, Colonna-Stigliano, etc. It played an important part in the affairs of Europe, became allied to the greatest houses of Italy, Spain and Germany, and has furnished many celebrated warriors, popes, and cardinals.

Colonna, CAPE (ancient Sounium), the southern extremity of Attica, Greece. Its summit is crowned by the ruins of a temple of Poseidon 289 feet above the sea, of which thirteen columns of white marble are still standing.

Colonna, VITTORIA, the most renowned poetess of Italy, was the daughter of Fabrizio Colonna, high constable of Naples, and born in 1490. At the age of nineteen she was married to the son of the Marquis of Pesara, the companion of her youth, who became one of the distinguished men of his age. They lived in the happiest union, and when her husband died of wounds received at the battle of Pavia (1525). Vittoria sought consolation in solitude and in poetry. She became the object of the deep affection of Michael Angelo, then in his sixty-fourth year, who addressed some of his finest sonnets to her. She died at Rome in 1547. Her most celebrated work is the Roma Spirituali, 1538.

Colonnade (kōl'ə-nad'), in architecture, any series or range of columns placed at certain intervals from each other. When surrounding the building on the exterior the colonnade is called a peristyle; when projecting beyond the line of the building it is called a portico.

Colony (kōl'o-ni), a settlement formed in one country by the inhabitants of another. Colonies may either be formed in dependence on the mother country or in independence. In the latter case the name of colony is retained only in a historical sense. Properly, perhaps, the term should be limited to a settlement which carries on a direct cultivation of the soil, as in the Dominion of Canada or Australia; such settlements as those of the British in Hindustan or Malta being the mere superposition on the natives of a ruling race which takes little or no part in the general industry of the
country. The motives which lead to the formation of colonies, and the manner of their formation, are various. Sometimes the ambition of extending territory and the desire of increasing wealth have been the chief impulses in colonization; but colonies may now be said to have become a necessity for the redundant population of European states. Among ancient nations the principal promoters of colonization were the Phoenicians, the Greeks, and the Romans; the greatest colonizers in modern times have been the English and the Spaniards, next to whom may be reckoned the Portuguese, the Dutch, and the French. The Germans have latterly contributed largely to the tide of emigration, particularly in the direction of America; but they have done little directly as colonizers.

The Phoenician colonies were partly caused by political dissensions and redundant population, but were chiefly commercial, serving as entrepots and ports of repair for Phoenician commerce along the coasts of Africa and Spain, in the latter of which they numbered, according to Strabo, more than two hundred. But it was in Africa that the most famous arose, Carthage, the greatest colonizing state of the ancient world. The Greek colonies, which were widely spread in Asia Minor and the islands of the Mediterranean, the coasts of Macedonia and Thrace, in South Italy and Sicily, were commonly independent, and frequently soon surpassed the mother states in power and importance. The colonies of Rome were chiefly military, and while the empire lasted were all in strict subordination to the central government. When the Roman power declined the remains of its colonies amalgamated with the peoples among whom they were placed, thus forming in countries where they were sufficiently strong what are known as the Latin races, with languages (Spanish, Portuguese, French and Italian) which are merely modifications of the old Roman tongue. Before America and the way by sea to the East Indies were discovered, the only colonies belonging to European states were those of the Genoese, Pisans, and Venetians in the Levant and the Black Sea, rivalling the establishments on which the mercantile greatness of Italy in those days was largely built.

The Portuguese were the first great colonizers among modern states. In 1419 they discovered Madeira, the Azores, and the Cape Verd Islands; the Congo and the Cape of Good Hope followed; and before the century was out Vasco de Gama had landed at Calicut on the Malabar coast of India. The first Portuguese colonies were garrisons along the coasts where they traded: Mozambique and Sofala on the east coast of Africa, Ormuz and Muscat in the Persian Gulf, Goa and Damao on the west coast of India. Colonies were established in Ceylon in 1505, in the Moluccas in 1510, Brazil was discovered in 1499, and this magnificent possession fell to Portugal, and was colonized about 1530. Bad government at home and the subjection of the country to Spain caused the loss of most of the Portuguese colonies. The Portuguese now possess several territories in Asia, at Goa, Damao and Diu, India; Macao, China; and some islands in the Indian Archipelago. In Africa they possess the Cape Verd and other islands; settlements in Senegambia, Guinea, Mozambique, Sofala, Angola, Benguela, Mossamedes, its colonies in Africa covering an area of nearly 800,000 sq. miles.

Soon after the Portuguese the Spaniards commenced the work of colonization. In 1492 Christopher Columbus discovered for Spain the principal islands of the West Indies and Haiti, or San Domingo, Porto Rico, Jamaica and Cuba were soon colonized. Before the middle of the sixteenth century Mexico, Ecuador, Venezuela, New Granada, Peru and Chile were subdued, and Spain took the first rank among the colonizing powers of Europe. But the Spaniards never really attempted to develop the industrial resources of the subject countries. The pursuit of mining for gold or silver occupied the colonists almost exclusively, and the enslaved natives were driven to work themselves to death in the mines. Cities were founded, at first along the coasts, for the sake of commerce, and military posts; afterwards also in the interior, in particular in the vicinity of the mines, as Vera Cruz, Cumana, Porto Bello, Cartagena, Valencia, Caracas; Acapulco and Panama on the coast of the Pacific; Lima, Guayaquil, Buenos Ayres. The colonial intercourse with Spain was confined to the single port of Seville, afterwards to that of Cadiz, from which two squadrons started annually—the galleons, about twelve in number, for Porto Bello; and the fleet of fifteen large vessels, for Vera Cruz. When the power of Spain declined, the colonies soon took the opportunity to declare their independence, and thus were formed the republics of Mexico, Venezuela, Colombia, Ecuador, Peru, Bolivia, Argentina, Chile, etc. Its remaining colonies, Cuba, Porto Rico, and the Philippine Islands, were taken by the United States as a result of the war of 1898, Cuba becoming an inde-
pended republic. The Ladrone group was transferred to Germany with the cession of Guam, held by the United States. The colonies of Spain are now confined to about 250,000 sq. miles in Africa and some small islands.

The fate of Philip II, who prohibited Dutch vessels from the port of Lisbon, forced the people of Holland to import directly from India or lose the large carrying trade they had acquired. Several companies were soon formed, and in 1602 they were united into one, the Dutch East India Company, with a monopoly of the East India trade and sovereign powers over all conquests and colonies in India. The Dutch now rapidly deprived the Portuguese of nearly all their East Indian territories, settled a colony at the Cape of Good Hope (1652), established a West India Company, made extensive conquests in Brazil (1623-60), which were soon lost, and more permanent ones on some of the smaller West India Islands, as San Eustatius, Curacao, Saba, etc. The growing power of the British and the loss of Holland’s independence during the Napoleonic wars were heavy blows to the colonial power of the nation. But the Dutch still possess numerous colonies in the East Indies, among which the more important are Java, Sumatra, Dutch Borneo, the Moluccas Islands, and part of New Guinea, also several small islands in the West Indies and Surinam.

No colonising power of Europe has had a career of such uniform prosperity as Great Britain. The English attempts at colonisation began nearly at the same time with the Dutch. After many fruitless attempts to find a northeast or northwest passage to the East Indies, English vessels found their way round the Cape of Good Hope to the East Indies in 1591. The East India Company was established in 1600. English commerce with India, however, was not at first important, and they possessed only single factories on the continent up till the beginning of the 18th century. The ruin of the Mogul Empire in India after the death of Aurengzebe (1707) afforded the opportunity for the growth of British power, as the British and French were compelled to interfere in the contentions of the native princes and governors. The French appeared at first to maintain the superiority; but the British in turn got the upper hand, and the victory of Clive at Plassey in 1756 laid the foundation of an exclusive British sovereignty in India. By the middle of the next century the British territory embraced, with the exception of a few dependent states, nearly the whole of India, this vast territory being still under the government of the East India Company—a mercantile company, controlled by Parliament, but exercising many important functions of sovereignty.

The discoveries of the Cabots, following soon after the voyages of Columbus, gave the English crown a claim to North America, which, though allowed to lie dormant for nearly a century, was never relinquished, and which, in the reign of James I, led to the beginning of colonization on a large scale. Raleigh’s settlement on Roanoke Island (North Carolina) in 1585 proved a failure, but in 1607 the colonists sent out by the London Company to Chesapeake Bay founded Jamestown, on the James River, in Virginia. The next great settlement was that of the Pilgrims, who landed December 21, 1620, in Massachusetts Bay. The colonization of New Hampshire, Maine, New Jersey, Connecticut, Rhode Island, soon followed. In the State of New York and the Hudson River territory the British found the Dutch already in possession; but in 1664 they seized the colony of New Amsterdam by force, changing its name to New York in honor of James, Duke of York. Pennsylvania was founded by William Penn, and colonized with Quakers in 1682; Maryland in 1631 by a party from Virginia; Carolina in 1670 and Georgia in 1732 by colonies from England. Colonies were early established in the West India Islands, including Barbadoes, half of St. Christopher’s (1625), and soon after many smaller islands. Newfoundland was taken possession of in 1583, colonized in 1621 and 1633. Canada was surrendered to Britain at the Peace of Paris in 1763. In 1764 began the disputes between Britain and its North American colonies, which terminated with the cession of the independence of the United States, Canada still remaining a British dependency.

Australia was discovered in the beginning of the seventeenth century. The first Australian settlements of Britain were penal colonies. New South Wales, discovered in 1770, was established as a penal colony in 1778. Tasmania (Van Diemen’s Land), discovered by Tasman in 1642, followed in 1803. West Australia became a free colony in 1829. Victoria was colonized in 1835 and made an independent colony in 1851. South Australia was settled in 1836. All these states are now included in the Commonwealth of Australia. New Zealand was discovered by Tasman in 1642 and made a colony in 1840. The Fiji Islands were
annexed in 1874 and New Guinea in 1884. In South Africa, Cape Colony, first settled by the Dutch in 1652, became an English colony in 1814. Great Britain holds possession of the Boer republics and other vast stretches in Africa. Egypt was formally declared a protectorate in 1914 during the European war; Cyprus was annexed at the same time.

France was somewhat late in establishing colonies. Between 1627 and 1636 the West Indian Islands of St. Christopher’s, Guadeloupe, and Martinique were colonized by private persons. Champlain was the pioneer of the French in the exploration of the North American continent, and founded Quebec in 1608. Colbert purchased several West Indian Islands, as Martinique, St. Lucia, etc., and sent out colonists in 1664 to Cayenne. In 1670 the East India Company formed by Colbert founded Pondicherry, which became the capital of extensive possessions in the East Indies. At the beginning of the eighteenth century France had extensive settlements in Canada, Nova Scotia and Newfoundland, the most flourishing of the West Indian Islands, and she seemed to have a prosperous career before her in India. In time, however, the rival interests of British and French colonists brought about a conflict which terminated in the loss of Canada and other North American possessions, as well as many of the West Indian Islands, while the dominion of India passed into the hands of the British.

The chief colonial possessions of France are: Algeria, Tunis, part of Morocco, French West Africa, Equatorial Africa, Somaliland, Madagascar, Mayotta, Island of Reunion, French India, Cochin-China, Guadeloupe, Martinique, French Guiana, and some islands in the Pacific.

Of recent years Germany has made an effort to take rank as a colonial power, and at the beginning of the European war (1914) had an African empire of over 1,000,000 sq. miles. Togo, Southwest Africa, and the Cameroons were acquired in 1884, East Africa in the following year. German New Guinea, which included the Bismarck Archipelago, Kaiserwilemsland, and some of the Solomon islands, came under the German colonial government in 1884. The islands in the Pacific were acquired in 1889. The long arm of the German empire stretched out to China, where Great Britain had established herself at Hongkong, Weihsien, and elsewhere, and in 1898 the bay and surrounding coast of Kiao-chau (193 square miles), were leased by China to Germany for a period of 99 years, but Japan took possession of the territory during the European war. Under the German system the inhabitants of the colonies have no voice in their administration; the laws are framed by the Imperial parliament. During the European war the colonial empire of Germany was captured by Great Britain and her Allies.

Japan is the most recent of the empire-building nations, her policy of expansion dating from 1854, the year in which Commodore Perry succeeded in establishing treaty relations between Japan and the United States. French officers remodeled her army; British sailors her navy, and following her easily successful war with China she was ceded Formosa in 1894. As a result of the Russo-Japanese war the paramount interests of Japan in Korea were recognized, and in 1910 Korea was formally annexed by Japan, and given the name of Cho-sen. Japan also acquired the Liau-Tung peninsula with Port Arthur, China’s strongest fortress, which Russia had seized. The port of Tsing-tao (Kiao-chow), which Germany had leased from China, was taken by Japan during the European war in 1914. Her ‘special interests’ in China were recognized by the United States, and an extension of her colonial power in that country is expected.

Belgium became a colonial power by the annexation in 1908 of the Congo Free State, which had been under the personal overlordship of Leopold II, King of the Belgians, who had governed the territory with extreme cruelty.

Italy attempted to take part in the partition of Africa among the European powers, but had an unfortunate experience. In 1882 it erected into a colony a coaling station held by it on the Red Sea, in 1885 occupied Massowah, and in 1889 combined its colonial territory under the name of Eritrea. This lay along the Red Sea coast of Abyssinia and the whole of that ancient kingdom came to be looked upon as under an Italian protectorate. But there was a rude awakening in 1896 when an Italian force, which had penetrated Abyssinia, was attacked at Adowa and completely defeated. As a result, the independence of Abyssinia was acknowledged, but Italy still held Eritrea, and which it a larger district in Somaliland, in the extreme eastern section of Africa. It seized on Tripoli, a Turkish possession, in 1911, a war ensuing between the Italians and the Turks and Arabs. Denmark, the remaining colonizing country of Europe, possesses Iceland, Greenland and the Faroe Islands, ancient acquisitions, of little value. She owned Santa Cruz, Saint Thomas and Saint John, three
islands in the Virgin Island group of the West Indies, but the United States purchased the Danish West Indies from Denmark in 1917.

At the end of the Spanish-American war (1898) the United States found itself with four new overseas possessions: Hawaii, Porto Rico, Guam, and the Philippines. Prior to the war the native queen of Hawaii had been deposed and the new government had attempted to negotiate a treaty providing for annexation to the United States. President Cleveland made an effort to restore the deposed queen to power, but failing in this, another treaty of annexation was presented to the Senate in President McKinley's administration. This was still pending when the war broke out. The events in the Philippines forcibly called the attention of the country to the necessity for controlling Hawaii, which was invaluable as a coaling station for the trans-Pacific voyage, and action upon the treaty was consequently hastened. The annexation was finally effected by a joint resolution passed July 7, 1898.

The other new possessions were taken from Spain as the result of military victories. Porto Rico had been invaded and in large part conquered by American troops near the end of the war, and its transfer to American sovereignty was therefore looked upon in the United States as the natural consequence of the conflict. The people of the island apparently desired annexation to the Union, since they had little ambition, as had the Cubans, for national independence. The provision was therefore included without question in the treaty of peace. The same was true of the little island of Guam in the Pacific, which was taken simply for use as a coaling station.

With the Philippines, however, the case was different. The original occupation of these islands by the United States might almost be described as an accident. At the outbreak of hostilities, Admiral Dewey, with the United States Pacific squadron, had received orders to attack the Spanish naval forces at Manila. This was an obvious move from a military point of view, because the destruction of the enemy's naval forces in the Far East was necessary both for the security of the West Coast of the United States and for the security of American commerce. The administration had at the time no idea of acquiring the Philippines. After Dewey's brilliant victory at Manila Bay, when the Admiral asked that troops be sent to occupy the city, and to destroy the Spanish army there, the officials at Washington were so little prepared for an aggressive campaign to seize the islands that it was several weeks before the army could be sent. Even after the American forces had taken Manila, there seems to have been little intention on the part of the administration at Washington to hold the islands permanently. Aguinaldo, the leader of the last Philippine rebellion, had been brought back from exile in an American war ship, and had been encouraged and assisted by Dewey in starting a new uprising. There was no agreement to assist him in securing the independence of the islands, but there was a sort of alliance between him and the American forces against the common enemy. Aguinaldo had occupied nearly all of the rest of the Island of Luzon when the United States forces took Manila.

The preliminaries protocol had provided that the United States shall hold and occupy the city, bay, and harbor of Manila, pending the conclusion of a treaty of peace, which shall determine the control, disposition, and government of the Philippines. This had been regarded by Spain as providing for the ultimate return of the islands to her. President McKinley apparently had no desire to retain the islands for the United States, and public opinion in this country was entirely undecided as to the course which should be pursued. In the interval between the signature of the protocol on August 12, 1899, and the conclusion of the Treaty of Peace on December 10 of the same year, however, there was a complete change in the attitude of the American people, which was reflected in the action of the government. When the peace commissioners left the United States in September, they were instructed to demand the cession of the Island of Luzon and the grant of reciprocal commercial privileges in the other archipelago. On October 26, they were instructed by cable to demand the cession of the entire group. The Spanish commissioners objected strongly, but were finally forced to accept the compensation offered—the payment by the United States to Spain of $20,000,000. The Philippines thus became the property of the United States.

The sudden change in the attitude of the United States was due to the so-called 'imperialistic' movement which swept the country in the autumn of 1898. There were several factors which contributed to arouse a strong popular opposition to the abandonment of what was regarded as a legitimate conquest. The cession of the islands by Spain had been demanded by the peace commissioners on political, commercial and humanitarian ground
Their retention seemed, indeed, to be the only course consonant with the national honor and safety. It was impossible to return them to Spain, after the revelations which had been made regarding the inefficiency and barbarousness of her rule there, and after the alliance which had existed between the American forces and the Philippine insurgents under Aguinaldo. It was equally impossible to make them independent, because of their manifest unfitness for self-government. There was a strong belief that Germany, which had become an object of grave suspicion since the unpleasant episode between the commander of her far eastern fleet and Admiral Dewey after the battle of Manila Bay, would seize the archipelago as soon as the United States withdrew. The victories of the war, moreover, had aroused a consciousness of national strength and national greatness which lifted the people of the United States out of their absorption in their own internal affairs, and filled them with an ambition to play a larger part in the world than ever before. Newspapers and orators began to speak of the United States as a world power, and to point to the acquisition of the Philippines as the first step in the fulfillment of our destiny to dominate the Pacific. There was a strong feeling that the United States ought to obtain a territorial foothold in the Far East, in view of the apparently approaching partition of China. The seizure of several ports in that empire by European powers in 1898 had aroused grave doubts as to whether it was destined to remain independent many years longer, and the interests of the United States in the future of the empire were felt to be so great that it could hardly afford to neglect an opportunity to obtain a naval and commercial base from which it might exercise an influence upon the course of events.

The expansionist movement was, perhaps, not so much political and sentimental as economic. The business interests of the country were convinced that it was time for the United States to adopt the imperialist ideal which had guided the foreign policy of England, France, and Germany during the three decades just past. Their arguments were the same as those of the commercial leaders who favored expansion in the European continent. They believed that the United States had reached a point where it was impossible for it longer to subsist on its internal trade. The country was at the time passing through an era of immense expansion in commerce and manufacturing. The total exports, which had been $457,828,684 in 1890, were $882,606,938 in 1896, $1,050,993,556 in 1897, and 1,231,482,330 in 1898. (1) The percentage of manufactured goods to the total value had increased from 14.78 per cent in 1880 to 21.18 per cent in 1890 and to 30.15 per cent in 1897. (2) This change in the character of our trade, the imperialists believed, would force the United States to embark on a policy of territorial expansion. The raw materials which had hitherto predominated in the country's foreign commerce had found a ready market in the great manufacturing countries of Europe, but the increase in the volume of manufactured goods made it vital to seek new commercial outlets in countries which were industrially less developed. These outlets could only be obtained in colonies, for the great powers of the world, which had already divided between them the greater part of the earth's surface, were applying or threatening to apply to their possessions a closed door policy, which would exclude the trade of other nations. The Philippines would not only furnish for American goods a market of great ultimate potentialities, but would also provide a center of distribution for American trade in all parts of the Far East.

The arguments of the imperialists were violently combated in the United States by persons who believed that the new movement involved an abandonment of the nation's traditional policies and ideals. The opponents of expansion declared that neither our form of government nor our national experience fitted us for the control of subject races, and that the acquisition of colonies could not but affect injuriously our own internal political and economic life. Many regarded the exercise of power over another people as a violation of the principles laid down in the Declaration of Independence and the Constitution, and branded the whole movement as un-American and pernicious. Others said that the new possessions would force the United States to become a military power, with danger to the liberty and security of its people. The opposition to the administration's policy was so strong in the Senate that the treaty of peace might not have been accepted if it had not been for the rebellion in the Philippines, which made many of its opponents feel that it would be cowardly to withdraw from the Islands until order had been restored. Immediately after its vote of ratification, however, the Senate passed a resolution stating that its action did not constitute a final determination of its attitude towards the islands.

The Samoan islands were parcelled out among the nations as the result of the
intervention of the powers following a series of internal disturbances, fostered, it must be admitted, by the three foreign powers possessing considerable interests in Samoa: Germany, Great Britain, and the United States. Great Britain received the Solomon and Tonga Islands, Germany got Samoa, and the United States took possession of Tutuila and a few other small islands.

The Canal Zone, a strip of land extending 5 miles on either side of the Panama Canal, was acquired by agreement with the newly created republic of Panama, in 1903, the United States paying $10,000,000 in gold and $250,000 annually for the perpetual right of occupation of the territory.

The Virgin Islands, formerly the Danish West Indies, were acquired by the United States in 1917, the compensation being $25,000,000. The islands composing the group are Santa Cruz, Saint Thomas, and Saint John.

Colophon (kol-‘o-fon), an ancient Greek city of Asia Minor, about 15 miles N. of Ephesus, one of the places claimed as the birthplace of Homer. Here dwelt Minnermus, the elegiac poet, and some other men of eminence.

Colophon, the device or imprint at the end of a published work, which in old books frequently stated the name of the author as well as the printer's name, along with the date and place of publication, most of which information is now put in the title-page.

Colophony (kol-‘o-ni), the dark resin obtained by distilling turpentine.

Color (kul’or), the name given to distinguish the various sensations that lights of various rates of vibration give to the eye. As in the case with many of the words that denote our sensations, the word color is also applied to the particular sense of bodies that cause them to emit the light that thus affects our senses. The molecular constitution of a body determines the character and number of the light vibrations it returns to the eye, and so gives to each body its own characteristic color; hence the term color is used to denote that in respect of which bodies have a different appearance to the eye independently of their form.

Ordinary white light (the light which comes from an incandescent solid or liquid) when transmitted through triangular prisms of glass or other media differ in dispersive power from the atmosphere is shown to consist of a number of colored lights, which, meeting the eye, together produce the sensation of white light. (See Spectrum and Light.) The colors thus shown are usually said to be seven—red, orange, yellow, green, blue, indigo, violet; although in reality there is an enormous, if not an infinite number of perfectly distinct colors in light. The seven colors are frequently called the primary colors, and other tints and shades are producible by mixing them; but in a stricter sense the primary colors are three in number, namely, red, green and violet (or blue). These three colors or kinds of light cannot be resolved into any others. In the scientific sense of the word white and black are not considered colors, a white body reflecting and a black body absorbing all the rays of light without separating them, whereas the colors proper are due to separation of the rays of light by partial absorption and reflection or by refraction. If a body absorbs every other kind of light and reflects or transmits red light only, it will appear of a red color; if it absorbs every kind except blue rays, it will appear blue; and so on. If more than one kind of light be transmitted or reflected the object will appear of a color compounded of these different rays of light.

In art the term color is applied to that combination or modification of tints which produces a particular and desired effect in painting. The colors of the spectrum have to be distinguished from color used in reference to pigments. The pigments red, blue and yellow, regarded in the arts as the primary colors, produce effects, when mixed, very different from those produced by admixture of the corresponding spectrum colors. These three pigment colors form other colors thus: red and yellow make orange, yellow and blue make green, and red and blue make purple; hence red, blue and yellow cannot be produced by any combination of the other colors.—Local colors are those which are natural to a particular object in a picture, and by which it is distinguished from other objects.—Neutral colors, those in which the hue is broken by partaking of the reflected colors of the objects which surround them. —Positive colors, those which are unbroken by such accidents as affect neutral objects.—Complementary colors, colors which together make white; thus any of the primary colors is complementary to the other two.—Subjective or accidental colors, the imaginary complementary colors seen after fixing the eye for a short time on a bright-colored object, and then turning it suddenly to a white or light-colored surface.

Colors in heraldry are azure, blue; gules, red; sable, black; vert, green; purpure, purple; tenné or tawny, orange; and murrey or saunine, dark crimson. (See Heraldry.) Military colors are the
flags or ensigns of a regiment. See Colorado, Military.

Colorado (kol-ō-rā'dō), one of the United States of America, situated in the central belt of states in the Rocky Mountains, between lat. 37° and 41° N., and lon. 102° and 105° W., and containing an area of 103,948 sq. miles. The western and central portions of its area are occupied by an intricate plexus of wild and irregular ranges inclosing valleys known as parks, most of which are fertile, well wooded, and of a mild climate. These 'parks,' are apparently the basins of former lakes upheaved and deprived of their waters above the level of the sea. These parks are generally small, but a few of them are larger, to name some entire states of the Union as North Park, Middle Park, and South Park. A large number of the mountains are over 14,000 feet high, including Pikes Peak, Long's Peak, and others. Of the mountain parks, the one best known and most frequented is Estes Park, near west of Denver, a favorite summer resort. The eastern section of the state is a great plain well adapted for pasture.

The rivers include the Arkansas, South Platte, Grand River, etc.; some of them remarkable for the grandeur of their cañons. (See Arizona.) Among wild animals are found the grizzly, the black and the brown bear, prairie-wolf, several kinds of deer, big-horn sheep, etc. There are extensive forests. In the mountain regions the rainfall is small and of the arable lands in the state a great portion require irrigation. As a result the agricultural development has had a comparatively recent beginning. Although a large part of its area is of a character which makes the growing of crops impossible, large portions are admirably adapted for cultivation. The eastern two-fifths, which lies within the Great Plains section of the United States, is largely utilized for grazing purposes, but dry farming has been successful and irrigated portions yield large crops.

To the west of the divide in the Sand Luis valley, in the south-central part of the state, the rainfall is at times considerable. To the east of the divide, on the plains, the rainfall is heavier, and here some crops are grown without irrigation. The growth of agriculture is indicated by the following figures: The number of all farms in 1910 was 46,170, compared with 24,700 in 1880. The value of farm property from 1900 to 1910 shows a remarkable increase. In the latter year it was $491,471,806 as compared with $161,045,141 in 1900. Orchard fruits are in some parts brought to an unusual degree of perfection. In general, cattle and sheep grazing are the leading pursuits of the rural population, though cattle raising on a large scale is decreasing. Sheep raising, which is confined largely to the southern counties, has likewise decreased.

The climate is dry and healthful, considered especially beneficial to asthmatic and pulmonary sufferers, and the charming parks are becoming great natural sanitariums. The chief wealth of Colorado consists of its minerals, principally gold and silver. These were developed until Colorado led the states in their production, the yield of these two metals in 1897 being valued at $47,078,535, more than one-third the total yield of the country. For many years after 1873 the output of silver was greater than that of gold; in 1892 it was six times as much; but in 1898 the gold was estimated at $24,000,000, the silver at $14,250,000. In 1910 the gold yield was stated at $20,408,041; that of silver (commercial value), about $5,000,000. Coal was the mineral product of second importance and silver ranked fourth. The coal fields of the state are divided by the major ranges of the Rocky Mountains into three groups, the Eastern, the Park, and the Western, the Eastern being the most highly developed. The coal ranges from sub-bituminous in the Denver regions, through various grades of bituminous, including the high grade cooking coal of the Trinidad and Glenwood Springs fields, to true anthracite, in the Crested Butte and Yampa fields. Iron, copper and lead are mined, iron being widely diffused. Other minerals are manganese, petroleum, zinc, cement and fire-clay.

Though pre-eminently a mining state Colorado is active in manufacturing, part of which owes its existence to the needs of the mining industry. Irrigation of the fertile valleys of the Platte and Arkansas rivers and other streams has made the beet-sugar production of Colorado greater than that of any other state. The canning industry is also the outgrowth of the development of irrigation. The fact that Colorado is a natural grazing country is responsible for the development of such industries as slaughtering and meat packing, the manufacture of butter, cheese, and condensed milk, the rendering of grease and tallow, and wool scouring.

The public school system is good, and there is a state university. The transportation facilities are excellent, and Colorado claims a greater railway mileage than any other of the Rocky Mountain states. In view of the fact that there are no navigable rivers in the state the legislature of 1909 created a State Railroad Commission to take general charge of the
Colorado was little known previous to 1879; it was organized as a territory in 1861, and admitted as a state in 1876. The state capital is Denver, which in 1870 had a population of 4759, and in 1910, 213,381. Leadville is the next in importance. Pop. of the state in 1870, 89,564; in 1910, 700,024; in 1917, 983,320.

Colorado, a name of two rivers of the United States.— (1) the Western Colorado, or Rio Colorado, formed by the junction of the Green and Grand rivers, at about lat. 38° N.; lon. 110° W., in Utah. It flows southwest and south through Arizona, and between Arizona and Nevada and California, and after a total course, including the Green, of about 2000 miles, falls into the Gulf of California. Among the most wonderful natural objects in North America is the Grand Cañon of the Colorado, between lon. 112° and 115° W. Here the river flows between walls of rock which are nearly vertical, and are in some places 6000 feet high. This cañon is more than 300 miles long. (2) A river in Texas which after a course of about 900 miles falls into the Gulf of Mexico at the town of Matagorda. (3) A river in Argentina, about 600 miles long, which empties into the Atlantic Ocean.

Colorado Beetle, an American species of beetle (Chrysemela or Polygraphia, or Doryphora decemlineata), nearly half an inch in length, almost oval, of a yellowish color marked with black spots and blotches, and on the elytra with ten black longitudinal stripes. The wings are of a blood-red color. It works great havoc among the potato crops, and is popularly known as the Potato Bug.

Colorado Springs, a city of El Paso county, Colorado, 65 miles s. of Denver, at the foot of Pike’s Peak, with an elevation of 5982 feet. It is surrounded by beautiful scenery, has a delightful climate, and is a popular resort. Pop. 29,078.

Color-blindness, total or partial incapability of distinguishing colors. Color-blindness has been divided into three grades: (a) Inability to discern any color, so that light and shade, and white, are the only variations perceived. (b) Inability to distinguish the nicer shades of the more composite colors, as browns, grays, and neutral tints. (c) Inability to distinguish between the primary colors, red, blue and yellow, or between them and their secondarys, green, purple, orange, and brown. Red is the color which the color-blind are most commonly unable to distinguish, while yellow is the most easily recognized. Color-blindness occurs in eyes whose power of vision, as to form and distance, is quite perfect, and may exist unknown to the person affected by it. This defect is common, especially among men. The cause of it in almost every case which has been carefully investigated has been found to be seated in the sensorium and not in the visual apparatus. It will be easily understood that those whose eyesight is thus defective are disqualified for holding various positions.

Colorimeter (kol-o-rim’e-ter), an instrument for measuring the depth of color in a liquid by comparison with a standard liquid of the same tint.

Color Printing, the art of producing designs, cards, etc., in various colors by means of lithography, printing from metal blocks, etc. The ordinary methods are: (1) the chromo-lithographic, in which a tracing of the original picture, or the like, is first made, and a copy transferred to as many stones as there are colors in the original, every color requiring a separate stone. The drawing of each stone is made to fit in, or register, with the preceding one, and as the paper passes through the machine an additional color is added every time, and thus the picture is built up color upon color (each being allowed to dry before the next is put on) until it is completed. Some chromos or oleographs may have as many as 25 or 30 printings or colors. (2) Block or surface color printing is specially adapted for book illustrations or similar work where nicety of detail or rapidity of production is required. As in chromolithography various printings are necessary; but these, while producing similar effects, are reduced in number by a method of printing several tints of the same color at one operation. Each block, which is usually of zinc and prepared in the usual way, is capable of producing three or more gradations of the same color; the darkest shade from the normal surface, lighter shades being got from parts which have been bitten or corroded in an almost imperceptible degree—the deepest corrosions giving, of course, the lightest shade. When all the tints of one color are thus printed from one block and at one operation, a second block with gradations, in the same way, is used, registering as in chromo-lithography, and so on until the picture is finished.

Colors, Military, the national flag and the flag of the regiment which contains the device and number of the regiment in gold. The colors, when uncased, are entitled to a salute when borne past a guard and by the command-
Color-Sergeant

Colostrum

ing officer and staff when carried past in review and in general by all officers and enlisted men under regulations prescribed by the Army Regulations. Similar customs prevail in the navy. The national flag is raised at sunrise with a gun salute and lowered at sunset with a gun salute— the playing of the "Star Spangled Banner" by the band.

Color-sergeant, a non-commissioned officer in the army who is a member of the regimental staff. There are two color-sergeants to each regiment, who carry and have charge of the national and regimental colors and are escorted by the color-guard. Color-sergeants rank line-sergeants and receive better pay.

Colosse (kol-os'ë), an ancient city of Lydia, in Phrygia, on the Lyceus, a branch of the Meander. It was the seat of one of the early churches of Asia to whom the apostle Paul wrote about 62 or 63 A.D.

Colosseum (kol-os'ë-um), a name given to the Flavian Amphitheater in Rome, a large edifice for gladiatorial combats, fights of wild beasts, and similar sports. It was begun by Vespasian, and finished by Titus, 80 A.D. The outline of the Colosseum is elliptical, the exterior length of the building being 620 and its breadth 513 feet; it is pierced with eighty openings or vomitories in the ground story, over which are superimposed three other stories, the whole rising perpendicularly to the height of 160 feet. Although two-thirds of the original building have disappeared, it is still a wonderful structure.

Colossians, Epistle to the. An epistle written by the apostle Paul, when he was a prisoner in Rome. It falls naturally into four parts: (1) exhortation and Thanksgiving; (2) nature and work of Christ; (3) doctrine; (4) personal matters and salutations. The third chapter is a picture of the Christian life as seen by Paul. It is a plea that, having put off the old man, the Colossians shall live like new men, putting aside all uncharitableness, bearing themselves with meekness and kindness. The probabilities are that Epaphras, of whom the writer speaks, preached first to the Colossians and was the means of their conversion. Among other early Christian missionaries whom Paul mentions here are Onesimus and Tychicus, the bearers of the epistle; Luke, "the beloved physician"; Aristarchus, a "fellow prisoner": John Mark, called here Marcus; Barnabas, a landowner of Cyprus, who sold his land and laid the price at the feet of the apostles in Jerusalem, becoming a co-preacher with Paul; and Demas, another fellow laborer who later deserted Paul (2 Tim. iv. 10), lacking the heroic mettle of the great apostle.

Colossus (ko-loss'us), in sculpture, a statue of enormous magnitude. The Asians, the Egyptians, and in particular the Greeks have excelled in these works. The most celebrated Egyptian colossus was the vocal statue of Memnon on the plain of Thebes, supposed to be identical with the most northerly of two existing colossi (60 feet high) on the west bank of the Nile. Among the colossi of Greece the most celebrated was the Colossus of Rhodes, a brass statue of Apollo 70 cubits high, esteemed one of the wonders of the world, erected at the port of Rhodes by Chares, 290 or 288 B.C. It was thrown down by an earthquake about 224 B.C. The statue was in ruins for nearly nine centuries, when the Saracens, taking Rhodes, sold the metal, weighing 720,000 lbs., to a Jew, about 653 A.D. There is no authority for the popularly-received statement that it bestowed the harbor mouth and that the Rhodian vessels could pass under its legs. Among the colossi of Phidias were the Olympian Zeus and the Athena of the Parthenon; the former 60 ft. high and the latter 40. The most famous of the Roman colossi were the Jupiter of the Capitol, the Apollo of the Palatine Library, and the statue of Nero, 110 or 120 ft. high, and from which the contiguous amphitheater derived its name of Colosseum. Recently rock-cut statues have been measured at Bamian on the road between Kabul and Balkh, the largest being 173 ft. high and the second 120 ft.

Among the modern works of this nature is the colossus of San Carlo Borromeo, at Arona, in the Milanese territory, 60 ft. in height; the 'Bavaria' at Munich, 65 ft. in height; the statue of Heerwegh, near Detmold, erected in 1875, 90 ft. in height to the point of the upraised sword, which itself is 24 ft. in length; the height of the figure to the point of the helmet being 55 ft.; the statue of Germania, erected in 1883, 54 ft. 34 ft. high, placed on an elaborately sculptured pedestal over 81 ft. high; and Bartholdi's statue of Liberty presented to the United States by the French nation, and which measures 104 ft., or to the extremity of the torch in the hand of the figure 151 1/2 ft. It is erected on Bedloe's Island in New York harbor. See Liberty Statue.

Colostrum (ko-los'trum), the first milk of mammalia secreted after giving birth to young. It differs in composition from ordinary milk: has a purgative action, and serves to clear the bowels of infants of the meconium or fecal matter which they contain at birth.
Colporteur (kol-por-teur'), a French term now naturalized in the United States, and appropriated to a class of men always, or most commonly, subsidized by societies or associations with the view of disseminating religious literature by carrying about publications for sale, generally at reduced rates.

Colt (kolt). Samuel (1814-62), an American manufacturer, inventor of the revolver, was born in Hartford, Conn., and in 1835 secured a patent for his revolving pistol. See Revolver.

Colton (kol-ton), Charles Caler, an English writer, born 1780; died by his own hand at Fontainebleau, 1832. He held the united living of Kew and Petersham, but was eccentric in his manners, extravagant in his habits, and irremediably addicted to gambling and its attendant vices. Bewildered by his pecuniary obligations, he fled to the United States, and after a sojourn there of some years took up his abode in Paris, where he acquired a fortune of $125,000 by gambling, which was soon dissipated. Through apprehension of a surgical operation he committed suicide. He wrote several satirical poems, Hypocrify, Napoleon, etc.; but his most remarkable work is Lecon, or Many Things in Few Words.

Colt's-foot, Trussiago Farfa, a weed of the order Compositae, the leaves of which were once much employed as a remedy for asthma and coughs. The name is given from the leaf somewhat resembling the foot of a colt, being broad and heart-shaped; the flowers are yellow.

Colt's Revolver. See Revolver.

Coluber (kol'-ber), a genus of non-venomous serpents, which includes, besides several N. American snakes the Coluber Asculapii, common in the neighborhood of Rome, and regarded as the serpent which was sacred to Asclepius, the god of medicine. To the same family belongs the common ringed snake of Britain (Tropidonotus satrile), which attains a length of 3 or 4 feet.

Columba (ko-lumb'ba). See Columbus.

Columba, St., a native of Ireland (Gartan in Donegal), born in 521; died in 597. In 545 he founded the monastery of Derry, and subsequently established many churches in Ireland. About 563 he landed in the island of Hy, now called Iona, and founded a church. About 566 he went on a mission of conversion among the northern Picts, and traversed the whole of Northern Scotland preaching the Christian faith and founding monasteries, all of which he made subject to that which he had set up on the island of Hy. The Columban church was in some points of doctrine and ceremonial opposed to that of Rome, to which it owed no allegiance. Shortly before his death he revisited Ireland. There is a well-known life of St. Columba, Vita Sancti Columbae written by St. Adamnan, Abbot of Iona.

Columbanus (kol-um-ba'nos), Saint, or Saint Columban, a missionary and reformer of monastic life, born in Ireland apparently about 540, became a monk in the Irish monastery of Benchor (Bangor), went through England to France with twelve other monks to preach Christianity, and founded the monasteries of Annegray, Luxeuil (590), and Fontaine in Burgundy. His rule, which was adopted in latter times by many monasteries in France, commands blind obedience, silence, fasting, prayers and labor, much more severe than the Benedictine rule, and punishes the smallest offenses of the monks with stripes. He retained also the old ecclesiastical customs of the Irish, among which is the celebration of Easter at a different time from the Roman Church. He appears to have remained at Luxeuil for nearly twenty years. He then went among the heathen Alemanni, and preached Christianity in Switzerland. About 612 he passed into Lombardy, and founded the monastery of Bobbio, in which he died in 618. His writings comprise his monastic rule, sermons, some poems and ecclesiastical treatises. His life was written by Abbot Jonas, a successor in the abbacy of Bobbio.

Columbarium (kol-um-ba'ri-um), in Roman antiquities, a place of sepulture for the ashes of the dead after the custom of burning the dead had been introduced. Columbaria consisted of arched and square-headed recesses formed in walls in which cinerary urns were deposited, and were so named from the resemblance between these recesses and those formed for the doves to build their nests in a dove-cot.

Columbia (ko-lum'bi-a), the capital of South Carolina, situated on an elevated plain on the left bank of the Congaree, 129 miles N. W. of Charleston. It contains some fine public buildings. Among the educational institutions are the South Carolina University, founded in 1804, and the Presbyterian Theological Seminary. The principal manufactures are cotton and fertilizers; in addition to which there are sash and door factory, iron works, foundries and machine shops.
The city was set on fire while occupied by General Sherman's army in 1865 and a large part of it burned. It was made the state capital in 1790. Pop. 40,000.

Columbia, a city, county seat of Boone Co., Missouri, 125 miles w. by n. of St. Louis. It is the seat of the University of Missouri, of the state Agricultural College and government Experiment Station. The principal industries are coal mining and the manufacture of shoes. Pop. 9692.

Columbia, a city of Lancaster Co., Pennsylvania, on the east bank of the Susquehanna River, 81 miles w. of Philadelphia. It possesses iron and other manufactures, including boilers, engines, iron, machinery, textiles, wagons, brushes, flour, stoves, etc. Pop. (1810) 12,464. Pop. (1820) 17,789. Pop. (1830) 21,627.

Columbia, a city, county seat of Maury Co., Tenn., on Duck River, 47 miles s. of Nashville. It has cotton, pencil, and flour mills and other manufactures, extensive phosphate interests, and a large mule market. It is the seat of a national arsenal. Pop. 10,000.

Columbia, District of, a small tract of country on the east bank of the Potomac River, about 120 miles from its mouth, surrounded on three sides by Maryland, and forming a neutral district for the seat of the United States government. It has an area of 65 square miles; was formed into a territory in 1871; and contains the city of Washington, which has been the national capital since 1800. Georgetown, a former city, is now part of Washington. As originally laid out, the district was 10 miles square, including a small area in Virginia; but this section was retroceded in 1846 and only the Maryland section retained. The affairs of the district and of Washington are administered by three commissioners directly under Congress. Pop. 331,068.

Columbia University, an educational institution in New York City, established in 1754, and giving courses in literature, science, medicine, law, etc. In 1916 the total number of students in all departments, including extension teaching and the summer school, was 18,176. Affiliated with it are Barnard College, Teachers' College, and the College of Pharmacy. In 1918 women were admitted to the Medical School for the first time.

Columbia River, or Oregon, a river of the United States, flowing into the Pacific Ocean, and rising at the base of the Rocky Mountains in British Columbia. It has a very winding course, partly in British Columbia, but mainly in the United States, where it receives two large tributaries, Clarke's Fork and Snake River. Farther down it turns abruptly to the west and forms the boundary between the States of Washington and Oregon. It drains an area of 288,000 square miles, and has a length of about 1400 miles.

Columbian Exposition, an international display created by act of Congress of April 25, 1890, providing for celebrating the 400th anniversary of the discovery of America by Columbus by holding an international exhibition of arts, industries, manufactures, etc., in Chicago, Illinois, October 12, 1892. The President and state governors and prominent civil and military dignitaries participated in imposing ceremonials, dedicating the grounds and buildings, but the exhibition was not formally opened until 1893, the great architectural work needed causing delay. The estimated cost of the buildings, etc., was over $33,000,000, and the exhibition in every respect a brilliant one; the buildings were covered with a white coating which gave the impression of marble, and the grouping of the structures was very artistic. Nearly every nation of the world sent exhibits and it was very largely attended, the receipts being over $28,000,000. One of the buildings has been preserved as the Field Museum of Natural History.

Columbus, a city, county seat of Muscogee Co., Georgia, at the head of navigation on the Chattahoochee River, 100 miles s. w. of Atlanta. The river furnishes extensive water power and some of the largest cotton mills of the south are located here. There are also extensive ironworks and other Industries and a large trade in cotton, the annual receipts exceeding $150,000 bales. Pop. 20,554.

Columbus, a city, the capital of Ohio, in Franklin County, on the Scioto, near the center of the state, with exceptional railway facilities. The excellent water, sewage and garbage systems keep the death rate low. The chief buildings are the capitol, deaf and dumb institution, institution for the blind, lunatic asylum, penitentiary, Roman Catholic cathedral, etc. Educational institutions include the Ohio State University, with over 4000 students enrolled; Columbus Medical College, Starling Medical College, Ohio Agricultural College, Columbus Art Institute, etc. There is a very extensive trade, and the manufactures are important and varied. Columbus suffered heavily in the Ohio floods of 1913. Pop. 208,737.
Columbus, a city, county seat of Bartholomew Co., Indiana, on the White R., east branch, 41 miles s. by E. of Indianapolis. Its manufactures include wood pulleys, leather, threshing and sawmill machinery, tools, etc. Pop. 9382.

Columbus, a city of Mississippi, on the Tombigbee River, in a rich alfalfa region. It has large cotton, cottonseed-oil, and other mills, and several institutions, including the Mississippi Industrial Institute. Pop. 8988.

Columbus, a city, county seat of Platte Co., Nebraska, 194 miles w. of Omaha. It has lumbering and other interests. Pop. 5014.

Columbus, Christopher (in Spanish, Cristóforo Colombo, which is his real name), was born in Genoa, died at Valladolid, Spain, in 1506. His father, Domenico Colombo, a poor wool-comber, gave him a careful education. He appears to have gone to sea at an early age and to have navigated all parts of the Mediterranean, and some of the coasts beyond the Straits of Gibraltar. In 1470 we find him at Lisbon, where he married the daughter of Bartolommeo de Perestrello, a distinguished navigator. He had gradually come to the conclusion that there were unknown lands belonging to Eastern Asia separated from Europe by the Atlantic. While the Portuguese were seeking to reach India by a southeast course around Africa he was convinced that there must be a shorter way by the west. He applied in vain to Genoa for assistance, and equally fruitless were his endeavors to interest John II of Portugal in the enterprise. He then determined to apply to the Spanish court; and after many disappointments he induced Ferdinand and Isabella to equip and man three vessels for a voyage of discovery. It was early in the morning of Friday, on August 3, 1492, that Columbus set sail from the port of Palos, and after sailing for two months the expedition narrowly escaped failure. The variation of the needle so alarmed the crews that they were on the point of breaking out into open mutiny, and he was obliged to promise that he would turn back if three more days brought no discovery. On the third day (Oct. 12, 1492) the island of Guanahani or San Salvador was sighted, which Columbus believed to belong to Eastern Asia and to be connected with India—a belief which he carried with him to his grave. Hence the mistaken name of Indians applied to the natives of America, and that of West Indies applied to the group of islands of which Guanahani forms one. On landing Columbus threw himself upon his knees and kissed the earth, returning thanks to God. The natives collected round him in silent astonishment, and his men, ashamed of their disobedience and distrust, threw themselves at his feet, begging his forgiveness. Columbus, drawing his sword planted the royal standard, and in the name of his sovereigns took possession of the country, which, in memory of his preservation, he called San Salvador. He then sailed in search of other lands, and discovered Cuba, St. Domingo, and several other of the West India Islands. Being so far successful, he built a fort at Hispaniola, Hayti, left some of his men there, and set out on his return to Europe, where he was received with great state and honors. In 1493 he set out on his second great voyage from Cadiz, with three large ships of heavy burden and fourteen caravels, carrying 1500 men. He discovered the island of Dominica, and afterwards Mariageante, Guadaloupe, and Martinique, and at length arrived at Hispaniola. Finding the colony destroyed, he built a fortified town, which he called, in honor of the queen, Isabella. He then left the island in order to make new discoveries, visited Jamaica, and returning after a voyage of five months, worn down with fatigue, found to his great joy that his brother Bartolommeo had arrived at Isabella with provisions and other supplies for the colony. Meanwhile a general dissatisfaction had broken out among his companions, who, instead of the expected treasures, had found hardships and labor. This and news of calumnies being set on foot against him at home induced him to return to Spain, where his presence and probity alone secured the treasure he brought silenced his enemies. In May, 1498, he sailed with six vessels on his third voyage. Three of his vessels he sent direct to Hispaniola; with the three others he took a more southerly direction, and having discovered Trinidad and the continent of America, returned to Hispaniola. His colony had now been removed from Isabella, according to his orders, to the other side of the island, and a new fortress erected called St. Domingo. Columbus found the colony in a state of confusion and turmoil. His enemies, in the meantime, endeavored to convince his sovereigns that his plan was to make himself independent, and Columbus was not only displaced, but Francisco de Bobadilla, a new governor, who had come from Spain, even sent him to that country in
chains. On his arrival (in 1500) orders were sent directing him to be set at liberty and inviting him to court, but for his injurious treatment he never got redress, though great promises were made. After some time he was able to set out on his fourth and last voyage (1502) in four slender vessels supplied by the court. In this expedition he was accompanied by his brother Bartolommeo and his son Fernando. He encountered every imaginable disaster from storms and shipwreck, and returned to Spain, sick and exhausted, in 1504. The death of the queen soon followed, and he urged in vain on Ferdinand the fulfilment of his promises; but after two years of illness, humiliations and despondency, Columbus died at Valladolid. His remains were transported, according to his will, to the city of St. Domingo, but on the cession of Hispaniola to the French they were removed in January, 1796, to the cathedral of Havana in Cuba. In 1899 they were removed, with much ceremony to Granada, Spain, though there is some question as to these being the correct remains.

Columella (kol-u-mel'a), Lucius Junius Moderatus, a Roman writer on agriculture; born at Cadiz in Spain; lived about the middle of the first century after Christ, and wrote twelve books, which are still extant, one of which, on gardening (De Re Rustica), is in verse.

Column (kol'um; Latin, columna), in architecture, a round pillar, a cylindrical solid body set upright and primarily intended to support some superincumbent weight. A column has as its most essential portion a long solid body, called a shaft, set vertically on a stylobate or on a congeries of moldings which forms its base, the shaft being surmounted by a more or less bulky mass which forms its capital. In classical architecture columns have commonly to support an entablature consisting of three divisions, the architrave, frieze and cornice, adorned with moldings, etc. The accompanying cut will illustrate these and other terms. Columns are distinguished by the names of the styles of architecture to which they belong: thus there are Hindu, Egyptian, Grecian, Roman and Gothic columns. In classic architecture they are further distinguished by the name of the order to which they belong, as Doric, Ionic, Corinthian, Composite or Tuscan columns. They may also be characterized by some peculiarity of position, of construction, of form, or of ornament, as attached, twisted, cabled, etc., columns. Columns are chiefly used in the construction or adornment of buildings. They
have also been used, however, singly for various purposes, especially for monuments. See Corinthian, Doric, Ionic, Gothic, etc.

Column, in military tactics, a formation of troops drawn up in deep files, showing a small front; as distinguished from line, which is extended in front and thin in depth. They are said to be close or open, according to the intervals between the battalions, regiments, etc., of which they are composed. Sometimes the name column is given to the small army, especially when actively engaged.

Colure (ko-lūr'), in astronomy, one of two great circles which divide the ecliptic into four equal parts. One passes through the solstitial and the other through the equinocial points of the ecliptic.

Colymbus (ko-lim'bus), the diving genus of birds, giving name to the family Colymbidae, which includes also the Grebes.

Colza Oil (kol'za), an oil much employed for burning in lamps, and for many other purposes. It is expressed from the seeds of Brassica campestris oleifera, and from allied plants of the cabbage family. It is yellowish brown, and has little or no smell. It becomes thick and solid only at very low temperatures.

Coma (ko'ma), in medicine, a state of complete insensibility, resulting from various diseases, as apoplexy; from narcotics, as opium; from accident or injury to the brain; or from excessive cold. When accompanied with delirium and the person's eyes are wide open, it is called coma vigil.

Coma, the luminous, nebulous, hair-like substance surrounding the nucleus of a comet.

Coma Berenicè's, Berenice's Hair, a small constellation of the northern hemisphere containing about forty stars visible to the naked eye, situated between Boötes and the tail of Leo.

Comacchio (ko-mak'ki-o), a fortified town, Italy, province of Ferrara, amid unhealthy marshes, about 2 miles from the Adriatic, with productive fisheries. It is the seat of a bishopric. Pop. 7944.

Comana (ko-ma'na), an ancient city of Cappadocia, celebrated in antiquity as the seat of the solemn worship of Ma (the moon goddess). Its site has not been identified.

Comanches (kō-man'ches), an American Indian tribe formerly roaming through Texas and part of Mexico. They were excellent horsemen, and extremely warlike, but their numbers are now insignificant. Some of them have been collected on a reservation in the western part of the former Indian Territory, now Oklahoma.

Comayagua (kō-mā-yā'gwa), a town of Central America, in Honduras, the capital of a department of the same name, situated on the southern border of the plateau of Comayagua, about midway between the two oceans. It is a bishop's see and has a cathedral. Pop. about 8000.

Comb, an instrument with teeth, made of tortoise-shell; ivory, horn, wood, bone, metal, or other material, used for dressing the hair, and by women for keeping the hair in its place when dressed. Combs have been used from the earliest times by rude as well as by civilized races.

Combaconum (kom-ba-kō'nüm), a town of Hindustan, presidency of Madras, district of Tanjore. It was the ancient capital of the Chola dynasty, and is one of the most ancient and sacred towns in the presidency. It has a great many well-endowed Hindu temples, a government college, courts, etc. A brisk trade is carried on with visitors and pilgrims. Pop. 59,023.

Combat, Trial by. See Battle, Wager of.

Combe (kōm), Andrew, a noted physician and medical author, born at Edinburgh in 1797; died in 1847. He was educated at the Edinburgh High School and afterwards for the medical profession at the university there. In 1822 he commenced practice at Edinburgh, and had considerable success. In 1838 he was appointed one of the physicians extraordinary to the queen in Scotland. His chief works are: Observations on Mental Derangement (1831), Principles of Physiology (1834), Physiology of Digestion (1836), and A Treatise on the Physiological and Moral Management of Insanity (1840). Like his brother George, he was a zealous phrenologist.

Combe, George, brother of the foregoing, was born in 1788, at Edinburgh; died at Moore Park, Surrey, in 1858. He was bred to the law, and in 1812 was admitted a member of the Society of Writers to the Signet. He was the first to introduce the doctrines of phrenology into Great Britain; and visited Germany and America lecturing on his favorite science. He was also a zealous promoter of the cause of popular education and social progress; and was among the first to advocate compulsory education and the establishment of a
Combe

board of health. Besides the Constitution of Health, published in 1829, and which has had an enormous circulation, he is the author of A System of Phrenology (1825); Lectures on Popular Education (1833); Moral Philosophy (1840); The Life and Correspondence of his brother, Dr. Andrew Combe (1850); Principles of Criminal Legislation and Prison Discipline Investigated (1854); and the Relation between Science and Religion (1857).

Combe, William. See Combe, William.

Combermere (kom'br-mer), Sir Stapleton Stapleton-Cotton, Viscount, an English general, born in 1773; died in 1805. He entered the army in 1790, and took part in the Mysore war against Tipu Suli in 1798 and 1799. He served with distinction through the Peninsular war, and was commander of the allied cavalry after 1810. In 1814 he was created Baron Combermere. In 1825 he was appointed commander-in-chief in India. He was latterly Constable of the Tower, and a field-marshall.

Combination. See Permutations and Combinations.

Combretaceae (kom-bre-ta-se-ə), an order of shrubby or arborescent polytetalous exogens, tropical shrubs or trees, with leaves distitute of stipules, and long, slender stamens. Some of them are astringent and used for tanning (myrobolan), and the kernels of others are eatable. They are chiefly valued for their brightly-colored, showy flowers, especially in the genus Combretum.

Combustion (kom-byst-yun), the operation of fire on inflammable substances; or the union of an inflammable substance with oxygen or some other supporter of combustion, attended with heat and in most instances with light. In consequence of the combination of the carbon in fuel with the oxygen of the air being the universal method of getting heat and light, and as when the action takes place the fuel is said to burn or undergo combustion, the latter term has been extended to those cases in which other bodies than carbon—for example, phosphorus, sulphur, metals, etc.—burn in the air or in other substances than air—for example chlorine. Though the action between the gas and the more solid material as coal, wood, charcoal, of whose combination combustion is the result, is mutual, the one having as much to do with the process as the other, yet the former, as oxygen, chlorine, iodine, and the com-

pounds which they form with each other and with nitrogen, have received the name of supporters of combustion, while to the latter the term combustibles has been assigned.

Combustible is the ignition of a body by the internal development of heat without the application of fire. It not infrequently takes place among heaps of rags, wool and cotton when sodden with oil; hay and straw when damp or moistened with water; and coal in the bunkers of vessels. In the first case the oil rapidly combines with the oxygen of the air, this being accompanied with great heat; in the second case the heat is produced by a kind of fermentation; in the third by the pyrites of the coal rapidly absorbing and combining with the oxygen of the air. The term is also applied to the extraordinary alleged phenomenon of the human body being reduced to ashes without the direct application of fire. It is said to have occurred in the aged and persons that were fat and hard drinkers; but most chemists reject the theory and altogether discredit it.

Comedietta (kom-e-di-e-tə), a dramatic composition of the comedy class, but not so much elaborated.

Comedy (kom-e-di), a dramatic composition of a light and amusing class, its characters being represented as in the circumstances or meeting with the incidents of ordinary life; distinguished from tragedy by its sprightliness, and the termination of its plot or intrigue being happy; and from farce by its greater refinement and moderation, and by more of probability and less of burlesque. See Drama.

Comenius (kə-mənˈnjuːs), Johann Amos, a Moravian educational reformer, born in 1592; died in 1671. He was chosen bishop of a Moravian Brethren, and suffered much in the persecutions of that body. He was the author of upwards of ninety works, the most important of which are Janua Linguarum Rerescunt (1631) and Orbis Sensualium Pictus (1658). His high reputation brought him invitations from England, Sweden and Hungary to aid in organizing public instruction; and the above works have been frequently translated and imitated.

Comets (kom-ets), certain celestial bodies which appear at occasional intervals, moving through the heavens in paths which seem to correspond with parabolic curves, or in a few instances in elliptical orbits of great eccentricity. The former, after being visible from the earth for a shorter or
longer time, disappear into space apparently never to return; the latter return to us periodically. Some comets are only visible by the aid of the telescope, while others can be seen by the naked eye. In the latter case they usually appear like stars accompanied with a train of light, sometimes short and sometimes extending over half the sky, mostly single and more or less curved, but sometimes forked. In a comet which appeared in 1744 the train was divided into several branches, spreading out from the head like a fan. The train is not stationary relatively to the head, but is subject to remarkable movements. The direction in which it points is always opposite to the sun, and as the comet passes its perihelion the train changes its apparent position with extraordinary speed. Hence the comet is itself of different degrees of luminosity, there being usually a central core, called the nucleus, of greater brilliancy than the surrounding envelope, called the coma.

Comets were long regarded as supernatual objects, and usually as portents of impending calamity. Tycho Brahe was the first who expressed a rational opinion on the subject, coming to the conclusion that the comet of 1577 was a heavenly body at a greater distance from the earth than that of the moon. The general law of the motion of bodies, as well as his own observation on the comet of 1680, led Newton to conclude that the orbits of the comets must, like those of the planets, be ellipses, having the sun in one focus, but far more eccentric; and having their apheions, or greater distances from the sun, far remote in the regions of space. This idea was taken up by Halley, who collated the observations which had been made of all the twenty-two comets, or at least notice had been taken previous to 1680. The results were very interesting. With but few exceptions the comets had passed within less than the earth's shortest distance from the sun, some of them within less than one-third of it, and the average about one-half. Out of the number, too, nearly two-thirds had had their motions retrograde, or moved in the opposite direction to the planets. While Halley was engaged on these comparisons and deductions the comet of 1682 made its appearance, and he found that there was a wonderful resemblance between it and three other comets that he had recorded—the comets of 1456, of 1531 and of 1607. The times of the appearance of these comets had been at very nearly regular intervals, the average period being between seventy-five and seventy-six years. Their distances from the sun, when in perihelion, or when nearest to that luminary, had been nearly the same, being nearly six-tenths of that of the earth, and not varying more than one-sixtieth from each other. The inclination of their orbits to that of the earth had also been nearly the same, between 17° and 18°; and their motions had all been retrograde. Putting these facts together, Halley concluded that the comets of 1456, 1531, 1607 and 1682 were reappearances of one and the same comet, which revolved in an elliptic orbit round the sun, performing its circuit in a period varying from a little more than seventy-six years to a little less than seventy-five; or having, as far as the observations had been carried, a variation of about fifteen months in the duration of one circuit of its year measured according to the orbit of the earth. For this variation in the time of its revolution Halley accounted upon the supposition that the form of its orbit had been altered by the attraction of the remote planets Jupiter and Saturn as it passed near to them; and therefore concluded that the period of its next appearance would be lengthened, but that it would certainly reappear in 1758 or early in 1759. As the time of its expected reappearance approached, Clairaut calculated that it would be retarded 100 days by the attraction of Saturn, and 518 by that of Jupiter, so that it would not come to the perihelion, or point of its orbit nearest the sun, till April 13, 1759. It actually reached its perihelion on March 13, 1759, being thirty days earlier than he had calculated. Along with the period of this comet and its perihelion distance, the magnitude and form of its path were also calculated. Estimating the mean distance of the earth from the sun at 92,900,000 miles, and the average number which was at that time considered as the true one), the mean distance of the comet was calculated to be 1,706,259,000 miles; its greatest distance from the sun, 3,325,400,000; its least distance, 1,310,000; and the transverse or largest diameter of its orbit, 3,410,500,000. This comet, therefore, is a body belonging to the solar system, and quite beyond the attraction of any body which does not belong to that system; and as this is determined of one comet, analogy points it out as being the case with them all. In 1835 it again returned, being first seen at Rome, August 5, and from that time continued to be observed till the end of the year in Europe, and through a great part of spring in 1836 in the southern hemisphere. It returned again
in 1910, but on this occasion had lost most of its brilliancy and was barely observable with the naked eye, much to the disappointment of those who had been awaiting its return with expectations of a striking spectacle.

The comet denominated Encke's comet, which has made repeated appearances, was first observed in 1818, and was identified with a comet observed in 1786, also with a comet discovered in 1786 by Miss Herschel in the constellation Cygnus, and with another seen in 1806. Its orbit is an ellipse of comparatively small dimensions, wholly within the orbit of Jupiter; its period is 1,260 days, or about three years and three-tenths. It has been frequently observed since. Another comet, the history of which is of the utmost importance in the latest theories regarding the connection of these bodies and the periodic showers of shooting-stars, is one known as Biela's comet, discovered in 1833. It revolved about the sun in about 6½ years and was identified as the same comet which was observed in 1772 and in 1806. Its returns were noted in 1832, 1833 and 1845. In 1846 it divided into two, returned double in 1862, but has not since been seen, the supposition being that it has been dissipated, and that it was represented by a great shower of meteors that were seen in Nov. 1872. One of the most remarkable comets of recent times was that known as Donati's, discovered by Dr. Donati, of Florence, in 1858. It was very brilliant in the autumn of that year, and on October 18th was near coming into collision with Venus. The year 1881 was remarkable for the number of comets recorded. During that year no fewer than seven comets, including the well-known short-period comet Encke's were observed.

The paths in which comets move are not, like those of the planets, all nearly in the same plane as the orbit of the earth, but are inclined to that orbit at all angles. Leaving out the small planets that have recently been discovered, all the others are contained within a zone extending only 7° on each side of the earth's orbit; and, with the exception of Mercury (by far the smallest of the six planets), they are within half that space. But the orbits of the comets are at all possible angles; and the number increases with the angle, so that they approximate to an equal distribution in all directions round the sun as a center. Taking all the orbits of which the inclinations have been ascertained, it has been found that of every hundred the inclinations are as follows: from 0° to 30°, 28; 30° to 50°, 27; 50° to 80°, 30; and 80° to 90°, 8. The comets that have been observed have made their passages through very different parts of the solar system; 24 have passed within the orbit of Mercury; 37 within that of Venus, 58 within that of the Earth, 73 within that of Mars, and the whole within that of Jupiter. Of a hundred or thereabouts, mentioned by Lalande, about one-half have moved from west to east, in the same direction as the planets, and the other half in the opposite direction. The direct and retrograde ones do not appear to follow each other according to any law that has been discovered. From 1299 to 1582 all that are mentioned were retrograde; and five that were observed from 1771 to 1780 were all direct.

That the comets are formed of matter of some sort or other we know from the dense and opaque appearance of their nucleus, as well as from the action of the planets upon them; but as their action upon the planets has not been great or even perceptible, we are led to the conclusion that they are not bodies of the same density or magnitude as even the smallest and rarest of the planets. They are probably groups of meteoric masses, varying in size. One theory of the nature of comets is that these bodies were ejected millions of years ago from the interior of suns, or planets in a sunlike state. When a comet is viewed through a telescope of considerable power there appears a dense nucleus in the center of the luminous and apparently vaporous matter of which the external parts are composed; and the opacity of this nucleus varies in different comets. On its first appearance, and again when it recedes, the luminous part of the comet is faint and does not extend far from the nucleus; but as it moves on towards the perihelion the brightness increases, and the luminous matter lengthens into a train, which, in some cases, has extended across a fourth of the entire circumference of the heaven. The most remarkable discovery of recent times regarding comets is the identity of the course of some of them with the orbit of certain showers of shooting stars. This was first demonstrated by the Italian astronomer Schiaparelli, who proved the agreement between the orbit of the great comet of 1862 and that of the star-shower seen annually about August 9th and 10th. It has since been demonstrated that every meteoric stream follows in the train of some comet large or small, which either exists now or has been dissipated, as Biela's comet was, leaving only its meteoric trail to show where it once traveled; and that every comet is
Comfrey

followed or preceded by a train of meteors, extending over a greater or less portion of the comet’s orbit.

Besides the very interesting Halley comet, which, true to the period assigned to it, re-appeared in 1910, the most important recent comet appearances have been that known as Pons-Brooks, which made its reappearance in 1884 and has a periodicity of about seventy-one and one-half years, or about five years less than Halley’s; the Westphal, which last appeared in 1813, with a period of slightly over sixty-one years; the Olbers, in 1887, its period being about seventy-two and one-half years. Those four are of what is called the Neptune family, and describe elliptic orbits. Besides the Biela comet, whose reappearance occurred last in 1852, but which has failed to appear according to the periodicity established, another comet, known as the Brousson, seems to have been lost. It last appeared in 1879 and has been looked for in vain since that year. It is suggested that in 1880 its orbit intersected that of Denning II near the orbit of Jupiter and that it underwent such perturbation as materially to alter its orbit and period. Almost every year a number of short period comets are discovered. In April, 1810, Wolf discovered at Heidelberg a new comet with a periodicity of nearly eight years; it reached its perihelion in June, 1917. Late in November, 1916, Metcalf discovered his fourth comet, but the first discovery of that year was due to Neujiman, on February 24, who sighted a comet of about the eleventh magnitude and five years’ term. See Birle’s, Donati’s and Halley’s Comets.

Comfrey (com’frē), a name given to several European and Asiatic plants of the genus Symphytum, nat. order Boraginaceae. The common comfrey, S. officinale, is found on the banks of rivers and ditches. Its root abounds in mucilage, which is useful in irritations of the throat, intestines and bladder.

Comiso (kom’-ē-sō), a town of Sicily, province, Syracuse, 15 miles W. of Ragusa. Pop. 21,873.

Comitia (kom’-ē-sha’-a), with the Romans, the assemblies of the people in which such public business was transacted as the election of magistrates, the passing of laws, etc. These were of three kinds: (1) The comitia curiata, or assemblies of the patrician houses or populus in wards or curiae. (2) The comitia centuriata, or assemblies of the whole Roman people, in divisions called centuries. (3) The comitia tributa, or assemblies of the plebeian tribes only.

Comity of Nations (com’-ē-tas gōn-tim’-s) in natural law, a phrase adopted in international law to denote that kind of courtesy by which the laws and institutions of one state or country are recognized and given effect to by the government of another.

Comma (kom’ā), in punctuation, the point [ , ] denoting the shortest pause in reading, and separating a sentence into divisions or members according to the construction. —In music, a comma is the smallest enharmonic interval, being the difference between a major and a minor tone, and expressed by the ratio 80:61.

Commander (kom’-ān-dēr), a chief; the officer of an army or any division of it. The office of commander-in-chief is the highest staff appointment in the army. In foreign armies title is sometimes not commander-in-chief, but field-marshall commander-in-chief, the difference being that the former is appointed by patent for life, while the latter is appointed by a letter of service, and holds office only during the pleasure of the sovereign. In the United States the President is declared by the Constitution to be commander-in-chief of the army and navy. In the navy, a commander ranks a lieutenant. In matters of etiquette he ranks with a lieutenant-colonel in the army.

Commandeer (kom’-ān-dēr), a term used by the Boers in the British-Boer war to designate the seizing of supplies, cattle, etc.

Commandery (kom’-ān-de-ri), a term used in several senses in connection with some of the military and religious orders, as the Templars, Hospitallers, etc. In certain religious orders, as those of St. Bernard and St. Anthony, it was the district under the authority of a dignitary called a commander.

Commandments. See Decalogue.

Commencement (kom’-ens’ment), in the universities and colleges of the United States, also in that of Cambridge, England, the day when bachelors and masters of arts and doctors receive their degrees.

Commendam (kom’-en-dam), the administrative or provisional management of a benefice during a vacancy. The person entrusted with the management was called commendador. The grant of ecclesiastical livings in this way gave rise to great abuses. In England the term was applied to a living retained by a bishop after he had ceased to be an incumbent. By 6 and 7 Wil-
Commensal (kom-en'sal; L. com. and mensa, a table), a measurer; applied in zoology to animals who live on or in other animals for part or the whole of their life, simply sharing the food of their host without being parasitic on him: thus the pea-crabs live within the cavity of shellfish, and find their food in the water introduced for the benefit of their host.

Commensurable (kom-en'sur-a-b'l), an appellation given to such quantities or magnitudes as can be measured by one and the same common measure. Commensurable numbers are such as can be measured or divided by some other number without an added index, such are 12 and 15, as being measured by 6 or 3.

Commentary (kom'en-tär'I), a term used (1) in the same sense as memoirs, for a narrative of particular transactions or events, as the Commentaries of Caesar. (2) A series or collection of comments or annotations. These may be in the form of detached notes or in a series of remarks written in connected form.

Commentry (kom-män'trē), a town of France, dep. of Allier, 8 miles S. E. of Montluçon, in the midst of a vast coal-field, to which the town owes its prosperity. Pop. 7581.

Commerce (k o m 'é rə), the interchange of goods, merchandise, or property of any kind between countries or communities; trade; traffic. The commerce of the United States has grown greatly within recent years, reaching a total in the fiscal year 1900-1 of $33,000,000,000. The exports exceeded the imports by $530,000,000,000. The manufactured goods exported reached the high total of $910,000,000.

Commerce, Department of, an executive department of the United States government, created in Feb., 1903, as the Department of Commerce and Labor. It has charge of the commercial interests of the country, and until the creation of the Department of Labor in 1913 had charge of the labor interests. Its head official is a member of the President's Cabinet.

Commerce, Chamber of, a board chosen from among the merchants and traders of a city to protect the interests of commerce; to lay before the legislature the views of their members on matters affecting commerce; to furnish statistics as to the staple trade of the locality; and to attain by combination advantages which could not be reached by private enterprise, etc. These associations originated in France early in the eighteenth century. Nearly all large cities in the United States have chambers of commerce.

Commercial Law (kom-ér'shəl; or the law merchant), the law which regulates commercial affairs among the merchants of different countries, or among merchants generally. It is derived from the different maritime codes of medieval Europe, the imperial code of Rome, international law, and the custom of merchants. Lord Mansfield (1704-93) was the first great exponent of commercial law in Britain. In this country the term is applied to that system of laws which refers to mercantile contracts, and is based upon the customs of trade. The principal subjects embraced within it are the laws of shipping, including that of marine insurance; the law of negotiable bills of exchange and promissory notes; and the law of sales.

Commercial Travelers, gentlemen who travel in the interest of trading houses or manufactories. Formerly merchants from smaller towns sought the large cities to make purchases, and do so yet to some extent, but competition in business has led to the custom of sending traveling agents to the smaller dealers to solicit their trade. 'Drummer' is the familiar name for these agents in the United States; 'bagman' or 'rider' in England.

Commercial Treaties, treaties entered into between two countries for the purpose of improving and extending their commercial relations; each country engaging to abolish, to reduce to an agreed rate or otherwise modify the duties on articles of production and manufacture imported from the one country into the other. They are usually for a limited period, but may be renewed and modified according to altering conditions. In these treaties the phrase, 'most favored nation,' implies concessions equal to the most favorable granted under any similar treaty. The first treaty of commerce made by England with any foreign nation was entered into with the Flemings in 1272; the second was with Portugal and Spain in 1308. A measure to establish reciprocity of trade between the United States and Canada was passed by the Congress of the United States in 1911, but was rejected by Canada. Treaties of like nature have been negotiated with most of the American and a number of the European nations.

Commination (kom-i-næ'shun), an office in the liturgy of the Church of England, appointed to be read on Ash Wednesday or on the first day of Lent, containing a recital of God's anger and threatenings towards sinners.

Commines, or Comines (kō-më̃n), two towns, one in France, the other in Belgium, on opposite sides of the Lys, 8 miles N. of Lille. Anciently they formed a single town, which was fortified and had a castle, in which Philip de Commines was born. Pop. of French Commines, 8000; of Belgian Commines, 9000.

Commines (kō-më̃n), PHILIPPE DE, French writer and statesman, born in 1445 at Commines; died in 1509. He became confidential adviser of Charles the Bold, Duke of Burgundy, but in 1472 he passed into the service of Louis XI, who loaded him with marks of favor. After the death of Charles the Bold Louis took possession of the duchy of Burgundy, sent Commines there, and soon after appointed him ambassador to Florence. He was afterwards sent by Louis to Savoy, for the purpose of seizing the young Duke Philibert, and of placing him entirely under the guardianship of the king, his uncle. In 1483 Louis XI died, and next year Commines attended Charles VIII in his invasion of Italy, and served him in a diplomatic capacity. Soon after that date he began to write his Memoirs, valuable as contributions to the history of his times. The first edition was published at Paris between 1523 and 1528. He relates in them the events which occurred during his life, and in most of which he had an active share, in lively, natural language, and displays everywhere a correct judgment, acute observation, and a profound knowledge of men and things.

Commissariat (kom-i-sär'ē-at), the department of an army whose duties consist in supplying transport, provisions, forage, camp equipage, etc., to the troops; also, the body of officers in that department. In the British army the commissariat and transport are under the Ordnance Store Department, with two commissaries-general and a number of deputy-commissaries-general, assistant commissaries-general, etc. In the United States army the Subsistence Department has one brigadier-general (commissary-general of subsistence), two colonels, three lieutenant-colonels, eight majors and twelve captains.

Commissary (kom'is-rē-).—1. An ecclesiastical term, an officer of a bishop who exercises spiritual jurisdiction in remote parts of a diocese, or one entrusted with the performance of the duties in the bishop's absence. 2. In the army a term applied to officers charged with furnishing provisions, etc., for its use.

Commissary-court, in Scotland, a sheriff or county court which decrees and confirms executors to deceased persons leaving personal property in Scotland, and discharges relative incidental functions.

Commission (ko-mish'ən), a formal act of trust; a warrant by which any trust is held or authority exercised.—A written document, investing a person with an office or certain authority.—A certificate issued by authority by which a military officer is constituted; as, a captain's commission.—A body of persons joined in an office of trust, or their appointment; as, a building commission.—Brokerage, allowance, or compensation made to a factor, agent, etc., for transacting the business of another; as one per cent. commission on sales.—Commission of bankruptcy, a commission appointed to investigate the facts relative to an alleged bankruptcy, and to secure all available assets and effects for the creditors concerned.

A commission merchant is one who sells goods on behalf of another, being paid by a certain percentage which is called his commission.—Putting a ship in commission is fitting her out for service after she has been laid up.

Commission, City Government by, a method of municipal government adopted originally in Galveston, and since applied successfully in New Orleans and many other American cities. Its purpose is to conduct the business affairs of cities on business principles and to do away with the system of political control and patronage. Usually five prominent business men of the city are elected as heads of the several municipal departments, and the management of affairs put under their care, the citizens retaining the right of recall of these officials from office if they prove incompetent or dishonest. The system, when fully tried, has proved desirable financially and otherwise. In 1912, 207 cities in 34 states had commissions.

Commissioners of Highways, officers having certain powers and duties concerning the highways within the limits of their jurisdiction. In some of the states they are county officers, and their jurisdiction is co-extensive with the county. In others they are town or township officers. They have power to establish...
Commissure (kōm′sī-sūr), in anatomy, a joining or union of two parts, as the sutures of the corpus callosum or great commissure of the brain.

Committee (kōm′tē), one or more persons elected or appointed to attend to any matter or business referred to them either by a legislative body, or by a court, or by any corporation, or by any society or collective body of men acting together. In Parliament or Congress, when a committee consists of the whole members of the body acting in a different capacity from that which usually belongs to them it is called a committee of the whole house, the business of which is conducted under somewhat different regulations from those under which the business of the house when not in committee is carried on. Familiar examples are committees of supply and committees of ways and means.—Standing committees are such as continue during the existence of the legislative body, and to these are committed all matters that fall within the purposes of their appointment, as the committee of elections or of privileges, etc.—Select committees are appointed to consider and report on particular subjects.—When the House of Representatives resolves itself into the committee of the whole house the speaker leaves the chair, which is occupied by one of the members, denominated the Chairman of Committee.

Committee of Public Safety (Comité du Salut Public), a body elected by the French Convention (April 6, 1793) from among its own members, at first having very limited powers conferred upon it that of supervising the executive and of accreting its actions. Subsequently, however, its powers became extended; all the executive authority passed into its hands, and the ministers became merely its scribes. It was at first composed of nine, but was increased to twelve members, viz.: Robespierre, Danton, Couthon, Saint Just, Prieur, Robert-Lindet, Hérault de Séchelles, Jean-Bon Saint-André, Barrère, Carnot, Collot d’Herbois and Bilbaud Varennes. The severe government of this body is known as the Reign of Terror, which ended with the execution of Robespierre and his associates in July, 1794. During the commune (March to May, 1787), a similar committee was established in Paris.

Commodore (kōm′ō-dōr), in the British navy, an officer, generally a captain, holding a temporary commission with a rank between that of captain and admiral, who commands a ship or detachment of ships in the absence of an admiral. They are of two kinds—one having a captain under him in the same ship, and the other without a captain. The former has the rank, pay, and allowance of a rear-admiral, the latter the pay and allowance of a captain, with a special allowance as the admiralty may direct. They both carry distinguishing pennants. In the United States the title of commodore was occasionally given by courtesy to captains in the navy in former wars, as in the case of Commodore Perry, but it was not made an official title until the time of the Civil war, and it was abolished again in 1900, all the commodores now recognized being those on the retired list. The title is also given by courtesy to the senior captain of a line of merchant vessels, and also to the president of a yacht club.

Commodus (kōm′ō-dus), L. Aelius Aurelius, a Roman emperor, son of Marcus Aurelius, was born in a.d. 161; killed in 192. He succeeded his father in 180, and gave early proofs of his cruel and voluptuous character. He gave himself up to the lowest society and the most shameless habits. He used to fight in the circus like a gladiator, and caused himself to be worshiped as Hercules. One of his concubines, whom he intended to put to death, administered poison to him; but it operated too slowly, and he was strangled by a favorite athlete.

Common (kom′un), in law, ‘a profit which a man hath in the land of another.’ There are certain rights of common which are recognized by the common law, namely, of pasture, of piscary or fishing, of esotures or cutting wood, and of turbary or of digging turf. But the phrase usually means the right of pasturing cattle, horses, etc., in a certain field, or within a certain territory. These rights have been mostly determined by prescription or immemorial usage. In Scotland a common is a piece of ground of which there is no superior, but the land is the land of the community generally.

Common Carriers. See Carrier.

Common Council, the council of a city or corporate town, empowered to make by-laws for the government of the citizens. The common councils sometimes consist of two
houses, chambers, or courts, and sometimes form only one. In the American cities the city councils generally consist of two branches, called, respectively, select and common. They are elected by the people.

**Commoner**, in Britain, a term applied to all citizens except the hereditary nobility.

**Common Law**, the unwritten law, the law that receives its binding force from immemorial usage and universal reception, in distinction from the written or statute law; sometimes from the civil or canon law; and occasionally from the *les mercatoriae*, or commercial and maritime jurisprudence. It consists of that body of rules, principles, and customs which have been received from former times, and by which courts have been guided in their judicial decisions. The evidence of this law is to be found in the reports of those decisions and the records of the courts. Some of these rules may have originated in edicts or statutes which are now lost, or in the tenets and conditions of particular grants or charters; but it is quite certain that many of them originated in judicial decisions founded on natural justice and equity, or on local customs. It is contrasted with (1) the statute law contained in legislative acts; (2) equity, which is also an accretion of judicial decisions, but formed by a new tribunal, which first appeared when the common law had reached its full growth; and (3) the civil law inherited by modern Europe from the Roman Empire. Wherever statute law, however, runs counter to common law, the latter is entirely overruled; but common law, on the other hand, asserts its preeminence where equity is opposed to it.

**Common Pleas**, in law, pleas brought by private persons against private persons, or by the government, when the cause of action is of a civil nature. In many States of the United States a court having jurisdiction generally in civil actions. In England the Court of Common Pleas is now merged in the High Court of Justice.

**Common Prayer**, a form of prayer prescribed by the Church of England to be used in all churches and chapels, and which the clergy are to use under a certain penalty. The Book of Common Prayer is used also by the English-speaking Episcopal churches in Scotland, Ireland, America, and the colonies, as well as by some non-episcopal bodies, with or without certain alterations. It dates from the reign of Edward VI; was published in 1549, and again with some changes in 1552. Some slight alterations were made upon it when it was adopted in the reign of Elizabeth. In the reign of James I, and finally soon after the Restoration, it underwent new revisions. The Book of Common Prayer of the Protestant Episcopal Church in America was ratified, after several revisions of the English book, in 1789, and was in general use until the adoption of the "Standard" at the General Convention, Baltimore, Maryland, in 1892. This was published Easter, 1893, and is now in general use.

**Commons**, House of. See Britain and Parliament.

**Common Schools**, a term used in the United States as equivalent to primary or elementary schools. They are supported by taxation and the rent or sale of school-lands.

**Common Time**, in music, is that in which every bar contains an even number of subdivisions, such as two minims, four quavers, or their equivalents. It is of two kinds, simple and compound. Simple common time is that which includes four beats in a bar, or any division of that number, or square of the number or its divisions. Compound common time includes two or four beats of three crochets or quavers to each beat.

**Commonwealth** (kom′n-welth), the whole body of people in a state; the body politic. In English history the name given to the form of government established after the death of Charles I, and which lasted until the restoration of Charles II (1649-59).

**Communalism** (kom′nal-izm), the theory of government by communes or corporations of towns and districts, adopted by the advanced republicans of France and elsewhere. The doctrine is that every commune, or at least every important city commune, as Paris, Marseilles, Lyons, etc., should be a kind of independent state in itself, and France merely a federation of such states. This system must not be confused with Communism, with which however, it is naturally and historically allied, though the two are perfectly distinct in principle.

**Commune** (kom′mân), a small territorial district in France, being one of the subordinate divisions into which that country is parceled out; the name is also given to similar divisions in some other countries, as Belgium. In the country a commune sometimes embraces a number of villages, while some large cities are divided into a number of
Commune of Paris—Company

Commune of Paris. — A revolutionary committee which took the place of the municipality of Paris in the French revolution of 1789, and soon usurped the supreme authority in the state. Among its chiefs were some of the most violent of the demagogues, such as Hébert, Danton and Robespierre. The name adopted by the ultraradical party in Paris brought once more into prominence by the events of the Franco-German war, more immediately by the siege of Paris (Oct., 1870, to Jan., 1871). They ruled over Paris for a brief period after the evacuation of the German troops, and had to be suppressed by troops collected by the Natural Assembly of France. Much bloodshed and wanton destruction of property took place before the rising was put down by M. Thiers government.

Communion (kō-mun'yun), the act of partaking with others of the sacramental symbols in the Lord's Supper. See Lord's Supper.

Communism (kom′-ū-nizm), the economic system or theory which upholds the absorption of all proprietary rights in a common interest, an equitable division of labor, and the formation of a fund for the supply of all the wants of the community; the doctrine of a community of property, or the negation of individual rights in property. No communist society has as yet been successful. Robert Owen made several experiments in modified communism, but they failed. St. Simon, Fourier and Proudhon have been the chief exponents of the system in France. Socialism (q. v.) is succeeding communism as an economic system.

Commutor (kom′-ō-tā′tor), a piece of apparatus used in connection with many electrical instruments for reversing the current from the battery without the necessity of changing the arrangement of the conductors from the poles.

Comme′ni, an extinct family of sovereigns, statesmen, generals and authors, said to be of Italian origin, to which belonged, from 1067 to 1185, six emperors of the East—Isaac I, Alexius I, John II, Manuel I, Alexius II and Andronicus I. These Crusaders had overthrown the throne of the Commeni in Constantinople a prince of that house founded an independent state at Trebizond in Asia Minor, where he was governor (1204). The last sovereign of this house was David Commenius (1461).

A remarkable member of the family was the Princess Anna Comnena. See Anna Comnena. — I. Como (kō′-mō; anciently Comum), capital of the province of Como, in the north of Italy (Lombardy), 24 miles N. N. W. of Milan, in a delightful valley at the s. w. extremity of Lake Como. It has a splendid marble cathedral dating from the fourteenth century, the old church of S. Fedele of the tenth century, the town-hall finished in 1215, the fine theater built in 1813. Here were born Pliny the elder and younger, and Volta the natural philosopher. Pop. 34,272.—The province of Como has an area of 1049 square miles. Pop. 576,275.

Como, Lake of (Lago di Como), a lake in the north of Italy, at the foot of the Alps, fed and drained by the river Adda, which carries its surplus waters to the Po. It extends from southwest to northeast 30 miles, giving off towards the middle, at the promontory where stands Bellagio, a branch running for about 13 miles southeast to Lecco, called the Lake of Lecco; greatest width 24 miles, greatest depth 1929 feet. It is celebrated for the beautiful scenery of its shores, which are covered with handsome villas, gardens, and vineyards, mountains rising behind to the height of 7000 feet. Trout and other fish abound in the lake.

Comorin (kom′-ō-rin), a cape forming the southern extremity of Hindustan (lat. 8° 4′ N., lon. 77° 35′ E.) and consisting of a low, sandy point.

Comoro Islands (kom′-ō-rō), a volcanic group in the Indian Ocean, between the northern extremity of Madagascar and the continent of Africa. They are four in number: Great Comoro, Mohilla, Johanna and Mayotta; total area, about 700 sq. miles; pop. 32,000. The people are nominally Mohammedans, and are akin to the mixed races of Zanzibar. They have large flocks and herds; and the coast lands are very fertile, abounding in tropical grains and fruits. Mayotta has belonged to France since 1843, and in 1886 the others became a French possession.

Companies (kum′pa-nēs), Joint-stock. See Joint-stock Companies and Partnership.

Companion (kum′-pan′yun), a raised hatch or cover to the cabin stair of a merchant vessel. — Companion Ladder, the steps or ladder by which persons ascend to and descend from the quarter-deck.

Company (kum′-pa-nil), a subdivision of an infantry regiment or battalion, cor-
Comparative Anatomy

Comparative Anatomy, See Anatomy.

Comparison (kəm-pər′ə-sən). Degrees of, in grammar, inflections of adjectives or adverbs to express degrees of the original quality, usually divided into positive, comparative, and superlative; as strong, stronger, strongest, glorious, more glorious, most glorious.

Compass (kump′pas), an instrument used to indicate the magnetic meridian or the position of objects with respect to that meridian, and employed especially on ships, and by surveyors and travelers. Its origin is unknown, but it is supposed to have been brought from China to Europe about the middle of the thirteenth century. As now generally used it consists of three parts: namely, the box, the card or fly, and the needle—the latter being the really essential part, and consisting of a small magnet so suspended that it may be able to move freely in a horizontal direction. The box, which contains the card and needle, is, in the case of the common mariner’s compass, a circular brass receptacle hung within a wooden one by two concentric rings called gimbal, so fixed by the cross centers to the box that the inner one, or compass-box, shall retain a horizontal position in all motions of the ship. The circular card is divided into thirty-two equal parts by lines drawn from the center to the circumference, called points or rhumbs; the intervals between the points are also divided into halves and quarters, and the whole circumference into equal parts or degrees, 360 of which complete the circle. The four principal are called cardinal points: viz. North, South, East and West. The needle, of magnetized steel, turns freely round its center, and one of the points, by the property of the needle, will always be directed towards the north pole. There is, however, liable to be a certain deviation owing to the magnetism of the ship itself, and this is especially strong in iron ships. (See Deviation.) As mounted on board ship, magnetic compasses are of two kinds, dry and liquid. The Dry Compass consists of a very light aluminum frame carrying several light needles (magnets) and supported on a pivot. On top of the frame is the compass card. The most common form of the dry compass is that devised by Lord Kelvin (see illustration). In the Liquid Compass the needles are carried by a buoyant frame in a non-freezing liquid (alcohol and water). The liquid is contained in a bronze bowl with a flat glass cover.—The increased use of steel for shipbuilding, which causes difficulty in the use of magnetic instruments led to the invention of the Gyro Compass. The principle is that of a rotating gyroscope whose fly-wheel is spun around rapidly by the help of an electric motion. When free to move in only two planes the gyroscope invariably sets parallel to the axis of the earth and this points to the absolute north.
Compasses (kum'pa-sez), or PAIR of COMPASSES, a mathematical instrument used for the describing of circles, measuring lines, etc. They consist simply of two pointed legs, movable on a joint or pivot, and are used for measuring and transferring distances. For describing circles the lower end of one of the legs is removed and its place supplied by a holder for a pencil or pen.

Hair Compasses are compasses having a spring tending to keep the legs apart, and a finely threaded screw by which the spring can be compressed or relaxed with the utmost nicety, and the distance of the legs regulated to a hair's breadth.—Bow Compasses are compasses having the two legs united by a bow passing through one of them, the distance between the legs being adjusted by means of a screw and nut.—Proportional Compasses are compasses used for reducing or enlarging drawings, having the legs crossing so as to present a pair on each side of a common pivot. By means of a slit in the legs, and the movable pivot, the relative distances between the points at the respective ends may be adjusted at pleasure in the required proportion.

Compass Plant (Silphium laciniatum), a composite plant growing in the prairies of the Mississippi Valley, and remarkable from the fact that its erect radical leaves stand so that their edges point almost exactly north and south, especially in midsummer. This is said to be due to the action of light, and to depend on the leaves having an equal number of stomata on either face.

Compensation (kom-pens'ä-shun), a balance-wheel or a pendulum so constructed as to counteract the tendency of variations of temperature to produce variations in the rate of vibration or oscillation. This may be accomplished in various ways, as by bars formed of two or more metals of different expansibilities so that the expansion of one counteracts the expansion of another. They are used to produce perfect equality of motion in the balances of watches and chronometers and the pendulums of clocks.

Compensation Laws. The first law for the compensation of workmen injured while in service was passed by Congress in 1908. This related to employees injured or killed while in government service, if not due to negligence or misconduct on the part of the workmen. In case of death, those dependent on the victim are to receive a sum equal to one year's wages of the deceased. In that of disability for a period over 15 days a sum is paid equal to the wages for the period, this not to exceed one year. Since 1910 laws of this character have been passed in 32 States. These vary so much in their provisions that we cannot speak of them generally. The injury must not be due to carelessness or drunkenness on the part of the workman, and the payments shall bear a certain proportion to the rates of wages paid. The effect of such laws has been very useful. Devices to prevent injury by unprotected machinery have been introduced by employers, costly litigation has been avoided, and drunkenness on the part of employees has much decreased, many employers refusing to employ drinking men. Especially in the case of railroad employment where much depends on the carefulness of train movers, intoxication has become prohibited.

Compiègne (komp-pe'shn), a French town, dep. Oise, in the left bank of the Oise, 35 miles N. N. E. of Paris. It has a splendid chateau, built by St. Louis, rebuilt by Louis XIV, and improved by Louis XV, Louis XVI, and Napoleon I. It was the autumn resort of the court of Napoleon III. In 1430 Joan of Arc was taken prisoner here by the English. Pop. 14,062.

Complexion (kom-plé kash'un), the color or hue of the skin, particularly of the face. The color depends partly on pigment in the deep cells of the epidermis and partly on the blood supply. The nature and color of the hair seem closely connected with the complexion, and these combined are important distinguishing marks of different races. See Ethnology.

Compline (kom'plin), the last of the daily canonical hours in the Roman Catholic breviary; the complement of the Vespers or evening office.

Composite (kom-pós-té), the largest known natural order of plants, containing more of different and described species of herbs or shrubs distributed all over the world. The flowers (generally called florets) are numerous (with few exceptions) and sessile, forming a close head on the dilated top of the receptacle; and surrounded by an involucre of whorled bracts. The flowers are monopetalous, and the order is divided into three natural groups from the form of the corolla; (1) Tubuliflorae, in which it is tubular, with five, rarely four, teeth; (2) Labiatae, in which it is divided into two lips; and (3) Liliiflorae, in which it is slit or ligulate. The stamens are inserted on the corolla, and their anthers are united into a tube (syngenesious). The style is two-cleft at the apex. The
fruit is dry and seed-like. The head of numerous florets was called by the older botanists a compound flower, hence the name. Many are common weeds, like the daisy, dandelion, thistle, etc.; many are cultivated in gardens, such as the asters, marigold, etc.; others have some economic or medicinal value, as chicory, artichoke, chamomile, lettuce, wormwood, arnicas, etc.

Composite

(kom'pos-it) Order, in architecture, the last of the five orders; so called because the capital belonging to it is composed out of those of the other orders, borrowing a quarter-round from the Tuscan and Doric, a row of leaves from the Corinthian, and volutes from the Ionic. Its cornice has simple modillions or dentils. It is called also the Roman or the Italic order.

Composition (kom-pōz'ish-ən), an arrangement which a bankrupt or person in pecuniary difficulties makes with his creditors, and by which he arranges to pay them a certain proportion only of the debts due. See Bankrupt.

Composition of Forces and Motions, in mechanics, the union or assemblage of several forces or motions that are oblique to one another into an equivalent force or motion in another direction. Thus two forces acting in the directions of the adjacent sides of a parallelogram compose one force acting in the direction of the diagonal, and if the lengths of the adjacent sides represent also the magnitudes of the forces, the diagonal will represent the magnitude of the compound force or resultant.

Compostella (kom-pōs-tə'la). See Santiago-de-Compostella.

Compustella, Order of St. James, an order of Spanish knights formed in the twelfth century to protect the pilgrims who flocked in vast numbers to Santiago-de-Compostella, where the relics of St. James were kept.

Composts (kom'posts), in agriculture are mixtures of various fertilizing substances. See Manure.

Compound Animals, a name of which by no means belong to the lowest types, in which individuals, distinct as regards many of the functions of life, are yet connected by some part of their frame so as to form a united whole. Such are the polyzoa and some of the ascidia.

Compounding (kom-pound'ing), or Felony, the accepting of a consideration for forbearing to prosecute; or the agreeing to receive one's goods again from a thief on condition of not prosecuting. This is an offense punishable by fine and imprisonment.

Compressed Air (kom-pres't), atmospheric air compressed by means of pumps, etc., and used in driving stationary and locomotive engines, and excavating machines; as also in working pneumatic despatch tubes, railway brakes, etc. Large railroad tunnels have been excavated by the use of compressed air motors, such as Hoosac tunnel and the Mount Cenis and others.

Compresibility (kom-pres'-i bil'ə-ti), the property of bodies in virtue of which they may be pressed into smaller bulk. All bodies are probably compressible, though the liquids are but slightly so. The gases are exceedingly compressible, and may be liquefied by pressure and cold combined. Those bodies which occupy their former space when the pressure is removed are called elastic.

Compulsory Insurance, a term applied to any system of insurance enforced by a government for the benefit of its working classes. Compulsory insurance against accident has been in force for some time in Great Britain, Germany, Austria, France, Norway, Italy, and Holland. In the United States custom differs in the various states. In Germany there is a national and compulsory system of insurance against sickness, accident and old age, for all those earning less than $500 a year. In France there is a compulsory insurance against old age and invalidity. The year 1912 saw the establishment of a revolutionary system of insurance against sickness and unemployment in Great Britain.

Compurgation (kom-pur-ga'shən), a mode of defense allowed by the Anglo-Saxon law in England, and common to most of the Teutonic tribes. The accused was permitted to call a certain number (usually twelve) of men, called compurgators, who joined
their oaths to his in testimony to his innocence.

Comstock, Anthony, secretary of the New York Society for the Suppression of Vice, born in 1844; died September 21, 1915.

Comstock Lode (kom’stok), formerly an extremely rich metallic lode in the western part of the State of Nevada, on the eastern slope of the Virginia Mountains. To it belonged the Big Bonanza and other mines, which have yielded gold and silver to the value of over $300,000,000.

Comte (kount), Isidore Auguste Marie François Xavier, founder of the “positive” system of philosophy, was born at Montpellier in 1798; died at Paris in 1857. His family were zealous Catholics and royalists. He was educated at the École Polytechnique, and embraced enthusiastically the socialist tenets of St. Simon. As one of his most distinguished pupils he was employed, in 1826, to draw up a formula of the doctrines presented by the St. Simonian school, which he accordingly accomplished in his Système de Politique Positive. This work did not, however, meet with the approval of St. Simon, who asserted that Comte had made a very important omission by overlooking the religious or sentimental part of human nature. In 1826 Comte commenced a course of lectures on positive philosophy but only four lectures were given when he became deranged in mind, and did not recover till the end of 1827. In 1830 he commenced the publication of his Cours de Philosophie Positive, which was completed in six volumes in 1842, and was freely translated into English and condensed by Harriet Martineau (two vols. 1853). (See Positive Philosophy.)

Comus (kō’mus), in the later Greek mythology, the god of revelry, feasting, merriment and merriments, generally represented as a drunken youth. Milton’s Comus is a creation of his own.

Comyn (kom’ın), John, Lord of Badenoch, was one of the commissioners sent to confer about the marriage of the Maid of Norway to Prince Edward of England. On the competition for the Scotch throne in 1291 Comyn put in a claim as a descendant of Donald Bane. The date of his death is uncertain, but he was alive in 1299. — His son, John Comyn, called the “Red Comyn,” was chosen one of the three guardians of Scotland and defeated the English at Roanin in 1302. He submitted to Edward I in 1304, and was killed by Bruce in the Convent of the Minorities at Dumfries in 1306.

Con, an Italian preposition signifying with and of frequent occurrence in musical phraseology: con amore, with feeling; con brio, brilliantly; con gusto, with taste, etc.

Conacre (kon’a-kér, kon’a-kér’), a term applied to a system common in Ireland, of underletting a portion of a farm for a single crop, the rent being paid to the farmer in money or in labor.

Concan (kon’kan), a maritime subdivision of Hindustan, in the presidency of Bombay. It consists of a long belt of sea-coast, stretching from north to south for about 220 miles, with an average breadth of 35 miles, and bounded on the east by the Western Ghauts. It includes the town and island of Bombay, a city about 12,500 sq. miles; pop. 3,035,654.

Concarneau (kön-kär-nō), a seaport, France, dep. Finistère, on an island in the bay of La Forêt. Has sardine and pilchard fisheries; a zoological laboratory, connected with the college of France; is much visited by artists. Pop. 7887.

Concave (kon’kāv), hollow and curved or rounded, as the inner surface of a spherical body. A surface is concave when straight lines drawn from point to point in it fall between the surface and the spectator; and convex when the surface comes between him and such lines.

Concentration (kon-sen-trā’shun), in chemistry, the act of increasing the strength of solutions. This is effected in different ways: by evaporating off the solvent, as is done in the separation of salt from sea-water; by distilling off the more volatile liquid, as in the rectification of spirit of wine; by the use of low temperatures, as in the purification of benzol; by difference of fusibility, as in Pattinson’s process for desalting lead.

Concepcion (kon-sep-se’ōn’), a seaport of Chile, capital of a province of the same name, on the right bank of the Biobio, 744 miles from its mouth, a well-built town with a cathedral. Its port at Talcahuano, a small town on the Bay of Concepcion, about 8 miles distant, is one of the best in Chile. Concepcion was founded in 1550, and has suffered much from earthquakes and attacks by the Araucanians. Pop. 55,458. There are towns of the same name in Paraguay and Uruguay, of 10,000 to 12,000 each, and others of smaller size in Latin America.
Conception (con-sep'ahn), the act or power of conceiving in the mind; in philosophy, that mental act or combination of acts by which an absent object of perception is brought before the mind by the imagination.

Conception, IMMACULATE, in the Roman Catholic Church, the doctrine that the Virgin Mary was born without the stain of original sin. This doctrine came into favor in the twelfth century, when, however, it was opposed by St. Bernard, and it afterwards became a subject of vehement controversy between the Scotists, who supported, and the Thomists, who opposed it. In 1708 Clement XI appointed a festival to be celebrated throughout the church in honor of the immaculate conception. Since that time it was received in the Roman Church as an opinion, but not as an article of faith until the year 1854, when the pope issued a bull which makes the immaculate conception a point of faith.

Conceptualism (kon-sep-ta-lizm), a doctrine in some sense intermediate between realism and nominalism. Conceptualism assigns to universals an existence which may be called logical or psychological, that is, independent of single objects, but dependent upon the mind of the thinking subject, in which they are as notions or conceptions.

Concert (kon'sert), a public or private musical entertain ment, at which a number of vocalists or instrumentalists, or both, perform singly or combined.

Concertina (kon-ser'te-na), a musical instrument invented by Professor Wheatstone, the principle of which is similar to that of the accordion. It is composed of a bellows, with two faces or ends, generally polygonal in shape, on which are placed the various stops or studs, by the action of which air is admitted to the free metallic reeds which produce the sounds. In the English concertina the compass is three octaves and three notes. The German concertina is an inferior instrument.

Concerto (kon-cher'to), in music, a kind of composition, usually in a symphonic form, written for one principal instrument, with accompaniments for a full orchestra.

Concert Pitch. See Pitch.

Concession (kon-sesh'un), a permission conceded by a government to a person or company to do certain things: specially applied to grants of land, of privileges or immunities in connection with certain enterprises, such as mining, the construction of railways, canals, or the like, usually subject to fixed conditions and limitations.

Conch (konk'), a marine shell, especially a large spiral shell of a trumpet shape, and which may be blown as a trumpet, as in the practice in Hindustan and some of the Pacific islands.

Conchifera (kon-kif'e-ra), Lamarck's name for that large class of cephalous molluscs which have shells consisting of two pieces, commonly known as bivalves (oyster, mussel, etc.).

Conchology (kon-kol'o-gi), the science of shells, that department of zoology which treats of the nature, formation and classification of the shells with which the bodies of many molluscs are protected; or the word may be used also to include a knowledge of the animals themselves, in which case it is equivalent to malacology. In systems of conchology shells are usually divided into three orders, univalves, bivalves and multivalves, according to the number of pieces of which they are composed. See Molluscs.

Conclave (kon'kläv), the place where the cardinals assemble for the election of the pope; also the electoral assembly of the cardinals themselves, Pope Gregory X, whose election had been delayed for three years, established in the council at Lyons (1274) the regulations of the conclave. The cardinals are shut up together in a particular suite of apartments in the palace where the pontiff dies, and they are supposed to have no communication with the outside world during the period of the election. The companion, either lay or clerical, whom the cardinal is allowed to take with him into the conclave during the election of a pope is called a conclavist. The office is one of great delicacy and trust.

Concord (kon'kord), in music, the combination of two or more sounds pleasing to the ear. Concordes are the octave, the fifth, third and sixth. The two first are called perfect, because as concords they are not liable to any alteration by sharps or flats. The two last are called imperfect, as being alterable.

Concord (kon'kord), a village of Massachusetts, on the Concord River, 20 miles W. N. W. of Boston. It has a state reformatory and manufactures of harness, rubber, etc., and is a large railroad center. It was the home of Emerson, Hawthorne, Thoreau, Louisa Alcott, and other eminent writers, and is historically famous as
The upper machine crushes the large rock to about the size of egg coal, delivering it to the rotary screen, which is just below its lowest piece.

ROCK CRUSHING PLANT FOR CONCRETE MATERIAL
Concord

the scene of the first fight between the British and Americans in the Revolution, shortly after the firing on the militia at Lexington. Pop. 6421.

Concord, a city, the capital of New Hampshire and of Merrimack Co., on the Merrimac River, 73 miles w. N. w. of Boston. It has interesting public edifices, and large manufactures, having water-power in abundance. Its products include cotton and woolen goods, wagons, machinery, and various others. There are quarries of fine granite in the vicinity, which are extensively worked. Pop. 21,497.

Concord, a city, capital of Cabarrus Co., North Carolina, 21 miles n. E. of Charlotte. Has manufactures of cotton goods, towels, furniture, etc. The Scotia Seminary (colored) is located here. Pop. 11,000.

Concordance (kon-kord'ans), a book in which the principal words used in any work or number of works, as the Scriptures, Shakespeare, Milton, Tennyson, Homer, etc., are arranged alphabetically, and the book, chapter and verse, or act, scene, line, or other subdivision in which each word occurs are noted; designed to assist an inquirer in finding any passage by means of any leading word which he can recollect, or to show the character of the language and style of any writer. Some of the most approved concordances in English are those of the Bible by Cruden, Butterworth, Brown and Taylor. Of non-biblical concordances, that of Mary Cowden Clarke to Shakespeare deserves especially to be mentioned.

Concordat (kon-kor'dat), a convention between the pope, as head of the Roman Catholic Church, and any secular government, for the settling of ecclesiastical relations. One of the most important of the earlier concordats, that of Worms, called also the Calixtine Concordat, made in 1122, between Pope Calixtus II and the Emperor Henry V, has been regarded as the fundamental law of the church in Germany. Another celebrated concordat was that agreed upon between Cardinal Gonshalvi, in the name of Pius VII, and Napoleon in July, 1801. By it the head of the state had the nomination of bishops to the vacant sees; the clergy became subject in temporal matters to the civil power; all communities, ecclesiastical courts, and jurisdictions were abolished in France, and even the regulations of the public worship and religious ceremonies and the pastoral addresses of the clergy were placed under the control of the secular authorities. Most of these provisions remain in France at the present day. Since the middle of the eighteenth century concordats have generally been adverse to the power of the pope.

Concrete (kon'kri't), a technical term in logic, applied to an object as it exists in nature, invested with all its attributes, or to the notion of such an object. Concrete is opposite to abstract. The names of individuals are concrete; those of classes, abstract. A concrete name is a name which stands for a thing; an abstract name is a name which stands for the attribute of a thing.

Concrete, building consisting of hydraulic or other mortar mixed with gravel or stone chippings about the size of a nut. It is used extensively in building under water, for example, to form the bottom of a canal or sluice, or the foundation of any structures raised in the sea; and it is also frequently used to make a bed for asphalt pavements, or to form foundations for buildings of any kind. It has also come extensively into use as the material with which the walls of houses are built, the concrete being firmly rammed into molds of the required shape, and then allowed to set. In large buildings a material known as reinforced concrete has come into use, the reinforcement consisting of strong steel rods around which the concrete is poured and which add very greatly to its strength. Many very large buildings have been erected in this manner, and the use of concrete as a building material is rapidly growing.

Concretions (kon-kri'zhuns), Mo-b-n, in animal economy, hard substances that occasionally make their appearance in different parts of the body, as well in the solids as in those cavities destined to contain fluids. They are usually named according to the parts of the body in which they occur, as pineal, salivary, pancreatic, hepatic, pulmonary, urinary concretions, etc. Their composition is equally various, but the most common constituents are phosphates, urates, or other salts, in combination with mucus, albumen, fibrin, and other organic matter. See Calcific.

Concupinage (kon-kü'bin-aj), sexual cohabitation of a man without legal marriage. It was permitted among the ancient Hebrews and the Greeks without limitation; but among the Romans in the case of unmarried men concupinage was limited by the Lex Julia and Lex Papia Poppea to a single concubine of mean descent.

Concurrent Jurisdiction (kon-kur'ent), the jurisdiction of differ-
Concussion of the Brain (kon-kush-un), a term applied to certain injuries of the brain resulting from blows and falls, though unattended with fracture of the skull. Stupor or insensibility, sickness, impeded respiration, and irregular pulse are the first symptoms, and though these may subside there is always for a time more or less risk of serious inflammation of the brain setting in.

Condamine, Charles Marie de la.

Condé, (kön-dà), town and fortress of France, dep. Nord, at the confluence of the Hayne and Scheldt. It gave their title to the Condé family. Pop. (1906) 2701.—For another Condé see Condé-sur-Noireau.

Condé, Louis de Bourbon, founder of the house of, born in 1539; killed after battle of Jarnac, 1569. See Bourbon.

Condé, Louis de Bourbon, Prince of (the Great Condé), a famous general, born in 1621. In 1641 he married a niece of Cardinal Richelieu. His defeat of the Spanish at Rocroi, in 1643, was followed, in 1648, by his defeat of Mercy at Nordlingen, and by his capture of Dunkirk in 1646, the year in which he inherited his father's title. During the troubles of the Fronde he at first took the side of the court; but believing himself to be ill requited by Mazarin he put himself at the head of the faction of the Petits Maîtres, and was imprisoned for a year by Mazarin (1650). On his release he at once put himself at the head of a new Fronde, entered upon negotiations with Spain, and, his attack on Paris being indecisive, retired to the Netherlands, where he was appointed generalissimo of the Spanish armies. In this capacity he unsuccessfully besieged Arras in 1654; but he was more fortunate at Valenciennes in 1656, and at Cambrai in 1657. In 1658 he was defeated before Dunkirk by Turenne, but was restored to his rank in France after the peace of 1659. In 1668 he accomplished the reduction of Franche Comté in three weeks; and in 1674 he defeated the Prince of Orange at Nancy. His successes over Montecuculi in Alsace in 1675 closed his military career. Four years later he retired to Chantilly, near Paris, and died at Fontainebleau in 1687.

Condé, Prince of, born at Chantilly in 1730; only son of the Duke of Bourbon and the Princess of Hesse-Rheinfels. He distinguished himself in the Seven Years' war, and in 1762 defeated the Prince of Brunswick at Johannisberg. On the outbreak of the revolution in 1789 he emigrated, and in 1792 formed, at Worms, a corps of emigrant nobility, which first joined the Austrian, and, in 1796, the English service. In 1797 he entered the Russian service, but in 1800, after the separation of Russia from the coalition, reentered for a time the English army. He lived in England till 1813, returned to Paris in 1814, received various honors, and attended the king in his flight to Ghent. On his return he was appointed president of a bureau of the chamber of peers, but soon after retired to Chantilly. He died at Paris in 1818.

Condensation (kon-den-sa'shun), in chemistry and physics, the act of reducing a gas or vapor to a liquid or solid form. Surface condensation, a mode of condensing steam by bringing it in contact with cold metallic surfaces in place of by injecting cold water.

Condensed Milk (kon-den'st), milk preserved by evaporating part of its moisture, mixing with refined powdered sugar, and packing in air-tight cans hermetically sealed; the sugar may also be omitted.

Condenser (kon-den'sér), a syringe by which air is compressed into a receiver. Also a vessel in which aqueous or other vapors are condensed by cooling into the liquid form.

Condensing Steam-Engine. See Steam-engine.

Condillac (kön-dä-yär), ÉTIENNE BONNOT DE, a French philosopher born in 1715. His Essai sur l'Origine des Connaissances Humaines (1746), in large part a polemic against abstract methods of philosophizing, struck the keynote of his system, and his Traité des Systèmes (1749) continued the condemnation of all systems not evolved from experience, from sensation. In 1764 appeared his Traité des Sensations, and
in 1755 his *Traité des Animaux*, a criticism on Buffon. The sagacity and clearness of his writings led to his appointment to the nephew of Louis XV, the infant Duke of Parma, for whom he wrote in 1755 his *Cours d'Études*, including a grammar, an *Art d'Écrire*, an *Art de Raisonner*, an *Art de Penser*, and a general history. His work *Le Commerce et le Gouvernement* appeared in the same year as *The Wealth of Nations* (1776), and was no unworthy companion to it. In 1768 he was elected to the Academy. He died shortly after the publication of his *Logic* in 1780, his *Langue des Calculs* being published posthumously in 1788.

**Conditional Immortality** (cond′-i-\(\text{sh}^\text{-}\)un-al), a doctrine held by certain religious sects, which hold that immortality is dependent upon certain conditions of belief and conduct, and replace the tenet of future punishment by that of annihilation. This doctrine has been advanced at intervals from ancient times, and in our day it has many advocates.

**Conditioned and Unconditioned**, in philosophy, terms introduced by Sir William Hamilton. The Unconditioned is regarded by Sir William Hamilton as a genus including two species: the Infinite, or the unconditionally unlimited, and the Absolute or the unconditionally limited; and the thesis which he maintains and expounds, and which forms one of the leading doctrines of his philosophical system, is that the Unconditioned, as thus explained, is entirely unthinkable. The mind is confounded in thought of knowledge though not of faith, to the limited and conditioned—the Conditioned being the mean between two unconditionates, mutually exclusive and equally inconceivable, but of which, on the principles of contradiction and exclusion, neither is to be admitted as necessary. Thus infinite space is inconceivable by us, while at the same time it is equally impossible to us to conceive of space as finite; yet one of these must be admitted necessary, and our conception is in some sense a mean between the inconceivables. The doctrine was applied by Mansel to determine the limits of religious thought.

**Condom** (kon′-döm), a town of s. w. France, dep. Gers, on a height above the Baise. It has a dilapidated cathedral, now the parish church. A considerable trade is carried on. Pop. (1906) 4046.

**Condonation** (kon′-do-nā′shun), in law, forgiveness of injury. In an action for divorce on the ground of adultery it is a legal plea in defense.

**Condor** (kon′dor′; Spanish name, from Peruvian cuntur), a South American bird, the *Sarcorhamphus grif\(\text{ph}^\text{-}\)thus*, one of the largest of the Vulturidae or vulture birds. In its essential features it resembles the common vultures, differing from them mainly in the large cartilaginous caruncle which surmounts its beak, and in the large size of its oval and longitudinal nostrils placed almost at the extremity of the cere. Despite the many stories of its gigantic proportions, Humboldt met with no specimens whose wings exceeded 9 feet in expanse, though it has occasionally been known to attain an expanse of 14 feet. It is found in greatest numbers in the Andes chain frequenting regions from 10,000 to 15,000 feet above the level of the sea, where they breed, depositing their two white eggs on the bare rock. They are generally to be seen in groups of three or four, and only descend to the plains under stress of hunger, when they will successfully attack sheep, goats, deer and bullocks. They prefer carrion, however, and, when they have opportunity, gorge themselves until they become incapable of rising from the ground, and so become a prey to the Indians. The king-vulture (*S. Papa*) is another bird of the same genus.

**Condorcet** (kon′-dor-sä′), MARIE JEAN ANTOINE NICOLAS DE CAR-ITAT, MARQUIS DE, an eminent French writer, born in 1743. At the age of twenty-one he presented to the Academy of Sciences an *Essai sur le Calcul Integral*, and in 1767 his *Mémoire sur le Problème des Trois Points* appeared, both being afterwards united under the title of *Essai d'Analyse*. The merit of this work gained for him in 1769 a seat in the Academy of Sciences, of which, after the publication of his *Fléaux des Académiciens morts avant 1689* (1773), he was appointed perpetual secretary (1777). In
1777 his *Theory of Comets* gained the prize offered by the Academy of Berlin; he enriched the *Transactions* of many learned societies; and took an active part in the *Encyclopédie*. During the troubles of the first French revolution his sympathies were strongly engaged on the side of the people. By the city of Paris he was elected deputy to the legislative assembly, of which he was soon appointed secretary, and in February, 1792, president. On the trial of Louis he was in favor of the severest sentence not capital; at the same time he proposed to abolish capital punishments, except in case of crimes against the state. The fall of the Girondist party, May 31, 1793, prevented the constitution which Condorcet had drawn up from being accepted, and as he freely criticized the constitution which took its place he was denounced as being an accomplice of Brissot. Madame Verney, a woman of noble feelings, succeeded him for eight months, during which he wrote his *Esquisse d'un Tableau Historique des Progrès de l'Esprit Humain*. Lest he should endanger her safety, however, he left the house secretly in opposition to her wishes, fled from Paris, and wandered about till arrested and thrown into prison, where, March 28, 1794, he was found dead on the floor, having apparently swallowed poison.

**Condottieri** (kon-dó-tè-a'ré), an Italian name given to the captains of those bands of mercenary soldiers who, in the fourteenth and fifteenth centuries, hired themselves out to carry on the petty wars of the Italian states. Montreal d'Albarino, a gentleman of Provence, was the first to give definite organization to a lawless band of this kind, and many of them attained a considerable size and power. One of the most noted was the company of Sforza Attendolo, whose son made himself Duke of Milan. For the most part, these mercenaries were good soldiers and splendidly equipped, but rapacious and cruel to all but their own class.

**Conduction.** See **Heat**.

**Conductor** (kon-duk'tur), or **Lightning-conductor**, an instrument by means of which either the electricity of the clouds, the cause of lightning, is conducted without explosion into the earth, or the lightning itself is received and conducted quietly into the earth or water without injuring buildings, ships, etc. It was invented by Benjamin Franklin about 1752, and met with speedy general adoption. It usually consists of a stout iron rod with one or more points at the top, the lower end being metallically connected with thick strips of copper which are carried into the ground to a considerable depth and terminated, if possible, in water or in wet earth. Various other forms of conductors have been introduced, such as are shown in the accompanying cut, where a is a conductor consisting of metallic strips joined together, b a conductor of copper wires intertwined with iron rods, c a conductor consisting of a metallic strip forming a tube with spiral flanges. Various kinds of tips are also in use, as will be seen in the cut, d being formed of several metals enclosed the one within the other, the most fusible being outside; g, h, i show how in some cases successive sections of rods are connected.

**Conduit** (kon'dit), a line of pipes or an underground channel of some kind for the conveyance of water, electric wires, etc.

**Condyle** (kon'dil; Gr. kondylos), in anatomy, a protuberance on the end of a bone serving to form an articulation with another bone; more especially applied to the prominence of the occipital bone for articulation with the spine.

**Condy's Fluid**, a preparation of permanganate of potash which is largely used as a deodorizer and disinfectant in fevers, etc. It is also employed as a gargle in diphtheria and other throat affections, and is especially valuable for cleansing ulcers and sores.

**Cone** (kon'), as used in geometry, generally means a right circular cone, which may be defined as the solid figure traced out when a right-angled triangle is made to revolve round one of the sides that contain the right angle. A more comprehensive definition may be given as follows:—Let a straight line be held fixed at one point, and let any other point of the line be made to describe any closed curve which does not cut itself; the solid figure traced out is a cone. When the curve which the second point describes is a circle, the cone is a right
Cone

Cone, in botany, a dry compound fruit, consisting of many open scales, each with two seeds at the base, as in the conifers; a stroblus.

Coneliano (konel-yè'nô), a town of Italy, province of Treviso, 28 miles N. of Venice. It has a castle and cathedral with paintings by Cima da Conegliano. Manufactures: silk and woolen cloths. Pop. 10,000.

Cone-shell. See Conus.

Conessi-bark (kon-es's), the bark of Wrightia antisyphenter-

ics, an apocynaceous plant of India, used as a tonic, a febrifuge, and an astringent in diarrhea.

Coney Island, a small island 8 miles southeast of New York, at the west end of Long Island, a popular seaside resort, about one hour by trolley from Manhattan City Hall. Here New York City has undertaken the creation of a great public seaside park. As many as 500,000 people often visit Coney Island in a single day during the summer.

Confederate States, the name given to the eleven Southern States of the American Union which attempted to secede on the election of Abraham Lincoln, the Republican candidate, to the presidency in November, 1860, thus leading to the great Civil War which lasted till 1865. See United States.

Confederation of the Rhine, the league of Germanic states formed by Napoleon Bonaparte in 1806, and including Bavaria, Wurttemberg, Baden, Hesse-Darmstadt, the Kingdom of Westphalia, etc. It extended over 125,160 sq. miles, and comprised 14,608,877 inhabitants. The princes undertook to raise collectively a large body of troops in event of war, and established a diet at Frankfort; but the failure of Napoleon's Russian campaign of 1812 shook the structure, and the league soon after broke up. It was succeeded by a new league, the Germanic Confederation.

Confession (kon-fesh'-ren), 1) a meeting of the representatives of different foreign countries for the discussion of some question. (2) A meeting between delegates of the two houses of a legislative body called to discuss the provisions of a bill with regard to which they are disagreed, with the object of effecting an agreement between them. (3) The annual meeting of the Methodist Episcopal Church for deliberation on its affairs.

Confervaceae (kon-fer-vä-se's), a family of marine or fresh-water algae having green fronds which are composed of articulated filaments simple or branched. The cells are shortish and cylindrical, and they are reproduced not by conjugation, but by zo- spores formed from the cell-contents and furnished with two or four cilia. The typical genus Conferva is found, either attached to various bodies or floating about in dense masses, or on ponds.

Conferris (kön-fesh-un), a term sometimes applied to a profession of faith; for instance, the Confession of Augsburg. It sometimes also signifies a religious sect, as the three Christian confessions—the Roman Catholic, the Lutheran and the Calvinistic, Confessor (I acknowledge) is the confession which the Catholic priests make before the altar when beginning mass or public worship.

AURICULAR (aw-ril'kar), in the strictest sense, the disclosure of sins to the priest at the confession, with a view to obtain absolution for them. The person confessing is allowed to conceal no sin of consequence which he remembers to have committed, and the father confessor is bound to perpetual secrecy. The practice of a public acknowledgment of great sins was altered by Pope Leo the Great, in 450, into a secret one before the priest, and the fourth general Lateran council (1215) ordained that every one of the faithful, of both sexes, come to years of discretion, should privately confess all their sins at least once a year to their own pastor, an ordination still binding all members of the Roman Catholic Church. Confession is a part of the sacrament of penance.

Confessional (kon-fesh'un-äl), in Roman Catholic churches and chapels, a kind of enclosed seat in which the priest sits to hear...
Confession of Augsburg

Confessional, Cathedral of St. Gudule, Brussels. Kneeling without and speaking through an aperture. Many confessionals are in three divisions or compartments, the center, which is for the reception of the priest, being closed half-way up by a dwarf door, and having a seat within it. The side compartments, which communicate with the center by grated apertures, are for the penitents.

Confession of Faith, a statement of religious beliefs, a kind of elaborate creed. (See Creed.) What is most distinctively known by this name is the document prepared by the Assembly of Divines which met at Westminster in obedience to an ordinance of Parliament issued June 12, 1643. The whole number of the assembly amounted to 174 members, mostly Puritans, thirty-two being members of Parliament. There were also six Scottish commissioners appointed to consult and deliberate, but not to vote. One of the chief results of the deliberations was the framing of the Confession of Faith, which, on the return of the Scottish commissioners, was adopted by the Assembly of the Church of Scotland, August 27, 1647.

Confidential Communication, in law, a communication made by one person to another which the latter cannot be compelled to give in evidence as a witness. Generally all communications made between a client and his agent, between the agent and the counsel in a suit, or between the several parties to a suit, are treated as confidential. The privilege of confidentiality does not extend to disclosures made to a medical adviser, and

in England it has been decided also that confessions made to a priest are not to be treated as confidential.

Confirmation (kon-fer-ma'shun), the ceremony of laying on of hands by a bishop in the admission of baptized persons to the enjoyment of Christian privileges, the person confirmed then taking upon himself the baptismal vows made in his name. It is practised in the Greek, Roman Catholic, Lutheran and English churches. In other Protestant churches a public confession of faith before the first communion takes the place of the rite. Confirmation is one of the seven sacraments of the Roman Catholic Church.

Confiscation (kon-fi-sa'kshun), the act of condemning as forfeited, and adjudging to the public treasury, the goods of a criminal in part punishment of a crime.

Conformable (kon-fom-a-bl), in geology, lying in parallel or nearly parallel planes, and having the same dip and changes of dip:

![Conformable Strata a and b, Unconformable at c.](image)

Confucius (kon-fu'shus), or Kon-Tse (signifying 'the teacher, Kong'), the famous Chinese sage, born about 550 B.C. in the province of Shantung, then belonging in part to the small vassal kingdom of Lu. His father, Shuhliang-helih, who was of royal descent, died three years later, and the boy was reared in comparative poverty by his mother, Chingtsai. At the age of seventeen he was made inspector of corn-markets, at nineteen he married, and after about four years of domesticity, in which a son and two daughters were born him, he commenced his career as a teacher. In 517 B.C. he was induced by two members of one of the principal houses in Lu, who had joined his band of disciples, to visit the capital with them, where he had interviews with Lao-tze, the founder of Taoism. Though temporarily driven from Lu to Tai by a revolution, he soon returned thither with an increasing following, and at the age of fifty-two was made chief magistrate of the city of Chung-too. So striking a reformation was effected by him that he was chosen...
Congé d'Elire for higher posts, became minister of crime, and with the aid of two powerful disciples elevated the state of Lu to a leading position in the kingdom. Its marquis, however, soon after gave himself up to debauchery, and Confucius became a wanderer in many states for thirteen years. In 483 he returned to Lu, but would not take office. The deaths of his favorite disciples Yen Hwin and Tze-lu in 481 and 478 did much to bring about his own, which took place in the latter year. Confucius left no work detailing his moral and social system, but the five canonical books of Confucianism are the Yik-king, the Shu-king, the Li-king, the Chuen-ting, and the Chi-ting, with which are grouped the 'Four Books,' by disciples of Confucius, the Ta-hoe or 'Great Study,' the Chung-Yung or 'Invariable Mean,' the Tung-ying or 'Philosophical Dialogues,' and the Hsii-ting, written by Meng-tee or Mencius. The teaching of Confucius has had, and still has, an immense influence in China, though he can hardly be said to have founded either a religion or a philosophy. All his teachings was devoted to practical morality and to the duties of man in this world in relation to his fellows; in it was summed up the wisdom acquired by his own insight and experience, and that derived from the teaching of the sages of antiquity. It is doubtful if he had any real belief in a personal god.

Congé d'Elire (kon-zAH da-LER), the Norman French for 'leave to elect,' designates the sovereign's license authorizing the dean and chapter of a vacant see in England to proceed with a new election. Though nominally choosing their bishop, yet the dean and chapter are bound to elect, within a certain time, such person as the crown shall recommend, otherwise they incur the penalties of a prevarication.

Conger-eel (kong-er-AL), a genus of marine eels characterized by a long dorsal fin beginning near the nape of the neck, immediately above the origin of the pectoral fins, and by having the upper jaw longer than the lower. The best-known member of this genus is the Conger vulgaris, sometimes as thick as a man's thigh, frequently attaining a length of 10 feet and more than 100 lbs. in weight. It is pale brown above, grayish white below, with whitish dorsal and anal fins fringed with black. Its flesh is eaten, but is somewhat coarse.

Congestion (kon-JET-vun), in medicine signifies an excessive accumulation of blood in an organ, which thereby becomes disordered. Among the causes of congestion are the different periods of development of the human body, each of which renders some particular organ unusually active; diseased conditions; and the accidental irritation of certain organs. Again, if the current of blood to one organ is checked the blood tends to accumulate in another; and the vessels which bring back the blood to the heart—that is, the veins—are sometimes obstructed, as by external pressure, by tumors, etc. Congestion sometimes lasts a short time only; but if not early cured, and its return, which would otherwise be frequent, prevented, it is only the beginning of other diseases. Sometimes it terminates in bleeding, which is a remedy for it; sometimes it increases into inflammation; sometimes it becomes a chronic disease, that is, the blood accumulates for a long time and expands the veins, the expansion becomes permanent, and dropsy may result.

Congleton (kong-gLOH-lat), a market town of England, Cheshire, in the north valley on the Dane, 22 miles S. of Manchester. It has cotton and silk manufactures, the latter forming the principal industry. Pop. (1911) 11,310.

Conglomerate (kon-gLOH-mur-at), a term applied by geologists to rocks consisting mostly of water-worn pebbles connected together by a matrix of siliceous, calcareous, or other cement, often called also plum-pudding stone.

Congo (kon-GO), formerly Zaïre, one of the great rivers of the world, in Southern Africa, having its embouchure in the South Atlantic. The mouth of the river was known to the Portuguese in 1485, but the lower part of its course was first explored by an English expedition under Captain Tuckey, which, in 1816, ascended it for about 172 miles. In 1867, however, Livingstone discovered a considerable river called the Chambesi, rising in the Chihala Hills, and having moved it to Lake Bangweolo traced it thence as the Luapula to Lake Moero, and thence again as the Lualaba to Nyangwe. From this point its exploration was taken up in 1876-77 by Stanley, who proved its identity with the Congo. It carries more water to the ocean than the Mississippi, its volume being next to that of the Amazon. Its total length is perhaps 3000 miles. Its chief tributaries are the Aruwimi and the Mobangi from the right, and the Ikolemba and Kwa from the left, which latter represents the collected waters of immense rivers from the south, such as the Kassai, the Kwango, etc. It is navigable for about 110 miles from its mouth, after which the navigation is interrupted by cataracts. See next article.
Congo, Belgian, formerly Congo Free State. 

The river Congo, in South Central Africa, stretching by a kind of narrow neck of territory to the river’s mouth, but expanding inland so as to cover an immense area, mainly lying south of the river. The obvious advantages of the Congo as a waterway in opening up the continent led to the formation at Brussels in 1878 of a Comité d'études du Haut Congo, under the patronage of Leopold II, having as its aim the internationalization and development of the Congo area. Under its auspices Stanley returned in 1879 (see preceding article) to open up the river and form a free state under European auspices. He established a first station at Vivi, the limit of maritime navigation, 110 miles above the mouth of the river. Leopoldville is an island with an area of about 94 sq. miles; pop. 25,000,000 to 35,000,000.

Congregationalists (kong-ree-ga'-shun-ists), or Independents. The distinctive principle of Congregational polity is that every congregation is entitled to elect its own officers, to manage all its own affairs, and to stand independent of, and irresponsible to, all authority, saving that only of the Supreme and Divine Head of the Church, the Lord Jesus Christ. Congregationalism denies that there is any authority in Scripture for uniting the churches of a nation or province into one corporation to be ruled by bishops, superior to the pastors of particular congregations, or by a presbytery or synod. This is it which distinguishes Congregationalism from Episcopacy and from Presbyterianism. As early as the days of Queen Elizabeth, Independents, or Brownists, as they were also named after Robert Browne, were numerous, and punishments of banishment and even death were inflicted upon some. Finally, large numbers of them retired to Holland and to America. By the Act of Uniformity in 1662 the Independents were subjected to much suffering. The Revolution of 1688, followed by the passing of the Toleration Act in 1689, brought them relief. Efforts were made about this time to bring about an accommodation between them and the English Presbyterians, but with little result. In 1730 certain Presbyterians, Baptists, and Independents formed themselves into a united body, under the name of the Three Denominations. The Independents are the largest dissenting body in England except the Wesleyan Methodists.

The history of American Congregationalism in its early years is practically that of the origin of New England, beginning with the arrival in 1620 of the first group of Puritans. In 1643 the four congregational colonies of Plymouth, Massachusetts Bay, Connecticut and New Haven formed a confederacy. In 1636 they founded Harvard College to provide training for their ministers, and ten years later missionary work was begun among the Indians. In 1914 there were in the United States 6100 churches with 748,000 communicant members.

Congress, the name given to the legislative assembly of the United States of America, consisting of
Congressional Apportionment

Congevre (kon’grav), William, an English dramatist, born 1670, educated at Kilkenny, and at Trinity College, Dublin, from which he entered the Middle Temple, London. A novel entitled *Agonistes*, under the pseudonym of Cleophil, was followed, at the age of twenty-one, by his comedy of the *Old Bachelor*, the success of which procured for him the patronage of Lord Halifax, who made him a commissioner for licensing hackney-coaches; soon after gave him a place in the pipe office; and finally conferred on him a very lucrative place in the customs. He afterwards received an additional sinecure in the appointment of secretary to the island of Jamaica. His next play, the *Double Dealer*, was less successful; his third comedy, *Love for Love*, and his tragedy *The Mourning Bride* (1679), were both popular; but after the cold reception of his *Way of the World* in 1700, he ceased altogether to write for the stage. He, however, continued to write occasional verses on public subjects; and in 1710 published a collection of his plays and poems, which he dedicated to his early patron, Lord Halifax, to whose person and party he remained attached in all fortunes. He died in 1729. His plays belong to the artificial school of comedy, which aimed rather at the production of a sustained flow of wit than at the precise delineation of character.

Congreve, Sir William, inventor of the Congreve rocket, was born in England in 1772, and entered the army, from which he retired in 1816 with the rank of lieutenant-colonel of artillery and entered the House of Commons. He invented the rocket about 1804. It was first used in active service in the attack on Boulogne, 1806, and on Copenhagen, 1807. He took out patents not only for the manufacture of gunpowder and of bank-note paper, and wrote treatises on the mounting of naval ordnance and on the hydro-pneumatic lock. He died at Toullouse, in 1828.

**Congreve Rocket.** See *Rocket*.

Coni, or Cu’neo (kōn’né-ō), a town of Coni, North Italy, capital of the province of Coni, charmingly situated on a hill, at the confluence of the river Gesso and the Gesso, 47 miles s. s. Turin. Formerly all merchandise passing from the seaport of Nice to Lombardy, Switzerland, and Germany went by this route, but the railway has confined its trade to Turin and neighboring towns. It has manufactures of silks and woollens. Pop. 27,065.

**Conia, Conine** (C₂H₂N), a volatile alkaloid, the active...
poisonous principle of *Conium maculatum* (spotted hemlock), nat. order Umbelliferae. It exists in all parts of the plant, but especially in the not quite ripe seed. When pure it is a colorless, oily liquid, specific gravity 0.878, changing by exposure to air to a brown fluid, and ultimately to a resinous, bitter mass, insoluble in water but soluble in alcohol, and when purified yielding a jelly with a butyric odor. It has a nauseous taste and very disagreeable odor, sharp and choking when strong, but in small quantity like the odor of mice. It is exceedingly poisonous, appearing to cause death by inducing paralysis of the muscles used in respiration. It is antispasmodic and relaxant.

**Conic Sections** *(kon‘ik*), three curves, the hyperbola, the parabola, and the ellipse, so called because they are formed by the intersection of the surface of a cone with planes that cut the cone in various directions. If the cutting-plane be parallel to the axis the curve formed is the hyperbola (1); if parallel to the slope of the cone the curve is a parabola (2); if passing through both sides of the cone obliquely the section is an ellipse (3). A section perpendicular to the axis of the cone forms a circle (4), which may also be considered one of the conic sections. A perpendicular plane through the apex gives a triangle (5).

**Conidia** *(kon‘id-‘a)*, in botany, the simple, dustlike, asexual reproductive cells produced on some lichens and fungi, as in the potato-blight.

**Coniferæ** *(kō-nīf’-ē-re)*, the pines, firs, and their allies, a natural order of gymnospermyous exogens, the essential character of which consists in the manner in which the ovules, not enclosed in an ovary, receive directly the action of the pollen without the intervention of a stigma. The ovules in these plants are borne on scales or modified leaves, which are spread out, not folded, and generally grouped in such a manner as to form a cone composed of a greater or smaller number of these leaves, of which only a portion mature and bear ovules. The disposition of the ovules in relation to these scales permits of a division of the Coniferæ into three distinct families or tribes. In the *Cupressinae*, which include the juniper, cypress, etc., the cones are formed of simple scales, each of which bears towards the base of its superior surface the ovules erect and sessile. The second family, *Abietinae*, has, in place of simple scales, scales actually double or formed of two parts; the lower one usually designated the bract; the other bearing at its base the ovules reversed. This family includes the pines, firs and larches, the araucarias, wellingtonias, dammasas, etc. In these two families the ovules are completely covered by the scales which constitute the cones, which unite after fertilization and enclose the seeds in their maturity. In the *Taxinae*, which constitute the third family, the scales are short, imperfect, and partly sterile, and neither cover the ovules at the period of fertilization nor at that of maturation. The ovules are usually set in the same manner as in the *Cupressinae*. The yew, the *ginko*, etc., belong to this family. The Coniferæ are found in large forests in the north of Europe and America, and are of great importance as timber trees. They abound also in resinous juices and yield turpentine, pitch, tar, succinic acid, etc. The leaves are usually alternate, and awl or needle shaped, the naked flowers are monocious or dioecious, the male flowers being in deciduous catkins, the female in cones.

**Coniine** *(kō’n-in*). See *Conio*.

**Coniostræ** *(kō-nil-ros‘trēs)*, in ornithology, a subdivision of the order *Insectores* or *Passeres*, consisting of genera having a stout, conical peak. The best-known genera are the larks, tits, finches, sparrows, gold-finches, linnets, bullfinches, crossbills, starlings, crows and birds of paradise.

**Conium** *(kō-nī‘um)*, a genus of umbelliferous plants. See *Hemlock*.

**Conjeveram** *(kon-je-ver-um*), a town of Hindustan, presidency of Madras, director of Chingleput. It stands in a valley, is irregularly built, and from 5 to 6 miles long. It possesses two famous pagodas dedicated to Vishnu and Shiva, and the inhabitants are mostly Brahmins. The name "Beneas of the South" has been sometimes given to it. Cottons are manufactured in the town,
Conjugal Rights

in which there is a large Free Church of Scotland mission school. Pop. 46,164.

Conjugal Rights (kon'jul) n. in law, the right which husband and wife have to each other's society, comfort and affection.

Conjunction (kon'junk'chun), in grammar a connective indeclinable particle serving to unite words, sentences, or clauses of a sentence, and indicating their relation to one another. They are classifiable into two main groups: (1) Coordinating conjunctions, joining independent propositions, and subdivisible into copulative, disjunctive, adversative and illative conjunctions. (2) Subordinating conjunctions, linking a dependent or modifying clause to the principal sentence.

Conjunction, in astronomy, the position of two of the heavenly bodies, such as two planets, or the sun and a planet, when they arrive at the same longitude (i.e., in the same direction from the earth). When it is simply said that a planet is in conjunction, conjunction with the sun is to be understood. Superior conjunction and inferior conjunction are terms used of the planets whose orbits are nearer to the sun than that of the earth, according as the sun is between us and them or they between us and the sun.

Conjunctiva (kon-junk-tiv'a), the membrane which lines the inner surface of the eyelids and is continued over the forepart of the globe of the eye.

Conkling (kon'kling), Roscoe, lawyer, orator and political leader, born at Albion, New York, 1829; died in Utica in 1886. He was in Congress 1859-63 and 1865-67, and United States Senator 1867-81, when he angrily resigned on account of disagreement with President Garfield on the question of political appointments to office.

Connaught (kon'nat), the smallest of the four provinces of Ireland, situated between Leinster and the Atlantic; area, 6,862 square miles: Its west coast is much broken up by numerous bays and inlets, and is thickly studded with islands. The central parts are comparatively level and of limestone formation, while the surrounding and picturesque mountains are formed of sandstone, clay-slate, granite and quartz. A large proportion of the province is bog, and generally, it is the least fertile of all the provinces. It is divided into five counties—Galway, Mayo, Roscommon, Leitrim and Sligo. Pop. 646,932.

Connaught, ARTHUR WILLIAM PATRICK ALBERT, DUKE of, an English statesman, the third son of Queen Victoria, born in 1850. He was trained in the Royal Military Academy, Woolwich, and received his commission in 1868. His promotion was rapid. In 1878 he married Princess Louise Marie of Prussia. In 1906 he was made personal aide-de-camp to Edward VII, and in 1910 opened the first parliament of the Union of South Africa. In 1911 he succeeded Earl Grey as Governor-General of Canada. The democracy of his régime gave him wide popularity.

Conneaut (kon'e-at'), a town of Ash tabula Co., Ohio, on Lake Erie, 68 miles N. E. of Cleveland. It has a good harbor and is a big ore port. There are manufactories of iron, leather, tin-plate, etc. Pop. 8319.

Connecticut (kon-net'i-kut), a river of New England, the west branch of which forms by treaty the boundary between the United States and Canada to lat. 45° N. It rises on the north border of New Hampshire; forms the boundary between Vermont and New Hampshire, passes through the west part of Massachusetts and the central part of Connecticut, and falls into Long Island Sound. It is navigable for vessels drawing from 8 to 10 feet for about 300 miles from its mouth, subsidiary canals, however, being required above Hartford; total length, 450 miles.

Connecticut, original of the thirteen American Union; bounded by New York, Massachusetts, Rhode Island and Long Island Sound; length, east to west, about 95 miles; greatest breadth, north to south, about 72 miles; area, 4900 sq. miles. It contains several distinct ranges of hills, but none of them have any great elevation. Its principal river is the Connecticut, which divides it into two nearly equal parts. The coast is indented with numerous bays and creeks, which furnish many harbors. Its mineral resources are not extensive, but include iron, tungsten and porcelain-clay. Lime is produced in large quantities, and there is abundance of building-stone. The soil is in general better suited for grazing than tillage, bounding in fine meadows. But where agriculture is practised there are ample crops of hay, tobacco, corn, rye, wheat, oats, barley, potatoes, etc.; and fruits, particularly apples, flourish. The manufactures consist chiefly of woolen, cotton and silk goods, metal goods, paper, clocks, hats and caps, leather goods, pottery-ware, glass and machinery, firearms, sewing machines, soap, candles, bricks, automobiles, etc. The principal exports consist of agricultural
Connellsville

produce and manufactures. The foreign commerce is nearly all carried on through New York and Boston, but there is a considerable coasting trade, and a large amount of tonnage engaged in the cod-fisheries. Fish-culture has received special attention, many millions of shad s and young salmon having been introduced into the rivers. The number of miles of railway in operation is over 1000. The chief educational institution is Yale College, one of the most celebrated in the States. Connecticut is divided into eight counties; the seat of government is Hartford. The State at first consisted of two colonies—Connecticut, with its seat of government at Hartford; and New Haven, with capital of same name. Connecticut was settled in 1633 by emigrants from Massachusetts, and Hartford was settled by English in 1635, the Dutch having previously built a fort there. The colony of New Haven was settled by English in 1638, and the two colonies were united under the name of Connecticut, in 1665. Pop. 1,114,736.

Connellsville (kon'el's-vil), a city of Fayette Co., Pennsylvania, 57 miles s. s. E. of Pittsburgh. Its manufacture of coke is the largest in the United States; also has iron and various other manufactures. Pop. 12,845.

Connemara (kon'ém-ara), 'the Bays of the Ocean', a boggy and mountainous district occupying the west portion of County Galway, Ireland; about 30 miles in length and 15 to 20 miles in breadth. Its coasts are very broken, and there are numerous small lakes. It is subdivided into Connemara proper in the west, Jar-Connaught in the south, and Joyce country in the north.

Conning Tower, an armored enclosure in a battleship, in which the commander may stand during a naval engagement, and from which he can direct the movements of ship and men. It has openings through which the enemy's ships can be seen.

Conoid (kō'noid), in geometry, a solid formed by the revolution of a conic section about its axis. Thus the solid resulting from a parabola is a paraboloid conoid or paraboloid; if a hyperbola, a hyperbolic conoid or hyperboloid, etc.

Conon (kō'nən), an Athenian who had the command of a fleet in 413 B.C. to prevent the Corinthians from relieving Syracuse then at war with Athens, and who, after various services, succeeded Alcibiades in 406. When the Athenian fleet was surprised and Athens captured by Lysander in 405, Conon escaped to Cyprus, and afterwards joined the Persians against the Spartans, being appointed to the command of a Persian fleet in 397. In 394, with Pharnabazus he defeated the Spartan admiral, Pisander of Cnidus, and in 393 returned to Athens to restore the walls and fortifications.

Connersville (kon'ers-vil), a city of Fayette Co., Indiana, 22 miles s. w. of Richmond. Automobiles, wagons, carriages, springs, axles, lamps, etc., are produced. Pop. 10,000.

Conquest (kong'kwest), in feudal law, a name applied to purchase or any other means of acquiring property than by the common course of inheritance.

Conrad I (kon'rād), King of Germany (911-918); died December 23, 918. During his reign the country was invaded by the Danes, Slavs, and Magyars, and he was constantly at war with his own subjects.

Conrad II, 'the Salian,' King of Germany and Emperor of the Romans, reigned from 1024 to 1039, and is regarded as the true founder of the Franconian or Salic line. On his election he proclaimed a God's Truce in order to attempt certain reforms in the kingdom; but his attention was too distracted between Italy and Germany for him to do more than repress some of the more marked evils of the feudal system.

Conrad III, King of Germany and emperor from 1138 to 1152, was the founder of the Swabian dynasty of Hohenstaufen. During the struggle with his rival, Henry the Proud, the factions of Guelf and Ghibeline, named from the war-cries of the respective parties, came into existence. Conrad, persuaded by St. Bernard, took part in the second crusade, from 1147 to 1149. His marriage with a Greek princess led to his adoption of the double-headed eagle. He was succeeded by his nephew Frederick Barbarossa.

Conrad, Joseph, an English novelist, born in Poland in 1857 and naturalized in Britain. His parents were implicated in the Polish uprising of 1862. Conrad took to the sea and sailed all over the world, embodying his experience in his story, Youth (1902). His other works include Almayer's Folly (1895), Tales of Unrest (1898), 'Ticet Land and Sea (1912) and A Personal Record (1913).

Consalvi (kon'sal'vē), Ercole, cardinal and prince of the Pope Pius VII, born in 1757; died in 1824. He concluded the famous concordat with Napoleon in 1801.

Consanguinity (kon-sang'kwin-tē), the relation of persons descended from the same ancestor.
Conscience

It is either lineal or collateral—lineal between father and son, grandfather and grandson, and all persons in the direct line of ancestry and descent, from one another; collateral between brothers, cousins, and other kinsmen descended from a common ancestor, but not from one another.

Conscience (kon’shens), that power or faculty, or combination of faculties, which decides on the rightness and wrongness of actions; otherwise called the Moral Sense. Where a man is asked or questions of right and wrong, and accompanied with the sentiments of approbation and condemnation, which, by the nature of man, cling inextricably to his apprehension of right or wrong. See Ethics.

Conscience (kön-ssên), HENDRIK, a Flemish novelist, born at Antwerp in 1812; died in 1882. Having educated himself, he taught for a short time in a school, and then served in the army for six years. He was for a time tutor in Flemish to the royal princes, and from 1868 conservator of the Wiertz Museum at Brussels. His novels, some of which have been translated into English, are partly based on the history of his country, partly pictures of everyday Flemish life. They include The Lion of Flanders; Jakob van Artevelde; Batavia; Wooden Clara; Blind Rosa; The Poor Nobleman; The Young Doctor; Maternal Love, etc. He also wrote a History of Belgium.

Consciousness (kon’shens-nes), a term used in various senses, most commonly perhaps to denote the mind’s knowledge or cognizance of its own action.

Conscription (kon-skrip’shen), the enlisting of the inhabitants of a country capable of bearing arms, by a compulsory levy, at the pleasure of the government, being thus distinguished from voluntary or voluntary enlistment. The word and the system were both introduced into France in 1798 by a law which declared that every Frenchman was a soldier, and bound to defend the country when in danger. In times of great danger it provided that the army should be formed by voluntary enrolment or by conscription. The conscription included all Frenchmen from twenty years of age complete to twenty-five years complete. On the restoration of the Bourbons conscription was abolished. It was, however, reenacted, and continued through the Second Empire to form the mode of recruitment in France. An army bill, passed by the National Assembly in 1872, at once the universal liability to conscription, but allows certain exceptions and postponements. The term of service is fixed at five years in the army, four years in the reserve of the active army, five years in the territorial army, and six years in its reserve—the total length of military service being thus twenty years. Universal liability to military service is also the law in Germany, Italy and Austria. In Germany the total length of service is twelve years. Twelve years’ service is also the period in Austria. The Russian army has long been partly raised by conscription, and by a law which came into force in 1872 an annual conscription was established to which all men who have completed their twenty-first year, and are not physically incapacitated, are liable. The men have to serve in the active army six years, after which they pass into the reserve for another nine years, during which they are liable to active service only in time of war. In Great Britain a small militia obtained, if necessary, by conscription is usually kept up in time of peace, but the regular army and navy are recruited by voluntary enlistment. In the United States conscription was resorted to on several occasions during the Civil war, on one occasion leading to a severe riot in New York. Since that war only voluntary enlistment existed until 1917. The need of raising an army without delay led the United States government, after taking part in the European war in 1917, to resort to selective draft or conscription for this purpose. It was decided by this means and by enlistment to raise the regular army to its maximum strength, to draft the National Guard, or State volunteers, into the Federal service, and to call out a body of troops by means of conscription, all men between the ages of 21 and 31 being included. These were registered to the number of 10,000,000 on June 8, 1917, and a first draft of 600,000 was called for to be mustered into the service at an early date.

Consecration (kon-se-kra’shen), the dedication with certain rites or ceremonies of a person or thing to the service of God; especially (1) the ordination of a bishop or archbishop; (2) the dedication of a church to God’s service, performed by a bishop; (3) the act of the priest in celebrating the eucharist.

Consequential Damages (kon-se-kwên’shal), in law, are such losses or damages as arise out of a man’s act, for which,
Conservation of Energy

Conservation of Natural Resources. The great and heedless waste of the extensive natural treasures of the United States, especially the forests, has led within recent years to a concerted action for their conservation for the benefit of future generations. The first national movement in this direction was made by President Roosevelt in 1908, when he called a convention of State governors to consider what could be done for the preservation of our great forests. The result of this movement was the formation of a National Conservation Commission, under the chairmanship of Gifford Pinchot, chief-forester, to take measures for this purpose. In December, 1908, Canada and Mexico were invited to take part in the movement, and in February, 1909, letters were sent to 45 nations, inviting their concurrence with the idea of calling a World Conservation Conference to consider in what way the vast natural resources of the world could best be conserved for man's benefit. Steps for the preservation and judicious handling of the American forests had previously been taken, by the withdrawal of public forest areas from exploitation and their conversion into national forests, the total area thus withdrawn to July 1, 1914, being 185,321,202 acres. A Bureau of Forestry was created in 1905, having control of these great wooded reserves. At present these forests yield an annual timber crop worth on the ground about $10,000,000, and furnish forage for cattle, horses, sheep and goats worth as much more to Western stockmen, while their yielding value is increasing instead of diminishing. In addition are State forests aggregating several millions of acres, yielding a profitable lumber supply and conserving the headwaters of many streams. These waters are being largely utilized in the West, by the building of irrigation dams, for the development into fertile farming lands of vast tracts of formerly arid soils. Conservation has also been extended to streams yielding water-power, which have been widely withdrawn from private exploitation and retained as government property for the future benefit of the people at large. Similar steps have been taken in regard to the great area of coal lands in the western government domain, including the extensive coal beds discovered in Alaska. These have been withdrawn from private use, with the expectation that they can be handled in a way to yield a large income to the government and thus be made a source of national aggrandizement. In 1910 President Taft withdrew from settlement, under an act of Congress of that year, 43,568,836 acres of public lands, of which 36,073,164 were coal sites (not including the coal lands withdrawn in Alaska), the others petroleum, phosphate and water-power sites. While these may be reopened to settlement, it will be with the proviso that the ownership of settlers will be confined to the surface, the mineral deposits underground being reserved for national use.

Conservatives (ko-n-stru-to-ri), in British politics the party that substantially corresponds to what used to be the Tory party, taking the opposite side to the Liberals. The name came into use about the time of the passing of the Reform Act of 1832 and is often used as implying greater enlightenment or liberality than Tory.

Conservatory (ko-n-stru-to-ri), a name given on the European continent to a systematic school of musical instruction. Conservatories were originally benevolent establishments attached to hospitals, or other charitable or religious institutions. In Naples there were formerly three conservatories for boys; in Venice four for girls; the Neapolitan group being reduced in 1813 to a single establishment under the name Royal College of Music. In Milan a conservatory was established in 1808. In France the musical school established in connection with the Opéra received its final organization in 1795 under the name of Conservatoire de musique. Among its teachers have been Méhul, Cherubini, Grétry, Boieldieu, etc. The Conservatorium, founded at Leipzig in 1842 under the auspices of Mendelssohn, is perhaps the most influential in Germany, though of late years other schools have pressed closely upon it. Institutions of the same description exist in Warsaw, Prague, Munich, Berlin and Vienna, and the term has been adopted in the United States and the British dominions.

Conservatory, in gardening, a term generally applied by gardeners to plant-houses, in which the plants are raised in a bed or border without the use of pots, the building being frequently attached to a mansion. The principles of their construction are
Conserve (kon'serv), a form of medicine in which flowers, herbs, fruits, roots, are preserved as nearly as possible in their natural fresh state.

Conshohocken (kon-shō-hock’en), a town of Pennsylvania, on the Schuylkill River, 13 miles N.W. of Philadelphia. It has iron manufactures, woolen and cotton mills, and other industries. Pop. 7480.

Consideration (kon-sid-ĕr-a’shŭn), in law, the reason or substantial ground which induces a party to enter into a contract; the equivalent for something given, done, or suffered. It may be either expressed or implied, that is, when justice requires it and the law implies it.

Consignment (kon-sin’mant), a mercantile term which means either the sending of goods to a factor or agent for sale, or the goods sent. The term is chiefly used in relation to foreign trade. The receivers of consignments have usually to keep magazines and stores, for the use of which their consigners are charged. The profits of a consigning agency often compare favorably with the occasionally larger but much less safe profits of original ventures. The consigning trade is protected by special laws. In most countries a consignor can claim his goods and collect all outstanding debts for goods sold on his account by a consignee who has suspended payment.

Consistory (kon’sis-tor-i), the highest council of state in the papal government. The name is also applied to the court of every diocesan bishop, held in their cathedral churches for the trial of ecclesiastical causes arising within the diocese. In the English Church the consistory is held by the bishop’s chancellor or commissary and by archdeacons and their officials either in the cathedral church or other convenient place in the diocese.

Consolato del Mare (It., lit. ‘the consulate of the sea’), an ancient code of maritime law, supposed to be a compilation of the laws and trading customs of various Italian cities, as Venice, Genoa, Pisa and Amalfi, together with those of the cities with which they traded, as Barcelona, Marseilles, etc. It has formed the basis of most of the subsequent compilations of maritime laws.

Console (kon’sol), in architecture, a projecting ornament or bracket having for its contour generally a curve of contrary flexure. It is employed to support a cornice, bust, vase, or the like, but is frequently used merely as an ornament.

Consols (kon’solz), or Consolidated Annuities, a public stock forming the greater portion of the national debt of Great Britain. It was formed in 1751 by an act consolidating several separate stocks bearing interest at 3 per cent. into one general stock. At the period when the consolidation took place the principal of the funds united amounted to £9,137,821; but through the addition of other loans it has increased so much that now, after considerable reductions, it still amounts to more than half of the national debt. The interest of about £5,000,000 is payable in Dublin, that of the remainder in London.

Consonance (kon’sō-nans), in music, an agreeable accord of sounds, such as the third, fifth, and octave. See Concord.

Consonant (kon’sō-nant; L. con, with, sonare, to sound), a letter so named as being sounded only in connection with a vowel, though some consonants have hardly any sound even when united with a vowel, serving merely to determine the manner of beginning or ending the vowel sounds; as in ap, pa, at, etc. In uttering a consonant there is greater or less contact of some parts of the organs of speech; in uttering a vowel there is a want of such contact, the vocal passage being open, though variously modified. They are classed as liquids, sibilants, labials, dentals, palatales, gutturals, etc.

Conspiracy (kon-spir’a-sē), in law, an offense ranked as a misdemeanor, and punishable by imprisonment and hard labor. It is constituted...
by a combination between several persons to carry into effect any purpose injurious either to individuals, particular classes, or the community at large. When the conspiracy leads to any overt act of an unlawful kind, the offense becomes felony.

Constable (kon'sta-bl; Fr. constable; Old Fr. constable; Lat. comes stabuli, 'count of the stable'), an officer of high rank in several of the medieval monarchies. Among the Franks, after the major domus, or mayor of the palace, had become king, the comes stabuli became the first dignitary of the crown, commander-in-chief of the armies, and highest judge in military affairs. The constable, however, acquired so much power that Louis XIII in 1627 abolished the office entirely. Napoleon re-established it, but it vanished with his downfall. In England the office of lord high constable was created by William the Conqueror, and became hereditary in two different families, as annexed to the earldom of Hereford. After the attainder of Stafford, however, lord high constables were appointed only to officiate on special occasions. The office of lord high constable of Scotland, expressly reserved in the treaty of union, is hereditary in the noble family of Errol.

In the common modern acceptance of the term constables are police officers in towns, counties, etc., having as their duties the repression of felonies, the keeping of the peace, the execution of legal warrants, etc. In case of special disturbances or in certain neighborhoods citizens may be sworn in as special constables. In the United States a constable is usually the acting bailiff of a justice of the peace, serving writs, executing judgments, making distrain, etc.

Constable, John, an English landscape painter, born in 1776. He was employed in the business of his father, a wealthy miller, for some years, but entered as a student of the Royal Academy in 1799. It was not till 1814, twelve years after he had begun to exhibit pictures, that he succeeded in getting any of them sold. In 1819 his 'View on the River Stour' procured him admission as an associate of the Academy. From this period his reputation widely extended itself, both over Britain and the continent, and for some of his works exhibited at the Louvre he received a gold medal from the King of France. He died in 1837. His careful studies of landscape in respect of tone were of great influence in art, especially in France, which derived its best landscape work from him.

Constable (kon'stans), a town of Germany, in Baden, on the south bank of the Lake of Constance, at the outflow of the Rhine into the Lower Lake or Untersee, its chief edifices being a magnificent Romanesque church, the Kaufhaus (merchant-house), an ancient palace, a grand-ducal residence, several convents, a theater, etc. The town has various branches of industry and a considerable trade. It was once a flourishing imperial city much larger than at present. Pop. 24,818.

Constance, council of, a special council of the Church of Rome, held between 1414 and 1418. The German emperor, the pope, 26 princes, 140 counts, more than 20 cardinals, 7 patriarchs, 26 archbishops, 91 bishops, 900 other clerical dignitaries and doctors, and about 4000 priests, were present at this assembly, which condemned to death Huss and Jerome of Prague, deposed the rival popes John XXIII, Gregory XII, and Benedict XIII, and elected Martin V to the papal chair.

Constance, lake of (Lat. Lacus Bris- gantinus; Ger. Bodensee), a lake of Central Europe in which Switzerland, Baden, Württemberg, Bavaria, and Austria meet; forming a reservoir in the course of the Rhine; length N. W. to S. E. 42 miles, greatest breadth about 8 miles; area 207 sq. miles; greatest depth (between Friedrichshafen and Uttwil) 898 ft.; 1293 ft. above sea-level. At its N. W. extremity the lake divides into two branches or arms, each about 14 miles in length; the north, called the Überlingersee, after the town of Überlingen, on its north bank, the south the Zellersee or Untersee, in which is the fertile island of Reichenau, belonging to Baden, about 3 miles long and 1½ broad. The lake, which is of a
dark-green hue, is subject to sudden risings, the causes of which are unknown. It freezes in severe winters only. The traffic on it is considerable, there being numerous steamers. The shores are fertile, but not remarkably picturesque.

**Constant (kənˈstān-tān)**, **Benjamin**, portrait painter, was born at Paris in 1845. He studied in the École des Beaux Arts and under Cabanel. He exhibited with growing distinction, at successive salons, from that of 1860 with his Hamlet, his Scenes from Algiers in 1873-74, his great historical painting of Mohammed II in 1453 in the exposition of 1878, and in 1885 a large Oriental subject, as melodramatic as possible, with splendid rendering of the human figure and strong effects of color. His noble picture of Justinian is in the Metropolitan Art Museum, New York. He was decorated with the cross of the Legion of Honor in 1872, and was a member of the French Academy of Fine Arts. He died in 1902.

**Constant de Bebecque (kənˈstān-dər-bek)**, Henri Benjamin, born at Lausanne in 1797; a prominent French liberal politician. During the revolution he distinguished himself by his works upon politics and on revolutionary subjects, and was elected to the office of tribune; but his speeches and writings rendered him odious to the First Consul, and he was dismissed in 1802. He died in 1830.

**Constantia (kənˈstān-tē-ə)**, a small district in Cape Colony a few miles from Cape Town, celebrated for its wine, made from vines brought originally from Persia and the Rhine, esteemed the best liqueur wine after Tokay, and owing its special properties largely to the soil.

**Constantina (kənˈstān-tə-nə)**, a town of Spain, 40 miles N. N. W. of Seville. Argentiiferois lead mines are in the vicinity. Pop. 9687.

**Constantine (kənˈstān-tē-nə)**, a town in Algeria, capital of a province of same name, on a rocky peninsula, 1968 ft. above the sea, and accessible only on one side. It is surrounded by walls, and the only edifice deserving notice is the palace of the bay, now the residence of the French governor. Both within the town and in the vicinity Roman remains abound, the town having been built by the emperor whose name it bears, on the site of Cirta, the capital of the Numidian kings. The manufactures consist chiefly of wooden and linen goods; the trade is in corn, linen, and wax. Pop. of town (1906) 46,906.

**Constantine (konˈstān-tēn)**, **CaIUS Flavius Valerius Aurelius Claudius**, Roman emperor, sur- named the Great, son of the Emperor Constantius Chlorus, was born A.D. 274. When Constantine's father was associated in the government by Diocletian, the son was retained at court as a hostage, but after Diocletian and Maximian had laid down the reins of government, Constantine fled to Britain, to his father, to escape from Galerius. After the death of his father he was chosen emperor by the soldiery, in the year 306, and took possession of the countries which had been subject to his father, namely, Gaul, Spain, and Britain. He more than once defeated the Franks who had obtained a footing in Gaul and drove them across the Rhine; and then directed his arms against Maxentius, who had joined Maximian against him. In the campaign in Italy he saw, it is said, the vision of a flaming cross in the heavens, beneath the sun, bearing the inscription 'In hoc signo vinces.' Under the standard of the cross, therefore, he vanquished the army of Maxentius under the walls of Rome, and entered the city in triumph. In 313, together with his son-in-law, the eastern emperor, Licinius, he published the memorable edict of toleration in favor of the Christians, and subsequently declared Christianity the religion of the state. Licinius, becoming jealous of his fame, twice took up arms against him, but was on each occasion defeated, and finally put to death. Thus in 323 Constantine became the sole head of the Roman Empire. His internal administration was marked by a wise spirit of reform, and by many humane concessions with regard to
Constantine

slaves, accused persons, widows, etc. In 329 he laid the foundation of a new capital of the empire, at Byzantium, called after him Constantinople. In 332 he fought against the Goths, relieved the empire of a disgraceful tribute, and secured his frontier upon the Danube. In 337 he was taken ill, was baptized, and died, leaving his empire between his three sons, Constantine, Constantius and Constans. He is sometimes numbered among the saints, and his festival observed May 20 or 21.

Constantine, Paulovitich, Grand, prince of Russia, second son of Paul I, born in 1779. He distinguished himself in 1799 under Suwaroff, and at Austerlitz in 1805; and in 1812, 1813 and 1814 attended his brother, the Emperor Alexander, in all his campaigns. Later he superintended affairs in Poland. On the decease of his brother in 1825 he was proclaimed emperor, but renounced his claim. He died in 1831, execrated by the Poles as one of their most barbarous oppressors.

Constantine I, King of Greece from 1913 to 1917, was born at Athens August 2, 1868. At the outbreak of the European war his sympathies were with the German-Austrian combination, the Kaiser Wilhelm being his brother-in-law. He professed neutrality, but Great Britain and her Allies forced his abdication and placed his second son, Alexander, on the throne of the Hellenes on June 13, 1917. Constantine was charged with having violated the Constitution of which France, England and Russia are the trustees.

Constantine (k o n-stan-ti-n’pol; 'city of Constantine,' called by the Turks Stamboul, from the Greek sta tón polin, into the city), a celebrated city of Turkey in Europe, capital of the Turkish Empire, situated on a promontory jutting into the Sea of Marmora, having the Golden Horn, an inlet of the latter, on the north and the Bosphorus on the east. The city proper is thus surrounded by water on all sides excepting the west, where is an ancient and lofty double wall of 4 miles in length, stretching across the promontory. On the opposite side of the Golden Horn are Galata, Pera, and other suburbs, while on the Asiatic side of the Bosphorus entrance is Skutari. Occupying the extreme point of the promontory on which

Section of Santa Sophia, Constantinople.

the city stands is the Seraglio or palace of the sultan, which, with its buildings, pavilions, gardens, and groves, includes a large space. At the principal entrance is a large and lofty gate, called Bab Humayum, 'the high door' or 'sublime porte,' from which has been derived the well-known diplomatic phrase. Of the 300 mosques, the most remarkable are the royal mosques, of which there are about fifteen, esteemed the finest in the world. First among these is the mosque of St. Sophia, the most ancient existing Christian church, converted in 1453 into a mosque on the capture of the city by the Turks. Another magnificent mosque is that of Soliman; after which are those of the Sultana Valide, built by the mother of Mohammed IV, and of Sultan Achmet, the most conspicuous object in the city.
when viewed from the Sea of Marmora. The streets are mostly extremely narrow, dark, dirty, and ill paved, and exceedingly crooked and tortuous, but there has been a certain opening up and improvement within recent years owing to the construction of tramways and the railway to Adrianople, which runs along the shore of the Sea of Marmora and past the Scarpaglio to the entrance of the Golden Horn. The numerous covered and uncovered bazaars are severally allotted to particular trades and merchandize. Constantinople has but one remarkable square, called the long, and a little more than half a mile broad at the widest part. Among the imports are grain, timber, cotton stuffs, and other manufactured goods. The exports consist of silk, carpets, hides, wool, goats' hair, valonia, etc.—The suburb Galata is the principal seat of foreign commerce. Here are situated the arsenals, the dock-yard, the artillery barracks, etc., extending along the Bosphorus for nearly 1½ miles. It is an ancient place,—Pera occupies the more elevated portion of the promontory of which Galata forms the maritime part. Both it and Galata have now much of the appearance of modern European towns.—Torhane is situate a little farther up the Bosphorus than Galata, of which it forms a continuation. It has a government foundry and arsenal for cannon.—Constantinople occupies the site of the ancient Byzantium, and was named after Constantine the Great, who rebuilt it about a.d. 330. It was taken in 1204 by the Crusaders, who retained it till 1261; and by the Turks under Mohammed II, May 29, 1453—an event which completed the extinction of the Byzantine Empire. See Byzantine Empire and Byzantium. Pop. (1914), 1,300,000.

Constantinople, General Councils of. These include the second, fifth, sixth, the Trullan, and the eighth. The second was convoked by Theodosius the Great, in 381, to put down the enemies of the Nicene Creed, who had already been restrained by his decrees. The fifth general council was held by the Emperor Justinian in 553, to decide the dispute of the Three Chapters, or three doctrines of the Bishops Theodore of Mopseis, Theodoret, and Ibas of Edessa, who were suspected of Nestorianism, and declared heretics by the council. The sixth council, held 680-681, condemned the doctrines of the Monothelites, and declared their leaders heretics. As these two councils made no new ecclesiastical laws, the Emperor Justinian II, in 692, again summoned a general council, which, because it was held in the Trullan Palace, was called the Trullan Council. It instituted rigid laws for the clergy, among them those fixing the rank of the patriarchs and the permission of marriage to priests, which were so offensive to the Latin Church that she rejected all the decrees of this council, and, though the Greek Church they are still valid. The
Constitutions

Constitutions (k ɔ n-sti-to̱̊̊t-ə-nyun), the fundamental laws of a state, whether it be a written instrument of a certain date, as that of the United States of America, or an aggregate of laws and usages which have been formed in the course of ages, like the English constitution. The ideal constitution is that established by a free sovereign people for their own regulation, though the expediency of other forms at various stages of national development cannot but be recognized. The chief of these are:—1. Constitutions granted by the plenary power of absolute monarchs, or constitutions octroyées, such as Louis XVIII’s Charte. 2. Those formed by contract between a ruler and his people, the contract being mutually binding—a class under which, in a great degree, the British constitution must be placed. 3. Those formed by a compact between different sovereign powers, such as the constitutions of the German Empire, of the United Provinces of Holland, and of the Swiss Confederation. 4. Those made by the people of a country or state for their own government, as in the United States.

In regard to political principles, constitutions are:—1. Democratic, when the
Constitution

fundamental law guarantees to every citizen equal rights, protection, and participation, direct or indirect, in the government, such as the constitutions of the United States and of some cantons of Switzerland. 2. Aristocratic, when the constitution recognizes privileged classes as the nobility and clergy, and entrusts the government entirely to them, or allows them a very disproportionate share in it. Such a constitution was that of Venice, and such at one time those of some Swiss cantons, for instance, Bern. 3. Of a mixed character. To this latter division belong some monarchal constitutions, which recognize the existence of a king whose power is modified by other branches of government of a more or less popular character. The British constitution belongs to this division. For the text of the Constitution of the United States, see United States.

Constitution. The, an American frigate of 44 guns, launched Sept. 20, 1797, which became renowned in the suppression of Barbary pirates and for her many victories in the war of 1812. She was the subject of O. W. Holmes's poem Old Ironsides, by the influence of which she has been retained in the navy and is now at the Boston Navy Yard. She captured the British frigate Guerriere off Cape Race, August 19, 1812, in an action which lasted 30 minutes.

Consistent (kon-sub-stan'shal), an equivalent for the Greek term homoeosis, the true significance of which disturbed the religious world early in the fourth century. The Athanasians, or Trinitarians at the Council of Nice in 325, gave it the meaning indicated in the Nicene Creed, 'Of one substance with the Father' (applied to Christ).

Consolation (kon-sub-sa n'sha s'-shun); the doctrine that the body and blood of Christ coexist in and with the elements of the Eucharist, although the latter retain their nature as bread and wine; opposed to the Roman Catholic doctrine of transsubstantiation. The term consubstantiation was employed in the doctrinal controversies of the Reformation by non-Lutheran writers to designate the Lutheran view of the Saviour's presence in the Holy Supper. The Lutheran Church, however, has never used or accepted this term to express her view, but has always and repeatedly rejected it and the meaning it conveys in her official declarations.

Consul (kon'sul), a name originally given to the two highest magistrates in the republic of Rome. After King Tarquinius Superbus had been expelled by the joint efforts of the patricians and plebeians (509 B.C.), two consuls (consules) were placed at the head of the senate, the body in whose hands was the administration of the republic. These officers were annually elected, at first only from the patricians; at a later period (366 B.C.) also from the plebeians. In order to be eligible to the consulship, the candidate was to be forty-five years of age, and must have passed through the inferior offices of questor, aedile, and praetor, and he was required by law to be in Rome at the time of the election. All these laws, however, were disregarded at various junctures in Roman history. The insignia of the consuls were a staff of ivory with an eagle at its head, a toga bordered with purple (toga praetoria), which under the emperors was embroidered; an ornamental chair (sella curule), and twelve lectors, who, with fasces and axes, preceded them. In the beginning of the republic the authority of the consuls was almost as great as that of the preceding kings. They could declare war, conclude peace, make alliances, and even order a citizen to be put to death; but their powers were gradually curtailed, especially by the establishment of the tribunes of the people, early in the fifth century. But they still stood at the head of the whole republic; all officers were under them; the tribunes of the people only excepted; they convoked the senate, proposed what they thought fit, and executed the laws. In times of emergency they received unlimited power, and could even sentence to death without trial, levy troops, and make war without the resolve of the people first obtained. Under the emperors the consular dignity sunk to a shadow, and became merely honor.

The last consul at Rome was Theodorus Paulinus (A.D. 536).

In France the name of consul was temporarily adopted for the chief magistrates after the revolution. The directorial government (third constitution) having been abolished by the revolution of the 18th Brumaire, of the year VIII (Nov. 9, 1799), a provisional consular government, consisting of Bonaparte, Sieyes, and Roger Ducos, established the fourth constitution, proclaimed Dec. 15, by which France was declared a republic under a government of consuls. Three elective consuls (Bonaparte, Cambacérès, Lebrun) had almost uncontrolled executive authority, while the legislative power was in the hands of the tribunate and the legislative assembly; a conservative senate was also elected. But as early as Aug. 2, 1802, Bonaparte was proclaimed First Consul for life, and thus the constitution of
France became again practically monarchical. On April 10, 1804, he was proclaimed emperor, and even the nominal consulate ended.

At present consuls are officials appointed by the government of one country to attend to its commercial interests in seaports or other towns of another country. The duties of a consul, generally speaking, are to promote the trade of the country he represents; to give advice and assistance when called upon to his fellow-subjects; to uphold their lawful interests and privileges if any attempt be made to injure them; to transmit reports of trade to his own government, to authenticate certain documents, etc. They are generally of three ranks: consul-general, consul, and vice-consul.

The position of the United States consuls is minutely described in the Regulations, Washington, 1896. Under various treaties and conventions they enjoy large privileges and jurisdiction. By the treaty of 1816 with Sweden the United States government agreed that the consuls of the two states respectively should be sole judges in disputes between captains and crews of vessels. (Up to 1906 there were eighteen treaties containing this clause.) By convention with France in 1853, they likewise agreed that the consuls of both countries should be permitted to hold real estate, and to have the “police interne des navires à commerce.” In Borneo, China, Korea, Morocco, Persia, Siam, Tripoli and Turkey an extensive jurisdiction, civil and criminal, is exercised by treaty stipulation in cases where United States subjects are interested. Exemption from liability to appear as a witness is often stipulated. To the consuls of other nations the United States government has always accorded the privileges of arresting deserters, and of being themselves amenable only to the federal and not to the state courts. They also recognize foreign consuls as representative suitors for absent foreigners. The United States commercial agents are appointed by the president, and are distinct from the consular agents, who are simply deputy consuls in districts where there is no principal consul. By a law of April, 1906, the U. S. consular service was reorganized and graded, the office of consul-general being divided into seven classes, and that of consul into nine classes.

Consuls are appointed by the president with the concurrence of the Senate. No specified term of service is fixed; usually all important consular officers are changed with changes of the administration. The result of this system has long been recognized to be unsatisfactory. A large measure of special knowledge is required for efficient consular service and such knowledge can be gained only through long service. Another defect from which the American consular system suffers is inadequacy of salaries. There are only a few posts carrying a salary of over $3500. In some cases fees for verifying invoices, etc., add very materially to the income of the consul; but in very few cases does the aggregate income of the consul compare with that of officers of like grade of foreign nations.

Consular reports on commercial matters are published by the bureau of statistics. These appear daily, and are later collected in monthly issues. At various times inquiries concerning matters of trade and industry are sent to the various consuls, and their reports are published by the same bureau.

Consumers’ League, an organization which aims at bettering the conditions of workers and educating consumers to a knowledge of their responsibility toward the workers. It was begun in England in 1890 and spread the same year to the United States of America. The Working Women's Society of New York was making an investigation into the conditions of the employment of women in the city stores and called together a meeting to ask consumers to aid them in their movement. The result was the formation of the Consumers' League of New York (January, 1891), and of other great cities. The league began to inquire into the conditions of service which obtained in the retail stores, especially as regards wages, hours of labor, physical conditions, holidays and general treatment. After investigation it published a 'white list' of stores which satisfied their demands and through which members were encouraged to purchase goods. The league soon undertook to also inquire into factory conditions and laid down certain conditions to be satisfied before members would purchase goods coming from factories. A label which might be used by factory owners who came up to their standards of employment devised. The league propagates its views by lectures and literature.

Consumption (kon-sum's h u n), or Phthisis (th' e s i s; Gr. phthón, to consume), now usually known as tuberculosis (which see).

Consumption, in political economy, all use or expenditure of the products of industry or of things having an exchangeable value. It is usually characterized as productive or
unproductive, according as it does or does not conduce to the efficiency of a producer and to further production. Thus wealth in the form of machinery is consumed productively by wear and tear in the processes of production; and, similarly, wealth expended in improving land is productively consumed; but the wealth expended in the maintenance of an operatic artiste is, from the ordinary point of view, unproductively consumed. The classification, however, is not of a very definite kind, the distinction lying, for the most part, in the degree of directness and obviousness with which the act of consumption is related to production. Hence in the case of the operatic artiste it is sometimes urged that the recreational benefit conferred upon the community tends indirectly to increase efficiency in production, and that from this point of view the artiste consumes productively. So the expenditure of wealth in war, or in preparations for war, usually classed as unproductive, may be really productive of consumption, as tending to the assurance of the producer in the stability of the commercial conditions. The perfect characterization of an act of consumption as productive or unproductive involves the consideration of elements of a frequently incommensurable kind, and the rough practical economic test has to be employed with some amount of reservation. Consumption is the end of all production; and as the demand of the consumer determines the employment of the various coefficients of production, land, labor and capital, it is urged by many later economists that the scientific treatment of economics should proceed from consumption to production, instead of from production to consumption in accordance with the method of the older economists. To make standards may be laid upon this method, but the consideration of economic problems from the standpoint of the consumer is of advantage, as giving the social need, rather than the producer's profit, the prior claim upon the attention.

Contact Action. See Catalysis.

Contagion (k o n t a j ə n), the communication of disease by contact direct or indirect. A distinction has sometimes been made between contagion, as the communication of disease strictly by contact, and infection, as communication of disease by the miasmas, exhalations or germs which one body gives out and the other receives. There is little doubt that excessively minute disease germs proceed from the breath, the perspiration or other excretions of a diseased person, and are capable of propagating the disease in another person; but much remains to be learned concerning the action of these. Antiseptics, or disinfectants, are used to destroy the poisonous particles, such as formaldehyde, carbolic acid, sulphur, permanganate of potash, chlorine gas, etc.

Contagious Diseases (Animals) Act, an act of the British Parliament passed in consequence of the ravages of the disease known as Rinderpest or cattle-plague, which broke out in 1865. Commissioners were appointed to investigate the subject, and in 1889 an act (subsequently amended by acts in 1878, 1884 and 1886) was passed enforcing regulations for preventing the introduction and spread of contagious diseases.

In the United States similar acts were made to stamp out pleuro-pneumonia, or lung plague, which caused much loss among swine. Kentucky, Indiana, Illinois and Missouri suffered largely from this disease, but it has been completely stamped out by the Bureau of Animal Industry. The symptoms of lung plague are fever, dry muzzle, accelerated pulse and respiration, depression, cough and indications of pleurisy and pneumonia. In about 50 per cent. of the cases death occurs in from one to two weeks from its attack; of the remainder about one-half become chronic and recover. No therapeutic that has been tried has been found of any value, so governments have made regulations to quarantine infected and suspected animals, and for the slaughter of those regarded as dangerous to animals. The United States freed itself from pleuro-pneumonia by enforcing these measures. It is estimated that the loss caused by this disease reached several million dollars in this country, while in Britain the annual loss for some years amounted to over $10,000,000. It does not affect human beings. See Rinderpest.

Contango (kon-təng'gō), in stock-jobbing, a sum of money paid to a seller for accommodating a buyer, by carrying the engagement to pay the price of shares bought over to the next account day. In reality, contango is interest paid for the loan of money for the interval between account days. The price at which the bargain is entered is called the making-up price.

Contarini (kon tə rinnə), a noble family of Venice which furnished seven doges to the State, besides several men of note.
Contempt (kon-tem’t’), an offense against the dignity, order, or authority of a court or legislative assembly. Contempts committed out of court may be punished by fine or imprisonment, contempts done before court are usually punished in a summary way by commitment or fine. The power of vindicating their authority against contempt is incident to all superior courts.

Continent (kon’ti-nent’), a connected tract of land of great extent, forming a sort of whole by itself, as Europe, Asia, Africa, North and South America; or we may speak of the Eastern and Western continents, Europe, Asia and Africa being regarded as one, and North and South America another. Australia, from its size, is often regarded as a continent, while Europe and Asia, regarded as a single body of land, are frequently spoken of as a continent under the name of Eurasia.

Continental System (kon-ti-nen-tal), a plan devised by Napoleon to exclude Britain from intercourse with the continent of Europe. It began with the decree of Berlin of November 21, 1806, by which the British Islands were declared to be in a state of blockade; all commerce, intercourse and correspondence were prohibited; every Briton found in France, or a country occupied by French troops, was declared a prisoner of war; all property belonging to Britons, fair prize, and all trade in goods from Britain or British colonies entirely prohibited. Britain replied by orders in council prohibiting trade with French ports, and declaring all harbors of France and her allies subjected to the same restrictions as if they were closely blockaded. Further decrees on the part of France, of a still more stringent kind, declared all vessels of whatever flag, which had been searched by a British vessel or paid duty to Britain, denationalised, and directing the burning of all British goods, etc. These decrees caused great annoyance, and gave rise to much smuggling, till annulled at the fall of Napoleon, 1814.

Contingent (kon-tin’jent’), the name often given to the quota of troops which is to be furnished by each member of a number of states composing a confederation.

Continuity (kon-ti-nu’ti-), Law of, an important principle in the investigation of the laws of motion and change in general. It may be enunciated thus: nothing passes from one state to another without passing through all the intermediate states.
Contract

tage accrues to the party sued. Lastly, the contract is voidable if obtained by fraud, mistake, or compulsion.

Contract, in politics, that which is supposed to exist from the beginning between the sovereign power and the subject. Such a contract is evidently a mere supposition, having no historical foundation in any annals which have been preserved.

Contractility (kon-trak-t'il-i-ty), the power which certain tissues in animals and plants have during life, of shortening themselves. It may be either voluntary or involuntary.

Contractions (kon-trak'shuns), abbreviations employed with the view of saving labor in writing, and also in former times with the view of saving parchment in extending MS. copies of works, deeds, etc. Contraction takes place in several modes, as by elision: writing a smaller letter above the word contracted; running two or more letters into one character; by symbols representing syllables or words; by initial letters; thus: med. for medicina; sec. for secundum; & for et; p for per; S.P.Q.R. for Senatus populusque Romanus. When the contraction consists of the initial letter, syllable, or syllables of a word, as al for ultimo, it is more correctly termed an abbreviation. See Abbreviations.

Contralto (kon-tral'to), in music, the highest voice of a male adult, or the lowest of a woman or a boy, called also the Alto, or when possessed by a man Counter-tenor. It is next below the treble and above the tenor, its easy range being from tenor G to treble C.

Contrate-wheel (kon-trat'), a wheel having the teeth projecting perpendicularly to the plane of the wheel.

Contravallation (kon-vä-val-lä'shun), in fortification, a line formed in the same manner as the line of circumvallation, to defend the besiegers against the enterprises of the garrison.

Contrayerva (kon-tra-yer'va), the aromatic, bitterish root of Dorstenia Contrayerva, a plant of the nettle family, imported from tropical America, and used as a stimulant and tonic.

Controller (kon-trö'ler), a public officer appointed to control, oversee, or verify the accounts of other officers.

Contumacy (kon'tu-mas-si), in law, disobedience of the orders of a court; the offense of non-appearance when summoned judicially.

Conus (kön'us), a genus of gastropodous molluscs, the type of the family Conidae or cone-shells, so named from the conical form of the shell. They are found in the southern and tropical seas.

Convalescent Hospitals, hospitals intermediate between ordinary hospitals and the homes of the patients, established in order that those who have been successfully treated may be fully restored to health and strength before going back to their former unsanitary surroundings.

Convallaria (kon-vä-lä'ri-a), a genus of plants, nat. order Lilacceae, the only species being the lily-of-the-valley. Convallamarin and convallaria are two glucosides obtained from the plant and are used in functional affections of the heart and in cardiac dropsy for their stimulating effect on the heart.

Convection of Heat, the transfer of heat by means of the upward motions of the particles of a liquid or gas which is heated from beneath. See Heat.

Convent (kon'vent), a religious house inhabited by a society of monks or nuns. See Monastery.

Conventicle (kon'vent'ikl), a private assembly or meeting for the exercise of religion. Historically, the term was specially applied to meetings of petty sects and dissenters in the statutes of the time of Charles II.

Convention (kon'ven'shun; Lati n, conventio, a meeting), a formal or statutory assembly, particularly of delegates or representatives, for discussing civil or political matters. In Great Britain the name Convention Parliament is given to the assembling of Parliament without the king's writ: as in 1688, when Charles II was restored, and in 1688, when the throne was left vacant by the flight of James II.—National Convention, in French history, the name given to that body which met after the legislative assembly had pronounced the suspension of the royal functions (September, 1792), and proclaimed the republic at its first sitting.

Conversano (kon-ve-rä'sä-no), a town in South Italy, province of Bari, 18 miles s. e. of Bari, with a fine cathedral, and a trade in wine, oil, almonds, flax and cotton. Pop. 13,685.

Conversazione (sät-sil-on'e), a reception, usually on a large scale and in the evening, at which the company move about, converse with
Conversion

their acquaintances, partake of tea, coffee, or other refreshments, and often have objects of art, science, or general interest set out for their inspection.

Conversion (kon-vehr'shun), a term in logic. A proposition is converted when the predicate is put in the place of the subject, and the subject in place of the predicate; as, 'no A is B ('no virtuous man is a rebel'), the converse of which is 'no B is A ('no rebel is a virtuous man'). Simple conversion, however, in this manner is not always logical. In the case of universal affirmatives, for example, 'all A are B' (say, 'all men are animals'), the simple converse 'all B are A' ('all animals are men') would not be true.

Converter (kon-ver'ter), the vessel used in the Bessemer steel-making process which holds the molten iron or carbide of iron which is to be converted into steel.

Convex (kon'veks; Lat. in concavis, resulted by arching), rising in a circular or rounded form; the contrary to concave (which see). Thus the inside of a watch-glass is concave, the outer surface convex.

Convex Lens. See Lens.

Conveyancing (kon-ve'än-sing), the practice of drawing deeds, leases, or other writings (conveyances) for transferring the title to property from one person to another, of investigating the title of the vendors and purchasers of property, and of framing those multifarious deeds and contracts which govern and define the rights and liabilities of families and individuals. The business of conveyancing is carried on by barristers, solicitors, and members of the legal profession generally.

Convict (kon'vekt), the general term for a person who has been found guilty of a serious offense and sentenced to penal servitude, such servitude consisting at times of forced labor on some public work. In England transportation was formerly the equivalent punishment.

Convocation (k o n-vō-ka'shun), an assembly of the clergy of England, belonging either to the province of Canterbury or to that of York, to consult on ecclesiastical matters. From the fact that the province of Canterbury is by much the more influential of the two provinces into which England is ecclesiastically divided, the convocation of the province of Canterbury is often spoken of as the convocation, as if there were only one. In former times convocations had the power of enacting canons; but this power was virtually abolished by the statutes of Henry VIII and Elizabeth.

Convolvulaceae (kon-vol'vul-ā'sē-ə), a natural order of plants comprising about 700 species largely consisting of climbers. Some of them have valuable properties. Jalap is derived from the Esagonia or Ipomoea purga, an inhabitant of Mexico.

Convolvulus (kon-vol'vul-lus), a genus of plants, type of the nat. ord. Convolvulaceae, consisting of slender twining herbs with milky juice, bell-shaped flowers, and five free stamens. Some species are commonly known as bind-weeds (C. arvensis); others are cultivated in gardens. C. tricolor, or minor convolvulus, with its large flowers of violet-blue, white, or yellow, a familiar species. Scammony is obtained from the root of the Convolvulus Scammonia, a native of Syria; the liqueur Noyaux from C. dissectus. Some species, like the C. Batatas, or sweet-potato, have tuberous and fleshy roots capable of being used as food. Convolvulus Jalapa was long considered as yielding the true jalap of commerce. This is now known to be procured from Esagonia or Ipomoea purga, an allied plant, found in the mountainous regions of Mexico.

Convoy (kon-voi), a fleet of merchantmen under the protection of a ship or ships of war, or the ship or ships appointed to conduct and defend them from attack and capture by an enemy. In military language it is used for escort.

Convulsion (kon-vul'shun), a violent involuntary, spasmodic muscular contraction or series of contractions, with alternate relaxations. Convulsions are universal or partial, and have obtained different names according to the parts affected, or the symptoms. The muscles principally affected in all species of convulsions are those immediately under the direction of the will, as those of the eyelids, eye, face, jaws, neck, superior and inferior extremities. Convulsions are produced commonly by irritation of some part of the brain or spinal cord, such as the general convulsions in inflammation of the brain membranes or of the nerves themselves. Children of a nervous temperament are often the subjects of convulsions during dentition, particularly when accompanied by a disordered state of the bowels or the presence of worms.

Convulsionists (k o n-vul'shun-ists). Convulsionists, those fanatics of the eighteenth century in France who had or affected to have convulsions, produced by religious im-
Conway

pulses. The name was first applied to females who exhibited varied seizures at the tomb of a Jansenist at St. Médard, some jumping, some barking, and others mewing like a cat.

Conway (kon'wā), or Aberconway, a town and very ancient borough of North Wales, in Carnarvonshire, about 13 miles E.N.E. of Bangor, at the mouth of the Conway. It is notable for its old castle built by Edward I, a suspension bridge built by Telford, and a tubular railway bridge by Stephenson. Pop. 5242.—The river Conway has a course of about 90 miles through much romantic scenery.

Conway, Henry Seymour, an English field-marshall, born in 1720, second son of the first Lord Conway. He was aide-de-camp to the Duke of Cumberland at Culloden in 1746, commanded the French general in Germany in 1761, was Secretary of State in the Whig cabinet 1761–68, was made commander-in-chief of the army in 1782, and moved in Parliament to cease hostilities against the United States. In allusion to this Burke said, 'All England, all America, joined in his applause.' He died in 1786.

Conway, MONCURE DANIEL, author and preacher, born in Stafford Co., Virginia, in 1822; died in 1907. He entered the Methodist ministry in 1849, but afterwards became a distinguished Unitarian pastor and an earnest antislavery advocate. He became pastor of a congregation in London in 1863. He wrote The Golden Hour, Demonology and Devil Lore, The Wandering Jew, Pine and Palm, Life of Thomas Paine, etc.

Conwell, RUSSELL H., American clergyman, born at Worthington, Mass., February 15, 1843. After serving in the Civil War and as newspaper correspondent, he was ordained to the ministry and became pastor of Grace Baptist Church, Philadelphia. This church, now known as the Baptist Temple, has prospered greatly under his administration. He has also founded the Temple College (now Temple University, which see) and the Samaritan Hospital.

Coney, CONEY (kö'nī), an old name for the rabbit; used also in the English version of the Bible as a translation of a Hebrew word probably meaning the Hyrax Syriacus, a rabbit-like animal common in Syria and Palestine, inhabiting crevices of rocks. See Hyrax.

Conya (kö-n'за), a genus of plants, nat. order Composite, annual or perennial herbs, scattered over the warmer regions of the earth, a few being found in temperate countries. None possess properties of any value. In England C. squarrosa is called fleabane because of its supposed property, when powdered and sprinkled, of driving away fleas.

Cooch-Behar, or KUCH-BEHAR, (kūch- bé-hār'), a native state in India, in political relation with the government of Bengal. It forms a level plain of triangular shape, intersected by numerous rivers, and is entirely surrounded by British territory. The greater portion of the soil is fertile and well cultivated. Area, 1307 sq. miles; pop. 567,037.—The chief town, Cooch-Behar, contains some handsome public buildings and a splendid new palace of the maharajah. Pop. 12,000.

Cook, James, a famous British navigator, born in Yorkshire in 1728, of parents not above the rank of peasantry. He was at first apprenticed to a shopkeeper; but acquiring a love for the sea, he became a sailor. In 1755 he entered the royal navy, and four years later as sailing-master of the Mercury performed valuable services in surveying the St. Lawrence River and the coast of Newfoundland. Some observations on a solar eclipse, communicated to the Royal Society, brought him into notice, and he was appointed commander of a scientific expedition to the Pacific. During this expedition he successively visited Tahiti, New Zealand, discovered New South Wales, and returned by the Cape of Good Hope to Britain in 1771. In 1772 Captain Cook, now raised to the rank of a commander in the navy, com-
manded a second expedition to the Pacific and Southern Oceans, which resulted, like the former, in many interesting observations and discoveries. He returned to Britain in 1774. Two years later he again set out on an expedition to ascertain the possibility of a northwest passage. On this voyage he explored the western coast of North America, and discovered the Sandwich Islands, on one of which, Hawaii, he was killed by the natives, February 14, 1779. Captain Cook wrote and published a complete account of his second voyage of discovery, and an unfinished one of the third voyage, afterwards completed and published by Captain James King.

Cook, JAY, banker, born at Sandusky, Ohio, in 1821; died in 1896. He engaged in the banking business at Philadelphia in 1842 and established a new firm in 1861, which did a large and useful business as a government agency in placing war-loans. It subsequently financed the Northern Pacific Railroad, thus leading to the failure of the firm in 1873, the first event in the great financial panic of that year. The later success of the Northern Pacific Railroad restored Mr. Cooke's wealth.

Cook, JOHN ESTEN, author, born at Winchester, Virginia, in 1830; died in 1886. His works include The Virginia Comedians, Larry of Eagle's Nest, The Last of the Foresters, Hammer and Spatier, also History of Virginia, Life of Robert E. Lee, etc.

Cook, ROSA TERRY, authoress, born at West Hartford, Connecticut, in 1827; died in 1892. She wrote Somebody's Neighborhood, Huckleberries, Poems by Rosa Terry, etc., most of her writings being short tales of much power and literary merit.

Cookery (koo'ker), the preparation of food so as to render it more palatable and more digestible. The art of cookery brings comfort, but also for health. Food is mainly prepared by submitting it to the action of fire as by roasting, boiling, stewing, etc. Each of these processes develops a different flavor in food, but they result alike in rendering the tissues, both of animal and vegetable food, softer and much more easily dealt with by the digestive organs. The art of cookery was carried to considerable perfection among some of the ancient nations, as for instance the Egyptians, Persians, and Athenians. Extravagance and luxury at table were notable features of Roman life under the empire. Among moderns the Italians were the first to reach a high degree of art in this department. Their cooking, like that of the ancient Romans, is distinguished by a free use of oil. Italian cookery seems to have been transplanted to the princes of the House of Medici to France, and was carried there to perhaps the highest degree of perfection; even yet the skill and resource which the French cook shows in dealing often with very slight materials is a highly creditable feature in the domestic economy of the nation. No other people seems to have equalled the French in this art.

Cook's Inlet, an inlet of the North Pacific Ocean, running into the territory of Alaska for about 150 miles; explored by Captain Cook in 1778.

Cook's Islands, a name of the Hervey Islands, given to them because discovered by Captain Cook. See Hervey Islands.

Cook's Strait, the channel which separates the two principal islands of New Zealand, discovered by Captain Cook in 1770.

Cookstown (kuks'toun), a town of Ireland, County Tyrone, 10 miles north of Dungannon; has manufactures of linen and large trade in flax. Pop. 3631.

Coolers (koo'lers), WATER, vessels of porous, unglazed earthenware, in which a liquid can be kept cool by constantly exuding through the substance of the ware and evaporating from the outer surface of the vessel.

Coolie (koo'li; Tamil, kuili), a name in Hindustan for a day laborer, also extended to those of some other eastern countries. Many of these have been introduced into the West Indies, Mauritius, and other places, their passage being paid for them on their agreeing to serve for a term of years. The first coolie emigrants appear to have been those sent to British Guiana from Calcutta in 1834, and the last of labor well after the abolition of slavery. The coolies employed in Guiana are chiefly from India.

Cooley (ko'le), THOMAS M., jurist, born at Attica, New York, in 1824. He removed to Michigan in 1843, studied law, and in 1859 became professor of law in Michigan University. He was a justice of the Supreme Court of Michigan in 1864; chief justice in 1867; retired from the bench in 1883, and was appointed by President Cleveland on the Interstate Commerce Commission, of which he was chairman. He resigned in 1891 and died in 1898. He ranked among the highest of constitutional jurists and was the author of
Coomassie

numerous legal works, chiefly based on the Constitution of the United States.

Coomassie (kō-məs′ē), a town of West Africa, capital of Ashantees, which was annexed to Great Britain in 1901. It was taken and burned by Sir Garnet Wolseley, at the head of the English expedition sent against the Ashantees in 1874. Pop. about 30,000.

Coomb (kōm), William; born at Bristol in 1741; died in 1823, author of several popular works, including the Diabolical; the Devil upon Two Sticks in England, a continuation and imitation of Le Sage’s novel, but far inferior in spirit and graphic delineation to the original; the Tour of Dr. Syntax in Search of the Picturesque; the History of Johnny Que Genua; English Dance of Death, etc., all accompanied by Rowlandson’s prints, to which they owe most of their value.

Coomie (kō’mē), a present in place of customs-duty, demanded by the kings and chiefs at parts of the West African coast for permission to trade with the natives.

Comptah (kōm’tə), a town of India on the sea-coast, in the presidency of Bombay, about 330 miles s. s. e. of Bombay. It has an open roadstead and a large cotton trade. Pop. 10,629.

Cooper, Sir Astley Paston, an English surgeon, was born in Norfolkshire in 1781; died in 1841. He studied medicine in London, and attended the lectures of John Hunter. After visiting Paris in 1794 he was appointed professor of anatomy at Surgeon’s Hall, and in 1800 head surgeon of Guy’s Hospital. He became a very eminent surgeon. In 1822 appeared his great work on Dislocations and Fractures. Shortly afterwards he became president of the Royal College of Surgeons, and honors and titles of every kind poured in on him.

Cooper, James Fenimore, an American novelist, born at Burlington, New Jersey, in 1789, studied at Yale College, and entered the American navy as a midshipman at the age of sixteen. In 1821 appeared the novel of Precaution, the first production of his pen. Though successful, it gave no scope for his peculiar powers, and it was not till the production of the Spy and the Pioneers that he began to take a high place among contemporary novelists. After that came a steady flow of novels dealing with life on the sea and in the backwoods, most of which, like the Pilot, Red Rover, Waterwitch, Pathfinder, Deerslayer and Last of the Mohicans, are familiar names to the novel-reading public. After visiting Europe and serving as consul for the United States at Lyons for three years, Cooper returned to America and died at Cooperstown, New York, in 1851. Besides his novels he wrote a history of the United States Navy and some volumes descriptive of his travels.

Cooper, Peter, an American inventor, manufacturer, and philanthropist, born in 1791; died in 1883. He started life with few advantages, being almost self-educated; but by dint of energy, perseverance, sagacity and integrity, accumulated a large fortune. He carried on the manufacture of glue and linseed oil for over fifty years, and was also connected with the iron manufacture, the railways (he designed and built the first American locomotive), and the telegraphs of the United States. The ‘Cooper Union’ in New York was established by him to furnish a free education in art and practical science. It comprises day classes, in which women are instructed in drawing, painting, and other branches of art; evening classes, in which young men and women are taught art, engineering, chemistry, mathematics, etc.; free reading-room and library, etc.

Cooperative Societies (kō-s-op′er-a-tiv), are associations of individuals for mutual assistance in industrial or commercial objects. One form of cooperative societies is that of an association of men belonging to some trade or industry for the purpose of carrying it on entirely by their own efforts, and thus securing all the profits of their labors to themselves; but much more common associations are those the object of which is to provide the members, and sometimes also the general public, with the ordinary household necessities, at as near as possible the prime cost. Associations of the former kind are thus associations for production, those of the latter for distribution, by means of what are commonly known as Cooperative Stores. Co-operative societies of the latter kind have been established very widely in Great Britain, one of the first and most successful of them being the Rochdale Equitable Pioneers’ Society, which, like others, is conducted on the principle of dividing the surplus profits among the members alone in proportion to their purchases, after a certain fixed percentage has been deducted for interest on the capital subscribed. This society commenced in 1844 with only nineteen members; it has now 5000 or 7000, and buys goods annually to the value of
more than $1,500,000. A striking feature in connection with the societies in the North of England, where they are very numerous and flourishing, is the formation of an association of cooperative societies. The North of England Cooperative Wholesale Society, for the purpose of making their purchases on as large a scale as possible, so as to increase the profits. There are now in Great Britain about 1300 societies, with sales amounting to $150,000,000 a year. Similar associations have been formed for the benefit of other than the working classes, such as clergymen, lawyers, medical practitioners, officers in the army and navy, members of the civil service, etc. The Civil Service Supply Association of London is the most extensive of these, and has been very successful, the annual sales amounting to about $8,500,000. Manufacturing associations of all kinds have been tried on the European continent, but neither there nor in Britain have they, on the whole, been very successful. In these societies, generally called Working Men’s Associations, the shareholders are usually also the workmen, and the surplus profits are divided among them as workmen after they have received the fixed percentage as shareholders, and in some cases also among the workmen who are not shareholders, if there are any such. In Germany there are societies for the purchase of raw materials, manufacturing associations, societies of united shops, and cooperative stores. In the United States cooperation has as yet chiefly taken the form of building-loan associations for providing the members with houses of their own, productive and distributive societies having made slow progress. See also Building Societies and Friendly Societies.

Cooper’s Creek, or the Barcoo, called by the latter name chiefly in its upper course, the largest inland river of Australia, which rises in Queensland by two branches, the Thomson and Victoria (or Barcoo), and flows southwest to Lake Eyre.

Coordinates (kò-or’di-nàts), in geometry, a term applied to lines, to which points under consideration are referred, and by means of which their position is determined. Co-ordinates either determine the position of a point in space or in a plane which is understood to contain all the figure under consideration. They determine position by straight lines only, or by a straight line and angles; in the latter case they are called polar co-ordinates. When co-ordinates are at right angles to each other they are called rectangular co-ordinates, and when they make any other angle with each other they are called oblique co-ordinates. In the fig. ox oy are two fixed lines at right angles to each other, and P is a point whose position is to be determined.

If we know on and on we can easily find the position of P, of which on ox are called the coordinates.

Coorg (kòorg), or Kuro, an ancient principality now a province in Southern Hindustan, lying between Mysore on the east and northeast and the districts of South Canara and Malabar on the west; area 1563 sq. miles. The country has a healthy climate and yields coffee, spices, timber, etc. The capital is Merkara. Pop. 180,607.

Coos (kò-os). See Coa.

Coosy (kò’si), a river of Northern Bengal, which rises among the Nepaul Himalayas, flows in a southerly direction, and falls into the Ganges after a course of 325 miles.

Coot (kút), a gallinaceous bird of the rail family (Rallidæ), frequenting lakes and ponds. The common coot (Fulica atra) has a bald forehead, a black body, and lobated toes, and is about 15 inches in length. The nests, which are very large, strong, and compact, are composed of reeds and rank water-herbage, built sometimes near the water’s edge, and sometimes on small islets at some distance from the shore. Should the nest be set adrift by a rise of water, the female coot seems in no wise disturbed, but sits composedly on her eggs until it is stranded. The coot of India, China and Japan is said to be identical with that of Europe, but the North American coot is now recognised as a distinct species, and has received the name of F. Wilsoni.

Copaiba, Copaifera (ko-pa’iba, ko-pa’-va), the name of a balsam and an oil. The balsam is a liquid resinous juice flowing from incisions made in the stem of a plant, Copaifera officinalis (nat. order Leguminose), and several other species of the genus, growing in Brazil, Peru, etc. It consists of several resins dissolved in a volatile oil. The resins are partly acid and partly neutral; the oil is clear, colorless and has an aromatic odor. It is used in
Copais (ko-pa'is), or Topolias, a lake or marsh of Greece in Boetia, enclosed by mountains on every side, and forming a shallow expansion of the river Cephissus some twenty miles broad, the water having numerous subterranean outlets to the sea. In 1881 a French company was formed for draining the lake or marsh, and thus redeeming some 62,000 acres of land. Operations were commenced in 1881, and the drainage was completed before the end of the century.

Copal (ko'pal) is a gum-resin yielded by different trees in Africa, South America, India and Australia, and differing considerably in quality in its several varieties; but in general it is hard, shining, transparent, and citron-colored. When dissolved in alcohol or turpentine it makes a beautiful and very durable varnish. Indian copal, known in England as gum animé, is produced by Vateria Indica; Madagascar copal from Hymenaea verrucosa; Brazilian copal from several species of Hymenaea and Icica, and from Trachylobium martianum. A substance called fossil copal or copolin is found in some places. It resembles copal resin in color and odor.

Copalche Bark (ko-pal'chê), the bark of the Strychnos pseudochina (order Euphorbiaceae), a native of Brazil. The name is also given to the bark of Croton pseudochina (order Loganiaceae) of Mexico. It resembles cascarilla bark in its properties.

Copan (ko-pan'), an ancient ruined city of Honduras, Central America, on the Copan River, with some remarkable remains of Indian origin.

Coparcenary (ko-par'cê-nar-e), in law, partnership in inheritance; joint heirship in which each is entitled to a distinct share of the benefits, while the property remains undivided.

Copartnership. See Partnership.

Cope (kop), a sacerdotal vestment, resembling a sleeveless cloak with a hood reaching from the shoulders to the feet, worn on solemn occasions.

Cope, CHARLES WEST, an English painter, born in 1811, studied at the Royal Academy and in Italy, and first exhibited at the academy in 1831. In 1843 he gained a prize of £300 for his picture The First Trial by Jury; in 1844, by his fresco the Meeting of Jacob and Rachel, he secured the commission for one of six frescoes for the House of Lords, producing accordingly Edward the Black Prince receiving the Order of the Garter. He executed eight frescoes from English history of the seventeenth century for the House of Lords, while his other works were numerous, the subjects being historical, romantic, or domestic. He also produced Last Days of Cardinal Wolsy, Departure of the Pilgrim Fathers, L’Allegro and II Penseroso, Milton’s Dream, Shulock and Jessica, Ann Page and Slender, Lear and Cordelia. He became A.R.A. in 1844 and R.A. in 1848, but retired in 1883, and died in 1890.

Cope, EDWARD DRINKER, an eminent naturalist, born at Philadelphia, Pennsylvania, in 1840; died in 1897. He was professor of natural history at
Copeck

Haverford College 1864-67, and for many years paleontologist to the United States Territorial Surveys. In 1864 he was appointed curator of the National Museum in Washington, in 1891 became professor of geology in the University of Pennsylvania, and in 1886 was president of the American Association for the Advancement of Science. He gave special attention to comparative anatomy and did excellent work in the systematic arrangement of the fishes and batracians and some groups of reptiles and mammals. He discovered and described over 1000 species of fossil vertebrata and made extensive explorations in the fossil-bearing strata of the western United States and elsewhere. He made important contributions to the theory of evolution, writing *Origin of the Fittest* and *Primary Factors of Organic Evolution*, also many works and papers on systematic anatomy and descriptions of the Cretaceous and Tertiary Vertebrates. His *Extinct Vertebrata of the Eocene Formations of Wyoming* describes some of the most remarkable types of mammals ever discovered. He purchased the *American Naturalist* in 1891 and edited it till his death.

**Copeck** (kö'pek; kopēka, a lance), a Russian copper coin, so called from the impression of St. George bearing a lance, the hundredth part of a silver rouble, or about the eightieth part of a paper rouble. It is equal in value to about three-fourths of a cent.

**Copenhagen** (kö- pen-hā'gen; Da-nish *Kjøbenhavn*, merchants' haven), the capital of Denmark, on the Sound, the larger and older portion of it on the east side of the island of Zealand, a smaller portion on the north point of the island of Amager, with a branch of the sea forming the harbor between them. The old fortifications, which formerly separated the city from its harbor, have been leveled and converted into promenades, and a modern system of fortifications constructed on a grand scale, far beyond the site of the old town and embracing canals to flood the approaches to the city. These are partly turned into a gigantic stronghold. The city is mostly well built, principally of brick. The chief buildings are the royal palace of Rosenborg with many antiques and precious articles; the Amalienborg, consisting, properly speaking, of four palaces, one of them the usual residence of the sovereign; the palace of Charlottenborg, now the repository of the Academy of Arts; the Royal Library, containing 350,000 volumes and 25,000 manuscripts; Thorwaldsen's Museum, containing a great many of the sculptor's works; the university buildings, the Vor Frue Kirke, the arsenal, etc. The university, founded by Christian I in 1478, has over 2000 students, and a library of 300,000 volumes. The museum of Northern antiquities and the ethnographic museum, founded in 1852, are unrivaled of their kind. The harbor is safe and commodious. Copenhagen is the principal station of the Danish fleet and the center of the commerce of Denmark. It carries on an active trade with Norway, Sweden, Russia and Germany, and in particular with Britain, the principal exports being grain, butter, cheese, beef, pork, cattle, horses, hides, etc. It has foundries and machine-works, extensive shipyards, woolen and cotton mills, porcelain works, breweries, distilleries, etc., and produces also watches, clocks, pianofortes, etc. Soap-reeling and tanning are carried on. Copenhagen is first mentioned as a fishing hamlet in 1043. In 1443 it was made the capital of Denmark. It has occasionally suffered much from fires and from hostile attacks, the most disastrous being the bombardment by the British from the 2d to the 5th of September, 1807. In 1891 the Danish fleet was here defeated by Sir Hyde Parker and Nelson. The environs in some parts are very fine. Pop. with suburbs, in 1911, 839,398.

**Copepoda** (ko-pep'o-da), an order of minute entom o st r a c o u s fresh-water and marine crustaceas, so named because their five pairs of feet are mostly used for swimming (Gr. *kopé*, an oar).

**Copernicus** (ko-per'ə-kus), or Kopernik, Nicholas, astronomer, born at Thorn, then in Poland, in 1473, his family being supposed to have come originally from Westphalia. He first studied medicine at Cracow, and afterwards began to study mathematics and astronomy, and in 1500 taught mathematics at Rome with great success. Returning to his own country, he was made canon in the cathedral of Frauenburg, and began to work out his new system for astronomy. Doubting that the motions of the heavenly bodies could be confused and so complicated as the Ptolemaic system (which see) made them, he was induced to consider the simpler hypothesis that the sun was the center round which the earth and the other planets revolve. Besides this fundamental truth Copernicus anticipated, for he can scarcely be said to have proved, many other of the principal facts of astronomical science, such
as the motion of the earth round its axis, the immense distance of the stars which made their apparent position the same from any part of the earth's orbit, etc. His general theory also enabled him to explain for the first time many of the important phenomena of nature, such as the variations of the seasons and the precession of the equinoxes. The great work in which Copernicus explained his theory, *De Orbibus Caelestibus Revolutionibus* ('On the Revolutions of the Celestial Orbs'), was completed in 1530, and published at Nuremberg in 1543. He was not recommunicated on account of it. He died at Frauenburg in 1543.

Copiapó (kō-pe-a-pō'), the name of a river and a town in Atacama, Chile. The river flows west from the Andes to the Pacific, and has a course of 155 miles. About 80 miles from the sea is the town of Copiapó, or San Francisco de la Selva, the center of an important mining district. Pop. 10,287. The seaport, Caldea, stands at the mouth of the river and has about 2800 inhabitants.

Coping (kō'ping), the top or upper covering of a wall made to project and slope so as to carry the rain-water clear of the wall.

Copley (kop'lé), John Singleton, a self-taught and distinguished painter, born in 1737 at Boston, Massachusetts; died in London in 1815, where he had settled in 1776, acquiring a reputation as a historical painter. He was elected a member of the Royal Academy in 1779. His most celebrated picture is the *Death of Lord Chatham*, now in the National Gallery. His son became Lord Lyndhurst.

Coppee (kop-pā'), Henry, author, born at Savannah, Georgia, in 1821, was graduated at West Point in 1845. He served in the army through the Mexican war, resigning in 1855 and becoming professor of English literature in the University of Pennsylvania. He was president of Lehigh University 1866-75, afterwards professor of history there, and in 1874 was made a regent of the Smithsonian Institution. He wrote *Elements of Logic*, *Elements of Rhetoric*, *Compend of Greek by the Arab-Moors*, etc. Died in 1886.

Copper (kop'er), one of the most anciently known metals, deriving its name from *Cyprus*, large supplies having in Greek and Roman times come from that island. It is a metal of a pale-red color tinged with yellow; chemical symbol Cu, atomic weight 63.2. Next to gold, silver and platinum it is the most ductile and malleable of metals; it is more elastic than any metal except steel, and the most sonorous of all except aluminium. Its conducting power for heat and electricity is inferior only to that of silver. It has a distinct odor and an unpleasant, metallic taste. It is not altered by water, but tarnishes by exposure to the air, and becomes covered with a green carbonate. It occurs native in branched pieces, dendritic, in thin plates, and rarely in regular crystals, in the primitive and older sedimentary rocks. Blocks of native copper have sometimes been obtained weighing many tons. Its ores are numerous and abundant. Of these, several contain sulphur and iron or other metal, such as copper glance or vitreous copper (CuS); gray copper or Fahlere, one of the most abundant and important ores; and copper pyrites or yellow copper ore (CuFeS₂), another abundant ore. The red oxide of copper (Cu₂O) forms crystals of a fine red color, and is used for coloring glass. There are two native carbonates, the blue and the green, the latter being the beautiful mineral *malachite*, the former also known as blue malachite. *Blue vitriol* is a sulphate, and is used for dyeing and preparing pigments, as are various other copper compounds. *Verdigris* is an acetate. The arsenite of copper is the pigment *scheele's green*. *Scheeinfurth green* is another copper pigment. All the compounds of copper are poisonous. It is found in most European countries, in Australia and Japan, in Africa and in America, the United States being much the greatest producer. Of the world's total yield of 363,688 metric tons in 1910, the United States produced 492,675, the greatest yields being in Arizona, Montana and Michigan. Recently very rich deposits, as yet little worked, have been discovered in Alaska. Copper is extracted from its ores either by the dry or the wet process. For the former, what is known as the Welsh process is most common in the Cornwall mines of Great Britain, and may be described. It consists in alternately roasting the ore, and then smelting it in a furnace with a suitable slag, until impure or blister copper is obtained. Before this stage is reached a metallic compound of copper, sulphur and iron has been produced, technically known as *matt, regulus, or coarse metal*, and subsequently a tolerably pure sulphide of copper called *fine metal*. The blister copper is refined by burning off the sulphur, arsenic, and other volatile impurities, and by melting it along with wood charcoal and stirring it with a
Copperas

Copperas (kö'pə-rəs), sulminate of iron, or green vitriol (FeS₂·7H₂O), a salt of a peculiar astringent taste and of a fine green color. When exposed to the air it assumes a brownish hue. It is much used in dyeing black and in making ink, and in medicine as a tonic. The copperas of commerce is usually made by the decomposition of iron pyrites.

Copper Glance (Cu₂S), a copper ore of a lead or iron-gray color. It contains a high percentage of copper, and abounds in Cornwall, England, and in many European countries.

Copperhead, a venomous North American snake, the Ancistrodons contortrix of the rattlesnake family, of the same genus as the water-moccasin, but it is not aquatic. While it has no rattle, its bite is as deadly as that of any snake of its size.

Copperheads, an epithet applied to pacifists and disloyal Northerners during the Civil War. The Ohioans are given credit for the first use of the term, probably having in mind the characteristics of the snake of that name. The copperhead snake hides in tall grass or lurks in crannies of rocks and strikes without a previous hint of his animosity. He never comes out into the open. Similar traitorous characteristics were suspected in the pacifist, hence the transfer of the title. During the European war the epithet was revived and applied to those who did not believe in carrying the war to a military conclusion.

Coppermine River, (kop'ər-min), a river of British North America, which falls, after a course of about 250 miles, into the Arctic Ocean, in lat. 68° N.; long. 116° W.

Copper-nickel, or Kupfernickel, an ore of nickel, an alloy of nickel and arsenic, containing about 60 of the former and 40 of the latter, of copper color, found in the mines of Westphalia and elsewhere. It often accompanies cobalt and silver ores. Called also niccolite.

Copper-plate, a polished plate of copper on which the outlines of some drawing or design are engraved or etched to be printed from; also a print or impression from such a plate.

Copper Pyrites (pi-ri'tez), or yellow copper ore, a double sulphide of copper and iron, composed in equal parts of copper, sulphur and iron. It occurs in metalliferous veins and is the commonest of the ores of copper.

Copper (kop'ra), or Corpse Wood, a wood in which the trees are cut periodically as they attain a certain size. The term is also used in a general sense for a wood of small growth, or consisting of underwood and brushwood.

Copra (kop'ra), the dried kernel of the cocoanut, from which the oil has not been expressed, a consid-
Coproliites (kop'ro-lîts), the term originally applied to the fossil excrements of extinct animals, chiefly lizards or sauroid fishes. They resemble oblong pebbles, and are found mostly in the Lias and Coal Measures. They consist chiefly of phosphates of calcium and magnesium, and the carbonates of the same metals, and organic matter, and as the fertilizing properties of these are well known, coprolites have been largely used as a manure. For this purpose they are reduced to powder and used as ground bones, or treated with sulphuric acid, so as to form superphosphate of lime.

Copae. See Coppice.

Copris (kop'tis), a small genus of plants, nat. order Ranunculaceae, two species of which, C. trifoliata (gold thread), found in Canada and the northern parts of the United States, and C. tectis of Assam, yield a bitter tonic used medicinally.

Copts (kop'ts), a name given to the ancient Egyptian race, belonging mostly to the Jacobite or Monophysite sect. Reduced by a long course of oppression and miarule to a state of degradation, the number and national character of the Copts have greatly declined. At present they do not amount to more than perhaps 350,000. Their costume resembles that of the Moslems, but they are very generally in the habit of wearing a black turban for distinction’s sake. In various other respects they resemble the Moslem, and they practise circumcision and abhor the flesh of swine. The women go out with veiled faces like the Moslem women. There are schools for the education of boys, but very few of the females are taught to read. Confusion is required of all. Fasting holds a prominent place in the life of the Copt, who is, indeed, required to fast (that is, to abstain from all animal food except fish) during the greater part of every year. The head of the Coptic Church is the Patriarch of Alexandria, who is also head of the Abyssinian Church. He is regarded as the successor of St. Mark, by whom the Copts believe that Christianity was introduced among them. They are very strict and exclusive in their religion, but a great number have latterly changed their early faith. The Copts are quiet and industrious, have a good capacity for business, but are said to be servile and crafty. The Coptic scribes form a close guild.

What is called the Coptic language is no longer spoken, Arabic having taken its place. It is still used, however, in a formal way in their religious services. It is regarded as the direct descendant of the ancient sacred language of the Egyptians. There is a tolerably abundant Coptic Christian literature, chiefly lives of saints, homilies, etc. It is written in what is substantially the Greek alphabet, with some additional letters.

Copy (kop’i), a writing, picture, etc., made in direct imitation of another. Of late years photography has been much used in copying paintings, engravings, maps, etc. Lithography is frequently used in multiplying copies of writings, such as circulars, and such contrivances as the gelatine pad and the papyrus are also in common use. A copy of a work of art made by the artist himself is called a replica or doublette, and a reproduction of a piece of sculpture in plaster a cast.

Copyhold (kop’i-hold), in English law a tenure of land by copy from the court rolls belonging to a manor. Copyhold property cannot now be created, for the foundation on which it rests is that the property has been possessed time out of mind by copy from the court roll, and that the tenements are within the manor. In 1653 Parliament passed a law which enables either the lord or tenant of any copyhold lands to compel enfranchisement of the land and convert it into freehold, either in consideration of a fixed sum or of an annual rent.

Copyright (kop’i-rit) denotes the property which an author has in his literary works, or which any other person has acquired by purchase, and which consists of the exclusive right of publication; or the right which a designer, engraver, painter, draughtsman, photographer or sculptor has in his designs, engravings, paintings, etc., in the case of encyclopaedias, reviews, magazines, and other periodical works. The copyright is vested in the proprietors as if they were the authors. It is, of course, quite competent to the authors to reserve the right of publishing them in a separate form. Dramatic and musical compositions are subject to the same copyright as books. The exclusive right of performing dramatic and musical compositions not printed or of causing them to be performed belongs to the author or his assignees under the same rules of copyright as those relating to books. Lectures and public speeches are the property of the
Coquelin (kok-lan), BÉNOIT CONSTANT, a French actor, born at Boulogne-sur-Mer in 1841; died in 1909. He made a successful first appearance in 1860 at the Théâtre Français and quickly rose to the head of his profession, excelling in light comedy and melodrama.

Coquettia Bark (ko-ket'a), a name given to the bark of *Cinchona lancifOLIA*, which contains quinine.

Coquillanut (ko-kwil'la), the seed of the piaassa or piscaba palm (*Attalea funifera*), one of the cocoaanut group, a native of Brazil. The nuts are 3 or 4 inches long, oval, of a rich brown color and very hard, and are used in turnery for making umbrella-handles, etc.

Coquimbo (ko-kim'bo), or LA SERRA, a town of Chile, capital of the province of Coquimbo, stands near the sea, on a river of the same name. It is the see of a bishop. Pop. 16,161.—PORTO COQUIMBO, the port of the above, from which it is distant 7 miles to the S. W., has smelting works and a large export trade, chiefly in copper and the precious metals. Pop. 6270.—The province is rich in copper, silver, gold, and other metals, and is mountainous. Pop. 165,000.

Coquito (ko-ké'to), the *Jubaes speciFIBILIS*, a very beautiful palm of Chile, allied to the cocoaanut palm, growing to the height of 40 to 50 feet, and yielding a rich, sweet sap which when boiled is called palm-honey.

Coracias. See Rollers.

Coracle (kor'a-kl), a small boat or canoe of oval form and made of wickerwork covered with skins. It was used by the ancient Britons, and something similar is still in use among Welsh fishermen and on the Irish lakes.

Coracoid Bone (kor'a-koid), a bone in birds joining the sternum and shoulder-bone, and giving support to the wing. In mammals it is represented by the coracoid process of the scapula.

Coral (kor'al), the name applied to the calcareous, stony structures secreted by many of the Actin zoas (sea-anemones, etc.) which form one of the divisions of the coelenterate zoophytes, and also applied to the animals themselves. Two kinds of corals are distinguished by naturalists, sclerodermic and sclerobasic, or those in which the calcareous skeleton is developed in the walls of the body, as in the reef-building corals, and those in which (as in
the red coral of commerce) the skeleton is external or cuticular. Reproduction takes place by ova, but chiefly by budding, the new individual remaining in organic union with the old. The coral masses grow not merely by the multiplication of individuals, but by the increase in height of each of the latter, which, as they grow, become divided transversely by partitions. The animal, distended with ova, collapses on their discharge, and thus becomes too small for the cup which it formerly occupied; it cuts off the waste space by a horizontal layer of coral, and the repetition of this process gradually adds to the height of the mass. It is in this way that the coral reefs and islands, occurring in such abundance in the Pacific, the Indian Ocean, and the Red Sea, are built up—works of such stupendous and astonishing bulk when compared with the tiny creatures that produce them.

These coral reefs appear under three principal types, namely the fringing reef, the barrier reef, and atoll or lagoon reef. According to Darwin's theory, the latter two are merely developments of the first. The fringing reef on the margin, say, of a South Sea island (see a in the figure) is the work of corals living near the shore. This island is supposed gradually to subside into the sea, but so slowly as to allow the coral polyps, which cannot exist at a greater depth than between 20 and 30 fathoms from the surface, to add to the height of the reef and keep themselves always at the same level. Thus, in the course of time, as the island sinks in the constantly receding margin, the coral formation will no longer be a fringing reef, but will stand out at sea, with water on all sides between it and the island. In this way the barrier reef is formed (as in b). But should the island continue to sink till it disappear altogether, the reef is then left as a huge circle enclosing a lagoon and constituting the atoll (c). By accretions of various kinds this finally rises above the surface of the sea, is taken possession of by a tropical vegetation, and at length becomes the habitation of man. Darwin's theory is by many not considered satisfactory, however, and these offer an explanation of the formation of the coral reefs without the process of subsidence.

The coral of commerce is the production of various corals, and is of different colors and internal structure. The red, pink, and black sorts are the most highly prized. The red coral has a branching, shrub-like form, and, with other kinds, is found abundantly in the Mediterranean. The coral fishery, as it is called, is carried on in various parts of the Mediterranean, the principal localities being the southwest coast of Corsica, where the finest quality is found, the coast of South Italy, and the north coast of Africa (Algeria and Tunisia). The raw coral is wrought chiefly in Leghorn, Genoa and Naples. The coral is brought up from the bottom by means of network bags with wide meshes, attached to crossbeams of wood that are let down from a vessel by a line. It takes the leading part both in fishing for coral and in its preparation for the market. Coral is capable of taking a good polish, but is not susceptible of receiving the finer execution of a gem. In composition it consists chiefly of carbonate of lime.

Coral Fishes, a name given to several species of different
genera, belonging to the Chatodontidae. They are found in all tropical seas, especially about coral reefs, and are all brilliantly colored. The most important is the Holothurias imperator, the ‘emperor of Japan,’ which measures about 18 inches in length, and is the most esteemed of all the Indo-Pacific fishes.

Coralline (kor'al-in), a term popularly applied both to seaweed with rigid, calcareous fronds and to many of the zoophytes.

Coralline, an orange-red color, prepared by the action of ammonium at about 300° Fahr. upon rosolic acid, or upon the washed residue of the action of a mixture of sulphuric, oxalic, and carbolic acids. It is used for dyeing silk, and is also printed upon cotton.

Coral Bag, in geology, the highest member of the middle Oolitic series—a variety of limestone containing an abundance of petrified corals, occurring in some parts of England.

Coral Boot. See Dentaria.

Coral Sea, part of the Pacific on the northeast of Australia, between it and the Solomon Islands and the New Hebrides.

Coral Snake, a genus of small venomous snakes of the same family as the cobra. The typical species is found in woods and thickets in South America.

Coral-tree, trees and shrubs of the name of leguminous genus Erythrina, natives of Africa and America, with trifoliate leaves and beautiful scarlet spikes of papilionaceous flowers.

Coranach. See Coronach.

Cor Angleais (kor-anglā; French, ‘Englislh horn’), a wind instrument of the reed kind, similar to the oboe, and possessing a compass of like extent, but of lower pitch. Its compass is from F fourth line in the bass to B flat above the treble staff.

Coraopolis (kor-a-op'u-lis), a town of Allegheny Co., Pennsylvania, 10 miles N. W. of Pittsburgh. It is in a petroleum and natural gas district. Pop. 5252.

Corato (kō-rätō), a town of S. Italy; province Bari. Pop. 41,573.

Corbeil (kor-bēl), a town of France, dep. Seine-et-Oise, where the Essonne enters the Seine; various manufactures. Pop. 9756.

Corbel (kor'bel), in architecture, a piece of stone, wood, or iron projecting from the vertical face of a wall, to support some superincumbent mass. Corbels are of a great variety of forms and are ornamented in many ways. They are sometimes used in rows to support a projecting course called a corbel-table.

Corbie Steps (kor'bi), in architecture, steps into which the sides of gables from the eaves to the apex are broken. They are common in old Scotch architecture, into which they were probably introduced from France.

Corchorus (kor'ko-ras), the genus of plants to which jute belongs, order Tiliaceae (the lime-tree). They are herbs or small shrubs with serrated leaves and small, yellow flowers. See Jute.

Corcoran (kor'ko-ran), William Wilson, banker, born in Georgetown, District of Columbia, in 1798. He engaged in the banking business, accumulated a large fortune. Retiring from business in 1864, plans of benevolence engaged him till his death in 1889. His charities are estimated to exceed $5,000,000. He founded the Corcoran Art Gallery at Washington, a beautiful white marble temple containing splendid oil paintings.

Cordage (kor'dāj), this word signifies all sizes of twine and rope in its comprehensive sense, though in stricter usage it is confined to ropes and cables from half an inch diameter upwards. The materials used in making cordage are hemp, flax, manila, jute, and other plant fibers.

Corday D’Armanos (kōr-dā-dr'manō), Marie Anne Charlotte, commonly called Charlotte Corday, was born in Normandy in 1768, of a family which counted the poet Corneille among its ancestors. Her lover, an officer in the garrison of Caen, was accused by Marat as a con-
spirator against the republic, and assassinated by villagers hired for that purpose. This, as well as a deep-rooted hatred against all oppressors, determined Charlotte Corday to free her country from Marat. Having obtained an interview with Marat at his own house, she plunged her dagger into his bosom, and gave herself up to the attendants, who rushed in at his cries. When tried for murder before the revolutionary tribunal, her air was dignified and her replies firm. In spite of the fervid eloquence of her advocate's defense, she was condemned to the guillotine, and was executed on July 17, 1793.

Cordele (kôr-de-lē), a town of Crisp Co., Georgia, 9 miles s. of Vienna. It is in a timber and agricultural district and has machine shops and manufactures of cottonseed-oil and carriages. Pop. 5883.

Cordeliers (kôr-de-lērz), originally an order of Franciscan monks who wore as part of their dress a girdle of knotted cords; afterwards the name given to a society of Jacobins, to which the names of Marat, Danton and Camille Desmoulins gave some reputation. The club lasted from 1792 to 1794, and took its name from their place of meeting.

Cord-grass (Sparring stricta), a British grass, very tough, and used for making ropes.

Cordiceps (kôr'dì-seps), a genus of fungi, some of which are found on dead leaves and branches, while others are remarkable for growing on the larvae of insects, which they latterly kill.

Cordilleras (kôr-dil-ya'rahs), a Spanish name given to the great chains of the Andes and of Mexico.

Cordite (kôr'dit), an explosive composed of guncotton, nitroglycerin and mineral jelly. While in a pressed state it is fairly dry, but when wetted it swells and in the form of a cord and wound upon reels to dry. Various thicknesses are made to suit different sized guns. Its two explosive ingredients, which separately are dangerous to handle, are almost harmless when combined.

Cordon (kôrd'en), in a military sense, troops so disposed as to present an uninterrupted line of communication, so as to preserve an area either from hostile invasion or from contagious diseases. In the latter sense it is called a sanitary cordon.

Cordova (kôr-dô-væ), an ancient Spanish city on the Guadalquivir, in Andalusia, capital of a province of the same name. A part of the town is of Roman, a part of Moorish origin; the street are narrow, crooked and dirty; the principal square, however, is distinguished for its just and the beauty of its colonnade. The cathedral is a splendid building, originally a mosque, erected in the eighth century by King Abderrahman. The town is well supplied with schools, hospitals, and other institutions. It has always carried on considerable trade; and under the Moors the leather exclusively manufactured there (cordovan) was exported in all directions. Cordova, which was founded by the Romans, became the capital of Arabian Spain and the center of Arabian splendor and science under the Caliphs of the West. At that time it is said to have had a pop. of 1,000,000. With the decay of the Moorish empire it fell into the hands of Ferdinand III of Castile. Present pop. 58,276.—The province includes the fertile and beautiful valley of the Guadalquivir and the mountains of Sierra Morena. Area, 5188 square miles; pop. 465,569.

Cordova, or Cordoba, a town of the Argentine Republic, capital of the province of the same name. It occupies a beautiful site in the valley of the Primero, and has railways to Rosario and Tucuman. Pop. (1912) 100,000. The province has an area of 62,190 sq. miles, and a pop. of 573,072.

Cordovan, a fine leather which took its name from the city of Cordova, where it was manufactured in large quantities. Much is now made in Northern Africa and the Levant.

Corduroy (kôrdō-roil), a thick cotton stuff corded or ribbed on the surface.—Corduroy road, a road in the United States, a road constructed with logs laid together over swamps or marshy places for carriages to pass over.

Cordwood, wood cut and piled for sale by the cord, in distinction from logs which are sold by the cord and are cut to the length of 4 feet; but in this respect the practice is not uniform.

Corea, or Korea (ko-ro'æ), a former kingdom of Asia, consisting chiefly of a peninsula lying northeast of China, bounded N. by Manchuria, E. by the Sea of Japan, S. by a narrow sea which parts it from the Japanese Islands, and W. by the Yellow Sea. It is called by the natives Taitsaien (Cho-men) and by the Japanese Korai, whence its European name. Pop. vaguely estimated at 8,000,000 to 15,000,000; area about 80,000 square miles. Seoul, or S. Korea, is the capital. The peninsula is traversed through its length by a mountain range, abrupt and precipitous on the east, but...
forming a gentle slope on the west side, which, being watered by the principal rivers of the country, is exceedingly fertile. In the north the only grain that can be grown is barley; but in the south, wheat, cotton, rice, millet and hemp are grown extensively. The ginseng root is a production greatly valued in China and Japan. The domestic animals are oxen, pigs, goats, dogs and cats, and a small race of horses. Oxen only are used for agricultural labors, the horse being reserved expressly for the saddle. Tigers, panthers, foxes, wolves and sables are abundant. The manufactures are, generally speaking, rude, and mostly confined to tissues of hemp and cotton, silk, paper and pottery. The peninsula abounds in minerals, gold, silver, iron, copper, lead and coal, and the natives show much artistic skill in the art of working metals.

The early records of Korea carry us back to 1122 B.C. Within recent years, while practically independent, it has been tributary to China, while Japan claimed rights there arising from ancient conquests. These conflicting claims led to war between Japan and China in 1894, the result being that Corea was released from Chinese suzerainty. In her war with Russia, Japan made this country a base of operations, established a protectorate over it, and soon after the close of hostilities practically annexed it in November, 1905, by making the Corean government accede to the protocol of a treaty transferring all diplomatic business from Seoul to Tokio, and setting up a Japanese governor-general's office in the Corean capitol. The annexation was completed in August, 1910, the Corean king being dethroned and the country reduced to the status of a province of Japan. As such it was given its ancient name of Cho-sen ("Land of Morning Calm").

*Corelli* (ko-rel-é), Marie, novelist, of Italian and Scotch Highland parentage, born 1864; adopted in infancy by Charles Mackay, the English song-writer. Was educated in a convent in France. With excellent musical ability, she composed an opera when only 13, and later produced several notable melodies. Turning to novelistic composition, a curious psychological experience of her own caused her to write *A Romance of Two Worlds*, in 1886. It attained instant success, and henceforth she devoted herself to literature. *Vendetta, Thelma, Ardaith, Soul of Lilith, Sorrows of Satan, Jane*, and many other
works of great popularity were produced. Her works are deeply tinged with mystical and psychical views.

Corfu (kör'fə; anciently Corcy'ra), a Greek island in the Mediterranean, the most northerly of the Ionian Islands, at the mouth of the Adriatic, near the coast of Albania, about 40 miles long, and from 15 to 20 wide; square miles, 227. The surface rises at one point to the height of 3000 feet. The scenery is beautiful, the climate pleasant and healthy, the soil fertile. Oranges, citrons, grapes, honey, wax, oil and salt are abundant. A Corinthian colony settled in the island in the eighth century B.C. The Venetians possessed Corfu from 1386 to 1797, the British from 1815 to 1864. Pop. 99,871.——Corfu, the capital, is finely situated on a promontory, which terminates in a huge insular rock crowned by the citadel; the streets are Italian in style; chief edifices, the cathedral, government palace, and Ionian Academy. There is a good harbor and considerable trade. Pop. 18,581.

Coriander (kor-i-and'ær; Coriandrum sativum), an umbelliferous plant, native of Italy, and cultivated in other parts of Europe. The whole plant has an unpleasant smell, but the fruit, improperly called seed, is very agreeable and aromatic when dry. It is used as a carminative and aromatic in medicine, and as an ingredient in cookery and confectionery.

Coriaria (kor-i-a'ri-a), a genus of plants, type of a small natural order of polyphetalous exogens. Coriaria myrtifolia is a shrub inhabiting the south of Europe and employed by dyers for staining black, and also used in tanning, and hence called tanner's sumach.

Corigliano (ko-rél-yō'-kō-nō), a town of South Italy, province of Cosenza, on a hill above the right bank of the Corigliano, near the site of the ancient Sybaris, of which no vestiges remain. Pop. 13,272.

Corinna (kō-rin'na), an ancient Greek poetess of Tanagra, in Boeotia, contemporary with Pindar (about 500 B.C.), whom she is said to have conquered five times at musical contests. Only a few fragments of her songs have come down to us.

Corinthus (kor-in'thə) a once celebrated city upon the isthmus of the same name which unites Peloponnesus with Northern Greece. It was renowned among the cities of Greece, commanded by its advantageous position a most important transit trade, and possessed all the splendor which wealth and luxury could create, while its citadel, the Acrocorinthus, nearly 2000 feet high, rendered it a strong fortress. Only a few ruins remain to attest its ancient mag-
Corinth

significance. It had two harbors, Lechaion on the west side of the isthmus, on what is now the Gulf of Corinth or Lepanto, and Cenchreae, on the Gulf of Athens or Aegina (anc. Baronio Gulf). Near Corinth were held the Isthmian games. Besides being one of the most magnificent, it was also one of the most voluptuous cities of Greece. After many political vicissitudes Corinth became the head of the Aegean League, and was conquered and destroyed by the Roman consul Mummius, 146 B.C. Julius Caesar, about a hundred years later, rebuilt it; but its commerce could not be restored, though it became a place of note and importance. St. Paul lived here a year and a half, and two of his epistles are addressed to the Corinthians (see below).—New Corinth is a village on the island of the gulf, several miles N.W. from the site of ancient Corinth; it is the seat of an archbishop. Pop. 4300.

Corinth, GULF OF, or Gulf of LE-PANTO, a beautiful inlet of the Mediterranean, about 40 miles long, between the Peloponnesus and Northern Greece.

Corinth, Isthmus of, the isthmus which connects the Morea (Peloponnesus) with Northern Greece, varying in width from 4 to 8 miles. A canal, begun in 1882 and about 4 miles long, was opened on August 6, 1883, across the isthmus, and now enables vessels to sail from the Archipelago to the Adriatic without rounding Cape Matapan. (kō-rin'θi-an).

Corinthian Order (kō-rin'than), that order of Grecian architecture of which the most characteristic feature is the capital of the column, which is decorated with beautifully carved acanthus leaves, but varies considerably in minor details. The column is generally fluted, with a fillet between the flutings, and stands upon a base. The entablature is variously decorated, especially the cornice; the frieze may be quite plain, or sculptured with foliage and animals. The Corinthian order was not very common in Greece; among the Romans it was much employed.

Corinthians, Epistles to the two epistles addressed to the church at Corinth about A.D. 57 or 62, which have been admitted as genuine writings of St. Paul by even the most critical assailants of the New Testament canon. They are most instructive from the insight which they furnish into the character of St. Paul himself, and the constitution, parties, and heresies of the apostolic church.

Coriolanus (kō-ri-o-l'ā-nus), the name given to an ancient Roman, Caius, or more properly Cneius, Marcus, because the city of Corioli, the capital of the kingdom of the Volsci, was taken almost solely by his exertions. He was subsequently banished for seeking to deprive the plebeians of their hard-earned privileges, and in particular of the tribuneship; and seeking revenge, he took refuge among the Volsci, the bitterest enemies of Rome, and prevailed upon them to war with her. The Volscian army, after making itself master of the cities of Latium, was pitched in sight of Rome before troops could be raised for the defense. The Roman senate made unwavering overtures for peace, till at length the tears of Veturia his mother, and Volumnia his wife, when they appeared at the head of the Roman matrons, induced Coriolanus to withdraw his army from before Rome. He was afterwards assassinated in a tumult while attempting to justify his conduct. The story of Coriolanus, which is now regarded as legendary, forms the subject of one of Shakespeare's plays.

Cork (kork), a city in the south of Ireland, capital of the county of Cork, situated on the river Lee. It is 15 miles from the sea, and besides an upper harbor at the city itself, and quays extending over four miles in length, there is a lower harbor at Queenstown, 11 miles below the town. The entrance, deep and narrow, is strongly fortified on each side. Cork is the third city in Ireland, and exports great quantities of grain, butter, bacon, hams, eggs and live stock. The principal industries are tanning, distilling, brewing, and fustries. There are also iron foundries and yards for the building of iron ships. The principal buildings are the Protestant and Roman Catholic cathedrals, exchange, custom-house, chamber of commerce, courthouse, Queen's College, etc. There is a naval dockyard at Haulbowline, an island within Cork harbor. Pop.
Cork

76,122.—The County is the most southerly and the largest in Ireland, having an area of 2890 square miles, of which less than a fourth is under crops. The west part is mountainous, the north and east very fertile. The coast is indented with numerous bays and inlets, of which the more important are Bantry Bay, Kinsale and Cork harbors. The climate is remarkably mild, though moist. The county is watered by the Bandon, Lee and Blackwater. Cattle, sheep, pigs and quantities of butter are exported. The fisheries are important. The county has seven political divisions, each sending a member to Parliament. The county town is Cork; other towns are Queenstown, Fermoy, Youghal, Banland, Malrow and Kinsale. Pop. 404,611.

Cork, is the external bark of a species of oak (Quercus suber) which grows in Spain, Portugal and other southern parts of Europe and in the north of Africa, and is distinguished by the great thickness and sponginess of its bark, and by the leaves being evergreen, oblong, somewhat oval, downy underneath, and waved. The outer bark falls off of itself if left alone, but for commercial purposes it is stripped off when judged sufficiently matured, this being when the tree has reached the age of from fifteen to thirty years. In the course of eight or nine years, or even less, the same tree will yield another supply of cork of better quality, and the removal of this outer bark is said to be beneficial, the trees thus stripped reaching the age of 150 years or more. The bark is removed by a kind of axe, parallel cuts being carried round the tree transversely and united by others in a longitudinal direction, so as to produce oblong sheets of bark. Care must be taken not to cut into the inner bark, or the tree would be killed. The pieces of cork are flattened out by heat or by weights, and are slightly charred on the surface to close the pores. Cork is light, impervious to water, and by pressure can be greatly reduced in bulk, returning again to its original size. These qualities render it peculiarly serviceable for the stopping of vessels of different kinds, for floats, buoys, swimming-belts, or jackets, artificial limbs, etc. Corks for bottles are cut either by hand or by means of a machine. The best corks are cut across the grain.

Cork, Earl of. See Boyle.

Cork, Fossil, a kind of mineral, a species of asbestos.

Corking-pin, a pin of a large size, formerly used for fixing a lady's head-dress.

Corleone (kor-ló-né), a town of Sicily, 22 miles south of Palermo. Pop. 14,808.

Corliss (kor-liss), George Henry, inventor, was born in Easton, New York, in 1817. The construction of stationary steam engines has been revolutionized by his improvements, he having invented many ingenious devices. A single engine made by him moved all the machinery in the Centennial Exhibition of 1876. He died in 1893.

Corm (korm), the dilated basis of the stem in monocotyledonous plants, which intervenes between the roots and the first buds, and forms the reproductive portion of the stem of such plants. It differs from a bulb in being solid and from a tuber in its oval figure. Examples are the so-called 'root' of the arum and that of the crocus.

Cormorant (kor-mo-rant) from French, cormoran, L. corvus marinus, a sea-crow), the name of several large web-footed birds of the pelican family, or forming a family by themselves. They have a longish and strongly-hooked bill, long neck, short wings, and rather long, rounded tail; all

Harris' Cormorant (Neopterus Harrisii).
The common cormorant of Europe (Phalacrocorax carbo) is larger than a goose, but with smaller wings. It occupies cliffs by the sea, feeds on fish, and is extremely voracious. It dives and swims with great power, and pursues its prey beneath the surface of the water, often to a great depth. Among the Chinese cormorants have long been trained to fish for man. At first a ring is placed on the lower part of the bird’s neck to prevent it swallowing the prey, and in time it learns to deliver the fish to its master without such a precaution being necessary. Another European cormorant is the green cormorant or shag (P. graculus). It is smaller than the common cormorant. Both these species are found on the eastern coasts of America, and there are various other American as well as Australian species.

Corn (Zea Maize), is the most valuable of our agricultural products. Nearly five-sixths of the world’s supply is raised in the United States in some years. In the year 1917, the total recorded was nearly three and one-quarter million bushels. It is also cultivated in Europe, South America and Australia. It needs a richer, heavier soil than wheat and a warmer climate, with long summers and warm nights, and requires from four to five months in which to mature, hence its range in latitude is lower than that of wheat. It is adapted to a wide range of soil conditions. Its longer season of growth than most other stable crops enables it more fully to utilize the plant food rendered available by the processes operating in the soil under favorable conditions of warmth and moisture. As a food crop it is little used in the United States in comparison with wheat, but in countries of Spanish America it is the chief cereal used. The plant is indigenous to America and the knowledge of its cultivation and value is one of the gifts of the Indians to the white man. From this country its cultivation has extended to the southern countries of Europe, and it is largely used for food in Italy and Roumania, as well as in Egypt and India. Its principal consumption in the United States is as feed for hogs and cattle, for which purpose three-fourths of the crop is used. It is used also in industrial products, as whiskey, starch and glucose, which consume about one-fifth of the crop. The types of corn are dent, flint, sweet, pop, soft and pod, of which only the first four are of noteworthy importance in America, and of these the dent type is the chief, representing nine-tenths of the corn crop in North America in its several hundred varieties. Flint is the second in importance and has a score or more varieties; it is the type most common in Canada, chiefly in Ontario; it is cultivated in the New England States, New York, Pennsylvania and New Jersey; certain varieties of flint corn are grown on the higher elevations. Dent corn is classified according to size and maturity, into early, medium and late maturing varieties, and is further distinguished for color, as yellow, white, white cap yellow and mixed dent varieties. In the eastern section there are three prevailing varieties: white Dent, Early Huron Dent, Funk’s Grow Day, Leaming and many strains of white cap dent. The varieties most raised in the corn belt of Ohio, Indiana, Illinois,
A CORN HARVESTER AT WORK

The machine cuts the corn, ties it in bundles and deposits the bundles in the wagon which accompanies it.
Iowa, Missouri and Eastern Kansas and Nebraska are Reed's Yellow, Funk's Yellow, Leaming, Reiley's Favorite, Clarage, Hogue's Yellow, Hildreth's Yellow, Hiawatha Yellow, Boone County White, Johnson County White, Silver Mine, St. Charles White and Kansas Sunflower. In the northern portion of the corn belt, Michigan, Wisconsin, Minnesota, the Dakotas and the northern sections of Illinois and Iowa, the commonest varieties are Silver Pride, Pride of the North, Wisconsin No. 7, Murdock, Wimple's Yellow, Pickett's Yellow and Golden Eagle. In the southern States are the large-eared varieties, Huffman, Excelsior, Chisholm, McManin's Gourdseed, St. Charles' White, Boone County White, Rockdale, Singleton, and Ferguson's Yellow, and the two-eared varieties, Lewis' Prolific, Hickory King and Neal's Paymaster, and among the prolific varieties bearing two or more ears on a stalk are Cocker's, Alhemarle, Whatley's, Mosby's, Hastings, Marlborough and Batts.

The best-known flint varieties include Longfellow, King Philip, Hickney's Yellow, Taylor's Improved and Davis' Eight-Rowed. It is to be noted that the variety best adapted to any locality can be determined only by local tests, the results of which by local farmers' organizations co-operating with State experiment stations has tended greatly to improve, both the selection of varieties and the yield per acre and to emphasize the importance of the selection of the variety that will give the best results in the locality.

More than 70 per cent. of the corn raised in the United States is produced in ten States: Illinois, Iowa, Missouri, Nebraska, Indiana, Kansas, Ohio, Texas, Oklahoma and Kentucky. The greater part of the yield of the United States, over four-fifths, is consumed within the counties in which it is grown, being fed to hogs and cattle, by which use, in the resultant pork and beef, it is worth six times as much as when used for human food. One great drawback to the exportation of corn as human food, at present, is the general ignorance in Europe of its value in this respect, and of how to handle it, nor are there suitable mills for grinding it, and the meal cannot itself be exported in large quantities because it will 'best' quickly and thus be unfit for food. It is not improbable that under the stress of war the ignorance of its value and the lack of grinding facilities will disappear, and that the day is not far distant when vast quantities of our corn will be shipped to foreign markets to add to the food supply of the people. According to estimates of the International Institute of Agriculture in Rome, Italy, the world crop of production of corn for 1911 was: United States, 2,885,900,000 bushels; Japan, 4,102,000 bushels; Switzerland, 157,000. Total for three countries, 2,940,159,000 bushels.

Corn requires for its highest production warm, deep and loamy soils with plenty of moisture. The critical period in the great corn belt is during July and August, during which the rainfall determines largely the season's yield; it is found that between the average yield of corn and the July rains there is a close correlation. Poor land is not suitable for corn, the growth of stalk requiring abundant plant food. Nor can it be grown continuously without diminishing yields on the same soil, no matter what manure or fertilizer is applied. A rotation of crops is essential to the maintenance of good yield. From four to seven years are the periods of rotation usual, but in the rotation at least one leguminous crop should be planted, but the crops for rotation vary according to their value in different sections. Corn succeeds best on sod land. Plowing for corn is done either in fall, winter or spring, in many sections preferably in the fall. Deep plowing has great advantages and disking and harrowing are of the highest importance to secure a loose and friable soil. The character and quantity of fertilizer best adapted depend on the nature and condition of the soil and other considerations, but stable manure is particularly valuable, second to which is a complete fertilizer having phosphoric acid as its chief ingredient. Phosphorus added to the stable manure also promotes an increased yield. Planting should not be done till the soil is warm enough to germinate the seed quickly, the time varying in different localities. A wet cold soil will rot the seed. It may in general be said that when the leaves of the oak are the size of a squirrel's ear in any locality, that is the best time to plant corn, but it is better to plant too early than too late.

When later planting is necessary early maturing corn is frequently planted. For grain raising 10,000 to 12,000 plants per acre produce the best stand in the great corn belt. The better the soil the greater the number of plants that can be supported. Small varieties may be more thickly planted, so may corn grown for fodder or ensilage, when the number of plants may be increased twenty-five per cent. Whether hill or drill planting is done, the rows are usually 30 inches apart, except in poorer soil, when 44 inches is better. Drilling is easier and is preferable unless there are many weeds. Where weeds are very numerous, better
results follow check-rowing, which admits of more thorough cultivation. In growing for grain three kernels to the hill yield, perhaps, the best results, generally. Where the rainfall is abundant corn is frequently planted in furrows, with a lister, a double mold-board plow that simultaneously cuts a deep furrow, plants the kernel, and covers it with earth. In loose soils the grain is planted from 3 to 4 inches deep, according to surface moisture, and on wet, heavy soils, 1½ to 2 inches. The kernels should be regular in shape and if necessary, should be assorted in sizes so that the planter plates may be adjusted to pass the different sizes. This result may be obtained by using a seed-corn grader.

Corn requires careful cultivation to destroy weeds, to conserve and to facilitate the absorption of moisture and to aerate the soil. Deeper rooting of the plant is induced by deep cultivation which should not be repeated after the first cultivation. Injury to the plant roots is unavoidable. For the first or deep cultivation, from four to five inches is general; the later shallow cultivation is generally one to two inches deep. Cultivating is governed by the weed growth and the state of the soil surface.

In the great corn belt the corn is in large part harvested direct from the standing stalks, leaving the latter to waste, except it is pastured. In other sections the whole plant is harvested, three to four hundred are cut and put in shocks to cure properly, after which it is hauled, in from three to six weeks after cutting, and the stacks reshocked to be removed to the barns, or stacked in rows as early as convenient, when sufficiently dry, for feeding during the winter. Shredding or chopping the stalks is economical, as the greater portion of the feeding value is thus utilized.

In storing corn it is desirable, after curing, to leave it in the ear for a time in a well-ventilated crib, protected from rats and mice. Corn shrinks considerably after storing in the crib, especially during the first month, a fact that bears importantly on the question of holding for market rises. Under an Act of Congress corn is classified into six grades, Nos. 1-6, according to the percentage of moisture, damaged kernels, foreign material, broken and cracked corn. Corn is the most valuable of the great feeding crops. Its selection and breeding is of great importance, and careful labor in this way has secured largely increased yields of grain and varieties. The farm value of the corn crop of the United States for 1917 was over four billion dollars, out of a gross farm output of twenty-one billions. See Ensilage.

Cornaceae (kor-nä-se-å), a natural order of polypetalous exogens, consisting of about 100 species, one of them being the common European dogwood. Several plants of this order are of service as tonics and for the cure of ague, and in America the bark of the Cornus flava, is sometimes used as a substitute for Peruvian bark. See also Corneal.

Corn Aphides, aphides infesting the ears of corn, barley, oats and other grain, and sucking their juices, as the Aphis graminis, or wheat aphia. See Aphid.

Corn-beetle, a minute beetle, Cocculus testaceus, the larva of which is often very destructive to stores of grain, particularly of wheat, in granaries. See Corn.

Corn-cockle, a well-known weed, (Agrostemma Githago), nat. order Caryophyllaceae, with large entire purple flowers, very troublesome among crops of grain. Its seeds are said to be poisonous to poultry, swine, etc., etc., or Landbail (Gres or Landbail (Gres)

Corn-crake, grattensis, is a species of bird of the order Grallae or Waders and of the family Rallidæ or rails. The crakes differ from the rails proper (Rallus) in having the bill shorter. The common crake of Britain is of a reddish-brown color. It lives in fields and meadows, and nestsle and runs among the long grass. The name is expressive of its cry. It feeds on worms and insects. Cornea (kor-nè-a), the transparent portion of the anterior coat of the eye. This is destitute of blood-vessels, its nutriment being obtained from a system of lymph chambers. It is subject to certain diseased conditions, the most common being inflammation known as keratitis. Also ulcer of the cornea is of common occurrence. This results most often from injury, inflammation of the conjunctiva, disturbances in nutrition, etc. Inflammation of other portions of the eye may accompany ulceration and result in adhesion, closure of the pupil and partial or full opacity of the cornea. A protrusion of the cornea, known as staphyloma, may follow.

Corneille (kor-nä-yè), Pierre, the father of French tragedy and classical comedy, was born at Rouen in 1606, at which place his father was advocate-general. He began his dramatic career with comedy, and a series of vigorous dramas, Méline (1829). Citadre, La Veuve, La Suivante, etc., announced the advent of a dramatist of
a high order. In 1635 he entered the field of tragedy with Medea; but it was not till the appearance of his next work, the famous Cid, that Corneille's claim to a place among the great tragic poets was recognized. The Cid was an imitation of a Spanish drama, and though gravely defective in the improbabilities of the plot and other respects, achieved an immense success by a certain sublimity of sentiment and loftiness of ideal, which are the native characteristics of Corneille's poetry. After the Cid there appeared in rapid succession Horace (1639); Cisna (1639), his masterpiece, according to Voltaire; and Polyæus (1640), works which show Corneille's genius at its best. Many of his later pieces exhibit a marked decline. Besides his dramas he wrote some elegies, sonnets, epistles, etc., as well as three prose essays on dramatic poetry. As a dramatist his merits are loveliness of sentiment and conception, admirably expressed in a bold and heroic style of versification and language. But in this constant straining after a heroic ideal he was apt to fall into a declamatory and inflated style. He died in 1694.

Corneille, THOMAS, brother of the preceding, was born at Rouen in 1625. They had married two sisters, and lived in the same house in the utmost harmony. Thomas began with comedies, which were imitations of the Spanish school, and were received with even greater applause than those of his brother. The first was Les Engagements du Hassard (1647). His best tragedy is Ariane (1672). He is a dramatist of very secondary rank, laborious and cultivated, but wanting in original power. He died in 1709.

Cornel (kor-ne'l), or CORNELIAN TREE (Cornus mascula) a species of dogwood, a tree or shrub of the order Cornaceae, distinguished by the hardness of its wood, a native of Asia and the south of Europe, and cultivated as an ornamental plant and for its fruit in the north. One of the finest species, the round-leaved Cornel, C. ocrinalis, is an American shrub, 5 to 10 feet high, common from Virginia to Canada. C. florida, the American dogwood, is a handsome tree 20 to 30 feet high.

Cornelia (kor-nél'a), the daughter of Scipio Africanus the elder, married Tiberius Sempronius Gracchus, censor B.C. 160, by whom she was the mother of the two famous tribunes Tiberius and Caius Gracchus. Cornelian (kor-nél'e-án), or CORNELIAN, a gem of a light-red or flesh color. It consists of silica along with minute quantities of the oxides of iron, aluminium, and sometimes of other metals, and is used for jewels, bracelets, necklaces and other articles.

Cornelius (kor-né'l-us), PETER VON, a German painter, born at Düsseldorf in 1787; died in 1867. He early exhibited a taste for art, and studied the great masters, especially Raphael. In 1811 he went to Rome, where, in conjunction with Overbeck, Veit and other associates, he may be said to have founded a new school of German art, and revived fresco painting in imitation of Michael Angelo and Raphael. He left Rome in 1819 for Düsseldorf, where he had been appointed director of the academy, but he soon settled in Munich to give his whole attention to the painting of the Glyptothek and the Ludwigskirche there. In these two great works he was assisted by his Munich pupils. In 1833 he made another visit to Rome, and in 1839 he visited Paris. In 1841 he was invited to Berlin by Frederick William IV, who entrusted him with the painting of the royal mausoleum or Campo Santo. The most celebrated cartoon in this series is the Four Riders of the Apocalypse. The series consists of twelve paintings, which have been engraved. Cornelius, a true representative of modern German thought, introduced into art a metaphysical and subjective element which is easily liable to be abused; and in his work grandeur of conception and elevation of tone have to make up for the want of the finest natural effects.

Cornelius Nepos, a Roman author of the first century B.C., the contemporary of Chiron and Catullus. The only extant work attributed to him is a collection of short biographies, probably an abridgment of a work written by Nepos. These biographies have long been a favorite school-book, and popular editions of them are very numerous.

Cornell (kor'nel), Ezra, an inventor, born at Westchester Landing, New York, in 1807. He aided Morse in laying the first telegraph line and subsequently acquired great wealth, largely through his connection with the telegraph business. He founded at Ithaca, New York, the university known by his name. Died in 1874.—His son ALONZO B. CORNELL, born at Ithaca, New York, in 1832, engaged in the telegraph business, became a prominent figure in the Republican party, was surveyor of the port of New York, 1869-72, was repeatedly chosen Speaker of the New York Assembly, and in 1879 was elected
Governor of the State of New York. Died in 1904.

Cornell University, an educational institution at Ithaca, New York, was established in 1867 with funds furnished from the income of 360,000 acres of public land allotted by Congress to the State for this purpose, and with a foundation of $500,000 presented by Ezra Cornell. This has been much augmented by subsequent donations. There are five general courses, including classics, literature and philosophy, science, engineering, architecture, agriculture, etc. The medical school is in New York City. Women are admitted on the same terms as men.

Cornet (kor'net), a wind-instrument of former times, originally a narrow, serpentine in form and increasing in diameter from the mouthpiece to the lower end. The modern cornet-a-piston, or cornet-o-pexib, is a kind of keyed bugle which has a very agreeable tone, and is much used in orchestras and military bands. Several forms of it are in use.

Cornet, formerly the lowest rank of commissioned officer in a regiment of cavalry in the British army, corresponding with the rank of ensign in the infantry. In 1871 this rank was abolished, that of sublieutenant taking its place.

Corneto (kor-nā'to), a cathedral town of Italy, province of Rome, on a lofty and precipitous volcanic ridge, 10 miles north of Civita Vecchia. Its old walls and its palaces and other edifices present a picturesque appearance. The ancient Tarquinii stood about a mile from Corneto; from the tombs in its necropolis a vast variety of Etruscan relics have been obtained. Pop. 5440.

Corn-fly, a name common to several insects of the family Muscidae, from the injury their larvae inflict on growing crops.

Corn-husking; Corn-shucking. An assemblage, in former times, of friends and neighbors at the house of an American farmer to assist him in stripping the husks or shucks from his Indian corn.

Corning (kor'ning), a city of Steuben Co., New York, on the Chemung River, 17 miles W. N. W. of Elmira. Coal is mined in the vicinity and it has large glass, iron and other works, and an extensive trade in coal, lumber, etc. Pop. 13,730.}

Cornish (kor'nish) Engine, a single-acting steam engine used for pumping water. The pump-rods appended to one end of the beam are loaded so as by their gravity to have sufficient force to raise the water, and the downstroke of the steam piston at the other end of the beam is used to raise them.

Cornish Language, a Celtic dialect spoken in Cornwall, which died out in the eighteenth century, though isolated words or terms are still in use, and some fragments of literature are still extant. It is allied to the Welsh and Breton. See Celtic.

Corn Laws, a name commonly given to certain statutes passed to protect the agricultural interests in Britain. The first form of interference by legislative enactment with the corn trade in England, soon after the conquest, was the prohibition of exportation, an expedient in those times to prevent scarcity in a sudden emergency. The exportation of grain was prohibited in the reign of Edward III in 1360-61. Calais and other appointed ports being excepted. This provision was relaxed by a statute of Richard II in 1394, by which exportation was permitted from all ports excepted by royal proclamation. In 1436, under Henry VI, the exportation of grain was permitted without license whenever the price of wheat did not exceed 6s. 8d. per quarter, and barley 3s. 4d. In 1463 a statute of Edward IV prohibited importation until the price exceeded the limit at which exportation was permitted. This was the beginning of protection, properly so called. At the restoration of Charles II duties were imposed both on exportation and importation, while the old principle of a standard price, beyond which exportation was prohibited, was retained. At the Revolution a new policy still more favorable to the agricultural interest was adopted. By a statute of William and Mary, a bounty was granted on the exportation of corn, and the duties on exportation were abolished. The amount of the bounty was 8s. for every quarter of wheat exported while the price was at or under 48s., with corresponding prices for other grains. The exportation of grain reached its highest point about 1750. From this period the country, which had always been normally a grain-exporting country, began, on account of
the increase of population and expansion of mechanical industries, to fall off in this respect, and in 1778 became permanently a grain-importing country. From this time the main efforts of the agricultural interest, largely represented in the Parliament and the ruling classes of the kingdom, were concentrated on obtaining the imposition of prohibitory duties on foreign grain. In 1804, for instance, in case the price of corn was below 6s. a prohibitory duty of 2s. 3d. was to be laid on what was imported; if between 6s. and 6s., a duty of 2s. 6d.; and only when the price had risen as high as 6s. per quarter was the foreign grain allowed to pass at a nominal duty of 6d. With the variations in more the large importance this sliding scale of prohibitory duties continued in force till 1846, when Sir Robert Peel, influenced by the corn law repeal agitation, and more especially by the Anti-Corn Law League, headed by Golden Rule. Britain carried a measure repealing the duty on imported corn, except a nominal sum of 1s. per quarter, which also in 1869 was done away with, thus leaving the importation of corn entirely free.

**Corn Marigold (Chrysanthemum so- gistem)**, a common weed in British cornfields, of a rich orange color.

**Corn-moth**, a small moth, the *Timâa granella*, the larva of which is exceedingly destructive to corn sheaves in the field, and to stored grain, from eating into the grains. Salt, frequent turning, and many expedients are employed to destroy the eggs.

**Corn, Montez**. See Gran Sasso.

**Corn Salad**, *Valerianella olitoria* and other species of the same genus, order Valerianaceae, is extremely easy of cultivation, and can be obtained in the very first days of spring. *V. olitoria*, called also lamb's lettuce, is a weak, succulent herb 6 to 12 inches high, used as a salad in early spring.

**Corn Sawfly** (*Cephus pygmeus*), an insect the larvae of which prey upon wheat and other cereals. The female deposits her eggs in the stem where the larvae live upon the interior of the straw and the nutritious juices of the plant.

**Corn-thrips**, a minute species of thrips, the *Thrips cerealium*, which does much mischief to grain crops, insinuating itself between the chaff and the unripe seed, and causing the latter to shrivel by sucking the juice. It is barely a line long.

**Cornucopia** (kor-nu-kö’pi-a; L. *Cornu Copia*, 'horn of plenty'), a wreathed horn filled to overflowing with fruit, flowers and grain; used as the symbol of plenty.

**Cornus**, a genus of plants, which see.

**Cornwall** (korn’wal), a maritime county of England, forming the southwestern extremity of the island, bounded by Devonshire, and surrounded on all other sides by the sea; area, 1,350 sq. miles or 868,167 acres. The coastline is much broken. Between the north and south coasts is the promontory of Land's End, terminating in granite cliffs about 50 feet high. Some of the other cliffs exceed 400 ft. in height. At Land's End terminate the hills of the Devonian Range, their highest summit in Cornwall being Brown Willy, 1368 feet. Granite and old red sandstone are the chief rocks. The rivers are numerous, but short. Much of the area, especially in the elevated districts, is barren waste. About a fifth is under the plow. The chief wealth of the county is in its minerals, especially its mines of copper and tin, though the value of both has diminished. Several mines exceed 350 fathoms in depth. In the Botallack copper mine, a few miles north of Land's End, the workings are carried below the sea. In addition to tin and copper there are, in comparatively small quantities, silver, lead, zinc, iron, manganese, antimony, cobalt and bismuth. There are also valuable deposits of kaolin or china-clay. There are no manufactures, but the fisheries, particularly of pilchard and mackerel, are valuable. Cornwall, with the Scilly Isles, seems to have been the Cassiterides or Tin Islands of antiquity. The natives long maintained their independence against the Saxons, and their country was spoken of as West Wales. Their language also long continued to be Celtic. (See Cornwall Language.) The chief towns are Bodmin (county town), Penzance, Truro and Falmouth (with Penryn). The county gives the title Duke of Cornwall to the eldest son of the sovereign of Great Britain, and forms a royal duchy. The revenues of which belong to the Prince of Wales for the time being. The dukedom was created for the Black Prince in 1337. Pop. (1911) 328,131.

**Cornwall**, a port and manufacturing town of Canada. province Ontario, on the north side of the St. Lawrence, 67 miles above Montreal. Pop. 6598.
Cornwallis (korn'wel-iz), Charles, Marquis of, son of the first Earl Cornwallis, born in 1738. Educated at Eton and Cambridge, he served in 1761 as an aide-de-camp in the Seven Years' war; was made colonel of foot in 1766, and finally general. On the outbreak of the American war he sailed with his regiment, served with distinction under Howe and Clinton, and in 1780 was left in independent command in South Carolina with 1000 men. He defeated Gen. Gates at Camden, 1780, and fought Gen. Greene at Guilford in 1781, but six months afterwards was besieged in Yorktown and compelled to surrender, October 17, 1781. This disaster brought an end to the war. In 1786 Lord Cornwallis went to India with the double appointment of commander-in-chief and governor-general, invaded Mysore in 1791, and obliged Tipoo Saib to surrender much territory. Having returned to Britain, he was created a marquis (1794), appointed lord-lieutenant of Ireland, and again in 1805 governor-general of India. He died the following year.

Corn-weevil (korn-wēvil), a destructive insect which preys upon stored corn. There are various species; order Coleoptera, family Curculionidae, genus Calandra. The *Calandra granaria* is a slender beetle of a dark-chestnut color about one-eighth of an inch long. It bores a hole and deposits its egg inside of the grain, which is afterwards eaten to the husk by the grub.

Coro (kô'ro), a seaport town of Venezuela, at one time a flourishing place, but now much decayed. Pop. 9600.

Corocore (kô-rə-kôr), a boat of the Indian Archipelago of various forms. That used in Celebes is propelled by oars, and is often manned with sixty men. Others, as those used in the Moluccas, are masted vessels.

Corody, Corody (kôr'ō-di), an allowance of meat, drink or clothing, anciently due to the king from an abbey or other religious house, for the sustenance of such of his servants as he thought good to place there for maintenance. Corodies were also retained by the private founders of religious houses and even granted to benefactors, and consisted in the right of sending a certain number of persons to be boarded at an abbey.

Corolla (kô-rol'a), in botany, the portion of the flower inside the calyx; the inner floral envelope. The corolla surrounds the parts of fructification and is composed of leaves called petals. When there are several free leaves it is called *polypetalous* corolla, as in the rose; but when the petals are united by the margins into a continuous structure it is called *monopetalous*, or more correctly *gamo-petalous*. It may generally be distinguished from the calyx by the fineness of its texture and the gynaxyness of its colors; but there are many exceptions.

Corollary (kôr'ol-lar'e; in Latin corollarium), in mathematics, a collateral conclusion, following from a proposition demonstrated.

Corolliflorae (kôr-ol'-fô'r-e), one of the great subdivisions of exogenous plants, distinguished by the corolla being gamopetalous, inserted below the ovary, and by the stamens being inserted on the corolla. The primrose, heath, gentian, verbena, etc., are included in this division.

Coromandel Coast (kôr-ə-man'del; dh o lo mand'ah-lah), the east coast of the Indian Peninsula, Madras Presidency, or that portion of it between Palk Strait and the river Pennar. It is open, sandy, and has no secure harbors, and the surf renders landing difficult and often impossible except to the native catamaran.
Coromandel Wood

Coromandel Wood, the wood of Diospyros kaki, a tree found in Ceylon. Its ground color is chocolate brown, with black stripes and marks; it is hard, turns well, and makes very handsome furniture.

Corona (kō-rō'nə; L. 'a crown')—(1) In astronomy, a halo or luminous circle round one of the heavenly bodies; specifically the portion of the aureola observed during total eclipses of the sun, which lies outside the chromosphere or region of colored prominences. It is supposed to be an outer portion of the solar atmosphere of exceeding rarity. (2) In botany, an appendage of the corolla in some flowers, coming, as it were, between the corolla and the stamens, well seen in the cup of the daffodil. (3) In architecture, the lower member of the projecting part of a cornice.

Coro'na Australis (the 'southern crown'), one of Ptolemy’s southern constellations, containing twelve stars.

Coro’na Borealis (the 'northern crown'), one of Ptolemy's northern constellations, containing twenty-one stars.

Coronach (kərˈə-nə), or Cora'nach, a dirge or lamentation for the dead formerly customary among the Celts of Scotland and Ireland.

Coronado (kər-o'nə-do), Vasquez de, a Spanish explorer, born at Salamanca, about 1510. He went to Mexico and in 1540 was put in command of an expedition to the north, with the hope of discovering and conquering a rich kingdom in that direction. Coronado went as far north as Kansas, but failed in all his hopes and became insane from disappointment, dying about 1542.

Coronation (kər-o-nə'nə'shun), the placing of the crown on a monarch's head with solemn rites and ceremonies. Part of the ceremony usually consists in the oath which the monarch takes, that he will govern justly, will always consult the real welfare of his people, and will conscientiously observe the fundamental laws of the state. In England kings have been anointed and crowned in Westminster Abbey, even to the latest times, with great splendor. The form of the coronation oath settled after the revolution of 1688 remained unchanged until 1910, when it was decided in Parliament to rescind, in the coming coronation of George V, the portion reflecting on the Roman Catholic faith. The Archbishop of Canterbury puts the oath to the sovereign, who swears to govern according to the statutes of Parliament, to cause law and justice in mercy to be executed, and to maintain the Protestant religion.

Coronellidae (kər-o-ne'lə-dē), a widespread family of venomous snakes. It includes several genera, as Peamophid and Coronella. Coronella lavis, the smooth snake, is a native of Britain.

Coroner (kərˈə-nər), an official whose chief duty is to inquire into the cause of the death of persons killed or dying suddenly. The coroner's examination is made in all cases with the aid of a jury, in sight of the body, and at the place where the death happened. If the body is not found he cannot sit. In the United States coroners are elected or appointed. They have no defined responsibility, except in cases of crime, where they can cause arrests.

Coronet (kər-o'nət), such a variety of crown as is worn by princes and noblemen. The coronet of a British duke is adorned with strawberry leaves; that of a marquis has leaves with pearls interposed; that of an earl raises the pearls above the leaves; that of a viscount is surrounded with pearls only; that of a baron has only six pearls.

Corot (kə-rō'), Jean-Baptiste-Camille, a French artist, born at Paris in 1796; died in 1875; studied under Michallon and Victor Bertin and afterwards in Italy. He exhibited for the first time in the salon in 1827, but some years elapsed before the high qualities of his work were recognized. The fortune which he inherited from his father enabled him, however, to follow out the best of his
Corozonuts

genius, and the last twenty-five years of his life were a continuous triumph. He frequently painted figure subjects, including the large sacred pictures, the Flight into Egypt and the Baptism of Christ; but his most characteristic and successful work was in landscape. His woodland scenes, painted for the most part at dawn or twilight in a scheme of pale greens and silvery grays, show a singularly subtle feeling for this phase of nature, and are undoubtedly among the most important contributions of the last century to landscape art.

Corozonuts (ko-ro'zō), the seeds of a tropical American palm, the Phytelephas macrocarpa, whose hardened albumen, under the name of vegetable ivory, is used for small articles of turneryware.

Corporal (kor'pō-rāl; French, caporal, from L. caput, the head, the corporal being formerly a superior officer), a petty officer in the American and British armies ranking just above the ordinary private and below the sergeant. He has charge of one of the squads of the company, places and relieves sentinels, etc.

Corporation (kor-pō-rā'shun), in law, a civil or political body in which are vested certain rights or privileges with a view to their preservation in perpetual succession. A corporation may consist of one person only and his successors, when it is called sole (the sovereign of Britain for example); or of a number of persons, when it is called aggregate. When a corporation is vested in a single person, that person is looked upon in regard to the rights of the corporation as holding a representative or official position, and these rights belong to and are transmitted by him in virtue of this position, and not as natural rights. In like manner the rights and powers of an aggregate corporation do not consist of the natural rights of the members, but of the rights held and duly exercised by the terms of the corporation. Corporations may be either public or private. An instance of the former is a municipal corporation under the management of the State or the United States government. Private corporations do not fulfill any function of public government. They may be either ecclesiastical or lay. Ecclesiastical corporations are created to enable religious societies to manage with greater facility their temporal concerns. Lay corporations are private corporations not under immediate control of some religious body.

Corporation Tax, a tax levied on the United States tariff law of 1909 providing for the taxation of every corporation, joint-stock company and assurance company organized and doing business in the United States, the tax being one per cent. upon all the net income over $5000. This is a national tax, its proceeds forming a part of the national revenue. In 1910 these were over $26,000,000. The law, as sustained by the Supreme Court, gives the government the right to investigate the books of corporations.

Corps (kôr; French for body), a word often used as a military and a political term.—A corps d'armée, or army corps, one of the largest divisions of an army.—Corps diplomatique, the body of ministers or diplomatic characters.—Corps législatif (kôr lā-shi-lä-tif), the lower house of the French legislature in 1857-70. Its members were elected for six years in the proportion of 1 to 35,000 voters.

Corpulence (kor-pō-lens), an unwieldy state of the human body due to the excessive deposition of fat. It is promoted by a diet too rich in fat-forming materials, fats, starch and sugars, bodily inactivity, tranquillity of mind, etc. There is, however, a diseased state of the system which, independently of all these influences, will increase the production and deposition of fat. If corpulence is excessive it becomes troublesome and at length dangerous. In curing corpulence due attention must be paid to the regulating of the diet, exercise and sleep of the individual. Special attention must be given to the kind of diet. Avoid all kinds of fattening food, such as fat, cream, butter, sugar, potatoes, farinaceous food and malt liquors, and indeed alcoholic liquors of all kinds. Little bread should be eaten; a moderate increase in animal foods, lean beef, fish, fowl, eggs, is allowed; green vegetables and fresh fruit may be eaten. Regular exercise to suit the person's powers should be engaged in. A noted instance of corpulence is Daniel Lambert, who weighed over 50 stone, or more than 700 lbs. Moderate corpulence may be quite consistent with health.

Corpus Christi (kor-pus kris'ti; 'body of Christ'), the consecrated host at the Lord's Supper, which, according to the doctrines of the Roman Catholic Church, is changed by the act of consecration into the real body of Christ. This doctrine caused the adoration of the consecrated host, and hence the Roman Catholic Church has ordained for the host a particular festival, called the Corpus Christi feast.

This
Corpus Christi was instituted in 1264 by Pope Urban IV by a bull, in which he appointed the Thursday of the week after Trinity Sunday for the celebration of the Corpus Christi festival throughout Christendom.

**Corpus Christi**, a city, capital of Nueces Co., Texas, on Corpus Christi Bay, at the mouth of Nueces River, 200 miles s. w. of Galveston. Oysters and turtles are canned and largely shipped, and it has an ice plant, planing mills, etc. Pop. 8222.

**Corpuscles** (k o r'pus-klz), the minutest particles of substance, such as the electrons supposed to constitute the atom, and the flying particles in the Lesage hypothesis of gravitation. (See next article.) A name also applied to two kinds of minute solid bodies constituting an integral part of blood.

**Corpuscular Theory of Light** (kor-pus'kə-lər), the theory which explained the phenomena of light by supposing that a luminous body emits excessively minute particles of matter, corpuscles as they were called, which striking the eye produce the sensation of light. Newton held the corpuscular theory, and supported it with great ingenuity. This theory has long been displaced by the **wave theory** (which see).

**Corpus Juris** (kor'pus jū'ris; 'body of law') is a name given to certain collections of laws. The name of Corpus Juris Civilis ('body of civil law') in particular was bestowed in the twelfth century upon the general body of legal works drawn up at the order of Justinian, viz. the Institutes, Pandects, Code and Novels; together with the collections bearing on the feudal law appended to them. With the canonical or papal laws the same mode of proceeding has been adopted, and the Corpus Juris Canonici compiled.

**Corral** (kor'al), a yard or stockade for cattle.

**Correction of the Press**, the correction of printed matter before publication. The first impression taken from the types is called a proof, and almost always contains some errors. In correcting proofs for the printer the following signs are used:—When a wrong word or letter occurs, a line is drawn through it, and the proper word or letter written on the margin opposite. If a clause, word, or letter is omitted, a caret (\^) is marked at the place, and the omission is written on the margin. If a superfluous letter or word occurs, the pen is drawn through it, and the character \(\mathfrak{j}\), signifying *delete*, or take out, written in the margin. Where words are improperly joined, a caret is written at the place where the separation should have been, and the mark \(\#\) written in the margin. When syllables or words are improperly separated, they are joined by horizontal parentheses, as du ty. These parentheses are to be made in the margin as well as at the break. This sign is also used where there is too much space in one or more parts of a line. A tick-mark (\(\checkmark\)) also means to lessen space. When words are transposed, they are to be connected by a curved line, as *not is* when set up for 'is not,' and the mark \& (transpose) is to be written under it, and the mark \(\mathfrak{q}\), made in the margin. When punctuation is omitted, or requires to be altered, a caret is put at the place, and the comma or period, etc., is placed in the margin, with a stroke behind it, as \(/\). If a mark of quotation or superior letter has been omitted, the caret is made as before, and a mark of this sort \(\checkmark\) or \(\\) placed in the margin. Words which are to be printed in italics are marked beneath with a single line; as, office (office), if in small capitals, with two lines, as Greece (GREECE); if in full capitals, with three, as James (JAMES).

Where these marks are used in correction, the abbreviations *stat.*, *small caps.*, or *caps.,* should be written in the margin. Where a word printed in italics is to be altered to roman letters, a line is to be drawn under it, and the word *ret.* written in the margin. Where a corrector, after altering a word, changes his mind, and prefers to let it stand, dots are placed under the word in the proof, and the word *let* (let it stand) written in the margin. When two paragraphs are desired to be joined, the end of the one and the beginning of the other paragraph are connected by a curved line \(\checkmark\), and the words *run in* written in the margin. Where a new paragraph is desired to be made, the mark \(\#\) is inserted at the place, and the word par. written in the margin. The corrections should always be written on the margin of the proof so as to ensure notice by the printer; and when these are numerous or intricate, connect them by a line drawn from the place where they are to be made.
Correggio (kor-je’yo), ANTONIO AL-
LEGI, an Italian painter, born at Correggio, near Modena, in 1494.
Little is known of his life, which was very retired. Almost the only anecdote
told of him is that on seeing the St. Cecilia of Raphael he exclaimed ‘Anch
‘io son pittore’ (I also am a painter), but this is doubtful. Correggio is un-
rivaled in chiaroscuro and in the grace and rounding of his figures. Among
his best pictures are Night, in which the
chief light is the glory beaming
from the infant Saviour; the St. Jerome;
the Marriage of St. Catherine; several
Madonnas, one of them (called La
Zingarella, or the Gipsy Girl) said to
represent his wife; the Penitent Magda-
lene; the altar-pieces of St. Francis, St.
Gervais, and St. Sebastian; Christ in the
Garden of Olives; the fresco of the
Ascension in the Church of St. John,
Parma; the Assumption of the Virgin in
the cathedral of the same city; the Ecce
Homo and Cupid, Mercury and Venus,
both in the National Gallery, London.
He died in 1534.
Correlation of Physical Forces,
a term introduced by Mr. Grove to denote
what may more properly be called the
convertibility of the various forms of
energy. The energy, for instance, which
a bullet in rapid motion possesses, is
converted into heat when it strikes the
target, the bullet being then warm to the
touch. So heat may again be converted
into kinetic energy, that is, the form of
energy possessed by a moving body; for
instance, through the intermediation of a
steam engine. Heat is also directly
converted into electricity, and electricity
into heat. In connection with this doctrine that of the conservation of en-
ergy was also studied. Mercury, red precipitate of mercury, butter of antimony, hydrochloric
acid, sulphuric acid, corrosive sublimate,
etc.
Corrèze (kor-raz), an inland depart-
ment of France, formed from part
of the former province of Limousin,
and deriving its name from the river
Corrèze, by which it is traversed; area,
2273 miles; capital, Tulle. It be-
longs almost entirely to the basin of the
Garonne. Except in a few valleys the
soil is far from fertile, heaths occupying a
great extent of surface, and agriculture
being in a very backward state. Pop.
317,430.
Corrib, LOUGH (lo’k kor’ib), a large
lake in Ireland, mostly in
County Galway, partly also in County
Mayo, about 23 miles in length, and
varying from 2 to 8 miles in breadth.
It receives the drainage of Lough Mask
to Galway Bay. It has some fine scenery
on its northern and western shores, con-
tains numerous islands, and, next to
Lough Neagh, is the largest lake in Ire-
land.
Corridor (kor’id-or; Italian and Span-
ish), in architecture, a gal-
ery or long aisle leading to several cham-
bers at a distance from each other, some-
times wholly enclosed, sometimes open
on one side. In fortification, corridor
signifies the same as covert-way.
Corrientes (kor-re-an’tes), a town of
the Argentine Republic, capital of the province of same name, on
the Paraná, near its confluence with the
Paraguay, 832 miles N. of Buenos Ayres.
It is well placed to serve as an entrepôt of goods between the upper parts of
the Paraguay and the Paraná and the sea-
ports on the La Plata. Pop. 30,172.
Pop. of province, 290,470.
Corrievrekin. See Corryvrekan.
Corrigan (kor’i-gan), MICHAEL AU-
GUSTINE, archbishop, born at Newark, New Jersey, in 1839; died in 1902.
He was graduated at the American
College at Rome in 1863, became Roman
Catholic bishop of Newark in 1873, was
made an archbishop in 1880, and suc-
ceded Cardinal McCloskey as Archbishop
of New York in 1886.
Corrobory (kor’o-bo-ri), a dance en-
gaged in by Australian natives in which the performers, with
shields in their hands, circle round a fire.
Corrody. See Corody.
Corrosives (kor-ro’si-vos; Lat. correderes,
to eat away), in surgery, substan-
tes which eat away whatever part
of the body they are applied to; such
are glacial acetic acid, burned alum, white
precipitate of mercury, butter of antimony, hydrochloric
acid, sulphuric acid, corrosive sublimate,
etc.
Corrosive Sublimate, bichloride of
mercury (HgCl2), a white, crystalline solid, an
acid poison of great virulence. The
stomach-pump and emetics are the surest
preventives of its deleterious effects when accidentally swallowed, if used im-
mediately; after a time the corrosive
action of the chemical on the stomach
may result in rupture thereof if the instru-
ment be inserted or emetic attempted.
White of egg is very serviceable in coun-
teracting corrosive action on the stomach.
It is a powerful antiseptic.
Corrugated Iron shee-t-iron
strengthened by being bent into parallel
Corruption of Blood

Furrows. It is largely used for roofing, and when dipped in melted zinc, to give it a thin coating thereof, is commonly known as galvanized iron.

Corruption of Blood. See At-tainer.

Corryvreckan (kor-è-vrek'àn), a place on the west coast of Scotland.

Corry (kor'ri), a city of Erie Co., Pennsylvania, 37 miles s. w. of Erie. It has locomotive works, machine shops, tanneries, etc., in a petroleum region, and contains a State fish-hatchery. Pop. 5991.

Corsac (kor'zak) or Corasan (Valpes corsac), a species of yellowish fox or dog found in Central Asia, Sibérie and India. It is gregarious, prowls by day, burrows, and lives on birds and eggs.

Corsairs (kor'särz), the Anglicized form of the term used in the south of Europe to denote those pirates who sailed from Algiers, Tunis, Tripoli, and the ports of Morocco.

Corselet (kor'sel'et). (1) A cuirass or armor to protect the body from injury, worn formerly by pikemen, generally of leather, and pistolproof. (2) The part of a winged insect which answers to the breast of other animals.

Corset (kor'set), a piece of underclothing worn, usually by women, to give shape to the body, consisting of a sort of closely-fitting jacket, usually stiffened by strips of steel, whalebone or other means, and tightened by a lace. The materials of which it is made should be smooth and elastic, and it should be especially fitted for the individual wearer, as no two human figures are precisely alike. It should be remembered, also, that corsets are meant to preserve a good figure, not to make one, and any forcible compression of the shape, especially on young persons, will only end in destroying natural grace of movement and in serious injury to the health.

Corsica (kor'si-kä; French, Corse), an island in the Mediterranean, forming the French department of same name. It is separated from the island of Sardinia, on the south, by the Strait of Bonifacio. About 10 miles wide; length, n. to s., 110 miles; breadth, near its center, 53 miles; area, 3377 square miles. The east coast is almost unbroken, but on the west coast a number of deep bays follow in rapid succession. The interior is traversed by a mountain chain, the culminating point of which, according to the latest surveys, is Monte Cinto, 8891 feet high, Monte Rotondo coming next, 8775 feet high. From the east and west side of the chain numerous streams flow to opposite sides of the coast, generally mere torrents. With the exception of some marshy districts on the east coast, the climate is excellent. There are fine forests containing pines, oaks, beeches, chestnuts and cork-trees, and the mountain scenery is splendid. In the plains and numerous valleys the soil is generally fertile; but agriculture is in a backward state. Mulés, goats, horses, cattle and sheep, and among wild animals the boar, the fox and the deer are common. There are good fisheries. In minerals Corsica is not rich. The chief exports are wine, brandy, olive-oil, chestnuts, fruit and fish. The chief towns, Ajaccio and Bastia, are connected by railway. The island was first colonized by the Phoenicians, from whom it got the name of Cyrena. The Romans afterwards gave it that of Corsica. From the Romans it passed to the Goths, and from them to the Saracens, and in the fifteenth century to the Genoese. France had the rights of the Genoese ceded to her, after Paoli had virtually made Corsica independent, and entered on forcible possession of it in 1768. An insurrection in 1794, headed by General Paoli and assisted by the British, for a time restored the island to independence; but in 1796 it again fell under the dominion of France. It is notable as the birthplace of Napoleon. Pop. (1906) 281,360.

Corsicana (kor'-i-kä'na), a city, county seat of Navarro Co., Texas, in Central Texas in what is known as the 'black land belt'; served by five railroads. There are oil-wells in its vicinity and it has shipping and manufacturing interests. Pop. 14,970.

Cormed (kor'med; Anglo-Saxon), formerly a piece of bread consecrated by exorcism, to be swallowed by any person suspected of a crime. If guilty, it was expected that the swallow would fall into convulsions, or turn deadly pale, and that the bread would find no passage. If innocent, it was believed the morsel would turn to nourishment.

Corso (kor'sö), an Italian term given to a leading street or fashionable carriage-drive.

Cort, Henry, the inventor of the processes of puddling and rolling iron, born at Lancaster, England, in 1740. He commenced business at Gosport, Hampshire; erected ironworks, and studied with great success methods of the process of manufacturing iron. By the
unfortunate selection of a partner he was involved in a complication of lawsuits, and finally ruined. In 1794, however, he received a pension of £200 a year from the British government. He died in 1800.

**Cortelyou** (kor'tē-yo̊o̊), Geo r ge B r uce, cabinet official, was born at New York in 1802; was graduated at the State Normal School, became a law reporter in 1833 and a school principal in 1885. He entered public service in 1889, became successively private secretary to various officials, and was made stenographer to President Cleveland in 1895, assistant secretary to President McKinley in 1898, and secretary in 1900. He was continued in this position by President Roosevelt, and was chosen by him in 1903 as the first secretary of the new department of Commerce and Labor. In 1906 he was appointed Postmaster-General and in 1907 Secretary of the Treasury, thus holding three secretarships in the Roosevelt cabinets. In 1909 he became president of the Consolidated Gas Company, of New York.

**Cortes** (cor'tēs), the old assembly of the estates in Spain and Portugal. In early times the king was very dependent upon them, especially in the kingdom of Aragon. When the kingdoms of Aragon and Castile were united under Ferdinand and Isabella the crown succeeded in rendering itself more independent of the estates, and in 1538 Charles abolished the assembly in Castile altogether. Gradually the popular liberties were encroached upon, and the cortes at length were convened only for the purpose of homage or ceremony, or when a question regarding the succession arose. In 1808 Napoleon revived the cortes for his own ends. The present cortes of Spain are composed of a senate and congress equal in authority, and having the power along with the king to make laws. (See Spain.) The Portuguese cortes is coeval with the monarchy, and has had a history very similar to that of the Spanish.

**Cortez**, or Cortéz (kor'tēs, kor'tēs) Fernando, or Hernan, the conqueror of Mexico, was born in 1485 at Medellin, in Extremadura; died near Seville in 1547. He went to the West Indies in 1504, where Velazquez, Governor of Cuba, under whom he had greatly distinguished himself, gave him the command of a fleet, which was sent on a voyage of discovery. Cortez quitte Santiago de Cuba in 1518, with eleven vessels, about 700 Spaniards, eighteen horses and ten small field-pieces. He landed on the shore of the Gulf of Mexico, where he caused his vessels to be burned, in order that his soldiers might have no other resource than their own valor. Having induced the Totonacs and Tlaxcalans to become his allies, he marched towards Mexico, where he was amicably received; but, having seized Montezuma, the Aztec monarch, and treated the people with great cruelty, they finally became hostile and attacked the invaders. After a desperate struggle, in which 100,000 Mexicans are said to have perished, the city was taken, and soon after the whole country was subjugated. In 1528 Cortez returned to Spain; but two years after he was again sent out to Mexico, where he remained for ten years, discovering meanwhile the peninsula of California. He returned once more to Spain, where, notwithstanding his great services, he was coldly received and neglected. After taking part in an expedition to Algiers in 1541 he passed the remainder of his days in solitude. He left a character eminent for bravery and ability, but infamous for perfidy and cruelty.

**Cortland** (kor'tland), a city, capital of Cortland Co., New York, 38 miles s. of Syracuse. It has a State normal school and various factories, including machine shops, wire works, paper mills, silks and wagon factories, etc. Pop. 11,504.

**Cortona** (kor'tō'na), a city of Italy, 50 miles s. e. of Florence. It is a place of great antiquity, is partly surrounded by cyclopean walls, and has in its museum a great variety of Etruscan and Roman relics. Its cathedral contains fine works of art. Pop. 8607.

**Cortona** (kor'tō'na), Pietro di, properly Pietro Berrettini, a painter and architect, was born at Cortona in 1596; died in 1669. Pope Ur-
Coruna

ban VIII employed him to decorate a chapel in the church of St. Bibiena, and also to execute the frescoes of the grand salon of the Barberini Palace. Many churches of Rome were decorated by him; and at Florence he adorned the Pitti Palace for the Grand-duke Ferdinand II. His easel pictures, although of less value than his larger works, are held in great estimation. As an architect he did some important work in church restoration.

Coruna (ko-rō'nyā). See Corunna.

Corundum (ko-rū'ndum), the earth alumina, as found native in a crystalline state. In hardness it is next to the diamond. The amethyst, ruby, sapphire and topaz are considered as varieties of this mineral, which is found in India and China, and is most usually in the form of a six-sided prism or six-sided pyramid. It is nearly pure anhydrous alumina (Al₂O₃), and its specific gravity is nearly four times that of water. Its color is various—green, blue, or red, inclining to gray, due to traces of iron, copper, etc. Emery is a variety of corundum.

Corunna (kō-rū'nā; Spanish, Co-rū'nā), a seaport of Spain, in the province of the same name in Galicia, on the northwest coast, on the peninsula at the entrance of the Bay of Bétanzos. It consists of an upper and a lower town, the former built on the n. side of a small peninsula, and the latter on the isthmus connecting the peninsula with the mainland. The harbor, which is well protected, is deep, spacious and safe, and many improvements have lately been made. Cattle form the chief export. There is a government tobacco factory employing 3000 women and girls. There is a lighthouse, 92 feet high, called the Tower of Hercules, and supposed to be of Roman construction. Corunna was the port of departure of the Spanish Armada (1588), and the scene of the repulse of the French and the death of Sir John Moore (1809). Pop. 43,971. See map at Ferrol.—The province is hilly, and its inhabitants chiefly engaged in agriculture and fishing. Area, 3061 sq. miles; pop. 653,556.

Corveé (kōr've), in feudal law, an obligation on the inhabitants of a district to perform certain services, as the repairs of roads, etc., for the sovereign or the feudal lord. In France this system was not finally abolished until 1792.

Corvette (kōr'vet), a vessel of war, barque or ship-rigged, having a flush deck, with no quarter-deck and only one tier of guns; but the term is now somewhat loosely used. Vessels of this class are now called cruisers.

Corvey, or Korvē (ko-rvē), a former monastery near Höxter in the Prussian province of Westphalia, founded in 816, an early center of German civilization. Wittekind, the historiographer of the convent; Bruno, known afterwards as Pope Gregory IV, and many other learned men were educated here. To its library belonged the only MS. of the first six books of the Annales of Tacitus, discovered here in 1614. The abbey, or castle of Corvey, as it is now called, has a rich and extensive library; but the ancient collection of the Benedictines is no longer in existence.

Corvidæ (ko-rvɪ-dē), the crows, a family of passerine birds, in which the bill is strong, conical shape, more or less compressed, and the gape straight. The nostrils are covered with stiff, bristly-like feathers directed forwards. The family includes the common crow, rook, raven, magpie, jay, jackdaw, nutcracker, Cornish chough, etc.

Corvi'nus, MATTHIAS. See Matthias Corvinus.

Corvo (korvō), the smallest and most northerly of the Azores Islands. Pop. about 1000.

Corwin (kor'win). THOMAS, statesman and orator; born in Bourbon Co., Kentucky, in 1784; died in 1856. He won celebrity as lawyer and orator; was elected to Congress in 1830; supported Harrison for the presidency in 1840; and was elected governor of Ohio. He represented Ohio in the United States Senate, 1845-50, and in the latter year, was appointed Secretary of the Treasury by President Fillmore. He was Minister to Mexico 1861-64.

Cor'yat, THOMAS, an eccentric English fish traveler, born in 1577; died at Surat India, in 1617. His wanderings, a great part on foot, were through Europe, Asia Minor, East India, etc. His travels were published under such curious titles as Coryat's Crudities, Coryat's Crambe or Colloquy Twice Sodden, etc. He acted as a sort of butt or foil to the wit of whom he associated in London.

Corybantes (kor-i-ba'nten), frantic priests of Cynocephale, who celebrated the mysteries with orgiastic dances to the sound of drum and cymbal.
Corymb (kor'imb), in botany, that form of inflorescence in which the flowers, each on its own pedicel of different lengths, are so arranged along a common axis as to form a flat broad mass of flowers with a convex or level top, as in the hawthorn and candytuft.

Corypha (kor'fa), a genus of palms, including the fan-palm, gebang palm and talipot.

Coryphaena (kor'-fa-na), Coryphene, a genus of fishes of the mackerel family (Scomberidae). The body is elongated, compressed, covered with small scales, and the anal fin extends the whole length of the back, or nearly so. The dolphin of the ancients is the C. hipparhia. All the species, natives of the sea of warm climates, are very rapid in their motions, and very voracious. They are of brilliant colors, and are objects of admiration to every voyager.

Corypheus (kor-i-fé-us), the leader of the chorus in the Greek drama. His functions were often as wide as those of our stage-manager, conductor and ballet-master. The name coryphées is now applied to a ballet-dancer.

Coryphodon (kor-i-fé-don), a genus of extinct Ungulata, forming a link between the elephants and tapirs, having the ridges of its molar teeth developed into points; found in the Eocene formations of England and France.

Cos, now called Stanchio or Stanko, an island in the Aegean Sea, on the coast of Asia Minor; area, 96 square miles; pop. 10,000. It was the birthplace of Hippocrates, and had anciently a celebrated temple of Asculapius. In Cos was manufactured a fine, semitransparent kind of silk, much valued by the ancients. Cos is also the name of the principal town, a decayed seaport. The island yields grain, wine, silk, cotton, citrons, etc.

Cosel. See Kosel.

Coseley (kor'li), an urban sanitary district of West Staffordshire, 11 miles n. of Birmingham. It has extensive iron and other manufactures. Pop. (1911) 22,841.

Cosenza (ko-sen'tsa), an episcopal city of Southern Italy, capital of province of Cosenza or Calabria Citeriore, 150 miles s. e. of Naples; pop. 21,240. It has manufactures of silk, pottery and cutlery; the environs are beautiful, and produce abundance of grain, fruit, oil, wine and silk.

Coshering (kosh'er-ing), or Coshery, an old feudal custom in Ireland by which the lord of the soil had the right to lodge and feast himself at a tenant's house.

Coshocton (ko-shok'ton), a town, capital of Coshocton Co., Ohio, 26 miles n. of Zanesville. It has numerous manufactories and is an important shipping point for coal, grain, flour, wool, etc. Pop. 9003.

Cosmas (kos'mas), surnamed Indicopleustes ('the Indian navigator'), an Alexandrian merchant and traveler of the sixth century; afterwards a monk. He wrote several geographical and theological works, the most important of which extant is the Christian Topography. The author tries to prove that the earth is a parallelogram bounded by walls, which meet and form the vaulted roof which we call the sky.

Cosmetics (kos-met'iks; from Gr. kosmetes, I ornament or beautify), external preparations for rendering the skin soft, pure and white, or for beautifying and improving the complexion. To these may be added preparations for preserving or beautifying the teeth, and those which are applied to the hair.

Cosmism (kos'mizm), that system of philosophy, based on the doctrine of evolution, enunciated by Mr. Herbert Spencer and his school; a phase of positivism.

Cosmogony (kos'-mog'ə-ni; Greek kosmos, world, and genē, generation), a theory of the origin or formation of the universe. Such theories may be comprehended under three classes: 1. The first represents the world as eternal, in form as well as substance. 2. The matter of the world is eternal, but not its form. 3. The matter and form of the universe are ascribed to the direct agency of a spiritual cause; the world had a beginning, and shall have an end. Aristotle appears to have embraced the first theory; but the theory which considers the matter of the universe eternal, but not its form, was the prevailing one among the ancients, who, starting from the principle that nothing could be made out of nothing, could not admit the creation of matter, yet did not believe that the world had been always in its present state. The prior state of the world, subject to a constant succession of uncertain movements which chance afterwards made regular, they called chaos. The Phoenicians, Babylonians, and also Egyptians seem to have adhered to
this theory. One form of this theory is the atomic theory as taught by Leucip- pus, Epicurus and Lucretius. According to it, atoms or indivisible particles existed from eternity, moving at hazard, and pro- ducing, by their constant meeting, a vari- ety of substances. After having given rise to an immense variety of combina- tions they produced the present organi- zation of bodies. The third theory of cosmogony may be said to be that gener- ally stated in the first chapter of Genesis, where the act of creation is unequivocally enunciated. This narrative has points in common with several ancient cosmogonies, notably those of the Assyrians and Baby- lonians. In modern cosmological specu- lations various causes have been as- signed to account for the phenomena of nature.

Cosmos (koz’mos), order or harmony, and hence the universe as an orderly and beautiful system. In this sense it has been adopted by Humebold as the title of his celebrated work, which describes the nature of the heavens as well as the physical phenomena of the earth.

Cosne (kö’n), a town of France, dep. Nièvre, 31 miles N. N. W. of Nevers, on the Loire. Pop. 8437.

Cossacks (kos’äks; Casacks), tribes who inhabit the southern and eastern parts of Russia, paying no taxes, but performing instead the duty of soldiers. Nearly all of them belong to the Greek-Russian Church, to which they are strongly attached, and to the observa- nces of which they are particularly attentive. They must be divided into two principal classes, both on account of their descent and their present condition—the Cossacks of Little Russia and those of the Don. Both classes, and especially those of the Don, have collateral branches, distributed as Cossacks in the A. and of the Danube, of the Black Sea, of the Caucasus, of the Ural, of Orenberg, of Siberia, of the Chinese frontiers and of Astrakhan. Writers are not agreed as to the origin of this people and of their name, but they are believed to be a mixed Caucasian and Tartar race. In personal appearance the Cossacks bear a close resemblance to the Russians, but are of a more slender make, and have features which are decidedly more hand- some and expressive. Originally their government formed a kind of democracy, at the head of which was a chief or hetman of their own choice; while under him was a long series of officers, with jurisdictions of greater or less extent, partly civil and partly military, all so arranged as to be able on any emergency to furnish the largest military array on the shortest notice. The democratic part of the condition gradually disappeared under Russian domination and when, in 1917, Russia capitulated to Ger- many and agreed to the recognition of the separate republic of the Ukraine, there was a vigorous movement for the re-establishing of the Don Cossack republic. The Cossacks were a very important element in the national army of Czarist Russia, forming a first-rate irregular cavalry and rendering excellent services as scouts and skirmishers. The European war, however, was fought more with shells than with horses, and the fact that great Russia laid down her arms before the victorious Teutons is no reflection on the courage and skill of the Cossacks. Every Cossack was liable to military service from 18 to 50. The Cossacks number about 3,250,000.

The capital of the Don Cossack territory is Novo Tcherkassk, which was founded in 1805. Rostov is the commercial center. Agriculture, live stock, herring-fishing and coal mining are the principal industries of the Cossacks.

Cossus (cos’sus), Servius Cornelius, consul at Rome 428 B.C. when in single combat he slew the Veian King Lar Tolumnius, and won the apolia opima, which could be gained by a Roman general only from a leader of the enemy.

Costa (kos’ta), Lorenzo, born in 1469; died 1536; an Italian painter of the Bolognese school.

Costa, Sir Michael, musical composer and conductor, born at Naples of an old Spanish family in 1810; died in 1884. In 1829 he went to England, and in 1836 became a naturalized British subject. He was conductor of the Philhar- monic Society, the Sacred Harmonic Soci- ety, Her Majesty's Opera, the Händel Festivals, etc. His chief works are the opera Don Carlos and the operas of Titus and Naama. He was knighted in 1863.

Costanoan (kö’s-tä’-nön), a linguisti- tic stock of North American Indians, whose territory extended from the Golden Gate, California, to a point below Monterey Bay. It once con- sisted of numerous tribes, but now is almost extinct, 50 survivors existing in 1888.

Costa Rica (kos’ta ri’ka), a republi- can state in the southern part of Central America; bounded N. by Nicaragua, E. and N. by the Caribbean Sea; E. by Panamá; and S. and W. by the Pacific. The area is 23,000 sq. miles, divided into five provinces and two co- mparcas. The country is intersected diag- onally by the primary range or cordillera of the isthmus, which throws off numerous spurs on either side. The chief range con-
Costello (kos-tel′o), Dudley, novelist and journalist, born in Ireland in 1805; died at London in 1865. A constant contributor to many journals and magazines, and author of several popular works of fiction, etc.—His sister, Louisa Stuart Costello, born in 1815; died in 1870; published two romances, entitled The Queen Mother (1841) and Clara Fane (1848), a poem called The Lay of the Stork (1866), and various historical and descriptive works.

Coster (kos′ter), Laurens (called Janzoon, that is, son of John), whose name is connected with the origin of printing, was born in Haarlem in 1370 or 1371; died about 1440. He was sacristan (Koster) of the parochial church at Haarlem, and from this office he derived his surname. According to a statement first found in Junius' Batavia (1588), he was the original inventor of movable types, and on this ground the Dutch have erected statues in his honor. Born in 1516, a Dutchman, Dr. Van der Linde, preferred to have demolished the claims of Haarlem to the invention of printing, and to have established that Holland, like other countries, was indebted for it to the Mayence school. This contention has been rejected by Mr. J. H. Hessels, who, on carefully investigating the matter, thinks it highly probable that Coster was the inventor. Among American printers Gutenberg is credited with the invention. See Fust, Gutenberg and Schöffer.

Costmary (kos′ma-ri; from L. costos, Mary, the Virgin), or Alecost (Bal-samita vulgaria), a composite herbaceous plant, a hardy perennial, a native of Italy, introduced into Britain in 1568, and common in almost every rural garden. It was formerly put into ale to give it an aromatic flavor, hence the name Alecost.

Costs, in law, are the expenses incurred by the plaintiff and defendant. As a rule, these are paid by the loser in a suit, but there are always extrajudicial expenses incurred by both parties, which each has to pay whatever be the issue of the suit. In criminal cases the party accused may have his expenses if the court thinks the accusation unreasonable. In matrimonial suits, the wife, whether petitioner or respondent, is generally entitled to her costs from the husband.

Costume (kos′tūm), the style of attire characteristic of an individual, community, class, or people; the modes of clothing and personal adornment which prevail in any period or country.—Costume balls, also called fancy dress balls, are entertainments at which the guests adopt a style of dress different from the one usually worn. It may be one which was worn at another period, or one worn in another country, or a modern dress worn by some particular class of society. A favorite plan is to make up as some well-known character in history or literature.

Côte-d'Or (kōt-dôr′), that is, hill or hillside of gold, from the excellence of its vintages, a chain of hills in the east of France, height from 1400 to 1800 feet.

Côte-d'Or, an inland and eastern department of France, part of the old province of Burgundy, having Dijon as its capital. It is watered by the Seine, the Saône, and their affluents, and derives its name from the Côte-d'Or hills (see above), which traverse it from N. E. to S. W. Area, 3382 sq. miles. The vineyards of the eastern slopes of the Côte-d'Or produce the celebrated wines of Upper Burgundy. Iron, coal, marble, etc., are found. Pop. (1906) 367,369.

Côtes-du-Nord (kōt-dū-nôr′), a maritime department in the north of France, forming part of ancient Brittany; capital Brieuc. Area, 2859 sq. miles. The coast extends about 150 miles, and the herring, pilchard and mackerel fishing is actively pursued. One of the main branches of industry is the
Coteswold

rearing of cattle and horses. In manufacturing industries the principal branch is the spinning of flax and hemp and the weaving of linen and sailcloth. Among the minerals are iron, lead and granite. Pop. 611,500.

Coteswold (or COTSWOLD) Hills. See Cotswoold Hills.

Cöthen. See Cothen.

Cothurni. See Buskin.

Cotidal Lines (kō-ti’dal), a system of lines on a globe or chart marking the places where high water occurs at the same instant.

Cotillion (kō-ti’l-yun), a brisk dance of French origin performed by eight persons together, resembling the quadrille, which is now called the Cossack dance. Each group of dancers, which consists in throwing wine from cups without spilling into little basins of metal, suspended in a particular manner or floating in water.

Cotingas (kō-ti’ng’s), a family of tropical American birds, some of which have splendid plumage, or are otherwise remarkable. See Bellbird, Umbrella-bird.

Coto (kō’tō), the reddish-brown, aromatic and slightly bitter bark of *Paliocourea densiflora*, order Rubiaceae, a tree of South America imported into Europe and used as a remedy in diarrhea and profuse sweating.

Cotoneaster (kot-on-es’ter), a genus of small trees or trailing shrubs, nat. order Rosaceae. *C. vulgāris* is a British species, having rose-colored petals and the margins of the calyx downy. The other species are natives of the south of Europe and the mountains of India. They are all adapted for shrubbery.

Cotopaxi (kō-tō-pak’si), the most remarkable volcanic mountain of the Andes, in Ecuador, about 60 miles N. W. of Chimborazo; lat. 0° 43' s.; lon. 78° 40' w.; altitude 19,500 feet. It is the most beautiful of the colossal summits of the Andes, being a perfectly symmetrical truncated cone, presenting a uniform unfurrowed field of snow of resplendent brightness. Several terrific eruptions of it occurred in which it superseded it. The name and the beginning of the nineteenth century.

Cotrone (kō-trō’nə), a seaport of Southern Italy, province of Catanzaro, on the site of the ancient Croton. It has a cathedral, is defended by a citadel and otherwise fortified. Pop. 7017.

Cotswold Hills (kōt’s-wold), a range of hills in England, County Gloucester, which they traverse N. to S. for upwards of 50 miles; extreme elevation near Cheltenham, 1104 feet. The Cotswold sheep are a breed of sheep remarkable for the length of their wool, formerly peculiar to the counties of Gloucester, Hereford, and Worcester.

Cotta (kōt’ta), Johann Friedrich, Baron von, an eminent bookseller of Germany, born in 1784; died in 1832. He began business at Tübingen, but in 1811 removed to Stuttgart. He was the publisher for many great writers in Germany, including Goethe, Schiller, Wieland, Richter, Uhland, Fichte, Hegel, the Humboldt, and others.

Cottabus (kōt’a-bus), an ancient town, which consisted in throwing wine from cups without spilling into little basins of metal, suspended in a particular manner or floating in water.

Cottage (kō’taj), a small country residence or detached suburban house, adapted to a moderate scale of living, yet with all due attention of neatness, comfort and refinement.

Cottbus. See *Kottbus*.

Cottier Tenure (kot’er ten’ər), a system of tenure according to which laborers rent small portions of land directly from the owner, or from a farmer, often giving personal service as part of the rent, and holding by annual tenancy.

Cottin (kōt’in), Sophie Ristaud, better known by the name of Madame Cottin, a French novelist, born in 1773; died in 1807. In 1790 she married M. Cottin, a banker of Bordeaux, who died in 1803, and thenceforth she followed literature. Her best-known work is *Elizabeth*, or *The Esicles of Siberia*; other novels are *Claire d’Albe*, *Maleine*, *Amélie* and *Mathilde*.

Cottle (kot’tl), Joseph, a bookseller and publisher of Bristol, England, and the author of some now almost completely forgotten poems, was born in 1774; died in 1853. He was a generous friend to Coleridge and Southey in their early days, and wrote an interesting volume of recollections of those authors.

Cotton (kot’lən), the name given to the soft cellular hairs which encircle the seeds of plants of the genus Gossypium, nat. order Malvaceae. The genus is indigenous to both the Old and the New World, and the plants are now cultivated all over the world within the limits of 30° north and south of the equator. All the species are perennial
shrubs, though in cultivation they are sometimes treated as if they were annuals. They have alternate stalked and lobed leaves, large yellow flowers, and a three or five celled capsule, which, when ripe, bursts open through the middle of the cell, liberating the numerous black seeds covered with the beautiful filimentous cotton. The North American cotton is produced by *Gossypium barbadense*, and two well-marked varieties are cultivated, the long-staple cotton, which has a fine, soft, silky fiber nearly 2 inches long, and the short-stapled cotton, which has a fiber little over 1 inch long adhering closely to the seed. The long-staple variety, known as Sea Island cotton, holds the first place in the market. It is grown in some of the southern United States, especially on islands bordering the coast. The cotton grown in South America is obtained from *G. Peruvianum*, called also kidney cotton. The indigenous Indian species is *G. herbaceum*, which yields a short-stapled cotton. It is grown throughout the Mediterranean region as well as in Asia. The mode of cultivating cotton is usually as follows:—The seeds are sown in drills in about a yard in width, the plant appearing above ground in about eight days afterwards. The rows of young plants are then carefully weeded and hoed, a process which requires to be repeated at two or three subsequent periods. No hoeing takes place after the flowering has commenced, from which a period of seventy days generally elapses till the ripening of the seed. To prevent the luster of the cotton wool from being tarnished, the pods must not remain ungathered longer than eight days after coming to maturity. The cotton-wool is collected by picking with the fingers the flakes from the pods, and then spreading out to dry, an operation which requires to be thoroughly performed. A machine has recently been invented which is asserted to pick cotton satisfactorily. The cotton then comes to be separated from the seeds, a process formerly effected by manual labor, but which has long been done by the cotton-gin. After being cleansed from the seeds, the cotton-wool is formed into bales, and is ready for delivery to the manufacturer.

Cotton has been cultivated in India and the adjacent islands from time immemorial. It was known in Egypt in the sixth century before the Christian era, but was then probably imported from India. It was not till a comparatively late period that the nations of the West became acquainted with this useful commodity, and even then it appears only to have been used as an article of the greatest luxury. The introduction of the cotton-shrub into Europe dates from the ninth century, and was first effected by the Spanish Moors, who planted it in the plains of Valencia. Cotton manufactories were shortly afterwards established at Cordova, Granada and Seville; and by the fourteenth century the cotton stuffs manufactured in the kingdom of Granada had come to be regarded as superior in quality to those of Syria. About the fourteenth century cotton thread began to be imported into England by the Venetians and Genoese. In China the cotton-shrub was known at a very early period, but it does not appear to have been turned to any account as an article of manufacture till the sixth century of the Christian era, nor was it extensively used for that purpose till nearly the middle of the fourteenth century. In the New World the manufacture of cotton cloth appears to have been well understood by the Mexicans and Peruvians long before the advent of Europeans. It was planted by the English colonists of Virginia in 1621, but only as an experiment, and the amount produced was long very small, the crop amounting only to about 2,000.-000 lbs. in 1791. In the following year the cotton-gin was invented, and the rapidity with which the fiber could be removed from the seed led to a rapid and great increase, the United States becoming in the following century the great producer of cotton. The cotton-plant is chiefly cultivated for the fiber growing upon the seed, but the seed itself has proved commercially valuable. Formerly a waste product, it now forms an essential part of the crop's value, yielding large quantities of cottonseed-oil and oil-cake. The fiber from the inner bark also

Harbaceous Cotton Plant (*Gossypium herbaceum*).
COTTON PICKER

COTTON PLATFORM AND COMPRESSOR

Experts have for many years been seeking a machine for picking cotton. The one illustrated above is an ingenious device which propels itself, picks the cotton, and stores it in the bags at the rear. In the lower view the machine seen in the background presses the cotton into bales, which are bound with steel tape.
Cotton shows possibilities of importance, being little inferior to jute, and much resembling it. Although cotton is a tropical plant, its cultivation is conducted most successfully in the temperate zone. The conditions most favorable to its growth and development are six months exemption from frost, moderate rainfall during growth, and while maturing abundant sunshine with little moisture. The Southern States of this country supply these conditions better than elsewhere, and they have no competitor in the quantity and few in the quality of the fiber produced. The amount grown enormously exceeds that of any other part of the world. The yield ranges from one-fourth of a bale of 500 lbs. to two bales per acre. If the lint alone is removed from the land, cotton is the least exhausting of the various crops of the United States. The quantity of cotton grown in the United States for the year preceding the census of 1901, as given therein, was 9,345,391 bales of a total gross weight of 4,672,695,500 lbs. In 1911 the crop reached the great total of 14,832,756 bales, the largest ever grown.

Cotton, CHARLES, an English writer. Born in 1630; died in 1697. He lived the life of a country gentleman, being a great angler and skilled in horticulture. His works are numerous, including Scarronides, or Virgil Travestie, Instructions how to Angle for a Trout and Grayling in a Clear Stream, a supplement to his friend Izak Walton's Compleat Angler; Poems on Various Occasions; translations of Montaigne's Essais, Cornelle's Horace, etc. He wrote well both in poetry and prose.

Cotton, Irish antiquary and collector of literary relics; born in 1670; died in 1631. He assisted Camden in his labors on the Britannia; and was made a baronet in 1611. He wrote numerous antiquarian works, but he is chiefly remembered for the magnificent library of ancient charters, records and other MSS. which he collected, and which passed to his heir intact, and was acquired by the nation in 1700. After being partially destroyed by fire in 1731, it was placed in the British Museum in 1757.

Cotton-gin, a machine employed in the production of cotton fiber, it being adapted to remove the lint from the seed to which it clings. When this has been done there remains of the product as gathered about one-third in weight of clean cotton, fitted for manufacture, and two-thirds of seed, of value for the oil it contains. Originally the work of separating the lint from the seed was a slow and difficult process, it being done by hand, a good day's work for a man being a few pounds of lint. The result was that American cotton could not compete with that of India and the West Indies, and very little was raised until after the invention of the cotton-gin. In India and China a crude and simple machine has long been used as a substitute for hand labor. It is called the 'churka' and is known in Italy as the 'manganello', and consists of two wooden rollers fixed in a frame and revolving in contact with each other. The cotton being drawn between them and the seed excluded. Various efforts have been made to improve this machine, which is still largely used in India, but it is impossible to clean cotton rapidly by this means, and gins have been introduced into the principal cotton districts to replace it. The cotton-gin (the word 'gin' being a contraction for 'engine') was invented in 1792, by Eli Whitney, a native of Connecticut, then living in Savannah, Georgia, as a tutor in the house of Mrs. Greene, the widow of General Greene of Revolutionary fame. His mechanical ingenuity was so evident that Mrs. Greene suggested to him the desirability of attempting to produce a cotton-cleaning machine for the benefit of the planters of the State. Whitney soon devised a machine, simple in principle, but effective in action. It is still in use throughout the South, improved but its principle unchanged. It consists of a grid or grating of parallel wires, set so close together that the cotton can easily pass between them but the seeds cannot. A set of circular saws, with sharp teeth, are so arranged that the teeth pass between the wires and when in revolution catch the fiber, tearing it loose from the seeds and pulling it between the wires, while the seeds slide down into a receptacle below. An additional necessary feature is a revolving brush which sweeps the cotton from the saw teeth and keeps them clean. Such is, in brief, the principle of the famous cotton-gin, which has been worth hundreds of millions of dollars to the planters of the South.

The effect of this machine on the cotton industry of the South was remarkable. In 1792, when Whitney's machine was produced, the United States produced only 500,000 pounds of cotton and all the cotton raised could have been grown on a field of a few hundred acres. In 1800 the crop was 18,000,000 pounds; ten years later it was 30,000,000 pounds; in 1830 a million bales. It has varied in late years from 10,000,000 to 16,000,000 bales. This great development would have
been impossible without Whitney's invention, which, however, was pirated, he receiving little benefit from it. The action of the machine, it must be said, is very hurtful to the fiber, being in this way a wasteful and costly apparatus. This injury was especially great with the long-stapled cotton, the fibers of which were found to be more or less cut, or 'nepped,' by the tearing action of the saws. To prevent this another American invention, the Macarthy gin, has come into use for cleaning the long-stapled Sea Island, Egyptian and Brazilian cotton. In this the fiber is drawn by a leather roller between a metal plate called the 'doctor,' fixed tangentially to the roller, and a blade called the 'beater,' which moves up and down in a plane immediately behind and parallel to the fixed plate. As the cotton is drawn through by the roller, the seeds are forced out by the action of the movable plate, which acts vertically in some machines and horizontally in others. Attempts have been made to improve both the saw and the roller machines, in the one case to prevent injury to the staple, in the other to add to the rapidity of the cleaning process. One of these is the 'needle' saw-gin, an invention intended to prevent the fiber from being cut. It consists of steel wire set in block tin, with the bottom of the teeth rounded or made smooth. On the other hand the Macarthy gin has been developed into a double action machine, with two movable blades or beaters. Also the 'knife roller' gin, the 'lockjaw' gin, and others have appeared as rivals to the saw-gin. The machine which will clean the largest quantity in the shortest space of time is naturally preferred, unless the fiber to which the staple is such as to reduce its market value. The production of the most efficient cotton-cleaning machinery is, therefore, of importance alike to the planter and the manufacturer. Until recent years the ginning was done on the plantations. Nearly the whole of it is now done in public ginneries with steam power and much more rapid production. The saw-gin is five times as fast as the roller-gin in its operation and is used throughout the Southern States except in the region of Sea Island cotton.

**Cotton-grass.** Plants of the genus *Eriophorum,* order Cyperaceae or sedges. Several species occur in the United States and in Great Britain, in moory or boggy places, and the white, cottony substance they produce is used for stuffing pillows, etc.

**Cotton-picker,** mechanical. Cotton has hitherto been picked by hand, the negroes of the South being employed. This method has long been unsatisfactory, for various reasons, and various efforts to produce a mechanical cotton-picker have been made. One tested in 1910 proved very satisfactory. It was operated by a gasoline motor, and picked the cotton by mechanical fingers, performing its work thoroughly and without injury to the plant or the unopened bolls, and at a cost much below that of hand-picking. It is the invention of Angus Campbell, a Scotchman.

**Cottonseed Oil,** a valuable oil expressed from the seeds of the cotton-plant, used as an adulterant or as a substitute for various other oils. The oil-cake of cottonseed is a valuable cattle-feeding. cotton.

**Cotton-spinning,** a term employed to describe in the aggregate all the operations involved in transforming raw cotton into yarn. The word 'spinning' has also a more limited signification, being used to denote the concluding process of the series. The following affords a general notion of the nature and order of the successive operations carried on in the manufacture of cotton yarn.—(1) *Mingelling,* the blending of different varieties of raw cotton, in order to secure economical production, uniform quality and color, and an even thread in any desired degree. (2) The *cowling,* *sortchaking,* or blowing, an operation which cleans the cotton and prepares it in the form of a continuous lap or rolled sheet for the next process. (3) *Carding,* an operation in which the material is treated in its individual fibers, which are taken from the lap, further cleansed, and laid in a position approximately parallel to each other, forming a thin film, which is afterwards condensed into a silver round, untwisted strand of cotton. (4) *Drawing,* the drawing out of several slivers to the dimensions of one, so as to render the new sliver more uniform in thickness, and to place the fibers more perfectly in parallel order. (5) *Stubbing,* the further drawing or attenuation of the sliver, and slightly twisting it in order to preserve its cohesion and rounded form. (6) *Intermediate or second stubbing,* a repetition of the former operation and further attenuation of the sliver in the production of coarse yarns. (7) *Roving,* a continuation of the preceding, its principal object being still further to attenuate the sliver, and give it a slight additional twist. (8) *Spinning,* which completes the extension and twisting of the yarn. This is accomplished either with the throttle or the mule. By means of the former machine the yarn receives
COTTON GINNING

In this process, the seed is removed from the raw cotton.
Cotton-worm

a hard twist, which renders it tough and strong. By means of the latter yarns of less strength are produced, such as warps of light fabrics and wefts of all kinds. (See Thread and Weaving.) Up to the middle of the last century the only method of spinning known was that by the hand-wheel, or the still more primitive distaff and spindle. In 1767 a poor weaver of the name of Hargreaves, residing at Stanhill, in Lancashire, England, invented a machine for spinning cotton, which he named a spinning-jenny. It consisted at first of eight spindles, turned by a horizontal wheel, but was afterwards greatly extended and improved so as to have the vertical substituted for the horizontal wheel, and give motion to from fifty to eighty spindles. In 1769 Arkwright, originally a barber’s apprentice, took out a patent for spinning by rollers. From the circumstances of the mill erected by Arkwright at Cromford, in Derbyshire, being driven by water-power, his machine received the name of the water-frame, and the thread spun on it that of water-twist. The next important invention in cotton-spinning was that of the mule, introduced by Mr. Samuel Crompton, of Bolton, in 1775, and so called from its combining the principle of the spinning-jenny of Hargreaves with the roller-spinning of Arkwright. Numerous improvements in cotton-spinning have been introduced up to the present day, but they are all modifications of the original inventions. Among these is the throstle, an extension and simplification of the original spinning-frame, introduced about the year 1810. The first machines set up in the United States were at East Bridgewater, Mass., in 1786, by two Scotchmen. In 1812 Francis C. Lowell introduced the Greathearted power loom at Lowell, Mass., which is now the largest cotton-manufacturing center in America. There are also extensive mills in active operation in Alabama, Georgia and other Southern States.

Cotton-worm, a caterpillar which feeds on the leaves of the cotton-plants, in such multitudes as to cause serious mischief. It changes into a pale, reddish-green moth.

Cottus, a genus of fishes. See Bull-head.

Coturnix: See Quail.

Cotyledons (kot-i-led’dns), the seed-leaves or seed-lobes of the embryo plant, forming, together with the radicle and plumule, the embryo, which exists in every seed capable of germination. Some plants have only one cotyledon, and are accordingly termed monocotyledonous; others have two, and are dicotyledonous. These differences are accompanied by remarkable differences in the structure of the stems, leaves and blossoms, which form the basis for the division of flowering plants into two great classes. The embryo plant of the Coniferae has many (three to twelve) cotyledons, and is called polycotyledonous. The cotyledons contain a supply of food for the use of the germinating plant. In some plants the store is very large, and in germination the seed-leaves remain under the ground, as in the pea and oak; in others the store is not so large, and the seed-leaves appear above ground and perform the functions of true leaves; while there is a large class of seeds where the embryo is very small, and the food is stored up around it, as in wheat and the buttercup.

Couchant (kouch’ant), in heraldry, said of a beast lying down with the head raised.

Couch Grass (QUITCH, or QUICK) (Triticum repens), a perennial grass, which is propagated both by seed and by its creeping root-stock, and is one of the most common and troublesome weeds of agriculture. When it first appears above ground its blade is readily eaten by sheep. The roots are readily eaten by pigs, and when cleaned and boiled or steamed become a farinaceous and nutritious food for cows and horses. It is the grass eaten by dogs as an emetic.

Couching (kouch’ing), an old operation for cataract, which consisted in passing a needle into the eye, and with it pushing the lens out of its place to leave the pupil of the eye clear.

Coucy (koo-se), RENAUD, CHATELAIN DE, an old French poet, born about 1160; killed at Acre in 1191. His songs are distinguished by great warmth of passion. He is the hero of a celebrated romance of the thirteenth century.

Coues (kouz), ELLIOTT, naturalist, was born at Portsmouth, New Hampshire, in 1842; died in 1889. He became a doctor and served as such in the army
from 1862 to 1881, also holding official positions in the northern boundary survey and the geological survey of the territories. He was professor of anatomy in the National Medical College at Washington 1877-87, and in 1883 of biology in Virginia Agricultural College. His works include *Key to North American Birds* and various other works on birds, *Fur-Bearing Animals, Biogen, Expedition of Lewis and Clark*, etc.

**Cougar** (kō'gār), a voracious quadruped of the cat kind, inhabiting most parts of America—*Felis concolor*. Its color is a uniform fawn or reddish brown, without spots or markings of any kind. It may attain a length of 9 feet, inclusive of the tail. In habits it is stealthy and cowardly, and seldom or never attacks man. It is by some called the puma or red tiger, and is one of the most destructive of all the animals of America, particularly in the warmer climates, where it carries off fowls, dogs, cats and other domestic animals.

**Cough** (kōf), a sudden and forcible expiration immediately preceded by closure of the glottis or narrowed portion of the box of the windpipe. The force for the action is obtained by a deep breath, then follows the closure of the glottis, succeeded by the expiratory effort forcing open the glottis. The action is performed by the expiratory muscles, that is, the abdominal muscles, by whose contraction the diaphragm is forced up, and the muscles of the chest, by which the ribs are pulled down. The cavity of the chest being thus diminished, air is driven out of the lungs. The object of the cough is usually to expel any foreign material in the lungs or air tubes. The offending material may be there present as the result of inflammation, catarrh, etc. It may also be gained entrance by inspiration. Thus, the irritating material may be merely some food or drink which has slipped into the larynx, or it may be dust, etc., in the air inhaled, and the cough is the means of expelling the intruder. But cough may also be produced when there is no irritating material present. The larynx or windpipe may be in an inflamed and irritated condition, in which state even the entrance of cold air will excite coughing. Moreover, cough may be produced by irritation of nerves, distant from the lungs and air passages, by what is called reflex action. Thus, irritation of the stomach, irritation connected with the ear, irritation of certain nerves by pressure of growths, etc., may produce cough, when the respiratory passages are not directly affected at all. Irritation at the back of the throat, as of the tickling by a long uvula, and so on, also produces it. A catarrhal cough is generally considered unimportant, particularly if there be no fever connected with it. But every cough lasting longer than two or three days is suspicious and ought to be medically treated.

**Coulisse** (kō-lis'), one of the side scenes of the stage in a theater, or the space included between the side scenes; properly one of the grooved pieces of wood, etc., in which a flat scene moves.

**Coulomb** (kō-lōm), CHARLES AUGUSTIN DE, French physicist, born in 1736 at Angoulême; died in 1806. His fame rests chiefly on his discoveries in electricity and magnetism, and on his invention of the torsion balance.

**Coulomb**, working unit of electrical energy. When a current having the strength of 1 ampere passes through a 1-ohm-resistance conductor in 1 second of time it constitutes a coulomb. Named after C. A. C. Coulomb (see preceding article).

**Coumarin** (kō'mar-in), a vegetable proximate principle, obtained from the *Dipteryx odorata*, or Tonka bean, sweet woodruff, sweet-scented vernal grass, melilot, etc. It has a pleasant, aromatic odor, and a burning taste; and is used in perfumery, in medicine, and to give flavor to certain varieties of Swiss cheese.

**Council** (koun'sil; Lat. concilium), an assembly met for deliberation, or to give advice. The term specially applies to an assembly of the representatives of independent churches, convened for deliberation and the enactment of canons or ecclesiastical laws. The four general or ecumenical councils recognized by all churches are: (1) the Council of Nice, in 325, by which the dogma respecting the Son of God was settled; (2) that of Constantinople, 381, by which the doctrine concerning the Holy Ghost was decided; (3) that of Ephesus, 431; and (4) that of Chalcedon, 451, in which last two the doctrine of the union of the divine and human nature in Christ was more precisely determined. Among the principal Latin councils are those of Clermont (1030), in the reign of Urban II, in which the first crusade was resolved upon; the Council of Constance, the most numerous of all the councils, held in 1414, which pronounced the condemnation of John Huss (1415), and Jerome of Prague (1416); the Council of Basel, in 1431, which attempted a reform and if not in the doctrines, yet in the constitution and dis-
Council discipline of the church; and the Council of Trent, which began its session in 1545, and labored chiefly to confirm the doctrines of the Catholic Church against the Protestants. On December 8, 1869, an ecumenical council, summoned by a bull of Pope Pius IX, assembled at Rome. This council adopted a Decree or Constitution de Fide, and a Constitution de Ecclesia, the most important article of which latter declares the infallibility of the pope when speaking ex cathedra.

Council, Aulic. See Aulic.

Council, Privy. See Privy-council.

Council and Session, Lords of, the supreme judges of the highest court of Scotland. See Session, Court of.

Council Bluffs, a city and important manufacturing and distributing center, seat of Pottawattamie County, Iowa, on the left bank of the Mississippi, opposite Omaha City, with splendid railway facilities and large grain elevators, the distributing center of a rich corn-growing country. The city is also a manufacturing city and large farm-implement center. Pop. 35,000.

Council of Ten, a secret tribunal of the old Venetian republic, formed in 1310 and continued till the fall of the republic in 1797. It virtually ruled the state, secretly decreeing the death of those whom it had reason to fear.

Council of War, an assembly of officers of high rank called to consult with the commander-in-chief of an army, or admiral of a fleet, on matters of supreme importance.

Counsel (koun'sel), or Counselor, a person retained by a client to plead his cause in a court of judicature. (See Barrister and Advocate.) The term counsel engenders the idea of a number of legal counselors engaged together in a case.—Queen's or King's Counsel, are English barristers appointed counsel to the crown, on the nomination of the lord-chancellor, and taking precedence over ordinary barristers. They have the privilege of wearing a silk gown as their professional robe, that of other barristers being of wool.

Count (kount; Latin comes, comites, a companion) appears to have been first used, as a title of dignity, in the reign of the Roman emperor Constantine (fourth century), meaning originally the companion of a prince or high dignitary. After the fall of the Roman power the title was retained; and under Charlemagne it denoted equally a military or civil employment. About the end of the fifteenth century, in Germany, and under the last princes of the Merovingian race in France, the title appears to have become hereditary in certain families. The German title Graf corresponds to the title Count in other countries of Europe. In modern times the custom of styling all the sons of a count also counts makes this designation very common, and the rank little more than nominal. In point of rank, the English earls are considered as corresponding to the continental counts, an earl's wife being styled a countess.

Count, in law, a declaration or indictment, an independent part of which, if it stood alone, would constitute a ground of action.

Counterfoil (koun'ter-foil), a kind of complementary and easily detached portion of a document, such as a bank check or draft, which is retained by the person giving the document, and on which is written a memorandum of the main particulars contained in the principal document.

Counter-irritant, in medicine a substance employed to produce an artificial or secondary disease, in order to relieve another or primary one. The term is more specifically applied to such irritating substances as, when applied to the skin, redden or blister it, or produce pustules, purulent issues, etc. The commonest counter-irritants are such as mustard, turpentine, cantharides or Spanish flies, croton-oil and the cautery.

Counterpoint (koun'ter-point), in music, a term equivalent to harmony, or the writing of a carefully planned accompanying part; or that branch of the art which, a musical thought being given, teaches the development of it, by extension or embellishment, by transposition, or by invention, throughout the different parts. Counterpoint is divided into simple, florid or figurate and double. Simple counterpoint is a composition in two or more parts, the notes of each part being equal in value to those of the corresponding part or parts and concords. In florid counterpoint, two or more notes are written against each note of the subject, or canto fermo, and discords are admissible. Double counterpoint is an inversion of the parts, so that the base may become the subject, and the subject the base, etc., thus producing new melodies and new harmonies.

Counterscarp (koun'ter-skarp), a fortification, the exterior talus or slope of the ditch, or the
talus that supports the earth of the covered way. It often signifies the whole covered way, with its parapet and glacis.

Countersign (sin), a private signal, word, or phrase given to soldiers on guard, with orders to let no man pass unless he first give that sign; a military watchword.

Countertenor (-ten-or), in music, one of the middle parts between the tenor and the treble; high tenor. It is the highest male adult voice, having its easy compass from tenor G to treble C, and music for it is written on the alto or C clef on the middle line of the staff. The lowest voices of females and boys have about the same register, and are sometimes inaccurately called countertenor. The correct term is alto or contralto.

Count Palatine (pál’a-tin), in England, formerly the superior of a county, who exercised regal prerogatives within his county, in virtue of which he had his own courts of law, appointed judges and law officers, and could pardon murders, treasons and felonies. All writs and judicial processes proceeded in his name, while the king's writs were of no avail within the palatinate. The Earl of Chester, the Bishop of Durham and the Duke of Lancaster were the Counts Palatine of England, the corresponding counties being called counties palatine.

Country Dance (koun’tri dāns’), a rustic dance of English origin, in which many couples can take part. The performers are arranged face to face, the gentlemen on one side and the ladies on the other, and go through certain prescribed figures.

County (koun’ti), originally a district of a country subject to a count or earl. The county in the United States has developed from the English county of the seventeenth century; but the organization of county administration has been thoroughly decentralized by the radical extension of popular election for all classes of officials. The principal county authority is the locally-elected county board, organized in various ways. Every county also has a sheriff and usually other elective officers, such as prosecuting attorney, treasurer, clerk and coroner. In many states there are county registers of deeds, auditors, assessors, school commissioners and surveyors. County administration varies in different states.

County Courts, are an ancient institution in England. Their jurisdiction was formerly very restricted, but they have had extensive powers conferred on them by recent acts of Parliament. In the United States there is a regular court in each county, presided over by a judge elected by the people or appointed by the governor and senate.

County Palatine, a county under a count palatine.

See Count Palatine.

Coup (kōp; French, a blow), a term used in various connections to convey the idea of promptness and force.—Coup de main, a prompt, vigorous and successful attack.—Coup d'état, a sudden decisive blow in politics; a stroke of policy; specifically, an exertion of prerogative to alter the laws or the constitution of a country without the consent or concurrence of the people expressed through their representatives, especially when such exertion is supported by armed force.—Coup de soleil. See Sunstroke.

Coupé (kō-pā), a four-wheeled carriage carrying two inside, with a seat for the driver outside.

Couple (kup’l), in dynamics, two equal and parallel forces acting in different directions and applied to the same body. The distance between their lines of action is called the arm of the couple, and the product of one of the two equal forces by this arm is called the moment of the couple.

Couplet (kup’let), two verses or lines of poetry of equal length and rhythm, often embodying an idea of the nature of an aphorism.

Coupling (kup’ling), in machinery, a contrivance for connecting one portion of a system of shafting with another, and of which there are various forms. A common form is the flange or plate coupling, which consists of two flanges separately fixed on to the two contiguous ends of the lengths of shaft to be connected, and firmly secured together by screws. The most useful kinds of couplings are those that are adjustable, or can be readily put on and off.—The term is also applied to an organ register, by which two or more rows of keys can be connected by a mechanism, so that they can be played together. It is also applied to methods and art of attaching railroad cars together.

Coupon (kō’pōn; from Fr. couper, to cut), an interest certificate printed at the bottom of transferable bonds, and so called because it is cut off or detached and given up when a pay-
ment is made. Also one of a series of tickets which binds the issuer to make certain payments, perform some service, or give value for certain amounts at different periods, in consideration of money received.

**Courbevoie** (kœrb-vwa'), a town of France, department Seine, on the left bank of the Seine, 5 miles N.W. of Paris, well built, with large barracks; pop. (1911), 38,138.

**Courier** (kœr-1-e'ær), a bearer of special despatches, whether public or private; also an attendant on a party traveling abroad, whose especial duty is to make all arrangements at hotels and on the journey.

**Courland** (kur'land' ; German, Kurland), a county in government in Russia, bounded N. by Livonia and the Gulf of Riga, w. the Baltic, s. Kovno, and e. by Vitebsk; area, 10,535 square miles; pop. 714,200. In the neighborhood of Mitau, the capital, the surface is diversified by hills of very moderate height; but elsewhere, and particularly towards the coast, it is flat and contains extensive sandy tracts, often covered with heaths and morasses. About two-fifths of the whole government is occupied by woodland. The peasantries are for the most part Latins; the more wealthy and intelligent classes Teutons, the prevailing religion being Lutheran. The territory was subjected to Poland in 1561, conquered by Charles XII of Sweden in 1701, and was merged in Russia in 1795. It was one of the new states formed by the Germans after the establishment of Russia in 1917. A state council was created by the German imperial government to direct the internal affairs of Courland. This consisted of barons, large land owners, and other members, all of the Germanic race.

**Course** (kœr'sar), or **Courser** (kur'sar-as), a genus of grizzliar birds belonging to the plover tribe. They are found chiefly in Africa, but one species, the cream-colored courser, has been met with in Britain.

**Coursing** (kœr-sing'), a kind of sport in which hares are hunted by greyhounds, which follow the game by sight instead of by scent. Meetings are held in various localities, at which dogs are entered for a variety of races, as horses are at a race meeting. When a hare is started it is allowed a certain advance on the dogs, which are then let loose from the 'slipper' or cords held by the 'slipper' and fastened to the dogs' collars. A judge keeps his eye on the dogs, and notes what are called 'points,' the victory being adjudged to the dog which makes the most 'points.'

**Court** (kört'). (1) All the surroundings of a sovereign in his legal state; the body of persons who compose the household of, or attend on, a sovereign. Presentation at Court is a formal introduction of persons of some eminence or social standing to the British sovereign on certain state occasions appointed for the purpose. They have to appear in the regulation 'court dress.' (2) A tribunal of justice; the hall, chamber, or place where justice is administered, or the persons (judges) assembled for hearing and deciding causes, civil, criminal, military, naval, or ecclesiastical. Courts may be classified in various ways. A common distinction is into courts of record and not of record; the first being those the judicial proceedings of which are enrolled in records. They may also be divided into courts of original jurisdiction and courts of appeal, or of appellate jurisdiction, inferior and superior courts, etc. Articles on the different courts will be found under such separate headings as Chancery, Common Pleas, Exchequer, Supreme Court, etc.

**Court-baron** in England, a court composed of the freeholders of a manor, presided over by the lord of the manor or his steward. These courts have long fallen into disuse.

**Court de Gébelin** (kœr-d-zhel-bla'), a French writer, born in 1725; died in 1784. He published, in 1773 and 1774, Le Monde Primitif Analyssé et Comparé avec le Monde Moderne, which, after nine volumes had appeared, remained unfinished. Its vast plan embraces dissertations on mythology, grammar, origin of language, history, etc. He also published Lettres Historiques et Apologétiques en Faveur de la Religion Réformée.

**Courtes** (kur'te-s), TEXTURE by, in English law, is where a man marries a woman seized of an estate of inheritance, and has by her issue capable of inheriting her estate. In this case, on the death of his wife he holds the lands for his life, as tenant by courtesy.

**Courtsey Title**, a title assumed by an individual or given to him by popular consent, to which he has no valid claim. When a British nobleman has several titles it is usual to give one of his inferior titles to his eldest son. Thus, the eldest son of the Duke of Bedford is Marquis of Tavistock, and the Duke of Buccleuch's eldest son is Earl of Dalkeith. The younger sons of noblemen have the courtesy title of Lord prefixed to their names, as Lord William Lennox. In Scotland, the eldest son of a
Court Hand

Viscount or baron has the courtesy title of Master, as the Master of Lovat, eldest son of Lord Lovat.

Court Hand, the old Gothic or Saxon hand or manner of writing used in records and judicial proceedings, and distinguished from the modern or Italian style.

Court Leet, in English history the criminal court, as the court baron was the civil court, of a manor. The right to hold it was granted by royal franchise to the lord of the manor. In some parts of England courts leet are still maintained in form, though they have ceased to have jurisdiction.

Court-martial, a court consisting of military or naval officers, for the trial of military or naval offenses.

Court of Arbitration, a court established at The Hague, Netherlands, by the Peace Convention of 1899. Its membership now includes distinguished legal authorities of all the civilized nations of the world. Since its establishment several important questions have been submitted to and decided by it, possible hostilities being thus avoided. See Arbitration.

Court of Claims, in the United States, created by act of Congress in 1855, has jurisdiction to hear and determine all claims founded upon any act of Congress, or on any regulation of any executive department or upon any contract, express, or implied, with the government of the United States; and all claims referred to it by either house of Congress.

Court of Love, in the chivalric period of the middle ages, a court composed of knights, poets and ladies, who discussed and gave decisions on subtle questions of love and gallantry. The first of these courts was probably established in Provence about the twelfth century. They reached their highest splendor in France, under Charles VI, through the influence of his consort, Isabella of Bavaria, whose court was established in 1380. An attempted revival was made under Louis XIV by Cardinal Richelieu.

Court, Presentation at, a formal presentation to the sovereign of Great Britain of persons socially entitled to that distinction. It takes place either at St. James' Palace or Buckingham Palace. The days of presentation are announced some time beforehand.

Courtrai (kōr'trā; Flemish, Kortryk), a fortified town, Belgium, 26 miles south of Bruges, on the Lys.

Here, in 1302, the 'battle of spurs' between the French and Flemings, took place. It was well built, and contains many handsome streets. Pop. 34,564.

Cousin (kö-san), Victor, a French philosopher and writer, founder of the so-called eclectic school of philosophy, was born at Paris in 1792; died at Cannes in 1867. He was educated at the Lycée Charlemagne, and entered the École Normale, then newly instituted, in 1811. His mind was directed towards philosophy under Laromiguère, Royer-Collard, and Maine de Biran. In 1816 Royer-Collard, returning to political life, recommended Victor Cousin as his successor, and he became deputy-professor of philosophy at the Sorbonne. He had also an appointment at the Collège Napoléon, or Collège Henri IV, and at the École Normale. In the free discussions (conférences) which followed his prelections he became, by the influence his eloquence exercised over his pupils, the founder of a school which, while assuming an eclectic development, was originally based on the dogmatic teaching of the Scottish school. In 1817 he visited Germany, and became acquainted with the writings of Kant, Fichte, Jacob and Schelling, by whose opinions his own were thenceforth modified. He lost his position as public teacher on political grounds in 1822, and did not resume teaching till 1828, when he shared with Guizot and Villemain an unexampled popularity, due partly to political feeling. After the July revolution (1830) he entered the Council of Public Instruction, to which he presented valuable reports on the state of public education in Germany and Holland. In the cabinet of Thiers in 1840 he accepted the office of minister of public instruction, and was created a peer of France. The revolution of 1848 brought his public career to a close. The head and founder of the modern school of eclecticism in France, he borrowed from many sources. His eclecticism was based on the principle that every system, however erroneous, which has anywhere commended assent, contains some elements of truth, by which its acceptance may be explained, and that it is the business of philosophical criticism to discover and combine these scattered elements of truth. The following are among his works:—Fréments Philosophiques (1826); NOUVEAUX Fréments Philosophiques (1828); Cours de Philosophie Morale (1840-41); Cours de l'Histoire de la Philosophie (1829); Histoire de la Philosophie au dix-huitième Siècle (1829); De la Métaphysique d'Aristote (1838); Philosophie
Cousins

Scholastique (1840); Du Vrai, de Beau et de Bien (1884), etc.

Cousins (Samuel), an English engraver, born in 1801; died in 1887. He engraved plates after Lawrence, Landseer, Reynolds, Millais, Leslie, Eastlake, Ward, etc. He was elected a Royal Academician Engraver in 1855, and when this class was abolished he became an Academician proper.

Court (kō-tₐ̀n), a town of Northern France, dep. Manche, on a hill about 4 miles from the sea, with which it communicates by a canal. It has a fine old cathedral crowning the hill on which the town stands. Pop. (1906) 6089.

Couthon (kō-tōn), Georges, a noted French revolutionist, born in 1756, and was bred to the profession of a lawyer. Some time after the revolution he was chosen a member of the national assembly, and allying himself with Robespierre aided and abetted the latter in all his atrocities. On the downfall of Robespierre's party Couthon shared, along with him and St. Just, in the decree of arrest, and was guillotined, July 28, 1794.

Couvade (kuv-vad'), a singular custom prevalent in ancient as well as modern times among some of the primitive races in all parts of the world. After the birth of a child the father takes to bed, and receives the food and compliments usually given elsewhere to the mother. The custom was observed, according to Diodorus, among the Corsicans; and Strabo notices it among the Spanish Basques, by whom, as well as by the Goths, it is still to some extent practised. Travelers from Marco Polo downwards have met with a somewhat similar custom among the Chinese, the Dyaks of Borneo, the negroes, the aboriginal tribes of North and South America, etc.

Covenant (kuv’en-ant), in law, an agreement between two or more parties in writing, signed, sealed and delivered, whereby they agree to do, or not to do, some specified act. In theology, the promises of God as revealed in the Scriptures, conditional on certain terms on the part of man, as obedience, repentance, faith, etc.

Covenant, in Scotch history, the name given to a bond or oath drawn up by the Scottish reformers, and signed in 1557, and to the similar deed of profession of Faith drawn up in 1581, in which all the errors of popery were explicitly abjured. The letter was subscribed by James VI and his council, and all his subjects were required to attach their subscription to it. It was again subscribed in 1560 and 1566. The subscription was renewed, and the subscribers engaged by oath to maintain religion in the same state as it was in 1560, and to reject all innovations introduced since that time. The Solemn League and Covenant was a solemn contract entered into between the General Assembly of the Church of Scotland and commissioners from the English Parliament in 1643, having for its object a uniformity of doctrine, worship and discipline throughout Scotland, England and Ireland, according to the word of God and the example of the best reformed churches. In 1662 it was abjured by act of Parliament, both in England and Scotland.

Covenanter (kuv’en-ant-er), in Scottish history, the name given to the party which struggled for religious liberty from 1637 on to the revolution; but more especially applied to the insurgents, who, after the passing of the act of 1662 denouncing the Solemn League and Covenant as a seditious oath (see above article), took up arms in defense of the Presbyterian form of church government. The Presbyterian ministers who refused to acknowledge the bishops were ejected from their parishes and gathered round them crowds of their people on the hillsides, or any lonely spot, to attend their ministrations. These meetings, called ' conventicles,' were denounced as seditious, and to frequent them or to hold communication with those frequenting them was forbidden on pain of death. The unwarrantable severity with which the recusants were treated provoked them to take up arms in defense of their opinions. The first outbreaks took place in the hill country on the borders of Ayr and Lanark shires. Here at Drumclog, a farm near Loudon Hill, a conventicle was attacked by a body of dragoons under Graham of Claverhouse, but were successful in defeating their assailants (1679). The murder of Archbishop Sharp on Magus Moor, and this defeat, alarmed the government, which sent a large body of troops under the command of the Duke of Monmouth to put down the insurgents, who had increased in number rapidly. The two armies met at Bothwell Bridge, where the Covenanter were totally defeated (June 22, 1679). In consequence of the rebellious protest called the Sanghar Declaration, North in 1682 by Cameron, Cargill and others, as representing the more irreconcilable of the Covenanter (known as Cameronians), and a subsequent proclamation in 1684,
the government proceeded to more severe measures. An oath was now required of all who would free themselves of suspicion of complicity with the Covenanters; and the dragoons who were sent out to hunt down the rebels were empowered to kill anyone who refused to take the oath. During this 'killing time,' as it was called, the sufferings of the Covenanters were extreme; but notwithstanding the great numbers who were put to death, their fanatic spirit seemed only to grow stronger. Even after the accession of William some of the extreme Covenanters refused to acknowledge him, owing to his acceptance of episcopacy in England, and formed the earliest dissenting sect in Scotland. See Cameron (Richard), and Reformed Presbyterians.

**Covent Garden** (kuv'ent; that is, convent garden), a market place in London, which formerly consisted of the garden belonging to the abbots and monks of Westminster. In 1831 the present market buildings were erected by the Duke of Bedford, the proprietor of the ground.—**COVENT GARDEN THEATER** sprang out of one in Lincoln’s Inn-Fields, through a patent granted to Sir W. Davenant in 1662. It is associated with the names of Kemble, Siddons, Macready, etc.

**Coventry** (kuv’en-tri), a city of England, county of Warwick, 35 miles northwest of London. It was formerly surrounded with lofty walls and had twelve gates, and was the see of a bishop early conjoined with Lichfield. Parliaments were convened here by the earlier monarchs of England, several of whom occasionally resided in the place. Pagants and processions were celebrated in old times with great magnificence, and a remnant of these still exists in the processional show in honor of Lady Godiva. (See **GODIVA**.) There are still a few narrow and irregular streets, lined with houses in the style of the fifteenth and sixteenth centuries. There are several fine churches. Coventry is the center of the ribbon trade, and silk-dyeing, watchmaking, and art metal work are staple lines of business. Pop. 106,377.

**Coventry** (kuv’en-tri), a town of Kent Co., Rhode Island, 18 miles s. w. of Providence. It has manufactures of cotton and woolen goods, etc. Pop. 5848.

**Cove of Cork.** See *Queenstown*.

**Coverdale** (kuv’er-dæl), MILES, the earliest translator of the Bible Into English, was born in Yorkshire in 1487; died in 1568. He was educated at Cambridge and was ordained priest in 1514. He was led some years afterwards to embrace the reformed doctrines, and, having gone abroad, assisted Tindall in his translation of the Bible. In 1535 his own translation of the Scriptures appeared, with a dedication to Henry VIII. Coverdale was almoner to Queen Catharine Parr, and officiated at her funeral. In 1551, during the reign of Edward VI, he was appointed Bishop of Exeter, but was ejected on the accession of Mary, and thrown into prison. After two years’ confinement he was liberated, and proceeded first to Denmark, and subsequently to Geneva, where he was employed in preparing the Geneva translation of the Scriptures. On the accession of Elizabeth he returned to England, and held for a short time the rectory of St. Magnus, London Bridge.

**Covered Way** (kuv’erd wà), a space of ground on the edge of the ditch round the works of a fortification between the covered way and the glacis, affording a safe communication round all the works.

**Covellite** (kuv’èr-tür), a legal term applied to the position of a woman during marriage, because she is under the cover or protection of her husband.

**Covalhia** (ko-vil’ya), a town of Portuguese, province of Beira, on the s. e. slope of the Serra da Estrela. In the neighborhood there are noted sulphurous baths. Pop. 15,489.

**Covington** (kuv’ing-ton), a city of Kentucky, on the s. bank of the Ohio River, opposite Cincinnati, of which it is virtually a suburb, being closely connected by means of bridges and ferries. It has a large general trade and manufacturing business; its industries including many cigar and tobacco factories, wagon works, glass works, etc. Pop. 53,270.

**Cow** (kou), the general term applied to the females of the genus *Bos* or *ox*, the most valuable to man of all the ruminating animals. Among the best breeds of dairy cows in the United States are the Dutch Belted, Holstein, Jersey, Guernsey, Shorthorn, Ayrshire, Devon and some breeds of Durham. The Jersey, Guernsey, and Shorthorn are valued as dairy cows, while the Holstein, though an enormous milk producer, from its large size is classed among the beef-producing breeds as the Durham. See *Os*.

**Cowbane** (kou-ban), or water-hemlock, Cicuta *viridos*, a perennial, umbelliferous, aquatic plant, producing an erect, hollow, much-branched, striated stem, 3 or 4 feet high, with dissected leaves. It is highly poisonous.
Cowberry, the Vaccinium Vitis idæa, the red whortleberry, a procumbent shrub of high moorlands in Europe, Asia and North America. It has evergreen, box-like leaves, and produces a red acid berry used for jellies and preserves. Named cowberry because in parts of Scotland the berries are used to thicken milk by being rubbed on the inside of milk-pails.

Cowboys, a term first used during the American Revolution, applied to a band of Tories who infested the neutral ground of Westchester County, New York, stealing cattle from both parties and doing other mischief. It has been used of recent years to designate the skilled horsemen who have charge of the cattle on the great ranges of the West. Many of them enlisted in the Rough Rider regiments of the Spanish war and proved daring soldiers.

Cow-bunting, the Molothrus bedoïs, an American bird about the size of the European sky-lark, and belonging to the family Sturnidae, or starlings. It drops its eggs into the nests of other birds to be hatched by them, but has never been known to drop more than one egg into the same nest. It is migratory, spending its winters regularly in the lower parts of North and South Carolina and Georgia, and appearing in Pennsylvania about the end of March. These birds often frequent corn and rice fields in company with the red-winged tropolais, but are more commonly found accompanying the cattle, feeding on seeds, worms, etc.

Cowees (kous), a seaport town and watering place in Hampshire, England, on the north coast of the Isle of Wight, at the mouth of the river Medina. It is well known as a yachting port. Pop. 9035.—East Cowes, on the opposite side of the river, is connected with it by a steam ferry and floating bridge. Pop. 4660.

Cowgrass. See Cowpea.

Cowitch, or COWHAKE (kou'itch, kou'-it, Hind, kow-soh), the hairs of the pods of leguminous plants, genus Mucuna, natives of the East and West Indies. The pod is covered with a thick coating of short, stiff, brittle, brown hairs, the points of which are finely serrated. They easily penetrate the skin, and produce an intolerable itching. They are employed medicinally (being taken in honey or syrup) as a mechanical vermifuge.

Cowley (kou'li), ABRAM, an English poet of great celebrity in his day, was born at London in 1618; died in 1667. He published his first volume, Poetic Blossoms, at the age of fifteen. He entered Trinity College, Cambridge, in 1636, but was ejected as a royalist in 1643, and removed to St. John's College, Oxford. He engaged actively in the royal cause, and when the queen was obliged to quit England, Cowley accompanied her. He was absent from his native country nearly ten years, and it was principally through him that the correspondence was maintained between the king and queen. On the restoration he returned with the other royalists, and obtained the lease of a farm at Chertsey, held under the queen, by which his income was about £300 per annum. Cowley's poems have failed to maintain their ancient popularity, but he still holds a high position as a prose writer and as an essayist. He took a considerable interest in science, and was one of the founders of the Royal Society. His chief works are: Love's Riddle, a pastoral comedy; Davidis, a scriptural epic; Neasprægium Jovialæ; The Mistress, a collection of love verses; Findarique Odes, Liber Plantarum, etc.

Cowloon (kou'lon), KOWLOON, or Kaulun, a peninsula at the mouth of the Canton River, directly opposite to the island of Hong-Kong, to which crown colony it belongs.

Cow-parsnip, an umbelliferous plant, genus Heracleum, one species of which, H. Spongiaeum, found in moist woods and meadows in England, grows to the height of 4 or 5 feet, and is used to feed to pigs. Siberian cow-parsnip (H. giganteum) is grown in gar-
Cowpea, a small gasteropodous shell, the *Cypraea moneta*, used for coin in some parts of Africa and in many parts of Southern Asia. The beauty of the cowrie-shells has procured them a place among ornaments, and they have been in demand among civilized and uncivilized nations since prehistoric times. The shells used as currency occur principally in the Philippine Islands. They vary in value in different localities. In India 6000 to 7000 are equal to a rupee, while in the interior of Africa 200 are worth 16c. The name is also given to other shells of the genus *Cypraea*.

Cowalip (kou'slip), the popular name of several varieties of Primula veris, order Primulaceae, a fragrant and pretty wildflower found in pastures and meadows. It has umbels of small, buff-yellow, scented flowers on short pedicels. Its flowers possess sedative properties and have been used as an anodyne, a sort of wine being prepared from them.

Cow-trees, a name of various trees having an abundance of milky juice, especially *Brosimum galactodendron*, a South American tree, order Artocarpaceae (breadfruit), which, when wounded, yields a rich, milky, nutritious juice in such abundance as to render it an important article of food. This fluid resembles in appearance and quality the milk of the cow. The tree is common in Venezuela, growing to the height of...
100 feet. The leaves are leathery, about 1 foot long, and 3 or 4 inches broad. In British Guiana, the name is given to the Hya-hya (Tabernamontana utiliss), a large, much-branched tree belonging to the Apocynaceae; in the country of the Rio Negro to Colophora, a tree of the same family; and in Pará to a species of Mimosaops.

Cox, David, an English landscape painter, born in 1758, in Birmingham; died at Harborne near Birmingham, in 1859. He was for several years engaged as scene-painter for various provincial and London theatres, and during a considerable portion of his early life he had to teach his art for a subsistence. After residing in London, Hereford, etc., he returned to Birmingham in 1841. His works are chiefly of English landscape, and in water-colors, a department which constituted his peculiar forte. His pictures are now very highly valued. In later life he painted a great deal in oil. He published a work on Landscape Painting and Effect in Water-colors.

Cox, Sir George W., an English writer, born in 1827; held some curacies in Devonshire, and afterwards became vicar of Bekesbrough, Kent, and Scratchingham, York. He published works on Greek history, the Mythology of the Aryan Nations, etc. Died in 1892.

Cox, Kenton, figure painter, born at Warren, Ohio, in 1866. He became noted as an illustrator, but gradually devoted himself to mural painting. Examples of his work are found in the Library of Congress, the Iowa State Capitol, the Minnesota State Capitol, etc. He is a frequent contributor to art magazines and has written several critical works. He was elected a member of the National Academy in 1903.

Cox, Palmer, artist, was born at Granby, Canada, in 1840. He lived in San Francisco, 1869-76, afterwards in New York. He wrote the Brownie Books, with their humorous illustrations, How Columbus Found America, Queen People with Paws and Claws, etc.

Coxie (kok'si), or Cozie, Michel J. van, a Flemish painter, born about 1500; died in 1592. He traveled to Rome, where he remained several years, attracted by the works of Raphael. Here he executed several paintings in fresco and many other pieces. For Philip II of Spain he executed an admirable copy of Van Eyck's altar-piece at Ghent.

Coyote (koł-ot', koł-ot'te), the American prairie-wolf (Canis ochrōpus or Lycisus latrans). It is native to the plains west of the Mississippi, and is a small species, though considerably larger than the fox. It is found as far south as Costa Rica.

Coyne, kwă-pel, Noel, a French painter, born in 1828 or 1829; died in 1707, at París. He adorned the old Louvre and the Tuileries, and painted some fine pictures for the council hall of Versailles.—His son ANTOINE (1691-1721) was highly distinguished both as a painter and an engraver.

Cypou, Cypu (kò'pyō), the native name of a South American rodent mammal, the Myopotamus corpus, about the size of and considerably resembling a beaver. Its limbs are short, its tail in part bare and scaly, and it swims with great ease, its hind feet being webbed. It inhabits burrows by the banks of streams. It is valued for its fur (called nutria fur). Length when full grown, about 2 feet 8 inches.

Coysevox, kó'zé-voks, Antonie, a French sculptor, born in 1640; died in 1720. Among his best works are an equestrian statue of Louis XIV; a statue of Cardinal Mazarin; the tomb of Colbert; the group of Castor and Pollux; the Sitting Venus; Nymph of the Shell; Hamadryad; Faun with the Flute; and Pegasus and Mercury.

Cozmuel, kó-z'mél', an island in the Caribbean Sea, off the coast of Yucatan.

Czechens, Frederick Swartzwout, author, born in New York in 1778; died in 1839. He is especially known for his Sparrowgrass Papers, and wrote other works in prose and verse.

Crab, a popular name for all the ten-footed, short-tailed crustaceans constituting the suborder Brachyura, order Decapoda, comprising many genera, distinguished from the lobster and other macrourous or long-tailed decapods by the shortness of their tail, which is folded under the body. The head and breast are united, forming the cephalothorax, and the whole is covered with a strong carapace. The mouth has several pairs of strong jaws, in addition to which the stomach has its internal surface studded with hard projections for the purpose of grinding the food. The stomach is popularly called the 'sand-bag'; a little behind it is the heart, which propels a colorless lymph (the blood) to the gills ('dead man's fingers'). The liver is the soft, rich, yellow substance usually called the fat of the crab. Crabs 'molt,' or throw off their calcareous covering, periodically. The first pair of limbs is not used for locomotion, but is furnished with strong
Crab or pinchers. The eyes are compound, with hexagonal facets, and are pedunculated, elongated and movable. Like most individuals of the class, they easily lose their claws, which are as readily renewed. They generally live on decaying animal matter, though others live on vegetable substances, as the racercrabs of the West Indies, which suck the

juice of the sugar-cane. Most inhabit the sea, others fresh water, and some the land, only going to the sea to spawn. Of the crabs, several species are highly esteemed as an article of food, and the fishery constitutes an important trade on many coasts. The common large edible crab (Cancer pagurus) is common on our shores, and is much sought after. See also Hermit-crab, Land-crab, Pecora-crab.

Crab, a name given to various machines, especially to a kind of portable windlass or machine for raising weights, etc. Crabs are much used in building operations for raising stones or other weights, and in loading and discharging vessels.

Crab-apple (Pyrus Malus), a small wild, very sour variety of the apple; also any sour or uncultivated species or variety. See Apple.

Crabbe (krab), George, an English poet, born at Aldborough, Suff.

and soon after entered the church. He was appointed domestic chaplain to the Duke of Rutland, and afterwards obtained ample preferment. In 1783 appeared the Village, which was followed two years afterwards by the Newspaper. The Parish Register appeared in 1807. The Borough appeared in 1810, and was followed, in 1812, by Tales in Verse, and in 1819 by Tales of the Hall. The later years of Crabbe's life were spent in the peaceful discharge of his professional duties at Trowbridge in Wiltshire, a living which he had received in 1814. His poems are all characterized by homely truthfulness, simplicity and pathos.

Cracklin (krak'lin), a species of chinaware which is ornamented by a network of small cracks in all directions. The ware receives the small cracks in the kiln, with the effect that the glaze or enamel which is afterwards applied appears to be cracked all over.
Cracow (kra-kō), the old capital of Poland and residence of the Polish kings, now a fortified city of the Austrian crownland of Galicia, is situated on the left bank of the Vistula, where it becomes navigable. It was for a time a republic (1815-46). The cathedral, a fine old Gothic edifice, contains monuments of Kosciusko and the Polish kings. The university was founded in 1364, but gradually fell into a decay and was reorganized in 1817. It has a library of 300,000 volumes. Pop. (1910) 150,318.

During the European war the Russian forces swept almost to the gates of Cracow, aided by the invaders under its walls in November, 1914, which ended in the retirement of the Russians.

Cranach, LIEBECK, pseudonym of Mary N. Murfree (g. r.)

Cranville, a name often given to Nan-eull Hall, Boston, from the fact that before the Revolution, the meetings of patriots were held here.

Crag (krág), in geology a local name in England for shelly deposits in Norfolk and Suffolk, usually of gravel and sand, of the older Pliocene period, subdivided into three members—viz., the Upper or Mammiferous Crag, the Red Crag and the Lower or Coraline Crag.

Crag and Tail, in geology a name applied to a hill formation common in Britain, in which a bold and precipitous front is presented to the west or northwest, while the opposite side is formed of a sloping declivity. The rock on which Edinburgh Castle stands, with its tail, gradually sloping down to Holyrood, presents a fine example. This phenomenon is due probably to the currents of the drift or glacial epoch.

Craig (krág), JOHN, a Scottish reformer, born in 1512; died in 1600. He became Knox's colleague in Edinburgh, refused to publish the ban on Mary and Bothwell, assisted in drawing up the Second Book of Discipline, and compiled the National Covenant signed by the king in 1559.

Craig, SIR THOMAS, a Scottish writer on jurisprudence, was probably born in the year 1538; died in 1608. He was educated at the University of St. Andrews, and afterwards repaired to France, where he studied civil and canon law. He returned about the year 1561, and was placed at the head of the crimi-
accompanied him in his pilgrimage to Jerusalem. On the commencement of the Reformation movement he became the intimate friend of Luther and Melanchthon, whose portraits, as taken by him, are among the most interesting memorials of the age. His works, chiefly portraits and historical subjects, are numerous and much prized.—His son Lucas (died 1586) also gained great distinction as a painter.

Cranberry (kran’bér-ı), the fruit of Oxycoccus palustris, a native of Europe, North Asia, and North America. It is also called Mossberry or Moorberry, as it grows only on peatbogs or swampy land, usually among masses of sphagnum. The berry, when ripe, is glbose and dark red, and a little more than ¼ inch in diameter. These berries form a sauce of exquisite flavor, and are used for tarts. The American cranberry, a native of Canada and the United States is the O. macrocarpus. It has larger berries than the European species, and is extensively cultivated in some localities. Vaccinium Vitis idaea, the cowberry, is often called the cranberry in Scotland.

Cranbrook (kran’brook), a small town of England, County Kent, 40 miles s. e. of London, where the first woolen manufactory in England was established by the Flemings in the reign of Edward III. Pop. 13,689.

Crane (krän), the common name of birds of the genus Grus, order Grallae, or Grallatores. They are generally of considerable size, and remarkable for their long necks and still-like legs, which eminently fit them for living in marshes and situations subject to inundations, where they usually seek their food. This is partly of vegetable matter but they also devour insects, worms, frogs, lizards, reptiles, small fish and the spawn of various aquatic animals. They build their nests among bushes or upon tussocks in marshes, and lay but two eggs. Cranes annually migrate to distant regions, and perform voyages astonishing for their great length. The common crane (Grus cineréa) has the general plumage ash-gray, the throat black, the rump ornamented with long, stiff and curied feathers, the head with bristly feathers; legs black; length about 4 feet. It inhabits Europe, Asia, and the north of Africa. The crowned crane (Gr. pavonina, or Balaeniceps pavonina) has the general plumage bluish ash-gray, the tail and primary quills black, the wing-coverts pure white; the head is crowned with a tuft of slender yellow feathers, which can be spread out at pleasure. It inhabits North and West Africa. The demeloselle crane (Anatropoides virgo) is so called from the elegance of its form. It is ash-gray, and

Crowned Crane (Balaeniceps rex). The head is adorned with two tufts of feathers formed by a prolongation of the ear-covers. Its habitat is Africa and the south of Europe. Among North American species are the whooping crane (G. Amerícanus), a larger species than the common crane, and the brown or sand-hill crane (G. Canadensis).

Crane, a hoisting appliance which in its various forms is capable of both lifting a load and transporting it laterally. The most widely applied type of crane is the overhead traveling crane, known also as bridge crane. In large shops, where heavy loads are frequent, a lifting capacity of over 100 tons is common. Jib cranes are of cantilever construction, and are used for hoisting purposes in yards.

Crane, Stephen, author, born at New-ark, New Jersey, in 1870; died in 1900. His Red Badge of Courage, a romance of the Civil war, attracted wide attention in Great Britain and America. He was a correspondent in the Greek-Turkish and Spanish-American wars.

Crane, Walter, English artist, was born in Liverpool, 1845; died March 15, 1915. He was associated with William Morris in the movement to bring about a revival of the decorative arts and crafts in England. Among his works are The Bridge of Life, The Chariots of the Hours, Later Summer. He illustrated Spenser's Faerie Queene and Shepherd's Calendar and several of Shakespeare's plays. Some of his designs for tapestry are notable, among them The Goose Girl. The Albert gold medal of the Society of Arts was awarded to him in 1904.

Crane-fly, a genus of two-winged insects (Tip-
Crane’s-bill, the typical genus of the order Geraniaceae. Many species are American plants; some are mere weeds, others extremely showy. See Geranium.

Cranganore (krän-ga-nôr), a town in Hindustan, presidency of Madras, state of Cochin, on the Malabar coast. Pop. 9475. It is the traditional field of St. Thomas’ labors in India. Jews have been settled here since the fourth century; and it is certain the church was established before the ninth.

Craniology (krä-nil-o’lō-gi), the science which investigates the structure and capacity of the skull in various animals. It is sometimes also used as synonymous with phrenology. See Phrenology.

Crank, an iron axis with the end bent like an elbow, serving as a handle for communicating circular motion; as, the crank of a grindstone; or for changing circular into longitudinal motion, as in some sawmills, or longitudinal into circular motion, as in a steam engine. The single crank (1) can only be used on the end of an axis. The double crank (2) is employed when it is necessary that the axis should be extended on both sides of the point at which the reciprocating motion is applied. An exemplification of this arrangement is afforded by the machinery of steamboats. The bellcrank (3), so called from its being much used in bell-hanging, is for a totally different purpose to the others, being used merely to change the direction of motion, as from a horizontal to a vertical line.

Cranmer (kran’mèr), Thomas, Archbishop of Canterbury, and famous for the part he played in the English reformation during the reign of Henry VIII; born at Aslockton, Notts, in 1489; executed by burning at Oxford in 1556. He entered as a student of Jesus College, Cambridge, in 1508, took the degree of M.A., obtained fellowship, and in 1523 was chosen reader of theological lectures in his college, and examiner of candidates for degrees in divinity. An opinion which he gave on the question of Henry VIII’s proposed divorce from Catharine brought him under the favorable notice of the king. Cranmer was called to court, made a king’s chaplain, and commanded to write a treatise on the subject of the divorce. In 1530 he was sent abroad with others to collect the opinions of the divines and canonists of France, Italy, and Germany, on the validity of the king’s marriage. At Rome he presented his treatise to the pope, but his mission was fruitless. In January, 1533, he was appointed Archbishop of Canterbury. Soon after he set the papal authority at defiance by pronouncing sentences of divorce between Henry and Catharine, and confirming the king’s marriage with Anne Boleyn. The pope threatened excommunication, and an act of Parliament was immediately passed for abolishing the pope’s supremacy, and declaring the king chief head of the Church of England. The archbishop zealously promoted the cause of the Reformation; and through his means the Bible was translated and read in churches, and monastic institutions were vigorously suppressed. In 1536 he pandered to Henry’s passions by promoting the divorce of Anne Boleyn. This and other services secured him in the king’s favor, who appointed him by will one of the council of regency to Edward VI. By his instrumentality the liturgy was drawn up and established by act of Parliament, and articles of religion were compiled, the validity of which was enforced by royal authority, and for which infallibility was claimed. The exclusion of the Princess Mary from the crown, by the will of her brother, was a measure in which Cranmer joined the partisans of Lady Jane Grey, apparently in opposition to his own judgment. With others who had been most active in Lady Jane’s favor he was sent to the Tower on the accession of Mary. He was tried on charges of blasphemy, perjury, insubordination and heresy, and was sentenced to be degraded and deprived of office. After these flattering promises were made, which induced him to sign a recantation of his alleged errors, and become, in fact, a Catholic convert. But when he was brought into
Crannogs

St. Mary's Church, Oxford, to read his recantation in public, instead of confessing the justness of his sentence, and submitting to it in silence, or imploring mercy, he calmly acknowledged that the fear of death had made him base his conscience; and declared that nothing could afford him consolation but the prospect of extenuating his guilt by encountering, as a Protestant penitent, with firmness and resignation, the fiery torments which awaited him. He was immediately hurried to the stake, where he behaved with the resolution of a martyr.

Crannogs (kra-n'gos), the name given in Ireland and Scotland to the platforms supported by piles in lakes, which were in use as dwelling-places and places of refuge among the old Celts. See Lake Dwellings.

Crantara (kra-n'tara; Gael. cross-far'gar), the fiery cross, an ancient Gaelic rallying symbol, the neglect of which implied infamy.

Cranton (krān'ton), a town (township) of Providence Co., Rhode Island, W. of Narragansett Bay. Contains several manufacturing villages, reform schools, State prison, etc. Pop. 21,107.

Crape (krāp), a light, transparent stuff, like gauze, made of raw silk, gummed and twisted on the mill, woven without crossing, and much used in mourning and dressmaking.

Crashaw ( kra'shə), RICHARD, an English poet, born in London in 1613; died in 1649; educated at the Charterhouse and at Cambridge. In 1637 he became a fellow of Peterhouse, and having been admitted to orders was noted as an eloquent and powerful preacher. In 1644 he was ejected from his fellowship by the Parliamentarians, and proceeded to Paris, where he became a convert to the Roman Catholic faith, and was appointed to a canonry at Loreto. Epigrammata Sacra appeared in 1654; Steps to the Temple, Sacred Poems, with other Delights of the Muses, was published in London in 1649; and a posthumous volume appeared at Paris in 1652, under the title Carmen Deo Nostro. Crashaw displays considerable poetic genius in the treatment of religious subjects, and though his works are now almost forgotten, they are said to have furnished hints to both Milton and Pope.

Crassulaceae (krā'sula's-e-ə), the houseleek family, a nat. order of polyetalous exogens. It consists of succulent plants, with herbaceous or shrubby stems, and annual or perennial roots, growing in hot, dry, exposed places in the more temperate parts of the world, but chiefly South Africa. Many species of Crassula, Sedum, etc., are cultivated in greenhouses for the beauty of their flowers. The genus Sedum is the most largely represented in the United States.

Crassus (krā'səs), Marcus Licinius, the Roman triumvir, surnamed Diex (the rich), on account of his vast riches, was born about b.c. 115; died in b.c. 53. He took part with Sulla in the Civil war; and as praetor, in b.c. 71, he defeated Spartacus and the revolting slaves at Rhegium. In b.c. 70 he was elected consul, having Pompey as his colleague; and in b.c. 60 Caesar, Pompey and Crassus formed the first triumvirate. Five years later he again became consul, and obtaining Syria for his province he made war on the Parthians, but was defeated and slain. It is said that when his head was sent to Orodas, the Parthian king, he caused melted gold to be poured into the mouth, in scorn of his notorious love of wealth.

Crataegus (kra-tē'gəs), the hawthorn genus of plants.

Cratæger (krā'tēr), the orifice or mouth of a volcano. Craters may be central or lateral, and there may be several subsidiary ones, which may shift their places or become merged by subsidence into others.

Cratinus (kra-ti'nəs), an Athenian comic poet to whom the invention of satirical comedy is attributed; died in b.c. 422 at the age of 97. Some fragments of his works remain.

Cravat (kra-vat'), a neckcloth; an article of silk, muslin, or other material worn by men about the neck; so called from Fr. Cravate, a Croat, because this piece of dress was adopted in the eleventh century from the Croats who entered the French service. Towards the end of the eighteenth and the beginning of the nineteenth century the cravat attained an incredible degree of extravagance, but common sense at last brought in the simpler style of neckties that has since prevailed.

Crawfish, or CRAYFISH (kra-fish, krā'fish), a name of various crustacean animals, the common crawfish being Astacus fluviatilis, the river lobster, a macrurous (long-tailed), ten-footed crustacean, resembling the lobster in appearance and habits. It inhabits the fresh waters of Europe and the north of Asia, and is common in some of the streams of England. It lurks under stones or in holes in the
Crawford

The Common Crawfish (Astacus Fluviatilis), viewed from below. a. Antennules; b. Large antennae; c. Eyes; d. Opening of auditory sac; e. Last pair of foot-jaws; f. One of the great chelae; g. Fifth thoracic limb; h. Swimmerets; i. The last pair of swimmerets; j. The opening of the anus below the telson.

The United States crawfish of the genus Astacus and Cambarus occur. Some of them by their burrowing habits injure mill-dams and the levees of the Mississippi.

Crawford (krə′fərd), Francis Marion, son of the following, was born in Italy in 1854, and studied philosophy and languages at Cambridge, Heidelberg, Carlshrou and Rome before embarking in fiction, in which he was both prolific and highly successful. His first novel, Mr. Isaac's, attracted much attention and was followed by numerous others. He also did some good historical work. He died in 1909.

Crawford, Thomas, sculptor, was born in New York City in 1814; died in 1867. His most famous works comprise Orpheus and Cerberus, Adam and Eve, Hebe and Ganymede, Mercury and Psyche and Dancing Jenny. He performed important works for the National government and the State of Virginia.

Crawford, William Harris, statesman, was born in Amherst Co., Virginia, in 1772. His life was spent in Georgia, where he was admitted to the bar in 1798. He became politically prominent and was elected United States Senator from Georgia in 1807 by the Democratic party. He was appointed Minister to France in 1813, became Secretary of War in 1815 and Secretary of the Treasury in 1818, retaining this position until 1825. In 1824 he was nominated for the presidency by a Congressional caucus, his competitors being Jackson, Adams and Clay. He was defeated, receiving 41 electoral votes. He was afterwards a circuit judge in Georgia, and died in 1834.

Crawfordsville (krə′fərd-vil), a city of Indiana, 44 miles N. W. of Indianapolis. It is the seat of Wabash College, founded 1852. The chief industries are brick, iron, match, galvanizing and furniture. Pop. 8971.

Crayon (krə′un), a colored pencil obtained from certain mineral substances in their natural state, but more commonly manufactured from a fine paste of chalk or pipe-clay colored with various pigments, and consolidated by means of gum, wax, etc. A kind of crayon painting (or pastel painting) is practised to some extent, the coloring matter in a soft state being rubbed on with the finger.

Cream (krēm), the yellowish, thick oily layer which forms at the surface when new milk is allowed to remain at rest. When it is agitated or churned butter is formed.

Creamery, a factory for the production of butter. Such factories, often run on the cooperative principle, are widely distributed in the United States. Here the cream from many farms is received and worked into butter by the aid of improved machinery, managed by skilled operators. In some cases the milk is received and the cream separated by centrifugal machines. In others the milk is skimmed at home and only the cream sent. The creamery product is better and more uniform than that usually made on farms and is produced with greater economy.

Cream of Tartar, or Potassium Bitartrate (KHC₂H₃O₄), exists in grapes, tamarinds, and other foods. It is prepared from the crystalline crust (crude tartar or
argol) deposited on the vessels in which grape juice has been fermented. The argol is dissolved by boiling with water, the mixture filtered, and the cream of tartar allowed to crystallize out. The commercial product usually contains a small percentage of calcium tartrate.

Creasote (krəˈsət), a substance discovered by Reichenbach about 1831 in wood-tar, from which it is separated by a tedious process. It is generally obtained, however, from the products of the destructive distillation of wood. In a pure state it is oily, heavy, colorless, has a sweetish, burning taste and a strong smell of peat smoke or smoked meat. It is a powerful antiseptic. Wood treated with it is not subject to dry-rot or other disease. It has been used in surgery and medicine with great success. Also spelled creosote.

Creasy (krəˈsē), Sir Edward Shep- herd, English historian, was born at Bexley, Kent, in 1812; died in 1878. He was educated at Eton, and at King’s College, Cambridge, of which he was elected a fellow in 1834. He was called to the bar at Lincoln’s Inn in 1837, and was for about twenty years a member of the home circuit. In 1840 he was appointed professor of history at the London University, and in 1860 was made chief-justice of Ceylon, receiving at the same time the honor of knighthood. His principal works are: The Rise and Progress of the British Constitution and The Fifteen Decisive Battles of the World.

Creationism (krəˈsizhən-əm), the doctrine that a soul is specially created for each human fetus as soon as it is formed in the womb; opposed to Traducianism, which teaches that the souls of children as well as their bodies are begotten by reproduction from the substance of the parents; and to Infusionism, which holds that souls are pre-existent, and that a soul is divinely infused into each human fetus as soon as it is formed by generation. Many theologians, however, regard the mode of the soul’s coming into being as a part of the mystery which envelopes the whole subject of the existence and transmission of life. The term Creationism has also recently been applied to that theory of the origin of man which is opposed to Evolution.

Crébillon (krəˈbē-ə], Prosper Jolyot de, a French writer of tragedy, was born at Dijon in 1674; died in 1762. His first play, La Mort des Enfants de Brutus, was rejected by the actors; but his next productions, Idoménée (1706) and Atys (1707), were successful. These were followed by Rhadamiste (1711), Xerxes (1714), and Semiramis (1717). At the age of seventy-six he wrote the Triomphe de Cicéron, or The Death of Cicero, which was brought upon the stage in his eighty-first year. His son Claude Prosper, born in 1707; died in 1797; was in high repute for his wit and his writings. His chief works are: La Sophie, La Hazard du Coin du Feu, and Les Égarements du Cœur et de l’Esprit, all of a licentious cast.

Crecy (krəˈsē, kresˈē), a small town of France, in the department of Somme, 9 miles north of Abbeville and 100 north of Paris; pop. 1748. It is celebrated on account of a battle fought here, August 26, 1346, between the English and French. Edward III and his son, the Black Prince, were both engaged, and the French were defeated with great slaughter, 30,000 foot and 1200 horse being left dead on the field, among whom were the King of Bohemia, the Count of Alençon, Louis, Count of Flanders, with many others of the French nobility.

Credence (kredənˈs], a small table by the side of the altar or communion-table on which the bread and wine are placed before they are consecrated.

Credit (kredˈıt), in economics, is the postponement agreed on by the parties of the payment of a debt to a future day. It implies confidence of the creditor in the debtor; and a ‘credent system’ is one of general confidence of people in each other’s honesty, solvency, and resources. By means of a credit system a comparatively small stock of money can be made to do duty for carrying on a number of different transactions; but it is indispensable for every good system of credit that money must be instantly available when required, and this principle applies to every species of transaction where postponed payment is concerned. Public credit is the confidence which men entertain in the ability and disposition of a nation to make good its engagements with its creditors; or the estimation in which individuals hold the public promises of payment, whether
such promises are expressed or implied. The term is also applied to the general credit of individuals in a nation; when merchants and others are wealthy and punctual in fulfilling engagements; or when they transact business with honor and fidelity; or when transfers of property are made with ease. So we speak of the credit of a bank when general confidence is placed in its ability to redeem its notes, and the credit of a mercantile house rests on its supposed ability and probity, which induce men to trust to its engagements. When the public credit is questionable it raises the premium on loans.

Credit, letter of, an order given by bankers or others at one place to enable a person to receive money from their agents at another place.

Crédit Foncier (krä-dê fon-syâ'), a peculiar mode of raising money on land in France, the peculiarity of which is that the advance must not exceed one-half of the value of the property pledged or hypothecated, and that the repayment of the loan is by an annuity terminable at a certain date. Several companies have been established by the French government with the privilege of making such loans.

Crédit Mobilier (krä-dê mô-bel-yâ'), a scheme which originated in France in 1852, its objects being to undertake trading enterprises of all kinds on the principle of limited liability, to buy up existing trading companies, and to carry on the business of bankers and stock-jobbers.—Crédit Mobilier of America was chartered in Pennsylvania, in 1859, for a general loan and contract business. The charter was purchased in 1867 by a company formed for the construction of the Union Pacific R. R., and a congressional investigation showed that a number of congressmen were private owners of the stock. As the railroad had been assisted by grants of land by Congress it was considered highly improper for members to have a pecuniary interest in such a concern. The expulsion of one senator was recommended, and two representatives were censured.

Creed (krä'd), a summary of belief, from the Latin credo (I believe), with which the Apostles' and Nicene Creeds begin. These two creeds, together with the Athanasian Creed, are the most ancient authoritative Christian creeds, though numerous ancient formulæ of faith are presented in the writings of the early fathers, Irenæus, Origen, Tertullian, etc., which agree in substance, though with some diversity of expression. The Nicene Creed was so called from being adopted as the creed of the church at the Council of Nicaea or Nice, 325 A.D., though its terms were subsequently somewhat altered. The Apostles' Creed probably dates from the end of the fourth century; but there is no evidence of its being accepted in its present form till the middle of the eighth. The Athanasian Creed was certainly not drawn up by St. Athanasius, as there is no sufficient evidence for its existence before the end of the eighth or beginning of the ninth century. In addition to these three creeds, the Roman Catholic Church has the creed of Pius IV, put forth in 1564, and consisting of the Nicene Creed with additional articles adopted by the Council of Trent, to which is now added a profession of belief in the definitions of the Vatican Council. The English Church adopts as 'thoroughly to be received and believed' the three ancient creeds, which as part of her liturgy may be read in the Book of Common Prayer, but does not consider any of them to be inspired. Besides these creeds there are numerous Confessions of Faith, which have been adopted by different churches and sects. The Thirty-nine Articles of the Book of Common Prayer form a confession of faith for the Anglican Church. The creed of the Church of Scotland and other Presbyterian churches is contained in the Confession of Faith, drawn up by the Westminster Assembly of Divines, and completed in 1646.

Creedmoor (krä'd'môr), a station on the Long Island railway, 11 miles east of the city of New York. It is much frequented by riflemen for target practice.

Creek (kräk'), a small inlet, bay, or cove; a recess in the shore of the sea or of a river. In America and Australia the term is often applied to a small river, an affluent of a larger one.

Creeks, American Indians formerly in Georgia and Alabama, but now residing in Eastern Oklahoma. The number of warriors used to amount to about 16,000, but altogether the tribe does not now exceed 9300. They have made considerable progress in agriculture, and raise horses, cattle, fowls, and hogs, and cultivate tobacco, rice, and corn.

Creepers (cré'pers), a family (Certhiidae) of birds which strongly resemble the woodpeckers in their habit of creeping on the stems of trees with the aid of the strong quills which project from the tail feathers, and of securing their insect food by an expert tongue. The common creeper (Certhia familiaris) is European, but is
Crefeld represented by American species. It is a pretty and interesting little bird, which builds its nest usually in holes or crevices of trees. The wall-creeper (Tichodromas muraria) of Southern Europe searches for its insect food on rocks. The family is found in all parts of the world.

Crefeld. See Krefeld.

Crema (kra'ma), a fortified city of Northern Italy, province Cremona, on the Serio, 25 miles S.S.E. of Milan; pop. 8027. It contains a cathedral, picture gallery, etc.

Cremation (kram'ashun), the destruction of the bodies of the dead by fire or extreme heat. Cremation was generally practiced in ancient times instead of burial, and has been advocated on hygienic grounds. But the modern method is altogether different from the ancient, the smoke of wood being replaced by the closed furnace of high temperature. Various methods of cremation have been proposed, the great difficulty being to consume the body without permitting the escape of noxious exhalations, and without mingling the ashes with foreign substances. In Siemens’ process, a modification of a plan of Sir Henry Thompson, this is successfully accomplished. Cremation societies have been instituted in many of the American States.

Crematory (kra'ma-ter'ē), a building in which cremation is practised. It contains a furnace heated to a very high temperature, into which the body is introduced and converted to ash.

Cremona (kra'mōna), a city of Italy, capital of province of same name, on the left bank of the Po, 47 miles s.e. by E. of Milan. It is surrounded by walls and wet ditches, its circumference being nearly five miles. The most remarkable edifice is the cathedral, begun in 1107 and completed about 1491. Close by, and connected with the cathedral, is the Torrazzo, one of the loftiest and most beautiful towers in Italy. Cremona is the seat of a bishopric, and has considerable manufactures of silk, wool, cotton, etc. It was at one time celebrated for its violins, especially those made by Antonio Stradivari, Joseph Guarnerius, and members of the Amati family. Pop. 39,344. The province has an area of 695 square miles and a population of 327,902.

Crenelle (kra'nel), an embrasure in an embattled parapet or breastwork. The adjective crenellated is applied in architecture to a kind of embattled or indented molding of frequent occurrence in buildings of the Norman style.

Creole (kre'ōl; Spanish criollo) is the name which was originally given to all the descendants of Spaniards born in America and the West Indies. It is now used in a wider sense to signify the descendants of Europeans of any nation born in South America and the West Indies, as well as in some other localities. Creole dialects are those jargons which originated from the mixture of different languages in the West Indies, Southern United States, etc., and are spoken by the descendants of the slaves. According to the European language which prevails in a Creole dialect it is called French creole, Spanish creole, etc.

Cresote. See Cresotes.

Crescendo (kre-se'hendo), or Cessa (Italian), a musical term signifying that the notes of the passage over which it is placed are to be gradually swelled. Crescendo passages are marked —— signifying piano to forte; the corresponding mark —— diminuendo, or decrescendo, marking the transition from forte to piano.

Crescent (kre'sent; Lat. crescens, growing), an emblem representing the moon in her horned state. This emblem is of very high antiquity, being that of the Greek goddess Artemis or Diana. It is found on medals of many ancient cities, particularly of Byzantium, from whence it is supposed to have been borrowed by the Ottomans. Since their establishment in Europe it has been the universal emblem of their empire. The crescent has given name to a Turkish order of knighthood from the form of the badge, instituted by Selim, Sultan of Turkey, in 1501.

Crescentiaceae (kre-sen-ti-a-see), a small family of corolliflor dicotyledons, of which the genus Crescentia, the calabash-tree, is the type.

Crespi (krees'pli), Giuseppe Maria, an Italian painter of the Bolognese school, born at Bologna in 1665; died in 1747. He had many scholars, among whom were his two sons Antonio and Luigi Crespi. The latter distinguished himself by his writings on painting. Crespi is also known as an engraver.

Cress, the name of several species of plants, most of them of the nat. order Crucifera. Water-cress, or Nasturtium officinale, is used as a salad, and is valued in medicine for its antiscorbutic qualities. The leaves have a moderately
Cresselle. It grows on the brinks of rivulets and in moist grounds. Common garden cress is the Lepidium sativum; Normandy cress Barbarea praecox; winter cress, B. vulgaris; Indian cress, Tropaeolum majus; bitter cress, Cardamine pratensis (cuckoo-flower).

Cresselle (kres'-el'; Fr. crecelle), a wooden rattle used in some Roman Catholic countries during Passion Week instead of bells to give notice of divine worship.

Cresset (kres'et), a name which appears to have been given in the middle ages and later indifferently to the fixed candlesticks in great halls and churches, to the great lights used as beacons and otherwise, and to lamps or firepans suspended on pivots and carried on poles in processions, municipal and military watches, etc.

Cressy. See Orba.

Crest (krest; Latin, crista), in ancient armor, the plume or tuft of feathers, or the like, affixed to the top of the helmet. In heraldry the crest is a figure originally intended to represent the ornament of the helmet, but is now generally placed upon a wreath, coronet, or cap of maintenance, above both helmet and shield. The crest is considered a greater criterion of nobility than the coat of arms itself, and it is now commonly a piece of the arms.

Creston (krest'on), a city, county seat of Union Co., Iowa, 105 miles N of Council Bluffs. It has large machine shops and roundhouse and an extensive poultry plant etc. Pop. 6024.

Creswick (kres'vik), Thomas, an English landscape painter, born in 1811; died in 1869. He was elected an associate of the Royal Academy in 1842, and a member in 1851. His first pictures were admitted into the Academy exhibition when he was in his seventeenth year, and his success was afterwards continuous. Among his great works are England, London Road a Hundred Years Ago, and the Weald of Kent.

Cretaceous (kré-ta'shus; or Chalk), in geology the upper strata of the Secondary series, immediately below the Tertiary series, and superincumbent on the Oolite system. This group is common to Europe, and also to a part of Asia. It consists of chalk resting upon arenaceous and argillaceous deposits, which are also regarded as part of the system. It has been divided into two parts—the Upper, consisting entirely of chalk or marl, and subdivided into the upper or soft chalk, containing many flint and chert nodules; the lower or harder chalk, with fewer flakes; and the chalk marl; and the Lower, consisting of sands and clay, and subdivided into the upper greensand; gauntlet, a bluish, tenacious clay; and the lower greensand. Paleontologists have suggested another division founded on the fossil remains found in the system, in accordance with which the upper greensand and gauntlet are transferred to the upper series, and the lower greensand and Wealden beds and Hastings sands constitute the lower.

Crete (krét). See Candidia.

Cretinism (krét-in-ism), a form of feebleness, or in idiocy associated with a peculiar condition of the body, occurring in Switzerland and other mountainous countries. Cretins are usually affected with goiter, and are usually the offspring of goiterous parents. They are ill grown and stunted, with swollen bellies. The skin is coarse, head large, the nose sunken and flattened at the bridge, the lips thick, chin protruding, mouth wide and gaping, the tongue large. The countenance is dull and heavy; there is general muscular weakness and slowness of sensibility. Associated with these are feebleness or want of intellect, varying in degree from absolute vacuity to a certain power of acquiring a little knowl-
edge; sometimes deafness and dumbness, perhaps squinting and blindness. Careful treatment under a physician by means of thyroid extract usually restores the victim almost to normal. The treatment must be almost continuous throughout life, associated with good food, cleanliness, exercise, etc.

**Cretonne** (kret-ton'), a cotton cloth with various textures of surface, printed on one side with pictorial and other patterns, and used for curtains, covering furniture, etc.

**Creuse** (kreuz'), an inland department of France comprising the greater part of the old province of Marche; area, 2150 square miles. It derives its name from the river Creuse, which rises in it, and traverses it diagonally in a northwest direction, afterwards flowing on to join the Vienne. The surface is generally rugged, and the soil, which is thin and rests upon granitic rocks, is by no means fertile. Pop. (1906) 274,004.

**Creuzer**, a German philologist and archaeologist, born in 1771; died in 1858. For nearly forty-five years he filled the chair of philology and ancient history at Heidelberg. He wrote on the mythology of Greece and other nations, on Greek history and literature, Roman antiquities, etc.

**Creuzot** (kreu-zot), LE, a town of Eastern France, dep. Saône-et-Loire, 14 miles from Autun, with extensive ironworks, the most complete in France. The mining of coal, the smelting of iron, and the manufacture of machinery give employment to about 15,000 workmen in the town and vicinity, the greater number being employed at the works of Schneider & Co. Pop. 33,500.

**Crewe** (krō̅), a municipal town of England, in Cheshire, 21 miles s. e. Chester, an important railway center and the seat of enormous manufactories of railway material. It is a modern town, well laid out, and chiefly inhabited by people connected with the railways. It has a commodious market hall, a corn exchange, mechanics' institution, townhall, etc. Pop. 44,970.

**Crewel-work** (kro'wil), work executed with the needle, and consisting of designs sewed in colored silk or woolen threads on a basis of unbleached cotton or linen, toweling, or the like.

**Crewkerne** (krō'karn), a town of England, in Somersetshire, 16 miles s. e. of Taunton; manufactures salicloth. Pop. 3939.

**Cribbage** (krib'aj), a favorite English game at cards played with the whole pack. It may be played by two, three, or four persons; and when by two, five or six cards may be dealt to each. Five-card cribbage played by two persons is the most scientific game. Sixty-one points make the game; there are no tricks and no Trumps, the object being to make pairs, fiftens, sequences, or the go, or prevent the adversary from doing the same. Court cards and tens count ten each, and all the rest count for the number of 'pips' upon them. Every pair, that is, every couple of cards of the same value belonging to different suits (two aces, two fours, two kings, etc.), counts two; and when there are three or four similar cards, as many pairs are counted as there are different combinations of the cards, taken two at a time. Every combination of cards, the united pips of which make up fifteen, counts two. A sequence consists of three or more cards of any suit following one another in rank, and counts one for each card. When the player whose turn it is to play cannot play a card without going beyond thirty-one, the other player scores one for having been the nearest to thirty-one. This is called scoring one for 'the go.' The remaining cards after thirty-one, or the next point to it, is made are thrown up, and each player's cards are counted. When all the cards in a hand, either with or without the turn-up card, are of one suit, or when all the cards in the crib, with the turn-up card, are of one suit, it is called a Rush, and counts one for each card. When the turn-up card is a knave the dealer scores two ('two for his heels'). When a knave of the same suit with the turn-up card is found in the hand of either player, the player in whose hand it is scores one ('one for his nob').

**Crichton** (krit'on), JAMES, surnamed the **Admirable**, a Scottish celebrity, son of Robert Crichton, lord-advocate, was born in 1500; died about 1556. He was educated at the University of St. Andrews, and, according to the current accounts of him, before his twentieth year had run through the whole circle of the sciences, could speak and write to perfection ten different languages, and was equally distinguished for his skill in riding, fencing, singing and playing upon all sorts of instruments. He visited Paris, Genoa, Venice, Padua, etc., challenging all scholars to learned disputations, vanquishing doctors of the universities, and disarming the most famous swordsmen of the time in fencing. He was latterly tutor to a son of the
Duke of Mantua, and is said to have been stabbed to the heart in a dastardly manner by his pupil. The story of his achievements seems to be rather highly colored; but he was extravagantly praised by Aldus Manutius, the printer of Venice, by whom he was well known. He left some Latin poems, which are said to be possessed of no remarkable quality.

Cricket (krik'et), an insect of the genus Gryllus, or Acheta of some naturalists, order Orthoptera. There are several species. The house-cricket is the Acheta (Gryllus) domesticus; the field-cricket is the Acheta (Gryllus) campestris; the mole-cricket is the Gryllotalpa vulgaris. The house-cricket of Europe is about an inch long, with an orange of about an inch and a half, of a pale yellowish color mixed with brown. By the friction of the peculiarly formed wing-covers the males produce that stridulous sound of which these insects are so well known, and which has become associated with ideas of cheerful domestic comfort. They live in holes and crevices near fireplaces or in other warm situations, whence they come out at night to feed on crumbs and other fragments of food. The field-cricket makes a similar noise. The house-cricket has been introduced into the United States, and there are several species of field-cricket there also. See also Mole-cricket.

Cricket, a favorite open-air game, played with bats, balls, and wickets on a piece of smooth greensward. It is played by two opposite sets or sides of players, generally numbering eleven each. Two wickets of three stumps each are pitched fronting each other at a distance of about 22 yards apart, the stumps being upright rods stuck in the ground, and projecting 27 inches. On the top of each set of stumps are placed two small pieces of wood called bails. After the rival sides have tossed for the choice of either taking the bat or fielding, two men are sent to the wickets bat in hand. The opposite or fielding side are all simultaneously engaged; one (the bowler) being stationed behind one wicket for the purpose of bowling his ball against the opposite wicket, where his coadjutor (the wicket-keeper) stands ready to catch the ball should it pass near him; the other fielders are placed in such parts of the field as is judged most favorable for stopping the ball after it has been struck by the batsman or missed by the wicket-keeper. It is the object of the batsman to prevent the ball delivered by the bowler reaching his wicket either by merely stopping it with his bat or by driving it away to a distant part of the field. Should the ball be driven any distance the two batsmen run across and exchange wickets, and continue to do so as long as there is no risk in being 'run out,' that is, of having the stumps struck by the ball while they are out of their position near the wickets. Each time the batsmen run between the wickets is counted as a 'run,' and is marked to the credit of the striker of the ball. If the batsman allows the ball to carry away a ball or a stump, if he knocks down any part of his own wicket, if any part of his person stops a ball that would have otherwise reached his wicket, or if he strikes a ball so that it is caught by one of the opposite party before it reaches the ground, he is 'out,' that is, he gives up his bat to one of his own side; and so the game goes on until all the men on one side have played and been put out. This constitutes what is called an 'innings.' The other players now take the bat and try to defend their wickets and make runs as their rivals did. Generally after two innings each have been played by the contestants the game comes to an end, that side being the victors who can score the greatest number of runs. It is the national game of England, as baseball is of the United States.

Cricklade (krik'läd), a town of England, County Wilts, on the Thames and the Severn Canal, 42 miles n. of Salisbury; pop. 5530. Cricklade now gives name to the northern parliamentary division of Wiltshire.

Crief (krif), a town of Scotland, County Perth, beautifully situated on a slope above the Earn, backed by lofty hills and crags. The principal manufacture is woolens (shirtings, blankets, tweeds, etc.). Pop. 6208.

Grillon (grë-yon), LOUIS DES BALBES DE BERTON DE, a great French warrior of the sixteenth century, born in 1541; died in 1615. He won distinction in five successive reigns—those of Henry II, Francis II, Charles IX, Henry III, and, above all, in that of Henry IV. He distinguished himself at the capture of Calais, and in the battles of Dreux, Jarnac, and Moncontour (1569), against the Huguenots, and in the naval battle of Lepanto against the Turks. The massacre of St. Bartholomew was reprobated by him. He fought for Henry at Ivry against the Catholic League.

Crime (krim), a term used to indicate sometimes a violation of the higher moral law, sometimes more specifically the violation of a certain group of the laws formulated by a nation. This group properly comprises in its scheme all offenses endangering the wel-
Crimea

fare of the community, as distinct from civil or private injuries, which are as between person and person, and terminate with the compensation of the injured. Hence from the legal point of view crime is sometimes defined as an offense punishable by law directly, as opposed to an offense which the law punishes indirectly by granting damages to the person wronged. (See Criminal Law.) Whether used in the legal or the moral sense crime implies freedom of will, the power of distinguishing between right and wrong, and a fulfilled intention. Hence, though the theorectic rule of common law is that all infraction of law is criminal and penal, it is held that young children, madmen, and idiots cannot commit crime.

Crimea (kri-mə'), Tuṣ (Rus., Kri-)

anc. Chersonesus Taurica), a peninsula of Southern Russia, government of Taurida, to the mainland of which it is attached by the Isthmuse of Perekop; area, 40,000 sq. miles. On the west and south it is washed by the Black Sea, and on the east by the Sea of Azof, a portion of which, shut off from the rest by a long and narrow strip of land, forms the Sivash or Putrid Sea. Three-fourths of the Crimea belongs to the region of steppes, but the other part, confined entirely to the south, and stretching along the coast from west to east, abounds in beautiful mountain scenery. Here the valleys looking southward are luxuriant with vines and olive and mulberry plantations, while the northern slope gives a large yield in cereals and fruits. The climate, however, is unequal, and in winter is severe. The chief stream is the Salgir. Others of some importance are the Tchernaya and the Alma. The most important of the productions, besides those already mentioned, are tobacco, of which a large quantity of excellent quality is produced, flax and hemp. The forests are of limited extent. There are large numbers of fine-wooled sheep, and horned cattle and horses are reared in large numbers. Pop. est. at 450,000. The chief town and port is Sebastopol. The country was anctently associated with the Cimmerians, and in later times with various Greek settlements and minor kingdoms. After being for some time a dependency of Rome, it was overrun by successive bodies of barbarians, and in 1237 fell into the hands of the Mongols under Genghis Khan. About 1261 the Genoese were permitted to occupy and fortify Kaffa, and they rapidly extended their power in the formation of other settlements. They were expelled, however, in 1475 by Mahomet II, who made it a dependent Chanate. In 1783 the Russians took pos-

session of the country; and with the view of overawing the Turks the great naval arsenal of Sebastopol, occupying the most commanding position in the Black Sea, was begun by Catharine II in 1786. Its military resources were steadily developed up to the time of the Anglo-French campaign (see Crimean war) of 1854, when it was occupied by the allies.

Crimean War (kri-mə-an), the struggle between England, France and Turkey on the one hand, and Russia on the other, to prevent the undue preponderance of Russia in the east of Europe; 1854 to 1856. The old plans for the extension of Russian power conceived by Catharine II and Potemkin were resuscitated by Nicholas I, who, believing that he had secured himself from interference on the part of Austria and Prussia, and that an Anglo-French alliance was impossible, prepared to carry them into action. Servia, Bosnia, Bulgaria, and the principalties of the Danube were to become Russian protectorates, and Constantinople was to be provisionally occupied by Russian troops. The first markedly aggressive step—the demand by Russia for a protectorate over the Greek Church throughout the Turkish empire—brought matters to a crisis. An ultimatum presented by Menschikoff in May, 1853, was rejected by the Porte; the Russians occupied the Danubian principalities; and war was declared by the Porte in October, 1853, by France and England in 1854, and by Sardinia in 1855. A French and English fleet entered the Baltic and captured Bomarsund and one of the Aland Islands, and in the south the allies landed at Varna, under Lord Raglan and Marshal St. Arnaud as commanders-in-chief. While the armies were making preparations Prussia and Austria demanded the evacuation of the Danubian principalities, and on this evacuation being ordered by Nicholas, for strategic reasons, the principalities were provisionally occupied by the Austrians. It soon became obvious that the Crimea must be the seat of the war, and 50,000 French and English troops with 6000 Turks were landed at Eupatoria (September, 1854). Five days later the battle of Alma was won by the allies (September 20th), and the march continued towards the south side of Sebastopol. Soon after St. Arnaud died and was succeeded by Canrobert. The siege of Sebastopol was commenced by a grand attack which proved a failure, and the Russians under Li-prandi retaliated by attacking the English at Balaklava (October 25th), but were defeated with heavy loss. It was at this battle that the famous, but useless, charge
was made by the Light Brigade. A second attack at Inkerman was again repulsed by the allies, but the siege works made slow progress during the winter, in which the ill-supplied troops suffered great privations. The death of Nicholas and succession of Alexander II. in March, 1855, brought no change of policy. Canrobert resigned in favor of Pelissier; and shortly after an unsuccessful attack on those parts of the fortification known as the Malakoff and Redan Lord Raglan died, and was succeeded by Simpson. The bombardment was continued, and in September the French successfully stormed the Malakoff, the simultaneous attack on the Redan by the British proving a failure. The Russians, however, then withdrew from the city to the north forts, and the allies took possession. The chief subsequent event was the capture of Kars, in Asia, by the Russians, after a splendid defense by the Turks under General Williams. By this time, however, the allies had practical possession of the Crimea, and the terms of peace were gladly accepted. A treaty was accordingly concluded at Paris on April 27, 1856, by which the independence of the Ottoman Empire was guaranteed. See Paris, Treaty of.

Criminal Law (krim'-nal), the law relating to crimes. The general theory of the common law is that all wrongs are divisible into two species: first, civil or private wrongs or torts; secondly, criminal or public wrongs. The former are to be redressed by private suits or remedies instituted by the parties injured. The latter are redressed by the State acting in its sovereign capacity. The general description of the private wrongs is that they comprehend those injuries which affect the rights and property of the individual, and terminate there; that of public wrongs or offenses being that they comprehend such acts as injure, not merely individuals, but the community at large, by endangering the peace, the comfort, the good order, the policy, and even the existence of society. In the first, therefore, so far as the law is concerned, the compensation of the individual whose rights have been infringed is held to be a sufficient atonement; but in the second class of offenses it is demanded that the offender make satisfaction to the community as acting prejudicially to its welfare. The exact boundaries between these classes are not, however, always easy to be discerned, even in theory; for there are few private wrongs which do not exert an influence beyond the individual whom they directly injure. The divisions, torts and crimes, are thus not necessarily mutually exclusive, cases sometimes occurring in which the person injured obtains damages, while at the same time the criminal is subjected to punishment, not as against the individual, but as against the State. It is, moreover, obvious that legal crimnality is not in any strict sense the measure of the morality of actions, though the legal enactment tends to enforce itself as a moral law. In large part it is only an approximate expression of the current sense of justice, this expression being both aided and hindered by the historical and constantly reflexive character of legal method. The basis of the criminal law of Great Britain is to be found in a series of loose definitions and descriptions, of which many, and therefore among the more important, date from the thirteenth century. The irregular superstructure reared upon these consists mainly of parliamentary enactments which originated in the eighteenth century. The laws as formulated, however, in any country, by no means always represent the law as interpreted, the whole system being further complicated by a mass of judicial comments and particular constructions. Thus, while there is a statutory division of crimes into treasons, felonies, and misdemeanors, the distinctions between them are so uncertain that it is possible to regard the first head as merely the isolation of a subcase of felony; while in respect of the second and third classes, the distinction can only be clearly marked by an enumeration of the crimes arbitrarily assigned to each in the common law and judges' decisions. Even in severity of punishment a misdemeanor may rank as high as a felony. The aim of criminal law as at present constituted is both retributive and preventive—in its former aspect being based upon the primitive passion of retaliation, in the latter primarily upon the fundamental instinct of self-preservation. The prevention of crime may, however, be effected in a threefold manner: by imposing a penalty which shall serve to deter fear to deter men from committing crimes, or by rendering it physically impossible for a man of known criminal tendency to repeat an offense, or by the reformation of the criminal. With the higher evolution of ideas the principle of retaliation has fallen into theoretical disrepute, though still a practical legal factor; and the problems of penology are made to turn almost exclusively upon the principle of prevention in these three aspects, and especially in the last two. In the several States of the Union the doctrine of the English common law is incorporated in the statute laws, as to
Crimp

the classification of the crime and its effects, but the punishment is measured by special statutory enactment. In most of the States the power of pardoning a criminal is vested in the governor; in Pennsylvania, by constitutional provision, a Board of Pardons can make recommendations to the governor for pardons. This is the custom also in Massachusetts.

Crimp, an agent who for a commission supplies ships with seamen just before sailing, the term being applied especially to low characters who decoy sailors by treating them, advancing money to them, and giving them goods on credit, etc., till they have them in their power, frequently getting them shipped off in a drunken state after all their money is spent. They also keep an outlook for emigrants, and take them to low lodging houses in which they themselves are interested.

Crimson (krim'zən), a rich, deep-red color, a red that owes its characteristic tint to a certain admixture of blue.

Crinoidea (kri-noi'de-a; Gr. krínoun, a lily), the encrinites or sea-lilies, an order of Echinodermata, consisting of animals attached during the whole or a portion of their lives to the sea-bottom by means of a calcareous jointed stem, from the top of which radiate feather-like, flexible appendages or arms, in the center of which is the mouth. Though comparatively few in number now, they lived in immense numbers in former days, many carboniferous limestones being almost entirely made up of their calcareous columns and joints.

Crinoline (krin'o-lin; French, from Latin críinis, hair), properly a kind of fabric made chiefly of horse-hair, but afterwars generally applied to a kind of petticoat supported by steel hoops, and intended to distend or give a certain set to the skirt of a lady's dress. Hooped skirts (farthingales or farthingales), supported by whalebone, were worn in England in the time of Queen Elizabeth and James I, and the fashion was again introduced in the time of George II. The crinoline proper came into common use about 1856, being worn by women generally and sometimes providing by its portentous dimensions a source of much inconvenience and no little danger. The immense bell-shaped crinolines happily fell into disuse about 1886. Crinoline wire was for years a leading branch in the steel trade. A horse-hair and cotton fabric used as a material for making ladies' bonnets is also called crinoline.

Crinum (kri'núm), a genus of handsome, some plants of the order Amaryllidaceae, with strap-shaped leaves and a solid scape bearing an umbel of many rosy, fragrant flowers. There are numerous species found in Asia, Australia, South America and certain parts of Africa, and interesting hybrids have been produced by our gardeners. The Crinum asiaticum has a bulb above ground, which is a powerful emetic, and is used by the natives to produce vomiting after poison has been taken.

Crio-sphinx (Gr. kriós, a ram), a sphinx with the head of a ram, as distinguished from the andro-sphinx or human-headed sphinx, and the hierac-sphinx with the head of a hawk.

Cripple Creek, a mining town, capital of Teller Co., Colorado. It is the business center of the exceedingly rich Cripple Creek gold mining district, which has yielded as much as $30,000,000 in a year. Pop. 6203.

Crisis (kri'sis; from the Greek krisi- in, to decide). In medicine, the turning-point in a disease at which a decided change for the better or the worse takes place. In regular fevers the crisis takes place on regular days, which are called critical days (the 4th, 14th, and 21st); sometimes, however, a little sooner or later, according to the climate and the constitution of the patient. The word crisis is also figuratively used for a decisive point in any important affair or business, for instance, in politics and commerce. Commercial crises have been in an especial degree the subjects of study at the hands of economists, with the result of establishing a curious periodicity in their recurrence. The commercial cycle apparently completes itself in about ten years, the earlier portion of the period being attended with improving trade, and a considerable inflation of credit and followed by failures and distrust.

Crisp, Charles Frederick, statesman, was born in Sheffield, England, of American parents, in 1845. After service in the Confederate army he studied law; was solicitor-general and
Crispi

judge in Georgia. He was elected to Congress from Georgia in 1822, and was Speaker of the House 1891-95. He died in 1896.

Crispi (kris'pi), FRANCESCO, an Italian statesman, born at Ribera, Sicily, in 1819; died in 1901. He joined the 1848 revolutionists at Palermo, and had to flee to France. In 1860 he organized the successful movement under which Garibaldi conquered Sicily. In the new Italian kingdom he was successively deputy minister and prime minister in 1887-90 and in 1894-96, resigning in 1896 in consequence of the Italian disasters in Abyssinia.

Criticism (krit'i-siz'm), THE HIGHER.
The determination of the literary value of books and writings, as opposed to the lower or textual criticism, in which is considered the history of writings as the work of penman or printer. In the higher criticism internal instead of external evidence is employed, the object being to trace literary form, construction and method, unity, date, probable authorship, and indications of later editing. It has been recently applied to the study of the Old Testament, especially by German writers, with important results, though different opinions have been reached by the two classes of critics, those who deny and those who maintain the existence of a supernatural element in the Scriptures.

Crittenden (krit'en-den), JOHN JORDAN, statesman, born in Woodford Co., Kentucky, in 1787. He studied law, became distinguished as an advocate, and was elected to the United States Senate in 1817 and again in 1835. President Harrison appointed him attorney-general in 1841. He was reelected to the Senate in 1843, was attorney-general in the Fillmore cabinet, and senator again 1855-61. He opposed the repeal of the Missouri Compromise, and in 1861, through his influence, the State of Kentucky remained in the Union. He died in 1863.

Croatia (kro-ash'ah), a country which forms, along with Slavonia and the 'Military Frontier,' a province or administrative division in the southwest of the Austrian dominions in the Hungarian portion of the monarchy, partly bounded by the Adriatic; total area, 16,773 sq. miles. Its surface is irregular, the Alps extending into it, and culminating at the height of 4400 feet. The Drave and the Save divide between them the whole drainage system. In the north, on low, sunny slopes, the vine is successfully cultivated; the olive, mulberry and fig thrive well on the coast. The south is generally unfertile, and in many parts almost sterile. The principal crops are barley and oats; but the whole country is more pastoral than arable. The inhabitants are Croats and Serbs, with a mixture of Germans, Hungarians, Jews and Gypsies. About three-fourths of the population are Catholics, the rest belonging chiefly to the Greek Church. The chief towns are Agram, Warasdin and Esseg. Pop. 1901, 2,416,304. In 600 the Croats, a tribe from the Carpathians, settled in Croatia, and gave their name to the country. It long maintained a sort of independent existence, but in 1091 it was taken over by Hungary.

Crocodilite (krek-do'il-it), an ornamental stone, a sort of fibrous quartz, now brought in considerable quantities from Cape Colony and made into articles of jewelry.

Crocket (krok'et), in Gothic architecture, an ornament, usually in imitation of curved and bent foliage, but sometimes of animals, placed on the angles of the sides of pinnacles, canopies, gables, etc. The name is also given to one of the terminal snags on a stag's horn.

Crockett, DAVID, an American frontiersman, born in Limestone, Greene County, Tenn., August 17, 1786. He received little education, giving his time and energy rather to backwoods pursuits, in which he excelled. In 1813-14 he served under General Jackson in the Creek campaign. In 1828 he became a member of Congress, succeeding largely in winning his seat, it is said, by his ability to relate anecdotes of frontier life at the political meetings. Through his opposition to President Jackson's Indian policy he was defeated for re-election in 1833, but was elected again to the house in 1833. In 1835 he left Tennessee for Texas, where, in the war for Texas independence, to whose cause he devoted himself, he was captured in the battle of the Alamo and put to death by the order of Santa Anna, March 6, 1836.

Crockett, SAMUEL RUTHERFORD, a New Galloway in 1859. He became a Free Church minister in 1886, but resigned in 1895 to devote himself to literature. He won fame by The Stikkit Minister and The Raiders, and afterwards wrote Men of the Moss Hags, Lochinvar, The Lilac Sunbonnet, The Red Axe, etc. He died April 20, 1914.

Crocodile (krok'odil), a genus, family, and order of saurian reptiles, comprising the large living forms of reptiles. The characters of the
order Crocodilia are as follows:—The skin is covered with square bony plates; the tail is long and compressed laterally. The four feet are short, and there are five toes on each of the two forefeet, and four on each of the two hind feet, the latter more or less webbed; the limbs are feeble. The jaws are long and their gape of enormous width. The nostrils are at the extremity of the snout, and capable of being closed to prevent ingress of water. The heart is four-chambered. The most ancient forms of the group were the *Telesaurus*, from the Lias and Oolite, and the *Streptospondylus*, from the Lias, Oolitic and Wealden strata. The families now existing are the *Alligatoridae*, *Crocodylidae* and *Gavialidae*. The alligators are all New World forms. (See *Alligator*) The gavial proper (*Gavialia Gangeticus*) is confined to the East Indies. (See *Gavial*) The *Crocodylidae*, to which family the crocodile belongs, have unequal teeth and no abdominal plates, and the cervical and dorsal plates are distinct for the most part. The crocodile of the Nile (*Crocodylus Niloticus* or *vulgaris*) is the best known member of the order; another species (*C. palustris*) is met with in South Asia, Sunda and the Moluccas. There is also a species in tropical America. The crocodile is formidable from its great size and strength, but on shore its shortness of limb, great length of body, and difficulty of turning enable men and animals readily to escape pursuit. In the water it is active and formidable. It is exclusively carnivorous, and always prefers its food in a state of putrefaction. In Egypt it is no longer found except in the upper or more southern parts, where the heat is greatest and the population least numerous. Crocodiles are still common enough in the river Senegal, the Congo, Niger, etc. They grow sometimes to a length of 30 feet, and apparently live to a vast age.

**Crocus** (κρόκος), a genus of plants of the order Iridaceae or Iris, forming one of the most common ornaments of our gardens. Most of the species are natives of the south of Europe and the Levant; and three grow wild in Britain. They may be divided, according to their period of flowering, into *vernal* and *autumnal*. Among the *vernal* crocuses may be mentioned the white and purple *C. vernus*; *C. versicolor*, distinguished by the yellow tube of its flower bearded with hairs, and its sweet scent; *C. biflorus*, the Scotch crocus, with beautiful pencilled sepals, and clear or bluish-white petals. Among the *autumnal* species are *C. nudiflorus* and *C. sativus*, whose long, reddish-orange, drooping stigmas when dried form *saffron*. See *Saffron*.

**Cresus** (κρέος), the last king of Lydia, son of Alyattes, whom he succeeded in 560 B.C., and extended the empire from the northern and western coasts of Asia Minor to the Halys on the east and Mount Taurus on the south, including the Greek colonies of the mainland. His riches, obtained chiefly from mines and the gold-dust of the river Pactolus, were greater than those of any king before him, so that his wealth became proverbial. Having entered upon war with Cyrus, he was taken prisoner in his capital, Sardis (B.C. 540). The date of his death is unknown, but he survived his captor, and is referred to in the reign of Cambyses.

**Croft, William**, an English musical composer, born in 1677. He was organist in the chapel royal, and published *Musica Sacra*, or *Select Anthems*, etc. Died in 1727.

**Crofter** (kroftær), a petty farmer renting a few acres of land, with sometimes the right of grazing his cattle in common on a piece of rough pasture. Crofters are numerous in the Highlands and in the Western Islands of Scotland, as well as in some other localities. From many districts they have been removed owing to their holdings being absorbed in sheep farms or deer forests, and they are now mainly congregated on the seashore, where they partly maintain themselves by fishing.

**Croker** (kro'ker), John Wilson, an English writer and politician, born at Galway, in 1780. He was educated in Cork, and at Trinity College, Dublin, and called to the Irish bar in 1802. In 1803 he published anononymously; *Familiar Epistles on the Irish Stage*, and in 1805, an *Intercepted Letter from China*, both clever satires. In 1808 he entered Parliament as member.
Croker

for Downpatrick. He was appointed in 1809 to the post of secretary to the admiralty, which he retained till the reign of William IV. The Reform Bill was strenuously opposed by him, and on the passing of that measure in 1832 he withdrew from public life. He was one of the founders of the Quarterly Review, and one of its ablest contributors, though his articles display frequent malevolence. His other writings include an edition of Boswell's Life of Johnson; Ulm and Trafalgar and Trafalgar, two poems; Stories from the History of England, from which Sir Walter Scott derived his idea of Tales of a Grandfather; and editions of the Suffolk Papers, Lady Hervey's Letters, Lord Hervey's Memoirs and Walpole's Letters. He died in 1867.

Cromer, THOMAS CROFTON, a collector of folklore, born at Cork in 1798. While in a merchant's office in Cork he commenced the collection of the songs and legends current among the peasantry of the south of Ireland. In 1819 an appointment in the admiralty was obtained for him, and he retired with a pension in 1850. His best-known work is his Fairy Legends and Traditions of the South of Ireland (1825). He died in 1864.

Croll, JAMES, an English physicist, born in 1821; died in 1890. Self-trained in science, he was on the Scotch geological survey 1867-81. He wrote Climate and Time, Stellar Evolution, The Philosophical Bases of Evolution, etc.

Croly (kröl), GEORGE, author and preacher, born at Dublin in 1780; studied at Trinity College, Dublin; was appointed to a small curacy in Ireland, but resigned it and became a prominent figure in London journalism and letters. His separate literary works comprise: Paris in 1815, a poem; the Angel of the World, a tale; Catiline, a tragedy: Pride shall have a Fall, a comedy, 1824; Salathiel, a romance; etc. He is also the author of several biographical works; and numerous sermons. In 1835 he was made rector of St. Stephen's, Wallbrook. As a preacher he was deservedly popular. He died in 1850.

Cromarty (krom'arti), a seaport of Scotland, at the extremity of the peninsula which separates the Moray from the Cromarty Firth, 16 miles N. E. of Inverness. It was the birthplace of Hugh Miller. Pop. 1242. —The county of Cromarty consists of a large number of detached portions scattered over the county of Ross with which they are practically merged. The total area is about 220,800 acres. See Ross and Cromarty.

Cromer (krömer), JOHN, an English artist, son of a Norwich weaver; born in 1769. During the greater part of his life he was a teacher of drawing. In 1806 he founded the Norwich Society of Artists, of which he became president as well as chief contributor to its annual exhibitions. He excelled in depicting the scenery of his native county, and especially in his handling of trees; and his high place among British landscape painters is now universally acknowledged. He died in 1821.

Cromer, EVELYN BARING, first Earl (1841-1917), British statesman and administrator, was born at Cromer Hall, Norfolk, and educated at Woolwich Academy. He joined the Royal Artillery in 1868, and in 1872 acted as private secretary to Lord Northbrook, Viceroy of India. He became major in 1876 and was appointed British commissioner of the Egyptian public debt office. He was finance minister of India from 1880 to 1883, when he became British agent and consul-general in Egypt. He was created first Baron Cromer in 1892, viscount in 1897, and earl in 1901. He reorganized every department of the Egyptian administration and was known as the builder of modern Egypt.

Cromer (krömer), a small seaport and bathing place of England, County Norfolk, 21 miles N. of Norwich. The old town is now submerged, the sea constantly making fresh encroachments. Pop. (parish) 4074.

Cromlecch (krömlek), an ancient monument consisting of two or more columns of unhewn stone supporting a large tabular block so as to form a rectangular chamber, beneath the floor of which is sometimes found a cist encasing a skeleton and relics. Sometimes the cromlecch was encircled by ring of standing-stones, as in the case of the Standing-stones of Stennis, in Orkney; and sometimes it was itself buried beneath a large mound of earth. See Dolmen.

Crompton (krom'tun), SAMUEL, inventor of the mule-jenny; born near Bolton, England, in 1753. He

Crompton at Lanhydrock, Cornwall.
early displayed a turn for mechanics, and when only twenty-one years of age invented his machine for spinning cotton, which was called a mule, from its combining the principles of Hargreave's spinning-jenny and Arkwright's roller-frame, both invented a few years previously. The mule shared in the odium excited among the Lancashire hand-weavers against these machines, and for a time Crompton was obliged to conceal his invention. He afterwards brought it again into work; but was unable to prevent others from profiting by it at his expense. Various improvements were introduced from time to time on the mule, but the original principle, as devised by Crompton, remained the same. The sum of £5000, voted to him by Parliament in 1812, was almost all the remuneration which he received for an invention which contributed so essentially to the development of British manufactures. He died in 1827.

Cromwell (krom'wel), Oliver, Lord protector of the Commonwealth of England, Scotland and Ireland, was born at Huntingdon April 25, 1599. His father, Robert Cromwell, who represented the borough of Huntingdon in the Parliament of 1593, was a younger son of Sir Henry Cromwell, who was knighted by Queen Elizabeth; and Sir Henry again was a son of Sir Richard Williams, a nephew of Thomas Cromwell, Earl of Essex, whose name he took. Oliver's mother was a daughter of William Steward, of Ely, and could trace her descent back to Alexander, lord-steward of Scotland, the founder of the house of Stuart. The first really authentic fact in his biography is his leaving school at Huntingdon and entering Sidney-Sussex College, Cambridge, April 23, 1616. On the death of his father in 1617 he returned home, and in 1620 married Elizabeth, daughter of Sir James Bourchier. In 1628 he was member of parliament for the borough of Huntingdon, to which he returned on the dissolution in 1629. In 1631 he went with his family to a farm which he had taken at St. Ives; and in 1636 to Ely, where he had inherited a property worth nearly £500 a year. During the Short and Long Parliaments he represented Cambridge, his influence gradually increasing. In the summer of 1642 he was actively engaged in raising and drilling volunteers for the parliamentary party, in view of the impending struggle with the king. He served as captain and colonel in the earlier part of the war, doing good service with his troop of horse at Edgehill; and it was his energy and ability which made the Eastern Association the most efficient of those formed for mutual defense. At the battle of Winceby (1643) he led the van, narrowly escaping death, and in the following year he led the victorious left at Marston Moor, deciding the result of the battle. A few months later he was present at the second battle of Newbury, and his action being fettered by the timidity of Manchester, he impeached the conduct of the earl. As the result of this disagreement Sir Thomas Fairfax was made lord-general, while Cromwell, notwithstanding the Self-denying Ordinance, was placed under him, with the command of the cavalry and the rank of lieutenant-general. As the result of the discipline introduced by Cromwell, the decisive victory of Naseby was gained in 1645, and Leicester, Taunton, Bridgewater, Bristol, Devizes, Winchester and Dartmouth fell into the hands of the Parliament. On the surrender of Charles by the Scottish army in 1646 Cromwell was one of the commissioners, and in the distribution of rewards for services received £2500 a year from the estates of the Marquis of Worcester. Though at first supporting Parliament in its wish to disband the army, which refused to lay down its arms till the freedom of the nation was established, he afterwards saw reason to decide in favor of the latter course. Hastily suppressing the Welsh rising, he marched against the Scottish royalists, whom he defeated with a much inferior force at Preston (August 17, 1648). Then followed the tragedy of the king's execution. Cromwell's name standing third in order in the death-warrant. Affairs in Ireland demanding his presence, he was appointed lord-
lieutenant and commander-in-chief; and by making a terrible example of Drogheda, (September, 1649), crushed the royalty party in that country within six months. Resigning the command to Ireton, he undertook, at the request of the Parliament, a similar expedition against Scotland, where Charles II had been proclaimed king. With an army greatly reduced by sickness he saved himself from almost inevitable disaster by the splendid victory at Dunbar (September 3, 1650), and a year later put an end to the struggle by his total defeat of the royalists at Worcester (September 8, 1651). For these services he was rewarded with an estate of £4000 a year, besides other honors.

He had already exerted a weighty influence in the supreme direction of affairs, being instrumental in restoring the continental relations of England, which had been almost entirely dissolved, and regulating them so as to promote the interests of commerce. The Navigation Act, from which may be dated the rise of the naval power of England, was framed upon his suggestion, and passed in 1651. The Rump Parliament, as the remnant of the Long Parliament was called, had become worse than useless, and on April 20, 1653, Cromwell, with 300 soldiers, dispersed that body. He then summoned a council of state, consisting mainly of his principal officers, which finally chose a Parliament of persons selected from the three kingdoms, nicknamed Barebone's Parliament, or the Little Parliament. Fifteen months after a new annual Parliament was chosen; but Cromwell soon prevailed on this body, who were totally incapable of governing, to place the charge of the commonwealth in his hands. The chief power now devolving again upon the council of officers (December 12, 1653), they declared Oliver Cromwell sole governor of the commonwealth, under the name of Lord-protector, with an assistant council of twenty-one men. The new protector behaved with dignity and firmness. Despite the innumerable difficulties which beset him from adverse Parliaments, insurgent royalists, and mutinous republicans, the early months of his rule established him in Holland, Sweden, Portugal, Denmark and France. In September, 1656, he called a new Parliament, which undertook the revisal of the constitution and offered Cromwell the title of king. On his refusal he was again installed as Lord-protector, but with his powers now legally defined. Early in the following year, however, he peremptorily dissolved the house, which had rejected the authority of the second chamber. Abroad his influence still increased, reaching its full height after the victory of Dunkirk in June, 1658. But his masterly administration was not affected without severe strain, and upon the death of his favorite daughter, Elizabeth Claypole, in the beginning of August, 1658, his health began to fail him. Towards the end of the month he was confined to his room from a tertian fever, and on September 3, 1658, died at Whitehall, in the sixtieth year of his age. He was buried in King Henry VII's Chapel, in Westminster Abbey, but after the Restoration his body was taken up and hanged at Tyburn, the head being fixed on a pole at Westminster Abbey, and the rest of the remains under the gallows.—Great as a general, Cromwell was still greater as a civil ruler. He lived in a simple and retired way, like a private man, and was abstemious, temperate, indefatigably industrious, and exact in his official duties. He possessed extraordinary penetration and knowledge of human nature; and devised the boldest plans with a quickness equaled only by the decision with which he executed them. No obstacle deterred him; and he was never at a loss for expedients. Cool and reserved, he patiently waited for the favorable moment, and never failed to make use of it. In his religious views he was a tolerant Calvinist. He was about 5 ft. 10 in. in height, his body 'well compact and strong,' and his head and face, though wanting in refinement, were impressive in their unmistakable strength.

He had appointed his eldest son, RICHARD, his successor; but the republican and religious fanaticism of the army and officers, with Fleetwood at their head, compelled Richard to dissolve Parliament; and a few days after he voluntarily abdicated the protectorship, April 22, 1659. His brother HENRY, who from 1654 had governed Ireland in tranquility, followed the example of Richard, and died in privacy in England. At the Restoration Richard went to the continent until 1660, when he assumed the name of Clark, and passed the remainder of his days in tranquil seclusion at Cheshunt, Hertfordshire. He died in 1712, at the age of eighty-six.—The last of the family was OLIVER CROMWELL, great-grandson of Henry Cromwell, son of the protector. He was a London solicitor, and clerk to St. Thomas' Hospital. He succeeded to the estate of Theobalds, which descended to him through the children of Richard Cromwell, and died at Cheshunt Park in 1821, aged seventy-
nine. He wrote the *Memoirs of the Protector and his Sons*, illustrated by Family Papers, 1820. Cromwell, Thomas, Earl of Essex, son of a blacksmith at Putney, in Surrey; born about the year 1490. In his youth he was employed as clerk to the English factory at Antwerp; in 1510 went to Rome; and on his return to England became confidential servant of Cardinal Wolsey, about 1525. On his master's disgrace in 1529 Cromwell defended him with great spirit in the House of Commons, of which he was then a member; and effectually opposed the articles of treason brought against Wolsey. After the cardinal's death he was taken into the king's service, was knighted and made privy-councillor, and in 1534 became principal secretary of state and master of the rolls. In 1535 he was appointed visitor-general of all the monasteries in England in order to suppress them, his services being rewarded by the post of lord-keeper of the privy seal, and the title of Baron Cromwell of Okeham. On the abolition of the pope's supremacy he was created king's vicar-general, and used all his influence to promote the Reformation. He was made chief-justice itinerant of the forests beyond Trent, Knight of the Garter, and finally, in 1539, lord high chamberlain, and the following year Earl of Essex. He at length fell into disgrace with the king for the part he took in promoting his marriage with Anne of Cleves; and others of his political schemes failing, he was arrested on a charge of treason and beheaded on Tower Hill, July 28, 1540. 

Cronstadt (kro'n-stat; Hungarian, Braszó), a town of Austria, in Transylvania, after Hermannstadt the principal seat of the industry and trade of the province, lying in a mountainous but well-wooded and romantic district near its southeast corner. Pop. 68,273.

Cronstadt, a maritime fortress of Russia, about 20 miles w. of Petrograd, in the narrowest part of the Gulf of Finland, opposite to the mouth of the Neva, on a long, narrow, rocky island, forming both by its position and the strength of its fortifications, the bulwark of the capital, and being also the most important naval station of the empire. Cronstadt used to be the commercial port of Petrograd, but since the construction of a canal giving large vessels direct access to the capital it has lost this position. Pop. 69,539. 

Cronus (kro'nuus), in ancient Greek mythology, a son of Uranus and Ge (Heaven and Earth), and youngest of the Titans. He received the government of the world after Uranus was deprived of it, and was in turn deposed by Zeus. Cronus was considered by the Romans as identical with their Saturnus.

Crook (kruk), George, soldier, born near Dayton, Ohio, in 1828; died in 1880. He was graduated at West Point in 1852, was promoted captain in 1861, and became a brigadier-general of volunteers about September, 1862. He commanded an army corps under SHERIDAN in the Shenandoah campaign of 1864 and was brevetted brigadier-general in the regular army. After the Civil war he served with great distinction in the Indian wars, and was one of the chief agents in subduing the bloodthirsty Apaches. He was brevetted major-general in 1865 and made chief cavalry commander in the army, and was raised to the full rank of major-general in 1883. 

Crookes (krooks), Sir William, an eminent English physicist, born at London in 1832. He was educated at the Royal College of Chemistry. He discovered the metal thallium, invented the radiometer, and by his researches with the Crookes vacuum tube opened the way to great advances in science. He published works on chemistry, dyeing, and metallurgy, in 1859 became editor of the Chemical News, and in 1864 of the Quarterly Journal of Science. He became a leading advocate of Spiritualism.

Crookston (kruk'ston), capital of Polk Co., Minnesota, 309 miles n. w. of St. Paul. It has railway repair shops, machine shops, foundries, large flour mill, tannery, sash and door factory, etc. Pop. 7550.

Croquet (kro'kat'), an open-air game played with balls, mallets, hoops and pegs on a level area, which should be at least 30 yards long by 10 yards wide. The iron hoops (shaped like the inverted letter U) and fixed with their two ends in the ground, arranged in a somewhat zigzag manner over the ground; they are usually ten in number. The posts or pegs (two in number) are placed at the near and far end of the field, respectively, marking the starting and turning points. The game may be played by any number of persons up to eight, either individually or arranged in couples or in sides. The object of the players is to drive with the mallets the balls belonging to their own side through the hoops and against the posts in a certain order,
and to prevent the balls of their opponents from completing the journey before their own by driving them against those of the enemy, and driving them as far as possible from the hoop or post to be played for, the player or players whose balls first complete the course claiming the victory.

Crosby (kros‘bé), Frances Jane, an American hymn-writer, born in Putnam County, New York, March 24, 1820; died February 12, 1896. She received instruction at the New York Institution for the Blind and was an instructor there from 1847 until her marriage with Alexander Van Alstyne in 1858. She published a number of popular poems, songs and hymns.

Crosier (krō‘sher), the staff borne by some of the higher dignitaries in the Roman Catholic and other churches, and probably the oldest of the insignia of the episcopal dignity. The original form of the staff resembled a shepherd's crook, but from the middle of the fourteenth century the archbishops began to carry, sometimes in addition to the pastoral crook, sometimes instead of it, a crosier terminating in a cross or double cross. The crosier is carried by bishops and archbishops themselves only in procession and when pronouncing benediction; on all other occasions it is carried before them by a priest. At Rome the right of bearing the crosier is peculiar to the pope himself, his crosier being in the form of a triple cross.

Cross (kraς), one straight body laid at any angle across another, or a symbol of similar shape. Among the ancients a piece of wood fastened across a tree or upright post formed a cross, on which were executed criminals of the worst class. It had, therefore, a place analogous to that of the modern gallows as an instrument of infamous punishment until it acquired honor from the crucifixion of Christ. The custom of making the sign of the cross in memory of Christ may be traced to the third century. Constantine had crosses erected in public places, palaces, and churches, and adopted it, according to a legend, as the device for a banner (labarum) in consequence of a dream representing it as the symbol of victory. In his time also Christians painted it at the entrance of their houses as a sign of their faith, and subsequently the churches were for the most part built in the form of a cross. It did not, however, become an object of adoration until after the alleged discovery of the true cross by Empress Helena (A.D. 324), and its adoption as the Christian symbol may be held to connect itself with the fact that it was used emblematically long before the Christian era, in the same way that traces of belief in a trinity, in a war in heaven, in a paradise, a flood, a Babel, an immaculate conception, and remission by the shedding of blood are to be found diffused among widely sundered peoples. The general meaning attached to the sign appears to have been that of life and regeneration. Since its adoption by Christianity it has under-

Forms of Crosses.

1. Cross of Calvary, a cross on three steps. 2. Latin Cross, a cross the transverse beam of which is placed at one-third of the distance from the top of the perpendicular portion, supposed to be the form of cross on which Christ suffered. 3. Tau Cross (so called from being formed like the Greek letter t, tau), or cross of St. Anthony, one of the most ancient forms of the cross. 4. Cross of Lorraine. 5. Patriarchal Cross. 6. St. Andrew's Cross, the form of cross on which St. Andrew, the national saint of Scotland, is said to have suffered. 7. Greek Cross, or cross of St. George, the national saint of England, the red cross which appears on British flags. 8. Papal Cross. 9. Cross nouvè quil quadril, that is, having a square expansion in the center. 10. Maltese Cross, formed of four arrow-heads meeting at the points; the badge of the Knights of Malta. 11. Cross fourche or forked. 12. Cross pâtrée or formée. 13. Cross potent or Jerusalem Cross. 14. Cross fleury, from the fleurs de lys at its ends.
Cross, Exaltation of the, a Catholic festival celebrated on the 14th of September in honor of the recovery of a portion of the true cross from the Persians by Heraclius (628 A.D.) and its erection on Mount Calvary.

Cross, Invention of the (the finding of the cross), a phrase chiefly used in connection with the Catholic festival in honor of the finding of the cross by the Empress Helena (326 A.D.), celebrated on the 3d of May.

Cross, Victoria. See Victoria Cross.

Crossbar Shot, shots with iron bars crossing through them, sometimes standing out 6 or 8 inches at both sides, formerly used for destroying rigging, bolting, etc.

Crossbearer (porte-crois, croiserger), in the Roman Catholic Church, the chaplain of an archbishop or a primate, who bears a cross before him on solemn occasions.

Crossbill (Loxia), a genus of birds of the finch family, deriving their name from a peculiarity of their bill, the mandibles of which are curved at the tips, so as to cross each other, sometimes on the one side and sometimes on the other. The form of the bill enables them to extract with ease the seeds of the pine, their usual food, from underneath the scales of the cones. They build and also breed at all seasons of the year, in December, as in March, April, or May. The common crossbill (Loxia curvirostra) is found in the northern countries of Europe. It is from 6 to 6½ inches in length. The male has a red plumage, the female is of a yellowish-green color. The Loxia pityopsitica, or parrot crossbill, is another European species. Two species of crossbill inhabit Canada and the northern States, Loxia Americana, and Curvirostra leucopetra, or white-winged crossbill.

Crossbow, or Arbalist, formerly a very common weapon for shooting, consisting of a bow fastened athwart a stock. The bow, which was often of steel, was usually bent by a lever windlass, or other mechanical contrivance, the missile usually consisting of a square-headed bolt or quarrel, but occasionally of short arrows, stones, and leaden bullets. Though largely used on the European continent, the crossbow was superseded at an early period in England by the more efficient longbow, from which twelve arrows could be detached per minute to three bolts of the crossbow.

Cross-breeding, the breeding together of animals of different races or stocks. See Breeding.

Cross-days, the three days preceding the feast of the Ascension.

Cross, Andrew, an English physician and scientist, born in 1784; died in 1855. He passed the greater part of his life experimenting in electricity. In 1816 he asserted that by electricity it was possible to communicate one's thoughts instantaneously to persons in the most distant parts of the earth, but he never appears to have attempted to demonstrate the fact by actual experiment. Among other things, he applied electricity in the production of crystals, discovered a process of purifying salt water by electricity, and also made some curious discoveries relative to the effects of positive and negative electricity on vegetation.

Cross-examination, the examination of a witness called by one party by the opposite party or his counsel.

Cross-fertilization, in botany, the fertilization of the ovule of one flower by the pollen of another, usually effected by the agency of insects, the action of the wind, water, etc. See Botany.

Crossopterygidae (-rij'il-dè), a subclass of ganoid fossil and recent fishes, so called from the fin-rays of the paired fins being arranged so as to form a fringe (Gr. krossoi) round a central lobe. The living Polypterus and Ceratodus belong to this group.

Cross-staff, an instrument used by surveyors consisting of a staff carrying a brass circle divided into four equal parts by two lines intersecting each other at right angles. At the extremity of each line perpendicular sights are fixed, the instrument being used in taking offsets.

Cross-stone, a name given to the minerals harmotome, a hydrated silicate of barium and aluminum, and staurolite, a silicate of iron and aluminium, in both of which the crystals cross each other. Harmotome, however, has by some mineralogists been called staurolite. The name cross-stone is sometimes also given to chalcedony, because of the occasional dark markings on the summits of the crystals.

Crosstrees, in ships, certain pieces of timber at the upper ends of the lower and top masts, athwart
which they are laid, to sustain the frame of the tops in the one, and extend the topgallant shrouds on the other.

*Crotalaria* (kro-tä-lär'-i-a), a genus of leguminous plants, all natives of warm climates, but some of them long cultivated in hot-houses. *C. juncea* is the sunn-hemp plant.

*Crotalidae* (k rō-tál'i-dē), a family of serpents including some of the most dangerous, above all the rattlesnakes.

*Crotch* (kroch), WILLIAM, a musical composer, born at Norwich, England, in 1775. As a child he showed astonishing precocity, and at the age of twenty-two was appointed professor of music at Oxford University, with the degree of Doctor of Music. In 1822 he became principal of the Royal Academy of Music. He died in 1847. He left a large number of compositions, more especially for the organ, piano, and voice, and three technical treatises.

**Crochet.** See Music.

*Croton* (krō'ton), a genus of herbaceous plants, shrubs and trees, order Euphorbiaceae, comprehending a great number of species, many of which possess important medical properties. The more remarkable species are *C. Cascarilla*, a native of the West Indies and Indies, from the seeds of which croton oil is extracted (see Croton oil); and *C. Draco*, a Mexican plant, which yields a red, resinous substance used in making varnish. *C. Pseudo-china*, the copalche plant, yields the bark of that name, but *C. balsamiférum*, *C. aromaticum*, and *C. thuriférum* are merely aromatic.

*Croton*, CROTON'Ä (the modern Cor-TRONE), in ancient geography, a Greek republic in Magna Græcia of South Italy, famous for its athlete, among whom the chief was Milo. It is still more celebrated as the city where Pythagoras taught between 540 and 530 B.C.

*Croton Oil*, a vegetable oil expressed from the seeds of the *Croton Tiglium*. It is so strongly purgative that one drop is a full dose, and half a drop will sometimes produce a powerful effect, and it should never be used except by the direction of an experienced physician. When applied externally it causes irritations and suppuration, and thus it is used as a counter-irritant in neuralgia, etc.

*Croton River*, a small stream which flows into the Hudson above Sing Sing, and from which water is obtained for New York city. The first Croton aqueduct, 38 miles long, was constructed 1837–42. It proving inadequate, larger dams were built and a new reservoir opened in 1890. Of the aqueduct 33.12 miles long, 29.63 miles are a continuous rock tunnel lined with brick and stone masonry. These aqueducts have a supply capacity of about 400,000,000 gallons daily.

*Crottles* (krōt'els), a popular name of various species of lichens collected for dyeing purposes, and distinguished as black, brown, white, etc., crottes. Under it are included *Parmelia physodes*, *P. casperata*, *P. azesita*, *Sticta pulmonaria*, and *Levandera pallescens*.

**Croup** (krōp). Two diseases are commonly confounded under the term "croup," one a simple and, if promptly treated, a readily subdued disease, the other most fatal. The former is simple inflammation of the inner lining membrane of the larynx—the box of the windpipe—or of the windpipe itself, or of both. It is common in children, and as the air-passage of children is narrow, the swelling produced by the inflammation so diminishes the space that difficult breathing, hoarseness of voice, and a cough like a muffled bark are quickly produced, while the breathing sounds loud and harsh. The other disease is diphtheria of the larynx or wind-
pipe, or both, in which a false membrane is formed which lines the air-passages, and so narrows them. Croup frequently proves fatal by suffocation, induced either by spasm affecting the glottis or by a quantity of matter blocking up the air-passages. The earliest symptoms should be noted, and the treatment in the absence of immediate medical advice should consist in the application of hot poultices to the upper part of the chest, while at the same time the child is made to inhale the steam from hot water. Hot drinks are beneficial, and the bowels should be freely opened.

Crousaz (krō-zā), Jean Pierre de, a Swiss mathematician and philosopher, born in 1663; died in 1748 or 1750. His chief work was: Système des Réflexions, ou nouvel Essai de Logique; Traité du Beau; De l'Éducation des Enfants; Traité de l'Esprit Humain, etc.; also an examination of Pope's Essay on Man.

Crow (Corvus), a genus of birds, type of the family Corvidae. It includes, in Europe, the carrion-crow, the hooded or Royston crow, the raven, the rook, and the jackdaw, the last three of which are described under their respective heads. The carrion-crow, or simply the crow (C. corone), is 18 or 19 inches in length, and about 36 between the tips of the wings. Its plumage is compact and glossy blue-black with some greenish reflections. Its favorite food is carrion of all kinds; but it also preys upon small quadrupeds, young birds, frogs, lizards, etc., and is a confirmed robber of the nests of game birds and poultry. It is not gregarious, being generally met with either solitary or in pairs. It builds a large, isolated nest, with from four to six eggs, generally of a bluish-green with blotches of brown. The carrion-crow is easily tamed, and may be taught to articulate words. The American crow (C. Americanus) is similar to the foregoing, but is smaller and less robust, and is somewhat gregarious. This crow is common in all parts of the United States, and is deemed a great nuisance by farmers from preying on their corn. The fish-crow (C. ossifragus), another American crow, resembling the preceding but smaller, is abundant in the coast districts of the Southern States. Its favorite food is fish, but it also eats all kinds of garbage, mollusca, etc. In winter its food is chiefly fruit, and it is then fat and considered good eating. The hooded, Royston, or gray-backed crow (C. cornix) is somewhat larger than the rook. Its head, wings, and tail are black, but less bright than in the rook; the rest of the body is a dull smoke-gray. Its food is similar to that of the carrion-crow, and it builds a similar nest.

Crowberry, or Crackberry (Empetrum nigrum), a plant resembling the heath, and bearing a jet-black berry, common in all the northern parts of Europe, Asia, and North America. The berries, which have a slight acid taste and are sometimes eaten, afford a purple dye. The red crowberry (E. rubrum), which has a red fruit, grows in the neighborhood of the Straits of Magellan.

Crow-blackbird, the name of certain American birds of the genus Quiscalus, family Sturnidae or starlings. The great crow-blackbird (Q. major), found in the Southern States, Mexico, and the West Indies, is 16 inches long, and of a glossy black plumage. The female is of a light-brown above and whitish beneath. The purple grackle, lesser or common crow-blackbird (Q. versicolor), is similar in color to the preceding, but smaller. They reach the middle states of America from the south in flocks in the latter part of March, and build in April in the tall pines or cedars. On their first arrival they feed upon insects, but afterwards commit great ravages upon the young corn. In November they fly southward again.

Crowfoot. See Ranunculus.

Crow Indians, a tribe of North American Indians. They belong to the linguistic stock included under the name of Siouan Indians and are of the same family as the Dakotas. Their present number is about 4000, confined to reservations in Montana.

Crowland, or Crovlond (krow'land), a town in England, county of Lincoln, 8½ miles north of Peterborough. Pop. (1911) 2885. Its chief points of interest are the curious ancient triangular bridge at the confluence of the Welland and the Nene, and the ruins of an abbey founded in 716 by Ethelbald. Ingulphus was abbot of Crowland from 1075 till 1108.

Crown (kroʊn), a circular ornament for the head. As now used the name is limited to the headdress worn by royal personages as a badge of sovereignty, but it was formerly used to include the wreaths or garlands worn by the ancients upon special occasions. Thus, among the Greeks and Romans, crowns made of grass, flowers, twigs of laurel, oak, olive, parsley, etc., and later of gold, were made use of as honors in
athletic contests, as rewards for military valor, and at feasts, funerals, etc. It is, however, with the eastern diadem rather than with the classic corona that the crown as a symbol of royalty is connected; indeed, it was only introduced as such a symbol by Alexander the Great, who followed the Persian usage. Antony wore a crown in Egypt, and the Roman emperors also wore crowns of various forms, from the plain golden fillet to the radiated or rayed crown. In modern times they were also of various forms until herals devised a regular series to

Crown

mark the grades of rank from the imperial crown to the baron's coronet. The English crown has been gradually built up from the plain circlet with four trefoil heads worn by William the Conqueror. This form was elaborated and jeweled, and finally arched in with jeweled bands surmounted by the cross and scepter. As at present existing the crown of England is a gold circle, adorned with pearls and precious stones, having alternately four Maltese crosses and four fleur-de-lis. From the top of the crosses rise imperial arches, closing under a mound and cross. The whole covers a crimson velvet cap with an ermine border. The crown of Charlemagne, which is preserved in the imperial treasury of Vienna, is composed of eight plates of gold, four large and four small, connected by hinges. The large plates are studded with precious stones, the front one being surmounted with a cross; the smaller ones, placed alternately with these, are ornamented with enamels representing Solomon, David, Hezekiah and Isaiah, and Christ seated between two flaming seraphim. The Austrian crown is a sort of cleft tiara, having in the middle a semicircle of gold supporting a mound and cross; the tiara rests on a circle with pendants like those of a miter. The triple crown of the popes is more commonly called the tiara.

Crown Gall, a destructive disease of fruit trees as well as red raspberries, grapes, roses and many other plants. The crown galls occur at the crown or on the roots and sometimes on the stems. They are more or less spherical, with irregular, roughened surface. The organism which causes the disease lives in the soil for several years and is very difficult to eradicate; a long rotation of crops is often necessary.

Crown-glass, the hardest and most colorless kind of window-glass, made almost entirely of sand and alkali and a little lime, and used in connection with flint-glass for optical instruments in order to destroy the disagreeable effect of the aberration of colors.

Crown Imperial. See Fritillary.

Crown Lands, the lands belonging to the British crown. These are now surrendered to the country at the beginning of every sovereign's reign in return for an allowance (the Civil List) fixed at a certain amount for the reign by Parliament. They are placed under commissioners, and the revenue derived from them becomes part of the consolidated fund. See Civil List.

Crown-wheel, a wheel with cogs or teeth set at right angles to its plane, the wheel in certain watches that drives the balance.

Croydon (kro'don), a municipal and parliamentary borough of England, in County Surrey, 10 miles s. of London, of which it is practically a suburb, near the sources of the Wandle, and near the Banstead Downs. The town, which is a favorite residence of merchants and business men, retired tradesmen, etc., is surrounded by fine villas, mansions and pleasure grounds. It is a place of ancient origin, but from its recent rapid increase is almost entirely new. Of special interest are the remains of the ancient palace, long a residence of the Archbishops of Canterbury. Pop. (1911) 16,539.

Crozet Islands (krō'zēt), a group of four uninhabited islands in the South Indian Ocean, between Kerguelen and Prince Edward Islands. They are all of volcanic origin, and the most easterly of them, East Island, has peaks exceeding 4,000 feet. The largest, Possession Island, is about 20 miles long by 10 broad.
Crozier. See Crozier.

Crucian Carp (krŏsh'yan karp), a thick, broad fish, of a deep-yellow color, the Cyprinus carassius, differing from the common carp in having no barbules at its mouth, inhabiting lakes, ponds and sluggish rivers in the north of Europe and Asia.

Crucible (krŏs'-i-bl), a vessel employed to hold substances which are to be submitted to a high temperature without collecting the volatile products of the action. It is usually of a conical, circular, or triangular shape, closed at the bottom and open to the top, and is made of various materials, such as fire-clay, platinum, a mixture of fire-clay and plumago, porcelain, etc.

Cruciferæ (krŏs'-if-er-ĕ), a very extensive nat. order of dicotyledonous plants, consisting of herbs which all have flowers with six stamens, two of which are short, and four sepals and petals, the spreading limbs of which form a Maltese cross, whence their name. The fruit is a pod with a membranous placenta dividing it into two cells. The mustard, watercress, turnip, cabbage, scurvy-grass, radish, horse-radish, etc., belong to this family. They have nearly all a volatile acidity dispersed through every part, from which they have their peculiar odor and sharp taste and their stimulant and antiscorbutic qualities. None are really poisonous. Some are found in our gardens because of their beauty or fragrance, as the wallflower, stock, candytuft, etc.

Crucifix (krŏs'-i-fiks), a cross bearing the figure of Christ. As a rule, the figures on the most ancient crucifixes were not carved, but were engraved on gold, silver, or iron crosses. At a later period they were painted on wood, and it is only in the ninth century, in the pontificate of Leo III, that the figure of Christ appears carved upon the cross in bas-relief. Originally the body was represented clothed in a tunic reaching to the feet; afterwards the clothing was removed with the exception of a cloth round the loins. Until the eleventh century Christ is represented alive; since that period he has been represented as dead. In the earlier crucifixes, also, the number of nails by which Christ is fixed to the cross is four, one through each hand and each foot, while in the more modern ones one foot is laid above the other and a single nail driven through both. Many crucifixes bear also the superscription in an abbreviated form, and accessory symbols and figures.

Crucifixion (krŏs'-i-si-kŏsh'ŏn), a mode of inflicting capital punishment, by affixing criminals to a wooden cross, formerly widely practised, but now chiefly confined to the Mohammedans. Different kinds of crosses were employed, especially that consisting of two beams at right angles and the St. Andrew's cross.

Crudden (krŏd'-en), Alexander, compiler of the Concordance to the Scriptures, was born at Aberdeen in 1701. He took the degree of M.A. at Marischal College, and in 1722 proceeded to London, where he was employed as tutor. He afterwards opened a bookseller's shop under the Royal Exchange, and in 1736 was appointed bookseller to Queen Caroline. His Concordance appeared in 1737, under the title of A Complete Concordance of the Holy Scriptures of the Old and New Testaments. In a pecuniary point of view it was not at first successful, and the embarrassments to which it recurred brought on unsettled his reason and led to his confinement at Bethnall Green. He was again temporarily confined in 1753. He died in Islington in 1770. Three editions of the Concordance appeared in his lifetime, and he was also the author of A Scripture Dictionary, or Guide to the Holy Scriptures and The History and Excellency of the Scriptures.

Cruelty to Animals. See Animals. Cruelty to.

Cruelty to Children. Prevention of. The fact that defenseless children are often grossly maltreated by inhuman parents and others under whose care they fall has led to the formation of societies and to legislation for their protection. The first of these societies was formed in New York and is still the largest and most influential. Then they spread to the other large American cities. Liverpool in 1868 and London in 1884 were the first to follow in England, and legislation has been passed in both countries to aid those engaged in this benevolent work.

Cruikshank (krŭk'kshank), George, the greatest of English pictorial satirists. After Hogarth, born at London in 1792, of Scottish extraction. He began early as a political satirist. In 1837 he commenced in Bentley's Miscellany his famous series of etchings on steel illustrative of Dickens' Oliver Twist. Having connected himself with the temperance movement he produced the Bottle, a powerful and popular series of designs. He latterly turned his attention to oil-
painting, his most noteworthy pictures being _Tam o' Shanter, Disturbing a Congregation_, and _The Worship of Baucbus_. He died in 1878.

**Cruiser** (kru'zer), in present-day naval phraseology, a vessel built to secure speed and fuel capacity at the expense of armor and battery strength. The modern cruiser may be regarded as the offspring of the frigate of the eighteenth and nineteenth centuries. Of this modern type in the United States navy, the first was the _Atlantic_ (1864), of the speed of 16 knots, followed by the _New York_ class, 19 knots, the _Olympia_ (1892), 21.5 knots, the _Columbia_ (1892) and the _Minneapolis_ (1893), 23 knots. The later construction has been designed for a minimum speed of 25 knots, with a possible attainable in excess of 30 knots or over under favorable conditions. The battleship and one form of cruiser were evolved from the conflicting opinions of two opposite schools of design. The battleship is the expression of the thoughts of those who stood for extremely developed battery power, great thickness of armor plate, and moderate speed. The cruiser is the result of the triumph of those who contended for high speed at the sacrifice of heavy armor protection and excessive battery strength. The armored cruiser was the particular development of the antagonistic views prevailing among naval architects. The type of this class in the United States navy was the _Brooklyn_, which figured prominently in the war with Spain in 1898. Recently the armored cruiser has been superseded by the battle cruiser. The armor protection in this type of ship is much lower than that of the battleship, while the ordnance, on the other hand, is practically the same. High speed, wide radius of action and great battery strength are the characteristics of this type; and to meet these requirements the battle cruiser is planned of a size considerably larger than the battleship. The protected cruiser is a later development of naval construction. Its distinguishing features are certain modifications in the distribution of the mass of protective armor of the ship. _Light_ cruisers are vessels of from 1500 to 7500 tons, used in scouting, as commerce destroyers, etc. They are outside the armored class.

**Crusader**, in forestry, the term applied to one who cruises in the forest for the purpose of surveying and estimating the amount and value of the standing timber. A definition of recent origin.

**Cruiue** (kroyv), a trap for fish, especially salmon, consisting of a sort of hedge of strong hurdles on a bight of river or the sea-beach. When the tide flows the fish swim over the wattles, but are left by the ebb.

**Crusades** (kroh-sads'), the wars carried on by the Christian nations of the West, from the end of the eleventh till the latter half of the thirteenth century, for the conquest of Palestine. They were called Crusades because the warriors wore the sign of the cross. The antagonism between the Christian and Mohammedan nations had been intensified by the possession of the Holy Land by the Turks and by their treatment of pilgrims to Jerusalem; and the first strenuous appeal was assured of response alike from the pious, the adventurous, and the greedy. The immediate cause of the _first Crusade_ was the preaching of Peter of Amiens, or Peter the Hermit, who in 1095 had joined other pilgrims on a journey to Jerusalem. On his return he gave Pope Urban II a description of the unhappy situation of Christians in the East, and presented a petition for assistance from the Patriarch of Jerusalem. The statements of the pope at the Councils of Piacenza and Clermont in 1095 produced a profound sensation throughout Europe, and in 1096 several armies set out in different divisions, most of which, being ignorant of military discipline and unprovided with necessaries, were destroyed before reaching Constantinople, which had been chosen for their place of meeting. A well-conducted regular army, estimated at 150,000 men, was headed by Godfrey of Bouillon; Hugh of Vermandois, brother to Philip, King of France; Baldwin, brother of Godfrey; Robert II of Flanders; Robert II of Normandy, brother of William II, King of England; Raymond of Toulouse; and other warriors. They traversed Germany, Hungary, and the Byzantine Empire, advanced over the Asia Minor coast to Nicaea in June, 1097, and shortly after, on July 4th, fought the first pitched battle at Dorylæum, being completely victorious after a severe contest. They then marched through Asia Minor upon Antioch, which, with the citadel, fell into their hands by treachery in June, 1098. Surrounded in turn by a Turkish army, they were soon reduced to pitiable straits, but succeeded in routing their besiegers on June 23. After remaining nearly a year in the neighborhood of Antioch, on May 29, 1099, their march against Jerusalem, the siege of which they commenced in June. Their numbers were now reduced to little more than 20,000 men; but after a fierce struggle the town was taken by storm on July 15th, and Godfrey of Bouillon was chosen King of Jerusalem, or, as he pre-
ferred to term himself, Protector of the Holy Sepulcher. At his death in 1190 he was succeeded by his brother Baldwin, who had in the earlier part of the Crusade established himself in Edessa, and made himself ruler of an extensive territory stretching over the Armenian mountains and the plain of Mesopotamia.

The second great and regularly conducted Crusade was occasioned by the loss of Edessa, which the Saracens conquered in December, 1144. Fearing still graver losses, Pope Eugenius III, seconded by Bernard of Clairvaux, exhorted the German emperor, Conrad III, and the King of France, Louis VII, to defend the cross. Both these monarchs obeyed, and in 1147 led large forces to the East, but returned in 1149 without having accomplished anything.

The third Crusade was undertaken after the fall of Jerusalem by Saladin in 1187, the monarchs Frederick I (Barbarossa) of Germany, Philip Augustus of France, and Richard I (Cœur de Lion) of England, leading their armies in person. Frederick, marching by way of the Danube and crossing from Galipoll, defeated the Turks at Philiomelium (now Finiminum), and penetrated to Seleucia, but was drowned in the Selef. His son Frederick led the small remains to Acre and took part in the siege, but after his death in 1191 the German army dwindled away. The other monarchs—Richard and Philip Augustus—had in the meantime met at Vezelai in June, 1190, and agreed to unite their forces at Messina in Sicily, where they spent six months at the end of 1190 and beginning of 1191. Philip joined the other Crusaders before Acre on April 13, 1191; but Richard, whose fleet was separated by a storm, went to Cyprus, and, dispossessing Isaac Comnenus, made himself king. It had been his death that he reached Acre, which surrendered a month later. Jealousies, however, arose between the monarchs, and within a few weeks after the fall of Acre the French king returned to Europe. Richard, now sole leader of the expedition, defeated Saladin and occupied Jaffa or Joppa; but having twice vainly set out with the design of besieging Jerusalem, he concluded (September 2, 1192) a truce of three years and three months with Saladin, who agreed that pilgrims should be free to visit the Holy Sepulcher, and that the whole sea-coast from Tyre to Jaffa (including the important fortress of Acre) should belong to the Crusaders.

The fourth Crusade was set on foot by Pope Innocent III, who commissioned Fulk of Neullî to preach it in 1198. Among its chief promoters was Godfrey of Villehardouin; Seneschal of Champagne; Baldwin, Count of Flanders and Lignan; Dandolo, the aged Doge of Venice; and the Marquis of Montferrat, who was chosen leader. The Crusaders assembled at Venice in the spring of 1202, but were diverted from their original purpose first by the capture of the Dalmatian town of Zara, and then by the expedition which ended in the sack of Constantinople and the establishment of a Latin empire there (1204).

The fifth Crusade, undertaken by Andrew of Hungary in 1217, and shared in by John of Brienne, to whom the title of King of Jerusalem was given, had little other result than the temporary occupation of the Nile delta.

The sixth Crusade, that of Frederick II, Emperor of Germany, was undertaken at the instance of Emperor Henry III and Gregory IX. On arriving he entered into negotiations with the Sultan of Egypt, and without any fighting recovered for himself, as heir of John of Brienne, the Kingdom of Judea, on the condition of tolerating in his kingdom the Mohammedan worship. He then concluded a useless truce of ten years, got himself crowned at Jerusalem, and returned in 1229.

The seventh and eighth Crusades were led by St. Louis of France (Louis IX) in person. This prince was resolved to strike a blow at Mohammedanism in Egypt. He took Damietta in June, 1249, and marched up the Nile, but was compelled to retreat, and finally to surrender with his whole army. He recovered his liberty by the surrender of Damietta, returned to Palestine, and in 1254, on the death of his mother, to France. The second expedition of Louis was still more disastrous in its results than the first. He landed in 1270 on the northern coast of Africa; but he himself and a large number of his knights died before Tunis, and the majority of the French Crusaders returned home. A crusading army under Prince Edward of England (afterwards Edward I), originally intended to operate with that of Louis, landed at Acre in 1271, but little was effected beyond a new truce for ten years (1272). For nineteen years longer the Christians in Palestine held with great difficulty the remnants of the Latin kingdom there. But Tyre and Beyrut (Beyrouth) were successively snatched from them, and finally the capture of Acre by the Sultan of Egypt in 1291 put an end to the kingdom founded by the Crusaders.

Despite their want of success, however,
the Crusades were of considerable indirect value in that by these joint enterprises the European nations became more connected with each other, the class of citizens increased in influence, partly because of the nobility suffered by extravagant contributions to the Crusades, and partly because a more intimate commercial intercourse greatly augmented the wealth of the cities, and a number of arts and sciences, till then unknown in Europe, were introduced.

**Crusado.** See Crusado.

**Crusca.** See Academia Della. See Academy.

**Crustacea** (krus-tá's-he-a), one of the primary branches into which is divided the great group of Articulate or Annuolate animals. The body is divided into head, thorax and abdomen, of which the two former are united into a single mass, cephalothorax, covered with a shield or carapace, and the abdomen usually presents the appearance of a tail. In some—the sand-hopper, wood-louse, etc.—the head is partially distinct from the thorax. The Crustacea breathe by branchi or gills, or by membranous vesicles, or by the general surface; and the body is composed of a series of rings more or less distinct. They possess the faculty of reproducing lost parts in an eminent degree. The integument is chitinous (see Chitin) and remains elastic in some, as the Isopoda, throughout life. But in the majority it is calcified or transformed into a hard shell, prisms of carbonate of lime being deposited in the outer layer. It consists of a great number of distinct pieces connected together by the edges of the epidermic envelope, just as among the higher animals certain bones are connected together by cartilages. Several species, if not all, molt or cast these outer skeletons or shells in the progress of growth; this is the case with crabs, crayfish, etc. The general grouping of the Crustacea is sometimes based upon the successive metamorphoses which the higher Crustacea undergo before reaching the adult form. Thus, the first stage of the lobster embryo is that of a minute object with three pairs of limbs, known as the Nauplius form; in the second, or Zoèa stage, the cephalothorax is provided with anterior, posterior, and lateral spines; the final form being reached by a series of moltings. But for practical purposes the Crustacea may be considered as ranging themselves under four subclasses: the Cirripedia, the Entomopod, the Podopthalmia, and the Edri-

ophthalmia. Of these the Cirripedia are represented by the barnacles; the Entomopodacea by the cyclops, daphnia, etc.; the Podopthalmia by the shrimps, prawns, lobsters, etc.; the Edriopthalmia by the fish-lice, wood-lice, beach-lice, etc. Besides the orders comprised under these classes there are, however, several groups, such as the Meroeustomata and the Trilobites, which lie between the Crustaceans and the Insects, and are as yet unattached to either.

**Crutched Friars** (krucht), an order of friars established at Bologna in 1169, and so named from their adopting the cross as their special symbol. It originally formed the head of their distinctive staff; afterwards they wore it in red cloth on the back and breast of their blue habit.

**Cruz, Santa.** See Santa Cruz.

**Cruzano** (krú-zó'o), a Portuguese or crusado-velho, is worth 400 reis, or about 43 cents; the new cruzano, cruzano-novo or pinto, dating from 1722, is worth 480 reis, or about 50 cents.

**CWT** (kruth), a Welsh name for a kind of violin with six strings, formerly much used in Wales. Four of the strings were played on by a bow, and two were struck or twitched by the thumb. Its general length was 22 inches, and its thickness 1½ inches.

**Cryolite, or Kryolithe** (krí-o-lit), a mineral, a native fluoride of aluminium and sodium, found at Eviagot, in Greenland, whence it is exported. It is of a pale grayish white or yellowish brown, occurs in masses of a foliated structure, and has a vitreous luster. It has been employed as a source of aluminium, and in the manufacture of a hard porcelain glass of great beauty. In addition to the Eviagot deposit cryolite has been discovered in the Ural Mountains.

**Cryophorus** (kr-o-fó'r-us; Gr. kryos, cold), an instrument for showing the diminution of temperature in water by its own evaporation. Wollaston's cryophorus consists of two glass globes united by a moderately wide glass tube. Water is poured in and boiled to expel the air, and while boiling the apparatus is hermetically sealed. When it is to be used the water is made to
run into one of the globes, and the other is buried in a freezing mixture. The aqueous vapor in the globe being thus condensed, a vacuum is produced, fresh vapor rises from the water in the other globe, which is again condensed, and this proceeds continuously till the water remaining in the globe has been, by the evaporation, cooled to the freezing point.

Crypt (krip't), originally a subterranean cell or cave, especially one constructed for sepulture. From the usage of these by the early Christians crypt came to signify a church underground or the lower story of a cathedral or church. It is usually set apart for monumental purposes, but is sometimes used as a chapel. The crypt is a common feature of cathedrals, being always at the east end, under the chancel or ape. The largest in England is that of Canterbury Cathedral; that of Glasgow Cathedral, formerly used as a separate church, is one of the most perfect pieces of architecture in Britain.

Cryptogamous Plants (krip-to-ga'mus), Cryptogamia, the botanical division embracing the lower classes of plants having no evident flowers or in which the reproductive organs are obscure. They propagate by spores. They are divided into cellular and vascular cryptogams, the former comprising the algae, fungi, lichens, charas, liverworts and mosses; the latter the ferns, horsetails, moonworts, rhizocarps and lycopods.

Cryptography (krip-to-gra-fi), the art of writing in secret characters or cipher, or with sympathetic ink. The simplest method consists in changing for every letter of the alphabet some sign, or another letter or group of letters. Thus the letter of Charles I to the Earl of Glamorgan with respect to the Catholics of Ireland was composed in an alphabet formed by different arrangements of the letters a and b in groups of five. All these methods, however, are easily deciphered by experts, as also is that employed by the Earl of Argyle in his plot against James II, in which the words of the letter were set down at concerted distances, the intervals being filled up with misleading words. The art of cryptography has much developed in more recent times, and ciphers of great intricacy are frequently used. Even the more complex, however, present, as a rule, but little difficulty to an expert.

Crypton (krip-ton), or Krypton, a new element discovered in June, 1898, by Prof. Ramsay, with Lord Rayleigh, joint discoverer of argon. It was obtained from the atmosphere, in which it exists in the proportion of 1 to 20,000,000. Spectrum: chief lines, green and yellow, the latter being nearly coincident with the helium yellow line. D 3.

Crystal (kris'tal), in chemistry and mineralogy, any body which, by the mutual attraction of its particles, has assumed the form of some one of the regular geometric solids, being bounded by a certain number of plane surfaces. The chemist procures crystals either by fusing the bodies by heat and then allowing them gradually to cool, or by dissolving them in a fluid and then abstracting the fluid by slow evaporation. The method of describing and classifying crystals now universally adopted is based upon certain imaginary lines drawn through the crystal, and called its axes. The classes are as follows: 1st, The monometric, regular, or cubic system (a), in which the axes are equal and at right angles to one another. 2d, The prismatic or dimeric system (b), in which the axes are at right angles to each other, and while two are equal, the third is longer or shorter. 3d, The right prismatic, rhombic, or trinometric system (d), in which the axes are at right angles to each other, but all are of different lengths. 4th, The hexagonal or rhombohedral system (c), which has four axes, three in one plane inclined to each other at 60°, the fourth perpendicular to this plane. 5th, The monoclinic or oblique system (e), in which two axes are at right angles and the third is inclined to their plane. 6th, The dicyclic or doubly oblique system (f), in which two axes are at right angles, the third oblique to both. 7th, The triclinic system (g), in which the three axes are inclined to each other at any angle other than a right angle. A crystal consists of three parts. 1st, Plane surfaces, called faces, which are said to be similar when they are equal.
Crystalline Rocks

to one another and similarly situated; dissimilar, when they are unequal or have a different position. 2d. Edges, formed by the meeting of two faces. They are said to be similar when formed by similar faces; dissimilar, by dissimilar faces. Equal edges are formed when the faces are inclined at the same angle to one another; unequal when they are inclined at different angles. 3d. Solid angles, formed by the meeting of three or more faces; and in this case also there are similar and dissimilar, equal and unequal solid angles according as they are formed by similar or dissimilar faces, and equal or unequal angled edges. The angles of crystals are measured by an instrument called the goniometer.

Crystalline Rocks (kris'ta-lin). See Diatreme.

Crystalloid (kris'ta-loid). See Dialysis.

Crystallomancy (kris-tal'lo-man-si), a mode of divining by means of a transparent body, as a precious stone, crystal globe, etc. The operator first muttered over it certain formulas of prayer, and then gave the crystal (a beryl was preferred) into the hands of a young man or virgin, who received an answer from the spirits within the crystal.

Crystal Palace, a notable building, erected in 1852-54 at Sydenham, near London, from the materials of the Great Exhibition of 1851, and originally designed as a great educational museum of art, natural history, ethnology, etc. It is composed entirely of glass and iron, and consists of a long and lofty nave intersected at regular distances by three transepts, of which the central is 384 feet long, 120 feet wide, and 188 feet interior height. It lies in about 200 acres of ground, excellently laid out for recreation, and possesses many permanent attractions apart from the annual round of concerts, flower-shows, pyrotechnical displays, etc. Chief among its attractions is the collection of casts of architectural ornaments and sculpture, arranged in the Egyptian, Greek, Roman, Alhambra, Byzantine, Medieval, Renaissance and Italian Courts.

Csaba (chá'ba), a town of Hungary, about 110 miles s. e. of Budapest, near the White Kőrösa. Pop. 37,547.

Csongrad (chońgrad), an active market town of Hungary, at the junction of the Kőrösa with the Tisza, 72 miles s. e. of Budapest. Trade, cattle, cereals, wines, etc. Pop. 22,619.

Ctenoid (ten'o-id), applied to the scales of fishes when jagged or pectinated on the edge like the teeth of a comb, as in the perch, flounder and turbot.

Ctenophora (ten-of'o-ra), an order of marine animals belonging to the subkingdom Ccelenterata, definable as transparent, oceanic, gelatinous Actinorhiza, swimming by means of ctenophores, or parallel rows of cilia disposed in comb-like plates. They develop no coral. Pleurobrachia (or Cyside) may be taken as the type of the order, which includes the Beroides, the Cestum or Venus' girdle, etc.

Ctesias (tēshe-as), a Greek historian of about 400 B.C., contemporary with Xenophon and partly with Herodotus. He was a physician, and lived for seventeen years at the court of Persia. He wrote a History of Persia, of which little remains.

Cuba (kū'ba), the largest and most western of the West Indies islands, lying at the entrance to the Gulf of Mexico; about 130 miles from Florida and Yucatan. Its length is 750 miles, the breadth varying from 20 to over 120 miles; area 45,881 miles. It formed the richest and most important colony belonging to Spain, but was wrested from that country by the United States in the war of 1898. The island probably had its origin in volcanic action, the Copper Mountains, which run its entire length, clearly demonstrating this. Pico Turquino is the highest summit, being 7780 feet. From the base of this chain of highland the land expands into meadows with numerous lagoons and swamps. The rivers are small and unnavigable. Good harbors abound with deep water at Havana, Matanzas, Puerto Prinipe, Santiago, etc.

The climate in the hilly districts is generally healthful and agreeable, but the lowlands are sickly and generally hot. The maximum temperature seldom exceeds 88° F., but the heat is constant, the mean temperature in the lowlands being 78°. The climate is moist, the rainfall being about 90 inches; yet some portions of the interior require irrigation. There are occasional hurricanes and earthquakes. Rain often descends in torrents from July to September, but no snow is known to fall on the highest mountains, though frost occurs occasionally. The most valuable domestic animals are the ox, horse and pig, which form a large proportion of the wealth of the island; the sheep, goat and mule are inferior in
Cuba

quality and number. The sylvan birds are numerous and in great variety, birds of prey are but few, and snakes and reptiles are not very plentiful. The shores abound in turtle, and alligators are found in the deep gulfs and bays.

Cuba is rich in minerals; those worked are mostly iron and copper. Of the former a large quantity is exported to the United States for admixture with the native ore. Bitumen is plentiful as a liquid and also in a plastic, resinous state. Gold, silver, coal and marble are found in the hilly country. Forests of mahogany, rosewood, cedar, ebony, fustic, palms, etc., abound on the mountains. Large crops of tobacco, sugar, rice, maize, bananas, cotton, coffee, yams and all tropical fruits, with hundreds of breeds of cattle, are raised. Tobacco forms the leading export, sugar having much fallen off by the competition of the beet-sugars of continental Europe and the unsettled state of the island. The sugar exports and imports amount to about $250,000,000, the exports being very largely to the United States. The manufacture of sugar, molasses, rum and cigars forms the principal industries. Over 2600 miles of railway are in operation, and 5000 miles of telegraph. The Roman Catholic religion was established by the Spanish law; education was made compulsory in 1880, but was not impartially carried out. There are 800 public schools, besides a few schools in the towns and a university at Havana. None of the aboriginal race remain, and but few of the indigenous mammals; of the latter are two species of aguti and an oppossum.

Cuba was discovered in October, 1492, by Columbus, and colonized in 1511 by the Spaniards. Hernando, the governor, cruelly treated the natives, an inoffensive race who had received their oppressors with great hospitality, and by 1553 the entire race became extinct. In 1553 the French destroyed Havana; it was rebuilt and strongly fortified in 1554. In 1624 Cuba was taken by the Dutch, but was soon restored to Spain. From 1650 to 1700 ravaged by filibusters, who in 1683 plundered and destroyed Puerto Principe. After 1700 Cuba prospered greatly. The English colonists, captured Havana in 1762, but in 1763 exchanged it for other possessions. It then became a center of the slave trade. Negro insurrections occurred in 1844-48, and over 10,000 negroes were slain in the latter year.

In 1898 commenced an insurrectionary attempt at independence which continued until 1878, and in 1895 another rebellion broke out. In April, 1898, war was declared by the United States against Spain, and in the struggle that ensued Cuba was freed from the dominion of Spain, the United States holding it until it would establish a satisfactory government of its own. This was accomplished in May, 1902, and the United States troops and officials were withdrawn. In 1906 a rebellious disturbance caused the United States to resume a temporary control of the island, but in 1909, a stable republican government being formed, the American troops were withdrawn. Pop. (1915) 2,511,038; capital, Havana, 639,818. In 1917 Cuba declared war against Germany, but took no active part.

Cubeb (ku'eb), the dried unripe fruit of Cubea, with numerous species, or Piper Cupibia, a native of Java and other East India isles, order Piperaceae.

Cubeb root (ku'eb rot), the number or quantity which, multiplied into itself and then into the product produces the cube; or which, twice multiplied into itself, produces the number of which it is the root: as 2 is the cube root of 8, because twice 2 are 4, and twice 4 are 8.

Cubespar, an anhydrous sulphate of lime.

Cubic Foot, of any substance, so much of it as is contained in a cube whose side is 1 foot.

Cubic Niter, or Chile Saltpeter, the nitrate of sodium found chiefly in the rainless district of Tarapacá in Chile, where it occurs for the most part mixed with other salts, sand and clay. It crystallizes in obtuse-angled rhombohedra, not in cubes, and is used in considerable quantities both as a dressing for grass and mixed in artificial manures. It has also been used as a source of nitric acid, and after double decomposition with chloride of potassium has been employed in the manufacture of gunpowder.

Cubist (ku'bis), a 20th century school of art, whose disciples endeavor to portray what they feel rather than what they see. The cubist avoids the definite forms to which the eye is accustomed in other styles of delineation, and works for the most part in combinations of angles, straight lines and geometrical figures. Hence the name.

Cucking-stool (ku'king st0l), a kind of chair formerly used as an instrument of punishment, frequently confounded with ducking stool.

Cuckoo (ku'k0; genus Cuculus), a scansional or climbing bird, the type of the family Cuculidae. The note from which it derives its name is a
Cuckoo-flower

Cuddalore

lore-call used only in the mating season. The greater number of species belonging to the genus are confined to hot countries, more especially India and Africa, though some are summer visitors of colder climates. In America no true cuckoos are found, the genus Coccyzus, to which the so-called American cuckoo belongs, differing very essentially from them in their habits. The species best known in Europe, the *Cuculus canorus*, is a bird about the size of a small pigeon, though the length of the tail gives it at a little distance a strong resemblance to a hawk. The adult bird is ashy gray, with a white breast barred across with narrow lines of grayish black; tail spotted and barred with white; bill black, touched at the gape with yellow; eyes and feet yellow. It appears in England about the middle of April, and in May begins to deposit its eggs in the nests of other species, giving the preference to those of the hedge-sparrow, meadow-pipit, or pied wagtail. The young cuckoo ejects from the nest its young companions, and many notices the attentions of its foster-parents, which feed it for about five weeks after it is fledged. The young birds do not leave the country until the end of August or even September; but the adult birds commence their flight southward in July or latest early in August. Their food consists chiefly of cockchafers, moths, dragon-flies and caterpillars, though young cuckoos will sometimes eat berries. There appears to be a curious preponderance of male as compared with female birds, a low estimate putting the ratio at about five to one.

Cuckoo-flower, or *Lady's Smock* (*Cardamine pratensis*), a common and pretty meadow plant, order Cruciferae, with pale lilac or white flowers. *C. pratensis* is abundant in Britain, and is found in swamps N. of New York; blossoms in April or May, presenting a very pleasing appearance. It possesses antiscorbutic properties.

Cuckoo-pint, the *Arum maculatum*, popularly known also by the names of 'lords-and-ladies' or 'common wake-robin.' See *Arum*.

Cuckoo-spit, a froth or spume found on plants, being a secretion formed by the larve of a small homopterous insect (Aphrophora spumaria).

*Cuculidae* (ku-kū'l-idē), the systematic name of the cuckoo family.

See Cuckoo.

Cucumber (ku'kum-ber), the fruit of *Cucumis sativus*, or the plant itself, belonging to the Cucurbitaceae or gourd order, and supposed to have been originally imported into Europe from the Levant. Though grown in England in the fourteenth century, it did not become generally used until after the reign of Henry VIII. It is now a common vegetable in the United States. It is an annual with rough, trailing stems, large, angular leaves, and yellow male and female flowers set in the axils of the leafstalks. Other species of the cucumber genus are *Cucumis melo*, the common melon, and the watermelon, *C. Citrullus*.

Cucumber-tree (*Magnolia aowmīnata*), a fine American forest tree, so named from the appearance of its fruit.

Cucurbit (kū-kur'bit). See Alembic.

Cucurbita (kū-kur'bi-ta), the typical genus of the order Cucurbitaceae. The pomeion or pumpkin gourd is *C. Pepo*.

Cucurbitaceae (kū-kur'bi-tā'ē-se), the gourd order, consisting of large herbaceous plants, annual or perennial, with alternate leaves palmately veined and scabrous, and unisexual flowers. The corolla is monopetalous, regular, and with five lobes; the petals are usually either yellow, white, or green, and deeply veined; the fruit fleshy and succulent. The stems are scabrous, and the general habit is climbing or trailing, by means of tendrils. The order contains at least fifty-six genera and about 300 known species, abounds in useful or remarkable plants, including the melon, gourd, cucumber, colocynth, bryony, etc. They are natives of both hemispheres, chiefly within the tropics. The annuals, however, are commonly grown in gardens.

Cudbear (kud-bār), a purple or violet colored powder used in dyeing violet-purple and crimson, prepared from the *Leocnora tartarae* and other lichens growing on rocks in Sweden, Scotland, etc. The color, however, is somewhat fugitive, and in Britain it is used chiefly to give strength and brilliancy to the indigo blues. There is little essential difference between cudbear and archil. It is also used to give a crimson color to pharmaceutical preparations.

Cuddalore (kud-da-lōr'), or *Kuralum*, a maritime town in Hindustan, presidency of Madras and district of South Arcot, 80 miles a. of Madras. It was formerly a place of great strength and importance, and still carries on a large land trade with Madras in indigo, oils and sugar. It
also exports grain and rice. Pop. 52,216.

**Cuddapah** (kud'da-pa), or **Kadapa**, a district and town of Hindustan, presidency of Madras. The district, of which the area is 5745 sq. miles, is traversed n. to s. by the Eastern Ghauts, and watered by the Pennar and its affluents. The forests contain much valuable timber, and the minerals include iron ore, lead, copper, diamonds, etc. Agriculture is in a flourishing condition, grain, cotton and indigo being largely grown. Pop. 1,291,267.—The town lies on a small river of same name, an affluence of the Pennar, 140 miles n. w. of Madras. It exports indigo and cotton. Pop. (1901) 16,432.

**Cudweed** (kud'wéd), the popular name in Britain for certain plants covered with a cottony pubescence, and belonging to the genera *Gnaphalium*, *G. polycaphalum*, the cottonweed, is common in fields in the United States.

**Cudworth** (kud'worth), RALPH, an English divine and philosopher, born in 1617. He took his degree and fellowship at Cambridge in 1638; in 1644 was chosen master of Clare Hall; in the following year regius professor of Hebrew; and in 1654 master of Christ's College, Cambridge, where he spent the rest of his life. In 1678 he published his *True Intellectual System of the Universe*, wherein all the Reason and Philosophy of Atheism is Confuted, and its Impossibility Demonstrated (folio)—a work of an exceedingly erudite kind, though tediously discursive in argument. He died in 1688.

**Cuence** (kwän'ka), a city of Spain, in New Castile, capital of the province, 85 miles e. s. e. Madrid. Pop. 10,756. It was built by the Moors, stands on a craggy hill, and has a remarkable cathedral. It was formerly celebrated for its art manufactures. Pop. of the province, 244,696; area, 9036 square miles.

**Cuenca**, a town of Ecuador, the third in point of importance in the country, with a cathedral and university. It has extensive sugar refineries, potteries and woolen factories. Pop. (1908 estimate) 30,000.

**Cueva** (kwa'ya), JUAN DE LA, a Spanish poet, born about the middle of the sixteenth century. His works comprise several tragedies, a heroic poem, a large number of lyrics and ballads, and the first Spanish didactic poem—on the *Art of Poetry*. No details are known of his life.

**Cufló** (ku'dók), a term derived from the town of Cufla or Kufa in the pashalic of Bagdad, and applied to a certain class of Arabic written characters. The Cufic characters were the written characters of Arabian alphabet in use from about the sixth century of the Christian era until about the eleventh. They are said to have been invented at Cufa, and were in use at the time of the composition of the Koran. They were succeeded by the Neakhi characters, which are still in use. Under the name of *Cufic* coins are comprehended the ancient coins of the Mohammedan princes, which have been found in modern times to be important for illustrating the history of the East. They are of gold (*dinar*), silver (*dirhem*), and brass (*fals*), but the silver coins are most frequent; and numbers of them have been found on the shores of the Baltic, and in the central provinces of European Russia.

**Cuirass** (kwir'-as'), an article of defensive armor, protecting the body both before and behind, and composed of leather, metal, or other materials variously worked. It was in common use throughout Europe in the fourteenth century. In England it fell into disuse in the time of Charles II, and in France a little later. It was reintroduced by Napoleon I, and the achievements of his cuirassiers led to its adoption for regiments of heavy cavalry in most European armies. See *Arms* and *Armor*.

**Cuir-bouilli** (kwir-bo'ili), leather, then impressed with ornaments, used for shields, girdles, sword-sheaths, coffers, purses, shoes, and many other articles; also, in the sixteenth century, for hangings for rooms gilded and painted, and, when heightened by gold or silver, known as *cuir doré* or *cuir argenté*.

**Cuishe**, or **Cuishees** (kwis'h), *kwis'-ex), defensive armor for the thighs, originally of buff leather, which was gradually superseded by plate iron or steel. Cuishees were introduced into England about the middle of the fourteenth century.

**Cujas** (käsh'a), JACQUES, or **Cujacius**, a distinguished French jurist, born about 1620; long professor of law at Bourges; died in 1690. He owed his renuence to die light shed by him on Roman law. He was the founder of the historical legal school, if not of scientific jurisprudence.

**Culdee** (kul'dé), a religious order which at an early period had establishments in many parts of Great Britain and Ireland, but are especially spoken of in Scotland. The name is of uncertain etymology; but is probably
from Celtic words meaning 'attendant of God.' It first appears in the eighth century, and the Culdees distinctively called seem to have been anchorites living under their own abbots and for long remaining independent of Rome. Otherwise archeologists have discovered no essential point either of faith, ritual or constitution in which they differed from the other clergy of the western church.

Culicidæ (kul'i-lis-de), a subfamily of dipterous insects, family Tipulidæ. The genus Culex comprehends the common gnat and the mosquito.

Culilawan Bark (kul'i-lil'a-wan), a valuable aromatic, pungent bark, derived from Cinnamomum Culilawan, a tree of the Moluccas, useful in digestion, diarrhea, etc. Called also clove-bark.

Cullen, William, physician and medical writer, born at Hamilton, Lanarkshire, in 1710. In 1740 he took the degree of M.D., was appointed in 1751 regius professor of medicine in the University of Glasgow. He died in 1790. His principal works are: Lectures on the Materia Medica, Synopsis Nosologicæ Methodicae, and First Lines of the Practice of Physic.

Cullera (kul-yar'a), a town of Spain, province and 25 miles s. by e. of Valencia. Pop. 11,947.

Cullinan Diamond, an immense diamond found in the Transvaal, in the mines of the Premier Diamond Mining Company, where it was discovered in 1905. Before cutting, its length was 4 ½ inches; height, 2 ½ inches; breadth, 2 ½ inches; total uncut weight 3253 ¼ carats, or over a pound and a half. It was bought by the South African government for $1,000,000 and presented to King Edward VII. Subsequently it was cut into a number of gems, the largest of which weighed 516 ½ carats, and another 396 3/16 carats.

Culloden Moor (kul-lo'den), a heath or moor in the county of Inverness, celebrated for the victory obtained April 16, 1746, by the Duke of Cumberland over Prince Charles Edward Stuart (the Pretender) and his adherents. The battle was the termination of the Stuart family to recover the throne of England.

Culm, in botany, the jointed and usually hollow stem of grasses, generally herbaceous, but woody and terebrile in the bamboo.

Culmination (kul-mi-na'shun), in astronomy, the passing of a star through the meridian, because it has at that moment reached the highest point (cuminum) of its apparent path in the sky. Two culminations take place in the course of the day, one above and the other below the pole.

Cultivator (kul'ti-vat'ur), an agricultural implement with long, strong, broad-pointed iron teeth or tines, for tearing up or loosening the soil; also called a horsehoe.

Culverin (kul'verin), a long and slender cannon used in the sixteenth century. It generally carried a ball of about 18 lbs.; the demi-culverin carried one of about half that weight.

Cumea (ku'me-ä), a very ancient city of Italy, in Campania, the oldest colony of the Greeks in Italy, founded about 1030 B.C. by colonists from Chalcis, in Euboea, and from Cyane (Greek, Kume) in Asia Minor. It founded Naples (Neapolis), and in Sicily Zancle or Messina. In 420 B.C. Cumea was taken by the Campanians, and with them came under the power of Rome (345 B.C.). It was destroyed A.D. 1207, and a few ruins only now exist.

Cumaná (ku-ma-nä), a town of Venezuela. It is the oldest European city in South America, having been founded in 1523. It lies near the mouth of the Gulf of Carico, and has a good roadstead in Cumaná Bay, with a trade in cacao, sugar, tobacco, etc. Pop. 12,051.

Cumberland (kum'ber-land), the extreme northwestern county of England. Area, 1520 sq. miles. There is great variety of surface in different parts. Two ranges of mountains may be traced—one towards the north, to which belongs the ridge called Crossfell (2892 ft.); and the other to the southwest, of which the highest peak is Skiddaw (3058 ft.). The two main rivers are the Eden and the Derwent. The county embraces part of the 'Lake Country' of England. Cumberland is rich in minerals, including lead, gypsum, zinc and especially coal and rich hematite iron-ore. In the northern division of the county there are a great many blast-furnaces, and works for the manufacture of steel and finished iron. The principal crops raised are oats, barley, wheat and turnips, but the bulk of the enclosed lands is sown in clover and grass. The rearing of cattle and sheep and dairy farming are engaged in to a considerable extent. Carlisle is the county town; the other principal towns are the seaports Whitehaven, Workington and Maryport; and the inland towns Penrith, Cockermouth and Keswick. Pop. (1911) 285,780.

Cumberland, a town of Providence Co., Rhode Island, in the northeast of the State. It manu-
factures cotton, horses, etc., and is in a mineral-bearing region. Pop. 10,107.

Cumberland, a city, the capital of Allegany County, Maryland, on the Potomac, 167 miles by rail from Baltimore. It is on the edge of the great George's Creek Cumberland coal basin, and iron is largely worked in the vicinity. There are iron and other manufactures; abundant timber, cement, rock, clay, natural gas, etc. Pop. 21,859.

Cumberland, a river of the United States which runs through Kentucky and Tennessee into the Ohio, having a course of about 900 miles, navigable for steamboats, 200 miles.

Cumberland, dramatic writer, born at Cambridge, England, in 1732. After studying at Westminster and Cambridge he became private secretary to Lord Halifax, who bestowed on him a few years later a clerkship of reports in the office of trade and plantations. After one or two failures in writing for the stage, his "Indian," brought out by Garrick in 1771, proved eminently successful, and it was followed by the less popular "Fashionable Lover," "The Choleric Man," "The Note of Hand" and "The Battle of Hastings." In 1775 he became secretary to the board of trade, and in 1780 was employed on a mission to Lisbon and Madrid, but failing to satisfy the ministry was compelled to retire. In addition he wrote several novels, poems, etc. He also edited the "London Review." He died in 1811.

Cumberland, WILLIAM AUGUSTUS, Duke of, second son of George II of England, born in 1721. At the battle of Dettingen he was wounded when fighting at the side of his father, and though unsuccessful at Fontenoy, where he had the command of the allied army, he rose in reputation by somewhat bruitly subduing the insurrection in Scotland caused by the landing of Charles Edward Stuart in 1745. In 1747 Cumberland was defeated by Marshal Saxe at Lafeld, and in 1757 he lost the battle of Hastenbeck, against D'Estrees, and concluded the convention at Klosterseven, by which 40,000 English soldiers were disarmed and disbanded, and Hanover placed at the mercy of the French. He then retired in disgrace from his public offices, and took no active part in affairs. He died in 1785.

Cumberland Gap, a narrow pass, about 500 feet wide through the Cumberland Mountains between Kentucky and Tennessee and at the western extremity of Virginia. It was the scene of important military incidents during the Civil War.

Cumberland Mountains, in Ten-.

Cumberland Presbyterian Church, a religious denomination founded in 1810 during a revival in Tennessee. They accepted the Presbyterian creed with the exception of predestination. In 1806, when they united with the Northern church, they had 2922 churches, with 227,000 members, including 42,000 colored membership.

Cumbræ, two Scottish islands in the Firth of Clyde, belonging to the county of Bute. They are both small, the only town being Millport, a seaside resort.

Cumbria, a geographical name, a part of Cumberland, the Scotch districts Galloway, Kyle, Carrick, Cunningham and Strathclyde, its capital being Alcluay or Dumbarton. It was possibly at one time the chief seat of the (legendary) kingdom of Arthur, and in the sixth century was an important and powerful kingdom. It speedily, however, fell under Saxon domination, and early in the eleventh century was given by Edmund of Wessex to Malcolm of Scotland to be held as a fief of the crown of England. The name still survives in Cumberland.

Cumbrian Mountains (k um'br-yan), a range of hills in England, occupying parts of the counties of Cumberland, Westmoreland, and North Lancashire. The mountains rise with steep acclivities, enclosing in some parts narrow but well-cultivated valleys, with numerous picturesque lakes, this being the "English Lake Country," so much frequented by tourists.

Cumin, or CUM'MIN (kum'lin), an umbelliferous plant (Cuminum Cuminum) which grows wild in Egypt and Syria, and is largely cultivated in Sicily and Malta, whence it is exported. The fruit, called cumin seeds, is of a light-brown color, with an aromatic smell and caraway-like taste, and possesses stimulating and carminative properties.

Cumming (kum'ing), John, born in 1810 at Aberdeen, where he graduated. At the age of twenty-two he became minister of the Scotch Church, Crown Court, Covent Garden, London, where he labored for half a century, publishing during that period
over two hundred works. He had a
high reputation as an orator, but he
was most widely known latterly in con-
nection with his prophecies of the
speedy coming of the end of all things.
His most popular works were: The
Great Tribulation, The Redemption
Drawneth Nigh, Apocalyptic Sketches
and Voices of the Night. Died in 1881.

Cumming, ROCALEYN GEORGE GOR-
DON, the 'Lion-hunter,' a Scottish
sportman and writer, born in 1820; died at Fort Augustus, in Scot-
tland, in 1886. He entered the army,
served some years in India, joined the
Cape Riles, and from 1843 till 1849
made five hunting expeditions into vari-
ous parts of native Shires. Of his
adventures are to be found in his Five
Years of a Hunter's Life (1850), and the
Lion Hunter of South Africa (1856).

Cummins, ALBERT BAIN, (kuminz), ALBERT BAIN,
American legislator, born in Carmichaels,
Pa., in 1850. He is governor of Iowa, 1902-06; elected U. S.
Senator (Republican) in 1908 to suc-
cceed W. B. Allison, and reelected in 1909.

Cumulative Vote (ktum-l-a-tiv),
the system by
which every voter is entitled to as many
votes as there are persons to be elected,
and may give them all to one
candidate, or may distribute them
among the candidates, as he
thinks fit. The principle was first
introduced into Britain by the
Elementary Education Act of
1870, and has been applied on
school board, and later in parlia-
mentary elections. It has been
advocated for many years in the
United States, and has been em-
ployed to a minor extent in Illinois and
Michigan. The supreme court of Michi-
gan pronounced it constitutional in 1891.

Cumyn (kum'in), COYIN, or CUM-
MING, a family whose name
appears frequently in the early history of
England and Scotland. It had its
original possessions near the town of
Comines in France, and from one of
the branches sprang the historian Phillip
de Comines. The English Comyns came
over with William the Conqueror, and
Robert Comyn, a servant of William,
was their representative in the northern provinces.
His nephew became chancellor of Scotland
about 1133, and in the middle of the thir-
teenth century the family counted among
its members four Scottish earls. In
the beginning of the fourteenth century it
was almost annihilated by Robert Bruce,
who slew the son of its head (the
Lord of Badenoch) in Dumfries. The
Comyns who escaped settled down in
the English court, and established im-
portant connections. See COMYN.

Cundinamarca (koon-di-nah-mar'ka),
one of the depart-
ments of the Republic of Colombia.
Area, estimated 79,810 square miles; pop.
537,658.

Cundurango (kun-du-ran'go), the
name given in Ecua-
dor to a plant found in Loya province.
It is also found in Colombia and is
claimed to be useful in the cure of can-
cer, scrofula and other blood diseases.
Its virtues are said to have been dis-
covered by accident, an Indian woman
administering it to her husband, who
was suffering from internal cancer. Her
purpose was to poison him and put him
out of his misery, but instead of dying
he became quite cured. Despite this
story, however, the actual value of the
plant is in question.

Cuneiform Writing (ku-né'-for-m;
a wedge, and forma, a shape), the name
applied to the wedge-shaped characters
of the inscriptions on old Babylonian
and Persian monuments; sometimes also
described as arrow-headed or nail-headed
characters. They appear to have been
originally of the nature of hieroglyphs,

Part of a Babylonian Brick Bearing Cuneiform Writing.

and to have been invented by the primit-
ive Accadian inhabitants of Babylonia
(a probable Turanian race), from whom
they were borrowed with considerable
modification by the subsequent Babylo-
nians and Assyrians, who were Semites
by race and spoke an entirely different
language. The use of the character,
however, ceased shortly after the reign
of Alexander the Great; and after the
lapse of nearly two thousand years it
was doubted by many if the signs had
ever had an intelligible meaning. They
were even regarded by some as the
work of a species of worm, by others as
mere talismanic signs, astrological sym-
ols and the like. The first hints to-
wards decipherment were given by Kar-
stens Niebuhr late in the eighteenth cen-
tury; and the labors of Grotefend, Rask,
Burnouf, Lassen, Rawlinson and other
investigators slowly perfected the means
of translation. Most of the inscriptions
first discovered were in three different languages and as many varieties of cuneiform writing, the most prominent, and at the same time the simplest and latest, being the Persian cuneiform writing with about sixty letters. Next older in time and much more complex is what is designated the Assyrian or Babylonian system of writing, consisting of from 600 to 700 characters, partly alphabetic, partly syllabic, or representing sound groups. Finally comes the Accadian inscriptions, the oldest of all, originally proceeding from a people who had reached a considerable degree of civilization more than four thousand years before Christ, and whose language (allied to Turkish) ceased to be a living tongue about 1700 B.C. The most celebrated trilingual inscription is that at Behistun, in Persia, cut upon the face of a rock 1700 feet high, and recording a portion of the history of Darius. The British Museum contains many thousands of inscribed clay tablets, cylinders, prisms, etc., the decipherment of which is in progress. Many have also been collected by American investigators, and the University of Pennsylvania has a rich collection of inscriptions. See also Assyria.

Cunene (ku-ně′ne), a river of South Africa, which enters the Atlantic after forming the boundary between the Portuguese and German territories there.

Cuneo. See Coni.

Cunningham (kŭn′iŋ-gham), the northern and most fertile district of Ayrshire, Scotland.

Cunningham, Allan, poet, born in 1785, at Blackwood in Dumfriesshire, Scotland; apprenticed in his eleventh year to a stonemason. Having been employed by Cromek to collect materials for his Remains of Nithdale and Galloway Song, he thought of his own compositions, which were printed, but quickly recognized as being forgeries. He then proceeded to London, where he at first supported himself by journalism, but afterwards obtained a situation in the studio of Chantrey, with whom he remained till his later works comprise the drama of Sir Marmaduke Mar- well; the novels of Paul Jones and Sir Michael Scott; the Songs of Scotland; his British Painters, Sculptors, and Architects (1829); and Lives of Burns and Mary, Queen of Scots. He died at London in 1842.—His son Peter (1816-68) is also known as the author of a series of works, including The Story of Nell Gwynne, Life of Drummond of Hawthornden, Modern London, Life of Inigo Jones, etc. He also edited Walpole's Letters, Goldsmith's Works, etc., and contributed to many periodicals and magazines.

Cunningham, William, Scottish, divine, famous for rousing speeches and pamphlets; born in 1805; died in 1861. He visited the United States in 1843 to collect information with regard to theological institutions.

Cupel (kŭ′pel), a small, shallow, porous, cup-like vessel, used in assays, to separate the precious metals from their alloys. See Assaying.

Cupid (kŭ′pid; Lat. Cupido), the god of love; corresponding with the Greek Eros. He is represented as a winged infant, naked, armed with a bow and a quiver full of arrows.

Cupola (kŭ′pō-la), in architecture, a spherical vault or the top of an edifice; a dome or the round top of a dome. The Italian word cupola signifies a hemispherical roof which covers a circular building, like the Pantheon at Rome and the Round Temple of Vesta at Tivoli. The term is also applied distinctively to the concave interior as opposed to the dome forming its exterior. See Dome.

Cupping (kup′ing), a surgical operation consisting in the application of the cupping-glass in cases where it is desirable to abstract blood from, or draw it to, a particular part. When blood is removed the operation is termed cupping or wet-cupping; when no blood is drawn, it is dry-cupping. The cupping-glass, a cup-shaped glass vessel, is first held over the flame of a spirit lamp, by which means the included air is rarefied. In this state it is applied to the skin, and as the heated air cools it contracts and produces a partial vacuum, so that the skin and integuments are drawn up slightly into the glass and become swollen. If blood is to be drawn, a scarificator or spring-lancet is generally used.

Cupressus. See Cypress.

Cupuliferæ (ku-pō-lif-er-ē), a botanical order, so named from the peculiar husk or cup (cupule) in which the fruit is enclosed. They are trees or shrubs, inhabiting chiefly the temperate parts of the northern hemisphere, and common in Europe, Asia and North America. The chief genera are the oak, chestnut, beech and hazel.

Cur, the name loosely given to any worthless dog of mongrel breed,
but applied more strictly to a cross between the sheep-dog and terrier.

Curacao (kó-rá-ska'ō), an island of the Dutch West Indies, in the Caribbean Sea, 46 miles N. of the coast of Venezuela; 36 miles long and 8 miles broad; capital Willemstad, principal harbor Santa Anna. It is hilly, wild and barren, with a hot, dry climate. Yellow fever has visited it every sixth or seventh year. Fresh water is scarce, and serious droughts occur. The tamarind, cocoa-palm, banana and other useful trees are reared—among them three varieties of orange, from one of which the Curacao liqueur is made. Sugar, tobacco, cochineal and maize are also produced, but the staple exports are salt and a valuable phosphate of lime used as a manure in its natural state, or made to yield valuable superphosphates. The islands of Curacao, Bonaire, Oruba (or Aruba), the Little Curacao form a Dutch government, the residence of the governor being at Willemstad. From the sixteenth century Curacao was held in succession by the Spaniards, Dutch and British, and finally ceded to Holland at the general peace in 1814. Pop. 29,718; including the dependencies, about 50,000.

Curacao, or CURACAO, a liqueur or cordial prepared from a peculiar kind of bitter orange growing in Curacao, which has a persistent aromatic odor and taste. It is prepared from the yellow part of the rind, which is steeped in strong alcohol, the infusion being afterwards distilled and rectified and mixed with syrup. For the true orange, the common bitter orange of Europe is often substituted, and the genuine deep-yellow color imitated by caramel, etc.

Curari (kú-rá-fi), C'URARA, UBARA, WOOD, the well-known arrow-poison used by the Indians of Spanish Guiana and of Northern Brazil. It is the aqueous extract of a tree, the *Synchona fosfíera*, thickened with mucilaginous matter; and its properties are such that if introduced into a scratch or puncture of the skin, so as to mix with the blood, it causes death by paralysis of the nerves of the respiratory organs. It may, however, be introduced into the alimentary canal without injury, and animals killed by it are wholesome as food. The active principle is called curarin.

Curassow (kú-ras'sō), or Hocoo, the name given to gallinaceous birds of the genus *Crax*, family Cracidæ; natives of the warm parts of America. The crested curassow (Curassow, or *Curassow*), found in Guiana, Mexico and Brazil, is a handsome bird, nearly as large as the turkey and more imposing in appearance, being of a dark-violet color, with a purplish-green gloss above and on the breast; the abdomen is snow white, and the crest golden. Another species is the red curassow (Cras rubra), also a native of South America, and about the size of a turkey. The casuaw bird (Urau pau1) is called the galeated curassow.

Curate (kú'rät), properly an incumbent who has the care of souls; now generally restricted to signify the substitute or assistant of the actual incumbent. In the Church of England curacies are either stipendiary or perpetual. A stipendiary curate is one who is hired by the rector or vicar to serve for him and may be removed at pleasure; a perpetual curate is one who is not dependent on the rector, but is supported by a part of the tithes or otherwise. The perpetual curacy is practically a vicarage. In the Protestant Episcopal Church in America the office of curate corresponds in the main to that of the English curate.

Curator (kú-rá'tur), in civil law, the guardian of a minor who has attained the age of fourteen, of persons under various disabilities, or of the estate of deceased or absent persons and insolvants. In learned institutions the person who has charge of the library or collections of natural history, etc.

Curb, the general term for a hard swelling on a horse’s leg. It consists of a strain of the straight ligament which runs down the back of the hock.

Curb-roof, in architecture, a roof instead of continuing straight down from the ridge to the walls, are at a given height received on plates, which in their turn are supported by rafters less in-
Curb-sender, an automatic signaling apparatus invented by Sir W. Thomson of Glasgow and Prof. Fleming Jenkin of Edinburgh, and used in submarine telegraphy. The message is punched on a paper ribbon, which is then passed through the transmitting apparatus by clockwork. The name is due to the fact that when a current of one kind of electricity is sent by the instrument another of the opposite kind is sent immediately after to curb the first, the effect of the second transmission being to make the indication produced by the first sharp and distinct, instead of slow and uncertain.

Curb-sender. See Physio-nut.

Curculionidae (kur-kù-li-on’-tè), the weevils or snout-beetles, one of the most extensive families of coleopterous insects. See Weevil.

Curcuma (kur’ku-ma), a genus of plants of the ginger family, of which C. longa yields turmeric, C. sedoaria, sedaory.

Curd. See Cheese and Milk.

Curfew (kur’fù; Fr. couvre-feu, cover fire), a practice originated in England by William the Conqueror, who directed that at the ringing of the bell at eight o’clock all fires and lights should be extinguished. The law was repealed by Henry I in 1100, but the bell continued to be rung in many districts to modern times and probably may still be heard. The name was also given formerly to a domestic utensil for covering up a fire. In the United States an ordinance establishing a curfew with the purpose of keeping young people off the streets, has existed in Salem, Massachusetts, since Puritan days. Similar ordinances have of late been adopted in other cities. In general providing that children under 15 shall not frequent the streets after 9 o’clock in summer and 8 in winter.

Curia (kur’ri-a), Papal, in its stricter sense the authorities which administer the papal primacy; in its common wider use all the authorities and functionaries forming the papal court. The different branches of the curia having respect to church government are the sacred congregation of cardinals, the secretariat of state, and the vicariate of Rome, the machinery employed being supplied by the chancery, the dateria, and the camera apostolica. As ‘supreme judge’ in Christendom the pope acts through special congregations and delegated judges, or through the regular tribunals of the rota and segnatura, and the penitentiary. The institution of the papal chapel and the household of the pope (familia pontifica) are also classed as departments of the curia; and finally the functionaries maintaining the external relation of the pope—legates, nuncios, apostolic delegates, etc. Formerly the curia included also the mechanism and functions of secular administration.

Curietali. See Horatii.

Curico (kur’ri-kò), a town of Chile, capital of province of same name. Pop. 14,577. Area of province, 2978 sq. miles; pop. 119,811.

Curie (kur’ri), Pierre, physicist and chemist, professor of physics in the Sorbonne, born near Paris, 1859. He aided his wife, Marie (born in Poland in 1867), in the analytical study of pitchblende, through which, born in 1898, the remarkable element radium was discovered. Only the bromide of this was known until 1912, when Madame Curie succeeded in isolating the metal. He was killed accidentally in Paris, April 19, 1906, and Madame Curie was elected to succeed him as professor.

Curie, Marie. See Radium and previous article.

Curitiba (kur’ri-ti’ba), a town of S. Brazil, capital of the province of Parana, connected by railway with the port of Paranagua. Pop. 24,553.

Curlew (kur’lè; Numenius), a genus of birds belonging to the same family (Scolopacidae) as the snipe and woodcock. The genus is characterized by a very long, slender and arcuated bill, tall and partly naked legs, and a short, somewhat rounded tail. The bill is more or less covered with a soft, sensitive skin by which the bird is enabled to detect its food in the mud. Two species of curlew inhabit the British Isles, the curlew proper, called in Scotland the ‘whaupe’ (Numenius arquata), and the whimbrel (Numenius phaeopus). They feed on various worms, small fishes, insects and molluscous animals, and are very shy, wary birds. Three species of
Curlew are inhabitants of America—the long-billed curlew (\textit{N. longirostris}), about 29 inches long, with a bill 7 to 9 inches in length; the Hudsonian, or short-billed curlew (\textit{N. Hudsonicus}); and the Esquimaux curlew (\textit{N. borealis}).

**Curling** (kurl'ing), a favorite Scotch winter amusement on the ice, in which contending parties slide large smooth stones having somewhat the shape of a flattened hemisphere, weighing from 30 to 45 lbs. each, with an iron or wooden handle at the top, from one mark to another. The space within which the stones move is called the \textit{rínk}, and the hole or \textit{mark} at each end the \textit{tee}. The length of the rínk from one to tee varies from 35 to 50 yards. The players are arranged in two parties, each headed by a \textit{skip} or director. The number of players upon a rínk is eight or sixteen—eight when the players use two stones each, and sixteen when they use one stone each. There may be one or more rínks according to the number of curlers. The object of the player is to play his stone as near to the mark as possible, to guard that of his partner which has been well laid before, or to strike off that of his antagonist. When the stones on both sides have been all played the stone nearest the tee counts one, and if the second, third, fourth, etc., belong to the same side, each counts one more, the number played for being generally twenty-one. If a player's stone does not cross a line, called the \textit{hog-score}, at some distance in front of the tee his shot goes for nothing and the stone is removed from the rínk. The set matches are termed \textit{bonspiels}. The game is now played in England, Canada, and elsewhere.

**Curran** (kør'án), \textit{John Philpot}, an Irish advocate and orator, born at Newmarket, near Cork, in 1730. He was educated at Trinity College, Dublin, went to London, was called to the bar, and during the administration of the Duke of Portland was raised to the bench. In 1784 he was chosen a member of the Irish House of Commons. His eloquence, wit and ability soon made him the most popular advocate of his age and country. On a change of ministry during the vice-royalty of the Duke of Bedford his patriotism was rewarded with the office of master of the rolls, which he held till 1814, when he retired with a pension of £2000 a year. He died at Brompton in 1817. A collection of his forensic speeches was published in 1806.

**Currant** (kůr'ant), the name of two well-known shrubs, order Grossulariaceae, cultivated in gardens for their fruit. The red currant, \textit{Ribes rubrum}, the fruit of which is used principally for jellies and jellies, is a native of Southern Europe, Asia and North America. The white currant is a cultivated variety of the red, and is used chiefly for dessert and for conversion into wine. The black currant, \textit{R. nigrum}, a native of most parts of Europe, and found abundantly in Russia and Siberia, is used for tarts and puddings and for a fine jelly recommended in cases of sore throat. Many species are indigenous in America, one of them the ornamental \textit{Ribes aureum}, which produces a fine berry. In Australia the name is given to \textit{Leucopogon Richi}, one of the Epacridaceae, and in Tasmania to certain species of \textit{Coprosma}, of the nat. order Cinchonaceae. The Indian currant of America is the snowberry, \textit{Symphoricarpos racemosus}. See also \textit{Currants}, where the origin of the name is given.

**Currants** (from \textit{Corinth}, being brought from the adjoining parts of Greece), a small kind of dried grape imported from the Levant, chiefly from the vicinity of Patras in the Morea, and also from Zante, Cephalonia and Ithaca, of which islands they are the staple produce. The plant is delicate and the crop precarious, and as the plantation must be six or seven years old before it bears, its cultivation requires a great outlay of capital. After being dried the currants are exported in large butts. They are now also a product of California.

**Currant Wine**, a wine made of the juice of the white or red currant (preferably the former). A pint of water is added to every four pints of berries and afterwards a pound and a half of sugar to each pint, a little spirits being mixed in the liquor before
it is set aside to ferment. Fermentation requires several weeks, and the wine is not fit for use for some months. For black-currant wine the berries are first put over the fire and heated to the boiling point in as small a quantity of water as possible.

Currency (kur‘en-d), any medium of exchange by which the processes of trade are facilitated. Originally all exchanges may be supposed to have been made directly by barter, one commodity being exchanged for another according to the convenience of the particular holders. In barter, however, it would obviously often be difficult to find two persons whose disposable goods suited each other’s needs, and there would also arise difficulties in the way of estimating the terms of exchange between unlike things, and of subdividing many kinds of goods in the barter of objects of different value. To obviate these some special commodities in general esteem and demand would be chosen as a medium of exchange and common measure of value, the selection varying with the conditions of social life. In the hunting state furs and skins have been employed by many nations; in the pastoral state sheep and cattle are the chief negotiable property. Articles of ornament, corn, nuts, olive oil, and other vegetable products, cotton cloth, straw mats, salt, cubes of gum, bees’ wax, etc., have all been at various times employed to facilitate exchange. These, however, while removing some of the difficulties attendant upon barter, would only partially solve others. It would be felt by degrees that any satisfactory medium must not only possess utility and value, but it must be portable, not easily destructible, homogeneous, readily divisible, stable in value, and cognizable without great difficulty. The metals would naturally commend themselves as best satisfying these requirements, and accordingly in all historical ages gold, silver, copper, tin, lead and iron have been the most frequent materials of currency. The primitive method of circulating them appears to have consisted simply in buying and selling them against other commodities by a rough estimation of the weight or size of the portions of metal. Sometimes the metal was in its native state (e. g., rough copper or alluvial gold dust), at others in the form of bars or spikes, the first approximation to a coinage being probably rudely shaped rings. The earliest money was stamped on one side only, and rather of the nature of stamped ingots than coins as we know them. The chief desiderata influencing the subsequent development of coinage were the prevention of counterfeiting, the prevention of any fraudulent subtraction of metal from the coin, the removal as far as possible of anything likely to occasion loss of metal in the wear and tear of usage, and the production of an artistic and historical monument of the state issuing the coin. Hence the elaboration of designs to cover the whole of a given portion of metal, and the nicer determination of quality, size, degree of relief, inscription, etc. While, however, metallic money of a guaranteed standard value was at an early period found to facilitate in a high degree the mechanism of exchange, it was speedily discovered that it was possible in large part to standard gold or silver or copper coins by various forms of currency of a representative character. The standard money depended solely for its value in exchange upon the value of the material of which it was composed; its metal and its nominal value were coincident; the representative money derived its value from a theoretical convertibility at will into the standard coin. Thus in token coins the metallic value may be much less than the nominal value, which is defined by the fact that they can either by force or law or custom be exchanged in a certain fixed ratio for standard coins. Gradually a series of devices came to be employed to further the interchange of commodities with the least friction, and the least possible actual use of the coinage except as a standard and common denominator of value in terms of which exchanges were made. Even in home transactions, but especially in international transactions, the use of actual specie was found to involve a loss of interest and a risk of still more serious loss, and a paper currency based upon credit offered the readiest solution of the difficulty. In this way bank-notes, bills of exchange, and checks—warrants or representative documents convertible, if desired, into standard coin—took their place alongside the metallic currency, partly displacing it, partly extending and supplementing it.

The requisites of circulation are that the monetary issues, whether of coin or paper, shall be from a recognized or official source, and that they admit of being freely returned when necessary to the source from which they are issued. The certification of the fineness of the masses of metal circulating in a community, and the protection from adulteration and fraud, clearly fall among
the necessary acts of police. It is still argued, as by Herbert Spencer in his Social Statics, that the coining should be left to the ordinary competition of manufacturers and traders; but when this has occurred the currency has uniformly become debased, and it is generally held, in accordance with the maxims of civil and constitutional law, that the right of coining is a prerogative of the state. Even in the case of state issues base money has been circulated, as in England in the reigns of Henry VIII and Edward VI, but the attempt is little likely to be repeated, the last of such debased issues, with the refusal to redeem it at its nominal value, having been made by a petty German prince early in the last century. In the matter of state supervision two precautions are particularly necessary to make the standard coins shall be issued as nearly as possible of the standard weight, and that all coin worn below the legal weight shall be withdrawn from circulation. The ground for these precautions is to be found in the broad general principle relating to the circulation of money, and known as Gresham's Law, that bad money invariably drives good money out of circulation, the heaviest coins being selected for exporting, hoarding, melting, conversion into jewelry, gold-leaf, etc. The law holds good not only with regard to coins in one kind of metal, but to all kinds of money in the same circulation, the relatively cheaper medium of exchange being retained in circulation while the other disappears. Of the various systems of metallic currency, the first adopted was that known as the single-legal-tender system, in which the state issued certified coins in one metal only. It was found, however, that in such cases the people invariably circulate for convenience coins of other metals, and that naturally arose out of this the adoption of a double or multiple legal tender system, in which coins were issued in different metals at a fixed rate of exchange. To obviate difficulties arising from the competition of two or more metals as concurrent standards of value, with the constant tendency of one or other to become more valuable as metal than as currency, a third system, the composite-legal-tender, came into existence, in which coins of the several metals were adopted as the standard of value, and token coins only issued in the other metals for the payment of small amounts. The last system is that now prevalent in Great Britain; but the double-legal-tender system to which the French have long adhered, and which long existed in the United States, has found an increasing number of advocates for its universal adoption. It was abandoned in the United States in 1800 in favor of gold as the single standard of value. See Bimetalism.

The circulation of representative money differs from that of standard metallic money in that it circulates only within the district or country where it is legally or habitually current. In the payment of debts to foreign merchants the only money which can be exported is standard metallic money. Hence Gresham's law holds with regard to paper money, which is, like light and debased coins, capable of driving out standard money. Examples of this are to be found in the suspension of specie payments by the Bank of England between 1797 and 1819, in the history of the French assignats at the time of the revolution, and in the financial history of the American Civil war. The various methods on which the issue of paper money may be conducted are exceedingly numerous and a matter of interminable debate. The state may either constitute itself the sole issuer of representative money on the same lines as it constitutes itself sole issuer of metallic money, or it may allow corporations, companies, or private individuals to issue representative money under legislative control.

The question as to the duty of a government in this respect has been much obscured by the want of a clear apprehension of the distinction between a real and a nominal currency. The doctrine of orthodox English writers on the currency of the absolute convertibility of the bank-note, by which is intended a convertibility provided for by the action of government, is held by some writers to proceed on an altogether exaggerated and inaccurate notion of the functions of a government. Another idea, that the issue of paper money ought to be wholly controlled by government, or ought to rest entirely upon government credit, places a high degree of faith in the trustworthiness of governments, and is held by many to misconceive the nature and objects of a paper currency. See also Bank and Money.

Current-meter (k'û'r'ënt-mâ'tër), an instrument for measuring the velocity of currents. It may be constructed in various ways, e.g., a simple tube which is bent and has its lower end open to the current, the ascension of water in the vertical part indicating the velocity of the current.
Currents (kur'ents), Marine, masses of sea-water flowing or moving forward in the manner of a great stream. They are phenomena of the highest importance, both on account of their influence upon the climate of many maritime regions—an influence often reaching far inland—and their practical relation to the art of navigation. These currents are numerous, and taken together constitute an oceanic circulation, the intricacy and irregularity of whose form is due to the number and variety of the agencies at work. Among the theories which have been put forward to account for the existence of currents the chief place belongs to the theory of a circuit maintained between equatorial and polar waters. According to this theory there is in either hemisphere an area within which the waters of the ocean are colder, and hence by many degrees denser, than within the belt of the tropics. The natural result is a tendency of the colder and heavier water to sink and to diffuse itself over the lower portion of the ocean-bed, and a movement of the warmer and lighter water in the direction of the surface, over which it tends to become diffused. In other words, the colder waters will move beneath the surface in the direction of the equator, and the warmer waters will flow along the surface in the direction of either pole. Hence, in either half of the globe there are two great and opposite currents—a cold current flowing from the pole towards the equator, and a warm current flowing from the equator in the direction of the pole. This theory has been excellently illustrated by Dr. Carpenter’s experiment, in which a trough of glass filled with water and having a lump of ice at one end and a heated bar of iron at the other exhibits a similar circulation of hot and cold currents. To this theory Sir O. Wyville Thompson opposed a theory of evaporation as the general cause of the movement, holding that in the Antarctic Ocean at least the return of moisture to the south to balance the cold draught of water that comes from thence takes place in a large measure through the atmosphere. Another great general cause of currents is to be found in the axial rotation of the earth eastward, by which the movement of tropical water towards the pole is deflected eastward, and becomes in the northern hemisphere a northeastwardly current and in the southern a southeastwardly one. Under the operation of the same laws the opposite currents from polar latitudes to the equator are deflected in southwesterly and northwesterly directions, respectively. It is to such influences that we may, in the main, attribute the well-known differences between the climates of North America and Europe within correspondent parallels. Other causes, more local in their nature, must be looked for to explain the origin and direction of currents in particular cases. In the case of surface or drift currents, for instance, it is probable that these are largely caused by the action of winds. Thus it is to the constant drift of surface water to the westward under the influence of the trade-wind that the equatorial currents of the Atlantic and Pacific are due. In the case of the Atlantic Ocean the westward-moving waters, encountering the eastward extension of the South American mainland, become of necessity divided into two streams, the one of which sets to the southward along the eastern coast of Brazil, while the other advances along the more northerly portions of the South American continent, past the outlets of the Amazon and the Orinoco, and thence into the Caribbean Sea. From the latter land-enclosed basin its course is necessarily into the similarly shut-in basin of the Mexican Gulf, whence it finally emerges through the narrow channel of Florida as the well-known gulf stream (which see). In the case of the Pacific Ocean there exists no such unbroken land barrier to the westward progress of the equatorial waters. A portion of its equatorial stream, however, is deflected to the northward towards the coasts of Japan (where it forms the well-known Japan stream, setting to the northeastern, past the Kuriles, in the direction of the Alaskan Islands), while another portion turns southwardly in the direction of Australia and New Zealand. To the same action of the winds, operating in connection with the obstacles presented by the land, divergent and counter-currents are due. Thus in the Atlantic and the Pacific there flows between the two equatorial trade-wind currents a counter-current in exactly the opposite direction, and there is a similar counter-current in the Indian Ocean north of its sole trade-wind current. Currents called indraught currents are also caused by the flow of water to replace that taken away by currents due to causes already mentioned. An example of this is found on the west coast of Africa, where an indraught current replaces the water blown towards the coast of South America. In the case of inland seas evaporation deter-
mines the direction of the surface currents, the direction being inwards, where, as in the Mediterranean, the evaporation exceeds the inflow of fresh water; and outwards, as in the Baltic and the Black Sea, where there is an opposite state of matters.

Curriculum (ku-rīk′ə-lum), originally, in Latin, the course over which the race was run, hence the whole course of study at a university necessary to qualify for a particular degree.

Currie (kur′i), James, the biographer of Burns and earliest editor of his works, was born in Dumfriesshire in 1756; died in 1806. He tried in succession commerce, journalism and medicine, and in 1780, after completing his studies at Edinburgh, he was appointed assistant surgeon in the army. Disappointed in his hopes of promotion, he settled at Liverpool, where he was made a physician to the infirmary, and increased his reputation by some publications on medicine. Having made an excursion into Scotland in 1782 he had become personally acquainted with Robert Burns, and upon the death of the poet he was induced to become the editor of an edition of his works, to which he added a memoir. By this work a sum of £1400 was raised for Mrs. Burns and her family.

Curry (kur′i), an Eastern condiment, a powder composed of cayenne pepper, coriander, ginger, turmeric, and other strong spices.

Currying (kur′i-ing) is the art of dressing cowhides, calf-skins, seal-skins, etc., principally for shoes, saddlery, or harness, after they have come from the tanner. In dressing leather for shoes the leather is first soaked in water until it is thoroughly wet; then the flesh side is shaved to a proper surface with a knife of peculiar construction, rectangular in form with two handles and a double edge. The leather is then thrown into the water again, secured upon a stone till the white substance called bloom is forced out, then rubbed with a greasy substance and hung up to dry. When thoroughly dry it is prained with a toothed instrument on the flesh side and browned on the grain side for the purpose of softening the leather. A further process of paring and praining makes it ready for waxing or coloring, in which oil and lampblack are used on the flesh side. It is then sized, dried and tallowed. In the process the leather is made smooth, lustrous, supple and waterproof.

Cursores (kur-sō′res), or Runners, an order of birds which includes the ostrich, rhea, emu, cassowary and apteryx. The birds of this order are distinguished by their remarkable velocity in running, the rudiment-
ologist, notable for his application of the comparative method to the study of the Greek and Latin languages. He was born at Lübeck in 1820, and in 1862 became professor of classical philology at Leipzig. He died in 1885. Of his works, a Greek Grammar, Principles of Greek Etymology and The Greek Verb have been translated into English.

Curtius (kər'shə-us), METTUS or MARCUS, a noble Roman youth, who, according to the legend, plunged with horse and armor into a chasm which had opened in the forum (A.D. 362), thus devoting himself to death for the good of his country, a soothsayer having declared that the dangerous chasm would only close if what was most precious to Rome were thrown into it.

Curtius Rufus, QUINTUS, a Roman writer, author of a History of Alexander the Great, in ten books, the first two of which are lost. His style is florid, and his narratives have more of romance than of historical certainty. Nothing certain is known of his life.

Curule Magistrates (kər'əl), in ancient Rome, the highest dignitaries of the state, distinguished from all others by enjoying the privilege of sitting on ivory chairs (sedes curulis) when engaged in their public functions. The curule magistrates were the consuls, praetors, censors and chief aediles, who, to distinguish them from the plebeian aediles, were called curule.

Curve (kərv; Latin, curvus, crooked), a line which may be cut by a straight line in more points than one; a line in which no three consecutive points lie in the same direction. The doctrine of curves and of the figures and solids generated from them constitutes what is called higher geometry, and forms one of the most interesting and important branches of mathematical science. Curve lines are distinguished into algebraical or geometrical and transcendental or mechanical. The varieties of curves are innumerable: that is, they have different degrees of bending or curvature. The curves most generally referred to, besides the circle, are the ellipse, the parabola and the hyperbola, to which may be added the cycloid.

Curwen (kər'wən), JOHN, an English musician, the chief promoter of the tonic sol-fa method of teaching to sing, was born November 14, 1816. He became a minister of the Independent Church, and became acquainted with Miss Glover's sol-fa system while visiting that lady's school at Norwich. After that he devoted much of his time to bringing the new method before the public by lectures, publications, and the establishment of a tonic sol-fa association and college. He died May 26, 1880.

Curzola (kər'zo-lə), the most beautiful of the Dalmatian Islands, in the Adriatic, stretching W. to E. about 25 miles, with an average breadth of 4 miles; area, 85 square miles. It is covered in many places with magnificent timber. The fisheries are very productive. It contains a town of the same name. Pop. 17,977.

Cusco (kəs'ko). See Cuzco.

Cusco-bark, Cuzco-bark, or Cinchona pubescens, which comes from Cuzco, in South America, and is exported from Arequipa. It contains a peculiar alkaloid called cuscine or cuscine, which resembles cinchona in its physical qualities, but differs from it in its chemical properties. When applied medicinally it excites warmth in the system, and has therefore been recommended in cold intermittent.

Cushing (kəshing), CALEB, statesman and diplomatist, was born at Salisbury, Massachusetts, in 1800; died in 1879. He studied law and was admitted to the bar in 1823, visiting Europe soon after and publishing Reminiscences of Spain, and Historical and Political Review of the Revolution in France. He served in Congress 1833-43; was appointed secretary of the treasury in 1843, but not confirmed by the Senate; in 1844 negotiated the first treaty of the United States with China, and in 1847 took part in the Mexican war, rising in rank to brigadier-general. In 1852 he was made a justice of the Supreme Court of Massachusetts; was Attorney-General of the United States 1863-57; in 1872 was United States Commissioner at the Alabama Claims arbitration; in 1873 was minister to Spain, and in 1874 was nominated by President Grant Chief Justice of the United States Supreme Court, but was not confirmed.

Cushing, FRANK HAMILTON, ethnologist, was born at Northeast, Pennsylvania, in 1857. In 1875 he was engaged by Professor Baird to make collections of Indian relics for the National Museum, and in 1879 accompanied Major Powell's expedition to New Mexico, and spent six years dwelling in a village of the Zuñi Indians, learning their language and traditions and gaining initiation into their secret religious ceremonies. His researches among the ancient ruins in this region were of great importance. In 1886 he discovered re-
mains of a sea-dwelling people on the Gulf coast of Florida. Died in 1900.

Cushing (kush'ing), William Bar-
ker, naval officer, was born at Delafield, Wisconsin, in 1842; died in 1874. He was appointed to the Naval Academy in 1857, but resigned the next year, and on the outbreak of the Civil war entered the service as a volunteer officer. He distinguished himself by gal-

lant service during the war, and es-
pecially by his brilliant and daring exploit of blowing up the Confederate ironclad Albermarle while at anchor at Plymouth, North Carolina, in 1864. After the war he served in the Pacific and Asiatic squadrons, reaching the rank of com-
mander.

Cushman (kush'man), Charlotte S., actress, was born at Boston, Massachusetts, in 1816; died in 1876. Her first theatrical appearance was in opera at the Tremont Theatre, Boston, but her reputation was gained in the drama, her first appearance in tragedy being as Lady Macbeth in 1835. She showed great power in this field, especially in Shakespearian characters, and for many years was a favorite on the American stage. She also manifested high ability as a dramatic reader.

Cusp (kusp), the point at which two converging curves meet and have a common tangent. Such points are numerous in architecture in the interna-
cal curvings of trefoils, heads of Gothic windows, etc. In the decorated and

Cusso (kus'so; Hagenia Abyssinica), a small Abyssinian tree, order Ros-
acea, yielding flowers which are im-
port ed into Europe and used as an an-
themintic.

Custard (kus'tard), a composition of milk or cream and eggs, sweetened with sugar and variously flavored; cooked in the oven or stew-
pan.

Custer (kus'ter), George Armstrong, soldier, was born in Harrison Co., Ohio, in 1839. He was graduated from West Point in 1861, and entered the army as a cavalry officer. He par-
ticipated in all but one of the battles of the Army of the Potomac, and was no-
table for dash and daring. After the Civil war he performed arduous service on the frontier. In 1876, while fighting the Sioux Indians, he and his command were attacked by superior numbers and were all killed.

Custodia (kus-tó'di-a), a shrine of precious metal in the shape of a reliquary in which the host or the relics of a saint are carried in proces-
sion on certain solemn occasions.

Custom House (kus'tom), an establish-
ment where commodi-

perpendicular styles the cusps, in addi-
tion to leaves, flowers, etc., were fre-
quently ornamented with heads or ani-

mals. In the Romanesque and Norman styles they were often ornamented with a small cylinder which bore a flower or similar device.

Cusparia Bark (kus-par'io-a), the bark of the Gal-
pea Cusparia, and some other species. See Angostura Bark.
Cutcherry (kuch‘e-ri), in the East Indies, a court of justice or public office.

Cutch Gundava (gun-da‘va), a division of Beluchistan, in the northeast; area, 10,000 sq. miles; pop. 100,000.

Cuthbert (kuth‘ber-t), St., a celebrated leader in the early English Church, was born, according to the tradition, near Melrose about 635. He became a monk, and in 664 was appointed prior of Melrose, which after some years he quitted to take a similar charge in the monastery of Lindisfarne. Still seeking a more ascetic life, Cuthbert then retired to the desolate isle of Farne. Here the fame of his holiness attracted many great visitors, and he was at last persuaded to accept the episcopal crown of Lindisfarne, which he, however, resigned two years after, again retiring to his hermitage in the island of Farne, where he died in 687. The anniversary of his death was a great festival in the English Church.

Cuticle (kut‘i-kl), the epidermis or outermost layer of the skin, a thin, pellucid, insensible membrane that covers and defends the true skin.

Cutis (kut‘is), in anatomy, a dense resisting membrane of a flexible and extensible nature, which forms the general envelope of the body; it is next below the cuticle, and is often called the true skin.

Cutlass (kut‘las), a short sword used by seamen. A guard over the hand is an advantage. It is, if well understood, a very effectual weapon in close contact; on account of its shortness it can be handled easily, and yet is long enough to protect a skilful swordsman.

Cutlery (kut‘ler-1), is a term applied to all cutting instruments made of steel. The finer articles, such as the best scissors, penknives, razors and lancets are made of cast-steel. Table-knives, plane-irons, and chisels of a very superior kind are made of sheaf-steel, while common steel is wrought up into ordinary cutlery. One of the commonest articles of cutlery, a razor, is made as follows:—The workman, being furnished with a bar of cast-steel, forges his blade from it. After being brought into true shape by filing, the blade is exposed to a cherry-red heat and instantly quenched in cold water. The blade is then tempered by first brightening one side and then heating it over a fire free from flame and smoke, until the bright surface acquires a straw color (or it may be tempered differently). It is again quenched, and is then ready for being ground and polished.

Cutack (kut‘tak), a town of Hindustan, in Orissa, on the right bank of the Mahanuddy, 60 miles from its embouchure and 230 s. w. Calcutta. It has little trade, and is known mainly for its beautiful filigree work in gold and silver. Pop. 51,364. The district of Cuttack has an area of 3654 sq. miles. It is well watered, and rice, pulse, sugar, spices, dyestuffs, etc., are grown along the coast, which is low and marshy, and wheat and maize in the hill regions. On the coast salt is extensively manufactured. Pop. 2,062,758.

Cutter (kut‘er), a small vessel, furnished with one mast, and a straight running bowsprit which may be run in upon deck. It differs from the lugsail in the ability of its windward sail, its square sail, from its lack of a bowsprit.

Cuttlebone (kut‘l), the dorsal plate of Sepia officinalis, formerly much used in medicine as an absorbent, but now used for polishing wood, painting, varnishing, etc., as also for poultice and tooth-powder, and for canary-birds on which to sharpen their beaks.

Cuttlefish. See Cephalopoda, Squid and Sepia.

Cutty-stool (kut‘i), a low stool of repentance, a seat formerly set apart in Presbyterian churches in Scotland, on which offenders against chastity were exhibited before the congregation and submitted to the minister's rebukes before they were readmitted to church privileges.

Cutwater, the sharp part of the bow of a ship, so called because it cuts or divides the water.

Cutworm, any worm or grub which is destructive to cultivated plants, as cabbage, corn, beets, etc.

Cuvier (kuv‘y), Georges Léopold Chrétien Frédéric Daubenton, Baron, a distinguished modern naturalist, was born in August, 1769, at Montbeliard, then belonging to the duchy of Württemberg. After studying at Stuttgart he became a private tutor in the family of Count d'Héricy, in Normandy, where he was at liberty to devote his leisure to natural science, and in particular to zoology. A natural classification of the vernes or worms was his first labor. The ability and knowledge shown in this work procured him the friendship of the greatest naturalists of France. He was invited to Paris, established at a central school there, and was received by the Institute as a member of the first class. His lectures on natural history, distinguished not less for the elegance of
Cuxhaven

their style than for profound knowledge and elevated speculation, were attended by all the accomplished society of Paris. In January, 1800, he was appointed to the Collège de France. Under Napoleon, who fully recognized his merits, Cuvier held important offices in the department of public instruction. In 1819 he was received among the forty members of the French Academy. He died at Paris in 1853. Among the numerous works by which he greatly extended the study of natural history we may mention Recherches sur les Ossements Fossiles; Discours sur les Révolutions de la Surface de la Géode; Leçons d'Anatomie Comparée; Histoire Naturelle des Poissons; Le Règne Animal, the last a general view of the animal kingdom, in which all animals were divided into the four great classes; Vertebrata, Mollusca, Articulata and Radiata.—His brother Frédéric (1773-1838) was also a naturalist of no mean order.

Cuxhaven (kux-häv'n), a German seaport, bathing-place, and pilot station in Hanover territory, at the mouth of the river Elbe. The harbor is large and commodious, and there are shipyards, a lighthouse, an old castle, fortifications, etc. Pop. 25,000.

Cuyabá (kë'yä-bä'), or JESUS DE CUTARA, a town of Brazil, capital of Matto Grosso, on the river Cuyaba, nearly 800 miles above its entrance into Paraguay. Pop. 17,515. There are rich gold-mines in the district.

Cuyp (kölp), ALEXANDER. See KUYP.

Cuzco (küs'kö), an ancient city in Peru, capital of a department of the same name, is situated in a wide valley about 11,000 feet above sea-level, between the Apurimac and Urubamba. The houses are built of stone, covered with red tiles, and are many of them of the era of the Incas. The ruins of the fortress built by the Incas, a stupendous specimen of cyclopean architecture, are still to be seen, as well as other massive specimens of ancient Peruvian architecture. The inhabitants manufacture sugar, soap, cotton and woolen goods, etc. There is a university, a cathedral, etc. Cuzco is the most ancient of the Peruvian cities, and was at one time the capital of the empire of the Incas. In 1524 it was taken by Pizarro. Pop. about 30,000. Area of the department, about 156,317 sq. miles; pop. 228,980.

Cyamus (s-a-mus), a genus of the Crustacea, the species of which are parasites on the whale. They are called Whale-lice.

Cyanic Series (s-tan'lIk), in botany, a series of colors in flowers of which blue is the type, passing into red or white, but never into yellow. It is distinguished from the santhis series, of which the type is yellow, passing into red and white, but never into blue. Cyanide (s-ta-nid), a combination of cyanogen with a metallic base.

Cyanin (s-ta-niln), the blue coloring matter of certain flowers, as of the violet, cornflower, etc. It is extracted from the petals by alcohol.

Cyanite, or KYANITE (s-ta-nil't, k'i-nil't), a mineral of the garnet family found both massive and in regular crystals. Its prevailing color is blue, but of varying shades. It is found only in primitive rocks.

Cyanogen (s-an'o-jen), a compound radical composed of one atom of carbon and one atom of nitrogen; symbol, CN (or Cy). It is a gas of a strong and peculiar odor, resembling that of crushed peach leaves, and burning with a rich, purple flame. It is inflammable and highly poisonous. It unites with oxygen, hydrogen, and most non-metallic elements, and also with the metals, forming cyanides. Combined with hydrogen it forms prussic (hydrocyanic) acid. See Prussic Acid.

Cyanometer (s-ta-nom'é-tér; measuring of blue') is the name of an instrument invented by Saussure for ascertaining the intensity of color in the sky. It consists of a circular piece of metal or pasteboard, with a band divided by radii into fifty-one portions, each of which is painted with a shade of blue, beginning with the deepest, not distinguishable from black, and decreasing gradually to the lightest, not distinguishable from white. The observer holds this up between himself and the sky, turning it gradually round till he find the tint of the instrument exactly corresponding to the tint of the sky.

Cyanosis (s-tan'ös'sis), a condition in which, from lack of proper aeration, the blood is blue instead of red; hence called the blue disease; the blue jaundice of the ancients. It is sometimes due to malformation of the heart, whereby the venous and arterial currents mingle.

Cyanotype Process (s-tan'ö-tip), a photographic picture obtained by the use of a cyanide. This process is in very common use by architects and engineers for copying plans, producing an image with white lines upon a blue ground. Sensitive paper is made by brushing it over with a solution of ferric oxide (10 gr. to the
Cyatheae (si-thē-ə). A genus of arborescent ferns, order Polypodiaceae, characterized by having the spores, which are borne on the back of the frond, enclosed in a cup-shaped indusium. There are many species scattered over the tropical regions of the world. C. medullata is a fine New Zealand species of comparatively hardy character. The soft, pulpy medullary substance in the center of the trunk is an article of food, somewhat resembling sago.

Cybele (si-bē-lē), originally a goddess of the Phrygians, like Isis, the symbol of the moon, but later introduced among the Greeks and Romans. Her worship was celebrated with a violent noise of instruments and rambling through fields and woods, and her priests were much in memory of Atys. (See Atys.) In later times she was represented as a matron, with a mural crown on her head, in reference to the improved condition of men arising from agriculture and their union into cities.

Cycadaceae (si-kād-ā-se-ə), or Cycads, (zikads), a nat. order of gymnospermous plants, resembling palms in their general appearance, and, as a rule, increasing by a single terminal bud. The leaves are large and pinnate, and usually rolled up when in bud like a crozier. The microscopic structure of the wood as well as the general structure of their cones ally them with the conifers. The plants of this order inhabit Indian, Australia, Cape of Good Hope and tropical America. Many are fossil.

Cycas (si-kās), a genus of plants, type of the Cycadaceae.

Cyclades (sik-lā-dez), or Kyklades, the principal group of islands in the Grecian Archipelago now belonging to the kingdom of Greece, so named from lying round the sacred island of Delos in a circle (Gr. cyclon or kuklos). The largest islands of the group are Andros, Paros, Mykonos, Tenos, Naxos, Melos and Thera and Ceos. They are of volcanic formation and generally mountainous. Some are very fertile, producing wine, olive oil and silk; others almost sterile. The inhabitants are excellent sailors. Area 1041 sq. miles. Pop. (1907) 130,378.

Cyclamen (sik-lā-men), a genus of bulbous plants, nat. order Primulaceae, or primroses. The species are low-growing, herbaceous plants, with very handsome flowers. Several of them are favorite spring-flowering greenhouse plants. An autumnal-flowered species (C. hederifolium) has become naturalized in parts of the south of England. The fleshy root-stalks, though acid, are greedily sought after by swine; hence the vulgar name, Sowbread.

Cycle (si’kl; Gr. cyclos or kuklos, a circle) is used for every uniformly returning succession of the same events. On such a succession or cycles of years rests all chronology, particularly the calendar. Our common solar year, determined by the periodical return of the sun to the same point in the ecliptic is well known to contain fifty-two weeks and one day, and leap year a day more. Consequently in different years the same day of the year cannot fall upon the same day of the week. And as every fourth year is a leap year, it will take twenty-eight years (4×7) before the days return to their former order according to the Julian calendar. Such a period is called a solar cycle. The cycle of the moon, or golden number, or metonic cycle, is a period of nineteen years after which the new and full moons return on the same days of the month.

Cyclic Poets (si’klk). See Greece (Literature).

Cycling (si’kling). The art of locomotion by means of a machine consisting usually of two, but sometimes of three or four wheels, connected by a light framework of steel and having a seat or seats for one or more riders. It is propelled by the pressure of the rider’s feet on two cranks attached to an axle. To the practised cyclist his machine is a rapid and easy mode of traveling, and the rate of twenty miles an hour has been attained both by bicyclists and tricyclists. The most remarkable example of what can
be done by a skilled cyclist is the journey of 12,000 miles performed by Mr. Thomas Stevens across the continents of America, Europe, and Asia on a bicycle. Commencing in April, 1884, he crossed first America, then Europe, then Asia, finishing at Yokohama in Japan in December of the same year. Motor cycles, moved by gasoline engines, have come into common use. The bicycle and the motor cycle are employed in military and police service. See Bicycle and Tricycle.

Cyclobranchiata (s'kló-brang-kl-'ta), an order of gasteropods in which the branchial or organs of respiration form a fringe around the edge of the body and the foot. The order consists principally of the limpets.

Cycloid (s'kloyd; Gr. cyclos, circle), a curve generated by a point in the plane of a circle when the circle is rolled along a straight line and kept always in the same plane. The genesis of the common cycloid may be conceived by imagining a nail in the circumference of a carriage-wheel; the curves which the nail describes while the wheel runs forward are cycloids. The cycloid is the curve of swiftest descent; that is, a heavy body descending by the force of its own gravity will move from one point of this curve to any other point in less time than it will take to move in any other curve which can be drawn between these points. Also, a body falls through any arc of an inverted cycloid in the same time whether the arc be great or small. In the figure let the circle of which the diameter is AB make one revolution upon the straight line ABA, equal in length to its circumference, then the curved line AAA, traced out by that point of the circle which was in contact with the point A in the straight line when the circle began to revolve is called a cycloid. The length of the cycloid is four times the diameter of the generating circle, and its area three times the area of this circle. This line is very important in the higher branches of mechanics.

Cyclobranchiata (s'kló-brang-kl-'ta), an apparatus for measuring and recording the distances traversed by wheeled vehicles and bicycles. It is also used in railroading. It is purely automatic, and by an ingenious attachment can be made to record and locate every inequality in the roadbed of a railroad.

Cycloid Fishes, an order of fishes according to the arrangement of Agassiz, having smooth, round, or oval scales, as the salmon and herring. The scales are formed of concentric layers, not covered with enamel and not spinous on the margins; they are generally imbricated, but are sometimes placed side by side without overlapping.

Cyclone (s'klón), a circular or rotary storm or system of winds, varying from 600 to 3000 miles in diameter, revolving round a center, which advances at a rate that may be as high as 40 miles an hour, and towards which the winds tend. Cyclones of greatest violence occur within the tropics, and they revolve in opposite directions in the two hemispheres—in the southern with, and in the northern against, the hands of a watch—in consequence of which, and the progression of the center, the strength of the storm in the northern hemisphere is greater on the south of the line of progression and smaller in the north than it would if the center were stationary, the case being reversed in the southern hemisphere. An anticyclone is a storm of opposite character, the general tendency of the winds in it being away from the center, while it also shifts within comparatively small limits. Cyclones are preceded by a singular calm and a great fall of the barometer.

Cyclopes (s'kló-péz), See Encyclopedia.

Cyclopean Works (s'kló-péz-an), in ancient architecture, masonry constructed with huge blocks of stone unshewn and uncemented, found in Greece, Sicily, Asia Minor, Peru, etc. A similar style of work is to be found in the British Isles, as the Rock of Cashel in Ireland or the Law's near Broughty-Ferry in Scotland.

Cyclops (s'klóps; Gr. Kyklóps, literally round-eyed, pl. Kyklópès; in English the word is used as a singular or a plural), in Greek myths, a fabled race of one-eyed giants, the sons of Uránus and Gé (Heaven and Earth), slain by Apollo. They were often represented as a numerous race living in Sicily and rearing cattle and sheep. Of such is the Cyclops of the Odyssey. Later traditions describe them as the servants of Vulcan working under Etna, and engaged in forging armor and thunderbolts.—Cyclopes is likewise the generic name of a certain minute Crustacean, order Branchiopoda, having but one eye, situated in the middle of its forehead.
**Cyclostomi** (si-klôs-tô-mi), **Cyclostomata** (si-klôs-tôm-a-ta), an order of cartilaginous fishes having circular mouths, as the lamprey. Called also *Marsipobranchia*.

**Cyder.** See *Cider*.

**Cydnus** (si'd-nus), a river in Cilicia, rising in the Taurus Mountains, anciently celebrated for the clearness and coolness of its waters.

**Cydonia** (si-dôn'i-a). See *Quince*.

**Cygnus** (si-g'nus; 'the Swan'), one of Ptolemy's northern constellations. Within this constellation is one of the richest portions of the Milky Way.

**Cylinder** (si-lin'd-er), a geometrical solid which, in popular languages, may be described as a long, round, solid body, terminating in two flat, circular surfaces, which are equal and parallel. There is a distinction between right cylinders and *oblique* cylinders. In the first case, the *axis*—that is, the straight line joining the center of the two opposite bases—must be perpendicular, and it may be regarded as described by the revolution of a rectangular parallelogram round one of its longer sides (the *axis*); in the second, the axis must form an angle with the inferior base.—In steam engines, the cylinder is the chamber in which the force of the steam is exerted on the piston.

**Cylindrical Lens** (si-lin'drik-al), a lens whose surfaces are cylindrical, instead of spherical, which is usually the case. A convex cylindrical lens brings the image of a source of light to a focus in a line instead of in a point. They are usually *plano-cylindrical*; that is, cylindrical on one side and flat on the other.

**Cylindrical Vaulting, in Architecture**, the most ancient mode of vaulting, called also a wagon, barrel or tunnel roof. It is a plain half-cylinder without either groins or ribs.

**Cyllene** (si-lê'nê). a mountain of Southern Greece, 7759 feet high.

**Cyma** (si'ma), in architecture, a wavy molding of which the profile of which is made up of a curve of contrary flexure, either concave at top and convex at bottom or the reverse. In the first case it is called a *cyma recta*; in the second a *cyma reversa*. It is a member of the cornice, standing below the abacus or corona.

**Cymbals** (sim'balz), musical instruments consisting of two basins of brass with a plane periphery, which emit a ringing sound when struck together. They are military instruments, but are now frequently used in orchestras.

**Cyme** (sim), in botany, a mode of in- florescence in which the principal axis terminates in a flower, and a number of secondary axes rise from the primary, each of these terminating in a flower, while from these secondary axes others may arise terminating in the same way, and so on, giving a flat-topped or rounded mass. Examples may be found in the common elder and the Caryophyllaceae.

**Cymri** (ki'm'ri), a branch of the Celtic family of nations which appears to have succeeded the Gaels in the great migration of the Celts westwards, and to have driven the Gaelic branch to the west (into Ireland and the Isle of Man) and to the north (into the Highlands of Scotland), while they themselves occupied the southern parts of Britain. At a later period they were themselves driven out of the Lowlands of Britain by the invasions of the Angles, Saxons and Jutes, and compelled to take refuge in the mountainous regions of Wales, Cornwall and the northwest of England. Wales may now be regarded as the chief seat of the Cymri.

**Cynancha** (sin-ang'kê), a name given to several diseases of the throat or windpipe, such as quinsy, croup, etc.

**Cynara** (ki'n'a-ra), a genus of Composite, in many respects like the thistle. The two best-known species are the artichoke and the cardoon.

**Cynewulf** (ki'n'e-wulf), an Anglo-Saxon or early English poet, whose name we only know from its being given in runes in the poems attributed to him, viz. *Elenè* ('Helena'), the legend of the discovery of the true cross; *Juliana*, the story of the martyr of that name; and *Crist* ('Christ'), a long poem incomplete at the beginning. The name Cynewulf also occurs as the solution of one of the metrical riddles in the Anglo-Saxon collection. Other poems, the *Andreas*, the *Wanderer*, the *Searfarer*, etc., have been ascribed to him without sufficient grounds. Cynewulf probably lived in the first half of the eighth century.
Cynics

From his poems we may gather that he spent the earlier part of his life as a wandering minstrel, devoting the later to the composition of the religious poems connected with his name.

Cynics (sin’iks), a sect of philosophers among the ancient Greeks, founded by Antisthenes, a scholar of Socrates, at Athens, about 380 B.C. Their philosophy was a one-sided development of the Socratic teaching by Antisthenes and his followers, who looked only to the severer aspect of their master’s doctrines, and valued themselves on their contempt of arts, sciences, riches, and all the social civilization of life. They made virtue to consist in entire self-denial and independence of external circumstances. In time this attitude degenerated into a kind of philosophic savagery and neglect of decency, and the Cynics fell into contempt.

Cynip (sin’ip), the gallfly, a genus of hymenopterous insects remarkable for their extremely minute head and large, elevated thorax. The females are provided with an ovipositor by which they make holes where they deposit their eggs in different parts of plants, thus producing those excrescences which are known as galls. The ball of commerce used in manufacturing ink is caused by the Cynips galla tinctoria piercing a species of oak which grows in the Levant. The Cynips roseus, or bedeguer gallfly, produces the hairy excrescences seen on the rosebush and the sweet-brier. See Bedeguar.

Cynocephalus (si-nó-sef’-ál-lus), a genus of baboons. See Baboon.

Cynoglossum (si-nó-glos’-um), hound's-tongue, a genus of plants, nat. order Boraginaceae, consisting of herbs from the temperate zones. C. officinale and C. montanum are British plants. The former has a dish-shaped bell like that from mice, and was at one time used as a remedy in scrofula. There are about fifty other species, all coarse plants.

Cynomorium (si-nó-mór’-i-mum), a genus of plants, nat. order Cynomoraceae. C. coccineum, the fungus melitensis of the old herbalists, is a small plant which grows in Sicily, Malta and Gozo, and was valued as astringent and styptic in dysentery and hemorrhage.

Cynosarges (si-nu-sar’-jés), in ancient Athens, a gymnasium in which Antisthenes, the founder of the Cynics, taught.

Cynoscephalæ (si-nos-sef’-a-le; Greek, dog’s heads’), a range of hills in Thessaly, memorable for two battles fought there in ancient times. The first was in B.C. 364, between the Thebans and Alexander of Pherae, in which Pelopidas was slain; and the second in B.C. 197, in which the last Philip of Macedon was defeated by the Roman consul Flamininus.

Cynosurus (si-nó-sor’-us), Cynosurus (lit., dog’s tail), an old name of the constellation Ursus Minor, or the Lesser Bear, containing the North Star.

Cynosurus, a genus of grasses. See Dog’s-tail Grass.

Cynthius (sin-thi-us), a surname of Apollo, from Mount Cynthus, island of Delos, on which he was born. For the same reason Diana, his sister, is called Cynthia.

Cyperaceae (si-per-a-se-e), the sedges, a natural order of monocotyledonous plants including fully 2000 known species. The members of this order are grassy or rush-like plants, generally growing in moist places on the margins of lakes and streams. Their stem is a cylindrical or triangular culm with or without knots; the leaves are sheathing. They are of little or no economical use, with the exception of Cypérus papyrus, which furnished the papyrus of Egypt.

Cyperus (si-pér’-us), a genus of plants, type of the order Cyperaceae. They are herbs with compressed spikelets of many flowers, found in cold climates, and characterised by the possession of bisexual flowers. Several kinds are cultivated in cool houses for decorative purposes; but it is essential that water be freely supplied as the species are mostly natives of swampy districts. C. alternifolius, the umbrella palm, is useful in aquaria.

Cypress (si’pres), a genus of coniferous trees. The Cupressus sempervirens, or common European cypress, is a dark-colored evergreen with extremely small leaves, entirely covering the branches. It has a quadrangular or, where the top branches diminish in length, pyramidal shape. Cypress-trees, though of a somewhat somber and gloomy appearance, may be used with great effect in shrubberies and gardens. They are much valued also on account of their wood, which is hard, compact, and very durable, of a reddish color and a pleasant smell. It was used at funerals and as an emblem of mourning by the ancients. Among other members of the genus are the Indian cypress (C. glauca); the C. pendula, a native of China and Japan; and the C. thurifera, or incense-bearing cypress, a native of Mexico; the ever-
Cyprian
green American cypress or White Cedar (C. thyoides), etc. The Taxodium distichum, or deciduous cypress of the United States and Mexico, is frequently called the Virginian cypress. Its timber is valuable, and under water is almost imperishable. In parts of the United States this cypress constitutes forests hundreds of miles in extent.

Cyprian (sip’ri-an), St., a father of the African Church, born at Carthage about the beginning of the third century, was a teacher of rhetoric there. About 246 he was converted to Christianity, when he distributed his property among the poor, and began to live in the greatest abstinence. The church in Carthage soon chose him presbyter, and in 248 he was made bishop. During the persecutions under Decius and Valerian he had twice to leave Carthage, but continued by his extensive correspondence to govern the African Church. He was beheaded in 258, for having preached the gospel in his gardens at Carthage. Among his writings are eighty-one Epistolae or official letters, besides several works on doctrine.

Cyprinidae (si-prin’t-dé), the carps, a family of soft-finned abdominal fishes, characterized by a small mouth, feeble jaws, gill-rays few in number; body covered with scales; and no dorsal adipose fin, such as is possessed by the silures and the salmon. The members are the least carnivorous of fishes. They include the carps, barels, tenches, breams, loaches, etc. The type genus is Cyprinus.

Cyprinodontidae (si-prin-o-don’ti-dé), a family of malacoerythous fishes, allied to the Cyprinidae, or carps.

Cyprinus (si-pri’nu:s), the carp genus of fishes, type of the family Cyprinidae (which see).

Cypripedium (si-pri-pé’di-um), lady’s slipper, a genus of plants of the nat. order Orchidaceae. Three species are natives of the United States. C. arietinum, the ram’s-head, is found from Canada to Vermont. One species (C. calceolus) is a native of Britain.

Cypris (sip’ris), a genus of minute fresh-water crustaceans popularly known as water fleas. They have the body enclosed in a delicate shell and swim by means of cilia. The Cypris is common in stagnant pools, and is very often found in a fossil state.

Cyprus (si’prus), an island lying to the south of Asia Minor, and the most easterly in the Mediterranean. Its greatest length is 145 miles, maximum breadth about 60 miles; area, 3584 sq. miles. The chief features of its surface are two mountain ranges, both stretching east and west, the one running close to the northern shore, and extending through the long northeastern horn or prolongation of the island, the other and more massive (Mount Olympus) occupying a great part of the south of the island, and rising in Troodos to 6390 feet. Between them is the bare and mostly uncultivated plain called Messaria. There is a deficiency of water. The climate is in general healthy. The forests are now under government supervision, and the island is esteemed one of the richest and most fertile in the Levant. Agriculture is the principal industry. Locusts formerly caused considerable damage to crops, but are now nearly extinct. Wheat, barley, cotton, tobacco, olives, raisins and carobs are the most important vegetable products. The wine is famous. Silkworms are reared, and a coarse kind of silk is woven. Salt in large quantities is produced. The minerals are valuable; the copper mines (the name copper is derived from that of this island), were anciently a source of great wealth. A recent attempt to work them has met with failure. Large numbers of sheep and goats are reared on the extensive pasture lands of the island. The principal towns are Lefkosia or Nicosia, the capital, the only considerable inland town, and the seaports Larnaca and Limassol. The chief exports are carobs, wine and cotton, with cheese, raisins, cocoons, wool, etc.

After belonging successively to the Phoenicians, Greeks, Egypt, Persia and
Cypselus

again Egypt. Cyprus in 57 B.C. became a Roman province, and passed as such to the eastern division of the empire. In 1181 it was bestowed by Richard of England (who had conquered it when engaged in the third crusade) on Guy de Lusignan, and after his line was extinct it fell into the hands of the Venetians (1489), with whom it remained till it was conquered by the Turks in 1571 and annexed to the Ottoman Empire. In 1878 it was placed under the control of Great Britain by a treaty which recognized the sovereignty of the Sultan and granted to Turkey a specified subsidy, which, however, was not paid directly but retained as an offset against British claims on the Ottoman Empire. During the European war Cyprus was formally annexed by Britain (1914).

Cyprus has become very prosperous during recent years. Modern roads, harbor works and schools have been built, and irrigation schemes have been adopted in the development of agricultural industry. The local council consists of a commissioner and a legislative council of 18 members. The total exports for 1914 amounted to $2,500,000; imports, $3,300,000. Pop. (1911), 275,000, of whom more than three-fourths belong to the Cypriote branch of the Greek Orthodox Church.

Cypselus (sēp's-e-lus), a genus of birds, type of the family Cypselidae, including the swifts and their congeners. One peculiarity in this family is that the hind toe is turned forward along with the three anterior toes.

Cyr (sĕr), St., a French village in the department of the Seine and Oise, 1 league west of Versailles; famous for the semi-annual for the education of ladies of rank which Louis XIV founded here. During the revolution this institution was done away with, and the fine buildings finally converted into a military school by Napoleon (1803). Pop. of the commune, 4253.

Cyrenaica (si-re-nä'ka), once a powerful Greek state in the north of Africa (corresponding partly with the modern Barca), west of Egypt, comprising five cities (Pentapolis), among which was Cyrene, a Spartan colony founded in 631 B.C. In later times it came into the hands of the Ptolemies, and in 466 B.C. the Romans obtained it. The Arab invasion ruined it (647). Cyrenaica is at present a vast but as yet very imperfectly explored field of antiquities.

Cyrenaica (si-re-nä'ka), a philosophical sect founded about 350 B.C. by Aristippus, a native of Cyrene and a pupil of Socrates. See Aristippus.

Cyril (si-ril'ii), the name of three saints or fathers of the Christian church. 1. CYRIL OF JERUSALEM, born there about the year 315 A.D., was ordained presbyter in 345, and in 350 or 361 became Patriarch of Jerusalem. He engaged in a warm controversy with Acacius, the Arian Bishop of Cessarea, by whose artifices he was more than once deposed from his episcopal dignity. He died in 386 or 388. We have some writings composed by him.

2. CYRIL OF ALEXANDRIA was educated by his uncle Theophilus, Patriarch of Alexandria, and in 412 A.D. succeeded him as patriarch. In this position his ambitious spirit caused the Christians into violent quarrels. At the head of the populace he assailed the Jews, destroyed their houses and their furniture, and drove them out of the city. Orestes, the prefect, having complained of such violence, was attacked by 500 furious monks. The assassination of Hypatia, the learned lecturer on geometry and philosophy, took place, it is said, at the instigation of Cyril. His quarrel with Nestorius, and with John, Patriarch of Antioch, regarding the twofold nature of Christ, convulsed the church, and much blood was shed between the rival factions at the Council of Ephesus in 431, the emperor having at last to send troops to disperse them. Cyril closed his restless career in 444.

3. St. Cyril, the Apostle of the Slavs, a native of Thessalonica. He converted the Chazars, a people of Hunnish stock, and the Bulgarians, about A.D. 896. He died about 988. He was the inventor of the Cyrillic Letters which took their name from him, and is probably the author of the Apologies which bear his name.

Cyrillian Letters (si-ril'i-an), characters used in one of the modes of writing the Slavonic language. In Poland, Bohemia and Lusatia, Roman or German letters are used, but among Russians, Bulgars, and all the Slavonic nations belonging to the Greek Church, the Cyrillic alphabet, a modification of the Greek one, is in use. Besides these there is the Ogholdic alphabet, in which the oldest literature of the Slavonic church is written. See Slavo-

Cyril, a celebrated city in Africa, about 10 miles from the north coast, founded by Battus and a body of Dorian colonists, B.C. 631. Numerous interesting remains have been discovered here. The town now occupying the site of the ancient Cyrene is a miserable place in the vilayet of Barca. See Cyrenaica.
Cyrus, King of Persia, a celebrated conqueror. The only ancient original authorities for the facts of his life are Herodotus and Ctesias. According to Herodotus, he was the son of Cambyses, a distinguished Persian, and of Mandane, daughter of the Median King Astyages. His grandfather, made apprehensive by a prophecy that his grandson was to dethrone him, gave orders that Cyrus should be destroyed after his birth. But the boy was preserved by the kindness of a herdsman, and at length sent to his parents in Persia. Here Cyrus soon gathered a formidable army, conquered his grandfather (B.C. 550), and thus became king of Media and Persia. In 546 he conquered Creæus of Lydia, and two years later took Babylon. He also subdued Phoenicia and Palestine, and restored the Jews from their Babylonish captivity. He was slain in battle with a Scythian nation in B.C. 529. Such is the account given by Herodotus; but the narrative of Ctesias differs in not making Cyrus a relative of Astyages and in some other points. The Cyropædia of Xenophon, which professes to give an account of the early life of Cyrus, is merely a philosophical romance.

Cyrus, called the Younger, to distinguish him from Cyrus the founder of the Medo-Persian monarchy, was the second son of Daricus Nothus or Ochus. Having formed a conspiracy against his elder brother, Artaxerxes Mnemon, Cyrus was condemned to death, but released at the request of his mother, Parysatis, and made governor of Asia Minor. Here he secretly gathered an army, an important part of which consisted of 13,000 Greek auxiliaries, and marched eastwards. His brother with a large army met him in the plains of Cunaxa (B.C. 401), and in the battle which followed, although the troops of Cyrus were victorious, Cyrus himself was slain. The republicans, the Greek, the Persian, and the Greek auxiliaries of Cyrus from the interior of Persia to the coast of Asia Minor is the subject of Xenophon’s Anabasis.

Cysticercus (sís-tikér’kus), an immature form of tapeworm found in certain animals.

Cystic Worm (sís’tik), an immature or half-developed form of tapeworm, once erroneously supposed to be a distinct species of intestinal worm.

Cystidea (sís-tíd’é-é), a family of fossil echinoderms, with feebly developed arms, occurring in the Silurian and Carboniferous strata.

Cystitis (sís-tít’äs), inflammation of the bladder.

Cystopteris (sis-tóp’tér-us), the bladder-fern, a genus of polypodaceous, delicate, flaccid ferns.

Cystotomy (sis-tó-töm’-mi), the operation of cutting into the bladder for the extraction of a calculus or other purpose.

Cythera (si-thér’ra). See Cerigo.

Cytisine (sít’i-sín), an alkaloid detected in the ripe seeds of the Laburnum. It is of a nauseous taste, emetic and poisonous.

Cytisus (sít’i-sús), a genus of plants belonging to the nat. order Leguminosae, suborder Papilionaceae. The members of the genus are shrubs or small trees, sometimes spiny, with leaves composed of three leaflets, and with yellow, purple or white flowers. They belong to Europe, Asia and North Africa, and are very ornamental plants. The best-known species is the common laburnum (C. Laburnum; see Laburnum). Another species is the Alpine laburnum (C. Alpinus). The common broom (C. Scoparius) also belongs to this genus. See Broom.

Cyzicus (sî’ti-kús), a peninsula of Asia Minor, 60 miles southwest of Constantinople. It was once an island, and the site of an ancient town of the same name.

Czar, or Tzar (sär), an alternative title of Emperor as applied to the rulers of Russia before the revolution (see Russia), not improbably a corruption of the Roman title Caesar. It was first adopted in 1547 by Ivan the Terrible. The wife of the Czar was called Czarina or Czaritz. The heir-apparent of a Czar or Czaritza, the heir-apparent and his wife were known as the Czarowits (Cesarévitch) and the Czarévnà (Cesarévnà). Imperial princesses were grand dukes.

Czartoryski (chár-to-rísh’kë), Adam Czartoryski (chár-to-rísh’kë), Adam George, Prince, a celebrated Polish statesman and patriot, born in 1770. His education was completed at the University of Edinburgh and in London. He fought bravely under Kosciusko, and after the partition of his country in 1795 was sent to St. Petersburg, where he formed a close friendship with Prince Alexander, and was made minister of foreign affairs. In 1805 he resigned his office, and withdrew soon after from public affairs. On the outbreak of the Polish revolution in 1830 he
took an active part and became the head of the national government. After the failure he lived at Paris. He died in 1861.

Czaslau (chas'lou), a town of Bohemia, 46 miles E. S. E. of Prague. Here Frederick the Great defeated the Austrians (1742). Pop. 9105.

Czechs (cheeka), the most westerly branch of the great Slavonic family of races. The Czechs have their headquarters in Bohemia, where they arrived in the fifth century. (See Bohemia.) The origin of the name is unknown. The total number of the Czechs (including Moravians, Slovaks, etc.) is about 6,000,000, nearly all of whom live in the Austrian Empire. They speak a Slavonic dialect of great antiquity and of high scientific cultivation. The Czech language is distinguished as highly inflective, with great facility for forming derivatives, frequentatives, inceptive and diminutives of all kinds. Like the Greek, it has a dual number, and its manifold declensions, tenses and participial formations, with their subtle shades of distinction, give the language a complex grammatical structure. The alphabet consists of forty-two letters, expressing a great variety of sounds. In musical value the Czech comes next to Italian.

Czegled (tsug'lad), a market town, Hungary, 39 miles S. E. of Budapest, in a district yielding grain and wine. Pop. 30,100.

Czenstochowa (chen-sto-ho'va), a town in Russian Poland, government of Piotrkow. There is here a convent containing a famous picture of the Virgin, which is visited by vast numbers of pilgrims. Pop. 53,650.

Czernowitz (cher'no-vits), a city of Austria, the chief town of Bukowina, 138 miles S. E. of Lemberg. It has manufactures of clocks, silverplate, carriages, toys, etc. Pop. (including suburbs), 69,619, a considerable proportion being Jews.

Czerny (cher'ni), George, Hospodar of Servia, born in the neighborhood of Belgrade about 1770; beheaded by the Turks, in July, 1817. His true name was George Petrovitch, but he was called Czerny or Kara George, i.e., Black George. In 1801 he organised an insurrection of his countrymen against the Turks, took Belgrade, and forced the Porte to recognise him as Hospodar of Servia. In 1813, however, he had to retire before a superior force, and took refuge in Austria. Returning to his country in 1817, he was taken and put to death. Czerny (cher'ni), Karl, pianist and musical composer, born in 1791; died in 1857. Among his pupils were Liszt, Thalberg and other distinguished musicians.

Czirknitz. See Zirknitz.
D, the fourth letter in our alphabet, representing a dental sound formed by placing the tip of the tongue against the root of the upper teeth, and then forcing up vocalized breath, or voice, into the mouth, the soft palate being raised to prevent its escape through the nose. It is formed in the same way, except that it is uttered with breath merely and not with voice. As a numeral D represents 500.

**Dab** (*Pleuronectes limanda*), a fish belonging to the family of the Pleuronectidae, or flat-fishes, comprising also the soles, turbots, halibuts, plaice and flounder, the last two being included in the same genus with the dab. It is of tattoos its extraordinary fertility arises.

Dacca was at one time celebrated for its hand-woven muslins, which are still hardly to be equalled in their combination of durability and delicacy; but this branch of industry has considerably decayed. Pop. 10,807,825, Mohammedans being in a decided majority.—**DACCA**, its capital, is about 150 miles northeast of Calcutta. The city has much decayed with the decrease of its staple trade in the celebrated Dacca muslin; suburbs which once extended northwards for 15 miles are now buried in dense jungle. Dacca, being free from violent heats, is one of the healthiest and most pleasant stations in Bengal. Pop. 108,501.

**Dace** (*Leuciscus vulgaris*), a small river fish of the family Cyprinidae, and resembling the roach, but longer and thinner. It is a gregarious

---

**Dabchick** (dab'chik). See **Grebe**.

**Da Capo** (da ka'po; Italian, 'from the head or beginning'), in music, an expression written at the end of a movement to acquaint the performer that he is to return to the beginning, and end where the word *fine* is placed.

**Dacca** (dak'ka), a commissioner's division of Hindustan in Bengal, at the head of the Bay of Bengal; area, 15,000 square miles. It is one of the richest districts in India, and produces such quantities of rice as to be called the granary of Bengal. The surface is an uninterrupted flat, and is intersected by the Ganges and Brahmapootra—from whose periodical inundations its extraordinary fertility arises.

Dacca was at one time celebrated for its hand-woven muslins, which are still hardly to be equalled in their combination of durability and delicacy; but this branch of industry has considerably decayed. Pop. 10,807,825, Mohammedans being in a decided majority.—**DACCA**, its capital, is about 150 miles northeast of Calcutta. The city has much decayed with the decrease of its staple trade in the celebrated Dacca muslin; suburbs which once extended northwards for 15 miles are now buried in dense jungle. Dacca, being free from violent heats, is one of the healthiest and most pleasant stations in Bengal. Pop. 108,501.

**Dace** (*Leuciscus vulgaris*), a small river fish of the family Cyprinidae, and resembling the roach, but longer and thinner. It is a gregarious

---

**Dachshund** (dak'shunt). See **Badger**

**Dacio** (*dazhi-a*), in ancient times, a region north of the Danube, inhabited by the Daci or Gete, afterwards a Roman province. It was conquered by the emperor Trajan in 101 A.D., but in 274 A.D., in the reign of Aurelian, had to be abandoned by the Roman colonists.

**Dacier** (*daz-ya*), Anna*, a learned Frenchman, born in 1651. He studied at Saumur, and in 1672 he went to Paris, where the Duke of Montausier...
entrusted him with the editing of the Latin writer Pom-péius Festus ad usum Delphini (see Delphini Classics). In 1683 he married Anne Lefèvre, the daughter of his former teacher, afterwards became perpetual secretary of the French Academy, published many editions and translations of the ancient classics, and died in 1722.—His wife, Anne, born in 1651, published an edition of Callimachus, and was entrusted with several editions of the classics ad usum Delphini. Her learned works were not interrupted by her marriage in 1683. Her translation of Homer and writings on Homeric poetry attracted a good deal of attention. Among her other works were translations of Terence, Plautus, two plays of Aristophanes, Anacreon and Sappho. She died in 1720.

Dacoity (da-kol’i), originally in the criminal code of India, a robbery committed by an armed band or gang, and technically under the present law of India any robbery in which five or more persons take a part. The term has also been applied more widely.

Dacrydium (da-krā’di-um), a genus of trees of the pine or yew family.

Daeryoma (da-krē-o’ma), a disease of the lachrymal duct of the eye, by which the tears are prevented from passing into the nose and consequently trickle over the cheek.

Dactyl (da’ti-l), in versification, a foot consisting of one long followed by two short syllables, or, in English, one accented and two unaccented, as happy.

Dactylogy (da-ti-l’o-jil), is the art of communicating ideas or conveying by means of the fingers. It is of great value to the deaf and dumb. See Deaf and Dumb.

Daddy-long-legs, a name given to a species of the crane-fly (Tipula oleracea). See Crane-fly.

Dado (da’dō), in classical architecture, the middle part of a pedestal, that is to say, the solid rectangular part between the plinth and the cornice; also called the die. In the interior of houses it is applied to a skirting of wood several feet high round the lower part of the walls, or an imitation of this by paper or painting.

Dædalus (dē’dal-us), a mythical Greek sculptor, the scene of most of whose labors is placed in Crete. He is said to have lived three generations before the Trojan war. He is credited with building the famous labyrinth in Crete, and inventing wings for flight, which his son Icarus foolishly attempted to use and was drowned in the Icarian Sea.

Daffodil (daf’o-dil), the popular name of a European plant which is one of the earliest ornaments of our gardens, being a favorite object of cultivation. Botanically it is Narcissus pseudonarcissus, order Amaryllidaceae. Many varieties of the daffodil are in cultivation, differing chiefly in bulk and in the form of the flower, which is of a bright primrose-yellow color. There are other forms of the name in local or partial use.

Dagger (dä’ger), a weapon resembling a short sword, with sharp-pointed blade. In single combat it was wielded in the left hand and used to parry the adversary’s blow, and also to despatch him when vanquished.

Daghestan (dä-ges’t-an’), a province of Russia, in the Caucasus, stretching along the west side of the Caspian Sea; area, 11,036 square miles. Its fertile and tolerably cultivated valleys produce good crops of grain, and also silk, cotton, flax, tobacco, etc. The inhabitants, almost all professing Mohammedans, consist chiefly of races of Tartar origin and of Circassians. Capital Derbend. Pop. 605,100.

Dago (da’go), an island belonging to Russia, to the s.w. of the entrance of the Gulf of Finland, with productive fisheries. The inhabitants, almost all Swedes, number about 14,000.

Dogba (da-gō’ba), in Buddhist countries and those which at one time held the Buddhist faith, a solid structure erected to contain some sacred relic or relics, as distinguished from the term stupas or tope, which in its specific application is usually restricted to monuments which commemorate some event or mark some spot sacred to the followers of Buddha. Dogbas are built of brick or stone, are circular in form, generally with a dome-shaped top, and are erected on
Dahabieh (dá-há-bé’e), a boat used on the Nile for conveyance of travelers. It varies considerably in size; has one or two masts, with a very long slanting yard on each mast supporting a triangular sail, and accommodates from two to eight passengers.

Dahlgren, John Adolf, American admiral, born in Philadelphia in 1809. Died 1870. On his father's side he was of Swedish descent, his father being Swedish consul at Philadelphia. In 1826 he entered the navy as midshipman; in 1834 was engaged on the U. S. Coast Survey. In 1847 he was assigned to the ordnance department. In 1850 he invented a howitzer, and in the same year the high-powered shell gun which bears his name. This gun, a cast-iron smooth-bore cannon, was so cast that the thickness at all points would vary in direct proportion to the varying force between breech and muzzle of the powder discharged at the breech. Dahlgren was also instrumental in securing the adoption of the 11-inch gun for the navy. For distinguished services during the Civil War he was promoted to the rank of rear-admiral. He was chief of the ordnance bureau at the time of his death. His son, Ulric Dahlgren (born 1842; died 1864) was a military officer during the Civil War. He lost his life in a raid undertaken for the purpose of releasing national prisoners at Libby Prison and Belle Isle.

Dahlia (dá’li’a; so called after the Swedish botanist Dahl), a genus of plants belonging to the nat. order Composite, suborder Corymbiformes, natives of Mexico. By cultivation an immense number of varieties has been produced, all deriving their origin from D. coccinea and D. variabilis. The flowers are large and beautiful, sporting into innumerable varieties. It does not stand frost, and has to be taken up during the winter.

Dahmann (dá’mán), Friedrich, Christian, a distinguished historian of Germany, born in 1785; died in 1860. He was professor at Göttingen and afterwards at Bonn, and distinguished himself as an advocate of liberal measures in politics. Among his principal works is a history of the English revolution.

Dahn (dän), Felix, a German historian, born at Hamburg, in 1824, and became law professor at Würzburg and at Königsberg. His works include The Kings of the Germans, The Migration of Nations, Ancient History of the Germanic and Romanic Peoples, works on...
the philosophy of law poems, novels, plays, etc.

**Dahomey** (dah-boh'me), a former negro kingdom of West Africa with an area of about 58,000 sq. miles and a coast line of 70 miles. It lies between German Togoland on the w. and British possessions on the E. and extends to the Niger River on the N. The Dahomans are all pagans and the former king was an absolute tyrant, whose army was partly made up of Amazons, while wholesale human sacrifices formed part of the state ceremonies. The last king, whose capital was Abomey, was deposed by the French in 1900, and the country is now under French rule.

**Daimiel** (dah-mel''), a town of Spain, New Castile, province of Ciudad Real, and 20 miles E. N. E. of the town of Ciudad Real, on left bank of the Jucar. The manufactures are linen and woollen fabrics, etc. Pop. 11,825.

**Daimios** (dah-mi-oss), a class of feudal lords formerly existing in Japan, but now deprived of their privileges and jurisdiction. By decree of August, 1871, the daimios were made official governors on a salary for the state in the districts which they had previously held as feudal rulers.

**Dairen** (dair'en), or **Tairen**, a city and seaport of Manchuria, situated on the Liao-tung Peninsula and on the Ta-lien-wan Bay in the Yellow Sea, 25 miles N. of Port Arthur. This city, originally named Dalny, was built by order of the Czar of Russia, for a commercial seaport, on the concession leased from China in 1898, and was thrown open as a port, free to the commerce of all nations December 1, 1901. It was divided into administrative, wholesale, retail and residential sections, the principal official buildings being erected and the streets laid out before opening. A fine town, with handsome buildings and all modern improvements, soon sprang up. The harbor, one of the best and deepest of the Pacific, free of ice the year round, was provided with breakwaters, great stone piers and large docks, including two dry docks. The town formed one of the eastern termini of the Trans-Siberian Railway, and was provided with elevators, gas and electric lighting, etc. The city was occupied by Japanese troops in 1904, during the Russo-Japanese war, and retained by Japan after the war. They renamed it Dairen, and it is now a place of much commercial importance. Pop. about 60,000.

**Dairy** (dair'i), the department of a farm which is concerned with the production of milk. After determin-
This remarkable device has proved thoroughly practicable, and is in use on a number of large dairy farms.

ELECTRIC MILKING MACHINE
A picture of one form of it and of the manner in which it is applied to the cow's udder is shown on the opposite page. The milking machine is a practical milker, working by air pressure through a pulsator, giving an upward squeeze to the teat. The four quarters of the cow's udder are emptied simultaneously, the suction and pressure on the teat being applied about fifty-five times a minute. With this apparatus one man can milk from fifty to sixty cows in two hours.

Dais (dā'is), a platform or raised floor at the upper end of an ancient dining-hall, where the high table stood; also a seat with a high wainscot back, and sometimes with a canopy, for those who sat at the high table. The word is also sometimes applied to the high table itself.

Daisy (dā'si), the name of a plant which is very familiar, and a great favorite (Bellis perennis). In the days of chivalry it was the emblem of fidelity in love. Its name is literally day's eye, because it opens and closes its flower with the daylight. It has been naturalized in parts of New England. The common daisy of the United States, the big or ox-eye daisy, also an introduced plant, is properly an aster.

Dák (dāk'), in the East Indies, the post; a relay of men, as for carrying letters, despatches, etc., or travelers in palanquins. The route is divided into stages, and each bearer, or set of bearers, serves only for a single stage. A dák-bungalow is a house at the end of a stage designed for those who journey by palanquin.

Dakar (dā-kār'), a fort, naval station and seaport in the French West-African colony of Senegal; capital of the settlement and since 1904 the seat of government. Pop. (1910) 24,500.

Daker-hen (dā-kēr-hēn), a name sometimes given to the corn-crake or landrail, a bird of the family Railidae.

Dakoity (dā-kōi'tē). See Dacoity.

Dakota Formation, a group of rocks belonging to the cretaceous strata and outcropping along the western border of the great plains from Texas to Alberta. West of the Rocky Mountains the Dakota rocks include workable strata of coal or lignite. In a great portion of the Rocky Mountain system the Dakota rests upon Lower Cretaceous, and sometimes Jurassic, strata.

Dakota Indians (dā-kō'tə). See Sioux.
Houses of Parliament. He outstayed his term of office to give the government the aid of his experience in the annexation of Oude; and when he returned to Europe in 1856 it was with a constitution so completely shattered that he was never able to appear again in public life, and died on December 19, 1860. As he left no direct male issue, his marquisate expired with him. In 1866 he was a pupil of Professor Agassiz, was in Alaska with a telegraphic expedition 1866-68; on the Coast Survey in Alaska 1871-84; palaeontologist on the Geological Survey 1884-98; since 1880 a curator of the National Museum. He is a member of the National Academy of Sciences. His works include Alaska and its Resources, Coast Pilot of Alaska, Tribes of the Extreme Northwest, Contributions to North American Ethnology, etc.

Dallas (dāl'as), George Mifflin, Vice-President of the United States, was born in Philadelphia in 1792, son of Alexander James Dallas, Secretary of the Treasury under President Madison and founder of the second United States Bank. Becoming prominent in the Democratic party, he was elected United States Senator in 1831, was made Minister to Russia in 1837, and elected Vice-President, under President Polk, in 1844. He was Minister to England 1858-61. He died in 1864.

Dall, William Healy, naturalist, born at Boston, Massachusetts, in 1845. He became a pupil of Professor Agassiz, was in Alaska with a telegraphic expedition 1866-68; on the Coast Survey in Alaska 1871-84; palaeontologist on the Geological Survey 1884-98; since 1880 a curator of the National Museum. He is a member of the National Academy of Sciences. His works include Alaska and its Resources, Coast Pilot of Alaska, Tribes of the Extreme Northwest, Contributions to North American Ethnology, etc.

Dalmatia (dal'ma-shə), a province of Austria, with the title of kingdom, the most southern portion of the Austrian dominions. It consists of a long, narrow, triangular tract of mountainous country and a number of large islands along the northeast coast of the Adriatic Sea, and bounded N. by Croatia, and N.E. by Bosnia and Herzegovina. In breadth it is very limited, not exceeding 40 miles in any part; its whole area is 4940 English square miles. The inland parts of Dalmatia are diversified by undulating ground, hills, and high mountains; but though there are some rich and beautiful valleys, the country on the whole must be considered poor and unproductive. The Narenta, the Zermagna, the Karada and the Cetina are the principal rivers, all with short courses. On some of these the scenery is singularly wild and picturesque. The interior is occupied by a much-neglected population, and agriculture is in a very backward state. Timber is scarce, and the country does not produce sufficient grain for its own wants. Apples, pears, peaches, apricots, oranges, pomegranates, etc., are among the fruits; the wines are strong, sweet and full bodied. On the coast fish, especially the tunny and the sardine, abound. The trade of the country is mostly confined to the coast towns, where the population is mainly of Italian extraction. Chief of these are Zara (the capital), Sebenico, Cattaro, Spalato and Ragusa. Among the na-
merous islands sprinkled along the coast many are valuable for their productions, such as timber, wine, oil, cheese, honey, salt and asphalt. The population is divided between the Italians of the coast towns and the peasants of the interior, Slovenian Slavs speaking a dialect of the Slavonic. The majority are Roman Catholics. After passing successively through the hands of Hungarian and Venetian rulers, and of the first Napoleon, Dalmatia finally, in 1814, fell under Austrian rule. Pop. 591,597.

Dalmatian Dog, a variety of dog called also the Danish, spotted, or coach-dog. See Coach-dog.

Dalmatic (dal-mat'ik), or Dalmatica, an ecclesiastical vestment worn by the deacon at mass, so called because it was an imitation of Dalmatian costume. It is worn also by bishops under the chasuble. It is a long robe with large, full sleeves with black or red longitudinal stripes and partially unclosed sides. A similar robe was worn by kings and emperors at high solemnities, and continues still to be worn by the sovereigns of England on such occasions.

Dalmatica, Cathedral of Chartres (twelfth century).

Dalriada (da-lri-a-a), the ancient name of a territory in Antrim, called after Carbery Riada, one of its chiefs. In the sixth century a band of Irish from this quarter settled in Argyshire under Fergus MacErc, and founded the kingdom of the Scots of Dalriada. After being almost extinguished, the Dalriadic line revived in the ninth century with Kenneth Macalpine, and, seizing the Pictish throne, gave kings to the whole of Scotland.

Dairy (dal-re), a town of Scotland, county of Ayr, on the Garnock, 19 miles s. w. of Glasgow, with ironworks and woolen and worsted mills. Pop. 5316.

Dalrymple (dal-rim'pl), Sir David, Lord Halles, a Scottish lawyer, antiquary and historian, born at Edinburgh in 1726. He studied at Eton and Utrecht. In 1748 he was called to the bar, and in 1766 was made a judge of the Court of Session. His publications were numerous, but consist principally of new editions and translations. Of his original production the Annales of Scotland from Malcolm Canmore to the Accession of the House of Stuart, is the most important. He died in 1792.

Dalrymple, James, first Viscount Stair, a Scottish lawyer and statesman, was born in 1619. In the English Civil war he sided with the Parliament, but afterwards joined the royalists; was made a knight on the Restoration, and in 1671 president of the Court of Session. In 1682 he fell out of favor with the king, and retiring to Holland became an adherent of the Prince of Orange, who, after the revolution, raised him to the peerage. He died in 1695. The connection of his son, the Master of Stair, with the massacre of Glencoe brought some odium upon him in his last years. He wrote: The Institutes of the Laws of Scotland (which is still a standard authority), Vindication of the Divine Perfections and An Apology for his Own Conduct.

Dalrymple, John, first Earl of Stair, born in 1643; died in 1707; son of the preceding, was an able Scottish lawyer and statesman. It was through him that the massacre of Glencoe was perpetuated in 1692. He succeeded his father as viscount in 1685, and in 1703 was created earl. He was largely instrumental in bringing about the union between Scotland and England.

Dal Segno (da-send' o; Italian), often contracted into D. S., means 'from the sign.' In music this expression denotes that the singer or player shall recommence at the place where the sign S is put.

Dalton (dal-ton), John, an English chemist and natural philosopher, born in 1766. After teaching for twelve years at Kendal, in 1793 his reputation as a mathematician won for him the chair of mathematics at the New College, Manchester. Here he continued to reside (though the college was removed in 1799), publishing from year to year valuable essays and papers on scientific subjects, while he also lectured in London, and visited Paris. In 1808 he announced in his New System of Chemical Philosophy his atomic theory of chemical action, the discovery of which spread his fame over Europe. Various academic and other honors were bestowed upon him, and in 1833 he received a pension of £150, afterwards increased to £300. He died in 1844.
Dalton-in-Furness

Daltonism, another name for Color-blindness, which see.

Dalton's Law. See Gas.

Daly (d'ali), Augustin, dramatist, born at Plymouth, North Carolina, in 1838; died in 1896. He became a very successful theatrical manager, and established Daly’s Theater, New York, in 1879. He served as a dramatic critic, adapted French and German plays, and wrote Under the Gaslight, Divorce, Pique, etc.

Daly, Charles Francis, jurist, born at New York in 1816; died in 1899. He was admitted to the bar in 1837, became judge of the New York Court of Common Pleas in 1844, and was its chief justice for 27 years. He was president of the American Geographical Society from its origin in 1844, and wrote on the history of map making and physical geography, etc.

Dalyell, or Dalzell (dä-el’), Thomas, a Scottish soldier, born about 1599. He was taken prisoner fighting on the royalist side at Worcester, and afterwards escaped to Russia, where he was made a general. Returning to England at the restoration, he was made commander-in-chief of the forces in Scotland, and made himself notorious for his ferocity against the Covenanters. He died in 1696.

Dam, a bank or construction of stone, earth, or wood across a stream for the purpose of keeping the current to give it increased head, for holding back supplies of water, for flooding lands, or for rendering the stream above the dam navigable by increased depth. Its material and construction will depend on its situation and the amount of pressure it has to bear. For streams which are broad and deep strong materials are required, usually stone masonry bound in hydraulic cement and a strong framework of timber. The common forms of a dam are either a straight line crossing the stream transversely, one or two straight lines traversing it diagonally, or an arc with its convex side towards the current. The breaking of a dam, thus letting loose its volume of held-back water, is apt to be attended with serious loss of life and property, as in several recent cases in the United States. See Embankment and Reservoir.

Damage-feasant (dam-aj-fe’-a-zant), in law, doing injury; trespassing, as cattle; applied to a stranger's beasts found in another person's ground, and then doing damage.

DAMAGE (dam-a-jes’), in law, pecuniary compensation paid to a person for loss or injury sustained by him through the fault of another. It is not necessary that the act should have been a fraudulent one; it is enough that it be illegal, unwarrantable, or malicious. If, however, a person has suffered a loss through fraud or delict on the part of another, that person has not only a claim to ordinary damages, but may also claim remote or consequential damages, and may estimate the amount of the loss he has sustained not at its real value, but at the imaginary value which he himself may put upon it, subject, however, to the modification of a judge or a jury. In other cases the damages cover only the loss sustained estimated at its real value, together with the expenses incurred in obtaining damages.

Daman. See Hyras.

Daman (dä-män’), a seaport of Hindustan, at the mouth of the Gulf of Cambay, 100 miles north from Bombay. It belongs to the Portuguese, who conquered it in 1531, and made it a permanent settlement in 1558. It formerly had a large trade, but this has much declined. The settlement, which is governed under Goa, has an area of 148 sq. miles; pop. 64,248.

Damanhoor (dä-man-hör’), a town of Egypt, capital of the province of Behera, 35 miles N.E. of Alexandria. It has manufactures of cotton and wool. Pop. 35,702. See Dung back the current.

Damar (dä-mär’), or Demar’, a town of Yemen, Arabia, 120 miles north by west of Aden. Pop. about 20,000.

Damar. See Dammar.

Damaraland (d a-mä-rä-länd’), a German protectorate in South Africa, extending along the Atlantic coast from Cape Frio to Walvis Bay, and inland to 20° E. long. Area about 100,000 sq. miles, including a large amount of barren lands.

Damar Resin (dä-mar’). See Dammar Resin.

Damasqueening (dam-a-sen’-ing). See Damaskening.

Damasacus (dam-a-se’-nas’), John, a town of Damascus, afterwards called also John Othysorres (golden stream), was born at Damascus about 676 A.D.; died about 760. He was the author of the first system.
of Christian theology in the Eastern Church, or the founder of scientific dogmatics, and his exposition of the orthodox faith enjoyed in the Greek Church a great reputation.

**Damascus** (da-mas'kus), a celebrated city, formerly capital, present chief town of Syria, supposed to be the most ancient city in the world. It is beautifully situated on a plain which is covered with gardens and orchards and watered by the Barada. The appearance of the city, as it first opens on the view, has been rapturously spoken of by all travelers; but the streets are narrow, crooked, and in parts dilapidated, and, except in the wealthy Moslem quarter, the houses are low, with flat-arched doors and accumulations of filth before the entrance. Within, however, there is often a singular contrast, in courts paved with marble and ornamented with trees and spouting fountains, the rooms adorned with arabesques and filled with splendid furniture. Among the chief buildings are the Great Mosque and the Citadel. The bazaars are a notable feature of Damascus. They are simply streets or lanes covered in with high woodwork and lined with shops, stalls, cafes, etc. In the midst of the bazaars stands the Great Khan, it and thirty inferior khans being used as exchanges or marketplaces by the merchants. One of the most important and busiest streets is 'Straight Street,' mentioned in connection with the conversion of the Apostle Paul. Damascus is an important emporium of trade in European manufactures; it is also a place of considerable manufacturing industry in silk, damasks, cotton and other fabrics, tobacco, glass, soap, etc. Saddles, fine cabinet-work and elegant jewelry are well made; but the manufacture of the famous Damascus blades no longer exists. One of the holy Moslem cities, it continues to be the most thoroughly oriental in all its features of

**Damascus-steel**, a kind of steel originally made in Damascus and the East, greatly valued in the making of swords for its hardness of edge and flexibility. It is a laminated metal of pure iron and steel of peculiar quality, carbon being present in excess of ordinary proportions, produced by careful heating, laborious forging, doubling and twisting.

**Damask** (dam'ask), the name given to textile fabrics of various

Damien

Damien (dā-mé-an), Father, a Catholic missionary, born in Belgium in 1840. Admitted to holy orders at the age of nineteen, his life was one of the noblest self-sacrifice. He sought the leper settlement of the Hawaiian Islands in 1854 and spent the remainder of his life among the lepers as a medical doctor and helper. Leprosy attacked him in 1885, but he worked on devotedly until his death in 1889.

Damien (dā-mé-an), Robert François, notorious for his attempt to assassinate Louis XV, was the son of a poor farmer and born in 1715 in the village of Trieulloy. He was a somber and obstinate disposition early obtained him the name of "Robert-le-Diable." After enlisting as a soldier he became a house-servant in various establishments in Paris and, having robbed one of his masters, he had to save himself by flight. After spending some months in different cities, in 1756 he returned to Paris with a mind which seems to have become disorderly. On January 8, 1767, as Louis XV was getting into his carriage to return from Versailles to Trianon, he was stabbed by Damien in the right side. The wound was of a trifling character and Damien, who made no attempt to escape, declared he never intended to kill the king. Damien was condemned and torn in quarters by horses March 28, 1767, on the Place de Grève at Paris.

Damietta (dā-mèt’a), a town of Egypt, on one of the principal branches of the Nile, about 6 miles from its mouth. It contains some fine mosques, bazaars and marble baths. Alexandria has long diverted the great stream of commerce from Damietta, but the latter has still a considerable trade with the interior in fish and rice. The ancient town of Damietta stood about 5 miles nearer the sea. Pop. (1907) 29,354.

Dammar (dām’är; or Dām’mār), a resin, a genus of trees of the natural order Conifera, distinguished by their large, lanceolate, leathery leaves, and by their seeds having a wing on one side instead of proceeding from the end. The Dammára orientális is a lofty tree of the East Indies Archipelago, attaining to some of the Molucca Islands a height of from 80 to 100 feet. It yields one variety of dammar resin. The Kauri pine, or Dammára australis, found in the North Island of New Zealand, is a magnificent tree, rising to a height of 150 to 190 feet, and yielding kauri gum. See Kauri.

Dammar Resin, a gum or resin of several kinds produced by different trees. The East Indian or cat’s-eye resin is got from the Dammára orientális, a tree of the East Indian Islands (see above), and is used for making varnishes for coach-builders, painters, etc. In its native localities it is burned as incense, and is also used for caulking ships. Sád dammar is produced by the Sád tree (India; Schorbas robusta), rock dammar by Hopra odoráta, and other species of trees; both yield good varnishes. Black dammar is another Indian species.

Dammooda (dā-mū’dā), a river of the Bengal presidency, rises in the Hooghly near its mouth; length, 350 miles.

Damocles (dā-mō’klēz), a native of Syracuse, and one of the courtiers and flatterers of the tyrant Dionysius the Elder. One day he was extolling the grandeur and happiness of Dionysius, whereupon the latter invited him to a magnificent banquet, where he would be regaled with regal fare and regal honors. In the midst of the entertainment, however, Damocles hap...
Damon and Pythias

pened to look upwards, and perceived with dismay a naked sword suspended over his head by a single hair, and was thus taught to form a better estimate of royal honors.

Damon and Pythias (də'mun, plī-the-as), two illustrious Syracusans, celebrated as models of constant friendship. Pythias had been unjustly condemned to death by Dionysius the Younger, tyrant of Sicily; but, having to leave Syracuse to arrange his affairs, his friend Damon was taken as a pledge that Pythias should return on the day fixed. Pythias, however, being unexpectedly detained, had great difficulty in reaching Syracuse in time to save Damon being executed in his place; and Dionysius was so affected by this proof of their friendship that he pardoned Pythias.

The Knights of Pythias, a fraternal order established in the United States, has this pleasant incident for its basis. Its growth has been remarkably rapid, and lodges are in existence in every state of the Union. See Knights of Pythias.

Dampier (damp'ər), WILLIAM, an English navigator, born in 1652. He was descended from a good family in Somersetshire; but losing his father when young, he was sent to sea, and soon distinguished himself as an able mariner. After serving in the Dutch war, in the Bay of Campeachy as a log-popular, and next year he was appointed commander of a royal sloop-of-war, fitted out for a voyage of discovery in the Australian seas. The vessel, on the home voyage (1700), foundered off the isle of Ascension, and Dampier returned to England. In 1703 he sailed for the South Sea in command of a privateer, returning in 1707; and next year he shipped as pilot with Captain Woods Rogers, and accompanied him on his voyage round the world. He died in 1715. Besides the book mentioned, he wrote *Voyages and Descriptions*, a supplement to it, and *Voyage to New Holland*. He was an excellent hydrographer, and a keen observer.

Damps, noxious exhalations issuing from the earth, and deleterious or fatal to animal life. Damps exist in wells which continue frozen over, and not used, and in mines and coal-pits; and sometimes they issue from the old lavas of volcanoes. These damps are distinguished by miners under the names of choke-damp, consisting chiefly of carbonic acid gas, which instantly suffocates; and fire-damp, consisting chiefly of light carburetted hydrogen, so called from its tendency to explode.

Damsen (dam'sen), a variety of the common plum (*Prunus domestica*). The fruit is rather small and oval, and its numerous subvarieties are of different colors; black, bluish, dark purple, yellow, etc. The damson (corruption of Damascene), as its name imports, is from Damascus.

Dan (Hebrew, meaning 'judgment'), one of the sons of Jacob by his concubine Bilhab. At the time of the exodus the Danites numbered 62,700 adult males, being then the second tribe in point of numbers. Samson was a member of this tribe.

Dana (də'na), CHARLES ANDERSON, editor, was born in Hinsdale, New Hampshire, in 1819. After association with the New York *Tribune* for 14 years as one of the proprietors and managing editor, in 1863 he was appointed Assistant Secretary of War. After 1868 he was the editor of the New York *Eagle*. Perhaps more than any other journalist his personality was identified with his newspaper. He died in 1897.

Dana, FRANCIS, statesman, born in Cambridge, Massachusetts, in 1743; died in 1811. He became an able lawyer, joined the 'Sons of Liberty,' and was active in the measures leading to the Revolution. He was a prominent leader in State and national councils during the war, was sent to Russia as minister in 1781, was judge of the Supreme Court of Massachusetts in 1785, and was chosen...
a member of the constitutional convention of 1787, but ill health prevented his serving.

Dana, JAMES DWIGHT, an American naturalist, born in 1813, and after 1855 a professor at Yale College. His writings include System of Mineralogy, Manual of Mineralogy, Coral Reefs and Islands, Manual of Geology, Textbook of Geology, and many reports and papers. He died in 1895.

Dana, RICHARD HENRY, an American writer, born in 1787, at Cambridge in Massachusetts; educated at Harvard; published several collections of poems and two novels. He died in 1879.

—His son RICHARD HENRY (born in 1815; died in 1882) was the author of the well-known work Two Years before the Mast, the result of his own experiences during a voyage recommended to him on account of his health.

Danae (dəˈnē), in Greek mythology, daughter of Acrisius, king of Argos. She was shut up by her father in a brazen tower, but Zeus, inflamed with passion for her, transformed himself into a golden shower, and descended through the apertures of the roof into her embraces. Set adrift on the waves by her father, she reached safely one of the Cyclades, where her child, Perseus, was brought up.

Danais (dəˈnēz), the fifty daughters of Danaus, a mythological character who, in peril from his brother, the King of Lybia, fled to Argos, where he was chosen king. The fifty sons of Egypt, the Lybian king, followed him and under pretence of friendship, sought the hands of his daughters in marriage. Danaus consented, but gave each of his daughters a dagger, bidding them to murder their husbands on the bridal night in revenge for his treatment by Egypt. All did so, except Lynceus, who allowed Lynceus, her husband, to escape. The poets tell us that in the underworld the Danais, as a punishment for their crimes, were compelled forever to pour water into a vessel full of holes.

Danbury (dəˈbər), a city, one of the capitals of Fairfield Co., Connecticut, 65 miles N. N. E. of New York. It has many large hat factories, also manufacturers of plated ware, boxes, underwear and machine shops, etc. Pop. 23,602.

Danbury Hatters’ Case, a famous case in the history of capital and labor. After eleven years litigation it came to an end on January 6, 1915, when the United States Supreme Court unanimously affirmed the decision of the lower courts, awarding to D. E. Loewe and Co., of Danbury, Connecticut, $220,130 damages for a nation-wide boycott declared by the American Federation of Labor against the plaintiff for refusal to unionize his shops.

Danby (dənˈbē), FRANCIS, painter, born near Wexford, England, 1793. He established his reputation in 1823 by his Sunset at Sea after a Storm; and in 1825, by his Delivery of Israel out of Egypt, obtained the honor of being admitted as an associate of the Academy. Among his subsequent pictures the most celebrated are the Opening of the Sixth Seal, exhibited in 1828; the Age of Gold, in 1831; The Enchanted Island—Sunset, in 1841; The Contest of the Lyre and Pipe in the Vale of Tempe, in 1842; and The Painter’s Holiday, in 1844. Danby’s excellence lay in his delineations of scenery, and the poetic halo with which he contrived to invest them. He died in 1861.

Dance of Death. See Death, Dance of.

Dancing (dancing), a studied and rhythmical movement of the limbs generally adjusted to the measure of a tune. In ancient times it was generally an expression of religious, patriotic, or military feeling, as in the case of the dance of David before the ark, the choric dances, or the Pyrrhic dance of the Greeks. The Romans, however, like the orientals, had their dancing done by hired slaves. This solemn character of the dance has declined with the progress of refinement and civilization, and it is now nothing more than an elegant social amusement and an agreeable spectacle at public entertainments.

Dancing Disease, an epidemic nervous disorder apparently allied to hysteria and chorea, occasionally prevalent in Germany and Italy during the middle ages. In 1734, during the celebration of the festival of St. John at Aix-la-Chappelle, the streets became crowded with men and women of all ranks and ages, who commenced dancing in a wild and frantic manner till they dropped down with fatigue. The mania spread to Cologne, Metz and Strasbourg, and gave rise to much imposition, proficacy and disorder. At the beginning of the seventeenth century the epidemic began to decline, and is only known now as a nervous affection in individual cases.

Dandelion (dan-de-lən, Lontbido Tareaeae), a plant belonging to the nat. order Compositae, indigenous to Europe, but now also common in America. The leaves are all
Dandie Dinmont Terrier

radical, and runcinate or jagged on the margin. From this circumstance has been derived its French name dents de lion (lion’s tooth), of which the English appellation is a corruption. The stems are hollow and have one large bright-yellow flower and a tapering, milky, perennial root, which acts as an aperient and tonic, and is much esteemed in affections of the liver. The whole plant is full of a milky and bitter juice. (See Taraxacum.) The seed of the plant is furnished with a white pappus, and is transported far and wide by the wind.

Dandie Dinmont Terrier, a peculiar breed of the Scotch terrier, so called from the Border farmer of that name who figures in Scott’s novel of Guy Mannering. This breed is known by its short legs, wiry and abundant hair, and large ears. It is very courageous when fully grown. It is usually either of a light brown, or a bluish-gray color, termed respectively the ‘Mustard’ and the ‘Pepper’ variety.

Dandolo, Andrea, Doge of Venice, and of an illustrious Venetian family, was born about 1310, and made doge in 1343. He carried on a war against the Turks with various success, and greatly extended Venetian commerce by opening a trading connection with Egypt. He wrote a chronicle of Venice, comprising the history of the republic from its commencement to 1342, which was published in Muratori’s collection. He died in 1354.

Dandolo (dán’d-do-lo), Enrico, Doge of Venice, was chosen to that office in 1192, at the advanced age of eighty-four. On the formation of the Fourth Crusade Dandolo induced the senate to join in it, and by its help recovered the revolted town of Zara. Constantinople was next stormed, the blind old doge losing his life in the attack. In the division of the Byzantine Empire the Venetians added much to their dominions. Dandolo died at Constantinople in 1205, at the age of ninety-seven.

Danebrog, Dannebroek (dán’e-brog), literally ‘the cloth or banner of the Danes,’ a Danish order of knighthood, said to have been instituted in 1219, and revived in 1593. The decorations consist of a cross of gold pâttée, enamelled with white, and suspended by a white ribbon embroidered with red.

Danegeld, is, ‘Dane tax’. In English history, an annual tax laid on the English nation for maintaining forces to oppose the Danes, or to furnish tribute to procure peace. It was at first one shilling, and ultimately seven, for every hide of land, except such as belonged to the church. When the Danes became masters of England the danegeld was a tax levied by the Danish princes on every hide of land owned by the Anglo-Saxons.

Danielagh, Danelaw (dán’lág), the ancient name of a strip of territory extending along the east coast of England from the Thames to the Tweed, ceded by Alfred to Guthrum, King of the Danes, after the battle of Ethandune. This name it retained till the Norman conquest, its inhabitants being governed by a modification of Danish law and not by English law.

Danewerk (dán’we-verk’; Ger. ‘Dane’s work’; Danish, Dannevirke), an ancient wall of about from 30 to 40 feet high and of an equal thickness extending along the southern frontier of Schleswig for nearly 10 miles, from the North Sea to the Baltic. It was constructed in the middle of the tenth century and repaired in 1850, but was captured by the Austrians and Prussians in the Schleswig-Holstein war of 1864 and soon after destroyed.

Daniel (dan’yel), the prophet, a contemporary of Ezekiel, was born of a distinguished Hebrew family. In his youth, B.C. 605, he was carried captive to Babylon, and educated in the Babylonian court for the service of King Nebuchadnezzar. Thrown into a lions’ den for conscientiously refusing to obey the king, he was miraculously preserved, and finally made prime-minister in the court of the Persian king Darius. He ranks with what are called the greater prophets. The book of the Old Testament which bears his name is divided into a historical and a prophetic part. Modern criticism generally regards it as written during the oppression of the Jews under Antiochus, about 170 B.C. It is partly in Chaldee.

Daniel, Samuel, an English historian and poet, contemporary with Shakespeare, was born in 1562. Under the patronage of the Pembroke family he received several court appointments, but he commonly lived in the country, employed in literary pursuits. His great poem, The History of the Civil Wars between the Houses of York and Lancaster, is written with much rhetorical grace and dignity of style. He wrote also epistles, pastorals, sonnets, and a few tragedies, as well as a clear and useful sketch of English history till the time of Edward III. He died in 1619.

Daniell, John Frederick, a distinguished English physician, born at London in 1790. In 1816 he
Daniell's Battery

commenced the Quarterly Journal of Science and Art in concert with Mr. Brande. In 1820 he published an account of a new hygrometer which he had invented. Soon afterwards his valuable works, Meteorological Essays and the essay on Artificial Climate, appeared. In 1831 he was appointed professor of chemistry in King's College, London, and made further important discoveries, chief among which is his apparatus for main-rod immersed in a solution of dilute sulphuric acid, or zinc sulphate solution, and separated by a porous pot of unglazed earthenware from a copper plate dipping into a solution of copper sulphate. The chemical reaction consists practically in the replacement of copper by zinc in the solution. Though the E.M.F. of the Daniell cell is only 1.08 volts, it is more constant than that of any other cell in common use.

![Map Showing the Virgin Islands (formerly Danish West Indies).](image)

taining a powerful and continuous current of electricity in galvanic batteries (see following article). For these discoveries he received successively the three medals in the gift of the Royal Society. He was made a D.C.L. of Oxford in 1843, and died in 1845.

Daniell's Battery, an electric cell invented by J. F. Daniell in 1836. In its present form it is a two-fluid cell in which depolarisation is effected by electro-chemical means. The essential parts of the cell are: a zinc

Daniels, Josephus, American editor and public official. He was born in Washington, N. C., in 1862, and received an academic education. At the age of 18 he engaged in newspaper work. He was a member of the Democratic National Executive Committee from North Carolina for many years, and a member of the Democratic National Committee which carried on the campaign for the nomination and election of President Wilson, in whose cabinet he became Secretary of the Navy.
Danish West Indies, the former title of three islands in the Virgin Island group of the West Indies, now part of the outlying possessions of the United States, which purchased them in 1917 for $22,000,000. This country had more than once sought to acquire them, and at one time could have done so for $5,000,000. What gives them their present increased value is the fact that they lie on one of the chief routes of travel between Europe and the Panama Canal, and possess an excellent harbor, that of Charlotte Amalie. The fear was entertained that Germany or some other European power might gain possession of these islands, a possibility likely to prove to the disadvantage of the United States.

These islands are known as Santa Cruz (Sainte Croix), Saint Thomas, and Saint John, their total area being 138 square miles and their combined population 32,786, chiefly divided between the first two named. These people are mostly negroes and the product of the island mainly sugar-cane and rum. Tobacco and cotton are also grown. These islands were discovered by Columbus, and have been successively held by Holland, England, Spain, and France and Denmark, their first ownership being that of the United States. Their value, as stated, lies in the port of Charlotte Amalie, which is a coaling and cable station and has facilities for ship repairing. In the hands of the United States it is likely to develop into a port of active business. See Saint Thomas and Charlotte Amalie.

Danes (dán'ts), a former secret society of the Mormon Church for militant action against its enemies. It was organized by Joseph Smith at Kirtland, Ohio, in 1838, by a 'covenant' toavenge any further expulsion of the Missouri Mormons by mobs. The name finally chosen by the society was Sons of Dan, turned by outsiders into Danites. It is usually charged with all the deeds of blood laid at the door of the Mormons, including the Mountain Meadows massacre. The Mormons have denied that the society had any existence, or if it had that it was in no way connected with the Mormon Church or was countenanced by it. The name was also given by the Douglas Democrats to the Buchanan Democrats in the Lincoln-Douglas senatorial campaign in Illinois, 1858, as an insultation that they were Buchanan's tools in upholding the Utah rebellion.

Dankali, or Dama'kil (the former is the Arabic singular, the latter the plural), the common name of a number of rude tribes that inhabit Africa, east of Abyssinia, between it and the Red Sea. They are of the Mohammedan religion. Number about 70,000.

Dannecker (dan-ék-er), J o h a n n H e i n n u c h, a German sculptor, born in 1758; died in 1841. As a student at the Karlschule he distinguished himself; was appointed court sculptor, and visited Paris and Rome. In 1790 he returned to Würtemberg, and became professor of the fine arts at Stuttgart. His best works are his statue of Christ and his Ariadne Seated on a Panther.

Dannemora (da-ne-mó'ra), a village on a lake of the same name, 24 miles N. N. E. of Upsala, in Sweden, celebrated for its iron-mines, the second richest in Sweden, which have been worked uninterruptedly for upwards of three centuries.

D'Annunzio (d a-n un'zö), G a s s e l l e, an Italian poet, dramatist and novelist, born at Francavilla in 1864. Inspired by the work of Carducci, he began writing poetry at a very early age. In 1897 he turned to the drama and in such plays as La Città Morta (1898), La Giocanda (1899) and Francesca da Rimini (1905) revealed unusual dramatic force. D'Annunzio has also won fame as a novelist. Among the best known novels are Il Piacere (1889), La Vergine delle Rocce (1896), and Il Fuoco (1900). Many of his works have been translated into English.

Dan River. A river rising in the Blue Ridge Mountains, in Patrick County, Virginia, and flowing southeast into North Carolina. It combines with the Staunton River in southern Virginia to form the Roanoke River. It is 130 miles long and drains an area of about 8700 square miles. The river is navigable for light boats and furnishes extensive water power.

Dante (dán'té), a contraction of Dante's the greatest of Italian poets, was born in Florence about the end of May, 1265, of a family belonging to the lower nobility. Of his early life and education little is definitely known. He is said to have studied in various seats of learning, and it is certain that either at this time or in the course of his wandering life he made himself master of all the knowledge of his time. He seems to have been quite a boy, no more than nine years of age, when he first saw Beatrice Portinari, and the love she awakened in him has been described in that record of his early years, the Vita Nuova, as well as in a later work, the Divine
Commedia, in terms which make it hard to distinguish the real personality of Beatrice from some ideal power of beauty and virtue of which she is to Dante the symbol. Their actual lives at least were far enough apart; Beatrice marrying a noble Florentine, Simone Bardi, in 1257, and dying three years afterwards; while the year following Dante married Gemma dei Donati, by whom he had four children. At this time the Guelfic party in Florence became divided into the rival factions of Bianchi and Nerli (Whites and Blacks), the latter being an extreme papal party, while the former leaned towards reconciliation with the Ghibelines. Dante's sympathies were with the Bianchi, and being a prior of the trades and a leading citizen in Florence he went on an embassy to Rome to influence the pope on behalf of the Bianchi. The rival faction of the Nerli, however, had got the upper hand in the city, and in the usual fashion of the time were burning the houses of their rivals and slaying them in the open street. In Dante's absence his enemies obtained a decree of banishment against him, coupled with a heavy fine, a sentence which was soon followed by another condemning him to be burned alive for malversation and peculation. From this time the poet became, and to the end of his life remained, an exile; and his history, first lost by the indifference of contemporaries and then hallowed by the legends of later generations, becomes semi-mythical. He has told us himself how he wandered 'through almost all parts where this language is spoken,' and how hard he felt it 'to climb the stairs and eat the bitter bread of strangers.' During this period he is said to have visited many cities, Arezzo, Bologna, Sienna, etc., and even Paris. In 1314 he found shelter with Can Grande della Scala at Verona, where he remained till 1318. In 1320 we find him staying at Ravenna with his friend Guido da Polenta. In September, 1321, his sufferings and wanderings were ended by death. He was buried at Ravenna, where his bones still lie. His great poem, the Divina Commedia ('Divine Comedy'), written in great part, if not altogether, during his exile, is divided into three parts, entitled Hell, Purgatory and Paradise. The poet dreams that he has wandered into a dusky forest, when the shade of Virgil appears and offers to conduct him through hell and purgatory. Further the pagan poet may not go, but Beatrice herself shall lead him through paradise. The journey through hell is first described, and the imaginative power with which the distorted characters of the guilty and the punishments laid upon them are brought before us; the impressive pathos of these short histories—often compressed in Dante’s severe style into a couple of lines—of pope and Ghibelline, Italian lord and lady; the passionate depth of characterization, the subtle insight and intense faith, make up a whole which for significance and completeness has perhaps no rival in the work of any one man. From hell the poet, still in the company of Virgil, ascends to purgatory, where the scenes are still mostly of the same kind, though the punishments are only temporary. In the earthly paradise Dante beholds Beatrice in a scene of surpassing magnificence, ascends with her into the celestial paradise, and after roaming over seven spheres reaches the eighth, where he beholds 'the glorious company which surrounds the triumphant Redeemer.' In the ninth Dante feels himself in the presence of the Divine essence and sees the blessed on thrones in a circle of infinite magnitude. The deity himself, in the tenth, he cannot see for excess of light. There are many notable translations of Dante's great poem. Among English versions we may mention those of Cary, Longfellow and Dean Plumptre, and an excellent prose translation by Dr. John Carlyle. The Vita Nuova has been admirably translated by D. G. Rossetti in his Early Italian Poets. Dante's other works are: Il Convito ('The Banquet'), a series of philosophical commentaries on the author's canzoni; Il Canzoniere, a collection of poems; a Latin treatise, De Monarchia, a work intended to prove the supremacy of the head of the Holy Roman Empire; a treatise on the Italian language entitled De Vulgari Eloquentia; and an inquiry into the relative altitude of
the water and the land, *De Aquis et Terris*.

**Danton** (dant-ton), GEORGE JACQUES, an advocate by profession, and one of the great figures in the French Revolution, born in 1759. His colossal stature, athletic frame, and powerful voice contributed not a little, together with his intellectual gifts and audacity, to win him a prominent position among the revolutionaries. He founded the club of the Cordeliers, was foremost in organizing and conducting the attack on the Tuileries, August 10, 1792, and as a reward for such services was made minister of justice and a member of the provisional executive council. When the advance of the Prussian army spread consternation among the members of the government Danton alone preserved his courage, and in a celebrated speech summoned all Frenchmen capable of bearing arms to march against the enemy. He voted for the capital punishment of all returning aristocrats, but undertook the defense of religious worship, and along with Robespierre brought Hébert and the worshipers of the goddess Reason to the scaffold. But the rivalry of the two great leaders had now reached a point when one must succumb, and the crafty Robespierre succeeded in having Danton denounced and thrown into prison, March 31, 1794. Five days afterwards he was condemned by the revolutionary tribunal as an accomplice in a conspiracy for the restoration of monarchy, and executed the same day.

**Dantzig** (dantzi), or **Danzig** (dantzi), a fortified town and port of Prussia, capital of the province of West Prussia, 253 miles N. E. Berlin, on the right bank of the west arm of the Vistula, about 3 miles above its mouth in the Baltic, and intersected by the Mottlau, which here divides into several arms. It is one of the most important seaports in the Prussian monarchy. The more modern parts are regularly and well built; in the other parts the streets are narrow and the houses old and indifferent. Among the principal buildings are the church of St. Mary, begun in 1345, the church of St. Catherine, the exchange, the arsenal, observatory, three monasteries, two synagogues, two theaters, etc. The industries are numerous, but, excepting those connected with shipbuilding, artillery and beer, not of great importance. The prosperity of the town is founded chiefly on its transit trade, particularly in wheat from Poland. There is also a considerable trade in amber. The proper port of Dantzig is Neufahrwasser, at the mouth of the Vistula; but vessels of large size can now come up to and enter the town. After being alternately possessed by the Teutonic knights and the Poles, Dantzig, on the partition of Poland, fell to Prussia. Pop. 169,300.

**Danube** (dan'-ub; anc. Ister or Dau-rus; Ger. Donau; It. Danubio), a celebrated river of Europe, originates in two small streams rising in the Schwarzwald, or Black Forest, in Baden, and uniting at Donaueschingen. The direct distance from source to mouth of the Danube is about 1000 miles, and its total length, including windings, about 1670 miles. From its source the Danube flows in a northeasterly direction to Ulm, in Württemberg, where it becomes navigable for vessels of 100 tons; then to Ratisbon in Bavaria, where it becomes navigable for steamers. Here it turns in a south-easterly direction, entering Austria at Passau, passing Vienna and Budapest, above which latter town it suddenly turns due south, holding this direction till it is joined by the Drave, after which it runs s. s. e. and enters Serbia at Belgrade. Continuing its general course eastward it forms for a long distance the boundary line between Roumania and Bulgaria. At Siliстра it once more turns northward, and flowing between Roumania and Bessarabia falls into the Black Sea by three different outlets. In the upper part of its course, through Württemberg and Bavaria, the Danube flows through some of the most fertile and populous districts of its basin. Its principal affluents here are the Iser and Lech. It passes through a succession of picturesque scenery till past Vienna, the land on both sides being well peopled and cultivated. The principal affluents are the March, or Morava, and the Ena. After passing through what is called the Carpathian Gate, at Pressburg, where it enters Hungary, it gives off a number of branches.
forming a labyrinth of islands known as Schüttten, but on emerging it flows uninterruptedly southwards through wide plains interspersed with pools, marshes, and sandy wastes. The principal affluents here are the Save, the Drave and the Theiss. Sixty miles before entering Roumania the river passes through a succession of rapids or cataracts. The river was formerly impassable for ships at this point, but the channel was made navigable by extensive engineering works and canals. The last of these cataracts, at Old Orsova, is called the Iron Gate. The lower course of the Danube, in Roumania and Bulgaria, is through a flat and marshy tract, fertile but badly cultivated and thinly peopled. In this part it increases its width from 1400 to 2100 yards, and farther on forms an expanse like a sea, and is studded with islands. Of the three outlets the Sulina Mouth is the deepest, and is usually chosen by ships bound up the river. The Danube is navigable for steamers up to Regensburg (Ratisbon), nearly 1500 miles from its mouth. Some of its tributaries, such as the Save, the Theiss and the Drave, are also navigable, so that the water system of the Danube may be estimated as admitting of about 2500 miles of steam navigation.

Danubian Principalities. See Roumania.

Danvers (dan'vers), a town in Essex Co., Massachusetts, 19 miles N. N. W. of Boston. It has manufactures of shoes, leather, electric lamps, bricks, etc., and contains St. John's Normal College and Essex County Agricultural School. Pop. 10,000.

Danville (dan'vil), the name of four important American cities: (1) The capital of Vermilion Co., Illinois, 125 miles s. of Chicago. Coal is mined largely near by, and there are flour, lumber, woolen, glass, iron and other in-

---

---
The beginning of the ill-fated attempt to force the Dardanelles. The soldiers are seen disembarking from the transport under shell fire from the Turkish forts.
Daoudnagar

and dumb asylum. It is an important horse market. Pop. 5420.

Daoudnagar. See Daudnagar.

Daphne (dá'fne), the Greek name for laurel, in Greek mythology a nymph believed by Apollo. Deaf to the suit of the god, and fleeing from him, she besought Zeus to protect her. Her prayer was heard, and at the moment Apollo was about to encircle her in his arms she was changed into a laurel, a tree henceforth consecrated to the god.

Daphne, a genus of plants, nat. order Thymelaeaceae. They are shrubs, inhabiting the greater part of the northern hemisphere, but chiefly the south of Europe and the warmer parts of Asia. The best-known is the mezereon (D. Mezeron), with pale-green leaves and very fragrant flowers. D. Lauroëlia (spurge laurel) has an irritant bark, and its berries are poisonous.

Daphnia (dáf'ni-a), the water-flea, a genus of minute crustaceans belonging to the division of Branchiopoda. The best-known species is the D. pulex, or 'branch-horned' water-flea, which is a favorite microscopical object. The head is prolonged into a snout, and is provided with a single, central, compound eye; it is also furnished with antennae, which act as oars, propelling it through the water by a series of short springs or jerks. These animals are very abundant in many ponds and ditches; and as they assume a red color in summer impart the appearance of blood to the water.

Darab', or DARABJERD (dá-rab'jerd), a town of Persia, province of Farsistan, beautifully situated in an extensive plain among groves of dates, orange and lemons, 140 miles southeast of Shiraz. Pop. about 5000.

Darbhanga (dárb-bing'ga), a town of Hindustan, in the Patna division of Behar, in a low-lying district subject to inundation; it is the residence of the Maharaja of Darbhanga, who has a fine new palace here. Pop. 66,244.

D'Arblay, MADAME. See Burney.

Dardanelles (dár-da-nelz); ancient Hellespont, a narrow channel which connects the Sea of Marmora with the Aegean Sea, and at this particular point separates Europe from Asia. It is about 40 miles in length, and varies in breadth from 1 to 4 miles. Its rapid current, often much accelerated by winds, runs southward. On the Asiatic side the country is fine and fertile, rising gradually upwards from the sea to the range of Mount Ida; the European side is steep and rugged, but densely peopled and highly cultivated. On both shores there are numerous forts and batteries. By treaty made in 1841 between the five great powers and Turkey, it was settled that no non-Turkish man-of-war should pass the strait without the permission of the Turkish government. The strait was entered by a British naval squadron in March, 1915, in a futile effort to reach Constantinople, three of the ships being sunk.

Dardanus (dár'da-nus), in Greek mythology, the progenitor of the Trojans.

Dare, VIRGINIA, the first child born of English parents in the New World. She was born at Roanoke, Va., in 1587; captured as a child by Indians, and never after heard of.

Darfur, or DARFOO (dárf'fór), a considerable region of Central Africa, forming a large oasis in the S.E. corner of the Great Desert. It may be considered as lying between lat. 11° and 15° N. and long. 21° and 29° E.; on the east it has Kordofan and on the west Wadai, while the regions to the south are occupied by barbarous nations. The inhabitants are Mohammedans and negroes and are semiharsharous. Their occupation is chiefly agriculture, and cattle form their principal wealth. The commerce with Egypt is extensive, and is carried on entirely by the African system of caravans. It exports ivory, ostrich feathers, gum, copper, etc., and receives in exchange sugar, cotton, cloth, hardware, firearms, etc. Pop. est. 750,000.

Doric (dár'ik), an ancient Persian gold coin of Darius, weighing about 129 grains, value about $5, and bearing on one side the figure of an archer. In later times the name has been applied to a silver coin having the figure of an archer.

Darien (dá'rě-en), GULF OF, a gulf of the Caribbean Sea at the north extremity of South America, between the Isthmus of Panama and the mainland.

Darien, Isthmus of, often used as synonymous with the Isthmus of Panama, but more strictly applied to

Golden Dario, from British Museum.
Darien Scheme

Darien Scheme, a celebrated financial project conceived and set afloat by William Paterson, a Scot, towards the close of the seventeenth century. Paterson was a man of bold and original conceptions, and possessed of a wide knowledge of commerce and finance. He was the first projector of the Bank of England, but was disappointed of his just recompense. His next scheme was one of magnificent proportions. He proposed to form an emporium on each side of the Isthmus of Darien or Panama for the trade of the opposite continents. The settlement thus formed would become the entrepôt for an immense exchange between the manufactures of Europe and the produce of South America and Asia. Paterson had designed to limit the benefits of the scheme to Scotland mainly, but had to seek help in London, where the subscriptions soon ran up to £300,000. Alarm was soon excited among the English merchants, especially those connected with the Indies, at the gigantic Scotch scheme, and the English subscriptions were withdrawn. Scotland, indignant at this treatment, subscribed at once and with great enthusiasm £400,000, a full half of all the cash in the kingdom. Little more than the half, however, was paid up. In 1698 five large vessels laden with stores, etc., and with 1,200 intending colonists, sailed for the Isthmus of Darien. The settlement was formed in a suitable position, and the colonists fortified a secure and capacious harbor; but nothing else had been rightly calculated. Many of the colonists were of the gentry, totally unacquainted with any of the arts necessary in a new colony; the provisions were either improper for the climate or soon exhausted; the merchandise they had brought was not adapted for the West Indian market. To add to their difficulties the colonists were attacked by the Spaniards and all commerce forbidden with them. For eight months the colony bore up, but at the end of that time the survivors were compelled by disease and famine to abandon their settlement and return to Europe. Two of the ships were lost on the way home, and only about thirty of the colonists, including Paterson, reached Scotland.

Darius (da-r'iu's), the name of several Persian kings. (1) Darius I, fourth king of Persia, son of Hystaspes, a prince of the royal family of the Achemenide, attained the throne in B.C. 521. His reign was distinguished by many important events. He reduced, after a two years' siege, the revolted city of Babylon, and led an expedition of 700,000 men against the Scythians on the Danube, from which he extricated himself after suffering great losses. He then turned himself against the Athenians who had promoted a revolt of the Ionian cities, he sent an army under Mardonius to invade Greece. But the ships of Mardonius were destroyed by a storm in doubling Mount Athos (492 B.C.), and his army was cut to pieces by the Thracians. Darius, however, fitted out a second expedition of 500,000 men, which was met, on the plains of Marathon by an Athenian army 10,000 strong, under Miltiades, and completely defeated (490 B.C.). Darius had determined on a third expedition when he died, B.C. 485.—(2) Darius II, surnamed Nothos, or the Bastard, by the Greeks, an illegitimate son of Artaxerxes I (Langismus). He ascended the throne in 423 and died in 404. His son Cyrus is familiar to us through Xenophon's Anabasis.—(3) Darius III, surnamed Codomannus, great grandson of Darius II, was the twelfth and last king of Persia. He ascended the throne B.C. 336, when the kingdom had been weakened by luxury and the tyranny of the satraps under his predecessors, and could not resist the attacks of a powerful invader. Such was Alexander of Macedon; and the army which was sent against him by Darius was totally routed on the banks of the Granicus, in Asia Minor. Darius then hastened with 400,000 soldiers to meet Alexander in the mountainous region of Cilicia, and was a second time totally defeated near the Issus, B.C. 333. Two years afterwards, all proposals for peace having been rejected by Alexander, Darius collected a second army, and meeting the Macedonian forces between Arbela and Gaugamela was again routed and had to seek safety in Egypt (331 B.C). Alexander now captured Suse, the capital, and Persepolis and reduced all Persia. Meanwhile Darius was collecting another army at Ecbatana in Media, when a traitorous conspiracy was formed against him by which he lost his life in 330 B.C. Alexander married his daughter Statira.

Darjeeling

Darjeeling, or Darjiling (dār-i-lé'ing), a district of India, in the extreme north of the lieutenant-governorship of Bengal, division of Cooch Behar; area, 1234 sq. miles. Tea, coffee, cinchona and cotton are cultivated more or less, and the cultivation of the tea-plant and the making of tea is now the staple industry. Pop. 249,117.—Darjeeling, the chief town in the district, is a sanitary station for the British troops,
and though little more than 36 miles from the plains stands at an elevation of 7400 ft. above sea-level, on a ridge with deep valleys on either side in a bleak but healthy situation. There is a residence of the lieutenant-governor, barracks, a sanatorium, etc. Pop. 16,924, much increased in the hot weather.

Darlaston (där'last-n), a town and parish of England, 17 miles s. by w. of Stafford. It has extensive coal and iron mines. Pop. 17,107.

Darley (dar'li), Felix O. Carle, artist, born at Philadelphia, Pennsylvania, in 1822; died in 1888. He early showed talent in drawing, and won reputation by his drawings for Irving's Legend of Sleepy Hollow and Rip Van Wrinkle, and his illustrations for the novels of Judd, Dickens, Cooper and Simms. In 1868, after residing for some years in Europe, he published Sketches Abroad with Pen and Pencil.

Darling (där'ling): from a governor of N. South Wales), a name of several applications in Australia. The Darling River, a river rising in the N. E. of New South Wales, flows in a south-western direction till it joins the Murray.—Darling District is a pastoral district about 50,000 sq. miles in extent, in the s. w. of New South Wales, and watered by the Darling and the Murray.—The Darling Downs consists of a rich table-land west of Brisbane in Queensland. It is well watered, and measures about 6000 sq. miles. The Darling Range is a range of granite mountains in Western Australia, running in a northerly direction parallel with the coast from Point D'Entrecasteaux for 250 miles.

Darling Grace, a celebrated English heroine, was born in 1819, in the Longstone Lighthouse (Farne Islands, coast of Northumberland), of which her father was keeper. In 1838 the steamer Forfarshire, with forty-one passengers on board besides her crew, became disabled off the Farne Islands during a storm, and was thrown on a rock where she broke in two, part of the crew and passengers left clinging to the wreck. Next morning William Darling descried them from Longstone, about a mile distant, but he shrank from attempting to reach the wreck through a boiling sea in a boat. His daughter Grace, however, implored him to make the attempt and let her accompany him. At last he consented, and father and daughter each taking an oar, they reached the wreck and succeeded in rescuing nine sufferers. The news of the heroic deed soon spread, and the brave girl received testimonials from all quarters. A purse of £700 was publicly subscribed and presented to her. Four years afterwards she died of consumption, in 1842.

Darlington (där'ling-tun), a municipal and parliamentary borough of England, 17¼ miles south of Durham; well built, chiefly of brick. The woolen manufacture is carried on to a considerable extent, and there are large ironworks and establishments manufacturing steel, locomotive engines, iron bridges, etc. Pop. (1911) 55,933.

Darlingtonia (där-lînt'gōn-á), a remarkable genus of American pitcher-plants, nat. order Sarraceniacese. A single species is known from California. The leaves are long and trumpet-shaped, with a wing rising from one side of the mouth.

Darmstadt (där'mstäyt), a town of Germany, capital of the Grand-duchy of Hesse, in a sandy plain, sloping to the Rhine, 15 m. s. of Frankfurt. It consists of an old and a new town. The former, which is the business part of the town, is very poorly built; the houses are old, and the streets narrow and gloomy. The new town is laid out with great regularity, and has handsome squares and houses. Among the remarkable buildings are the old palace (with a library of 500,000 volumes and 4000 MSS., a picture-galley, and a rich museum of natural history), the Roman Catholic Church, and the Rathaus, or town-hall, built in 1580. Darmstadt has some iron-foundries, breweries, etc., but depends more upon the residence of the court than upon either trade or manufactures. Pop. (1910) 84,529.

Darmstadt, or Hesse-Darmstadt. See Hesse.

Darnel (dar'nél), the popular name of Lolium temulentum, a species of poisonous grass. It appears to be the infelix lolium of Virgil, and the tares of Scripture. Its properties are said to be narcotic and stupefying, but recent researches have cast some doubt on its reported deleterious qualities. It is met with in cornfields, and is now naturalized in N. America.

Darnétal (där-nä-tal), a town of France, dept. of Seine-Inférieure, 2¾ miles east of Rouen. There are extensive woolen factories and spinning-mills. Pop. 6739.

Darnley (darn'li), Henry Stuart, Lord, son of the Earl of Lennox and Lady Margaret Douglas, a niece of Henry VIII. and by her first marriage queen of James IV, born in 1541. In 1565 he was married to Mary, Queen of Scots. It was an unfortunate match, and ere long gave rise first to coolness,
then to open quarrel, and finally to deadly hate, which the murder of Rizzio, to which Darnley was a party, only increased. Mary, affected, however, to be reconciled to him, but could not long conceal her contempt for the handsome imbecile. After the birth of a son, subsequently James VI, Darnley was seized at Glasgow with smallpox, from which he had barely recovered when Mary visited him, and had him conveyed to an isolated house called Kirk of Field, close to the Edinburgh city walls. This dwelling, which belonged to a retainer of Bothwell's, the rapidly rising favorite, was blown into the air with gunpowder (February 10, 1567). The dead bodies of the king and his page were found in a field at a distance of 80 yards from the house, quite free from any mark which such an explosion would cause. Strong circumstantial evidence points to Bothwell as the murderer, and, some think, to Mary as an accomplice in the crime.

**Darrang** (dur'ransg), a district of Assam province, Hindustan, forming a portion of the upper valley of the Brahmaputra; area, 3418 sq. miles; pop. 337,313. Virgin forests cover a large portion of the region.

**Darters** (dar'ters), or **Snake-birds**, a genus (Plotopterus) of web-footed birds of the pelican tribe, found near the eastern coasts of the tropical parts of America, and on the western coast of tropical Africa, as well as in Australia. The birds perch on trees by the sides of lakes, lagoons and rivers, and after hovering over the water suddenly dart at their finny prey with uncanny aim (hence the name). From the serpent-like form of their head and neck, the head being scarcely thicker than the neck, they are called snake-birds.

**Dartford** (dart'ford), a town of England, county of Kent, on the Darent, 15 miles from London. On the river are numerous paper, corn, and oil mills, a large foundry, and an extensive gunpowder manufactory, etc. Dartford was the first place in Britain where a paper-mill was erected. Wat Tyler was a native of this place, and the insurrection known by his name broke out at Dartford. Pop. (1911) 23,609.

**Dartmoor** (darm'borah), an extensive upland tract in England, in the western part of Devonshire, often called the Forest of Dartmoor, and belonging to the Duchy of Cornwall; reaching from Brent s., to Oakhampton n., 22 miles, with a breadth of about 20 miles, and occupying from 130,000 to 150,000 acres. Cattle and sheep are fed on the coarse grass during the summer months. Several of the rugged granite hills (here called tura) are of considerable height, Yes Tor rising 2060 feet above the plain. Dartmoor prison, built in 1809 as a state prison, is now a convict depot.

**Dartmouth** (dart'muth), a municipal borough and seaport of England, county of Devon, situated near the entrance of the river Dart into the British Channel, 30 miles south from Exeter. The port is much resorted to by ocean steamers for coaling purposes. Pop. (1911) 7065.

**Dartmouth**, a town of Nova Scotia, on Halifax harbor, opposite Halifax. It has rope works, saw mills, sugar refinery, chocolate and cocoa factory, etc. Pop. 6000.

**Dartmouth College**, an institution founded at Lebanon, Connecticut, in 1769 and removed to Hanover, New Hampshire, in 1769. Aided by Lord Dartmouth, an English nobleman, it was given his name. In 1816 the New Hampshire legislature changed its name to Dartmouth University, but this was opposed by the trustees and a memorable lawsuit followed, the case being carried to the United States Supreme Court. Daniel Webster was one of the counsel for the trustees, whose case was won and the university organization dissolved. The college has remained a conservative institution, and has now about 100 instructors and 1200 students, with an endowment of nearly $3,000,000.

**Dary**, Pierre Antoine Noel Mathieu Bruno, Count, a French statesman and author, born at Montpellier in 1767; died in 1829. He favored the revolution, but was imprisoned during the reign of terror, when he translated the odes and epistles of Horace into French verse. Napoleon discovered his abilities and rewarded him with various official appointments of trust. In the campaigns against Austria and Prussia (1806-09) he served with ability as a diplomatist and financier. He became chief minister of state in 1811, and was called to the chamber of peers in 1818. In later life he devoted himself exclusively to letters. His chief works are his History of the Venetian Republic, Life of Sully, History of Bretagne, etc.

**Darwen**, Over (ôv'ar dar'wen), a municipal borough of Lancashire, England, 3½ miles south of Blackburn. Until about the middle of the last century Over Darwen was an insignificant village; now it is a populous and thriving town. The staple manufacture
is cotton; other manufactures are paper, iron castings, earthenware, etc. Pop. (1911) 40,544.

**Darwin** (dar’win), CHARLES ROBERT, an English naturalist, born at Shrewsbury in 1809; died at Down near Beckenham, Kent, in 1882; was the son of Dr. Robert Darwin and grandson of Dr. Erasmus Darwin. He was educated at Shrewsbury School, and at the universities of Edinburgh and Cambridge. He early devoted himself to the study of natural history, and in 1831 he was appointed naturalist to the surveying voyage of H.M.S. Beagle, commanded by Captain (afterwards Admiral) Fitzroy. The vessel sailed in December, 1831, nothing less than a revolution in biological science. In it for the first time was given a full and satisfactory exposition of the theory of evolution as applied to plants and animals, the origin of species being explained on the hypothesis of natural selection. The rest of his works are largely based on the material he had accumulated for the elaboration of this great theory. The principal are a treatise on the *Fertilisation of Orchids* (1862); *Domesticated Animals and Cultivated Plants, or The Principle of Variation, etc., under Domestication* (1867); *Descent of Man and Variation in Relation to Sex* (1871); *The Expression of the Emotions in Man and Animals* (1872); *Movements and Habits of Climbing Plants* (2d ed., 1875); *Insectivorous Plants* (1875); *Cross and Self fertilisation* (1876); *The Power of Movement in Plants* (1880); *The Formation of Vegetable mould* (1881), the last containing a vast amount of information in regard to the common earthworm. Mr. Darwin was buried in Westminster Abbey.

**Darwin,** ERASMUS, an English physician and poet, was born in 1731; died 1802. His works include *Zoonomia, or the Laws of Organic Life; Phytologia, or the Philosophy of Agriculture and Gardening.* Charles Darwin was his grandson.

**Darwinism** (dar’win-izm), the views, especially regarding the origin and development of animals and plants, expressed in detail and advocated with much earnestness in the works of Charles Darwin. See Evolution, Natural Selection, etc.

**Dasheen** (da-sheen), a root vegetable of the genus *Colocasia,* of the family Araceae, grown extensively in the West Indies and recently introduced into the Southern States. It is closely allied to the taro, or *tara* (q. v.), one of the important food plants in most of the warm regions of the world, and developed to a high degree in Hawaii. The dasheen is very similar to the potato in its food characteristics. It is adapted for cultivation in rich, moist, well-drained soils, and matures in October and November. It requires at least seven months to reach full maturity.

**Dass,** PETTER, Norwegian poet, of Scottish extraction, born in 1647; died in 1708. He is known as the 'father of Norwegian poetry,' and his principal poem, *The Trumpet of Northland,* is one of the favorite national poems.

**Dasyure** (das’i-yur’), the brush-tailed opossum, a genus of plantigrade marsupials found in Australia and
Dataria

Tasmania, and so named in contrast to the opossums of the New World (Didel-phys), which have naked tails somewhat like rats. The ursine dasyure (Dasýurus ursinus) of Tasmania is about the size of a badger, but of a sturdier form, of a dull black color, carnivorous, and so savage a temper as to have gained for itself the alternative name of Diaboús ursínus, or Tasmanian devil. Formerly it was most destructive to flocks and poultry yards, but is now in the inhabited districts nearly exterminated. The various species of the genus have much the same nature and habits as the European polecat.

Dataria (da-t’r-i-a), the papal office of the chancery at Rome, from which all bulls are issued.

Date (Latin, dólum, given), that addition to a writing which specifies the year, month and day when, and usually the place where, it was given or executed; also the time when any event happened, when anything was transacted, or when anything is to be done.

Date, the fruit of the date-palm or the tree itself, the Phénix dac-týlifera. The fruit is used extensively as an article of food by the natives of Northern Africa and of some countries of Asia. It consists of an external pericarp, separable into three portions, and covering a seed which is hard and horny in consequence of the nature of the albumen in which the embryo plant is buried. Next to the coconuus tree the date is unquestionably the most interesting and useful of the palm tribe. Its stem shoots up to the height of 50 or 60 feet without branch or division, and of nearly the same thickness throughout its length. From the summit it throws out a magnificent crown of large feather-shaped leaves, and a number of spadices, each of which in the female plant bears a bunch of from 180 to 200 dates, each bunch weighing from 20 to 25 lbs. The fruit is eaten fresh or dried. Cakes of dates pounded and kneaded together are the food of the Arabs who traverse the deserts. A liquor resembling wine is made from dates by fermentation. Persia, Palestine, Arabia and the north of Africa are best adapted for the culture of the date-tree, and its fruit is in these countries an important article of food. It is now being introduced into California.

Date-line,INTERNATIONAL, the line at which the date of the day changes on going around the globe. A man who travels around the earth in the direction of the sun’s movement gains on the sun and adds a little to the length of each day. On completing the round he will have added twenty-four hours, and thus have gained a full day. It may be Sunday still to him, but it will be Monday to the people he had left. If he goes round opposite to the sun he loses solar time and each day becomes shorter, so that on completing the round he has lost a day’s time unconsciously. It is now Monday to him, but it is Sunday to the people he left when starting. To avoid this complication a meridian line has been chosen, on crossing which the traveler changes his reckoning. If it is Tuesday, when he crosses this line going westward he calls it Monday. If going eastward he calls it Wednesday. Thus an awkward complication is avoided. The date-line has been fixed at the 180° meridian from Greenwich. This line has the advantage of traversing water through nearly all its course. Two deviations are made where it crosses island masses. After passing through Bering Strait it slants to the west around the Aleutian Islands, that they may have the same day as the United States, to which they belong, when the Fiji and neighboring groups of islands belonging to Great Britain are reached it bends to the east, so as not to embarrass the local commerce with a change of day.

Date-plum, the name given to several species of Diospyros, a genus of trees of the ebony family. The European date-plum is the D. Lotá, a low-growing tree, native of the south of Europe. It produces a small fruit, the supposed lotus of the ancients. The American date-plum, or persimmon (D. Virgíníína), attains a height of 50 or 60 feet; the fruit is nearly round, about an inch in diameter, is very auster, but edible after being frosted. The Chinese date-plum (D. Kákí) is cultivated for the sake of its fruit, which is about the size of a small apple, and is made into a preserve.

Datholite (dath’o-lít), the siliceous borate of lime, a mineral of a white color of various shades found in Scotland and on the continent of Europe; also near Lake Superior. Where it is used in the manufacture of boric acid.

Datia (da’ri-a), a native state in Bundelkhand, Hindustan, under the Central India Agency. Area, 911 sq. miles; pop. 173,759.—Datia, the chief town of the state, is situated 125 miles S. E. of Agra, and contains a large number of handsome houses, the residences of the local aristocracy. Pop. 24,071.
Datisin (da-tis'sin), a substance yielded by the bastard hemp, Datisca cannabina, a herbaceous, dicotous perennial, a native of the south of Europe, where it is used as a substitute for Peruvian bark, and for making cordage. Datisin (C_{16}H_{18}O_{5}) is extracted from the leaves, and is used as a yellow dye.

Dative (dæ'tiv; L. dativus, from dare, to give), in grammar, a term applied to the case of nouns which usually follow verbs or other parts of speech that express giving, or some act directed to the object, generally indicated in English by to or for.

Datura (dæ-tə'ra), a genus of plants, order Solanaceae, with large, trumpet-shaped flowers. There are several species, all having poisonous properties and a disagreeable odor. D. stramonium is the thorn-apple, possessing strong narcotic properties, and sometimes employed as a remedy for neuralgia, convulsions, etc. The dried leaves of D. stramonium, and D. tatula, an American species, are smoked as a remedy for asthma.

Daturine (dæ-tə-rin), a poisonous alkaloid found in the thorn-apple (Datura stramonium), its chemical formula being identical with atropine, the alkaloid from deadly nightshade.

Daubenton (də-bənto'), or d'Aubenton, Louis Jean Marie, a French naturalist and physician, born in 1716; died in 1800. He studied medicine at Paris, and in 1742 began to assist Buffon in the preparation of his great work on natural history, the anatomical articles of which were prepared by him. In 1745 he was appointed curator and demonstrator of the cabinet of natural history in Paris, of which he had charge for nearly fifty years. He became professor of natural history in the College of France in 1778. Among his publications are: Instructions to Shepherds, A Methodical View of Minerals, etc., and he contributed many scientific articles to the first Encyclopédie.

Daubeney (də'be-nəl), Charles Giles Bridle, an English scientist, born in 1795; died in 1867. For many years he was professor of chemistry, botany and rural economy at Oxford, and wrote several esteemed scientific works.

Daucus (də'kəs), a genus of umbelliferous plants, the most important of which is the carrot.

Daudet (də-dət), Alphonse, a French novelist, born at Nimes, in 1840. He settled in Paris in 1857, and wrote poems, essays, plays, etc., without much success, till he discovered his powers as a novelist, when he speedily rose to the highest rank. His more celebrated works are Frémont jeune et Risset Ainé (1874); Jack (1876); La Nabab (1877); Les Roi en Exil (1879); Numa Roumestan (1881); L'Evangéliste (1883); Sapho (1884); Les Aventures Prodigeuses de Tartarin de Tarascon (1874); its sequel, Tartarin sur les Alpes (1886); Trente Ans à Paris (autobiographical, 1888); and L'Immortel (1888). All his most important works have been translated into English. He died in 1907.—His brother, Ernest (born in 1837), also distinguished himself as a novelist, and was one of the best-known political writers of the French republican party.

Daughters of the American Revolution, a society composed of women each of whom is directly descended from an ancestor who 'with unfailing loyalty rendered material aid to the cause of independence as a recognized patriot, as soldier or sailor, or as a civil officer, in one of the several colonies or states organized in 1890 at Washington, D. C. Since their organization they have greatly extended their activities in all departments of civil and social life. The membership of the society in 1914 numbered 100,000, with chapters in China, Cuba, Mexico and the Philippines.

Daughters of the Confederacy, a society organized in Nashville, Tennessee, in 1884, and composed of the wives, widows, mothers, sisters or lineal descendants of men who served in the Confederate army or navy or otherwise aided the cause of the Southern Confederacy.

Daughters of the King, an order of women members of the Protestant Episcopal Church, organized in 1885. Its purpose is to bring young women within the influence of the church and to cooperate
with pastors to that end. (It is distinct from the 'King's Daughters.\textsuperscript{a})

**Daughters of the Revolution**

a patriotic society of American women organized in 1891, membership being confined to women lineally descended from 'a military or naval or marine officer, soldier, sailor, or marine,' in the Revolutionary service, or from one who signed the Declaration of Independence, or was a member of the Continental or State congresses or a congressional official assiated in the winning of American independence: with the limitation that these remained loyal to Congress or States throughout the war.

**Daulatabad (dou-lat-ə-bad\textsuperscript{b}),** a town of India, in the Nizam's Dominions of Buldarabad, Deccan; 170 miles E. of Bombay; the fortress, also known by the name of Deogiri, was from remote antiquity the stronghold of the rulers of the Deccan. Pop. 1243.

**Daun (doun),** LEOPOLD JOSÉPH MARIA, COUNT VON, an Austrian general, was born in 1705, and died in 1766. He served in the Turkish war in 1710, as major-general in Italy in 1734, and distinguished himself at the battle of Kromka in 1737, and the capture of Dingelingen in 1740. In 1748, after serving against the French in the Netherlands, he was made Knight of the Golden Fleece. His skilful passage of the Rhine, and his marriage with the Countess of Fux, a favorite of Maria Theresa, procured for him the post of master-general of the ordinance, and in 1757 that of general field-marshall. That same year he defeated Frederick the Great at Kolin, and soon after took Breslau. In 1758 he again defeated Frederick at Hochkirch; but he was at that time defeated by Frederick at Torgau in 1759. He afterwards became president of the aulic council.

**Dauphin (də-fən),** the title of the eldest son of the king of France prior to the revolution of 1830, said to be derived from the dolphin, the crest of the lords of Dauphiny. The name was assumed towards the middle of the ninth century by the lord of Dauphiny, which province was bequeathed by Humbert II to the king of France in 1349 on condition that the heir to the throne should bear the title of Dauphin of Viennois.

**Dauphiny (də-fən-i; Dauphiné),** one of the ancient provinces of France, which comprised the modern departments of the Jura, the Hautes Alpes, and part of that of the Drôme. The capital of the whole was Grenoble.

**Dauw (də-wu),** or Perchi (Eguana burchelli), a species of zebra which inhabits the plains of Southern Africa, particularly to the north of the Orange River. Its general color is a pale brown, with greyish white on the abdomen and inner parts of the limbs. Its head, neck and body and the upper parts of its limbs are striped like the zebra, but the stripes are not so dark in color. The Dutch colonists call it Bonte-guagga.

**Davenant (dav'en-ant), Sir William, an English poet and dramatist, born at Oxford in 1605; died in 1688. His father kept the Crown Inn, a house at which Shakespeare used to stop on his journeys between London and Stratford. He was early introduced into court life, (in the service of the Duchess of Richmond and Lord Brooke; and having produced several plays and court masques, he succeeded Ben Jonson in the laureateship (1637). During the civil war he fought on the royal side, was made a lieutenant-general, and received the honor of knighthood. On the decline of the royal cause he retired to France; but attempting to sail for Virginia, his ship was captured, and he escaped death through the good offices of John Milton, a kindness he was able to repay after the Restoration. Under Charles II Davenant flourished in the dramatic world. His works consist of dramas, masques, addresses, and the epic Gondibert, which was never finished; but he is remembered chiefly by the travesty of Shakespeare's Tempest, made in conjunction with Dryden. He was buried in Westminster Abbey.**

**Davenport (də-vən-pərt), a city, county seat of Scott Co., Iowa, situated at the foot of the upper rapids of the Mississippi, 181 miles west of Chicago, and directly opposite Rich Island, the seat of a United States arsenal. Woolen goods, agricultural implements and machines, pottery, carriages, gas engines, locomotives, machinery, washing machines, pearl buttons, metal ware, looms, and pressed steel cars, etc., are manufactured, and there are hydro-electric plants. Pop. 57,860.**

**Daventry (də'ven-tri), or DAIN Tree, a market town of England, in the county of and 11 miles W. by N. of Northampton. Pop. 3,517.**

**David (də'vid), King of Israel, the youngest son of Jesse, a citizen of Bethlehem, and descended through Boaz from the ancient princes of Judah. The life of David is recorded through the first and second books of Samuel and the first book of Chronicles. The**
David I

book of Psalms, a large portion of which has been attributed to him (see Psalms), also contains frequent allusions to incidents in his life. He reigned from 1065 A.D. to 1100 A.D. according to the usual chronology, but recent investigations put the dates of David's reign from 30 to 50 years later. Under David the empire of the Israelites rose to the height of its power, and his reign has always been looked on by the Jews as the golden age of their nation's history.

David I, King of Scotland, son of Malcolm Canmore; born about 1080; succeeded his brother Alexander I in 1124; died in 1153. He was the first to introduce feudal institutions and ideas into his native land. He twice invaded England to support his niece Matilda against Stephen, her rival claimant for the English crown, during one of his incursions being defeated at the Battle of the Standard (1138). He died at Carlisle, and was succeeded by his grandson Malcolm. He acquired a considerable reputation for sanctity. While yet Prince of Cumbria he had begun the establishment of the Glasgow bishopric. He adjusted the bishoprics of Dunkeld, Moray, Aberdeen, Ross, Caithness, Brechin, Dunblane and Galloway. Among the religious houses for regulars which late from his reign are Holyrood, Melrose, Jedburgh, Kelso, Dryburgh, Newbattle, etc. His services to the church procured for him the popular title of saint, but the endowments so taxed the royal domains and possessions that James VI bitterly characterized him as 'ane sair sanct for the crown.'

David II, King of Scotland, son of Robert Bruce, born in 1322; succeeded to the throne in 1329; died in 1370. On the death of his father he was acknowledged by the greater part of the nation. Edward Balliol, however, the son of John Balliol, formed a party for the purpose of supporting his pretentions to the crown; he was backed by Edward III of England. Battles were frequent, and at first Balliol was successful; but eventually David succeeded in driving him from Scotland. Still, however, the war was carried on with England with increasing rancour, till at length David was made prisoner at the battle of Neville's Cross (1346). After being detained in captivity for eleven years he was ransomed for 100,000 marks. The remainder of his reign was occupied in disputes with his parliament.

David, of the modern French school of painting, born at Paris in 1738; died at Brussels in 1825. He went to Rome in 1774, and passed several years there painting a number of important pictures. A second visit produced the Horatii, one of his masterpieces. In 1787 he produced The Death of Socrates, in 1788 Paris and Helen, and in 1789 Brutus. In the revolution he was a violent Jacobin, and wholly devoted to Robespierre. Several of the scenes of the revolution supplied subjects for his brush. One is considered his masterpiece, The Rape of the Sabines, was painted in 1799. He was appointed first painter to Napoleon about 1804; and after the second restoration of Louis XVIII he was included in the decree which banished all regicides from France, when he retired to Brussels.

David, Pierre Jean, a French sculptor, born at Angers in 1789 (hence commonly called David d'Angers); died in 1866. He went when very young to Paris, became the pupil of J. L. David, and in 1809 a prise obtained from the Academy enabled him to pursue his studies at Rome, where he formed a friendship with Canova. On his return to Paris he laid the foundation of his fame by a colossal statue of the great Condé in marble. He visited Germany twice, in 1828 and 1834, and executed busts of Goethe for Weimar, of Schelling for Munich, of Tieck for Dresden, of Rouch and Humboldt for Berlin. In 1831 he began the most brilliant sculptures of the Pantheon, his most important work, which he finished in 1837. He executed a great number of medals, busts and statues of celebrated persons of all countries, among whom we may mention Walter Scott, Canning, Washington, Lafayette, Gutenberg, Cuvier, Victor Hugo, Béranger, Paganini and Madame de Staël.

David, St., patron of Wales, Archbishop of Caerleon, and afterwards of Menevia, now St. David's, where he died about 601. He was celebrated for his piety, and many legends are told of his miraculous powers. His
David's writings are no longer extant. His life was written by Ricemarch, bishop of St. David's in the eleventh century.

David's, St., a decayed episcopal city of Wales, County Pembroke, near the promontory of St. David's Head, once the metropolis see of Wales. Within a space of 1200 yards in circuit are the cathedral, chiefly of the twelfth century, with a finely decorated roof-loft, the episcopal palace, the ruins of St. Mary's College, and other ecclesiastical edifices, chiefly ruinous. Pop. of township 5393.

Davidson, George, astronomer, born at Nottingham, England, in 1825, and brought to the United States in childhood. He was appointed on the United States coast survey in 1845, and had charge of the transit of various expeditions to Japan in 1854, and New Mexico in 1882. He completed the transit factors of many thousands of stars. In 1873 he became professor in the University of California, and president of the California Academy of Sciences in 1874. In 1896 he became professor of geography in the University of California. He is a member of the National Academy of Science and of many foreign learned institutions.

Davies (de'ves), Sir John, an English poet and lawyer, born in 1570; died in 1626. In 1603 he was appointed solicitor-general for Ireland, and soon after attorney-general. He was knighted in 1607, returned to the English Parliament in 1611, and obtained the dignity of lord chief-justice in 1620. He wrote Orchesra, slumma to Astrae, Nosce Tepsam, a metaphysical poem and his best-known work; he is also the author of a work on the political state of Ireland.

David (dá'vil-lá), Enrico Cattino, an Italian historian, born near Padua in 1576; died in 1631. Brought up in France, he for a time served with distinction in the French army. In 1599 he entered the Venetian service.

Davis, Andrew Jackson, clairvoyant, born in Orange Co., New York, in 1826. He developed in youth remarkable powers. An uneducated boy, he wrote, under clairvoyant influence, tomes full of philosophical speculations and learned disquisitions. These were published as Principles of Nature, Her Divine Revelations, The Great Harmony (4 vols.), etc. They advocated the doctrines of spiritualism. He practiced for many years as a clairvoyant healer of the sick. He died in 1910.

Davis, Cushman Keillog, legislator, born at Henderson, New York, in 1834; died in 1900. He removed to Wisconsin, studied law, and served in the legislature. He was elected to the Minnesota legislature in 1897, was district attorney of that State 1868-73, and governor 1874-75. Was United States Senator 1877-1900, and served on the Paris Peace Commission of 1898.

Davis, Henry Winter, statesman, was born in Annapolis, Maryland, in 1817. As member of Congress he was a brilliant orator. Although representing a slave State, he was unaltering in fidelity to the Union and a strenuous advocate of emancipation, and as early as 1805 favored negro suffrage. He died in 1865.

Davies, Jefferson, president of the Confederate States of America during the Civil war; born in Kentucky in 1808. He was graduated at West Point Military Academy, and from 1828 to 1835 saw a good deal of service on the frontier. At the latter date he became a cotton planter in the State of Mississippi. He was elected to Congress in 1845, but at the commencement of the Mexican war he left Congress and engaged actively in the contest. He entered the Senate in 1847, and held various posts in the government, upholding the policy of the slave States and the doctrine of slave rights. On the outbreak of the Civil war he was chosen president of the Southern States, continued president throughout the war, and was taken prisoner after the fall of Richmond. After two years imprisonment in Fortress Monroe, he was set at liberty by the general amnesty of 1868. He afterwards wrote a history of the war. He died in 1889, at New Orleans.

Davis, or Davys, John, an English navigator, born at Sandridge, in Devonshire about 1550. In 1586-87 he conducted three expeditions for the
discovery of the northwest passage. In the first he coasted round the south of Greenland and sailed across the strait that now bears his name into Cumberland Gulf, and in the third he sailed north through Davis Strait into Baffin Bay. He also accompanied the expedition of Cavendish to the Pacific in 1591–93, and made several voyages to the East Indies.

Davis, Richard Harding, war correspondent, novelist and short-story writer, was born at Philadelphia in 1864, entered newspaper work in 1887 and began his war-correspondent career reporting the Greco-Turkish war of 1887. He served in the Cuban insurrection, the Spanish-American war, the South African wars, the Russo-Japanese war, the Balkan wars, and the first years of the great European war. He was in Belgium when the Germans invaded that country and was captured as a spy by the Teutons, narrowly escaping with his life. Later he went to Salonika and Serbia. He returned from Europe early in 1916 and began work on a new book, *With the French in France and Salonika*, but the terrific strain he had undergone sapped his strength and he died suddenly, April 13, 1916, only a few weeks after his return home. He was the author of *Soldiers of Fortune, Gallagher and Other Stories, The Bar Sinister*, etc. Rebecca Harding Davis, his mother, was also a writer of magazine stories. She was born at Washington, Pa., 1831; died 1893.

Davis Strait, a narrow sea which separates Greenland from Baffin Land, and unites Baffin Bay with the Atlantic Ocean; lat. 60° to 70° N.

Davits (dā’vīts), two projecting arms of wood or iron on the side or stern of a vessel, used for suspending or lowering and hoisting the boats by means of sheave and pulley. They are fixed so as to admit of being shipped and unshipped at pleasure.

Davos (dā’vōs), an elevated valley (over 5000 feet) of Switzerland, Canton Grisons, containing several villages; a winter resort of persons suffering from chest diseases.

Davout, or Davoust (dā-vō’st), Louis Nicolas, Duke of Auerstädt and Prince of Eckmühl, marshal and peer of France, born in 1770 at Annoux, in Burgundy; died in 1823. He entered the army at the age of seventeen; served with distinction under Duroc, and at the passage of the Rhine, in 1807. He went with Bonaparte to Egypt in 1798, and commanded the cavalry of the army of Italy in 1800. He received a marshal's baton in 1804, led the right wing at Austerlitz in 1805, and defeated the Prussians at Auerstädt in 1806. He shared the glory of Eylau, Eckmühl and Wagram; was made Governor of Hamburg; took part in the Russian campaign of 1812, and was wounded at Borodino. During the Hundred Days (1815) he was Napoleon's minister of war, and after Waterloo was appointed by the provisional government general-in-chief of the French armies. In 1819 he was a member of the Chamber of Peers.

Davy (dā’vē), Sir Humphry, a distinguished English chemist, was born at Penzance, in 1778; died at Geneva in 1829. After having received the rudiments of a classical education he was placed with a surgeon and apothecary, and early developed a taste for scientific experiments. So successful was he in his studies that he was appointed professor of chemistry in the Royal Institution at the age of twenty-four. In 1803 he was chosen a member of the Royal Society. His discoveries with the galvanic battery, his decomposition of the earths and alkalies and ascertaining of their metallic bases, his demonstration of the simple nature of the oxymuriatic acid (to which he gave the name of chlorine), etc., obtained him an extensive reputation; and in 1810 he received the prize of the French Institute. In 1814 he was elected a corresponding member of that body. Having been elected professor of chemistry to the Board of Agriculture he delivered lectures on agricultural chemistry during ten successive years. The numerous accidents arising from fire-damp in mines led him to enter upon a series of experiments on the nature of the explosive gas, the re-
sult of which was the invention of his safety-lamp. He was knighted in 1812 and created a baronet in 1818. In 1820 he succeeded Sir J. Banks as president of the Royal Society, and at the time of his death he was a member of most of the scientific societies of Europe. He wrote: *Philosophical Researches, Elements of Agricultural Chemistry, Electro-Chemical Researches, Elements of Chemical Philosophy, Researches on the Oxy-muriatic Acid, On Fire-damp, etc.* He also contributed some valuable papers to the *Philosophical Transactions*, and was author of *Salmonia, or Days of Fly-fishing, and Consolations in Travel, or the Last Days of a Philosopher*.

**Davy Lamp.** See *Safety-lamp*.

**Davyum** (dæˈví-əm; after Sir H. *Davy*), a metal of the platinum group discovered in 1877. It is hard, silvery metal, slightly ductile, extremely inuble, and has a density of 9.386 at 25°C.

**Dawes, Henry L.**, statesman, was born in Cummington, Massachusetts, in 1816; died in 1903. He was graduated at Yale College and studied law. After serving as member of the House of Representatives for seven consecutive terms, in 1874 he was elected United States Senator, and reelected 1881 and 1887. During his career he was prominent in legislation.

**Dawson (dɔsən).** Henry, an English landscape painter, born in 1811; died in 1878. In early life he was a worker in a Nottingham lace-factory, but this occupation he gave up for art in 1833. After struggling for some time at Nottingham he removed to Liverpool in 1844, and thence to Croydon in 1850, and in later years resided at Chiswick. It was long before his abilities were fully recognised, and his pictures began to bring high prices only a little before his death. Among the best of them are *Wooden Walls of Old England, London from Greenwich Hill, Houses of Parliament, The Rainbow, Rainbow at Sea and The Pool below London Bridge*.

**Dawson, Sir John William**, a Canadian geologist, born at Picton, Nova Scotia, in 1820; died in 1899. Educated at Picton and Edinburgh University, he early turned his attention to geology, having published papers on the subject when not much over twenty. He accompanied Sir Charles Lyell when examining the geology of Nova Scotia in 1842. In 1850 he became superintendent of education for Nova Scotia, and in 1855 principal and professor of natural history, in McGill College, Montreal, in which position, as well as in that of vice-chancellor, and latterly principal of the university, his services in the cause of education were very marked. He became a member of the Royal Society (London) in 1862, was knighted in 1885, and was president of the British Association in 1886 during its meeting at Birmingham. His published works include *Acadian Geology, The Story of the Earth and Man, Science and the Bible, The Dawn of Life, The Chain of Life*, etc.

**Dawson City**, a river port of the Yukon Territory, Canada, on the Yukon River, in the center of the Klondike gold region. It was founded in 1896, and in the early days had a population of over 25,000. River steamers reach it from the mouth of the Yukon River in Bering Sea, and it has water and railway connections with Skagway, Alaska, and is the seat of the government offices. Pop. (1911) 3,013.

**Dax** (daks), a town and watering place of Southwestern France, dep. Landes, on the left bank of the Adour, 25 miles n. e. of Bayonne. The chief attraction of the place is its thermal springs, which have temperatures varying from 86° to 166° Fahr., were much frequented by the Romans, and are still in great repute for the cure of rheumatic and similar complaints. Pop. (1906) 8,985.

**Day** (dæ), either the interval of time during which the sun is continuously above the horizon or the time occupied by the revolution of the earth on its axis, embracing this interval (the period of light) as well as the interval of darkness. The day in the latter sense may be measured in more than one way. If we measure it by the apparent movement of the stars, caused by the rotation of the earth on its axis, we must call it the sidereal time when a star is on the meridian and when it again returns to the meridian: this is a sidereal day. It is uniformly equal to 23 hours, 56 minutes, 4.008 seconds. But more important than this is the solar day, or the interval between two passages of the sun across the meridian of any place. The latter is about 4 minutes longer than the former, owing to the revolution of the earth round the sun, and it is not of uniform length, owing to the varying speed at which the earth moves in its orbit and to the obliquity of the ecliptic. For convenience an average of the solar day is taken, and this gives us the mean solar or civil day of 24 hours, the difference between which and the actual solar
day at any time is the equation of time.

The length of the days and nights at any place varies with the latitude and season of the year, owing to the inclination of the earth's axis. In the first place, the days and nights are equal (twelve hours each) all over the world on the 21st of March and the 21st of September, which dates are called the vernal (spring) and autumnal equinoxes (Lat. æquus, equal; nox, night). Again, the days and nights are always of equal length at the equator, which, for this reason, is sometimes called the equinoctial line. With these exceptions, we find the difference between the duration of the day and the night varying more and more as we recede from the equator. This will be easily understood from a consideration of the accompanying figure, which represents

![Diagram to Illustrate the Differences in the Length of Day and Night.](image)

the position of the earth at the northern summer solstice. Let A, A', Z, Z' represent the sun's rays, then the vertical circle $\text{AP}_B \text{G}$ will be the circle of illumination—that is, the line which separates the illuminated and dark hemispheres of the earth. Consider a place $F$. As the earth times round it would describe a circle $\text{F}_B \text{D}_G$H, the greater part of which, $\text{F}_D \text{G}$, is performed in the sunlight, and the smaller part, $\text{G}_H \text{F}$, in the dark. In other words, the day for the place $F$ would be longer than its night. It will be also seen that for any place within the Arctic circle $\text{A}$ the sun does not set, while in the Antarctic circle the sun never rises so long as the earth is in this position. At the northern winter solstice the reverse of all this is the case—the Arctic circle never comes into the light area, and places within the Antarctic circle never enter into the dark. From this it will be seen that at both poles the year consists of one day of six months' duration, and one night of the same length.

The Babylonians began the day at sunrise; the Jews at sunset; the Egyptians and Romans at midnight, as do most modern peoples. The civil day in most countries is divided into two portions of twelve hours each. The abbreviations P.M. and A.M. (the first signifying post meridiem, Latin for afternoon; the latter ante meridiem, forenoon) are requisite, in consequence of this division of the day. The Italians in some places reckon the day from sunset to sunset, and enumerate the hours up to twenty-four; the Chinese divide it into twelve parts of two hours each. For astronomical purposes the day is divided into twenty-four hours instead of two parts of twelve hours. Formerly it began at noon, but since January 1, 1885, the day of twenty-four hours has begun at midnight at Greenwich Observatory; and this reckoning is now generally adopted for astronomical purposes elsewhere than at Greenwich. The Greenwich day practically determines the date for all the world. At midday at Greenwich the date (day of the week and month) is everywhere the same, though there are all possible differences in naming the hour of the day. But midday at Greenwich is the only instant at which we ever have the same date all over the world. The meridian of midnight, which is then at 180° E. or W., goes on revolving, gradually bringing a new date to every place to the west of that line, but obviously not bringing that new date to the places immediately to the east of that line till twenty-four hours after. From this it follows that whereas places on the one side of the globe have the same date, places on the other side of the globe have a different date except when midnight lies between them. The actual difference of time between Wellington in New Zealand and Honolulu in the Sandwich Islands is only about 2 hours; yet a person at Wellington may date a letter 9 o'clock A.M. June 26, while another writing at the same instant at Honolulu dates his 11 o'clock A.M. June 25.

Day, THOMAS, an ingenious writer, of a benevolent, independent, but eccentric spirit, was born at London in 1748; killed by a fall from a horse in 1780. His father, who was a collector of the customs, died while he was an infant,
Day

leaving him a considerable fortune. He was educated at the Charter House and at Oxford. In 1765 he was called to the bar. He renounced most of the indulgences of a man of fortune, that he might bestow his superfluities upon those who wanted necessities; and he also expressed a great contempt for forms and artificial restraint of all kinds. He wrote, in prose and verse, on various subjects, but the History of Sanford and Merton is the only work by which his name is perpetuated.

Day, William Rufus, statesman, born at Ravenna, Ohio, in 1849. He was admitted to the bar in 1872, became a judge in Ohio, and of the United States District Court in 1889. He was appointed assistant Secretary of State in 1887, became Secretary of State in April 1888, and resigned to become chairman of the Paris Peace Commission. He has been an associate justice of the United States Supreme Court since 1903.

Daybook, a journal of accounts; a book in which are recorded the debts and credits or accounts of the day. See Bookkeeping.

Dayfly, the popular name of those neuropterous insects which belong to the genus Ephemerida. They are so called because, though they may exist in the larval and pupal state for several years, in their perfect form they exist only from a few hours to a few days, taking no food, but only propagating their species and then dying.

Daylight Saving, a movement to make the most of daylight for working hours by setting the clock ahead one hour in the summer season. It came into force in the United States in April, 1918. See United States.

Day-lily, the popular name for a genus of lilies (Hemerocallis), natives of temperate Asia and Europe, two solid green stems of which (H. flava and H. fulva) are grown in gardens. They have long, radical leaves, and a branched, few-flowered scape, with large, handsome blossoms, the segments of which are united into a tube.

Daysman, an English law, an arbitrator or elected judge. This term is antiquated. See Book of Job.

Days of Grace, are days allowed for the payment of a promissory note or bill of exchange after it becomes due.

Dayton, a city of Ohio, capital of Montgomery county, at the confluence of the Mad and Great Miami rivers, 60 miles N.E. of Cincinnati. It has abundant waterpower, is on the line of the Miami and Erie Canal, and is a place of great industrial activity, a tobacco center, a center of railway communication, and in the variety and extent of its manufactures it stands in the front rank of western towns of its size. Its commercial interests are also large. In March, 1913, Dayton was swept by a heavy flood; but the city immediately set to work to repair the loss. Pop. 116,577.

Deacon (dē′kən), ecclesiastically, a person in the lowest degree of holy orders. The office of deacon was instituted by the apostles, and seven persons were chosen at first to serve at the feasts of Christians, and distribute bread and wine to the communicants, and to minister to the wants of the poor. In the Roman Catholic Church the deacon is the chief assistant at the altar. He assists the priest in the celebration of mass, and on certain conditions can preach and baptize. In the Church of England the deacon is the lowest of the three orders of priesthood, these being bishops, priests and deacons. The deacon may perform all the ordinary offices of the Christian priesthood except consecrating the elements at the administration of the Lord's Supper, and pronouncing the absolution. In Presbyterian churches the deacon's office is to attend to the secular interests, and in Independent churches it is the same, with the addition that he has to distribute the bread and wine to the communicants.

Deacon, in Scotland, the president of an incorporated trade, who is the chairman of its meetings and signs its records. Before the passing of the Burgh Reform Act the deacons of the crafts, or incorporated trades, in royal burghs, formed a constituent part of the town council, and were understood to represent the trades as distinguished from the merchants and guild brethren. The deacon-convenor of the trades in Edinburgh and Glasgow are ex-officio to be the constituent member of the town council.

Deaconess (dē′kən-əs), (1) a female deacon in the primitive church; (2) the term for a kind of quasi sister of mercy among certain American and other Protestants.

Dead-eyes, in ships, round, flattish, wooden blocks, encircled by a rope or an iron band, used to extend the shrouds and stays, and for other purposes.

Dead-letter, a letter which lies for a certain period uncalled for at the post-office, or one which cannot be delivered from defect of address, and which is sent to the general post-office to be opened and returned to the writer.—Dead-letter office, a department of the
Dead-lights

Dead-lights, or strong wooden or metal shutters fitted on the outside of the cabin windows of a vessel, so as to close them tightly in bad weather.

Deadly Nightshade. See Bella-donna.

Dead Men's Fingers. See Alcyonium.

Dead-nettle, the common name of the species of plants of the genus Lamium, nat. order Labiates, from the resemblance of their leaves to those of the nettle, though they have no stinging property. There are several species found in Britain (and now also in N. America), as the white dead-nettle (L. album), the red (L. purpureum), and the yellow (L. Galeobdolon).

Dead Reckoning (ded rek'oun-ing). The calculation of a ship's place at sea without any observation of the heavenly bodies. It is obtained by keeping an account of the distance which the ship has run by the log, and of her course steered by the compass, and by rectifying these data by the usual allowance for drift, leeway, etc., according to the ship's known movements.

Deadwood (ded'wud), a city of South Dakota, capital of Lawrence Co., situated among the Black Hills and a great ore reducing center. It is an important trading and supply point. Pop. 3663.

Dead Sea (Latin, Lacus Asphaltites; Arabic Bahr Lot, 'the Sea of Lot'), called in Scripture 'Salt Sea,' 'Sea of the Plains,' and 'East Sea,' a celebrated lake in Asiatic Turkey, near the south extremity of Palestine, south of Syria. The north extremity is 25 miles east of Jerusalem and 10 miles southeast of Jericho; length, north to south, about 46 miles; breadth at the widest part, 9 to 10; average, about 8½ miles. The basin or hollow in which the Dead Sea repose forms the south termination of the great depression through which the Jordan flows, that river entering it at its north extremity. It receives several other tributaries, but has no outlet. The surface is 1312 feet below the level of the Mediterranean, and 600 feet below Lake Tiberias, from which the Jordan issues. It lies deeply imbedded between lofty cliffs of naked limestone, its shores presenting a scene of indescribable desolation and solitude, encompassed by desert sands and bleak, stony, salt hills. Sulphur and rock-salt, lava and pumice abound along its shores. The water is nauseous, due to magnesium chloride, and so dense that the human body will not sink in it. It is about a third of its length from the north end it attains a maximum depth of 1308 feet. The southern portion is a mere lagoon, 12 feet deep in the middle and 3 at the edges. It was long assumed that this lake did not exist before the destruction of Sodom and the other 'cities of the plain,' and that, previously to that time, the present bed of the lake was a fertile plain, in which these cities stood, and was then merely traversed by the Jordan, which, in accordance with this theory, was supposed to hold on its course to the Red Sea. This theory has been shown to be highly improbable. Eminent critics are of opinion that the cities of the plain stood on the lower part of the lake, which received an extension when these cities were destroyed.

Deaf and Dumb, or Deaf-mutes. Persons both deaf and dumb, the deafness resulting from deafness which has either existed from birth or from a very early period of life. Such persons are unable to speak simply because they have not the guidance of the sense of hearing to enable them to imitate sounds. Among the causes assigned for congenital deafness are consanguineous marriages, hereditary transmission, scrofula, certain local or climactic conditions, ill health of the mother during pregnancy, etc. Acquired or accidental deafness, which occurs at all ages, is frequently due to such diseases as smallpox, measles, typhus, paralysis, hydrocephalus and other cerebral affections, but more particularly to scarlet fever, which is somewhat apt to leave the patient deaf owing to the inflammatory state of the throat extending to the internal ear, and thus causing suppuration and destruction of the extremely delicate parts of the auditory apparatus. In the greater proportion of deaf-mutes no defect is visible, or can be detected by anatomical examination, and no applications yet discovered appear to be useful. The necessity of communication, and the want of words, oblige the deaf-mutes to observe and imitate the actions and expressions which accompany various states of mind and of feeling, to indicate objects by their appearance and use, and persons by some peculiar mark, and to describe their actions by direct imitation. In this way he and his friends are led to form a dialect of that universal language of attitude, gesture and expression which becomes a substitute for words in the hands of the pantomimic actor, and which adds force and clearness to the finest
Deaf and Dumb

efusions of the orator; in other words, the natural signs language. This language, in its elements, is to be found among all nations, and has been the medium of communication between voyagers and the natives of newly discovered countries. It is employed by many savage tribes to supply the paucity of expression in their language and to communicate with other tribes. Among some of the Indians of North America it exists as a highly organised language. Such a means of communication is after all very imperfect, however, and various more perfect systems have been devised to enable deaf-mutes to communicate with one another and with the rest of mankind, and thus to gain such an education as people in general possess. In 1648 John Bulwer published the earliest work in English on the instruction of the deaf and dumb. This was followed by Dalgarino's Ars Signorum ("Art of Signs") in 1661, and Dr. W. D. Holder's Elements of Speech. Dalgarino, who was a native of Scotland, likewise published, in 1680, Didascalocolos, or the Deaf and Dumb Man's Tutor, a work of considerable merit. To Dr. John Wallis, however, Savilian professor of mathematics at Oxford, is generally ascribed the merit of having been the first Englishman who succeeded in imparting instruction to deaf-mutes. In 1743 the practicability of instructing deaf-mutes was first publicly demonstrated in France by Pereira, a Spaniard, before the Academy of Sciences, which gave its testimony to the success of the method. About the same time the Abbé de l'Epée, who devoted his life and fortune to this subject, introduced a system for the instruction of the deaf and dumb, which was taught with great success in the Royal Parisian Institution, and afterwards still further developed by his pupil and successor, the Abbé Sicard. In 1770 a public institution for the education of deaf-mutes was established at Leipzig, through the labors of Samuel Heinicke, the great upholder of the vocal or articulatory system, which is still retained at Vienna and throughout Germany. About twenty years previously Thomas Braidwood had established near Edinburgh in 1760 a deaf and dumb school on the articulating system, which was visited by Dr. Johnson during his tour in Scotland. The first public institution in Great Britain for the gratuitous education of the deaf and dumb was founded at Bermondsey in 1782 by the Rev. Messrs. Townsend and Mason. From this establishment originated the London Asylum in Kent Road, which was opened in 1807. In the United States great advances have been made in the education of deaf-mutes, and a National Deaf-mute College is maintained at Washington by the government. Many states have established institutions for the care and instruction of deaf-mutes.

The two chief methods of conveying instruction to the deaf and dumb are by means of the manual alphabet, and by training them to watch the lips of the teacher during articulation. There are two kinds of manual alphabet: the double-handed alphabet, where the letters are expressed by the disposition of the fingers of both hands; and the single-handed, in which the letters are formed with the fingers of one hand. Particular gestures which are attached to each word as its distinctive sign are largely used, as are also real objects and models, pictures, etc. The method of teaching by articulation, the pupil learning to recognize words, and in time to utter them, by closely watching the motions of the lips and tongue in speech, and by being instructed through diagrams as to the different positions of the vocal organs, is now receiving much attention, and has given excellent results, cases being known where persons have conversed with the deaf and dumb and remained ignorant that those to whom they were speaking were afflicted in this way. It is by no means a novel system, but of late it has vastly increased in favor with authorities. A new mode of teaching articulation has recently been brought into notice, consisting in the use of the system of visible speech devised by Mr. McVilie Bell. The characters of the alphabet on which this system is founded are intended to reveal to the eye the position of the vocal organs in the formation of any sound which the human mouth can utter. This system has practical value as a means of instruction with all classes of the deaf and dumb has not as yet been sufficiently tested.

Deafness, the partial or total inability to hear. This is a symptom of most affections of the ear. It may be due simply to an accumulation of wax. If it comes on suddenly without pain in a healthy person this is probably the cause. When it comes on with a cold in the head it is the result of a cold or catarrh, and is likely to pass off in a few days. Attended by pain ringing in the ears, etc., some degree of inflammation is likely present. The most intractable form of deafness comes on very gradually and painlessly, and is connected with disease of the middle ear. In a skilled ear surgeon were consulted in
time much might probably be done to stay its progress. Deafness due to the disease of the nerve of hearing is usually very intense, comes on suddenly or advances very rapidly, and is not easily reached by treatment. As to other causes of complete deafness see "Deaf and Dumb."

Deák (dā-kā'), Ferencz, a Hungarian statesman, born of a noble Magyar family, in 1803; died in 1876. He was elected to the National Diet in 1832, and became the leader of the liberal party. At the revolution of 1848 he became minister of justice, but retired when Kossuth obtained power. On the defeat of the patriots in 1849 he retired from public life, and did not return till the Franco-Austrian war gave him an opportunity of serving his country. He is regarded as the master-spirit of the movement by which the ancient independence of his country was restored in 1867. Though the leader of the liberal party, he constantly refused office, but no change in the ministry was made without his consent.

Deal (dēl), a seaport and watering place of England, County Kent, between the North and South Foreland, 72 miles E. by S. of London. Walmer Castle, Sandown Castle and Deal Castle are in the vicinity of the town. Boatbuilding and sail-making are carried on. There is a pier, but no proper harbor; the well-known Downs afford excellent anchorage. Pop. (1911) 11,297.

Deal, the division of a piece of timber made by sawing; a board or plank. The name deal is chiefly applied to boards of fir above 7 inches in width and of various lengths exceeding 6 feet. If 7 inches or less wide they are called battens, and when under 6 feet long they are called deal-ends. The usual thickness is 3 inches, and width 9 inches. The standard size, to which other sizes may be reduced, is 1 1/2 inches thick, 11 inches broad, and 12 feet long. Whole deal is deal which is 1 1/2 inches thick; slit deal, half that thickness. Deals are exported from Prussia, Sweden, Norway, Russia and British North America.

Deal-fish, the Trachypterus Arctos, so called from its excessively compressed body, a denizen of the northern ocean and an occasional visitor to the coasts of Iceland, Norway and Britain; measures from 4 to 8 feet in length; is of a silvery color with minute scales, and has the dorsal fin extended along the whole length of the back. It is also known by the Scandinavian name Vaagmeer.

Dean (dēn; from L. decanus, from decem, ten), an ecclesiastical dignitary, said to have been so called because he presided over ten canons or prebendaries; but more probably because each diocese was divided into deaneries, each comprising ten parishes or churches, and with a dean presiding over each. In England, in respect of their differences of offices, deans are of several kinds. 

Deans of chapters are governors over the canons in cathedral and collegiate churches. The dean and chapter are the bishop's council to aid him with their advice in affairs of religion, and they may advise, likewise, in the temporal concerns of his see. Rural deans were originally benefited clergyman appointed by the bishop to exercise a certain jurisdiction in districts of his diocese remote from his personal superintendence, but their functions have for many years become almost obsolete. Dean of the chapel royal, in Scotland, is a title bestowed on six clergyman of the Church of Scotland, who receive from the crown a portion of the revenues which formerly belonged to the chapel royal in Scotland, and which are now in the gift of the crown.

Dean Forest, England, county of Gloucester. It formerly comprised the greater part of the county west of the Severn, but is now reduced to about 22,000 acres, nearly one-half of which is enclosed, and was formerly appropriated for the growth of navy timber, but is now mainly covered with coppices. This district is crown property, and the inhabitants (chiefly coal and iron miners) enjoy many ancient privileges. In 1911 it contained a pop. of 64,261.

Dean of Faculty. — (1) In some universities, as that of London and those of Scotland, the chief or head of a faculty (as of arts, law, or medicine); in the United States, a registrar or secretary of the faculty in a department of a college, as in a medical, theological, or scientific department. (2) The president for the time being of an incorporation of barristers or law practitioners; specifically, the president of the incorporation of advocates in Edinburgh.

Dean of Guild, in Scotland, originally a title that magistrate of a royal burgh who was head of the merchant company or guildry; now the magistrate whose proper duty is to take care that all buildings within the burgh are sufficient, that they are erected agreeably to law, and that they do not encroach either on private or public prop-
Death

Death (deth), is that state of a being, animal or vegetable, but more particularly of an animal, in which there is a total and permanent cessation of all the vital functions, when the organs have not only ceased to act, but have lost the susceptibility of renewed action. Death takes place either from the natural decay of the organism, as in old age, or from derangements or lesions of the vital organs caused by disease or injury. The signs of actual death in a human being are the cessation of breathing and of the beating of the heart; insensibility of the eye to light, pallor of the body, complete muscular relaxation, succeeded by a statue-like stiffness or rigidity which lasts from one to nine days; and decomposition, which begins to take place after the rigidity has yielded, beginning first in the lower portion of the body and gradually extending to the chest and face. What becomes of the mind or thinking principle, in man or animal, after death, is a matter of philosophical conjecture or religious faith.

Death Rate, the proportion of deaths among the inhabitants of a town, country, etc. It is usually calculated at so many per thousand per annum.

Death's-head Moth, the largest species of lepidopterous insect found in Europe, and systematically known by the name of Acherontia atropos. The markings upon the back of the thorax very closely resemble a skull, or death's-head; hence the English name. It measures from 4 to 5 inches in expanse. It emits peculiar sounds, somewhat resembling the speaking of a mouse, but how these are produced naturalists have not been able satisfactorily to explain. It attacks beehives, pillages the honey, and disperses the inhabitants. It is regarded by the vulgar as the forerunner of death or other calamity.

Death Valley, a narrow valley in California, between the Panamint and Funeral Mountains, its central part covered with salt and 300 or 400 feet below sea level. It is considered the dryest and hottest place in the United States, its temperature having reached the extreme of 122° F. It is so called because a party of emigrants perished there in 1849.

Death-watch, the popular name of the Anobium tesselatum, a coleopterous insect that inhabits the wood-work of houses. In calling to one another they make a peculiar ticking sound, which superstition has interpreted as a fore-runner of death.

Débacle (dāˈba-kl), a sudden breaking up of ice in a river; used by geologists for any sudden outbreak of water, hurrying before it and dispersing stones and other debris.

Debenture (de-benˈtər), a deed-poll (declaratory deed) given by a public company in acknowledgment of borrowed money. It gives the holder the first claim for dividends, while the capital sum lent is usually assured on the security of the whole undertaking. With the deed, coupons or warrants for the payment of interest at specified dates are generally issued. Custom-house certificates of drawback are also termed debentures.

Deborah (deˈbər), a Hebrew seer or prophetess who lived in the time of the Judges, by the aid of Barak delivered the northern tribes from the
De Bow

oppression of Jabin, and secured a peace of forty years' duration. The triumphal ode (Judges, v) attributed to her is a remarkable specimen of Hebrew poetry.

De Bow (de bò), James D. B., born at Charleston, South Carolina, in 1820; died in 1867. An able statistician, he founded in 1845 De Bow's Commercial Review, and in 1847 became professor of political economy and statistics in the University of Louisiana. In 1855 he published Industrial Resources of the South and West.

Debreczin (dé-bret'szin), a town of Hungary, on the edge of the great central plain, 115 miles E. of Budapest. Its houses are mostly of a single story; the streets broad and unpaved. Among the principal edifices are the Protestant church and college. Manufactures are coarse woolens, leather, soap, tobacco-pipes, casks, etc. A large trade is done in cattle. Pop. (1910) 32,729.

Debs, Eugene Victor, labor leader and socialist, born at Terre Haute, Indiana, in 1855. A locomotive fireman, he rose to be president of the American Railway Union, and in 1897 Chairman of the National Council Social Democracy of America. While managing a railroad strike in 1894 he was charged with conspiracy and acquitted, but was imprisoned for six months for contempt of court. He has been the presidential candidate of the Social Democracy since 1900.

Debt, National. See National Debt.

Debussy (ða-bl-sé'), Claude Achille, a French composer, born at St. Germain-en-Laye, August 22, 1862. He is the leader of the extremists of the young French school in finding new methods of expression, and has introduced a new system of color into music. His scale basis is of six whole notes, used frequently incomplete. His works, which are very numerous, include the operatic masterpieces: Pelléas et Mélisande, La Mer, Ariettes Oubliées, Images, incidental music to King Lear, The Petite Suite, Trois Nocturnes, and many songs.

Decade (dek'ád; Latin, decas, decadis; Greek dekas, from deka, ten) is sometimes used for the number ten, or for an aggregate of ten. The term is now usually applied to an aggregate of ten years.

Decagon (dek'á-gon), in geometry, a figure of ten sides.

Decaisnea (de-ká'né-a), a genus of plants, nat. order Lardizabalaceae, growing on the Himalayas 7000 feet above the sea. It sends up erect stalks like walking-sticks, bearing leaves 2 feet long. Its fruit, which resembles a short cucumber, contains a sweet, yellow, edible pulp.

Decalogue (dek'-a-log'; Gr. deka, ten, and logos, a word), the ten commandments, which, according to Exod. xx. and Deut. v, were given by God to Moses on two tables of stone. The Jews call them the ten words. Jews and Christians have divided the ten commandments differently; and in some Catholic catechisms the second commandment has been united with the first, and the tenth has been divided into two.

Decameron. See Boccaccio.

Decamps (dé-kán'), Alexandre Gabriel, an eminent French painter, was born at Paris in 1803; killed while hunting at Fontainebleau in 1860. His paintings include pictures of Oriental scenery and character, historical pictures, genre pictures and animals.

De Candolle (dé kán-dal'), Augustin Pyrame, one of the most illustrious of modern botanists, whose natural system of classification, with some modifications, is the one still generally used, was born at Geneva in 1778; died there in 1841. He took up the study of medicine at Geneva and Paris, where he attracted the notice of Cuvier and Lamarck, whom he aided in various scientific researches. After returning to his native city he again visited Paris, and took his medical degree, selecting as the subject of his thesis the medical properties of plants. In 1804 he lectured in the College of France on vegetable physiology; and the following year published an outline of his course, under the title of Principes de Botanique, prefixed to the third edition of Lamarck's Tableau Français. In this outline he laid the basis of the system of classification which he afterwards developed in larger and more celebrated works. In 1808 he obtained the chair of botany in the faculty of medicine at the University of Montpellier. In 1816 he returned to Geneva, where a chair of natural history was expressly created for him, and where he continued for many years to extend the boundaries of his favorite science by his lectures and publications. His chief works are: L'Histoire des Plantes Grasses, Regni Vegetabilis Systema Naturale (Incomple), Théorie Elémentaire de Botanique, Organographie Végétale, Physiologie Végétale et Prodropus Systematis Naturalis, the latter completed by his son Alphonse (1806-93), also an eminent botanist and member of the French Institute.

Decandria (de-kan'dr-l-a), in the Linnean system of bot...
Decapitation (dek-ap'i-ta-shun), beheading, capital punishment inflicted by the sword, ax, or guillotine.

Decapoda (dek-ap'o-da; Gr. deka, ten, and pous, podos, a foot).—(1) The highest order of crustaceans, so called from having five pairs of legs. They are subdivided into Brachyura, the short-tailed decapods or crabs; Macrura, or long tailed, including the shrimp, lobster, prawn, crayfish, etc.; and Anomura, of which the hermit-crab is an example. (2) One of the two divisions of the dibranchiate cuttle-fishes (the other being the Octopoda). They have two arms longer than the other and bear the suckorial discs only at the extremities.

Decapolis (dek-ap'o-lis), a district of ancient Palestine containing ten cities, partly on the east, partly on the west of the Jordan.

Decastyle (dek'a-stil; Gr. deka, ten, and stylos, a column), a portico or colonnade of ten columns.

Decatur (de-kat'er), a city, capital of Macon Co., Illinois, 39 miles n. of Springfield. It has ironworks, flour and cereal mills, and many other industries. It is an important railroad center and a place of considerable trade. Pop. 31,140.

Decatur, Stephen, an able American naval commander, born in 1779; killed in a duel in 1820. Among the chief exploits of his life were the burning of the frigate Philadelphia under the guns of the forts of Tripoli; the capture of the British frigate Macedonian in 1812; his attempted escape from the blockade of New York harbor, 1813-14; and his chastisement of the Algerines, 1816. He was renowned for his cool intrepidity and great personal bravery.

Decazeville (dé-kaz-vël), a town of France, dep. Aveyron, with coal and iron mines and large ironworks. Pop. (1906) 9749.

Decan (dek'an; Sanskrit, Dakshina, south), a term locally limited to the territory of Hindustan lying between the Nerbudda and the Kistna, but generally understood to include the whole country south of the Vindhyas, thus comprising the Presidency of Madras and part of Bombay, Hyderabad, Mysore, Travancore and other native states.

Decedilousness (de-seb'al-us), the name of several Dacian kings, or perhaps a general title of honor borne by them. One of them distinguished himself by his opposition to the Roman arms during the reigns of Domitian and Trajan. He entered the province of Moeso-Gallic, defeated and killed Appius Sabinus, the Roman governor, and captured many important towns and fortresses. Domitian agreed to pay him a yearly tribute, which was continued by Nerva, but refused by Trajan, who subdued Dacia, and Decedilousness, to escape falling into the hands of the victors, committed suicide.

December (de-sem'ber), the twelfth month of our year, from the Latin decem, ten, because in the Roman year instituted by Romulus it constituted the tenth month, the year beginning with March. In December the sun enters the tropic of Capricorn, and passes the winter solstice.

Decemvirs (de-sem'vers), the ten magistrates who had absolute authority in ancient Rome (B.C. 451-449). See Appius Claudius.

Deciduous (de-sid'á-us), is a term applied in botany to various organs of plants, particularly leaves, to indicate their annual fall. A tree of which the leaves fall annually is called a deciduous tree, and the same term is applied to the leaves themselves. The term is also applied in zoology to parts which fall off at a certain stage of an animal's existence, as the hair, horns and teeth of certain animals.

Decimal (des'i-m'al) FRACTIONS. See Fraction.

Decimal System, is the name given to any system of weights, measures, or money in which the unit is always multiplied by 10,000, some power of 10, or a higher denomination, and divided by 10 or a power of 10 for a lower denomination. This system has been rigidly carried out in France in all its weights and measures, and the principle obtains in the coinage of Belgium, Italy, Spain, Portugal, the United States, and some other countries. To express the higher denominations, that is to say, the unit multiplied by 10,100,1000,10,000, the French, in their metric system, make use of the prefixes décies, hecto, kilo, derived from the Greek; thus, the mètre being the unit of length, décimètre is 10 mètres, hectomètre 100 mètres, kilomètre 1000 mètres. To express lower denominations, that is tenths, hundredths, etc., the Latin prefixes décies, centis, milli are used in the same way; thus a centimètre is the hundredth part of a mètre, décimètre the tenth part of a mètre. The basis of the whole system is the linear measure, the unit of
which is the mètre, supposed to be the ten-millionth part of a quadrant of the earth’s meridian (39.37 inches). The square of 10 mètres, or square décamètre, called an are, is the unit of surface measure. The cube of the tenth part of the mètre, or cubic décimètre, called a litre, is the unit of liquid capacity. The cube of the mètre, called a stère, is the unit of solid measure. The weight of a cubic centimètre of distilled water at 39.2° r. a. (4° Centigrade), called a gramme, is the unit of weight. The unit of money is the franc, which is divided into diximes and centimes.

**Declination** (de-si-ma’shun), the selection of the tenth man of a corps of soldiers by lot for punishment, practiced by the Romans. Sometimes every tenth man was executed; sometimes only one man of each company was the tenth in order. The term is frequently used in a loose way for the destruction of a great but indefinite proportion of people, as of an army or inhabitants of a country.

**Decius** (de-shus), C. MESSIUS QUIN- TUS TRAJANUS, a Roman emperor, who reigned from A.D. 249 to A.D. 251. He persecuted the Christians, and perished with his army in a battle near Abribicum against the Goths.

**Deck** (dek), a horizontal platform or floor extending from side to side of a ship, and of formed planks supported by the beams. In ships of large size there are several decks one over the other. The quarter-deck is that above the upper deck, reaching forwards from the stern to the gangway.

**Decker, Thomas**. See Dekker, Thomas.

**Declaration** (de-klar-a’shun), an avowal or formal statement; especially a simple affirmation and its acceptance in lieu of a legal affirmation, or affidavit, which modern law allows in a variety of cases, such as those which relate to the revenues of customs or excise, the post-office, and other departments of administration. Justices of the peace, notaries, etc., are also empowered in various cases to take voluntary declarations in lieu of oaths, solemn affirmations and affidavits.—**Declaration of Independence**, the solemn declaration of the Congress of the United States of America, on July 4, 1776, by which they formally renounced their subjection to the government of Britain.—**Declaration of Paris**, an instrument signed at the Congress of Paris, 1856, and subsequently accepted by the chief powers. It declared (1) privateering to be abolished; (2) a neutral flag covers enemy’s goods, with the exception of contraband of war; (3) neutral goods, except contraband of war, are not liable to capture under an enemy’s flag; and (4) blockades, in order to be binding, must be effective.—**Declaration of War**, the formal notice of hostilities.—**Declaration of London**, an instrument agreed upon, but not ratified, by ten maritime powers, codifying the principles of naval warfare.

**Declaration of Independence**. A famous state paper issued by the American Continental Congress on July 4th, 1776. It was drawn up by Thomas Jefferson, as member of a committee appointed for the purpose, and declared that the united colonies of America were ‘Free and Independent States,’ giving at length the reasons for this act, which was based on the unjust and oppressive treatment of the colonies by the king and parliament of England.

**Declension** (dek-len’a’shun), in grammar, the aggregate of the inflections or changes of form which nouns, pronouns, and adjectives receive in certain languages according to their meaning or relation to other words in a sentence, such variations being comprehended under the three heads of number, gender, and case, the latter being the most numerous. See Case.

**Declination** (dek-len’a’shun), in astronomy, the distance of a heavenly body from the celestial equator (equinocial), measured on a great circle passing through the pole and also through the body. It is said to be north or south according as the body is north or south of the equator. Great circles passing through the poles, and cutting the equator at right angles, are called circles of declination. Twenty-four circles of declination, dividing the equator into twenty-four arcs of 15° each, are called hour circles or horary circles.—**Declination of the compass or needle, or magnetic declination**, is the variation of the magnetic needle from the true meridian of a place. This is different at different places, and at the same place at different times. The declination at London was 11° 15’ w. in 1576, 0° in 1652, 19° 30’ w. in 1760, 24° 27’ w., its maximum, in 1815, subsequently changing eastward.

**Declinometer** (dek-lin’om-e-ter), an instrument for determining the magnetic declination, and for observing its variations. In magnetic observatories there are permanent instruments of this kind, and they are now commonly made self-regulating. Such instruments register the small hourly and
annual variations in declination, and also the variations due to magnetic storms. **Decomposition** (dé-kom-pō-zish'ən), **Chemical**, is the separation of the constituents of a body from one another. Roughly speaking—for it is a difference of degree rather than of kind—decomposition is either artificial or spontaneous. Artificial decomposition is produced in bodies by the action of heat, light, electricity, or chemical reagents; spontaneous, in bodies which quickly undergo change in ordinary circumstances, unless special precautions are taken to preserve them. The bodies of the mineral, and the definite crystallized principles of the organic, world belong to the first; organized matter, such as animal and vegetable tissues, organic fluids, such as blood, milk, bile, and the complex non-crystallized bodies, albumen, gelatin, emulsin, etc., belong to the second.

**Decorated Style** (dek'ür-ā-tēd), in architecture, the second style of pointed (Gothic) archi-

Decree (de-kri), in general, an order, edict, or law made by a superior as a rule to govern inferiors. In law it is a judicial decision or determination of a litigated cause. Formerly, in England, the term was specially used for the judgment of a court of equity, but the word judgment is now used in reference to the decisions of all the divisions of the supreme court, as, also, in the United States. The word is still used in Scotland for the final judgment of a court, frequently in the form decree.

**Decree Nisi** (nē'sē), literally, a "de-

rior term for the decree of divorce issued by a court on satisfactory proof being given in support of a petition for dissolution of marriage; it remains imperfect for
Decreption

Decrépitation (dék-rép'i-ta'shun), the act of flying asunder with a crackling noise on being heated, or the crackling noise, attended with the flying asunder of their parts, made by several salts and minerals when heated. It is caused by the unequal sudden expansion of their substance by the heat, or by the expansion and volatilization of water held mechanically within them.

Decrescendo (dák-ré-shën'dô), an Italian term in music which denotes the gradual weakening of the sound, or the reverse of crescendo.

Decretals (dék-rë'tá-lz), a general name for the papal decrees, comprehending the rescripts (answers to inquiries and petitions), decrees (judicial decisions by the Rota Romana), mandates (official instructions for ecclesiastical officers, courts, etc.), edicts (papal ordinances in general), and general resolutions of the councils. The decretales form a most important portion of the Roman Catholic canon law, the authoritative collection of them being that made by the orders of Gregory IX and published in 1234.

Dedham, the seat of Norfolk Co., Massachusetts, 9 miles S.W. of Boston. It has manufactures of woolen goods, carpets, machinery, pottery etc. It was the birthplace of Fisher Ames. Pop. 9294.

Dedication (ded'-i-ká'shun), the act of consecrating something to a divine being, or to a sacred use, often with religious solemnities. Also an address prefixed to a book, and formerly inscribed to a patron, to show respect and recommending the work to his protection and favor; now chiefly addressed to friends of the author, or to public characters, simply as a mark of affection or esteem.

Deduction (de-dúk'shun), in reasoning, the act or method of drawing inferences, or of deducing conclusions from premises; or that which is drawn from premises. See Logic.

Dee (dë), the name of several British rivers. (1) A river of Scotland, partly in Kincardineshire, but chiefly in Aberdeenshire, one of the most finely wooded and one of the best salmon rivers in Britain. The city of Aberdeen stands at its mouth. (2) A river of N. Wales and Cheshire; rises in Lake Bala, Merionethshire; flows to the Irish Sea 20 miles below Chester. (3) A river of Scotland, county of Kirkcudbright: rises in Loch Dee, situated among the western hills, flows S. and S.W., and falls into Kirkcudbright Bay. Each of these streams is between 90 and 90 miles long.

Dee, John, an English mathematician, alchemist and astrologer, born in 1527; died in 1608. In early life he successfully devoted much of his time to mathematical, astronomical and chemical studies. In the reign of Mary he was imprisoned on suspicion of practicing the 'black art'; but was in favor with Elizabeth, who is said to have employed him on secret political missions, and paid him a fixed salary. In 1581, along with a man named Kelly, he visited several of the continental courts, pretending to raise spirits. In 1596 he obtained from the queen the wardenship of Manchester College. Here he resided for nine years, and then returned to his old residence at Mortlake, where he died, leaving behind him many works, partly of a scientific character, partly dealing with the occult sciences, invocation of spirits, etc.

Deed (déed), in law, a writing containing some contract or agreement, and the evidence of its execution, made between parties legally capable of entering into a contract or agreement; particularly an instrument on paper or parchment, conveying real estate to a purchaser or donee. It is either an indenture or a deed-poll; the former made between two or more persons in different interests, the latter made by a single person, or by two or more persons having similar interests.

Deeg (dëg), a town and fortress in Bhurtpore, Central India, 57 miles northwest of Agra, situated in the midst of marshes and almost surrounded by water during a great part of the year. At the southwest corner is a lofty rock, on which the citadel stands. It was taken in 1804 by General Fraser, and dismantled after the capture of Bhurtpore by Lord Combermere. P. 1585.

Deemster (dëm'ster), an officer formerly attached to the High Court of Justiciary in Scotland, who formally pronounced the doom or sentence of death on condemned criminals. The office was conjoined with that of executioner. The name is now given in the Isle of Man to two judges who act as the chief-justices of the island, the one presiding over the northern, the other over the southern division. They hold
Deep Sea Exploration

Investigation of the deeper areas of the ocean. The method employed by sounding with apparatus fitted to bring up specimens of organic life and of the sea-bottom. American explorations were conducted from 1872 onwards by the U.S. Coast Survey and the Fish Commission, while several European nations have engaged in similar work. The most important of these explorations was that of the English ship Challenger (1872-76), which widely traversed the Atlantic and Pacific, and brought up numerous and extraordinary specimens of deep sea animal life. The sea-bottom was also examined and much learned concerning its make-up and conditions. One interesting feature of the results is that many of the animals found are phosphorescent, themselves lighting up their dark abode.

Deer (dér), a general name for the Ungulate or hooved ruminating animals constituting the family Cervidae, of which the typical genus is Cervus, the stag or red deer. The distinguishing characteristics of the genus are, that the members of it have solid branching horns which they shed every year, and eight cutting teeth in the lower jaw and none in the upper. The horns or antlers always exist on the head of the male, and in the reindeer on that of the female. The forms of the horns are various; sometimes they spread into broad palms which send out sharp snags around their outer edges; sometimes they divide fantastically into branches, some of which project over the forehead, while others are reared upwards in the air; or they may be so inclined backwards that the animal seems almost forced to carry its head downward. They are used as defensive and offensive weapons, and grow with great rapidity. There are many species of deer, as the red deer or stag, the fallow-deer, the roebuck, the reindeer, the moose, the elk, the musk or caribou, etc. (See the separate articles.) Deer are pretty widely distributed over the world, though there are none in Australia and few in Africa, where the antelopes (whose horns are permanent) take their place. The reindeer alone has been domesticated.

Deer Forest, an extensive tract of mountainous land set apart for the protection of wild deer, especially red deer, which are used for purposes of sport. In Scotland, to which such forests are chiefly confined, some 2,000,000 acres, distributed over nine or ten counties, are devoted to deer forests. The land is usually, in by far the greater part, of the wildest and most inaccessible kind, but of course may yield large numbers of grouse and other game as well as deer. A great many of the forests are rented by sportsmen from the proprietors, and the rents drawn are considerable, ranging from £1000 to £5000, and even much more, per annum for a single forest. Crofters have often been removed from their holdings in order that the land might be incorporated in some deer forest, and this has been regarded as a great grievance. On the other hand, the lessees of the forests have expended large sums of money in the country, and the rents paid the proprietors have enabled them to do the same.

Deer-grass, the name of several North American plants of the genus Rhesia.

Deer-mouse, the common name of the genus Merosotes, an American genus of rodent animals related to mice and the jerboas of the Old World. The deer-mouse of Canada (M. Canaden sis) is a pretty little animal of the size of a mouse, with very long hind legs and a tail, and very short forelegs. It is an exciting but laborious mode of hunting the red deer, in which, on account of the extreme shyness of the game, their far-sightedness and keen sense of smell they have to be approached by cautious manoeuvring before a chance of obtaining a shot occurs. Great patience and tact and a thorough knowledge of the ground are essential to a good stalker, who has to undergo many discomforts in crouching, creeping, wading through bogs, etc. Advance from higher to lower ground is unwise made, for the deer are always apt to look to the low ground as the source of danger. 'Deer-driving' towards a point where the shooters are concealed is often practiced, but is looked on as poor sport by the true deer-stalker.

Defamation (def-a-ma'shan), the malicious uttering of slanderous words respecting another which tend to destroy or impair his good name, character, or occupation. To constitute defamation in law the words must be spoken maliciously. Defamation is punishable either by action at common law or by statute.

Default (de-falt'), in law, signifies generally any neglect or omission to do something which ought to be done. Its special application is to the non-appearance of a defendant in court.
Defendant

when duly summoned on an appointed day. If he fail to appear judgment may be demanded and given against him by default.

Defendant (de-fen'dant), in law, the party against whom a complaint, demand, or charge is brought; one who is summoned into court and defends, denies, or opposes the demand or charge, and maintains his own right. The term is applied even if the party admits the claim.

Defender of the Faith (Fideli Defensor), a title belonging to the King of England, as Catholicus to the King of Spain, Christianissimus to the King of France, etc. Leo X bestowed the title of Defender of the Faith on Henry VIII in 1521, in account of his book against Luther, and the title has been used by the sovereigns of England ever since.

Defand (de-fand), Marie de Vichy-Chamond, Marquise du, a companion among the French literati of the eighteenth century, born in 1697; died in 1760. In 1718 she married the Marquis du Defand, from whom she separated after ten years. During the latter part of her long life she became the center of a literary coterie, which included Choiseul, Boufflers, Montesquieu, Voltaire, D'Alambert, David Hume and Horace Walpole. She possessed much natural talent; but the laxity of her morals formed a strong contrast to the superiority of her intellectual powers.

Defiance (de-fans), a city, capital of Defiance Co., Ohio, on the Maumee River, 50 miles s. w. of Toledo. It has extensive machine shops and other manufacturers. Pop. 7007.

Deflating (de-fla'ting), that branch of fortification the object of which is to determine (when the intended work would be commanded by eminences within the range of firearms) the directions or heights of the lines of rampart or parapet, so that the interior of the work may not be incommoded by a fire directed to it from such eminences.

Defile (de-fil'), a narrow passage or way in which troops may march only in a line, or with a narrow track; a long, narrow pass, as between hills, etc.

Definition (def'i-nish'un), a brief and precise description of a thing by its properties; an explanation of the significance of a word or term, or of what a word is understood to express. Logicians distinguish definitions into nominal and real. A nominal definition explains the meaning of a term by some equivalent word or expression supposed to be better known. A real definition explains the nature of the thing. A real definition is again accidental, or a description of the accidents, as causes, properties, effects, etc.; or essential, which explains the constituent parts of the essence or nature of the thing. An essential definition is, moreover, metaphysical or logical, defining 'by the genus and difference,' as it is called; as, for example, 'a plant is an organized being, destitute of sensation,' where the part first of the definition states the genus (organized being), and the latter the difference (destitute of sensation, other organized beings possessing sensation); thus it distinguishes the physical parts of the essence; thus, a plant is distinguished by the leaves, stalk, root, etc. A strictly accurate definition can be given of only a few objects. The most simple things are the least capable of definition, from the difficulty of finding terms more simple and intelligible than the one to be defined.

Defoe (de-f槐), Daniel, an English writer of great ingenuity and fertility, was born in 1661 in London, where his father, James Foe, carried on the trade of a butcher. In 1686 he joined the inscription of the Duke of Monmouth, and had the good fortune to escape; after which he made several unsuccessful attempts at business, and at last turned his attention to literature. In 1701 appeared his satire in verse, The True-born Englishman, in favor of William III. As a zealous Whig and Dissenter he was frequently in trouble. For publishing The Shortest Way With the Dissenters (1702), the drift of which was misunderstood by both Churchmen and Dissenters, he was pilloried and imprisoned in Newgate, obtaining his liberty through the influence of Harley, who employed him in several important missions, particularly in the negotiations for the union with Scotland, of which he wrote the history. While in Newgate, in 1704, he commenced the Review, a literary and political periodical which lasted for nine years. In 1706 he published an account of the Apparition of Mrs. Veal, a fictitious narrative accompanying a translation of Drelincourt on Death. In 1706 he published his largest poem, entitled Juris Divino, a satire on the doctrine of divine right. In 1707 he was in Scotland, which he also visited several times subsequently in connection with political affairs, and as an agent of those in
De Gérando (dé-zhà-rǎn-dō), Joseph Marie, Baron, a French philosopher and statesman, born at Lyons, in 1772; died in 1842. After serving in the army for some time he took office as minister of the interior under Lucien Bonaparte, and was afterwards engaged in the organization of Tuscany and the Papal states on their union to France. In 1819 he commenced a course of lectures in the Faculté de Droit, in Paris, on public and administrative law. He was raised to the peerage in 1837. De Gérando has acquired great fame by his philosophical writings. His principal works are Des Signes et de L'Art de Penser, De la Génération des Connaissances Humaines, Histoire comparée des Systèmes de Philosophie, Du Perfectionnement Moral et de l'Éducation de Soi-même, De l'Éducation des Bourgmestres de Naissance, and De la Bienfaisance Publique.

Deggendorf (deg'ên-dorf), a town of Bavaria, on the Danube, with manufactures of cloth, etc. Pop. (1906) 7154.

De Gourmont (dé-gôr'mon), René, French poet, born in 1888; died in Paris September 26, 1915. He was editor of the Mercure de France and a director of the Revue des Idées.

Degradation, (de-grá-dá'shun), the ecclesiastical censure by which a clergyman is divested of his holy orders. The canon law distinguishes degradation into two sorts; the one summary, by word only; the other solemn, by stripping the person degraded of those ornaments and rights which are the ensigns of his order or degree. The term is also applied to the deprivation of offices not ecclesiastical.

Degree (de-gre'), in geometry or trigonometry, the 360th part of the circumference of any circle, the circumference of every circle being supposed to be divided into 360 equal parts, called degrees. A degree of latitude is the 360th part of the earth's circumference north or south of the equator, measured on a great circle at right angles to the equator, and a degree of longitude the same part of the surface east or west of any given meridian, measured on a circle parallel to the equator. Degrees are marked by a small - near the top of the last figure of the number which expresses them; thus 45° is 45 degrees. The degree is subdivided into sixty equal parts called minutes; and the minute is again subdivided into sixty equal parts called seconds. Thus, 45° 12' 20" means 45 degrees, 12 minutes and 20 seconds. The magnitude or quantity of angles is estimated in degrees and parts of a degree, because equal angles at the center of a circle are subtended by equal arcs, and equal angles at the centers of different circles are subtended by similar arcs, or arcs containing the same number of degrees and parts of a degree. An angle is said to be so many degrees as are contained in the arc of any circle intercepted between the lines which contain the angle, the angular point being the center of the circle. Thus we say an angle of 90°, or one of 45° 24'. It is also usual to say that a star is elevated so many degrees above the horizon, or declines so many degrees from the equator, or such a town is situated in so many degrees of latitude or longitude. The length of a degree depends upon the radius of the circle of the circumference of which it is a part, the length being greater the greater the length of the radius. Hence the length of a degree of longitude is greatest at the equator, and diminishes continually towards the poles, at which it = 0. Under the equator a degree of longitude contains 60 geographical, and 69.16 statute miles. The degrees of latitude are found to increase in length from the equator to the poles, owing to the figure of the earth. Numerous measurements have been made in order to determine accurately the length of degrees of latitude and longitude at different parts of the earth's surface and thus settle its dimensions and magnitude. When the French determined to establish their system of measures and weights based upon the metre (see Decimal System), they settled that this base was to be the ten-millionth part of the distance from the equator to the pole,
which distance had to be found by accurate measurement. Ten degrees of latitude were accordingly measured, from Dunkirk to Formentera, one of the Balearic islands. Similar measurements having been made in Britain, the length of a total arc of twenty degrees has been found. Many measurements have also been made elsewhere. The term is also applied to the divisions, spaces, or intervals marked on a mathematical, meteorological, or other instrument, as a thermometer or barometer.

**Degree**, in universities, a mark of distinction conferred on students, members, or distinguished strangers, as a testimony of their proficiency in the arts or sciences, or as a mark of respect, the former known as ordinary, the latter as honorary degrees. The degrees are bachelor, master and doctor, and are conferred in arts, science, medicine, divinity and music. Degrees are conferred on women by London University. Cambridge admits them to the tripos examination, and Oxford to most of its honor schools, but neither grants at present the stamp of a degree.

St. Andrew's University grants the title L.L.A. to women who pass in four subjects; the standard of attainment being the same as that required for the M.A. degree, the books prescribed and the questions set being practically identical. In the United States universities similar degrees are given and women frequently receive them.

**Degree**, in algebra, a term used in speaking of equations, to express what is the highest power of the unknown quantity; thus, if the index of that power be 3 or 4 ($x^3$ or $x^4$), the equation is respectively of the third or fourth degree.

**Dehra** (dár'a), a town of Hindustan, capital of Dehra Doon, beautifully situated, with military cantonments, English, Presbyterian and Roman Catholic churches, and an American mission. Pop. 28,966.

**Dehra Doon** (dár'a dön), a beautiful and fertile valley in the Meherut division of the Northwestern Provinces, Hindustan, at the s. w. base of the lower sacred mountains range of the Himalayas. It is bounded on the n. by the Jumna, n. e. by the mountains of Gurwhal, from 7000 to 8000 feet high, s. e. by the Ganges, s. w. by the Sutlej range, 3000 to 3600 feet high. Its length from s. e. to n. w. is about 45 miles; breadth, from 15 to 20 miles. The chief town in the valley is Dehra.

**Dei gratia** (dé' dangers; 'by the grace of God'), a formula which sovereigns add to their title. The expression is taken from several apostolical expressions in the New Testament.

**Deinosaúria.** See **Dinosauria.**

**Deioces** (de' i-séz), an ancient personage who flourished about seven centuries B.C., rose from a private station to be the founder of the Median Empire. By acting as arbiter in the disputes which took place in his own vicinity, the fame of his justice induced the Medes to choose him for their king after their revolt from the Assyrians. He built the city of Ecbatana, in which he resided; after a reign of thirty-five years he left the throne to his son Phraortes.

**Deira** (dé' rə), an ancient kingdom, stretching from the Tees to the Humber, and extending inland to the borders of the British realm of Strathclyde. With Bernicia it formed the Kingdom of Northumbria.

**Deism** (de' ism); n. by De'ism (Gr. Deo, God), a philosophical system which, as opposed to Atheism (Gr. a, not, and Theos, God), recognizes a great First Cause; as opposed to Pantheism (Gr. pán, all, Theos, God), a Supreme Being distinct from nature or the universe; whilst, as opposed to Theism, it looks upon God as wholly apart from the concerns of this world. It thus implies a disbelief in revelation, skepticism as regards the value of miraculous evidence, and an assumption that the light of nature and reason are the only guides in doctrine and practice. It is thus a phase of Rationalism. In the eighteenth there were a series of writers who are spoken of distinctively as the English deists. They include Collins, Toland, Tindal, etc.

**Dejanira** (de' já-nir'a), in Greek mythology, the wife of Hercules or Heracles (which see).

**DeKalb** (de'kalb'), a city of DeKalb Co., Illinois. 58 miles w. of Chicago. It is the seat of the Northern Illinois Normal School, and manufactures wire, shoes, gloves, gas-engines, auto trucks, wagons, etc. Pop. 9242.

**De Kalb, John**, a German soldier, born at Hütendorf in 1721. An officer in the French army, he came to America with Lafayette in 1777, was appointed a major-general by Congress, and served in Washington's army. In 1780 he was second in command under General Gates in the South and was killed at the battle of Camden. He called himself baron, but was really a peasant's son, without title.

**Dekker,** or **Decker** (dek' ker). Jer-
Dekker known poems are: Lof der Gelüdacht, a satire on avarice; and Puntstücken. Dekker, or Dekker, Thomas, an English dramatist and miscellaneous writer, born about 1570; died in 1631. He was a voluminous writer, and besides a great number of pamphlets he wrote many plays which give a vivid picture of contemporary life in London. Among these are: Old Fortuneatus, Shoemaker’s Holiday, Satiromastig, The Honest Whore, etc. He also collaborated with Massinger, Ford, Middleton, Jonson, and others. A quarrel with Ben Jonson occasioned that Poet’s Postmaster and the Satiromastig of Dekker.

De la Beche, Sir Henry. See Coche, Sir Henry de la.

Delaborde (dé-là-bör’), Henri François, Count, a French general, born at Dijon in 1764; died in 1833. He distinguished himself in the republican armies; fought through the whole of the Napoleonic wars, and was ennobled in 1807. After the second restoration he was placed on the list of the officers who were to be criminally prosecuted, but in consequence of a technical error the case against him lay over, and he lived retired and unannoyed till his death.

Delacroix (dé-là-kwá’), Ferdinand Victor Eugène, an eminent French painter, born in 1798; died in 1863. He is considered the chief of the modern French romantic school of painters. In 1831 he joined the embassy sent by Louis Philippe to the Emperor of Morocco. To this journey we are indebted for several pictures remarkable for their vivid realisation of oriental life as well as their masterly coloring. They are: The Jewish Marriage, Muley Abderrhaman with his Bodyguard, Algerian Ladies in their Chamber, Moorish Soldiers at Evening, and several scenes of court life. He decorated several of the public buildings of Paris, and was admitted into the Institute in 1867. He was an artist of great versatility, strong in coloring, but weak in drawing.

Delagoa Bay (dé-lä-gō’a bā’), in Southeast Africa, a large sheet of water separated from the Indian Ocean by the peninsula and island of Inyack. The bay stretches north and south upwards of 70 miles, with a breadth of from 16 to 20 miles, and forms the southern extremity of the Portuguese settlement of Mozambique. It is available for vessels of large tonnage, though the presence of shoals, banks and flats renders the navigation of the bay somewhat intricate. The port and Portuguese settlement of Lourenço Marques is being constantly developed as a place of trade. A railway runs from the city to Pretoria, 200 miles distant. During the Boer war Lourenço Marques was the only port available for the Boers.

Delambre (dé-làm-br), Jean Baptiste Joseph, a French astronomer and pupil of Lalande, born at Amiens in 1749; died in 1822. His studies were not directed to astronomy until his thirty-sixth year, but he rapidly acquired fame, and produced numerous works of great value. He was engaged with Méchain from 1792 till 1799, in measuring an arc of the meridian from Barcelona to Dunkirk. In 1807 he succeeded Lalande in the Collège de France, and wrote his Traité d’Astronomie Théorique et Pratique (three vols. 4to, 1814); Histoire de l’Astronomie du Moyen Age (1819); Hist. de l’Astronomie Moderne (1821), two vols., and Hist. de l’Astronomie du 18me Siècle (two vols.).

Deland (dé-lan’), Margaret W., novelist, was born in Pittsburgh, Pennsylvania, in 1857. She wrote John Ward, Preacher; Story of a Child; Old Chester Tales; The Awakening of Helena Ritchie; The Old Garden and other poems, etc.

Delane (dé-lán’), John Thaddeus, born at London in 1817; died in 1879; became editor of the London Times in 1841, and retained that important post till 1877, during which time that paper attained an almost unparalleled influence and a great circulation.

Delaroche (dé-là-rôsh’), Hippolyte (familiarly styled Paul), probably the greatest painter of the French school, born at Paris in 1797; died in 1856. He studied landscape...
painting for a short time, but applied himself afterwards to historical painting, and rapidly rose to eminence. His subjects are principally taken from French and English history. Among them may be mentioned: Joan of Arc interrogated in Prison by Cardinal Beaufort; the Death of Queen Elizabeth, a work greatly admired by French and generally repro- bated by English critics; The Children of Edward IV in the Tower; Cromwell contemplating the Dead Body of Charles I; The Execution of Lady Jane Grey; and the Hemicycle, an immense work painted in oil on the wall of the École des Beaux Arts, Paris. It represents an assemblage of the great painters, sculptors and architects from the days of Giotto to those of Lavoisier, and has been admirably engraved by Dupont. His merits consist in correct drawing, appropriate expression, harmonious color, and great distinctness and perspicuity in treatment, rendering the story of his pictures at once intelligible. He holds a middle place between the classical and the romantic schools, and was regarded as the leader of the so-called 'eclectic school.'

Delavigne (dé-là-vèn), Jean François Casimir, a French poet and dramatist, born at Havre in 1783; died in 1843. At the restoration he published a set of elegies, entitled Les Mascarernes, which deplored the faded glories of France. He produced in 1819 his tragedy of Les Vépres Siciliennes; Les Comédiens appeared in 1820, and the tragedy of La Paria in 1821. Of his other plays which followed these may be mentioned: L'Ecole des Vieillards; Maria Faleria; and the dramas of Louis XI —founded on Commynes' Memoirs and Quentin Durward—and Don Juan d'Auriche. His hymns La Parisienne and La Varsouvienne, and the ballad La Toilette de Constance, are among his more popular poetical pieces. He died a member of the Academy.

Delaware (del'ə-wər), a river which rises in the Catskill Mountains in New York, separates Pennsylvania from New York and New Jersey, and New Jersey from Delaware, and loses itself in Delaware Bay. It has a course of about 400 miles, and is navigable for about 160 miles above Philadelphia, and for smaller craft to the head of tide-water at Trenton (155 miles).

Delaware, one of the original thirteen United States, and, next to Rhode Island, the smallest state in the Union, named after Lord Delaware, one of the early governors of Virginia. It is bounded north by Pennsylvania, east by the Delaware River and Bay and by the ocean, south and west by Maryland; area, 2050 square miles. It is divided into three counties, Kent, Newcastle and Sussex, and has nearly the form of a right-angled triangle (hence its popular name 'the Diamond State'). In the south and towards the coast the surface is very level, but the north part is rather hilly. An elevated swampy tableland towards the west traverses the State, forming the watershed between the Chesapeake and the Delaware bays. A great part of the soil is fertile, and agriculture is in a flourishing state. Fruit cultivation (peaches, apples, berries) is largely engaged in, and the canning and drying of fruits are important industries. There are also extensive and varied manufactures. A shipyard connects Chesapeake River and Delaware Bay. There are about 300 miles of railway. Wilmington is the chief manufacturing and commercial town. The capital is Dover. Delaware, though slave-holding, remained loyal to the Union at the accession of the Southern States. Pop. 202,322.

Delaware, a city, capital of Delaware Co., Ohio; a place of considerable trade and the seat of the Ohio Wesleyan University. There are celebrated medicinal springs in the vicinity. Furniture, shoes, gas engines and underwear are produced. Pop. 11,000.

Delaware Bay, an estuary or arm of the sea between the States of Delaware and New Jersey. At the entrance between Capes May and Henlopen, it is 11 miles wide, and is nearly 60 miles long, being in parts 25 miles wide. Near Cape Henlopen is situated the Delaware Breakwater, which affords vessels a shelter within the cape. It was erected by the Federal government, and cost about $3,000,000.

Delaware Indians, a tribe belonging to the Algonquin family, originally known as living on the Delaware River, and called by themselves Leni Lenape. They had to leave their original settlements about the middle of the nineteenth century, going farther west, and eventually were removed to the Indian Territory. Their numbers are now insignificant.

Del Credere (del kred'ə-rè), an Italian phrase, similar in import to the English guaran- tee or the Scotch warrandice. It is used among merchants to express the obligation undertaken by a factor, broker, or mercantile agent, when he becomes bound, not only to transact sales or other business for his constituent, but also to guarantee the solvency of the persons with whom he contracts. On
Deleb Palm

The Deleb Palm, also known as the Borassus aethiopum, is a native of the interior and western Africa, and is found in the Palmyra palm. Its leaves and fruits are used by the Africans for various purposes, including food and drink.

Delegate

A delegate is a person appointed and sent by another or by others, with powers to transact business as his or her representative. The title was given to members of the First Continental Congress in America, 1774. Representatives to Congress from the United States territories are designated by the term. They have the right of discussion, but no vote.

Delescluze

Louis Delescluze was a French communist, born in 1809. He adopted a journalistic career and was imprisoned and fined for his socialist and revolutionary articles, and also sentenced to banishment. He escaped to England, but having returned to France in 1853, was kept in prison for some time and then banished to Cayenne. On his return he again got into trouble. After the fall of the empire and the German occupation he became a prominent member of the Commune, and was shot at one of the barricades in 1871.

Delfshaven

Delfshaven, a former town of Holland, on the Maas, 2 miles s. w. of Rotterdam, of which it is now a suburb. It is well protected from inundation by dikes, etc., and has ample accommodation for shipping.

Delft

Delft, formerly DELF, a town of Holland, 8 miles n. w. of Rotterdam, intersected in all directions by canals. Among its buildings are the town hall, the Prinzen-hof, the scene of the assassination of William the Silent, now a military barracks; the old Reformed church, containing the monuments of Admiral Tromp, the naturalist Leeuwenhoek, etc.; the new church, containing monuments to William I, Hugo Grotius, and the bells of the present royal family. Delft was formerly the center of the manufacture of the pottery called delft-ware; its chief industries now embrace carpets, leather, soap, oil, gin, etc. Pop. 31,582.

Delft-ware, or DELF, is a kind of pottery covered with an enamel or white glazing which gives it the appearance of porcelain. It was originally manufactured in Delft in the fourteenth century, is now considered coarse, but was among the best of its day.

Delfzyl

Delfzyl, a strongly fortified town and port of North Holland, province Groningen, on the Dollart. Pop. 7396.

Delhi

Delhi, a city of Hindustan, in the Punjab, anciently capital of the Patan and Mogul empires, about 964 miles n. w. of Calcutta. At the durbars in 1811, when George V was made Emperor of India, he changed the capital from Calcutta to Delhi. It was at one time the largest city in Hindustan, covering a space of 20 square miles, and having a population of 2,000,000. A vast tract covered with the ruins of palaces, pavilions, baths, gardens, mausoleums, etc., marks the extent of the ancient metropolis. The present city abuts on the right bank of the Jumna, and is surrounded on three sides by a lofty stone wall 5½ miles long, strengthened by the British at the beginning of the last century with a ditch and glacis. The palace or residence of the Great Mogul, built by Shah Jehan, commenced in 1631, and now known as 'the fort,' is situated in the east of the city, and abuts directly on the river. It is surrounded on three sides by an embattled wall of reddish sandstone nearly 60 feet high, with round towers at intervals, and a gateway on the west and south. Since the mutiny in 1857 a great portion has been demolished in order to make room for military barracks. One of the most remarkable objects in the city is the Jamma Musjid or Great Mosque, a magnificent structure in the Byzantine-Arabic style, built by the Emperor Shah Jehan in the seventeenth century. Among modern buildings are the government college, founded in 1722 (abolished as a college); the Residency, and a Protestant church. The East Indian Railway enters the city by a bridge over the Jumna. The s. w. quarter of the town is densely occupied by shops and dwellings of bazaar-pollution; the streets are narrow and tortuous, but some of the main thoroughfares of the city are splendid streets, the chief being the Chandni Chauk, or Silver Street. During the mutiny Delhi was seized by the Sepoys, who held possession for four months, during which many atrocities were committed. Pop. (1911) 222,837.

Delillé

Jacques Delillé was a French didactic poet, born in 1788; died in 1813. His translation of Virgil's "Georgics," published in 1794, with a "Discours Préliminaire" and numerous annotations, established his fame, and obtained him admission to the French
Deliquescence

Academy. He became professor of Latin poetry in the College of France, and of belles-lettres at the University of Paris. Though an adherent of the old system, Robespierre spared him on every occasion. At his request Delille wrote the *Dithyrambe sur l’Immortalité de l’Ame*, to be sung on the occasion of the public acknowledgement of the Deity. In 1794 he withdrew from Paris, but returned again in 1801, and was chosen a member of the Institute. He spent two years in London, chiefly employed in translating *Paradise Lost*. His reputation mainly rests on the *Georgics*, and *Les Jardins*.

the body, as the heart; it may be caused by long-continued and exhausting pain, and by a state of inanition of the nervous system.

Delirium Tremens, an affection of the brain which arises from the inordinate and protracted use of ardent spirits. It is therefore almost peculiar to drunkards. The principal symptoms of this disease, as its name imports are delirium and trembling. The delirium is a constant symptom, but the tremor is not always present, or, if present, is not always perceptible. Frequently the sufferer thinks he sees the

Great Mosque at Delhi, viewed from Northeast.

a didactic poem. Other works are *L’Homme des Champs*, *La Pitié*, *Les Trois Régnes de la Nature*, *La Conversation*, *L’Enéide de Virgile*, etc.

Deliquescence (dél-i-kwiz’-ə-sən), a change of form from the solid to the liquid state, by the absorption of moisture from the atmosphere. It occurs in many bodies, such as caustic potash, carbonate of potassium, acetate of potassium, chloride of calcium, chloride of copper, chloride of zinc, etc.

Delirium (de-lir’-ı-əm), a temporary disordered state of the mental faculties occurring during illness either of a febrile or of an exhausting nature. It may be the effect of disordered or inflammatory action affecting the brain itself, or it may be sympathetic with active diseases in other parts of most frightful, grotesque, or extraordinary objects, and may thus be put into a state of extreme terror. It is properly a disease of the nervous system. The common treatment is to administer soporifics so as to get the patient to sleep.

Delisle (dé-lél), Guillaume, a French geographer, born in 1675; died in 1726. He published upwards of 130 maps, and reconstructed the system of geography current in Europe in the beginning of the eighteenth century. Louis XV appointed him geographer to the king.—His brother, Joseph Nicolas, born in 1688; died in 1768, was a distinguished astronomer, geographer and mathematician. He visited England, where he formed acquaintance with Newton and Halley.

Delitzsch (də-léch), a town of *Krpesian Saxony*, on the
Delitzsch

Löbber, 15 miles north of Leipzig, with manufactures of woolens, and several important annual fairs. Pop. 10,479.

Delitzsch, theologian, born at Leipzig in 1813. He was a strong supporter of strict orthodox theology; became professor of theology at Hosterl in 1846, at Erlangen in 1854, and at Leipzig in 1867. He published many devotional and theological works and several commentaries. Died in 1890.—His son Friedrich, born in 1850, has distinguished himself in Assyriology, and is professor of that subject at Leipzig.

Della Cruscan, a coterie of English poetasters resident for some time in Florence, who printed inferior sentimental poetry and prose in 1780. Coming to England, they communicated the infection to minds of a like stamp, and the newspapers of the day, chiefly the World and the Oracle, began to give publicity to their incursions. They were extinguished by the bitter satire of Gifford's Baviad and Mavrid. Mrs. Fizzi, Boswell, Merry, Cobb, Holcroft, Mrs. H. Cowley and Mrs. Robinson were the leaders. They took the name from the Accademia Della Crusca in Florence.

Della Robbia (del'la rob'ë-a) Luca, an Italian sculptor, born in 1400 at Florence; died in 1462. He was distinguished for his work both in marble and bronze, and also for his reliefs in terra-cotta coated with enamel, a kind of work named after him. Other members of the family distinguished themselves in the same line, especially Andrea (1435-1526) nephew and pupil of Luca.

Della Robbia Ware, terra-cotta bas-reliefs thickly enameled with tin-glaze; made at Florence (chiefly 1450-1530); in France (1530-1567); so called from the name of the above artist.

Dellys (del'lis'), a seaport of Algeria, 49 miles east of Algiers. It consists of a French and an Arab town; the climate is salubrious, and there is a trade in grain, oil and salt. Pop. 14,070.

Delolme (dé-löm'), Jean Louis, a Swiss writer, born at Geneva in 1740; died in 1806. He at first practiced as a lawyer in his native city, but the part which he took in its internal commotions obliged him to repair to England, where he passed some years in great indigence. He became known by his celebrated Constitution de l'Angleterre.

De Long, George Washington, Arctic explorer, born in New York City in 1844; entered the Naval Academy and became an officer in the U. S. navy. He took part in an expedition to northern Greenland in 1874 and in 1879 sailed as commander of the Jeannette on an expedition to explore the Arctic Ocean north of Siberia. The ship was crushed in the ice June 12, 1881, and De Long died of starvation in the delta of the Lena River, October 30. His remains were brought to the United States in 1884.

Deloo (del'oo'; Cephalothys grimmii), a small but pretty antelope occurring over a great part of Central and Southern Africa.

Delorme (dé-lörm'), Marion, a celebrated French beauty who reigned under Louis XIII. The date of her birth is stated at 1613, 1612 and 1615. Her beauty and wit soon made her the rendezvous of all that was gallant and brilliant in Paris. She espoused the side of the Frondeurs, and Mazarin was about to have her arrested when her sudden death in 1650 terminated her short career. The legend is current in France that the death and funeral was a mere pretense; that she escaped to England, returned to Paris, and after marrying three husbands lived to the age of 129. Victor Hugo has taken her as the subject of one of his dramas.

Delos (dé'lös), an island of great renown among the ancient Greeks, famed to be the birthplace of Apollo. It was a center of his worship, and the site of a famous oracle. It is the central and smallest island of the Cyclades, in the Egean Sea, a rugged mass of granite about 12 square miles in extent. At first the island, occupied by the Ionians, had kings of its own, who also held the priestly office. In 477 B.C. it became the common treasury of the Greeks who were leagued against Persia. Subsequently the Athenians removed the inhabitants from it, but they were soon restored. Its festivals were visited by strangers from all parts of Greece, Asia Minor, etc. After the destruction of Corinth (146 B.C.) the rich Corinthians died thither, and made Delos the seat of a flourishing commerce. The greatest curiosity of the island was the Temple of Apollo. The Persians, when they made war against Greece, bore the island out of reverence to the patron deities. The Delians showed great skill and taste in making utensils, statues of their gods, figures of heroes, animals, etc., in bronze and silver. Delos, called Dēn or Śūtit, is now without permanent inhabitants; a few shepherds from the
neighboring isles pay it summer visits with their flocks. Abundant ruins of its former magnificence yet exist, and excavations resulting in interesting archaeological discoveries have recently been made.

**Delphi** (del'fi), an ancient Greek town, originally called Pytho, the seat of the famous oracle of Apollo, was situated in Phoci, on the southern side of Parnassus, about 8 miles N. of the Corinthian Gulf. It was also one of the meeting places of the Amphictyonic Council, and near it were held the Pythian games. The oracles were delivered by the mouth of a priestess who was seated on a tripod above a subterranean opening, whence she received the vapors ascending from beneath, and with them the inspiration of the Delphian god. The oracular replies were always obscure and ambiguous; yet they served, in earlier times, in the hands of the priests, to regulate and uphold the political, civil and religious relations of Greece. The oracle was celebrated as early as the ninth century B.C., and continued to have importance till long after the Christian era, being at last abolished by the emperor Theodosius. Persons came to consult it from all quarters, bestowing rich gifts in return. The splendid temple thus possessed immense treasures, and the city was adorned with numerous statues and other works of art. It first lost its treasures in 357 B.C., when seized by the Phocians; it was afterwards plundered by Sulla and by Nero, while Constantine also removed several of its treasures. The site of the town is now occupied by a village called Castri, near which may be seen the still-flowing Castalian spring.

**Delphin Classics** (del-fin klask'iks), a collection of the Latin classical authors made for the dauphin (Lat. ad usum Delphini), son of Louis XIV, under the editorship of Bossuet and Huet, with notes and interpretations. A similar series based on these was published in London.

**Delphinidae** (del-fin'i-dè), the dolphin family of cetaceans. See *Delphinium*.

**Delphinium** (del-fin'i-um), a genus of Ranunculaceae, comprising the larkspurs, stavesacre, etc. See *Larkspur*.

**Delsarte** (del-sart), FRANCOIS A. N. El., a French singer and teacher of elocution, born at Solesmes in 1811; died in 1871. He won a high reputation as a teacher of dramatists and a singer of declamatory music, and published works on voice culture and several novels. The system founded by him, known as the Delsarte system, is still popular in the United States, and is applied to the promotion of health by a series of bodily movements held to yield a harmonious development of the body and a true and natural dramatic expression.

**Delta** (del'ta), the name of the Greek letter Δ, answering to the English D. The island formed by the alluvial deposits between the mouths of the Nile, from its resemblance to this letter, was named Delta by the Greeks; and the same name has since been extended to those alluvial tracts at the mouths of great rivers which, like the Nile, empty themselves into the sea by two or more diverging branches.

**Delta Metal**, a brass, or alloy of copper and zinc, to which manganese has been added. It is used for parts of machinery and for ornamental work.

**Deltoid Muscle** (del'toid), a muscle of the shoulder which moves the arm forwards, upwards and backwards.

**Deluc** (dé-lok), JEAN ANDRÉ, a geologist and meteorologist, was born in 1726 at Geneva; died at Windsor in 1817. In 1773 he went to England; was elected a fellow of the Royal Society of London, and appointed reader to the queen, a situation he held for forty-four years. He made numerous geological excursions in Central Europe and in England, of which he has published accounts. He aimed at defending the Mosaic account of the creation against the criticism whose weapons were furnished by his favorite science. He made many valuable original experiments in meteorology. Among his numerous writings are his *Recherches sur les Modifications de l'Atmosphère* (Geneva, 1772); *Nouvelles Idées sur la Météorologie* (London, 1780); and his *Traité élémentaire de Géologie* (Paris, 1810).

**Deluge** (del'oj), the universal inundation which, according to the Mosaic history, took place to punish the great iniquity of mankind. It was pro-
Delundung, according to Genesis, by a rain of forty days; and covered the earth 15 cubits above the tops of the highest mountains, and killed every living creature except Noah, with his family, and the animals which entered the ark by the command of God. Many other nations mention, in their mythological or prehistoric part of their history, inundations which, in their essential particulars, agree with the Scriptural account of Noah's preservation, each nation localizing the chief events and actors as connected with itself.

Delundung (de-lun'dung; Prionodon gracilis), an interesting quadruped inhabiting Java and Malacca, allied to the civets, and probably forming a connecting link between them and the Felidae, being destitute of scent-pouches. It is of slender form, with a long tail, and is beautifully spotted.

Delvino (de-lve'no), a town of Albania, Turkey, about 44 miles northwest of Janina; it is the seat of a Greek bishop, and has some trade in olive oil. Pop. about 6,500.

Demagogue (dem-a-gog), originally simply one who leads or directs the people in political matters; now it usually means one who acquires influence with the populace by pandering to their prejudices or playing on their ignorance.

Demand and Supply, terms used in political economy to express the relations between consumption and production, between the demand of purchasers and the supply of commodities by those who have them to sell. The relations which subsist between the demand for an article and its supply determine its price or exchangeable value. When the demand for a commodity exceeds the supply the price of the commodity is raised, and when the supply exceeds the demand the price falls.

Demavend (de-mav'end), a volcanic mountain of Persia, and the highest peak of the Elbruz chain, 45 miles south of the Caspian Sea and about 40 miles N. W. of Teheran. Its height is about 19,400 feet, and it bears evidence of having been active during the latest geological (if not within the historical) period.

Dembia (dem-be'a), or Tsana, a lake of Abyssinia, in a province of the same name in the west part of that country. It is of irregular form, about 140 miles in circumference, has an elevation of 6100 feet above the sea, and forms the reservoir of the Blue Nile.

Dembinski (dem-bin'ski), HENRY, a Polish general, and leader in the Hungarian revolution of 1849; born in 1791; died in 1864. He served under Napoleon during the Russian campaign of 1812; was governor of Warsaw and commander-in-chief of the Polish army during the revolution of 1830; was appointed by Kossuth commander of the Hungarian troops in 1849, and served till Kossuth's resignation compelled him to seek refuge in France, where he remained till his death.

Dementia (de-men'shi-a), a form of insanity in which unconnected and imperfectly defined ideas chase each other rapidly through the mind, the powers of continued attention and reflection being lost. It often implies such general feebleness of the mental faculties as may occur in old age.

Demerara (dem'er-a-ra), or Dem-ar-a, a division of British Guiana, which derives its name from the river Demara or Demerara. It extends about 100 miles along the coast, lying on the east of Essequibo and on the west of Berbice. The soil is very fertile, producing abundant crops of sugar, coffee, cotton, rice, etc. Chief town, Georgetown. Pop. of province, 171,000. The river, after a course of about 120 miles, flows into the Atlantic.

Demesne (de-mez'n), or Domain, in law, a manor-house and the land adjacent or near, which a lord keeps in his own hands or immediate occupation, for the use of his family, as distinguished from his tenemental lands, distributed among his tenants.

Demeter (dem'e-tér), one of the twelve principal Grecian deities, the great mother-goddess, the nourishing and fertilizing principle of nature. She was the daughter of Cronus and Rhea, and mother of Persephone (Proserpine). The main feature in the myth of Demeter, and that which forms the fundamental idea of her worship, is the loss and recovery of her daughter, Persephone. By the Romans she was called Ceres. See Ceres.

Demetrius (de-met're-us), or Dmitri, a name borne by a series of impostors who usurped supreme authority in Russia, and led to some of its remarkable revolutions. Ivan Vasilievitch, who had put his eldest son to death with his own hand, left the throne in 1584 to another son, Fedor, a feeble prince, whom Boris Godunoff entirely supplanted in his authority. Ivan had left another son, Dmitri, by a second marriage; and Boris, fearing that he might one day prove a formidable obstacle to his ambitious projects, caused him to disappear, but no one
exact. knew how. Grishka, or Gregory Otrepieff, a native of Jaroslav and a novice in a monastery, personated Dmitri, went to Lithuania, where he embraced the Roman Catholic religion and married the daughter of Minzsek, palatine or waiwod of Sandomir. In 1604 he entered Russia at the head of a body of Poles, was joined by a number of Russians and Cossacks, and defeated an army sent against him. On the death of Boris he was placed on the throne, but he offended the Russians by his attachment to Polish manners and customs, and still more by a want of respect to the Greek religion and its patriarch, and he was assassinated after reigning about eleven months. A rumor of his being still alive having spread, another impostor quickly appeared to personify him, and the Poles espousing the cause of the second false Dmitri, made it triumphant, until he was assassinated in 1610 by the Tatars whom he had selected as his bodyguards. A state of anarchy ensued and continued for nearly half a century, during which a number of other false Dmitris appeared in different quarters.

Demetrius, surnamed Poliorcetes (the besieger of cities), king of ancient Macedonia, son of Antigonus, a successor of Alexander the Great, was born about B.C. 339. Being sent by his father to wrest Greece from Cassander, he appeared before Athens with a fleet, expelled the governor Demetrius Phalereus, and restored to the people their ancient form of government (307 B.C.). He conquered Macedonia (294 B.C.) and reigned seven years, but lost this country, was imprisoned by Seleucus, and died in Syria, 283 B.C.

Demetrius Phalereus (fa-lê'rëz), a celebrated Greek orator and statesman, born 345 B.C.; in 317 was made Macedonian governor of Athens, and embellished the city by magnificent edifices. He fled to Egypt when Athenians were to be invaded by Demetrius Poliorcetes (see above), where he is said to have promoted the establishment of the Alexandrian Library and of the museum. Demetrius wrote on several subjects of philosophal and political science, but the work on rhetoric, which has come to us under his name, belongs to a later age.

James, a Canadian novelist, born at St. John's, New Brunswick, in 1837; died in 1880. He was professor of classical languages in Acadia College in 1860-85, and of history and rhetoric in Dalhousie College in 1885-89. His books were numerous, including The Dodge Club, The American

Demetrius, a Comedy of Terrors, The Cryptogram, etc.

Demilune (dem'i-lûn), in fortification, practically the same as a ravelin (which see).

Demi-monde (dem'i-mond), an expression first used by the younger Dumas in a drama of the same name (first performed in 1855), to denote that class of gay female adventurers who are only half-acknowledged in society; popularly disreputable female society; courtesans.

Demi-relief (-ri-li-ä'vô), in sculpture, half-relief, or the condition of a figure when it rises from the plane as if it had been cut in two and only one half fixed to the plane.

Demise (demiz; literally 'a laying down'), in law, a grant by lease; it is applied to an estate either in fee-simple, fee-tail, or for a term of life or years. As applied to the crown of England, demise signifies its transmission to the next heir on being laid down by the sovereign at death.

Demisemiquaver (dem'i-sem'i-ku-vâr), in music, half a semiquaver, or the thirty-second part of a semibreve.

Demiurge (dem'i-úrj'; Greek, de- miourgos, a handicraftsman), a designation applied by Plato and other philosophers to the Divine Being, considered as the Architect or Creator of the universe. The Gnostics made a distinction between the Demiurge and the Supreme Being; with them the first is the Jehovah of the Jews, who, though deserving to be honored as the Creator, was only the instrument of the Most High.

Demmin (dem-mën'), an old town of Prussia, province of Pomerania, 70 miles w. n. w. from Stettin, with manufactures of woolen and linen cloth, hats, leather, hosiery and tobacco; and a good trade. Pop. 12,541.

Democracy (de-mo'k-rä-ai), the rule of a people by the people themselves; that form of government in which the sovereignty of the state is vested in the people, and exercised by them either directly, as in the small republics of ancient Greece, or indirectly, by means of representative institutions, as in the constitutional states of modern times. The term is also applied in a collective sense to the people or populace, especially the populace regarded as rulers. See also next article.

Democrat (dem's-krat), one who advocates democracy. In the United States, a member of one of the two great political parties into which that country is divided; opposed to Re-
Democritus. The main features of the Democritic principles are decentralization, self-government of the states, and tariff for revenue only. The Democratic party was in the ascendant during most of the time from the election to the Presidency of Jefferson, in 1800, to that of Lincoln, in 1860. Since the latter date the Republicans have nearly always been in control of the government, the only Democratic Presidents being Cleveland, who served two terms, at disconnected intervals, and Woodrow Wilson.

Democritus (dē-mōk'ri-tus), a Greek philosopher of the new Eleatic school, a native of Abdera, who was born between 470 and 460 B.C. He traveled to Egypt, where he studied geometry, and probably visited other countries, to extend his knowledge of nature. Among the Greek philosophers he enjoyed the instruction of Leucippus. He afterwards returned to his native city, where he was placed at the head of public affairs. Indignant at the follies of the Aberites, he resigned his office and retired to solitude, to devote himself exclusively to philosophical studies. According to later biographers he was called 'the laughing philosopher,' from his habit of laughing at the follies of mankind. In his system he developed still further the mechanical or atomical theory of his master Leucippus. Thus he explained the origin of the world by the eternal motion of an infinite number of indivisible bodies or atoms, which differ from one another in form, position, and arrangement, and which have a primary motion, which brings them into contact, and forms innumerable combinations, the result of which is seen in the productions and phenomena of nature. In this way the universe was formed fortuitously, without the interposition of a First Cause. The eternal existence of atoms (of matter in general) he inferred from the consideration that time could be conceived only as eternal and without beginning. He applied his atomic theory, also, to natural philosophy and astronomy. Even the gods he considered to have arisen from atoms, and to be perishable like the rest of things existing. In his ethical philosophy Democritus considered the acquisition of peace of mind as the highest aim of existence. He is said to have written a great deal; but nothing has come to us except a few fragments. He died 370 B.C., at an advanced age. His school was supplanted by that of Epicurus.

Demogorgon (dē-mō-gōr'gon), a mysterious divinity in pagan mythology viewed as an object of horror rather than of worship, by some regarded as the author of creation, and by others as a famous magician, to whose spell all the inhabitants of Hades were subjected.

Demoielle (dē-mō-zēl'), the Numidian crane (Anthropoides virgo), an African bird which visits the south of Europe. It is about 3 feet in length, and differs from the true cranes in having the head and neck quite feathered and the tertiaries of the wings elongated and hanging over the tail. It has its name from its gracefulness and symmetry of form.

Demouvre (dē-mō-vr'), Abraham, a French mathematician, born in 1667; died at London in 1754. He settled in London after the revocation of the edict of Nantes, and gained a livelihood by becoming a teacher of mathematics. His chief works are: Miscellanea Analytica; The Doctrine of Chances; or a Method of Calculating the Probabilities of Events at Play; and a work on annuities; besides Papers in the Transactions of the Royal Society, of which he was a fellow.

Demon (dē-mōn; Greek, deimōn), a spirit or immaterial being of supernatural but limited powers, especially an evil or malignant spirit. Among the ancient Greeks the name was given to beings similar to those spiritual existences called angels in the Bible. In the New Testament evil spirits are called demons (commonly translated 'devils'). A belief in demons is found in the oldest religions of the East. Buddhism reckons six classes of beings in the universe; two, gods and men, are accounted good; the other four are malignant spirits. The Persians and the Egyptians had also a complete system of demons, and in Europe, up till the middle ages, the divisions of oriental, classical, and Scandinavian mythology often figure, from the Christian point of view, as evil spirits. In later times phases of demonology may be seen in the witchcraft mania and the spiritualism of the present day.

Demoniac (dē-mō'ni-ak), a person whose mental faculties are overpowered, and whose body is possessed and actuated by some created spiritual being; especially a person possessed of or controlled by evil spirits. The New Testament has many narratives of demoniacs, and various opinions are entertained in regard to the characters of their affliction.
which treats of the nature or character of demons or evil spirits.

Demonstration (dem-un-strā'hum), in a logical sense, any mode of connecting a conclusion with its premises, or an effect with its cause. In a more rigorous sense it is applied only to those modes of proof in which the conclusion necessarily follows from the premises. In ordinary language, however, demonstration is often used as synonymous with proof.

Demonte (dā-môn'tā), a town of North Italy, on the Stura, 14 miles s.w. from Cuneo. Pop. of commune, 5155.

De Morgan (de morgan), Augustus, mathematician and logician, was born at Madura, in Southern India, in 1806; died in 1871. His writings are very numerous and include Elements of Arithmetic, Elements of Algebra, Elements of Trigonometry, Essay on Probabilities and on their Application to Life Contingencies and Insurance Offices, Formal Logic.

De Morgan, William Frend, English author, born in 1839 at London, adopted art as a profession and achieved considerable fame in stained glass-work. In 1906 he commenced as a writer of fiction. His novels include Alice-for-Short, Joseph Vance (nearly 300,000 words), Somehow Good, It Never Can Happen Again, An Affair of Dishonor, and When Ghost Meets Ghost (written in 1914). He died Jan. 15, 1917.

Demos (dā-mōs; Greek), the people as a whole, or the body of people of the lower class as distinguished from those of rank, wealth, or position.

Demosthenes (dē-mōs'thē-nēs), a famous ancient Greek orator, the son of a sword-cutter at Athens, where he was born in 382 (according to some in 386) B.C. His father left him a considerable fortune, of which his guardians attempted to defraud him. Demosthenes, at the age of seventeen years, conducted a suit against them himself, and gained his cause. He then set himself to study eloquence, and though his lungs were weak, his articulation defective, and his gestures awkward, by perseverance he at length surpassed all other orators in power and grace. He thundered against Philip of Macedon in his orations known as the Philippics, and endeavored to instill into his fellow-citizens the hatred which animated his own bosom. He labored to get all the Greeks to combine against the encroachments of Philip, but Macedonian gold and their want of patriotism frustrated his efforts. He was present at the battle of Charesnea (380 B.C.), in which the Athenians and Boeotians were defeated by Philip, and Greek liberty was crushed. On the accession of Alexander, in 336, Demosthenes tried to stir up a general rising against the Macedonians, but Alexander at once adopted measures of extreme severity, and Athens sued for mercy. It was with difficulty that Demosthenes escaped being delivered up to the conqueror. In 324 he was imprisoned on a false charge of having received a bribe from one of Alexander's generals, but managed to escape into exile. On the death of Alexander the next year he was recalled, but the defeat of the Greeks by Antipater caused him to seek refuge in the temple of Poseidon, in the island of Calauria, on the coast of Greece, where he poisoned himself to escape from the emissaries of Antipater (322 B.C.). The character of Demosthenes is by most modern scholars considered almost spotless. His fame as an orator is equal to that of Homer as a poet. Cicero pronounces him the most perfect of all orators. He carried Greek prose to a degree of perfection which it never before had reached. Everything in his speeches is natural, vigorous, concise, symmetrical. We have under his name sixty-one orations, some of which are not genuine. The great opponent—and indeed enemy—of Demosthenes as an orator was Aeschines, and a controversy with the latter called out one of the noblest efforts of the great orator.

Demotic Alphabet (dē-mō'tik; or Dē-mō'ti-kā), a simplification of the hieratic, which again was a contraction of the hieroglyphic characters. See Hieroglyphic Writing.

Demotica, or Dimotika (dē-mō-ti'kā), a town of Boumele, on the right bank of the Maritsa, 20 miles south from Adrianople; the see of a Greek archbishop; pop. about 10,000.

Dempster (dem'ster), Thomas, a Scotch writer, was born at Muirhead in 1629; died at Bologna in 1625. He studied in various institutions, became noted for learning, and is said to have been regent of the College of Navarre, Paris, at the age of seventeen. He held professorships of law and belles-lettres at Toulouse, Nimes, Pisa and Bologna, and became noted for his quarrelsome temper, which often involved him in scenes of armed violence. The best known among his many works is Historia Gentis Scootorum, a biographical dictionary of the authors and saints of Scotland, many of them fictitious. A more valuable work is De Etruria Regali.
Demulcents (dé-mul’sents), medicines which tend to soothe or protect the mucous membranes against irritation. They are generally composed of starch, gum, albuminous or oily substances largely diluted.

Demurrage (de-mur’aj) in maritime law, the time during which a vessel is detained by the freighter, beyond that originally stipulated, in loading or unloading. When a vessel is thus detained she is said to be on demurrage. The name is also given to the compensation which the freighter has to pay for such delay or detention. Demurrage must be paid though it be proved the delay is inevitable; but it cannot be claimed where it arises from detention by an enemy, tempestuous weather, or through the fault of the owner, captain, or crew. The term is applied also to detention of railway freight cars, etc.

Demurrer (de-mur’er), in law, a stop at some point in the pleadings, and a resting of the decision of the cause on that point; an issue on matter of law. A demurrer confesses the fact or facts to be true, but denies the sufficiency of the facts in point of law to support the claim or defense.

Demy (de’mi), a particular size of paper—in America, writing paper, 16x21 inches; in Great Britain, printing paper, 17¼x22 inches; writing paper, 15x20 inches; drawing, 17x22 inches.

Denain (dé-nan), a town of Northern France, dep. Nord, 6 miles from Valenciennes. It stands in the center of a coal-field, and has ironworks, etc. A great victory was gained here in 1712 by the French under Villars over the allies under Eugene and Allemarle. Pop. 22,845.

Denarius (de-nâ’ri-us), a Roman silver coin worth 10 asses or 10 lbs. of copper originally, and afterwards considered equal to 16 asses, when the weight of the ass was reduced to an ounce on account of the scarcity of silver. The denarius was equivalent to about 7½d. English money. There was also a gold denarius equal in value to 25 silver ones.

Denatured Alcohol. Under a law passed by the United States Congress in 1907, on alcohol intended for use as fuel or for illuminating purposes, or other mechanical employment, the tax must be paid. But to avoid taxation it must be rendered unfit for drinking by the addition of such unpalatable substances as wood alcohol, pyridin, benzola, sulphuric ether, or animal oil. Thus treated it is spoken of as dematured.

Denbigh (den’bi), a county of North Wales, on the Irish Sea: area, 694 square miles, of which about a fourth is arable. Along the N. the ground is level, in the E. hilly, while the mountains in the N. and W. rise from 1000 to 2500 feet. There are several beautiful and fertile vales, among the more celebrated of which are the vales of Llangollen, Clwyd and Conway. Barley, oats and potatoes are grown on the uplands; and in the rich valley, or wheat, beans, and peas. Cattle and sheep are reared, and dairy husbandry is carried on to a considerable extent. The minerals consist of lead, iron, coal, freestone, slate and millstone. Flannels, coarse cloths and stockings are manufactured. The principal rivers are the Clwyd, the Dee and the Conway. Pop. 144,736.—The county town Denbigh is near the center of the Vale of Clwyd, 25 miles w. of Chester, picturesquely situated on a rocky eminence, the summit of which is crowned by the ruins of an ancient castle. Tanning and shoemaking are carried on. Pop. 6892.

Denderah (den’dér-a; the Teisypus of the Greeks and Romans), an Arab village of Upper Egypt, on the left bank of the Nile, 28 miles N. of Thebes, celebrated for its temple dedicated to Athor, the Egyptian Venus, the best preserved of any of the great temples of antiquity in Egypt.

Dendermonde (den’dér-monde), or Termont, a town of Belgium, province of East Flanders, at the confluence of the Dender with the Scheldt, 12 miles N. w. from Brussels. It is strongly fortified, defended by a citadel, and surrounded, by low, marshy ground which can be laid under water, manufactures, woolens, linens, tobacco, etc. The town was taken by Marlborough in 1706. Pop. 9719.

Dendrite (den’drit), a stone or mineral, on or in which are figures resembling shrubs, trees, or mosses. The appearance is due to arborescent crystallization, resembling the frostwork on our windows. The figures generally appear on the surfaces of fissures and in joints in rocks, and are attributable to the presence of the hydrous oxide of man-
Dendrobium (den-drō'bī-um), an extensive genus of epiphytes dispersed over the damp tropical forests of Asia, order Orchidaceae. They vary much in habit; many are cultivated in hothouses on account of the beauty of their flowers.

Dendrophis (den-drō-fis), a genus of harmless serpents, family Colubridae, found in India and Africa, living on trees and feeding on reptiles.

Dengue (dēng'gā), a febrile epidemic disease of the West Indies and Southern United States, the symptoms of which are such as would accompany a mixture of scarlet fever and rheumatism.

Denham (den'am), Dixon, lieutenant-colonel and African traveler, was born at London in 1786; died at Sierra Leone, in 1828. In 1823-24 he was engaged, in company with Captain Clapperton and Dr. Oudney, in exploring the central regions of Africa. Denham himself explored the region around Lake Tchad, was wounded and separated from his company, but found his way home after great suffering, when he published his Narrative of Travels. In 1826 he went to Sierra Leone as superintendent of the liberated Africans, and in 1828 was appointed lieutenant-governor of the colony.

Sir John, a poet, born at Dublin in 1615; died in 1689, and was buried in Westminster Abbey. In 1641 he first became known by his tragedy of The Sophy, and in 1642 he published his first edition of his most celebrated poem, called Cooper’s Hill. He was subsequently entrusted with several confidential missions by the royalist party, and, being detected, fled to France. At the restoration, in 1660, he obtained the office of surveyor of the king’s buildings, and was created a knight of the Bath, and a fellow of the newly formed Royal Society.

Denina (dē-nē'nā), Carlo Giovanni Maria, an Italian historian, born in 1731 at Reveillo, in Piedmont. He became professor at Pinerolo, and afterwards at Turin, where he published the first three volumes of his History of Italian Revolutions (1769), containing a general history of Italy. In 1777 he went to Rome, and four years later to Berlin, where he was welcomed by Frederick the Great, an account of whose life and reign he afterwards wrote. Most of his works—History of Piedmont, Political and Literary History of Greece, etc.—were written at Berlin. In 1804 he was introduced to Napoleon, who appointed him imperial librarian at Paris. He died in 1813.

Denis, St. (san deh-nē), a town in the Seine, France, department of the department of the Seine, 6 miles north of Paris, lying within the lines of forts surrounding the capital. It contains the famous abbey church of St. Denis, a noble Gothic structure, in part dating from the eleventh or earlier, but much was done in the way of restoration in the nineteenth century. St. Denis was the burial place of the kings of France; and all her rulers from Hugh Capet downwards, besides some of the earlier dynasties, lay there till 1793, when the revolutionary fury of the convention caused the tombs to be rifled and the church to be denuded. At the restoration Louis XVIII again sought out the relics of his ancestors, so far as they could be found, and had them buried here, and there is now again a long series of restored royal tombs, with numerous other monuments, much stained glass, and modern decoration. The church is about 384 feet long and 92 high. Pop. (1911) 71,549.

Denis, St., (deh-nē; Latin, Dianysius), the apostle of the Gauls. He set out from Rome on his sacred mission towards the middle of the third century, became the first Bishop of Paris, and was put to death by the Roman Governor Pescennius. Catulla, a heathen lady converted by the sight of the saint’s piety and sufferings, had his body buried in her garden, where the Abbey of St. Denis now stands.

Denison (den’sun), a city of Grayson Co., Texas, 73 miles N. of Dallas. It has cotton, cottonseed oil and lumber mills, machine-shops, etc. Pop. 13,632.

Denison, Aaron L., watchmaker, was born at Freeport, Maine, in 1812. He learned the watchmaking business and in 1835 conceived the idea of making all the parts of watches by machinery. He invented the standard gauge known by his name, organized the Warren Watch Company, and placed the first machine-made watch on the market in 1853. The factory was removed to Waltham in 1854 and has had an immense development. He died in 1895.

Denison, George Taylor, military author, was born at Toronto, Canada, in 1839. He entered the Canadian militia and became commander of the governor-general’s bodyguard. His History of Cavalry won a prize of 5000 rubles, offered by the Czar of Russia.
Denizen

Other works were Manual of Outpost Duties, Modern Cavalry, etc.

Denizen (den’iz-en), in English law, an alien who is made a subject by the sovereign's letters patent, holding a middle state between an alien and a natural-born subject. A denizen cannot sit in either house of parliament or hold any civil or military office of trust.

Denmark (den’mârk), a northern kingdom of Europe, consisting of a peninsular portion called Jutland, and an extensive archipelago lying east of it and comprising the islands of Seeland (or Sjælland), Fünen (or Fyen), Lolland (or Lolland), Falster, Langeland, Møen, Samsø, Læsø, Arrø, Bornholm, and many smaller ones. Besides these there are the outlying possessions of Iceland, Greenland, and the Faroe islands in the Atlantic Ocean, and Santa Cruz, St. Thomas and St. John in the West Indies. The area of the home possessions is 14,789 square miles (barely half that of Scotland), of which Jutland occupies 7,055; the pop. in 1866 was 1,680,258; in 1910, 2,757,176. Including Iceland, part of Greenland, etc., the total area of the Danish possessions is 101,403 square miles; pop. 2,586,602. Copenhagen is the capital; other chief towns are Odense, Aarhus, Aalborg, Randers and Horsens. For administrative purposes Denmark is divided into eighteen provinces or districts, besides the capital, nine of these making up Jutland, while the others embrace the islands.

On the south, Denmark is bounded byGermany and the Baltic; on the west it is washed by the North Sea; northwards it is separated from Norway by the Skager Rack; eastward it is separated from Sweden by the Kattegat and the Sound. Denmark, whether insular or mainland, is a very low-lying country, the eastern side of Jutland, where the highest elevation occurs, not exceeding 650 feet. All the rocks belong to the upper series of the secondary and to the tertiary formation. The rock most fully developed is the chalk, above which is an extensive boulder formation containing seams of lignite. Above this are thick beds of clay and marl. Where this prevails, as in Seeland and the east of Jutland, the soil is generally fertile; but where it is overlaid with deep beds of sand, as in the north and west of Jutland, it is extremely desolate. Nearly the whole west coast, indeed, is rendered almost uninhabitable by the drift-sand which has formed an almost uninterrupted line of sterile downs called Klitter, extending from Cape Skagen (or The Skaw) to Blaavands Hook. A large portion of Jutland consists of heathy or moory land, comparatively unprofitable. Elsewhere it exhibits a fertile, undulating surface. The islands, especially Seeland and Fünen, are fertile and present many landscape beauties. The country was once covered with great forests, but these have disappeared, and Denmark is largely dependent on other countries for her supplies of timber. Woods of some extent still exist, however, especially in the islands. In the earliest prehistoric times (the stone age) the Scotch fir was the prevailing tree, and subsequently the oak. The principal tree now is the beech, the oak forming but a small portion of the timber of Denmark. The elm, asp, willow, aspen and birch are met with in small numbers or singly. Pine forests have been planted in the north of Jutland and elsewhere. Denmark has numerous streams but no large rivers; the principal is the Guden, which flows northeast through Jutland into the Cattegat. It is navigable for part of its course. Less important streams are the Holm, the Lomborg and the Stor Aa. All the others are insignificant brooks and streamlets. The lakes are very numerous but not large, the largest not exceeding 5½ miles in length by about 1½ miles broad. There are numerous winding inlets of the sea that penetrate far into the land. The longest of these, the Lielmford in Jutland, entering from the Cattegat by a narrow channel, winds its way through to the North Sea, thus making northern Jutland really an island. In this ford, which widens out greatly in the interior and gives off various minor fiords, there are one large and various small islands. Intercourse between the various islands and parts of the kingdom is separated from each other by water, is well kept up by ferries, etc., and the country is well supplied with railways both in Jutland and the islands. Copenhagen, Aalborg, Aarhus and Randers are the chief seaports. Owing to the lowness of the land and its proximity to the sea on all sides, the climate is remarkably temperate for so northerly a region, though the thermometer in winter may sink to 22° below zero, and in summer rise to 89°. Violent winds are frequent, and rains and fogs prevalent, but the climate is favorable to vegetation.

The agricultural land is greatly subdivided, as the law interdicts the union of small farms into larger. Among crops the greatest area is occupied by oats, which are grown all over the country, but
Denmark

best in Jutland. Barley is grown chiefly in Seeland, and is largely used in brewing beer, the common beverage of the country. Rye is extensively raised, and the greater part of the bread used in Denmark is made from it. Turnips, beans, peas, flax, hemp, hops, tobacco, etc., are also grown; but in general cattle-breeding, grazing and the dairy take up most of the farmer's attention in Denmark. The old Danish breed of horses, found chiefly in Jutland, has long been famous for strength, symmetry, docility and bottom. The fisheries are still important, but not so much as formerly. The herring, turbot, torsk and salmon are the most abundant. The manufactures, although progressing, are not yet of great importance. Paper, gloves, the woollens and earthenware of Jutland, the wooden clocks of Bornholm, are the chief. There are also iron-foundries, sugar-refineries, some extensive tanneries, and many distilleries. The people of Denmark bake their own bread, brew their own beer, and make the greater part of their house furniture and utensils with their own hands.

The commerce of Denmark is carried on chiefly with Great Britain, Germany, Norway, Sweden and Russia. Germany possesses the largest share, and Great Britain a little less than Germany. The value of imports was, 1912, $219,063,000; exports, $158,922,000. The chief imports are textile manufactures, metal goods, coal, timber, oil, coffee, sugar, tobacco, fruit, etc. The chief exports are cattle, horses and swine, butter (a most important item), bacon, hides, flour, eggs, and other edible. Much of the butter and other agricultural produce goes to Britain. The merchant marine has a total tonnage of about 550,000. The railways have a length of about 3000 miles. Since 1875 the unit of the Danish monetary system has been the kroes, or crown, value 26.8 cents. The krone is divided into 100 øre. The Danish pound weight is equal to 1.102 avoirdupois. The barrel or toende, is equal to 3.8 imperial bushels; the viertel to 1.7 English gallons. The foot equals 12.356 English inches; the mile is 4.884 English miles. These measures have been superseded by the metric system, legally established in 1907.

The population of Denmark is composed almost exclusively of Danes, with a few thousand Jews and others. The Danes have regular features, fair or brownish hair, and blue eyes. They still maintain their reputation for seafaring skill and hospitable customs. They are almost exclusively Lutherans in religion, but unlimited toleration is extended to all faiths. Jews, however, though themselves electors, cannot be elected as representatives. At the head of the educational institutions stand the University of Copenhagen and the Holberg Academy at Sorø. The provinces are well supplied with gymnasia and middle schools, and primary instruction is given at the public expense in the parochial schools. It is rare to meet a peasant who cannot read and write, even among the poorer class.

The government of Denmark was originally an elective monarchy. In 1681 it became a hereditary and absolute monarchy, and in 1849 a hereditary constitutional one, the legislative power being vested in the king and diet jointly. The diet or Rigsdag consists of two chambers, the Landsting or upper house, the Folketing or lower house. The former is a senate of 66 members, twelve of whom are nominated for life by the crown, the others being elected for eight years. The members of the Folketing are 114 in number, directly elected by universal suffrage, and hold their seats for three years. The Rigsdag meets every October, and all money bills must be submitted to the lower house. The army consists of all the able-bodied young men of the kingdom who have arrived at the age of twenty-one years. The time of service is eight years in the regular troops, and afterwards eight more in the reserve. Every corps has to drill for thirty to forty-five days every year. The army on a war footing has a total strength of about 83,000 men. The navy is unimportant in number and strength. The revenue in 1912 amounted to $30,589,000. The national debt in 1913 was $85,679,000.

History.—The oldest inhabitants of Denmark whom we find mentioned by name were the Cimbri, who dwelt in the peninsula of Jutland, the Chersonenses Cimbrioc of the Romans. They first struck terror into the Romans by their incursion, with the Teutones, into the rich provinces of Gaul (113-101 B.C.). After this, the Goths broke into Scandinavia, and appointed chiefs from their own nation over Denmark, Norway and Sweden. For a considerable time Denmark was divided into a number of small states, whose inhabitants lived mostly by piracy along the neighboring coasts. In 787 they began to make their descents on the eastern coasts of England, and along with other inhabitants of Scandinavia they conquered Normandy in 870-71. Under Gorm the Old all the small Danish states were united in 925, and his grandson Sweyn, now the head of a powerful kingdom, commenced the conquest of Norway and of England, which was ultimately completed by his son Canute.
Canute died in 1035, leaving a powerful kingdom to his successors, who, in 1042, lost England, and in 1047 Norway. In 1047 Sweyn Magnus Estride sen ascended the throne, but with the exception of the great Waldemar the new dynasty furnished no worthy ruler, and the power of the kingdom decayed considerably till the accession of the politic Queen Margaret in 1057, who established the union of Calmar in 1057, uniting under her rule Denmark, Sweden and Norway. In 1448 Christian I, count of Oldenburg, was elected to the throne, thus founding the royal family of Oldenburg, which kept possession of the throne till 1663. Under the rule of Christian, Norway, Sweden, Schleswig and Holstein were connected with the crown of Denmark, but under his successor, Christian II, Sweden established its independence. Under Frederick I (1523-33) the Reformation was introduced. Christian IV of Denmark ascended the throne in 1588, took part in the Thirty Years' war, and engaged twice in a war with Sweden, with most unfortunate results. Frederick III again engaging in war with Sweden in 1637 was equally unsuccessful. Christian V and Frederick IV were conquered in the war with Charles XII. Denmark, however, after the fall of Charles XII, gained by the Peace of 1720 the toll on the Sound, and maintained possession of Schleswig. After this Denmark enjoyed a long repose. In 1800, having acceded to the northern confederacy, the kingdom was involved in a war with Great Britain, in which the Danish fleet was defeated at Copenhagen, April 2, 1801. In 1807, there being reason to think that Denmark would join the alliance with France, a British fleet went into the Sound to demand a defensive alliance or the surrender of the Danish fleet as a pledge of neutrality. Both were denied, and the Danish capital was bombarded and forced to capitulate, the whole fleet being delivered up to the British. In 1814, the Congress of Vienna, meeting in Paris, determined to make the country a part of the German Confederation. Denmark formed new alliances with Napoleon until 1814, when a peace was concluded by which she ceded Heligoland to England in exchange for the Danish West Indies, and Norway to Sweden in exchange for Swedish Pomerania and Rügen, which, however, she shortly after surrendered to Prussia, receiving in return Lauenburg and a pecuniary compensation. In June, 1815, the king entered into the German confederacy as representing Holstein and Lauenburg. In 1848 Schleswig and Holstein revolted and were not finally subdued till 1852. In 1857 the Sound dues were abolished. Frederick VII died in 1863 and with him the Oldenburg line became extinct. He was succeeded by Christian IX (Prince of Sonderburg-Glücksburg). At the commencement of 1864 the Danish territory was politically distributed into four parts, viz.: Denmark Proper (consisting of the Danish islands and North Jutland), the duchy of Schleswig or South Jutland, with a population more than one-half Danish, the remainder Frisian and German; the duchy of Holstein, purely German; the duchy of Lauenburg, also German. The measures of the Danish government compelling the use of the Danish language in state schools having given great umbrage to the German population of the duchies, the disputes resulted in the intervention of the German confederation, and ultimately Holstein was occupied by the troops of Austria and Prussia (1864). After a short campaign the Prussians captured Alsen, overran the greater part of Jutland, and forced the Danes to accept a peace (August 31), by which they renounced their right to the duchies of Schleswig, Holstein and Lauenburg. A difference now arose between Austria and Prussia as to what should be done with the duchies, and Prussia showing an evident intention of annexing them, the result was a war between the two powers, which ended in the total defeat of Austria at Sadowa, or Königgrätz, July 3, 1866. By the treaty which followed Prussia obtained the duchies. The chief events since then have been prolonged struggle between the government and the Folketing; the influence of a new political party (1893) desiring parliamentary concord in the agrarian interest; the rejection of the proposal to sell the Danish West Indies to the United States; the death of Christian IX and accession of Frederick VIII (1906); the death of Frederick VIII and accession of Christian X (1912).

Language and Literature.—The Danish language, owing to the Scandinavian branch of the Teutonic family of languages, and is a sister of the Swedish and Norwegian. It is written either in the German or the Roman characters. From the long union of Norway with Denmark, Danish became the written language of the Norwegians, and is still the language of the educated classes. The oldest literary monuments of the Danish language consist of the laws of the early kings in the twelfth century. Next to these come the heroic ballads (Kjærminer), some of which date from the thirteenth, others from the fourteenth, fifteenth and sixteenth centuries. They were collected while they still lived in the
Denmark

mouths of the people, by A. S. Vedel. Outstanding literary monuments probably belonging to the thirteenth century, are the Danish Rhyming Chronicle and a Danish translation of the Old Testament. During the Reformation period Christian Pedersen (1480-1554) did for the Danish language much what Luther did for the German, by publishing, besides other works, a translation of the New Testament and the Psalter and later the complete Bible. The sixteenth and seventeenth centuries were distinguished by the publication of a number of works on the national history, among the writers of which we may mention Hans Vania the elder, Arild Hvittfeld, Nils Krag, Vitas Bering, Ramus, etc. Modern Danish poetry commences in the period succeeding the Reformation with hymns, Scriptural dramas, edifying narratives, etc. Justesen Itaach and Erik Pontoppidan the elder are among the chief names in this department. Anders Bording (died in 1677) and Thomas Kingo (died in 1722) made names as lyric poets, the sacred poems of the latter being a noble contribution to Danish literature. A new epoch began with Louis Holberg (1654-1754), who was the founder of the Danish stage, and his name and that of the lyric and dramatic poet Ewald mark the brightest period of the national literature. Among the comic dramatists Peder Andreas Heiberg, and among song writers the celebrated Jens Baggesen hold the first place. Fresh life was inspired into Danish poetry by Adam Oehlenschlager (1770-1850), contemporary with whom was Adolf Wilhelm Schack Staffeldt (1770-1826), a lyric poet of the first rank. In 1811 Bernhard Severin Ingemann made his appearance, first as a lyric poet, but afterwards turned his attention to the drama, and later to the historical romance. Among the dramatic writers the names of Johan Ludvig Heiberg, Overskou, Hostrup, Erik Bøgh and the more recent Molbech and Edvard Brandes, are well known. Among poets we may mention Heiberg, Andersen, Blicher, Hilet, Paludan-Müller and Rosenhoff: the modern school being represented by Carl Ploug, Drachmann and Gjellerup. Among those who have displayed a talent for novel writing are Ch. Winther, Carl Bernhard, Meyer Aron Goldschmidt, Sten Stensen Blicher, who describes common life in Jutland with poetic truth. Among other distinguished modern writers we must mention Hendrik Hertz, a lyric poet and dramatist; Hans Christian Andersen, famous throughout Europe for his stories; and Waldemar Thisted, a lyricist and novel writer of considerable note. Among scholars the names of Madvig, Westergaard, Rask and others take a high place. 

Dennewitz (den ′wits ′), a small Russian village in the circle of Potsdam, province of Brandenburg, famous for the battle between the French and Prussians, September 6, 1813, in which the latter, aided towards the end by Russian and Swedish armies, were victorious.

Dennis (den′is′), John, an English dramatist and critic, born in London in 1657; died in 1734. Of independent means, he devoted himself to literature, wrote some dramatic pieces and poems, and at length settled down to criticism. His irritability and rancorous criticisms involved him in perpetual broils. Pope gave him a place in his Dunciad, and Swift satirized him with merciless wit in his Narrative of the Deplorable Frenzy of Mr. John Dennis. Having fallen into poverty in his old age, a play was given for his benefit, to which his former antagonist, Pope, contributed a prologue. 

Denon (de-nōn′), Dominique Vivant, Baron de, a distinguished French artist, born in 1747, of a noble family. Of amiable manners, and with a talent for the arts, he was appointed gentleman-in-ordinary to Louis XV. He was afterwards employed in the diplomatic service, and was long connected with the French embassy in Naples, where he greatly improved his talent for drawing and engraving. Returning to France he became acquainted with Bonaparte, accompanied him in his campaigns, was made inspector-general of museums, selected the works of art to be transferred from conquered countries to the Louvre, and superintended the erection of monuments in honor of the French successes. He died at Paris in 1825. He published Travels in Upper and Lower Egypt, finely illustrated.

Dénouement (dä-nō-mä′), a French term naturalized in England, and signifying the winding up or catastrophe of a plot, the solution of any mystery, etc.

Density (d′en s′t′-tē′), in physics, the quantity of matter contained in a body under a given bulk. If a body of equal bulk with another contains double the quantity of matter it is of double the density. Or if a body contain the same quantity of matter as another, but under a less bulk, its density is greater in proportion as its bulk is less than that of the other. Hence the density is directly proportional to the quantity of matter, and inversely proportional to the bulk or magnitude. The relative quan-
Dentistry

Dental Formula (den'tal for'mu-lä), an arrangement of symbols and numbers used to signify the number and kinds of teeth of a mammiferous animal. The dental formula of man is:

I. 2-2  C. 1-1  P.M. 1-1  M. 2-3 = 32,

which is read thus: Two incisors on each side of both jaws, one canine tooth on each side of both jaws, two premolars on each side of both jaws, and three true molars on each side of both jaws, in all 32 teeth.

Dentalium (den-tä'li-üm), a genus of gasteropodous mollusks, the shell of which consists of a tubular arcuated cone open at both ends, and resembling the tooth of an elephant in miniature. There are many species, known by the common name of tooth-shells.

Dentaria (den-tä'ri-a), coral-root, a genus of plants, nat. order Cruciferae. There are about twenty species, natives of temperate countries. They are ornamental herbs, with creeping, singularly toothed root-stocks, from which there are the names of coral-root and toothwort. The stem-leaves are opposite or in whorls of three, and the flowers are large and purple. D. bulbifera, the only British species, is a rare plant in the southeast of England. D. diphylla, or pepperwort, a native American species, has roots that are used as mustard.

Dentatus (den-tä'tus), MANIUS CUR-\ns: an ancient Roman general of Sabine descent. In B.C. 290 he brought to a victorious termination the war with the Sannites, which had lasted for nearly fifty years. In B.C. 275 he defeated King Pyrrhus at Beneventum, for which he received a magnificent triumph. In B.C. 274 he was made consul for the third time and conducted to a successful issue the last war with the southern Italians. He died about B.C. 270.

Dentex (den'teks), a genus of acan-thopterygious fishes of the family of the Sparidae, or sea-breams. They have conical teeth, and those immediately in front are long and hooked inward. The Dentex vulgaris, common in the Mediterranean, sometimes attains the length of 3 feet. Its general appearance is not unlike the perch. It is esteemed as an article for food.

Dentifrice (den'ti-fris), a preparation for cleansing the teeth, of which there are various kinds in the form of tooth-powders, tooth-washes, or tooth-pastes. Cuttle-fish bone, finely powdered chalk, and charcoal are common dentifices. Rhatany, catechu, myrrh and mastic are also often employed.

Dentils (den'tils), in architecture, the little cubes resembling teeth, into which the square number in the bed-molding of an Ionic, Corinthian, or Composite cornice is divided.

Dentine (den-'ti-n), ao, Dentils of the Corin-thian Cornice.

the ivory tissue lying below the enamel and constituting the body of a tooth. It consists of an organic basis disposed in the form of extremely minute tubes and cells, and of mineral matter.

Dentistries (den'tis-trës), a tribe of birds of the order Inessores or Perchers, including Shrikes, Butcher-birds, etc., characterized by having a notch and tooth-like processes on each side of the margin of the upper mandible. They are rapacious and prey on weaker birds.

Dentistry (den'tis-tri), the art of cleaning and extracting teeth, or repairing them when diseased and replacing them when necessary by artificial ones. There are two very distinct departments in dentistry, the one being dental surgery, the other what is known as mechanical dentistry. The first requires an extended medical knowledge on the part of the practitioner, as, for instance, a knowledge of diseases whose effects may reach the teeth, of the connection between the welfare of the teeth and the general system, etc., as well as ability to discern latent oral diseases, calculate the effects of operations, etc. The chief operations in this department are scaling, or removing the tartar which has accumulated on the base of the teeth; regulising, the restoring of overcrowded and displaced teeth to their proper position; stopping, the filling up of the hollow of a decayed tooth and thus preventing the progress of decay; extracting, a proc-
Dentition (den-tish-un), the cutting of teeth. See Teeth.

D'Entrecasteaux (dán-tr-kah-to), a name of several applications in geography. (1) A channel between the southeast cape of Tasmania and Brunl Island. It affords good shelter and anchorage to ships. (2) D'Entrecasteaux Isles, a group lying m. of British New Guinea. (3) D'Entrecasteaux Point, on the s. w. coast of Australia. The name is that of a distinguished French navigator of the eighteenth century.

Denuation (dě-nú-d'a-shun), in geology, the act of washing away the surface of the earth by water, either in the form of constant currents or of occasional floods.

Denver (den-ver), an industrial and commercial city, capital of the State of Colorado, on the right bank of the South Platte River, 15 miles east of the Rocky Mountains. It is the junction of eight important railway systems, and has a large trade, being the chief supply center for the farming and mining regions of Colorado and New Mexico. In its vicinity are some of the largest smelting works of the country. It has also large manufacturing and jobbing interests, including the car shops of four lines of railroad. It is the emporium of the gold and silver mining districts of the State and the chief center of the coal trade.

The city is well built, and contains among its institutions, the State capitol and the University of Denver. It is situated at an elevation of 5280 feet, and the climate is peculiarly dry and salubrious. The city was founded in 1858. Pop. in 1880, 36,629; in 1900, 133,859; in 1910, 213,381; in 1914, est. 240,000.

Deobructants (d’é-o-bra’t-ants), medicines which open the natural passages of the fluids of the body, as the pores and lacteal vessels, and thus cause removal of obstructions.

Deobund, or Deoband (dě-o-baad’), a town of Hindustan, Saharunpur district, N. W. Provinces, an ancient place with manufactures of fine cloth. Pop. 19,260.

Deodand (dě-o-dand; Dee-dee-dum), a thing to be given or dedicated to God, an obsolete legal term for anything that had caused a person's death, all such chattels being forfeited by the old rule of the common law of England to the sovereign or lord of the manor. Its origin was attributed to the notion that where a man was suddenly cut off in his sins expiation ought to be made for the benefit of his soul; and, accordingly, the chattel, which occasioned his death should be forfeited to the king, to be devoted by him to pious uses. Deodands were abolished in 1846.

Deodor [Indian Cedar (Céd-e-dar}), Deodar Cedar, or Deodar (dě-o-dar), a large and valuable Indian tree similar to the cedar of Lebanon, and by some considered only a variety. It is native to the Himalayas and yields timber that is much used in Hindustan. It was introduced into Britain in 1831, and is now a common ornamental tree. See Cedar.

Deodorizers (d & e-o-de-r-i-z-erz), chemical substances which have the power of destroying fetid effluvia, as chlorine, chloride of lime, etc.

Deogarh (dá-o-gahr), the name of two towns in Hindustan: (1) In Bengal, 170 miles n. w. of Calcutta, with a group of temples to which numerous pilgrims resort. Pop. about 10,000. (2) In Oodeypore Rajputana. Pop. 6846.

Deogiri (dá-o-gí-ri). See Daulatabad.

D'Eon de Beaumont (dá-on dé bo-mo), Charles Genevieve Louise Auguste Andre Timothee, a notorious French character, chevalier, doctor of law, diplomatist, etc.
Deontology

born in 1728. He afterwards distinguished himself in the Seven Years' war, then was secretary of the French legation, and ultimately became minister plenipotentiary. Having quarreled with the French government, he lived fourteen years in London in a kind of banishment. During these years he had occasionally dressed and passed as a female, and about this time his sex began to be doubted. In 1777 he returned to France, was ordered to dress as a woman, and continued to do so both there and after he returned to England (in 1785), where he died in great poverty in 1810, being then regarded by everyone as a female.

Deontology (dē-on-tol'ō-ji), or the science of duty; the term used by certain philosophic schools (Bentham, Spencer, etc.) to denote their doctrine of ethics.

Department (dē-part'ment), a subdivision of executive government, under a subordinate officer. In the United States the government embraces the departments of state, justice, interior, war, navy, treasury, post-office, agriculture and commerce and labor, the heads of which form the Advisory Cabinet of the President. The government is conducted in three separate departments—the legislative, judicial and executive. The country is subdivided into military departments, each under an officer appointed by the President.

De Pauw (dē-pōw'), a university situated at Greencastle, Indiana; founded by the Indiana Conference of the Methodist Episcopal Church in 1837, and known as the Indiana Asbury University until 1884 when the name was changed in recognition of large bequests from Washington C. De Pauw. Besides the college of liberal arts there were schools of medicine, law, theology, pedagogy, music and art, but only the college of liberal arts and the school of music are at present operating. There were in 1914 50 instructors and about 1000 students.

Depew (dē-pū'), Chauncy Mitchell, orator and statesman, born at Peekskill, New York, in 1834. He studied law and became prominent as a railroad lawyer. He was made vice-president of the New York Central R. R. in 1882 and president in 1886, and also became president of the West Shore R. R. Actively engaging in politics, he was successively secretary of state for New York and minister to Japan, and received 100 votes for President in the Republican National Convention of 1888. In 1890 he was elected United States Senator from New York. He gained a high reputation as an orator and for the rich vein of humor in his after-dinner speeches.

Dephal (dēp'hāl; Artocarpus Lā-koochā), an Indian tree of the same genus as the breadfruit and jack, and cultivated for its fruit. The juice is used for bird-lime.

Depilatories (dē-pi-l'ā-tūr-ēz), applications used to remove the hair from the body, especially the face and scalp, without injuring the texture of the skin. The celebrated ruirus depilatory consists of quicklime and orpiment (tarsulphuret of arsenic) boiled in water impregnated with a strong alkaline lye. This mixture is rubbed gently on the parts, which are afterwards washed in warm water.

Deponent (dē-pō'ūn't), (1) in grammar, a verb passive in form but active or neuter in signification. (2) In law, a person who makes an affidavit, or one who gives his testimony in a court of justice; a witness upon oath.

Deposit (dē-po'zīt), in law, something given or entrusted to another as security for the performance of a contract, as a sum of money or a deed. In commerce, a deposit is generally either money received by banking or commercial companies with a view to employ it in their business, or documents, bonds, etc., lodged in security for loans. In the first case interest is usually paid to the depositor. The receipt given by the banker for money deposited with him is called a deposit receipt.

Deposit, in geology, a layer of matter formed by the settling down of mud, gravel, stones, detritus, organic remains, etc., which had been held in suspension in water.

Deposition (dē-pō-zhēn'ūn), in law, the testimony given in court by a witness upon oath. It is also used to signify by way of answer to interrogatories. Depositions are frequently taken conditionally, or de bene esse, as it is called; for instance, when the parties are sick, aged, or going abroad, depositions are taken, to be read in court in case of their death or departure before the time for the trial to be held.

Deposition of a Clergyman, the degradation of a clergyman from office, divesting him (in churches which do not, like the Church of Rome, hold the indelible nature of orders) of all clerical character. See Depreciation.
Dépôt (dəˈpɔ or dəˈpɔ), a French word in general use as a term for a place where goods are received and stored; hence in military matters, a magazine where arms, ammunition, etc., are kept. The term is now usually applied to those companies of a regiment which remain at home when the rest are away on foreign service.

Deprivation (dəˈprɪ ˈvərəʃən), the removing of a clergyman from his benefice on account of heresy, misconduct, etc. It entails, of course, loss of all emoluments, but not the loss of clerical character.

De Profundis (də ˈprəʊˈfʌndɪz), in the liturgy of the Roman Catholic Church, one of the seven penitential psalms, the 130th of the Psalms of David, which in the Vulgate begins with these words, signifying, 'Out of the depths.' It is sung when the bodies of the dead are committed to the grave.

Deptford (dəˈfɔrd), a parliamentary borough, England, in the counties of Kent and Surrey, on the right bank of the Thames, forming now part of London. It has some manufacturers of pottery, chemicals, soap, etc. The old naval dockyard was shut up in 1869, but the royal victualling yard is still the largest establishment of its kind. Pop. (1911) 108,468.

Deputy, one who exercises an office as representing another. Chamber of Deputies, the lower of the two legislative chambers in France and in Italy, elected by popular suffrage, and corresponding in some respects to the House of Commons in Britain, and the House of Representatives in America. See France, Italy.

De Quincey (də kwiˈnɛ), Thomas, an English author, the son of a Manchester merchant, born at Greenhay, near Manchester, in 1785. In 1793 his father died, leaving the family a fortune of £30,000. After attending for some time the Bath and Manchester grammar schools, where he showed precocious ability, especially in classical studies, he imparted his guardian to send him to Oxford University, and on being refused he ran away from school, ultimately arriving in London in an absolutely destitute condition. His sufferings at this time he has described in his Confessions of an English Opium Eater. At length, in 1803, he matriculated at Oxford, and it was in the second year of his course here that he began to take opium in order to alleviate severe neuralgic pains. On leaving college he settled at Grasmere, Westmoreland, in the vicinity of Wordsworth and Southey, and devoted himself to literary work. Here or in London he remained till 1828, reading voraciously, and writing for the London Magazine, Knight’s Quarterly Magazine, and afterward Blackwood’s Magazine. From 1828 to 1840 he lived in Edinburgh, then removed with his family to Laeswade, which continued to be his headquarters. He died at Edinburgh in 1859. His writings, nearly all contributions to magazines, are distinguished by power of expression, subtle thought, and an encyclopedic abundance of curious information. He was eccentric in his habits, incapable of managing money matters, but amiable and polite.

Dera Ghazi Khan (dəˈra gəˈzə kən), a district and town in the Punjab, Hindustan. The former, which is in Dera Ghazi Khan division, has an area of 4517 square miles and a pop. of 471,149. The town has a pop. of 25,731, half Hindus and half Mohammedans. It has extensive manufactures of silk, cotton and coarse cutlery.

Dera Ismail Khan (dəˈra əˈmaık əl kən), a district and a town of Hindustan, in the Punjab, in the division of Dera Ismail Khan. The district lies north of that of Dera Ghazi Khan on both sides of the Indus, and has an area of 9290 square miles, and a pop. of 252,379. The town is a staple place for cotton goods. Pop. 31,737.

Dera Ismail Khan, a division or commissionerhip of Hindustan, in the Punjab, occupying part of the valley of the Indus, and comprising Dera Ghazi Khan, Dera Ismail Khan and Bannu; area 22,315 sq. miles. It is well watered and fertile, and contains numerous towns and villages. Pop. 1,043,903, mostly Mohammedans.

Derbent, or Derwent (dəˈrɛ bent), a fortified Russian seaport city of the government of Daghestan, on the west shore of the Caspian, an ancient place formerly belonging to Persia. The manufactures consist of woolen stuffs, copper and iron ware, rose-water, etc.; and there is some trade in saffron, largely grown in the vicinity. Pop. 14,821.

Derby (dəˈbl, dəˈrɛbl), a municipal and parliamentary borough in England, capital of Derbyshire, on the Derwent, here crossed by an elegant bridge of three arches, 115 miles N. N. W. London. It is pleasantly situated in a wide and fertile valley open to the south, and is well and regularly built
in the modern quarter. It has some fine public buildings, among which are the churches of All Saints, St. Alkmund and St. Werburgh, the county hall, school of art, infirmary, etc. There is also a very handsome free library and museum. The principal manufactures are silk, cotton, paper, articles in Derbyshire spar, castings, porcelain, etc. Derby is one of the oldest towns in the kingdom, and is supposed to owe its origin to a Roman station, Derwentio, situated at Little Chester, on the opposite side of the river. Under the Danes it took the name of Deraby. Richardson, the novelist, was a native of the town. Pop. 123,433.—The county of Derby, or Derbyshire, in the center of the kingdom, area, 1029 square miles, five-sixths being arable or in permanent pasture. The southern and eastern parts have a fertile soil, while the northwestern portion is bleak, with a rocky and irregular surface. Here is the loftiest range of the English Midlands, the mountains of the Peak. The Peak itself is 2000 feet high. The principal rivers are the Derwent, the Trent, the Wye, the Erwash, the Dove and the Rother. Oats and turnips are important crops, and dairy-handker is carried on to a large extent. Coal is abundant in various parts of the county, iron ore is also plentiful, and lead, gypsum, zinc, fluor spar, and other minerals are obtained. The manufactures are silk, cotton and lace, machinery and agricultural implements. Pop. (1911) 660,129.

Derby, Edward Geoffrey Smith Stanley, Fourteenth Earl of, an English statesman, born at Knowsley Park, Lancashire, in 1799; died there in 1839. In 1820 he was returned to the House of Commons as a member for Stockbridge. At first inclining to the Whig party, he joined Canning’s ministry in 1827, and in 1830 became chief secretary for Ireland in Lord Grey’s government, greatly distinguishing himself by his speeches in favor of the Reform Bill in 1831-32. The opposition led by O’Connell in the House of Commons was powerful and violent, but Stanley, while supporting a bill for the reform of the Irish Church and the reduction of ecclesiastical taxation, was successful in totally defeating the agitation for the repeal of the Union. He warmly advocated the abolition of slavery, and passed the act for this purpose in 1833; but in the following year a difference of opinion with his party as to the diversion of the surplus revenue of the Irish Church led him to join the Tories. In 1841 he became colonial secretary under Sir Robert Peel, but resigned on Peel’s motion for repeal of the corn laws. In 1851 and 1855 he formed ministries, and again in 1866. Early in 1868 he resigned office. Earl Derby joined to great ability as a statesman, and brilliant oratorical powers, a high degree of scholarly culture and literary ability.—Edward Henry Stanley, fifteenth earl of Derby, was born in 1826; educated at Rugby and Trinity College, Cambridge. In 1852 he was under secretary of foreign affairs; afterwards secretary of state for India. Under his superintendence the management of the British India empire was transferred from the East India Company to the government of Great Britain. In 1866 and also in 1874 he was secretary of state for foreign affairs. Lord Derby became a Liberal in 1879, and was secretary of state for the colonies under Mr. Gladstone from 1882 to 1885. He, however, took a stand against Irish Home Rule in 1886, and afterwards ranked among Gladstone’s opponents. He died in 1893.

Derby, Orville Adelbert, geologist, was born at Kellogsville, New York, in 1851. He became an instructor of geology at Cornell University, resigned in 1875 to join the geological survey of Brazil, and has been chief of this survey since 1907. He is the highest authority in the geology and physical geography of
Derby Day, on which he has written many valuable papers.

Derby Day (dār'bi dā), the great annual London holiday, on which the horse-race for the stakes instituted by Lord Derby in 1780 is run. It always falls on a Wednesday. The race is run on Epsom Downs, an extensive plain in the neighborhood of London. The entry-money for each subscriber is fifty guineas, and the stakes are run for by colts of three years. The entries are so numerous that the value of the stakes reaches several thousand pounds. On Epsom Downs, on the Derby Day, are assembled all classes, high and low.

Derbyshire. See Derby.

Derbyshire Neck. See Goiter.

Derbyshire Spar. See Fluorspar.

Derecske (de-rech'ke), a town of Hungary, in the county of Bihar. Soda is obtained from the neighboring swamps. Pop. 8767.

Dereham (dēr'am), East, a town in England, nearly in the center of the county of Norfolk, with manufactures of agricultural implements, iron-foundries, and a brisk trade. The poet Cowper was buried in the church here. Pop. 5729.

Derelict (der'e-likt), a vessel or anything relinquished or abandoned at sea, but most commonly applied to a ship abandoned by the crew and left floating about.

Derg, Lough (lou'g derg); (1) a lake of Ireland, county of Donegal, about 3 miles long by 2½ broad at the broadest part, and studded with islets, one of which, called Station Island, has long been a great resort of Roman Catholic pilgrims; (2) an expansion of the river Shannon between County Tipperary and Counties Clare and Galway, about 24 miles long and averaging 2 miles in breadth.

Derham (der'am), William, an English philosopher and divine, born in 1657; died in 1735. He was long rector of Upminster in Essex. His best-known works are entitled Physico-Theology, Astro-Theology, and Christo-Theology.

Derivation (der-i-vā'shan). See Etymology.

Derma (der'ma), Dermis, the true skin, or under layer of the skin, as distinguished from the cuticle, epidermis, or scarf-skin.

Dermatology (der-ma-tol'o-ji), the branch of medicine which treats of the skin and its diseases.

Dermatophyte (der-ma-tō-fīt), a parasitic plant, chiefly of the lowest type of the Cryptogamie, infesting the cuticle and epidermis of men and other animals, and giving rise to various forms of skin-disease, as ringworm, etc.

Dermestes (der-mes'tez), a genus of coleopterous insects, one species of which (D. lardarius) is known by the name of bacon-beetle, and is often found in ill-kept ham or pork shops.

Dermot Mac Muragh (der'mot mak muragh), the last Irish king of Leinster, attained the throne in 1140. Having carried off the wife of O'Ruare, prince of Letrim, he was attacked by the latter, and after a contest of some years driven out of Ireland (1167). He then did homage to the English king, and with the help of Richard, Earl of Pembroke, recovered his kingdom, but died in the same year (1170), and was succeeded by Pembroke, who had married his daughter.

Derna (der'na), a town in Barca, on the north coast of Africa. Pop. 7000.

Derrick (der'ık), a lifting apparatus consisting of a single post or pole, supported by stays and guys, to which a boom with a pulley or pulleys is attached, used in loading and unloading vessels, etc. Floating derricks of the strongest construction, with an immense boom and numerous blocks, are also used.

Derrick-crane (der'ık krān), a kind of crane combining the advantages of the common derrick and those of the ordinary crane. The rib of this crane is fitted with pivots at the head, and has a chain instead of a tension-bar attached to it at the top, so that the inclination, and consequently the sweep, of the crane, can be altered at pleasure.

Derry. See Londonderry.

Dervish (der'vish), or Dervise (Persian, poor), a Mohammedan devotee, distinguished by austerity of life and the observance of strict forms of worship. There are many different orders of them. Some live in monasteries, others lead an itinerant life, others devote themselves to menial or arduous occupations. They are respected by the common people, and the mendicants among them carry a wooden bowl into which the pious cast alms. One of their forms of devotion is dancing or whirling about, another is shouting or howling, uttering the name Allah, accompanied by violent motions of the body, till
they work themselves into a frenzy and sometimes fall down foaming at the mouth. They are credited with miraculous powers, and are consulted for the interpretation of dreams and the cure of diseases.

**Derwent** (der’went), the name of four rivers in England, in Derbyshire, Yorkshire, Durham and Cumberland, respectively, the last draining Derwentwater Lake. Also a river in Tasmania.

**Derwentwater** or Keswick Lake, a beautiful lake in Cumberland, England, in the vale of Keswick. It is about 3 miles in length and 1½ in breadth, and stretches from Skiddaw on the north to the hills of Borrowdale. Near the northeast corner is the celebrated cascade of Lodore. Its waters are carried to the sea by the Derwent.

**Derwentwater**, James Ratcliffe, last earl of, one of the leaders in the rebellion of 1715, born at London in 1689. The standard of revolt having been raised in Scotland, Lord Derwentwater commenced the movement in England on October 6, 1715, but was forced, along with the other Jacobite nobles, to surrender at discretion on November 13th. He was executed on Tower Hill, February 24, 1716, his estates being confiscated, and in 1735 granted to Greenwich Hospital.

**Derzhavin** (de-rzhä-vin), Gabriel Romanowitch, a Russian lyric poet, born in 1743. He entered the army as a private soldier, distinguished himself highly, and was eventually transferred to the civil service, in which he obtained the highest offices. In 1803 he retired from public life and devoted himself entirely to poetry. One of his most beautiful poems is the *Odes Bog*, or *Address to the Deity*. He died in 1816.

**Desaguadero** (des-a-gwa-dá’rō), a river of Bolivia, in a valley of the same name, issuing from Lake Titicaca, and carrying its waters into Lake Aullagas. Also a river in the Argentine Confederation flowing into Lake Bevedero Grande, and separating the provinces of San Juan and Mendoza. Desaguadero signifies in Spanish ‘a channel of outlet.’

**Desaix de Veygoux** (des-sä dé va-gō), Louis Charles Antoine, a distinguished French general, born in 1768 at St. Hilaire d’Ayat, in Auvergne. He was of noble family, and entered the army as a sublieutenant. He distinguished himself greatly in 1794 under Pichegru, and two years later with the army of the Rhine under Moreau. In 1797 he accompanied Bonaparte to Egypt, and was very successful in reducing Upper Egypt. After the Treaty of El Arish he followed Bonaparte to Italy, took command of the corps of reserve, and, arriving on the field of Marengo at a critical moment, decided the victory by a brilliant charge, June 14, 1800. He himself fell, mortally wounded by a cannon shot.

**Desault** (dé-sō), Pierre Joseph, one of the most celebrated surgeons of France, was born in 1744, and died in 1795. After some experience in the military hospital at Béfourt he went to Paris in 1764, studied under Petit, and two years afterwards became a lecturer on his own account. His reputation soon increased, and he became principal surgeon in the hospital De la Charité, and in 1758 was put at the head of the great Hôtel Dieu in Paris. Here he founded a surgical school, in which many of the most eminent surgeons of Europe were educated.

**Descant** (des’kant), in music, an addition of a part or parts to a subject or melody, a branch of musical composition which preceded the modern counterpoint and harmony, coming into existence at the end of the eleventh or beginning of the twelfth century.

**Descartes** (da-kärt), René, a great French philosopher and mathematician, with whom the modern or new philosophy is often considered as commencing, was born March 31, 1596, at La Haye, in Touraine. He was educated at the Jesuit College of La Flèche, where he showed great talent.
He entered the military profession and served in Holland and in Bavaria. In 1621 he left the army, and after a variety of travels finally settled in Holland, and devoted himself to philosophical inquiries. Descartes, seeing the errors and inconsistencies in which other philosophers had involved themselves, determined to build up a system anew for himself, divesting himself first of all the beliefs he had acquired by education or otherwise, and resolving to accept as true only what could stand the test of reason. Proceeding in this way he found (Meditationes de Prima Philosophia) that there was one thing that he could not doubt or divest himself of the belief of, and that was the existence of himself as a thinking being, and this ultimate certainty he expressed in the celebrated phrase "Cogito, ergo sum" (I think, therefore I am). Here, then, he believed he had found the test of truth. Springing from this point Descartes found the same kind of certainty in such propositions as these: that the thinking being or soul differs from the body (whose existence consists in space and extension) by its simplicity and immateriality and by the freedom that pertains to it; that every perception of the soul is not distinct; that it is so far an imperfect finite being; that this imperfection of its own leads it to the idea of an absolutely perfect being; and from this last idea he deduces all further knowledge of the truth. Descartes also contributed greatly to the advancement of mathematics and physics. The higher departments of geometry were greatly extended by him. His system of the universe attracted great attention in his time, though long since exploded. It rested on the hypothesis of celestial cortices, immense currents of ethereal matter, by which he accounted for the motion of the planets (Principia Philosophiae, 1644). His work effected a great revolution in the principles and methods of philosophizing. In 1647 the French court granted him a pension of 3000 livres, and two years later, on the invitation of Christina of Sweden, he went to Stockholm, where he died in 1650.

Descent (d-e-s-ent'), in law, is the transmission of the right and title to lands to the heir, on the decease of the proprietor, by the mere operation of law. The rule determining to whom an estate belongs, on the decease of the proprietor, is that of consanguinity, or relationship by blood, though with some exceptions, as in the case of the portion, or the use of a portion, of a man's property given by the laws to his widow. The rules of descent, designating what relations shall inherit, and their respective shares, will be determined by the genius and policy of the government and institutions. Hence the practice of entailments in the feudal system. And wherever the government is founded in family privileges, or very intimately connected with them, as is the case in all governments where the hereditarily aristocratical part of the community have a great preponderance, the sustaining of families will very probably be a characteristic feature in the code of laws. Thus, in Britain, all the lands of the father, unless otherwise directed by will, go to the eldest son. In the United States of America this distinction in favor of the eldest son has been abolished, and the laws there are founded upon the principle of equal distribution both of real and personal estate among heirs of the nearest surviving degree. Kindred in blood are divided into three general classes, viz. 1. descendants; 2. ancestors; 3. collateral relatives, that is, those who have descended from the same common ancestor. The civil law computes the degrees by counting the generations up to the common ancestor, as father, grandfather, great-grandfather; or mother, grandmother, great-grandmother; and from him or her down to the collateral relative, as brother, cousin, etc., making the degree of relationship the sum of these two series of generations. Every person has two sets of ancestors, the paternal and maternal, and therefore two sets of collateral relatives. There is also a distinction of collateral kindred, into those of the whole blood and those of the half blood.

Deseda (de-se'h-dâ), or DESTRADE, one of the Leeward Islands, belonging to the French, in the Caribbean Sea, about 10 miles long and hardly 6 broad. The soil is in some places black and good, in others sandy and unproductive. Pop. about 1500.

Desert, GREAT AMERICAN. See Arid Region.

Desert (d-e-s-âr't), a term more particularly applied to vast barren plains such as are found in Asia and Africa, but which may also be used to designate any solitude or uninhabited place whether barren or not. See Sahara and Gobi.

Deserter (d-e-s-'t-r) a soldier or sailor who quits the service without leave. Deserters are tried by court-martial, which may inflict death as the extreme punishment, or a less severe punishment, according to the circumstances of the case.
Desertion (de-zər′shən), by husband or wife, without due cause, is in England grounds for a judicial separation. A wife may obtain an order to protect any money or property she may have acquired since desertion, against her husband or his creditors. Desertion in most of the states of the Union constitutes a ground of divorce, though they differ as to the period of time which must elapse before action can be brought.

Desful. See Dijful.

Deshoulières (dā-so̱-li̱r), A N T O I N E T T E D U L A G A R D E, a French lady of much literary reputation in the seventeenth century; born in 1634; died in 1694. She was the center of attraction in the best circles of the period, and was elected a member of several learned societies. Among her works are odes, eclogues, idyls, and a tragedy, Generiic.

Desiccation (des-i-kā′shən), a process of dispelling moisture by the use of air, heat, or chemical agents, such as chloride of calcium, quicklime, oil of vitriol and fused carbonate of potash. — Desiccation cracks, in geology, are the fissures caused in clayey beds by the sun’s heat, and seen in various rock strata.

Design (des′in′), thought, arrangement, or grouping, imagination or invention in works of art. A design is a composition or invention, pictorial, architectural, or decorative. It may be simply an imperfect sketch, as a record of a first thought; or it may be a fully matured work, as a cartoon in preparation for fresco painting, or a drawing to illustrate a book.

Design, Schools of, schools where art is taught in relation to its industrial application rather than its aesthetic side. They may be regarded as intermediate between schools of technology, in which the designing is of strictly mechanical nature, architecture excepted, and schools for the training of artists who devote themselves to the fine arts. The courses in the schools of design vary in detail, but generally include free-hand drawing; the theoretical principles of decoration and the history of art, especially in its decorative aspect; copying and variation of designs; original designing for textile fabrics, wall-paper, stained glass, pottery, leather work, book covers, etc.; and the study of the best examples of designing. To this is added instruction in technical manipulation. The impetus to promote the development of the art industries of the country originated in Boston in 1870. The Centennial Exhibition of 1876 further strengthened the movement. Various institutions of learning established courses in applied art, among them being Cooper Union; the Lowell Free School affiliated with the Massachusetts Institute of Technology; the School of Design for Women, in Philadelphia; the School of Industrial Art of the Pennsylvania Museum, also of Philadelphia. In Europe many schools are devoted to instruction in design, and the teaching for the blind and the deaf and dumb has reached a high development.

Desman (des′mən). See Must-mat.

Desmidiaceae (des-mid-iă′sé-ə), Des- MIDI′E-E, a nat. order of microscopic, fresh-water, coniferoid Algae. They are green gelatinous plants composed of variously forced cells having a bilateral symmetry, which are either free, or in linear series, or collected into bundles or into starlike groups, and imbedded in a common gelatinous coat. Desmidiaceae differ from Diatomaceae in their green color and absence of silic.

Desmodium (des-mōd′ē-um), a genus of plants. See Moving Plant.

Des Moines (děs mōn′), a manufacturing and trading city, capital of the State of Iowa and of Polk County, on the Des Moines River, about 340 miles west of Chicago. Among its chief buildings are the new State house, the State arsenal, colleges, opera houses, a regimental post of the U. S. A., etc. It is the seat of Drake University, the leading educational institution of the Church of Christ, Highland Park (Episcopalian), and the Danish Lutheran Theological School. There are coal-mines in the vicinity, and the manufactures are rapidly increasing. The industries include important pork-packing establishments and bridge-building (anbyterian), and the Danish Lutheran Theological School. Pop. 295,000.

Des Moines, the largest river in the State of Iowa, rises in the s. w. of Minnesota and flows in a southeasterly direction until it falls into the Mississippi about 4 miles below Keokuk, after a course of 300 miles.

Desmology (des-məl′ö-jè; Greek, des-mo′s, a ligament), that branch of anatomy which treats of the ligaments and sinews.

Desmoulins (dā-mō′lē-ap), B E N O I T CAMILLE, born in 1780
or 1762, was conspicuous during the first period of the French revolution. He was among the most notable of the pamphleteers and orators who urged the multitude forward in the path of revolution. Having become closely connected with Danton and the party of opposition to Robespierre, and inveighing against the reign of blood and terror, he was arrested on the order of the latter on March 30, 1794, tried on the 2d of April, and executed on the 5th.

Desna (děs-nä'), a river in Russia, which rises in the government of, and about 50 miles east of the town of Smolensk, flows through the governments of Orel and Tchernigov till it joins the Dnieper near Kiev. It is 500 miles in length and navigable nearly throughout.

De Soto (dě so'tō), Hernando, a Spanish explorer and discoverer of the Mississippi, born about 1496; died in 1542. He accompanied expeditions to the New World under Davila and Pizarro, and played a distinguished part in the conquest of Peru. In 1539 he led an expedition to Florida, whence after many difficulties he penetrated to and beyond the Mississippi. Here he was attacked with fever and died.—The name De Soto has been given to a county in the n.w. of Mississippi, in the locality of his discovery of the Mississippi River.

De Soto, a city of Jefferson Co., Missouri, 43 miles s. by w. of St. Louis. Lead, zinc and tiff ore are produced in the vicinity, and it has railroad machine shops, a large shoe factory. Exports grain, lead and tiff. Pop. 4721.

Despot (des'pot; Greek, despotēs), originally a master, a lord; at a later period it became an honorary title which the Greek emperors gave to their sons and sons-in-law when governors of provinces. At present despot means an absolute ruler, as the Emperor of Russia, and in a narrower sense a tyrannous one.

Dessalines (dã-sâ-lé'n), Jean Jacques Emperor of Hayti, born in Africa about 1760, was a slave in 1791, when the insurrection of the blacks occurred in that island, but was set free along with the other slaves in St. Domingo in 1794. His talents for war, his courage, and unscrupulous conduct raised him to command in the insurrections of the colored people, and after the deportation of Toussaint L'Ouverture, and the subsequent evacuation of the island by the French, Dessalines was appointed governor-general for life with absolute power; and the year following (1804) was declared emperor with the title of Jacques I. But his rule was savage and oppressive, and, October 17, 1806, he was slain by one of his soldiers.

Dessau (des'ou), a town in Germany, capital of the duchy of Anhalt, in a beautiful valley on the left bank of the Mulde, mostly well built, with fine squares and many handsome buildings. The manufactures consist of woollens, woolen yarn, carpets, machinery, tobacco, etc. Pop. 55,134.

De Stendhal. See Beyle, Marie-Henri.

Destertro (des-ter'o), now Florianapolis, a seaport of Brazil, capital of the province of Santa-Catharina. The harbor is, next to that of Rio de Janeiro, the best on the Brazilian coast. Pop. 36,687.

Destroyer. A small, well-armed and very fast war-vehicle originally designed to overtake and destroy torpedo boats (which see), but in the European war employed for navy scout duty and for the destruction of submarines and other minor naval work.

Destutt de Tracy (dâ-tù de trasy), Antoine Louis Claude, a French philosophical writer, born in 1754, of a family of Scotch extraction; died in 1836. As a philosopher he belonged to the Sensationalist school, and considered all our knowledge to be derived originally from sensation. Among his chief works are Idéologie (1801), Logique (1805), Traité de la Volonté (1815).

Detachment (de-tach'ment), a body of troops selected from the main army for some special service.

Detaille (dā-tā'y), Jeanne Baptiste EDOUARD, a French military and historical painter, born in Paris, October 5, 1848; died there, December 24, 1912. He was a pupil of Meissonier.

Determinism (dē-tēr'min-iz'm), a philosophical theory which holds that the will is not free, but is invincibly determined either—according to the older form of the theory—by a motive furnished by Providence, or—according to the modern form—by the aggregation of inherited qualities and tendencies.

Detinue (det'ni-nō), in law, the form of action whereby a plaintiff seeks to recover a chattel personal unlawfully detained.

Detmold (det'mold), a town of Germany, capital of Lippe-Detmold, on the left bank of the Werra, 50 miles southwest of Hanover, with a new and an old palace (or castle), good public library, museum, etc. In the vicinity a
Detonating Powders

(colossal statue has been erected to the
famous warrior Hermann or Arminius
who overthrew the Roman general Varus
and his legions in a battle which was
fought near this place. Pop. 13,164.

Detonating Powders (d e t u' n a t-
ing), certain
certain
chemical compounds which, on being
exposed to heat or suddenly struck, explode
with a loud report, owing to one or more
of the constituent parts, suddenly assum-
ing the gaseous state. The chloride
and iodide of nitrogen are very powerful det-
onating substances. The compounds of
ammonia with silver and gold, fulminate
of silver and of mercury detonate by
slight friction, by means of heat, electric-
ity, or sulphuric acid.

Detonating Tube, a species of eu-
diometer, being a
stout glass tube used in chemical anal-
alysis for detonating gaseous bodies. It
is generally graduated into centesimal
parts, and perforated by two opposed
holes for the purpose of passing an
electric spark through the gases which
are introduced into it, and which are
confined within it over mercury and
water.

Detritus (d e t r i t u s), in geology, small
fragments of matter worn
off or detached from solid bodies by
attrition, distinguished from debris, which
is made up of larger fragments.

Detroit (d e t r o i t'), the metropolis of
Michigan, situated on the De-
troit River the greatest waterway in the
world, the tonnage passing through it
being over 70,000,000 tons yearly. The
city has a frontage of 11 miles on Detroit
River and 4 miles on the River Rouge, a
navigable estuary. Its railroad transpor-
tation facilities are covered by five
lines of the Michigan Central system, four
of the Grand Trunk and two of the Pere
Marquette, beside being a terminal point
of the Wabash, Lake Shore, Canadian Pa-
cific, Detroit, Toledo and Ironton and De-
troit & Toledo Short Line. It is a pros-
perous and beautiful city, with wide
streets, 31 parks, the largest being 705
acres in extent, and a Boulevard, 12 miles
long encircling the central portion of
the city. Its principal public buildings
are the Federal Building, City Hall, and
County Building. It has also a large
public library with eight branches and a
museum of art. Its prosperity is based
chiefly on its manufactories which num-
ber 2500 employing 150,000 hands and
with a product in 1913 valued at $410,-
000,000. Of this nearly half is in auto-
mobiles and their parts and accessories.
Other large branches of manufacture are
freight cars, adding machines, pharma-
cetical preparations, stoves, soda ash and
kindred alkalis, packing products, tobacco
and cigars, furniture and clothing. It is
also the largest shipbuilding port on the
Great Lakes. Detroit was settled by the
French in 1701, went under the British
flag in 1760 and the American flag in
1796. Pop. 580,000.

Detroit River, or Strait of St.
Claire, a river or
strait of North America, which runs from
Lake St. Clair to Lake Erie. It is 28
miles long, and of sufficient depth for the
navigation of large vessels. It is about ⅔
mile wide opposite Detroit and enlarges
as it descends. An immense lake trade
passes through it.

Dettingen (d e t' i n g en), the name of
several places in Germany,
among which is a village of Bavaria, on
the right bank of the Main, famous for
the victory gained by the English and
Austrians under George II of England
over the French in 1743.

Deucalion (d e u k a l a ' n), in Greek
mythology, the son of
Prometheus and father of Hellen, ances-
tor of the Hellenes. According to tradi-
tion, he saved himself and his wife,
Pyrrha, from a deluge which Zeus had
sent upon the earth by building a ship
which rested upon Mount Parnassus.
To repair the loss of mankind they were
directed by an oracle to throw stone be-
hind them, which became men and
women.

Deus ex Machina (mak' i na; L. 'a
god out of the
machine'), a phrase used to designate the
resorting to supernatural causes to ex-
plain phenomena that one is not able to
account for by natural means. The
phrase is taken from the practice in the
classical stage of introducing a god from
above by means of some mechanical con-
trivance in order to effect a speedy dé-
nouement of the plot.

Deuterocanonical (d u t e r o k a
n i k), a term applied
to those books of Scripture that were ad-
mitted into the canon after the rest, some
of them being regarded by Protestants as
apocryphal.

Deuteronomy (d u t e r o n ou mi), the
last of the books of the
Pentateuch, so called (Greek
deuteron, second; nomos, a law) from its
consisting in part of a restatement of the
law as already given in Exodus, Leviticus
and Numbers, and containing also, in
addition to special commands and
admonition not previously given, an ac-
count of the death of Moses. See
Pentateuch.
Deutz (doots), a town in Prussia, on the right bank of the river Rhine, opposite the city of Cologne, with which it communicates by a bridge, and with which city it was incorporated in 1888. It is strongly fortified as part of the defenses of Cologne—forming in fact, a tête-du-pont. There are some manufactories of porcelain and glass, also an iron-foundry, machine-works, and a large establishment for the construction of artillery. Pop. 16,136.

Deutzia (doot'si-a), a genus of plants, of the nat. order Philadelphia, containing seven or eight species, all of which are interesting from the beauty of their flowers, some of them favorite garden and greenhouse plants. They are small shrubs indigenous to China and Japan and Northern India.

Deux-Ponts (du-pouns), the French name for the German town Zschebrück (which see), both names meaning 'two bridges.'

Devanagari (dav-na-ga-re), a name of the Sanskrit alphabet.

Development Theory. See Evolution.

Deventer (de'ven-tür), an old town in Holland, province of Overijssel, 8 miles north from Zutphen, at the confluence of the Schipbeek and IJssel. Its industries embrace carpets, cast-iron goods, printed cottons, hosiery, and a kind of cake called Deventer cake. It has a large export trade in butter. Pop. 26,212.

De Vere (de'ver), Aubrey Thomas, an Irish poet, born in County Limerick in 1814; died in 1902. He was the son of Sir Aubrey de Vere, a poet and dramatist (1788-1846). Educated at Trinity College, Dublin, he engaged in literary work, publishing Irish Odes and other pieces of poems, also Picturesque Sketches of Greece and Turkey, Recollections by Aubrey de Vere, etc.

Deveron (dev'er-on), a river of Scotland belonging to Aberdeenshire and Banffshire, 90 miles long.

Deviation of the Compass, the variance of a ship's compass from the true magnetic meridian, caused by the near presence of iron. In modern ships, in which iron is largely used in construction, and especially in battleships, deviation of the compass is a serious source of trouble, one difficult to overcome, and calling for various and complex arrangements of this directive implement. The gyro-compass now is much employed for this purpose, the principle of magnetic attraction being replaced by the effect of rapid rotation. In this the compass is inclined in a vertical plane and rotated at great speed produces inertia, the revolving body vigorously retaining the direction of its axis of movement while at the same time it tends to assume that of the earth's axis, so that its line of whirl becomes the same as that of the earth, pointing in the same direction as the magnet. The gyro-compass is now used on all commercial ships, battleships and submarines. It points to the true pole and with a force much stronger than that of the magnet.

Device (dev'is), a name common to all figures, cinhers, characters, rebuses, mottos, etc., which are adopted by a person or a family by way of badge or distinctive emblem, often a representation of some natural body, with a motto or sentence applied in a figurative sense.

Devil (dev'il; Greek, diabolos, a slanderer or accuser), in theology, an evil spirit or being; especially the evil one, represented in Scripture as the traducer, father of lies, etc. Most of the old religions of the East acknowledge a host of devils. The doctrine of Zoroaster, who adopted an evil principle called Ahriman, opposed to the good principle and served by several orders of inferior spirits, spread the belief in such spirits among the people. The Greek mythology did not distinguish with the same precision between good and bad spirits. With the Mohammedans Ebīl, or the devil, was an archangel whom God employed to destroy a pre-Adamite race of Hīmy, or genii, and who was so filled with pride at his victory that he refused to obey God. The Satan of the New Testament is also a rebel against God. He uses his intellect to entangle men in sin and to obtain power over them. But he is not an independent self-existent principle, like the evil principle of Zoroaster, but a creature subject to omnipotent control. The doctrine of Scripture on this subject soon became blended with numerous fictions of human imagination, with the various superstitions of different countries, and the mythology of the pagans. The excited imaginations of hermits in their lonely retreats, sunk as they were in ignorance and unable to account for natural appearances, frequently led them to suppose Satan visibly present; and innumerable stories were told of his appearance, and his attributes—the horns, the tail, cloven foot, etc.—distinctly described. In consequence of these fictions which Christ and his apostles performed on the possessed, the early church be-
lied in a power connected with the cons-
segregation of priests to drive out evil
spirits. (See Exorcism.) The belief in
evil spirits, witches, etc., was in the sev-
eteenth century so common that they be-
came the objects of judicial process.
With the progress of the natural sciences,
however, in the eighteenth century many
wonderful phenomena became explained,
and less was heard of witchcraft.
Devil, the machine through which cot-
tton or wool is first passed to pre-
pare it for the carding-machines; a teas-
ing-machine.

Devil, Tasmanian. See Dasyure.

Devil-fish, the popular name of va-
rious fishes, one of them being the angler (which see). Among
others the name is given to several large
species of ray occasionally captured on
the Atlantic and Pacific coasts of Amer-
ica, and much dreaded by divers, whom
they are said to have after enveloping
them in their vast wings. During gales
of wind or from strong currents these
immense fish are driven into shoal water,
and being unable to extricate themselves,
fall an easy prey to the vigilance of the
fisherman, who obtain considerable
quantities of oil from their livers.

Devil’s Advocate. See Advocatus
Diaboli.

Devil’s Bit, the common name of a
species of Scabiosa
(scabiösa succisa), nat. order Dipsaccce.
It has heads of blue flowers nearly
globular, and a fleshy root, which is, as it
were, cut or bitten off abruptly. The sweet
scabious is a well-known fragrant
garden flower.

Devil’s Bridge (T eu felsbrücke), a
famous bridge in
Switzerland, over the Reuss, built of stone
from mountain to mountain, 75 feet in
length, a right angle, and over St. Gothard,
from Germany to Italy.

Devil’s Dust, a name sometimes ap-
plicated to old woollen
goods when torn up into their original
fibres, to be woven again into new fab-
rices, called shoddy.

Devil’s Punchbowl, a small lake
of Ireland, near the Lakes of Killarney, between
2000 and 3000 feet above the sea, sup-
posed to be the crater of an ancient
volcano.

Devil’s Wall, in the south of Ger-
many, a structure
which was originally a Roman rampart,
intended to protect the Roman settlements
on the left bank of the Danube and on
the right bank of the Rhine, against the
inroads of the Teutonic and other

tribes. Remains of it are found from the
Danube, in Bavaria, to Boon on the
Rhine.

Devil-worship, the worship paid to
the devil, an evil
spirit, a malignant deity, or the per-
sonified evil principle in nature, by many
of the primitive tribes of Asia, Africa
and America, under the assumption that
the good deity does not trouble himself
about the world; or that the powers of
evil are as mighty as the powers of good,
and have in consequence to be bribed
and reconciled. There is a sect called
devil-worshippers inhabiting Turkish and
Russian Armenia and the valley of the
Tigris, who pay respect to the devil, to
Christ, and to Allah or the supreme being,
and also worship the sun.

Devise (de-viz’), in law, usually the
disposition of real estate by
will, but also sometimes applied to any
gift by will, whether of real or personal
estate.

Devizes (de-viz’ez), a town in Eng-
land, county of Wilts, finely
situated on a commanding eminence, 23
miles west by south of London. The
name is derived from the Latin dīvīs
terrae, (’divided lands’), because the an-
cient castle of Devizes was built at the
meeting-place of three different manors.
Agricultural engines and implements are
made, and malting is carried on. Pop.
(1911) 6741.

Devon, Devonshire (dev’un-shér), a
maritime county in the s. w.
of England, its northern coast being on
the Bristol Channel and its southern on the
English Channel; area, 2686 square
miles, the county being the third largest
of England. From Exeter to the confines
of Cornwall extends the wide and barren
tract called Dartmoor; but the vale of
Exeter, comprising from 120,000 to 130,-
000 acres, and the south extremity of the
county called South Hams, limited by a
line drawn from Torbay to Plymouth
Sound, are among the most fertile dis-
tricts of England. Tin, lead, iron, copper,
manganese, granite and the clay used by
potters and pipemakers are the chief min-
eral products. The geological formation
of the Old Red Sandstone is so largely
developed that the term Devonian has
to some extent become its synonym.
Agriculture is in a somewhat backward
state, owing, probably, to the general pre-
ference given to dairy husbandry, for
which the extent and richness of its grass
lands make the county most suitable.
Wheat, barley, beans, peas and potatoes
are the principal crops. About three-
fourths of the county are under crops or
Devonian System

in pasture. There is a large trade in butter, cheese, and live stock and the 'clotted' cream and cider of Devonshire are well known as specialties of the county. Pop. (1911) 701,981.

Devonian System (de-vō'ni-an), in geology, a name originally given to rocks of Devonshire and Cornwall, intermediate between the Silurian and Carboniferous strata, and consisting of sandstones of different colors, calcareous slates and limestones, etc. They are divided into lower, middle and upper groups, all containing fossils, but the middle most abounding in them, including corals, crinoids, crustaceans, mollusca (especially brachiopods), and cephalopods. Devonian rocks occupy a large area in Central Europe, as well as in the United States, Eastern Canada and Nova Scotia. The term has been often used as equivalent to Old Red Sandstone.

Devonport (dev'un-port), a municipal and parliamentary borough and port of England, county of Devon. It has no special trade beyond that connected with the dockyards and government works. Pop. (1911) 51,064.

Devonshire. See Devon.

Dew (dū) is a deposition of water from the atmosphere upon the surface of the earth in the form of minute globules. The earth absorbs heat during the day; at sunset its supply is cut off, but the radiation continues. Grass and foliage, being radiators, lose their heat, and the moisture of the atmosphere is condensed by contact therewith. See Dewpoint.

Dewas (dā-wās'), a state of Central India. Pop. 142,162. Its capital of the same name, has a pop. of 15,000.

De Wet, Christian Rudolf, born in 1854, was the chief commandant of the Orange Free State army during the Boer War (1899-1902). In this long-drawn-out contest he distinguished himself by great ability and daring. Though many efforts were made to capture him, he always succeeded in outwitting his pursuers, General Roberts and Kitchener, and at the end of the war was still at large. His book, *Three Years of War*, was published in 1902.

DeWey, George, naval officer, born in Vermont, in 1837, appointed to the Navy in 1854. On the outbreak of the Civil war, he was commissioned as lieutenant and assigned to the *Mississippi*, which, under Farragut, took part in forcing the Mississippi River. This vessel running aground in March, 1863, and being exposed to a hot Confederate fire, Dewey fired her and escaped with the crew. He took part in the two attacks on Fort Fisher, and continued in active service after the war, being made captain in 1884. In 1885 he was sent to command the flagship *Pensacola*, European squadron, and in 1888 was appointed Chief of Bureau of Equipment and Recruiting, with the rank of commodore. Commissioned commodore in 1896, he was placed in 1898 in command of the Asiatic squadron, and on May 1, after the declaration of war against Spain, fought the Battle of Manila, silencing the forts and destroying the Spanish fleet, without the loss to himself of a man or ship. On May 11, Congress unanimously adopted a resolution of thanks, granted him a sword of honor and placed him on the active list as rear-admiral. On August 13, he, in conjunction with General Merritt, attacked Manila, reduced it and took possession. In February, 1899, he was given the rank of admiral, previously borne only by Farragut and Porter. He died Jan. 16, 1917.

Dewey John, an American psychologist and educator, born in Burlington, Vermont, October 20, 1859. He studied at the University of Vermont and Johns Hopkins University, and has held the position of professor of philosophy in the Universities of Michigan, Minnesota, Columbia and Chicago. His published works include *Psychology* (1888), *Study of Ethics* (1894), *School and Society* (1899), *Studies in Logical Theory* (1903). He is generally considered as the pioneer of the pragmatic movement in America.

Dewberry (dī-bēr'i; rubus caesius), an edible fruit belonging to the order Rosaceae, and to the same genus as the bramble. The American dewberry (*rubus Canadensis*) derives this name from the dew-like bluish bloom which covers the fruit. It abounds in dry, stony fields from Canada to Virginia, as a running plant, which bears a larger and sweeter berry than the common blackberry.

De Witt, Jan., grand-pensionary of Holland, celebrated as a statesman and for his tragic end, was the son of Jacob de Witt, burgomaster of Dort, and was born in 1625 or 1632. He became the leader of the political party opposed to the Prince of Orange, and in 1653 was made grand-pensionary. In 1665 the war with England was renewed and conducted by De Witt with great ability till its termination in 1667. In 1672 Louis XIV invaded the Spanish.
Dew-point

Netherlands and involved. Holland in war. De Witt’s popularity, already on the decline, suffered still further in the troubles thus occasioned, and he felt it necessary to resign his office of grandpensionary. At this time his brother Cornelius, who had been tried and put to torture for conspiring against the life of the young Prince of Orange, lay in prison. Jan de Witt went to visit him, when a tumult suddenly arose among the people, and both brothers were murdered, August 20, 1672. De Witt was a man of high character, simple and modest in all his relations.

Dew-point, the temperature at which condensation of the vapor in the air takes place. When the temperature of the air has been reduced by radiation to the dew-point, dew is deposited and an amount of heat set free which raises the temperature of the air. Thus the dew-point will indicate what the minimum temperature of the night is likely to be, a knowledge of which is useful to the horticulturist.

Dewsbury (dju’sber’i), a town of England, in the West Riding of Yorkshire, and 30 miles southwest of the town of York, chiefly engaged in the manufacture of heavy woolen cloths, including blankets, carpets, rugs, flannels, baizes, etc. Pop. (1911) 53,338.

Dexter (dek’ster), a term meaning on the right-hand side, chiefly used in heraldry. The dexter chief point is a point in the right-hand upper corner of the shield, being in the dexter extremity of the chief.

Dextrine (dek’strin; CaIIoO), the soluble or gummy matter into which starch can be converted by the action of dilute acids or malt extract, or by heat. It is remarkable for the extent to which it turns the plane of polarization to the right, whence its name. Its composition is the same as that of starch. By the action of hot dilute acids dextrine is finally converted into grape-sugar. It is white, insipid, and without smell. It is a good substitute for gum-arabic in medicine.

Dextro-Compounds (dek’stro), bodies which cause the plane of a ray of polarized light to rotate to the right. Dextrine itself, dextroglucose, tartaric acid, malic acid, cinchonine, and many other bodies have this property; while others, which have the opposite effect, of causing the plane to rotate to the left, are called levoco-compounds.

Dextrose (dek’strō), a name for grape-sugar (which see).

Dey (dā), a title formerly assumed by the rulers (under the Turkish Sultan) of Algiers, Tripoli and Tunisia.

Dezful (dez’fool). See Dizful.

Dhalak (dẖā-lāk’), an archipelago of the Red Sea, off the coast of Abyssinia. It consists of nearly 100 rocks and islets, mostly uninhabited, clustering round the island of Dhalak el-Kebir, which is about 35 miles long by 30 broad. This island possesses a pearl-fishery.

Dhar (dẖār), a small native state in Central India, with an area of about 1740 square miles. The soil is fertile, and yields indigo, rice, opium, etc. Pop. (1901) 142,115. The capital is of the same name, is surrounded by a mud wall, and has some striking buildings. Pop. (1901) 17,792.

Dharangaon (dẖār-a’nɡa-on), a town of Hindustan in Khandesh district, Bombay. Pop. 14,000.

Dharapuram (dẖār-a-pu’ram), a town of Hindustan, Coimbatore district, Madras. Pop. 8000.

Dharmkot (dẖarm’kot), a town of India, in Firozpur district, Punjab. Pop. 6000.

Dharmasala (dẖarm’-sa-la), a hill station with military cantonments, in Kangra district, Punjab, India. Pop. 6971.

Dharwar (dẖār’-war’), the chief town of Dharwar district, in the Bombay Presidency, Hindustan, a straggling place with some trade. There is a fort well planned and strongly situated, but now falling into ruins, and military cantonments at 2 miles’ distance. Pop. 31,279. The Dharwar district has an area of 4535 square miles; pop. (1901) 1,113,298.

Dhole (dōl), the Cingalese name for the wild dog of India (C½os dukhuensis). It is distinguished from the genus Canis, or dog proper, by its having one molar fewer in either side of the lower jaw. It is of a fox-red or rufous-fawn color, in size between a wolf and a jackal, and hunts always in packs.

Dholera (dẖō-lē’ra), a seaport of Hindustan, Bombay Presidency, one of the chief cotton-marts in the Gulf of Cambay. Pop. about 10,000.

Dholka (dōl’ka), a town of Hindustan, Bombay Presidency, probably one of the oldest towns in Gujarat. Pop. about 15,000.
Dholpur (dół'pör), a native state of Central India, Rajputāna; (1901) 270,073.

Dhulia (döl'ë-ë), a town of Hindu- stan, Khandesh district, Bombay Presidency. Pop. about 25,000.

Dhurra, DOURAH (dö'rá), East Indi- an millet, the seed of Sorgum vulgāre, largely grown in India and after wheat the chief cereal crop of the Mediterranean region, being largely used in those countries by the laboring classes for food. Varieties are grown in many parts of Africa, one of them known as Kaiffir corn. It does not make good bread, but is excellent for puddings and is prepared for food in various ways. The plant is closely allied to the sugar cane and is cultivated in the United States as a source of sugar.

Diabase (día-bás), a diorite or green- stone, a fine-grained, crystalline-granular rock.

Diabetes (di-ab'é-tēz), a disease of which the most remarkable symptoms are: a great increase in the quantity of urine, a voracious appetite, a stoppage of the cutaneous perspiration, thirst, emaciation, and great muscular debility. In true diabetes (diabetes mellitus) the composition of the urine is also greatly affected, an abundance of saccharine matter (diabetic sugar) being found in it. This disease usually attacks persons of debilitated constitution and often without any obvious cause. Tea, coffee, dry wines, spirits and bitter ale may be drunk. Milk should be taken only sparingly. The disease is essentially a chronic one, though it may quickly end in death. Research and experiment in the Rockefeller Institute of Medical Research have resulted in the discovery that diabetes is due to a defect in the operation of the pancreas, causing the development of excess dextrose, a form of sugar, in the blood. A cure has also been announced. The basis of the remedy is bicarbonate of sodium with a small amount of salt. In extreme cases this may be given hypodermically. The treatment is simple and consists almost entirely in starving out the disease. Carbohydrates or foods containing starch are eliminated from the patient's diet and a normal supply of fats and proteins alone is allowed. Diseases of the lungs are apt to attack a diabetic person and must be carefully guarded against.

Diabetic Sugar (dí-a-bě' tık), the sweet principle of diabetic urine. It is identical with starch-sugar, grape-sugar, etc. It is not a constituent of normal urine, but in diabetes it may be present to the amount of 8 or 10 per cent., and in some cases more.

Diablerets (dy-ble-rët), L. a moun- tain group of the Bernese Alps, Switzerland, between Canton Vaud and Canton Valais. The highest peak has a height of 10,620 feet.

Diachylon (di-ak'ler-ōn), a substance prepared by heating together oxide of lead or litharge, olive-oil and water, until the combination is complete, and replacing the water as it evaporates. It is used for curing ulcers and is the basis of many plasters.

Diacoustics (di-a-kō'ous-tē-ık), the science or doctrine of sounds as they are refracted by passing through different mediums.

Diadelphia (di-a-de-lē'ē-a), the name given by Linnaeus to his seventeenth class of plants, distinguished by having their stamens united in two bundles by their filaments.

Diadem (di-a'dēm), an ancient ornament of royalty. It was originally a head-band of fillet made of silk, linen, or wool, worn round the temples and forehead, the ends being tied behind and let fall on the neck, as seen in old representations of the diadem of the Indian Bacchus. Subsequently it was usually set with pearls and other precious stones. The term is also used as equivalent to crown or coronet.

Diagnosis (di-ge'za-sis), a separation of one syllable into two; also the mark (**) which shows that a second vowel is to be pronounced, as in aerial.

Diaglyphic (di-ag'li-fik), a term applied to sculpture, engraving, etc., in which the objects are sunk into the general surface.

Diagnosis (di-ag-nō'sis), in medicine, the determination of diseases by their distinctive marks or symptoms; the discovery of the true nature and seat of a disease.

Diagonal (di-ag'o-nal), in geometry, a straight line drawn between the opposite angles of a quadrilateral figure.

Diagonal Scale, a measuring scale which consists of a set of parallel lines drawn on a ruler, with lines crossing them at right angles and at equal distances. One of these equal divisions is called a degree, that at the extremity of the ruler, is subdivided into a number of equal parts, and lines are drawn through the points of division obliquely across the parallels. With the
help of the compasses such a scale facilitates the laying down of lines of any required length to the 200th part of an inch.

Diagoras (di-ag'o-ras), an ancient Greek poet and philosopher, who flourished about 425 B.C. He spent a great part of his life in Athens. Like his teacher Democritus, he attacked the prevailing polytheism, and sought to substitute the active powers of nature for the divinities of the Greeks. On this account he had to leave Athens and return to his native Chios.

Diagram (di'gra-ram), a figure or geometrical delineation applied to the illustration or solution of geometrical problems, or any illustrative figure in which outlines are chiefly presented, and the details more or less omitted.

Dial (di'al), or SUN-DIAL, an instrument for showing the hour of the day from the shadow thrown while the sun is shining by a stile or gnomon upon a graduated surface. This instrument was known in the earliest times by the Egyptians, Chaldeans and Hebrews. From those eastern nations it came to the Greeks. It was introduced into Rome during the first Punic war. Dials are of various construction, horizontal, inclined, or upright, the principle in every case being to show the sun's distance from the meridian by means of the shadow cast by the stile or gnomon. The stile is made parallel with the earth's axis, and may be considered as coinciding with the axis of the diurnal rotation. Consequently as the sun moves westwards the shadow of the stile moves round in the opposite direction, falling on the meridian lines so marked as to represent the hours of the day. The dial of course gives solar time, which, except for four days of the year, is slightly different from that of a well-regulated clock. Dials are now rather articles of curiosity or ornament than of use.

Dialect (di'a-lekt), the language of a part of a country, or a distant colony, deviating either in its grammar, vocabulary, or pronunciation, from the language of that part of the common country whose idiom has been adopted as the literary language, and the

Diagoras

Dialysis

Dialyse (di-a-lek'tiks), the old name of logic, or the art of reasoning, but used in Kant's philosophy to mean the logic of appearance, or that logic which treats of inevitable tendencies towards error and illusion in the very nature of reason.

Diaphragm (di'a-frag'm), a siliceous mineral of lamellar or foliated structure. Its subspecies are green diaphragm, hypersthenite and bronzite. The metalloid subspecies is called schillerstein, or schiller spar. It forms diaphragm rock, and enters into serpentinite.

Diaphragm (di'gra-m), the art of making ing sun-dials; also the art and practice of mine-surveying in which the theodolite, magnetic needle, etc., are employed.

Dialogue (di'a-log), a conversation or discourse between two or more persons. The word is used more particularly for a formal conversation in theatrical performances, and for a written conversation or composition in which two or more persons carry on a discourse. This form was much in favor among the ancient philosophers as a medium for expressing their thoughts on subjects. The Dialogues of Plato are the finest example. Many of the great French and Italian writers have used this form.

Landor's Imaginary Conversations is the best production of this kind in English.

Dialysis (di'al-i-sis), the separation of the crystalloid constituent elements of a mixture from the colloid, the former being bodies which diffuse readily, such as sugar, salt, bichromate of potassium, etc.; the latter bodies which diffuse with difficulty or not at all, bodies resembling glue or gelatin, such as gum, starch, caramel, albumen, the ordinary constituents of food, etc., etc. The dialysis is affected by pouring a mixed solution of crystalloid and colloid on a sheet of parchment paper stretched over a wood or gutta-percha hoop, having its edges well drawn up, and confined by an outer rim. The parchment is allowed to float on a basin of water.
Diamagnetic

In a short time all the crystalloid bodies will have passed through the membranous septum into the pure water, while the colloid matter will remain almost entirely in the dialyzer.

Diamagnetic (di-a-magn-et’ik), a term applied to substances which, when under the influence of magnetism and freely suspended, take a position at right angles to the magnetic meridian, that is, point east and west. From the experiments of Faraday it appears that all matter is subject to the magnetic force as universally as it is to the gravitating force, arranging itself into two great divisions, the paramagnetic and diamagnetic. Among the former are iron, nickel, cobalt, platinum, palladium, titanium, and a few other substances; and among the latter are bismuth, antimony, cadmium, copper, gold, lead, mercury, silver, tin, zinc and most solid, liquid and gaseous substances. When a paramagnetic substance is suspended freely between the poles of a powerful horseshoe magnet it points in a line from one pole to the other, which Faraday terms the axial line. On the other hand, when a diamagnetic substance is suspended in the same manner it is repelled alike by both poles, and assumes an equatorial direction, or a direction at right angles to the axial line. It has been supposed that the diamagnetic phenomena are a result of the superior magnetic force of the oxygen of the atmosphere.

Diamantina (dë-a-man-të’na), a town of Brazil in the diamond district in the province of Minas Geraes, the inhabitants of which are almost all engaged in the gold and diamond trade. Pop. 17,890.

Diameter (dï-am’ë-ter), the straight line drawn through the center of a circle, and touching the two opposite points of the circumference. It thus divides the circle into two equal parts, and is the greatest chord. The length of the diameter is to the length of the circumference of the circle as 1 to 3.14159265, the latter number being an interminable decimal.

Diamond (dï’a-mond), the hardest and one of the most valuable of gems, and the purest form in which the element carbon is found. (See Carbon.) It crystallizes in forms belonging to the regular or cubic system, the most common being the regular octahedron and rhombic dodecahedron (twelve faces). The finest diamonds are colorless, perfectly clear, and pellucid. Such are said to be of the finest water. But diamonds are often blue, pink, green, or yellow, and such are highly prized if of a decided and equal tint throughout. The hardness of the diamond is such that nothing will scratch it, nor can it be cut but by itself. The value of a diamond is much enhanced by cutting facets upon it inclined at certain angles to each other so as to produce the greatest possible play of color and luster. What is called the brilliant cut best brings out the beauty of the stone. Its upper or principal face is octagonal, surrounded by many facets. But this form of cutting requires an originally well-shaped stone. For other diamonds the rose cut is used. In this form six triangles are cut on the top so that their apices meet in a point called the summit. Round this are disposed other facets. Stones which are too thin to cut as rose-diamonds are cut as table-diamonds, which have a very slight play of color. In the cut Fig. 1 is the diamond in its native state; Fig. 2 is the vertical, and Fig. 3 the lateral appearance of a brilliant; Fig. 4 the vertical, and Fig. 5 the lateral appearance of a rose-cut diamond; in Fig. 6 the flat portion a in a cut stone is called the table; the part a b c, which projects from the setting, is the front, the part b b o, sunk in the setting, is the back or culasse, while the line b b is the prickle. The art of cutting and polishing the diamond was unknown in Europe till the fifteenth century, and the stone itself was not nearly so highly valued in the middle ages as the ruby. Diamonds are valuable for many purposes. Their powder is the best for the lapidary, and they are used for jewelng watches, as lenses for microscopes, and in the cutting of window and plate glass. When used as a glazier’s tool the diamond must be uncut. Inferior kinds of diamonds are also extensively used by engineers in rock-boring (see Boring), and by copper-plate engravers as etching-points. Diamonds are obtained from alluvial deposits (sands, clays, etc.), being separated by washing. They are found in India,
Diamond

Borneo, and other parts of the East; sometimes in N. America and Australia; but the chief diamond fields of to-day are Brazil and Cape Colony, the center of the latter being Kimberley in Griqua Land West. Diamonds were first discovered in the latter in 1867, but since then the output has amounted to over $200,000,000 in value. One of the largest diamonds known (weight 307 carats) was found in Borneo about a century ago, and belongs to the Rajah of Mattan. One of the most celebrated is the Koh-i-noor (Mountain of Light), belonging to the British crown. It weighed originally nearly 800 carats, but by subsequent recuttings has been reduced to 103¾ carats. The Orloff diamond, belonging to the Emperor of Russia, weighs 195 carats; the Pitt diamond, among the French crown jewels, 130¼. The former, which came from India, has been thought to have originally formed part of the Koh-i-noor stone. The largest Brazilian diamond weighed 254½ carats and was cut to a brilliant of 125. Some of the South African diamonds are also very large, one being found in 1893 weighing 971 carats, or nearly half a pound. More recently a much larger one has been found, weighing 3034 carats. This has been cut into eleven pieces, the largest, a drop brilliant, weighing 516½ carats. This, called the Star of South Africa, has been placed in King George’s scepter, and another, of 309 3-16 carats, in his crown.

Diamond, in technical language, is the rhomboid—that is, a quadrangle with equal sides and two obtuse angles.

Diamond-beetle, the Entimus imperialis, a splendid coleopterous insect belonging to the family Curculionidae or weevils.

Diamond-drill. See Boring.

Diamond Harbor, a port on the left bank of the Hugli River, about 38 miles by the railway from Calcutta, formerly much used as an anchorage for ships waiting for the tide.

Diamond Necklace, an affair of some note in French history immediately preceding the Revolution. See Antoinette, Marie; La Motte; and Rohan, Louis

Diana (di’-a-n’a), in mythology, an ancient Italian goddess whom the Romans latterly identified with the Greek Artemis, with whom she had various attributes in common, being the virgin goddess of the moon and of the chase, and having as attributes the crescent moon, bow, arrows and quiver. The name is a feminine form of Janu. She seems to have been originally the patron divinity of the Sabines and Latins. She was worshiped especially by women as presiding over births, no man being allowed to enter her temple. See Artemis.

Diana-monkey (Ceropithecus Diana), a species of monkey found in Africa, and so named from the crescent-shaped band on the forehead resembling the crescent moon, which was the symbol of Diana.

Diana of Poitiers, Duchess of Valentinois, born in 1498. She was the mistress of King Henry II of France and descended from the noble family of Poitiers in Dauphiny. At an early age she married the Grand-senescal of Normandy, Louis de Brezé, became a widow at thirty-one, and some time after the mistress of the young Duke of Orleans. On his accession to the throne, in 1547, as Henry II, Diana continued to exercise an absolute empire over him till his death in 1559. After that event she retired to her castle of Anet, where she died in 1566.

Diandria (di-an’dr-eh), the second class in the Linnaean system, comprehending all genera with flowers having only two stamens, provided the stamens are neither united at their base, nor combined with the style and stigma, nor separated from the pistil.

Dianthus (di-an’thus), the genus of flowers to which the pink belongs.
Diapason (dī-ə-paˈzən), in music, the concord of the first and last notes of an octave. The word is also used for the most important foundation stops of an organ. They are of several kinds as open diapason, stopped diapason, double diapason. The French use the term as equivalent to pitch in music.

Diapason (dī-a-pər), a kind of textile fabric much used for towels and napkins, and formed either of linen or cotton, or a mixture of the two, upon the surface of which a figured or figured pattern is produced by a peculiar mode of twilling.—As a term in ornamentation diapason is applied to a surface covered with a flowered pattern sculptured in low relief, or to a similar pattern in painting or gilding covering a panel or flat surface.

Diaphoretics (dī-a-fər-əˈtiks) are agents used in medical practice for producing a greater degree of perspiration than is natural, but less than in sweating. The Turkish bath and a large part of hydroathletic treatment, diluent drinks, etc., are employed for this purpose. Diaphoretics increase only the sensible perspiration, while sudorifics excite the sensible discharge called sweat.

Diaphragm (dī-a-frām), in anatomy, a muscular membrane placed transversely in the trunk, and dividing the chest from the abdominal cavity. In its natural situation the diaphragm is convex on the upper side and concave on its lower, but when the lungs are filled with air it becomes almost flat. It is the principal agent in respiration, particularly in inspiration. A complete diaphragm is found only in Mammalia.

Diarbekir, Asiatic Turkey, capital of the pashalic of same name, on a high bank overlooking the Tigris, and surrounded by a lofty, massive wall. It has manufactures of iron and copper ware, leather, silk, woolen and cotton goods, and a considerable trade. Pop. about 35,000.

Diarrhea (dī-a-rēˈə), a very common disease, which consists in an increased discharge from the alimentary canal, the evacuations being but little altered except in their assuming a more liquid consistence. They are generally preceded or accompanied by flatulence and a griping pain in the bowels, and frequently by sickness. Diarrhea is often produced by indigestible food, repletion of the stomach, cold applied to the surface of the body, impressions on the nervous system. It is often also a symptom of some other disease. In its simple form diarrhea is not difficult of cure, mild purgatives given in small doses and accompanied by quantities of mild diluents being frequently successful. Castor-oil, rhubarb and magnesia are the most generally applicable. The food should be of the least stimulating kind.

Diastase (dī-asˈtās), a substance existing in barley, oats and potatoes, but only after germination. When in solution it possesses the property of causing fecula or starch to break up at the temperature of 150° Fahr., transforming it first into dextrine and then into sugar. It is obtained by digesting in a mixture of three parts of water and one of alcohol, at a temperature of 115° Fahr., a certain quantity of germinated barley ground and dried in the open air, and then putting the whole under pressure and filtering it. Diastase is solid, white and soluble in water and diluted alcohol, but insoluble in strong alcohol.

Diathermancy (dī-thərˈman-sē), the property that is possessed in various degrees by different substances of transmitting radiant heat. Bodies that are equally transparent, that is, bodies which have equal power of transmitting rays of light, are very different in their power of transmitting heat rays. Thus a thin plate of glass and a thin plate of rock-salt may be nearly equally transparent, but the plate of rock-salt has far superior power of transmitting rays of heat. The latter, it has been found, allows 92 per cent. of the total heat from any source to pass; glass only 38 per cent. from a lamp flame, 24 per cent. from incandescent platinum, etc. Rock-salt is the only body equally diathermanous to heat from all sources. The diathermancy of the plates in every case decreases very rapidly as their thickness is increased.

Diathegsis (dī-athˈē-sis), in medicine, a certain general habit or constitution of body as predisposing to certain diseases.

Diatomeae (dī-a-tōmˈē-ə), a natural order of coniferoid algae, consisting of microscopic plants found in fresh, brackish and salt water, and on moist plants and damp ground. The frond secretes a very large quantity of silex, which is formed in each cell into three portions, viz., two generally symmetrical valves and a connecting hoop. The species consist of single free cells, or the cells remain attached so as to form linear, filabelliform, circular, or geniculate fronds, or in some cases the cells or frustules are enclosed in a transparent, gelatinous sheath or frond. The ordinary method of increase is by cell division.
Diatomite (di-at'u-mit), a diatomaceous earth (see Diatomaceae), generally found underlying peat in various districts of Scotland. In Syke, at Loch Quire, where large supplies of diatomite have recently been discovered, it is found about 18 inches below the surface, and extends downward for about 7 feet, and in some places to a much greater depth. Diatomite is principally used for the manufacture of dynamite, its value as an absorbent being fully double that of the ordinary German kieselguhr. It is described also as extremely well adapted for the manufacture of silicate and ultramarine paints, siliceous glazings, porcelain, boiler-coatings, isolating felt, etc.

Diatonic (di-a-ton'ik), a term originally applied by the Greeks to one of their three genera of music. In modern music it is applied to the natural scale, and to the intervals, chords, melodies, or harmony characteristic of it. A diatonic chord is a chord having no note chromatically altered. A diatonic interval is an interval formed by two notes of the diatonic scale unaltered by accidentals. A diatonic melody is a melody composed of notes belonging to one scale only.

Diaz (di-a'ts), BABTOLOMMED, a celebrated Portuguese navigator of the fifteenth century, named in 1488 commander of one of that long succession of exploratory expeditions which the Portuguese court had during this century become distinguished for promoting. The two vessels composing the expedition sailed along the African coast till they reached Cape Negro (lat. 15° 50' s.), where Diego Cam, a previous explorer, had stopped. At 29° s. they anchored at a point to which they gave the name of Angra das Voltas (Bay of Detours). In sailing north from this point they discovered the Cape of Good Hope without knowing it, and landed at a bay on the east coast. Diaz now wished to continue his voyage in order to discover the country of Pater John, but the sailors refused to accompany him. In again doubling the Cape he gave it the name of Cabo Tornentoso (Cape of Storms), which the king changed to its present designation. In 1500 Diaz had command of a vessel in the expedition of Cabral which discovered Brazil. In returning home the vessel which he commanded was lost, May 29, 1500.

Diaz, PORFINO, former President of Mexico, was born at Oaxaca, Mexico, 1830, of Indian descent through his mother. He became a lawyer, took part in civil wars (1854-67), and in 1867 was defeated in a contest for the presidency. Exiled in 1871, he returned in 1876, headed a successful revolution, and was made provisional president, being regularly elected in the following year. Under the constitution he could serve only one term, but an amendment set aside this rule, and he was again elected in 1884, being regularly re-elected until 1908. Under his rule Mexico prospered as never before, foreign capital was brought into the country, public works were built, and the resources of the state developed. But his home rule was stern and often oppressive, discontent spread widely, and in the autumn of 1910 a revolutionary movement broke out which extended throughout the country and became successful in May, 1911. The resignation of Diaz was demanded and the old ruler was forced to submit, leaving the country in voluntary exile, while the powers of government were seized by the triumphant revolutionists. He died in 1915.

Dibdin (di'din), CHARLES, an English fish dramatic manager and poet, composer and actor, born in 1745: died in 1814. At the age of fifteen he made his appearance on the stage, and was early distinguished as a composer. He invented a new kind of entertainment, consisting of music, songs and public declamations, which he wrote, sung, composed and performed, himself, and by this means succeeded in amusing the public for twenty years. His patriotic songs were very popular, and his sea songs, among which are Tom Bowling, Poor Jack and The Trim-built Wherry, are still favorites in the British navy.—His son, CHARLES DIBDIN, composed and wrote many small pieces and occasional songs.—Another son, THOMAS, early displayed the same dramatic tastes as his father, was connected with various theaters, and wrote a great many songs and a number of dramas.

Dibranchiata (di-brank-l-â'ta), the two-gilled Cephalopods or cuttle-fishes. See Cephalopods.

Dice (di's). Cubical piece of bone or ivory, marked with dots on each of its six faces, from one to six, according to the number of faces. They are shaken in a small box and then thrown on the table. Dice are often loaded or falsified in some way so as to
make the high or the low sides turn down. Dice are very ancient, being well known among the Egyptians and Greeks.

**Dichlamyeous (di-klam-ıd-ı'us)**, in **botany**, said of plants that have both calyx and corolla.

**Dichobune (di-kö-bön')**, a genus of extinct quadrupeds occurring in the Eocene formations, presenting marked affinity to the ruminants, and coming between them and the Anoplotherium.

**Dichotomy (di-kō'tö-ml)**, a cutting in two; a division by pairs. Hence, in botany, a mode of branching by constant forking, each branch dividing into two others.

**Dichroic Crystals (di-kro̱'ık)**, crystals that have the property of exhibiting different colors when polarized light is passed through them in different directions. Thus dichroite, a mineral observed by Haly, appears deep blue in the direction of the principal axis, and yellow brown in a direction at right angles to it, even when viewed with ordinary light.

**Dichroite (di-kro̱-it)**, a mineral, a silicate of magnesium, iron and aluminium, which readily undergoes modifications and passes into other minerals. It exhibits different colors. (See preceding article.) Sometimes called Jolite.

**Dichroscope (di-kro̱-skıp)**, an optical instrument, usually consisting of an achromatized double-image prism of Iceland spar, fixed in a brass tube, which has a small square hole at one end and a convex lens at the other, of such a power as to give a sharp image of the square hole. On looking through the instrument the square hole appears double, and if a dichroic crystal is placed in front of it the two images will appear of different colors.

**Dick, Thomas**, a Scottish author of popular scientific works, born at Dundee, in 1774. He was for many years a teacher at Perth, but afterwards resided at Broughty Ferry, where he devoted himself to astronomical science, especially in its relations to religion. Some years before his death a small pension was granted to him by the government. Among his works are *The Christian Philosopher* (1823), *Celestial Scenery* (1838), etc. He died in 1857.

**Dickens (dik'ıns)**, Charles, one of the greatest English novelists, was born in 1812, at Landport, Portsmouth. His father, John Dickens, was then in the employment of the Navy Pay Department, but subsequently became a newspaper reporter in London. Young Dickens received a somewhat scanty education, was for a time a mere drudge in a blacking warehouse, and subsequently a clerk in an attorney's office. Having perfected himself in shorthand, however, he became a newspaper critic and reporter, was engaged on the *Mirror of Parliament* and the *True Sun*, and in 1835 on the *Morning Chronicle*. For some time previously he had been contributing humorous pieces to the *Monthly Magazine*; but at length, in 1835, appeared in the *Morning Chronicle* the first of that series of *Sketches by Boz* which brought Dickens into fame. It was followed in quick succession by a pamphlet entitled *Sunday under Three Heads*, by Timothy Spark (1836); the

---

**Tuggs of Ramsgate (1836)**; *The Village Coquette*, a comic opera (1836); and a farce called the *Strange Gentleman* (1836). In the same year Chapman and Hall engaged the new writer to prepare the letterpress for a series of comic sketches on sporting subjects by Seymour, an artist who had already achieved fame, and suggested as a subject the adventures of an eccentric club. Seymour committed suicide soon after, and H. K. Browne joined Dickens as illustrator, the result being the immortal *Pickwick Papers*. The great characteristics of Dickens' genius were now fully apparent, and his fame rose at once to the highest point it was possible for a writer of fiction to reach. A new class of characters, eccentric indeed, but vital representations of the humors and oddities of life, such as Mr. Pickwick, Sam Weller and his father, Mr. Winkle, and others, were made familiar to the public. Under the name of the *Posthu-
mous Papers of the Pickwick Club this work was published in two vols. 8vo. in 1837. In the same year Dickens was engaged as editor of Bentley's Magazine, to which he contributed Oliver Twist, a work which opened up that vein of philanthropic pathos and ignominious satire of institutions which became a distinguishing feature of his works. Before the completion of Oliver Twist, Nicholas Nickleby was begun, being issued complete in 1839. As the special object of Oliver Twist was to expose the conduct of workhouses, that of Nicholas Nickleby was to denounce the management of cheap boarding-schools. Master Humphrey's Clock, issued in weekly numbers, contained among other matter two other leading tales, The Old Curiosity Shop and Barnaby Rudge, the latter a historical tale, going back to the times of the Gordon Riots, and published complete in 1840-41. In 1841 Dickens visited the United States, and on his return wrote American Notes for General Circulation (1842). His next novel, Martin Chuzzlewit (1844), dwelt again on his American experiences. These works created great indignation in the United States by the severity of their satirical criticism. Martin Chuzzlewit added a number of typical figures—Mr. Pecksniff, Mark Tapley, Sarah Gamp and others—to English literature. The series of Christmas Tales followed, in which a new element of genius, the power of handling the weird machinery of ghostly legend in subordination to his own peculiar humor, excited a new sensation of wonder and delight. These enumerated consecutively were: A Christmas Carol (1843), The Chimes (1844), The Cricket on the Hearth (1845), The Battle of Life (1846), The Haunted Man and the Ghost's Bargain (1847). The extraordinary popularity of these tales created for a time a new department in literature, that of the sensational tale for the Christmas season. In 1845 Dickens went to Italy, and on his return the Daily News, established on January 1, 1846, was intrusted to his editorial management; but, despite his earlap training, this was an occupation ungenial to his mind, and in a few months the experiment was abandoned. His Pictures from Italy were published the same year. Next followed his novels of Dombey and Son (1848) and David Copperfield, a work which has a strong autobiographical element in it (1849-50). In 1850 Dickens became editor of the weekly serial Household Words, in which various original contributions from his own pen appeared. In 1853 his Bleak House came out. A Child's History of England, commenced in Household Words, was published in 1852-54. Hard Times appeared in Household Words, and was published in 1854. Little Dorrit, commenced in 1856, dealt with imprisonment for debt, the contrasts of character developed by wealth and poverty, and executive imbecility, idealized in the Circumlocution Office. In 1859, in consequence of a disagreement with his publishers, All the Year Round superseded Household Words; and in the first number of this periodical, May 28, was begun A Tale of Two Cities. Great Expectations followed in the same paper, beginning December 1, 1860. In All the Year Round also appeared a series of disconnected sketches, called the Uncommercial Traveler, published in 1868. Our Mutual Friend, completed in 1857, and published in weekly numbers, with illustrations by Marcus Stone, was the last great serial work which Dickens lived to finish. It contained some studies of characters of a breadth and depth unusual with Dickens, and is distinguished among his works by its elaborate plot. The first number of his last work, The Mystery of Edwin Drood, was issued on April 1, 1870, and only three numbers had appeared when he died somewhat suddenly, at his residence, Gad's Hill Place, near Rochester, on June 9th. He had considerably overtaxed his strength during his later years, more especially by his successive series of public readings from his own works, one series being delivered in America in 1867-68. He was buried in Westminster Abbey. Dickens' work as a novelist is firmly based upon a wide and keen observation of men. It is true that most of his characters suffer from being created to exhibit little more than one trait or quality alone, and thus receive an air of grotesqueness and exaggeration which approaches caricature. But the single trait or quality which they embody is so truly conceived, and exhibited with such vitality and humor, as to place Dickens, in spite of all that is grotesque and overstrained in his work, among the great artists.

Dickinson (di'kən-sən), Don M. lawyer, was born at Port Ontario, New York, in 1846; studied law in Michigan, and practiced in Detroit and Washington. He became prominent as a Democratic politician in the Greeley campaign of 1872 and the Tilden campaign of 1876. He was postmaster-general of the United States, 1887-89, chairman of the Democratic
National Campaign Committee in 1892, senior counsel for the United States in the Fur Seal Arbitration of 1894-97, and member of the Court of Arbitration in the controversy between the United States and Salvador in 1902.

Dickinson College, a collegiate institution at Carlisle, Pennsylvania, the oldest in the State except the University of Pennsylvania, it being founded in 1783. It was named after Hon. John Dickinson, who gave it valuable gifts. It was a Presbyterian institution until 1885, when it passed under the control of the Methodists. It has endowed funds of about $380,000.

Dickson City (dik'sun), a borough in Lackawanna Co., Pennsylvania, 5 miles N. of Scranton. It has foundries, machine shops, silk-mills, etc., and coal is mined in its vicinity. Pop. 9331.

Dicotyledon (di-kot-i-le'don), a plant whose seeds are characterized by the embryo containing a pair of cotyledons or seed-leaves, which are always opposite to each other. Dicotyledons are further characterized by their netted-veined leaves and the exogenous structure of their stems. The class is divided into four subclasses: Thalami-flore, Calyciflorae, Corolliflorae and Monochlamydeae (which see, respectively). The class receives also the name of exogenes.

Dictator (dik-ta' tūr), an extraordinary magistrate of the Roman republic, first instituted B.C. 501. The power of naming a dictator when an emergency arose requiring a concentration of the powers of the state in a single superior officer was vested by a resolution of the senate in one of the consuls. The dictatorship was limited to six months, and the person who held it could not go out of Italy. This rule was laid aside during the first century. The dictator was also forbidden to appear in Rome on horseback without the permission of the people, and he had no control over the public funds without the permission of the senate. He had the power of life and death, and could punish without appeal to the senate or people. All the other magistrates were under his orders.

Dictionary (dik'shun-ar-l; from the Latin dictio, a saying, expression, word), a book containing the words, or subjects, which it treats, arranged in alphabetical order. It may be either a vocabulary, or collection of the words in a language, with their definitions; or a special work on one or more branches of science or art prepared on the principle of alphabetical arrangement, such as dictionaries of biography, law, music, medicine, etc. Among dictionaries of the English language the earliest seem to have been those of Baret, 1573, and of Bullokar, 1616. That of Dr. Johnson, published in 1755, made an epoch in this department of literature. Previous to this the chief English dictionary was that of Bailey, a useful work in its way. An enlarged edition of Johnson's dictionary, by the Rev. H. W. Todd, appeared in 1818; and this, again enlarged and modified, was issued under the editorship of Dr. R. G. Latham (1864-72). The first American dictionary was that of Noah Webster, first published in 1828, and frequently republished since. It greatly enlarged the dictionary vocabulary, gave full etymologies, and indicated both pronunciation and syllabification. It was the first dictionary to embody the historical principles of treatment which find their culmination in the New English Dictionary. This monumental work is being edited mainly by Dr. James A. H. Murray of Oxford, England. The first edition was published in 1884. A rival of Webster's work appeared in Worcester's in 1859; and many smaller dictionaries for home and school use have since found general acceptance. The Century Dictionary, the first edition of which appeared in 1880-91, is the best American dictionary on a large scale. The chief etymological dictionary of the English language, is that of Professor Skeat. The greatest French dictionary is that of Littré; the greatest German, that of the brothers Grimm; the greatest Latin, the Theaurus Linguarum Latinarum, now being prepared.

Dictograph (dik'to-graf), or Dicta-graph, an instrument magnifying sound, invented by K. M. Turner, of New York. It consists of a small supersensitive transmitter, a receiver or ear piece, connecting wires, and a small battery. The transmitter can be easily concealed and a voice within fifteen feet is carried over wires to any required distance. This instrument has been found valuable in detective work.

Dictyogen (dik-ti'oj-en), the name given to a group of plants, with net-veined leaves, intermediate between the monocotyledons and dicotyledons, as the yam, sarsaparilla, etc.

Didactic Poetry (di-dak'tik), poetry which professes to give a kind of systematized instruction. In a larger sense of the word most great poems might be called didactic, since they
Didelphia contain a didactic element in the shape of history or moral teaching. Dante's *Divina Commedia*, Milton's *Paradise Lost*, or Goethe's *Faust*, for example. The difference may be said to be this, that in the one case the materials are limited and controlled by nothing but the creative fancy of the poet, while in the other they are much more determined by the actual nature of the subject treated of.

**Didelphia** (dî-del'fî-a), one of the three subclasses of the mammalia (the others being Monodelphia and Ornithodelphia), comprising the order otherwise known as Marsupials, which form the only order in the subclass.

**Didelphys** (dî-del'fîs). See *Opossum*.

**Diderot** (dé-dô'), *Denis*, a French writer and philosopher, was born in 1713, at Langres, in Champagne, and educated in the school of the Jesuits, and afterwards at Paris, at the College of Harcourt. His first works were the *Essai sur le Moïvre et la Vertu* (1746); this was followed by a pamphlet against the Christian religion. His *Lettre sur les Aveugles à l'Usage de Ceux qui Voyent*, is in the same strain. These heterodox publications cost him an imprisonment for some time at Vincennes. Diderot now tried writing for the stage, but his pieces were failures.

In 1749 he had begun along with D'Alembert and some others the *Encyclopédie*. At first it was intended to be mainly a translation of one already published in English by Chambers. Diderot and D'Alembert, however, enlarged upon this project, and made the new *Encyclopédie* a magnificently comprehensive and bold account of all the thought and science of the time. Diderot, besides revising the whole, undertook at first the mechanical art of printing. Didot, afterFRANÇOIS DIDEROT, born in 1689; died in 1757. Of his sons FRANÇOIS AMBERGUS (born in 1720; died in 1804) and PIERRE FRANÇOIS (born in 1732; died in 1786), the first distinguished himself in the type-making business, and the second equally eminently by his bibliographical knowledge, and contributed much also to the advancement of printing. PIERRE (born in 1761; died in 1853), succeeded his father FRANÇOIS AMBERGUS in the printing business. He made himself famous by his magnificent editions of classic authors in folio, among which his Virgil (1798) and his Racine (1801) may be particularly mentioned. He did much also for the improvement of types, etc. He is known also as an author—

**FIRMIN** (born in 1764; died in 1836), the brother of Pierre, took charge of the type-founding, was the inventor of a new sort of script, and an improver of the stereotype process—AMBERTHE FÉRMIN (born in 1790; died in 1876) and CINTHÉE FÉRMIN (born in 1794; died in 1880) occupied a distinguished position among the publishers of Paris. The house has now extended its trade into everything connected with bookselling, papermaking, bookbinding, etc.

**Didunculus** (dî-dung'kû-lu's), a genus of birds allied to the pigeons, and comprising only the one species, *D. striigrostris* of the Navigator Islands. The bird is of special interest as being the nearest living ally of the extinct dodo. It has a length of about 14 inches, with a glossy plumage varying from velvety black on the back to a greenish black on the head, breast and abdomen. The large beak, which is nearly as long as the head, is greatly arched on the upper half, while the lower
Didymium

is furnished with two or three tooth-like indentations.

Didymium (di-di'm-i-um), a rare metallic element, occurring along with lanthanum in the mineral cerite as discovered by Moesander in 1848. Recently it is said to have been resolved into two new elements: Praseodymium and Neodymium.

Didynamia (dè-dí-ná'm-i-a), the fourteenth class in the Linnean system of plants, the members of which have four stamens, of which two are longer than the other two.

Die (di), a metallic stamp for impressing a design or figure upon coins or other metallic objects. See Die-stamping.

Die (dè), an ancient town of France, dep. Drôme, 26 miles southeast of Valence; with a former cathedral and Roman remains. Pop. (1906) 3000.

Dié (dè-ā), Sr., a town of France, dep. of Vosges, on the Meurthe, 26 miles E. N. E. of Epinal. Both iron and copper are worked; there are marble quarries; and a variety of manufactures are carried on. Pop. 16,289.

Diebitsch-Sabalkanski, H A N S K A R L, a Russian general, born at Grossliepe in Silesia in 1785, was educated at the military school of Berlin, but in 1801 quit the Prussian service for that of Russia. He was present at the battles of Austerlitz and Friedland, served with distinction in the campaign of 1812, took part in the battles of Dresden and Leipzig, and was made lieutenant-general at the age of twenty-eight. He had the chief command in the Turkish war of 1828-29, stormed Varna, and made the famous passage of the Balkans, for which the surname of Sabalkanski was conferred on him. In 1830 he commanded the army sent against the revolted Poles, but did not distinguish himself in this service. He died in 1831.

Diedenhofen (di-de-nô-fén). See Thionville.

Dieffenbach (dè-fèn-bâkh), JOHANN FRIEDRICH, a German surgeon, born at Königsberg in 1792. After having studied at Bonn and Paris he settled in Berlin, where his talent as an operator soon attracted notice. Surgery is particularly indebted to him for new methods of forming artificial noses, eyelids, lips, etc., and curing squinting, stammering, etc. He died in 1847.

Dielectric (di-elek'trik), a name applied by Faraday to any medium through or across which electrostatic induction can take place. (See Induction, Electrostatic.) Faraday found that electrostatic induction was not action at a distance, but took place by means of the insulating medium separating the two conductors. The medium he named a dielectric, and measured its specific inductive capacity by taking that of common air as unity.

Dieflytra (di-e-fly'tra), a genus of plants belonging to the nat. order Fumariacese or Fumitories. The best known is D. spectabilis, a native of Northern China and Siberia, now common in European and other gardens. It blossoms in April and May, and its long drooping racemes of purplish-red blossoms present a very graceful appearance. It grows freely in the open air. It is sometimes called pendent heart or virgin's heart from the shape of the blossoms.

Diemen (dè-men), ANTON VAN, a Dutch administrator, was born in 1593. Having gone to India, he speedily rose to the highest dignities, and was at length, in 1636, made governor-general. He administered the government with much ability, and contributed much to the establishment of the Dutch commerce in India. Abel Tasman, whom he sent with a vessel to the South Seas in 1642, gave the name of Van Diemen's Land, to the island now called Tasmania. Van Diemen died in 1645.

Dieppe (dè-ep), a seaport town of France, department Seine-Inférieure, on the English Channel, at the embouchure of the Arques, 93 miles N. N. W. Paris. Almost the only public edifices worth special notice are the two Gothic churches (St. Jacques, begun in the thirteenth century, and St. Rémi, founded in 1522), and the old castle (1423), now a barracks. To the west of Dieppe proper is the suburb La Barre; and on the opposite side of the harbor
Le Pollet, which is inhabited chiefly by sailors and fishermen. Dieppe is one of the chief watering places of France, and is frequently visited by visitors. The manufactures include works in ivory, work in horn and bone, lacemaking, sugar-refining, shipbuilding, etc. In early times Dieppe was the chief port of France, but its prosperity diminished after the revocation of the Edict of Nantes (1685). Pop. 22,120.

Diesel Engine, an oil engine invented by Rudolph Diesel in 1893. The engine operates at compression pressures very much higher than those used in any other internal-combustion engines, and it dispenses with the usual igniting devices by rendering the air charge incandescent by compression. The efficiency of the Diesel engine is high, and it can use low grades of fuel, but it has the disadvantage of greater weight per horse-power than other engines. It has found increasing favor for use in marine propulsion, and in 1913 was adapted to high-speed railway service, and put into use in Germany.

Dies Fasti et Nefasti (dî'es), a Roman division of days, with reference to judicial business, into working days and holidays. A dies fastus was a working day; a dies nefastus, a legal holiday.

Die-sinking, is the art of preparing dies for stamping coins, buttons, medallions, jewelry, fittings, etc. The steel for the manufacture of dies is carefully selected, forged at a high heat into the rough die, softened by careful annealing, and then handed over to the engraver. After the engraver has worked out the design in intaglio the die is put through the operation of hardening, after which, being cleaned and polished, it is called a matrix. This is not, however, generally employed in multiplying impressions, but is used for making a punch or steel impression for relief. For this purpose another block of steel of the same quality is selected, and, being carefully annealed or softened, is compressed by proper machinery upon the matrix until it receives the impression. When this process is complete the impression is retouched by the engraver, and hardened and collared like the matrix. Any number of dies may now be made from this punch by impressing upon it plugs of soft steel.

Dies Irae (dî'es yrê), one of the great Latin hymns of the medieval church, generally used as part of the requiem or mass for the souls of the dead. It describes, as its name (‘the day of wrath’) denotes, the final judgment of the world, and seems to have been suggested by the description in Zephaniah, i, 15 and 16. It is supposed to have been written by Thomas da Celano, a Franciscan friar of the thirteenth century. There are many translations, but hardly any which convey the solemn force of the original.

Diest (dést), a town of Belgium, province Brabant. 32 miles E. N. E. Brussels. It has some manufactures, but the chief products of the place are beer and gin, the former being largely exported. Pop. (1900) 8383.

Diet (dî'èt), a meeting of some body of men held for deliberation or other purposes; a term especially applied to the legislative or administrative assemblies of the German Empire, Austria, etc.

Dietetics (dî-e-tê'tiks), that part of medicine which relates to the regulation of diet. The ideal diet is clearly that which, without burdening the viscera uselessly, furnishes all necessary nutritive elements, with due consideration for special physiological conditions in any given case. Under the head of Aliment the physiological properties of various foods have already been considered theoretically in respect of their capacity to supply physical waste in nitrogenous and non-nitrogenous matter. (See Aliment.) No single substance contains the elements needed to replace this waste in their requisite proportions, and a mixed diet is therefore necessary. For instance, to secure the required amount of carbon a man would need to eat about 4 lbs. of lean beef, while 1 lb. would yield all the nitrogen required; thus, apart from the labor of digesting 4 lbs. of beef, the body would be compelled to get rid of the excess of nitrogen. Bread, on the other hand, has carbon in abundance, but is deficient in nitrogen; so that by uniting 2 lbs. of bread with 2 lb. of lean meat, the due proportion of carbon and nitrogen is satisfactorily supplied. Milk and oatmeal taken together also contain nitrogenous and non-nitrogenous substances in nearly the required proportions. A certain proportion of saline matter is also necessary. The nature of the food most suitable for a healthy man is dependent in part upon general conditions such as climate and season, and in part upon special conditions of individual habit. The inhabitants of the Arctic regions need large quantities of oligeneous food; those of the tropics live chiefly on starchy products. With increased activity and exertion, as in training, an increase in the
Dietrich

nitrogenous foods becomes necessary. In a state of health we need not draw hair-breadth distinctions as to the superior salubrity of the several sorts of diet, the quantity rather than the quality of food being the main consideration. Those persons who have been most remarkable for health and life have generally been contented with two moderate meals a day, which are certainly quite sufficient during a state of health. In various countries the breakfast generally consists of tea, coffee, or cocoa, with a certain proportion of bread and butter; persons with delicate digestive powers, or who lead a sedentary life, cannot with safety or comfort eat animal food constantly at breakfast. At dinner all made dishes highly spiced, such as curries, turtlesoup, etc., as provoking appetite, are hurtful; and the custom of late dining is not to be commended. Stewed and boiled meats are more difficult to digest than meat cooked by fire alone. The flesh of young animals seems to be more difficult of digestion than that of old and the flesh of tame than that of wild animals. All sorts of fat meat must be taken in smaller quantities. Hence, also, ham, bacon and salted meats cannot be eaten in such quantities as the tender flesh of poultry. Fish has the advantage of being easily soluble. All boiled vegetables are in general easy of digestion; raw vegetables and salads are rather more difficult. Fruit should be taken in the forenoon rather than after a hearty meal.

In all diseases attended with much fever or quickness of pulse the stomach loathes animal food, and there is generally a great increase of thirst, to quench which water, either quite cold, or iced, or tepid, orrenderedacid, maybefreely indulged. Infusions, too, of barley, sage, balm, etc., may be taken. In chronic diseases attended with hectic fever, milk is the most proper diet. The best food for infants is, of course, their mothers' milk; but whenever they begin to cut teeth a little animal food, such as soft-boiled eggs, beef broth and even chicken minced very fine, may be given. Many infants suffer from having too much sugar given them in their food.

Dietrich (dë'trîk) CHRISTIAN WIL- HELM ERNST, a German painter and engraver, called by Winckelmann 'the Raphael of Landscape,' born in 1712. He studied under his father, and afterwards under Alexander Thiele at Dresden, where he became court painter, professor in the academy, etc. He adopted several different manners or styles of painting, successfully imitating Raphael and Mieria, Correggio and Os- tade. He died in 1774.

Dietrich of Bern, the name under which Theodic the Great, king of the Ostrogoths, appears in the old German legends. Bern stands for Verona, his capital.

Dieu, or D'YEU (dyëu; ancient Insula Dei), an island off the west coast of France, department of Vendée. It is inaccessible on the west side, but on the east has a tolerable harbor defended by batteries. The chief industry is fishing. There are four lighthouses on the island. Pop. about 3000.

Dieu et Mon Droit (dyëu e mon d'r wā'; 'God and my right'), the motto of the arms of England, first assumed by Richard I, and revived by Edward III, when he claimed the crown of France. Except during the reigns of Elizabeth and Anne, who used the motto Semper eadem, and of William III, who personally used Je maintiendrai, it has ever since been the royal motto of England.

Diez (dyëz), FRIEDRICH CHRISTIAN, a German philologist of the Romance languages, born in 1784. Having qualified himself as a lecturer at Bonn, he was appointed professor of the Romance languages in 1830. His work stands in much the same relation to the Romance dialects which the researches of Grimm occupy with respect to German dialects. In addition to various works on the poetry of the Troubadours, he published a very valuable Grammatik der Romanischen Sprachen in 1836-42, and an Etymologisches Wort- erbuch der Romanischen Sprachen in 1853. He died in 1876.

Differential Calculus. See Calculus.

Differential Thermometer (dif- er-en'-shal), an instrument for determining very minute differences of temperature. Leslie's differential thermometer consists of two glass bulbs containing air connected by a bent tube containing some sulphuric acid, the movement of which (as the air expands and contracts) serves to indicate any slight difference of temperature between the two bulbs.

Diffraction (dif-frak'shun) a term applied to certain phenomena connected with the modification that rays of light undergo in passing close to the edge of an opaque body. Thus when a beam of direct sunlight is admitted into a dark room through a narrow slit, and falls upon a screen placed to receive it, there appears a line of white light bordered by colored fringes;
Diffusion

these fringes are produced by diffraction. See Interference.

Diffusion (di-fu'shun), the gradual dispersion of particles of one liquid or gas among those of another. Thus, in the case of gases, when a jar of oxygen and a jar of hydrogen are connected together by a tube or opening of any kind, they rapidly become mixed; and their mixture does not depend on gravity, but takes place in opposition to that force, as may be shown by placing the jar of hydrogen gas above the other. Oxygen is sixteen times heavier than hydrogen, bulk for bulk, but the heavier gas moves upwards and the lighter downwards, and the process of intermixture, or diffusion, goes on until the two gases are apparently equally distributed throughout the whole space. After that they have no tendency whatever to separate. Similarly, if two vessels, one containing oxygen and the other hydrogen, be connected by a tube which is stuffed with a plug of porous material, such as plaster of Paris, the gases gradually diffuse one into the other through the porous plug. The two gases, however, do not pass through the porous separator at equal rates, but in inverse proportion to the square roots of the densities of the gases. Thus in the cases of two vessels, one containing hydrogen and the other oxygen, which is sixteen times as heavy as hydrogen, the hydrogen will pass towards the oxygen jar four times as quickly as the oxygen will pass towards the hydrogen jar. Kindred phenomena occur when two liquids that are capable of mixing, such as alcohol and water, are put in contact, the two gradually diffusing one into the other in spite of the action of gravity. In some cases, however, as where ether and water are employed, the diffusion is only partial, extending a comparatively small distance on either side of the original line of separation. When solutions of various solid bodies are placed in contact, interdiffusion also takes place. On the results of his examination of the phenomena of diffusion of liquids and salts across porous membranes or septa, Graham founded a method of separating colloid from crystalloid bodies, which he called dialysis (which see).

Digamma (di-gam'a), a letter which once belonged to the Greek alphabet, and which remained longest in use among the Ætolians. It resembled our letter F, and hence was called digamma, that is, double F. It appears to have had the force of f or v.

Digby (dig'bi), Sir Everard, an English gentleman, born of a Roman Catholic family in 1581. He enjoyed some consideration at the court of Elizabeth and James I, by whom he was knighted. Having been accused of contributing money to the Guy Fawkes conspiracy, he was hanged in 1606.

Digby, Sir Kenelm, eldest son of the preceding, born in 1603. He studied at Oxford, was knighted in 1623, and on the accession of Charles I was created a gentleman of the bedchamber, a commissioner of the navy, and a governor of the Trinity House. He soon after fitted out at his own expense a small but successful squadron against the Algerines and Venetians. In 1636 he became a Roman Catholic, and was imprisoned as a Royalist from 1638 to 1643, when he was allowed to retire to the continent. At the restoration he returned to England, became a member of the Royal Society, and was much visited by men of science. He died in 1665. He wrote numerous works; a Treatise on the Nature of Bodies, a Treatise on the Nature and Operation of the Soul, Of the Cure of Wounds by the Power of Sympathy, etc. Evelyn calls him 'an arrant mountebank.'

Digest (di'jest), a name originally given to a collection or body of Roman laws, digested or arranged under proper titles by order of the emperor Justinian. Hence applied to any somewhat similar collection.

Digerter (di-jes'ter), a strong vessel of copper or iron, on which is screwed an air-tight cover with a safety-valve, the object being to prevent loss of heat by evaporation. Water may be thus heated to 401° Fahn.; at which temperature its solvent power is so greatly increased that bones are converted into a jelly.

Digestion (di-jest'yun), is that process in the animal body by which the semiliquid state of the nutritive parts is prepared to enter the circulation, and separated from those which cannot afford nourishment to the body. The organs effecting this process are called the digestive organs, and consist of the stomach, the large and small intestines, etc. (see Intestines, Stomach), the liver and pancreas. When the aliment, after being properly prepared and mixed with saliva by mastication, have reached the stomach, they are intimately united with a liquid substance called the gastric juice, by the motion of the stomach. By this motion the aliments are mechanically separated into their smallest parts, penetrated by the gastric juice, and transformed into a uniform pulpy or fluid mass. The gas-
tric juice acts upon the albuminous parts of the food, converting them into peptones, which can pass through organic membranes and thus enter the blood. This action is aided by the warmth of the stomach. The pulpy mass, called chyme, proceeds from the stomach through the pylorus, into that part of the intestinal canal called the small intestine, where it is mixed with the pancreatic juice, bile and intestinal juice. The pancreatic juice converts starch into sugar, albumins into peptones, and emulsionizes fats, so that all these kinds of food are rendered capable of absorption. The process is aided by the intestinal juice. The bile also acts upon fats, and thus the food is formed into the chyle, which is absorbed into the system by the capillary vessels called lacteals (see Chyle, Chyme), while the non-nutritious matters pass down the intestinal canal and are carried on.

Digit (di'it); Lat. digitus, a finger.

In arithmetic, any one of the ten numerals, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0. Digit is also a measure of a finger's breadth, equal to ¼ inch.—Digit, in astronomy, is the measure by which we estimate the quantity of an eclipse. The diameter of the sun or moon's disk is conceived to be divided into twelve equal parts, called digits; and according to the number of those parts or digits which are obscured, so many digits are said to be eclipsed.

Digitalin (di'ital-in), a vegetable glucoside, the active principle of the Digitaria purpurea or foxtail. It is white, difficult to crystallize, inodorous, has a bitter taste, and is a strong poison.

Digitalis (di'ital-is), a genus of plants, nat. order Scrophulariaceae, containing about twenty species of tall herbs, natives of Europe and Western Asia. The purple foxtail (D. purpurea) is a common wild flower in Britain, and several species are grown in American gardens. Digitalin, also preparations of digitalis leaves, are used as cardiac stimulants and diuretics.

Digitate (di'it-tät), in botany, branched out into divisions resembling fingers, said of leaves or roots.

Digitigrada (di'it-i-grä'da), a section of the Carnivora, so called from their walking on the ends of their toes; as distinguished from the Plantigrada, which, like the bear, place the whole foot upon the ground. This tribe includes the weasel, dog, cat, etc.

Digitatorium (di'it-i-tö'ri-um), a small portable dumb instrument having a short keyboard with five keys like those of a piano, used by piano-players for practice, to give strength and flexibility to the fingers.

Digne (di'ně'), a town of France, capital of the department of Basses-Alpes, picturesqueley situated on a mountain slope, 60 miles northeast of Marseilles. Pop. 4628.

Dihong (di'hōng'). See Brahmaputra.

Dijon (di-zhōn), a town in Eastern France, capital of the department Côte-d'Or, in a fertile plain, at the foot of a range of vine-clad slopes, formerly surrounded by ramparts, which now furnish beautiful promenades. At some distance it is surrounded by a series of forts. Some of the buildings belong to the period when Dijon was capital of the dukedom of Burgundy, the chief being the cathedral, a building of vast extent with a lofty wooden spire above 300 feet high; the churches of Notre Dame and St. Michael; the ancient palace of the dukes of Burgundy, now used as the hôtel de ville and museum; and the palais de justice, formerly the parliament house of Burgundy. It has important educational institutions and a valuable library. Industries: woolens, hosery, candles, mustard, vinegar, chemicals, paper-hangings, etc., tanneries, foundries, machine factories, cotton and oil mills. The trade is considerable, particularly in the wines of Burgundy. Pop. (1911) 73,847.

Dika (dē'ka), a vegetable fat obtained from the seeds of a W. African tree, genus Irvingia, used in making fine soaps.

Dikamali (dē'ka-mā'li), a resin exuding from Indian trees, genus Gordenia, a solution of which is used to dress wounds and open sores.

Dike, or Dyke, a word variously used in different localities to represent a ditch or trench, and also an embankment, rampart, or wall. It is specially applied to an embankment raised to oppose the incursions of the sea or a tidal river, the dikes of Holland being notable examples of work of this kind. These are often raised 40 feet above the high-water mark, and are wide enough at the top for a common roadway or canal, sometimes for both. The Helder Dike, one of the largest, is about 6 miles in length and involves an annual outlay of over $30,000.

Dike, Dyke, in geology, a term applied to intrusions of igneous rock, such as basalt, greenstone, etc., which fill up veins and fissures in the stratified systems, and sometimes project on the surface like walls.
Dilapidation (di-lap-i-dä'shun), in English law, is where an incumbent of a church living suffers the parsonage house or outhouses to fall down, or be in decay for want of necessary repairs; or it is the pulling down or destroying any of the houses or buildings belonging to a spiritual living, or destroying of the woods, trees, etc., pertaining to the same. An outgoing incumbent (or his heirs) is liable for dilapidation to his successor.

Dilemma (di-lem'a; from Gr. dis, twice, and lemme, an assumption), in logic, an argument in which the same conclusion is drawn from two contrary propositions. We append one of the most famous of the classical dilemmas. A young rhetorician said to an old Sophist, 'Instruct me in pleading and I shall pay you when I gain a cause.' The master sued for the reward, and the scholar eluded the claim by a dilemma. 'If I gain my cause I shall not pay you, because the award of the judge will be against you. If I lose it I may withhold it, as I shall not have gained a cause.' The master replied: 'If you gain you must pay me, because you promised to pay me when you gained a cause; if you lose you must pay me, because the judge will award it.' The two results which are found equally objectionable are called the 'horns' of the dilemma.

Dilettante (di-lët-tan'tä), an Italian expression, signifying a lover of the arts and sciences, who devotes his leisure to them as a means of amusement and gratification, being thus nearly equivalent to amateur. In 1734 a number of gentlemen founded in London the Dilettanti Society which published a splendid work on *Ionia Antiquitatis*, 1769-1840: *Specimens of Ancient Sculpture*, *Egyptian*, *Etruscan*, *Greek* and *Roman*, 1809, 1835; *the Temples of Ephesus and Bassae*, 1860, etc.

Dilke (dilk), SIR CHARLES W., an English official and author, born at Chelsea in 1843. He entered Parliament as a radical in 1888 and in 1882 became president of the local government board, with a seat in the cabinet. He wrote *Problems of Greater Britain*, *Army Reform*, *The British Empire*, and other works. His wife, Emily F. Dilke, is an able art critic and author of *The Renaissance of Art in France, Art in the Modern State*, etc.

Dill (dill), an umbelliferous plant, *Anethum graveolens*, a native of the southern countries of Europe, the fruits, commonly but erroneously called seeds, of which are moderately warming, pungent, and aromatic, and are employed medicinally as a carminative. In appearance it resembles the fennel. Dill-seeds yield dill-water and an essential oil, when distilled with water. Dill-water is used as a remedy in flatulency and gripes of children.

Dilleniacéæ (di-len-i-a-ke-e), an order of plants, chiefly fine trees, inhabiting the East Indies, allied to Ranunculaceae and Magnoliaceae.

Dillingen (dill'en-gên), an old town of Bavaria, on the Danube, 24 miles northwest of Augsburg. It was long the seat of a Jesuit university, and the castle was formerly the ordinary residence of the Bishop of Augsburg. Pop. (1905) 6078.

Dillon (dill'an), JOHN, politician, was born in Irish parentage in New York in 1851, educated at the Catholic University of Dublin, and early identified himself with the Parnellite movement for reform in Irish affairs. He was elected to Parliament for County Tipperary in 1885 and soon became prominent there for the violence of his language. In Ireland his speeches were so ultra-radical that they led to his imprisonment three times between 1881 and 1888. He became one of the most prominent promoters of the 'Plan of Campaign' in Irish agitation, and in 1896 succeeded Justin McCarthy as chairman of the main section of the Irish Nationalist party.

Dilman (dil'män'), a town of Persia, province of Azerbaijan, 16 miles west of Tabreez. Pop. estimated at 15,000.

Dilolo (dë-lö'lo), a small lake in Central S. Africa, lat. 11° 30' S.; regarded as the source of the Zambezi.

Dilolo-oil (dë-lö'o-il), an oil obtained from the poin-tree of India, also called poon-seed oil.

Diluents (dil'ënts), in medicine, are those substances which are taken to increase the proportion of fluid in the blood. They consist of water and watery liquors.

Diluvium (di-lëv'ë-üm), the name formerly given by geologists to certain gravels and comparatively recent deposits, which seem to have been the result of a rush of water or deluge.

Dime (dim; French, *dîme*, Lat. *démesus*), the term for the tenth part of a dollar or quarter in the United States of America, a silver coin whose English equivalent is about 5d.

Diminutive (di-min'ë-tiv), in grammar, a word having a special affix which conveys the idea of littleness, and all other ideas connected with this, as tenderness, affection, com-
Dimity

Dimity (dim’-ti), a stout cotton fabric, ornamented in the loom either by raised stripes or fancy figures. It is usually employed white, as for bed and bedroom furniture.

Dimorphism (di-mor’fizm), in crys- tallography, the crystallization of a body in forms belonging to two different systems, or incompatible forms of the same system, a peculiarity exhibited by sulphur, carbon etc.

Dimorphism, in botany, the condition when analogous organs of the same species appear under two very dissimilar forms. Thus the common primrose occurs in two forms, one having long stamens and a short pistil, the other a long pistil and short stamens.

Dinajpur (de’naj-poor), a town of Bengal, Hindustan, capital of a district of the same name, 205 miles north of Calcutta; pop. 13,430. The district covers an area of about 4118 square miles; pop. 1,567,080.

Dinan (de’-nân), a town of France department of Côtes-du-Nord (Brittany), on the Rance, 14 miles south of St. Malo. It stands on a steep hill nearly 200 feet above the river, is surrounded by high old walls pierced with four gates, and is a picturesque and interesting old place. Pop. (1911) 11,410.

Dinant (de-nânt), a town of Belgium, in the province and 14 miles s. of Namur; picturesquely and strongly situated on the Meuse, a place of unique appearance. The town-house was once the palace of the Princes of Liège. Pop. (1904) 7674.

Dinapur (de’-nâ-poor), a town of Patna district, Bengal, Hindustan, on the right bank of the Ganges, about 12 miles y w. of Patna. It is a cantonment and military headquarters of the district with extensive barracks.

Dinoceras (di-nö’se-ros; Gr. deinos, terrible, keras, a horn), a fossil mammal found in the Eocene strata of N. America, in some respects akin to the elephant and of equal size, but without a proboscis. Its bones were very massive; it had two long tusks in the upper jaw, three pairs of horns, and the smallest brain proportionally of any known mammal.

Dinornis (di-nor’nis; Gr. deinos, terrible, ornis, a bird), an extinct genus of large wingless birds—classed among the Struthionidae or ostrich tribe—the bones of five species of the smallest Dinornis (pelvic and leg bones which have outline of body) have been found in New Zealand. The largest must have stood at least 14 feet in height, several of its bones being at least twice the size of those of the ostrich. The

The environs are studded with handsome bungalows. Pop. with cantonment, 33,700.

Dinar (di-nar’; L. denarius), formerly an Arab gold coin, also a Persian coin; at present the chief Servian coin, value 1 franc.

Dindigal (di-nid’-gul’), a town of Madras Presidency, Madura district, India, with a fort on a rocky height. Pop. (1906) 25,182.

Dindorf (di-nôr’dorf), WILHELM, a German classical scholar, born in 1802, lived most of his life at Leipzig, and died in 1883. His chief publications were editions of the Greek dramatists and works elucidative of them and other Greek writers.

Dingo (ding’go), the native wild dog of Australia (Canis Dingo), of a wolf-like appearance and extremely fierce. The ears are short and erect, the tail rather bushy, and the hair of a reddish-dun color. It is very destructive to the flocks, killing more than it eats. Its remains have been found fossil, but the fact of its having been the only placental mammal in this continent renders its indigenous character doubtful.

Dinitronaphthol (di-nitronaphthol). See Naphthyl.

Dinoceras (di-nö’se-ros; Gr. deinos, terrible, keras, a horn), a fossil mammal found in the Eocene strata of N. America, in some respects akin to the elephant and of equal size, but without a proboscis. Its bones were very massive; it had two long tusks in the upper jaw, three pairs of horns, and the smallest brain proportionally of any known mammal.
Dinosauria

body seems to have been even more bulky in proportion, the tarsus being shorter and stouter in order to sustain its weight. They do not appear to have become extinct until the seventeenth or eighteenth century, and are spoken of as moae by the natives, who buried the eggs with their dead as provision for their journey to the other world.

Dinosauria (di-no-sa’ri-a; Gr. deinos, terrible, and sauros, a lizard), a group of colossal lizards, resembling the pachydermatous mammals in general appearance, but in reality intermediate between the struthious birds and lizards. The majority, as the Megalosaurus, which attained to 40 feet in length, were carnivorous; the Iguanodon, however, was herbivorous. They were the land reptiles of the Jurassic, Wealden and inferior Cretaceous continents.

Dinotherium (di-no-thér’i-um; Gr. deinos, terrible; thérion, beast), a genus of extinct gigantic mammals, the remains of which occur in Tertiary formations in several parts of Europe. The largest species (D. giganteum) is calculated to have attained the length of 18 feet. It had a proboscis and also two tusks placed at the anterior extremity of the lower jaw, and curved downwards somewhat after the manner of those in the upper jaw of the walrus. The zoological position of the dinotherium is that of a proboscidean allied to the elephant. The skull, molar teeth and acapular bone are the only portions yet discovered. Kaup regards it as intermediate between the mastodonts and tapirs and terrestrial; while Blainville and Pictet regard it as allied to the sea-cows, and inhabiting the embouchure of great rivers.

Diocese (di’o-sés; Greek, dioikésis, administration), the circuit or extent of a bishop's jurisdiction. Each English diocese is divided into archdeaconries, each archdeaconry (nominally) into rural deaneries and each deanery into parishes. See Bishop.

Diocletian (di-o-klé’shun-an; C. Valerius Diocletianus, sur-named Jovius), a man of mean birth, a native of Dalmatia, proclaimed Emperor of Rome by the army 284 A.D. He defeated Carinus in Mesia (286), conquered the Allemanni, and was generally beloved for the goodness of his disposition, but was compelled by the dangers threatening Rome to share the government with M. Aurelius Valerius Maximian. In 292 C. Galerius and Constantius Chlorus were also raised to a share in the empire, which was thus divided into four parts, of which Diocletian administered Thrace, Egypt, Syria and Asia. As the result of his reconstitution of the empire there followed a period of brilliant successes in which the barbarians were driven back from all the frontiers, and Roman power restored from Britain to Egypt. In 305, in conjunction with Maximian, he resigned the imperial dignity at Nicomedia, and retired to Salonica in Dalmatia, where he cultivated his garden in tranquillity until his death in 313. In the latter part of his reign he was induced to sanction a persecution of the Christians.

Diodati (de-o-dâ’te), Giovanni, an Italian Protestant divine, born at Lucca, about 1576, of a noble Catholic family. He was for some time professor, first of Hebrew, then of theology, at Geneva, and in 1619 represented the Genevan clergy at the Synod of Dort, and aided in drawing up the Belgic confession of faith. He is most celebrated for a translation of the Bible into Italian, which is superior to his translation of it into French. He died at Geneva in 1649.

Diodorus (di-o-do’rus) of AMIEN, in Sicily, and therefore called Siculus; a Greek historian in the time of Julius Caesar and Augustus, universal history, in the composition of which he traveled through a great part of Europe and Asia, occupied him thirty years, and consisted of 40 books, but only books 1-5 and 11-20, with certain fragments, are now extant.

Dioecious (di-o’e-us; Gr. di, double, oikos, a house), in botany a term applied to plants which have flowers with stamens on one individual and those with pistils on another; as opposed to monocious. The willow, the yew, the poplar, etc., are Dioecious.

Diogenes (di-o’jen-es) of APOLLONIA (Crete), known also as the Physicist, a Greek philosopher of the fifth century B.C., who belonged to the Ionian school, and considered air as the element of all things.

Diogenes, or Sinope (si-no’pê; on the Black Sea), the most famous of the Cynic philosophers, born
about 412 B.C. Having been banished from his native place with his father, who had been accused of coinage false money, he went to Athens, and thrust himself upon Antisthenes as a disciple. Like Antisthenes, he despised all philosophical speculations, and opposed the corrupt morals of his time; but while the stern austerity of Antisthenes was repulsive, Diogenes exposed the follies of his contemporaries with wit and good humor. As an exemplar of Cynic virtue he satisfied his appetite with the coarsest food, practiced the most rigid temperance, walked through the streets of Athens barefoot, without any coat, with a long beard, a stick in his hand, and a wallet on his shoulders, and by night, according to the popular story, slept in a tub (or large earthenware vessel). On a voyage to the island of Ægina he fell into the hands of pirates, who sold him as a slave to the Corinthian Xeniaides in Crete. The latter emancipated him, and entrusted him with the education of his children. He attended to the duties of his new employment with the greatest care, commonly living in summer at Corinth and in winter at Athens. He died in 323 B.C., at a great age. Of the many stories related of him the majority are probably fictions; many indeed are chronologically impossible. His enemies accused him of various scandalous offenses, but there is no ground for supposing him guilty of any worse fault than that of elevating impertinence to the rank of a fine art.

Diogenes Laërtius, author of a sort of history of philosophy in Greek, appears to have been born at Laerte, in Cilicia, and to have lived towards the close of the second century after Christ; but no certain information exists as to his life, studies, or age. The work is divided into books and chapters in accordance with the title, On the Lives, Doctrines and Aphorisms of those who have distinguished themselves in Philosophy. It is full of absurd and improbable anecdotes, but contains valuable information regarding the private life of the Greeks, and many fragments of works now lost. It was the foundation of the earlier modern histories of philosophy.

Diomede (d′o-mē′de), a genus of birds, including the various species of albatrosses (which see). Diomede Islands (d′o-mē′dē), a group of three small islands in Bering Strait, and midway between Asia and America.

Diomedes (d′i-o-mē′dēz), in Greek mythology, (1) A king of the Biatônés, who fed his horses on human flesh, and used to throw all strangers who entered his territories to those animals to be devoured. He was killed by Hercules, who carried off the horses. (2) One of the heroes at the siege of Troy, the son of Tydeus and Delpyle, and king of Argos, one of the suitors of Helen. After she was carried off Diomedes engaged in the expedition against Troy, in which his courage and the protection of Pallas rendered him one of the most distinguished heroes. He wounded Aphrodite and Ares, and thrice assailed Apollo; and by carrying off the horses of Rhesus from the enemies' tents, and aiding Ulysses in the removal of Philoctetes from Lemnos, he fulfilled two of the conditions on which alone Troy could be conquered. Finally he was one of the heroes concealed in the wooden horse, by whom the capture of Troy was at length accomplished. Different accounts were given of his after-life. He is often called Diomede.

Dion (d′i-on) or Syracuse, in Greek history, a connection by marriage of the elder and younger Dionysius, tyrants of Syracuse, over whom he long exercised great influence. He attempted to reform the younger Dionysius (which see), but his enemies succeeded in effecting his banishment. He afterwards returned and made himself ruler of the city, but became unpopular, and in 363 B.C. one of his followers, Calipus of Athens, caused him to be assassinated.

Dionea (d′i-on-e′a), a genus of plants, nat. order Droseraceae. Only one species is known, D. muscipula (Venus' fly-trap), a native of the sandy savannas of Carolina and Florida. It has a rosette of root leaves, from which rise a naked scape bearing a corymb of fairly large, white flowers. The leaves have a dilated petiole and a stalked 2-lobed lamina, with three short, stiff bristles on each lobe. The bristles are remarkably irritable, and when touched by a fly or other insect the lobes of the leaf suddenly close on and capture the insect. It is said to digest the food thus captured by means of a fluid which dissolves it exactly like ordinary gastric juice.

Dion Cassius (d′i-on kash′e-us), or Dio Cassius, a Greek historian, born about 155 A.D. at Nicea, in Bithynia. After accompanying his father to Cilicia, of which he held the administration, he came to Rome about 180, and obtained the rank of a Roman senator. On the accession of Pertinax Dion was appointed prœtor, and in the
reign of Caracalla he was one of the senators whom it had become customary to select to accompany the emperor in his expeditions, of which he complains bitterly. In 219 he was raised to the consulship, and about 224 became pre-consul of Africa. In 229 he was again appointed consul; but feeling his life precarious under Alexander Severus, he obtained permission to retire to his native town of Nicæa. The period of his death is unknown. The most important of his writings, though only a small part is extant, is a History of Rome, written in Greek and divided into eighty books, from the arrival of Aeneas in Italy and the foundation of Alba and Rome to A.D. 229.

Dion Chrysostom (krی's-os-tom), a Greek sophist and rhetorician and a favorite of Trajain born in A.D. 50; died about A.D. 110. Eighty of his orations (in excellent Attic) have been preserved.

Dionysia (di-o-nish'i-a). See Bacchanalia.

Dionysius (di-o-nish'e-us), St. a disciple of Origen, and patriarch of Alexandria in 248 A.D. He was driven from the city in 250, and in 257 was banished to Libya, but was restored in 260. Died in 265 A.D.

Dionysius, Halicarnassus, in Caria, a Greek critic and teacher of eloquence, born about 70 B.C. He went to Rome about 30 B.C., where he wrote his Roman Antiquities, in twenty books, in which he relates (in Greek) the early history of Rome and its government up to the times of the first Punic war. We have the first nine books of this work entire, the tenth and eleventh nearly so, and some fragments of the others. His rhetorical writings are of greater value, especially his essays on the Greek orators. He died about 6 B.C.

Dionysius, the Areopagite, that is one of the judges of the Areopagus, at Athens, a convert to Christianity by the Apostle Paul about the middle of the first century, and the first bishop at Athens, where he suffered martyrdom. Certain writings formerly ascribed to him consist of obscurely written treatises on mystical subjects. Scotus Erigena translated them into Latin. In France, where a certain Dionysius (see Deni, St.) established the first Christian community at Paris in the third century, they were readily received, this Dionysius being without further inquiry taken for the Areopagite, because the origin of the Gallican Church could thus be carried back to the first century; and France gained a patron saint who was a martyr and the immediate disciple of St. Paul.

Dionysius, the Elder, in Greek history, tyrant or absolute ruler of Syracuse, born about 430 B.C. of obscure parentage. He obtained the rank of general, and afterwards of commander-in-chief; and gaining the support of the army, he seized the supreme power in Syracuse, though only twenty-five years of age. He extended his rule over other cities in Sicily; and after some successes and reverses in the struggle with the Carthaginians he gained a complete victory over them under the walls of Syracuse. In his expeditions into Lower Italy he reduced the city of Rhegium by famine (387). After another short war with Carthage he lived for some time in peace, occupied with writing poems, tragedies, etc., with which he contended for the Olympic prize. In 368 he commenced a new war against the Carthaginians, but failed to drive them entirely out of Sicily. He is said to have died from a potion administered at the instigation of his son Dionysius the Younger (367 B.C.).

Dionysius, the Little (so called on account of his short stature), a Scythian monk who was abbot of a monastery at Rome in the beginning of the sixth century, and died about the year 550, according to others about 545, celebrated as the author of the computation of time from the Christian era. This mode of computation, however, was not publicly used until the eighth century.

Dionysius, of Syracuse, who, in 367 B.C., succeeded his father, Dionysius the Elder. For the purpose of recalling him from the excesses to which he was addicted Dion persuaded him to invite Plato to his court, but the influence of the philosopher effected no permanent change. Becoming suspicious of Dion, the tyrant banished him and confiscated his property, but in 357 B.C. Dion made himself master of Syracuse. Dionysius died to Locri, but after the murder of Dion recovered his power in Syracuse. His misfortunes, however, had rendered him more cruel, and Timoleon, who came to Syracuse with aid from Corinth against the Carthaginians, deposed him in 344 B.C. He was carried to Corinth, where he is said to have gained a living by giving lessons in grammar, or as one of the attendants on the rites of Cybele.

Dionysus (di-o-ni'sus), the original Greek name of the god of wine, the name Bacchus, by which he was called both by the Greeks and
Diophantus (di-o-fant’us), or Alex-
ander, the first Greek
writer on algebra, flourished, according to
some authorities, about the middle of
the fourth century after Christ. He left
behind him thirteen books of Arith-
metical Questions, of which only six
are extant; and a work on Polygon
Numbers.

Diopsidé (di-op-sid’), a rare mineral,
a variety or subspecies of
augite, occurring in prismatic crystals of
a vitreous luster, and of a pale green,
or a greenish or yellowish white.

Diopsis (di-op’sis), a genus of dip-
terous insects, or two-winged
flies, the members of which are remark-
able for the immense prolongation of the
sides of the head, the head appearing
as if it were furnished with two long
horns, each having a knot at its apex.

Dióptase (di-op’tás), emerald copper
ore, silicate of copper, a
translucent mineral, occurring crystal-
like in six-sided prisms.

Dióptrics (di-op’triks), that part of
optics which treats of the
refraction of light passing through dif-
f erent mediums, as through air, water
or glass, and especially through lenses.
These phenomena, however, are now more
commonly treated under the head of
refraction. See Refraction.

Diorama (di-ór’a-má), a mode of
painting and of scenic exhibi-
tion invented by Messrs. Daguerre and
Bouton, and first exhibited in 1823.
It secures a higher degree of illusion than
the ordinary panorama, by a mode of
uniting transparent painting to the usual
optical method, and causing the light to
fall upon the picture both from before
and behind. At the same time, by
means of colored transparent blinds,
suspended both above and behind the
picture, the rays of light can be inter-
cepted and made to fall at pleasure in
graduated tints upon every part of the
picture in succession.

Diorite (di-o’rit), a tough trap-rock,
sometimes of a whitish color
speckled with black or greenish black;
sometimes very dark in color, consisting
of hornblende and feldspar.

Dioscoreaceae (di-os-kor-e-ás’se-ás), a
nat. order of endogen-
ous plants, with alternate reticulate-
veined leaves, tuberous root-stocks and
twining stems. The flowers are small
and unisexual. There are six genera,
with about 100 species. The typical
genus is Dioscorea, which includes the
yam. Black bryony is the only British
representative. The tortoise plant or
elephant’s-foot occurs in South Africa.
See Yam.

Dioscorides, Perdánus (di-os-kor’-i-
dés, pe-da’m-us), born in Gicilia in the first century of the Christ-
ian era, a Greek physician, author of a
celebrated work on Materia Medica, in
five books, particularly valuable in re-
gard to botany.

Dioscuri (di-os-kü’ri). See Castor
and Pollux.

Diosma (di-os’ma), a genus of ruta-
ceous plants inhabiting
Southern Africa, allied to Baroea
(which see). They have alternate or
opposite simple leaves, strongly marked
with dots of transparent oil, and diffus-
ing a powerful odor when bruised. Some
species are cultivated for their white or
plumish flowers.

Diospyros (di-os’py-ros), a large
genus of trees or shrubs,
natives of the warmer regions of the
world, nat. order Ebenaceae. The trees
of this genus supply ebony wood. That
from Ceylon is the wood of D. Ebenum;
from India, of D. melanoxylon and D.
Ebenaster; and that from Mauritius of
D. reticulátá. The D. Lotos is the Indian
date-plum. It is by some supposed to
have been the lotus tree of the ancients,
whose fruit was said to produce oblivion.

Dip, of the horizon, an allowance made
in all astronomical observations of
altitude for the height of the eye above
the level of the sea.

Dip, in geology, the inclination or angle
at which strata slope or dip down-
wards into the earth. The degree of in-
clination or amount of the dip, which is
easily measured by a special instrument,
is determined by the angle which a line
drawn perpendicular to the direction of
the stratum makes with the horizon.
The line in which such strata cut the
surface is called the strike, and is al-
ways at right angles to the dip.

Diphtheria, a contagious disease char-
acterized by the formation of a thick,
leathery, false membrane in the throat,
and allied to croup, which, indeed, is
often considered a form of it, the disease
being called diphtheria when it attacks
particularly the tonsils and parts in their
neighborhood, and croup when it princi-
ply attacks the larynx. (See Croup.)
It has only in recent times attracted pub-
ic attention by its frequency and pecu-
liar symptoms. It is a most fatal disease,
resulting from the introduction into the
body of a specific bacterium, is contagious,
often epidemic, and in some places en-
demic. It is always accompanied by a
Diphthong

very low state of the system, indicating the
necessity of giving stimulating nourish-
ment very freely. The membrane may
spread more or less, going down into
the windpipe or up the nose, and death
may be caused by suffocation and ex-
hauation, the violence of the poison some-
times causing it even without the for-
mation of the membrane. The most es-
cential thing in its treatment is to give
antitoxin, keep up the strength by food
stimulants, and apply antiseptic agents to
the exudation. See Antitoxin.

Diphthong (dif’thong), a coalition
or union of two vowels
pronounced in one syllable. In uttering
a proper diphthong both vowels are
pronounced; the sound is not simple, but
the two sounds are so blended as to be
considered as forming one syllable, as in
void, bough. The term improper diph-
thong is applied to the union of one sylla-
ble of two or more vowels, of which
only one is sounded, as in been.

Diphyodont (di’f-i-o-dont), a term
applied to those ani-
mals which develop two sets of teeth, a
deciduous or milk set, and a permanent
set—as distinct from the monophyodonts,
which develop only one set. The ma-
Jority of mammals are diphyodont, though
the number of teeth replaced may vary;
thus in man twenty teeth of the adult
are preceded by a milk set; in the hare,
the anterior incisors are not so preceded,
but the posterior smaller incisors replace
an earlier pair.

Diplacanthus (di-pla-kan’th us), a
genus of ganoid fishes,
found only in the
Old Red Sandstone.
They have small scales, a heterocer
cal tail, and two dorsal fins with a strong
spine in front.

Dipleidoscope (di-plei’d os-k ò p), an
instrument for indi-
cating the passage of the sun or star
over the meridian, by the coincidence of
two images of the object, the one formed
by single and the other by double deflec-
tion. It consists of an equi-
ter- al hollow prism, two of whose sides are silvered
on the inside so as to be mirrors, while
the third is formed of glass. The prism
is adjusted so that one of the silvered
sides shall be exactly in the plane of the
meridian, and the transparent side to-
wards the object.

Diploma (di-pló’ma; Gr. dipléma,
from dipló, to double or
fold), literally a document folded but
once, and therefore divided into two
parts. It is used to signify a document
signed and sealed, in which certain
rights, privileges, dignities, etc., are con-
ferred, especially a university degree,

Diplomacy (di-ple’o-ma’si), the art of
conducting negotiations,
arraing treaties, etc., between nations;
the branch of knowledge which deals
with the relations of independent states
to one another; the agency or manage-
ment of envoys accredited to a foreign
court; the forms of international nego-
tiations. The Cardinal de Richelieu is
generally considered as the founder of
that regular and uninterrupted inter-
course between governments which ex-
ists at present between almost all the
Christian powers; though the instruc-
tions given by Machiavelli to one of his
friends, who was sent by the Florentine
Republic to Charles V (Charles I of
Spain) show that Richelieu was not the
first to conceive the advantages that
might be derived from the correspond-
ence of an intelligent agent accredited
at the seat of a foreign government.

Diplomatic agents are of several de-
grees: 1, ambassadors; 2, envoys extraordi-
ary and ministers plenipotentiary; 3, minis-
ters resident; 4, chargés d’affaires;
5, secretaries of legation and attachés.
Their rank was regulated in Europe, in
the above order, by agency or manage-
ment at Vienna in 1814. Among the Euro-
pean powers it is agreed that of ministers
of the same rank he who arrives first
shall have the precedence over his col-
leagues. The United States was long
represented by ministers only, but now
sends ambassadors to the leading coun-
tries of Europe.

Diplomatics (di-pleo-mat’iks), origi-
nally the science of de-
ciphering ancient MSS. It laid down
certain principles for the systematic ex-
amination of public documents, and
taught the forms and styles adopted in
them, the titles and rank of public offi-
cers subscribing them, etc. Among the
earliest exponents of diplomatics were
Vepbröck, an Antwerp Jesuit (1758),
and Mabillon (1681).

Diplophonia (di-lop’fo’ni-ə), the
simultaneous produc-
tion of two sounds of different pitch,
due to partial paralysis of the larynx.

Diplopterus (di-lop’ter-us), a genus
of fossil ganoid fishes,
belonging to the Old Red Sandstone.

Diplozoön (di-lop’zo’on), a para
tic trematode worm which
infects the gills of the bream, and which
appears to be formed of two distinct
bodies, male and female, united in the
middle, and resembling an X.

Dipnoi (di-noi; Gr. di, dis, double,
and noé, breath), an order of
fishes, including only the singular mud
fishes (Lepidosiren), important as ex-
Dippel

Inhibiting the transition between fishes and the amphibians. Formerly Lepidosiren was reckoned the lowest of the amphibians, now it constitutes the highest order of fishes. The body is fish-like in shape, covered with small, horny scales of a cycloid character; the pectoral and ventral fins are represented by two pairs of long, filiform organs; the heart has two auricles and one ventricle, and the respiratory organs are twofold, consisting of ordinary gills opening externally, and of true lungs—formed by the modified swimming-bladder—communicating with the oesophagus by means of an air duct or trachea, whence the name. They are also called Protoperi. The combination of respiratory organs is similar to that which is presented by the tailed amphibians with persistent gills (perennibranchiate), as the axolotl. This interesting group is allied to the ganoids through the Ceratodus of Queensland. The L. paradosea is found in the Amazon; L. annectens in the Gambia.

Dippel (dip'el), Johann Conrad, a German theologian and alchemist, born in 1672. He studied theology, defended the orthodox party against the Pietists, led a turbulent life at Strasbourg, and then joined the Pietists until an unfortunate tractate placed him in disfavor with both parties. He then turned his attention to alchemy, and during a residence at Berlin produced the oil called after him (see next article), from which indirectly followed the discovery of Prussian or Berlin blue. After various adventures and wanderings in Sweden, Denmark and Germany he died in 1754.

Dippel's Oil, the rectified form of the black fetid oil, containing ammoniac carbonate, which can be obtained by the destructive distillation of animal matter, such as stag's-horn, ivory, or blood. The crude form was used in medicine, despite its appearance and odor, until Dippel refined it. His oil was formerly prescribed as an antispasmodic and diaphoretic, but is no longer used in medicine.

Dipper (dip'er), a bird of the genus Cinclus, allied to the thrushes. The common dipper, water-onzel, or water-crow (Cinclus aquaticus), is a familiar European bird; it is about 7 inches in length, with a very short tail, small rounded wings, and large, powerful feet; the bill is of moderate length, straight and slender. The male has the upper part of the body dark brown, the throat and breast white, belly rusty. The dippers frequent streams, and feeds largely on water insects and larvae. It can dive and walk under water, effecting its progress by grasping the stones with its feet. The song is sweet and lively. Other species are found in Asia and America.

Dipping-needle, or InCLINATION Compass, an instrument for showing the direction of one of the components of the earth's magnetism. In essentials the instrument consists of a light magnetized steel bar supported on a horizontal axis which passes, as nearly as possible, through the center of inertia of the bar. When a needle thus mounted is placed anywhere not in the magnetic equator, it dips or points downwards; and if the vertical plane, in which it moves, coincides with the magnetic meridian the position of the needle shows at once the direction of the magnetic force. The intersection of two or more directions found by making the experiment at different places, indicates the place of the magnetic pole.

Diprotodon (di-pro-to-don), a gigantic fossil marsupial of Australia, allied to the kangaroos.

Dipsacus (dip'as-kus). See Teasel.

Dipsas (dip'sas), a genus of Asiatic and tropical American nonvenomous serpents of the family Colubridae, of very elongated form. With the ancients it was a serpent whose bite was said to produce a mortal thirst.

Dipsomania (dip-so-ma'ni-a; Gr. dipsos, thirst, and mania, madness), a term recently introduced to denote an insane craving for intoxicating liquors, when occurring in a confirmed or habitual form. It is often of hereditary origin, but may result from sunstroke, from some injury to the brain, or from disease. The only remedy appears to be seclusion, with enforced abstinence and healthy occupation. Homes for this purpose have been established in Britain and the United States.
Diptera (dip’te-ra), an order of two-winged insects, of which the common house-fly and the blue-bottle are familiar examples. They are characterized by a body with slight coriaceous coverings, a trunk open beneath, and containing a sucker composed of two, four, or six lancet-shaped elongated scales, two palp, antennae almost always composed of three joints, large eyes, an abdomen of from four to seven distinct segments, tarsi with five joints, and two short clubbed appendages called halteres or balancers, which seem to be the rudiments of the posterior pair in four-winged insects, and are kept in continual motion. All undergo complete metamorphosis, and all are oviparous except the Scarabaeus, which issue from their mother in shape of larvae; and the Pupipara, which first make their appearance as nymphs. The greater number live on the sap of flowers, but some feed on blood, others fasten on other animals to lick up their perspiration, their sores, or various secretions.

Dipteraceae (dip-ter-a-se-e), Dipterocarpeae, an important order of Asiatic exogenous, polypetalous trees, allied to the mallows (Malvaceae). The different species produce a number of resinous, oily, and other substances; one, a sort of camphor; another, a fragrant resin used in temples; and others, varnishes; while some of the commonest produce pitches, and sal, valuable timber.

Diptych (diptik; Greek) originally signifies the same as diploma, something folded; the double tablets of metal, ivory, etc., used by the Greeks and Romans. Diptychs became important in the Christian church, in them being written the names of popes, and other distinguished persons who had deserved well of the church, to be mentioned in the church prayers. Diptychs also often contained pictures of Biblical scenes, etc.

Dipus. See Jerboa.

Dipyre (di-pr), a mineral consisting chiefly of silicate of alumina, with small proportions of the silicates of soda and lime. Its name indicates the double effect of fire upon it (Gr. di, double, pwr, fire) in producing first phosphorescence and then fusion.

Direz, or Eumenides. See Furies.

Directors (di-rek’turs), persons elected to meet together at short fixed intervals and consult about the affairs of corporations or joint-stock companies, and to advise and assist the manager. These are termed Ordinary Directors, as in many companies there is a body called Extraordinary Directors, who have little or no business functions, and are chosen, as a rule, on account of their social position imparting a degree of distinction to the concern. Directors are appointed by a general meeting of the shareholders in the undertaking, and a certain number of them, usually a third, retire every year. Ordinary directors are granted a certain remuneration for their services. The duties and responsibilities of directors are defined by the constitution of the company, or by the various acts of legislature affecting joint-stock and other companies.

Directory (di-rek’to-ri), the name given to a body of five officers to whom the executive authority in France was committed by the constitution of the year III (1796). The two legislative bodies, called the council, elected the members of the directory; one member was obliged to retire yearly, and his place was supplied by election. This body was invested with the authority, which, by the constitution of 1799, had been granted to the king. By the revolution of the 18th Brumaire the directory and the constitution of the year III were abolished. It was succeeded by the consulate.

Direct Primary, a method of nominating candidates for office now adopted in many of the States of the American Union. Under the former method conventions of elected delegates were held, who nominated the candidates, usually those selected by the party leaders. In the new method of direct primaries the candidates are voted for directly by the people, who have an immediate control over the results.

Directrix (di-rek’triks), in mathematics, a line perpendicular to the axis of a conic section, and so placed that the distance from it of any point in the curve is to the distance of the same point from the focus in a constant ratio; also, the name given to any line, whether straight or not, that is required for the description of a curve. The directrix of a parabola is a line perpendicular to the axis produced, and whose distance from the vertex is equal to the distance of the vertex from the focus. Thus A B is the directrix of the parabola V E D, of which V is the focus.

Dirk (dérk), a kind of dagger formerly used as a weapon of offense
Dirk-hartog Island

by the Highlanders of Scotland. Dirks are worn by midshipmen and cadets of the royal navy, and still form part of the full Highland costume.

Dirk-hartog Island, on the west coast of Australia, 45 miles long north to south, and 10 miles broad.

Dirt-beds, in geology, layers of ancient strata of the Isle of Purbeck (Dorset), which contain the stumps of trees that once grew in them.

Disability (dis-a-bil'-i-ty), in law, incapacity to do any legal act. It is either absolute, which wholly disables the person; such as outlawry or excommunication—or partial, such as infancy, coverture, insanity, or drunkenness.

Disbanding (dis-ban'd-ing), the breaking up of a regiment, or other body of military, and releasing them from service, when they are no longer required, or it may be on account of insubordination.

Disbarring (dis-bar'ing), expelling a barrister from the bar, a prerogative which, in England, is possessed by the benchers of each of the four Inns of Court. The party disbarréd may lodge an appeal with the judges in their capacity of visitors.

Disk, the central part of a radiate compound flower surrounded by the ray. Also a part, sometimes cup-shaped, at the base of the stamens, consisting in some cases of rudimentary stamens, in others of the modified receptive. In astronomy the term is applied to the face or circular figure exhibited by the sun, moon, or a planet in the sky.

Discharge. See Calico-printing.

Discharging Arch (dis-charj'ing), an arch formed in the substance of a wall to relieve the part which is below it from the superincumbent weight. Such arches are commonly used over lintels and flat-headed openings.

Disciples of Christ, or Christians, sometimes called Campbellites, an American religious organisation, had its beginning in 1806. See Alexander Camp-bell. The church numbers over two and a quarter million members.

Disclaimer (dis-klä'm'ér), in its stricter legal sense, a plea containing renunciation or a denial of some claim alleged to have been made by the party pleading.

Disco (dis'kō), an island off the w. coast of Greenland, 70 miles long, averaging 60 miles wide, lat. about 70° N. It has large coal deposits.

Discophora, (dis-kof'-ė-ra), a subclass of the Hydrozoa, comprising most of the organisms known as sea-jellies, jelly-fishes, sea- nettles, etc.

Discord (dis'kord), in music, a dissonant or inharmonious combination of sounds, so called in opposition to the concord. See Dissonance.

Discount (dis-kount), the charge made by a banker for interest of money advanced by him on a bill or other document not presently due. In advancing money on such security the banker deducts the charge for interest on his advance from the total amount represented on the security, pays the difference, which is called the proceeds of the bill, to the person parting with it, and collects the full amount to reimburse himself for outlay and interest at maturity. Popularly, the term discount is applied to any deduction from the full amount of an account made by the party to whom it is paid, especially on prompt or early payment. When a bill which has been discounted is paid by the acceptor before it is due, the discount allowed for repayment is called rebate.

Discovery (dis-kov'e-ri), in law, the act of revealing or making known any matter by a defendant in his answer to a bill in chancery. The word is also used in reference to the disclosure by a bankrupt of his property.

Disgrace (dis'kra), an ore of silver, consisting of antimony and silver. It occurs in hexagonal prisms.

Discus (dis'kus), an ancient term for an implement among the Greeks and Romans, a quoit of stone or metal, convex on both its sides, sometimes perforated in the middle.

Disease (dis'iz'), any morbid state of the body, or of any organ or part of the body. Diseases are described as local or constitutional, idiopathic, symptomatic, epidemic, endemic, contagious, acute, chronic, etc. As to their classification, see Nosology. The influence of the parents on the organisation of the child is so great that not only peculiarities of external form, but the peculiar constitution, the greater or less
Diseases of Plants

activity and development of the organs, are found to pass from parent to child. As it is in the particular state of the several organs is the foundation that a very great part of diseases have their foundation, the liability to certain diseases may be inherited with the organic structure, and the son attacked by various complaints at the same period of life in which his father was. The most important hereditary defect is physical weakness. These diseases are called hereditary; but it is only the predisposition to them that is inherited. Hence the actual development of hereditary diseases requires certain cooperating circumstances. Constitutional diseases often depend on circumstances which affect the fetus during pregnancy. Among the diseases, the predisposition to which is most frequently hereditary are acrocy, hemophilia (especially bleeding at the lungs), and hemorrhoids, consumption, gout, gravel and stone, cancer, disorders of the mind, hysterical and hypochondriac affections, apoplexy, epilepsy, and organic diseases of particular parts, especially of the heart. Inherited diseases are much more difficult to cure than those which originate in accidental external causes, and special care should therefore be taken to adopt an environment and mode of life calculated to counteract the inherited predisposition. As to the origin of certain diseases see Germ Theory.

Diseases of Plants, may be divided into two main classes: those produced by temperature, excess or deficiency of moisture and light, impure air, the composition of the soil, and other mechanical or chemical agencies; and those produced by other organised beings, whether belonging to the animal or vegetable world. Too high a temperature will produce an excitement inconsistent with healthy growth, while a low temperature destroys the connection between the cells, and is one of the chief causes of cancer. In the absence of light the chemical changes necessary to the complete development of the chlorophyll will not take place, and the plant is in consequence blanched. Tender tissues, however, frequently require protection from a too free admission of light. In tropical forests, unhealthy to man, certain vegetables find a congenial atmosphere, but in most cases pure air is indispensable, as shown by the difficulty of cultivating plants in the heart of towns. Few things are more prejudicial to plant life than excess of moisture, partly from its immediate action on the tender tissues of the roots, and partly from decomposition, but, more than all, from the low state of temperature which is kept up at the very point where a certain degree of heat is essential. Diseases springing from the actions of other organisms may be classed as direct injuries, alterations of tissues from the presence of larvae of insects, exhaustion from parasitic insects or plants, especially fungi.

Dishonor of a Bill (dis-on'ur), the refusal or neglect to accept or pay when due a bill of exchange, or promissory note, or draft on a banker. It is absolutely necessary that the holder of a dishonored bill should give immediate notice of the non-payment to the drawers or endorsers.

Disinfectant (dis-in-fekt'ant) is any substance that destroys the germs and odors of contagious and infectious diseases. The most important for practical purposes are formaldehyde, chlorine, carbolic acid, sulphurous acid, Condy's fluids (containing respectively manganate and permanganate of potash), and Burnett's fluid, containing chloride of zinc. Carbolic acid is one of the most effective, needing, however, some little care in the handling, as it sometimes causes severe burns. It does not in its common form mix with water, but floats on the surface undiluted. For application to the skin Condy's fluid is one of the readiest preparations. In cases of infectious or contagious disease, disinfectants, such as chlorinated lime or carbolic acid, should at once be placed about the house, especially in the sickroom and in the passages and landing outside. A large sheet also should be nailed so as to hang across the door, and this should be kept constantly wet with carbolic acid. All excretions should be instantly disinfected and also the closet which receives them. In a country place it is best to bury them in a considerable depth of earth. Every article of clothing and furniture should be carefully treated, as the germs may lurk in them and break out after a lapse of months or years.

Disintegrator (dis-in'te-gra-tur), a machine for pulverising and sometimes for mixing various materials, such as rock, asphalt, ore, artificial manures, sugars, corn, the ingredients of mortar, etc.

Disk. See Disc.

Dislocation (dis-lio-kä'shun), a surgical term applied to cases in which the articulating surfaces of the bones have been forced out of their proper relations. The particular dislocation takes its name either from the joint itself or its furthest bone, and is
called compound when accompanied with an external wound. The most common dislocations are those of the hip, shoulder, elbow, knee, and ankle, and the chief obstacle to their reduction is the spasmotic and violent contraction of the muscles consequent upon them, the application of considerable force often being necessary to set the joint. Chloroform is of great use, not only in preventing pain, but in relaxing the muscles. The most dangerous dislocations are those of the bones of the spine.—In geology it signifies the displacement of parts of rocks or portions of strata from the situations they originally occupied.

Dismal Swamp, a large tract of marshy land, beginning a little south of Norfolk, Virginia, and extending into North Carolina, containing 150,000 acres; 30 miles long, from north to south, and 10 broad. This tract was formerly covered with trees, with almost impervious brushwood between them, but it has now in part been cleared and drained. In the midst of the swamp is a lake, called Drummond's Pond, 7 miles in length. A navigable canal through the swamp connects Chesapeake Bay and Albemarle Sound.

Dismas (di\'mas), Sr., the name of the penitent thief, according to medieval legends.

Dispart (di\'part), the difference between the semidiameter of the base ring at the breech of a gun and that of the ring at the swell of the muzzle.

Dispensary (dis\'pen-sa\'ri), a public institution, primarily intended for the poor, where medical advice is given and medicines are furnished free, or sometimes for a small charge. It is distinguished from a hospital in having no beds. Dispensaries are found in most large towns in the United States and Europe. In the Old World they originated in monasteries. The oldest one in the United States was opened in New York in 1780.

Dispensation (dis\'pen-sa\'shun) is the act by which an exception is made to the rigor of the law in favor of some person. The pope may release from all oaths or vows, and may sanction a marriage within the prohibited degrees of the Mosaic law, or exempt from obedience to the disciplinary enactments of the canon law. In England the monarch claimed, in former times, a similar dispensing power in civil law, but the prerogative was so much abused by James II that it was abolished by the Bill of Rights. The power of commuting sentences in capital cases is the only form in which the dispensing power of the crown still exists. In ecclesiastical matters a bishop may grant a dispensation allowing a clergyman to hold more than one benefice or to absent himself from his parish.

Dispensatory (dis\'pen-sa-to\'ri), the same as Pharmacopæia (which see).

Dispersion (dis\'per\'shun), an optical term applied to the angular separation experienced by the component rays of a pencil of light on emerging from a refracting medium whose surfaces are not parallel to each other, e.g., the common prism. The length of the spectrum and the relative space occupied by the colored rays vary greatly according to the refracting medium, the spectrum from a prism of oil of cassia being two or three times longer than one formed by a glass prism.

Disposition (dis\'po-zish\'un), in Scotch law, is, in its general acceptance, a deed by which a person provides for the general disposal of his property inheritable and movable, after his death, equivalent to a will or testament; also a conveyance of property.

Disraeli, Benjamin. See Beaconsfield.

D'Israeli (di\'ri\'zel-i), Isaac, man of letters, and father of the well-known statesman, was born in Enfield, Middlesex, in 1786. His father, Benjamin D'Israeli, a descendant of a family of Spanish Jews which had settled at Venice in the fifteenth century to escape the Inquisition, came over to England in 1738 and made a large fortune. Isaac D'Israeli, however, showed a strong repugnance to commerce, and was finally permitted to follow his literary bent. An anonymous reply to Peter Pindar, entitled On the Abuse of Satire, was followed in 1791-1793 by the appearance of his Curiosities of Literature, the success of which determined much of his afterwork. His Essay on the Literary Character was published in 1783, and some time afterwards a volume of romantic tales, The Loves of Mejmoun and Leila. Between 1812 and 1822 appeared the Calamities of Authors, Quarrels of Authors and Inquiry into the Literary and Political Character of James I; the three being afterwards published collectively under the title of Miscellanies of Literature. In 1838 appeared the commencement of his Life and Reign of Charles I, a work completed in 1851. An affection of the eyes put an end to a projected life of Pope and a history of English Freethinkers, but in 1841 he published a selection from his MSS. un-
Diss (dis), a town of England, Norfolk, on the slope of a hill 18 miles south by west from Norwich. It was formerly noted for the manufacture of 'Suffolk bempen cloth,' worsted yarn and knit hosiery. Pop. 3769.

Disseizin (dis-e-zin), or Disseisin, in law, is the dispossession of a freehold estate, or interrupting his seisin. Of freeholds only can a seizin be had, or a disseizin done. Whether an entry upon lands is or is not a disseizin will depend partly upon the circumstances of the entry and partly upon the intention of the party, as made known by his words or acts.

Dissenters (dis-ent-ers), the common name by which in Britain all Christian denominations, excepting that of the Established Churches, are usually designated, though in acts of parliament it generally includes only Protestant dissenters, Roman Catholics being referred to under their specific name. The most important bodies of English dissenters are the different bodies of Methodists, the Congregationalists and the Baptists; and of Scotch dissenters, the Free Church and the United Presbyterian Church. The Nonconformists were dissenters from the English Church.

Dissentis (dis-en-tis), a town of Switzerland, Canton Grisons, about 3800 ft. above the sea, at the junction of the Middle and Vorder Rhine, with a Benedictine abbey established in 614. Pop. 1400.

Dissociation (dis-so-a's h u n), a chemical term used to express the partial decomposition which takes place when chemical compounds are exposed to a high temperature; as when by the passage of steam through a white-hot platinum tube some of it is decomposed and an explosive mixture of oxygen and hydrogen may be collected. In his writings on dissociation Ste. Claire Deville uses the term in a more extended sense, as denoting the separation of a body into its constituents (whether simple or compound) at a temperature inferior to that at which its composition is usually seen to take place.

Dissolving Views (di-solv-ing) are glass magnified and thrown with great distinctness upon a screen by means of one or two magic lanterns with strong lenses, and illuminated by the oxyhydrogen light. If one lantern is used the picture is drawn out of focus gradually, and a second substituted, which is brought gradually into focus, thus producing the haze and brilliancy which have gained this sort of exhibition its name. If two lanterns are used, they are placed side by side with their lens tubes slightly convergent, so that the images may be superposed on the screen. By means of a revolving shutter either lantern can be wholly or partially shut off and the image of other lanterns be correspondingly disclosed.

Dissonance (dis-u-nans), in music, that effect which results from the union of two sounds not in accord with each other. The ancients considered thirds and sixths as dissonances; and, in fact, every chord except the perfect concord is a dissonant chord. The old theories include an infinity of dissonances, but the present received system reduces them to a comparatively small number. The most common are those of the tonic against the second, the fifth against the sixth, or (the most frequent of all) the fourth against the fifth.

Distaff (dis-taf), the first instrument employed in spinning. It consisted of a staff, on one end of which the wool or flax was rolled. The spinner held it in the left hand, and drew out the fibers with the right, at the same time twisting them. A small piece of wood called a spindle was attached to the thread, the weight of which carried it down as it was formed. When the spindle reached the ground the thread which had been spun was wound round it, and it was then again fastened near the beginning of the new thread.

Distemper (dis-tem-per), a disease of the dog commonly considered as of a catarrhal nature. In most cases a running from the nose and eyes is one of the first and chief symptoms, the defluxion becoming after some time mucous and purulent. The animal is subject to violent fits of coughing combined with vomiting, loses its appetite, its flesh begins to waste, and if the disease be virulent, symptoms of affection of the brain manifest themselves, accompanied by fits, paralysis, or convulsive twitchings. In the first stage of the disease laxatives, emetics, and occasional bleeding are the principal remedies; diarrhoea should be checked by astrigents, and to reduce the violence of the fits warm bathing and antispasmodics should be resorted to. The distemper is generally contagious, and occurs but once in a lifetime.
Distemper (Italian, tempera), in painting, a preparation of opaque color mixed in a watery glue, such as size, white of egg, or gum. It is used now chiefly in scene-painting and in paper for walls, but was employed in the higher departments of art before the introduction of oil-painting in the fifteenth century. Distemper is painted on a dry surface, fresco on wet mortar or plaster.

Distich (dist'ik), a couplet of verses, especially one consisting of a Latin or Greek hexameter and pentameter, making complete sense.

Distillation (dis-ti-l'a-shun), the volatilization and subsequent condensation of a liquid by a special apparatus, resulting in a separation of the liquid from a mixture. The operation is performed by heating the crude liquid or mixture in a retort or vessel known as the body of the still. This is made of various shapes and materials, and is closed with the exception of a slender neck which opens into the condenser, a long tube through which the hot vapor from the still is passed. The tube is kept at a sufficiently low temperature to cause the vapor to condense, the common method of securing this being to surround the tube with a constantly renewed stream of cold water. In some cases ice or a freezing mixture may be required to effect condensation. On a large scale the condensing tube is called round and round in a tub or box, and is known as a worm. From the end of it the vapor, condensed into a liquid, drops or distils into a receiver. The simplest case of distillation is that of water containing solid matter in solution, the solid matter remaining behind in the still or retort while the water trickles pure into the receiver. The cut which

represents a simple form of still, shows B, a copper boiler, the 'body' of the still, A being the 'head,' and C the 'neck,' which communicates with the spiral worm D placed in a vessel which contains cold water, the distilled liquid trickling out at 0. The cold water round the worm requires to be continually renewed, as it absorbs the heat. When the mixture to be distilled consists of two or more liquids of different boiling-points, such as alcohol and water, the more volatile comes off first, accompanied by a certain proportion of the vapor of the other, so that it is hardly possible completely to separate bodies by one distillation. This is effected by repeated successive distillations of the liquid with or without the addition of substances to retain the impurities. When the production of one of the ingredients only is aimed at by this process, it is called rectification, but when it is desired to separate and collect all the liquids present, or to divide a mixture into portions lying within certain ranges of temperature ascertained either by the thermometer or by the amount of liquor run off, or by the appearance of the distillate, etc., the process is called fractional distillation.

In the laboratory, distillation is employed for purifying water, for recovering alcohol and ether, and for the preparation, purification, and separation of a great number of bodies. On the large scale distillation is employed in the preparation of potassium, sodium, zinc, mercury; of sulphuric acid, ether, chloroform, sulphide and chloride of carbon, essential oils and perfumes; purification of coal and wood tar, and the products obtained from them; and, most extensive of all, the manufacture of whiskey, brandy, or other spirit. Sea-water is also distilled in many cases for drinking or cooking purposes. Destructive distillation differs from the preceding in this respect, that the original substance is not merely separated into the bodies by the mixture of which it is formed, but is so acted on that it is completely decomposed, and bodies are produced which had no existence in the original matter. The term is restricted to the action of heat upon complex organic substances out of contact with the air. The products of destructive distillation are numerous and varied. On the manufacturing scale the process is conducted sometimes for one part, sometimes for another part of the products. Coal, for example, is distilled primarily for the gas, but also for ammoniacal water, benzol, anthracene, and sometimes for the sake of the fixed carbon or coke, the volatile portions being neglected and practically wasted. Wood is distilled partly for the sake of the pyrogeneous acid and the tar, partly for the charcoal. Bones are distilled for the sake of the charcoal, though the oil is also
Distoma

collected. Shale is distilled solely for the sake of the oil.

Distoma (dis'to-ma), a genus of trematode or sorcular parasitical worms or flukes, inhabiting various parts in different animals. D. hepaticum, or common liver fluke, inhabits the gall-bladder or ducts of the liver in sheep, and is the cause of the disease known as the rot. They have also been discovered in man (though rarely), the horse, the hog, the rabbit, birds, etc. In form it is ovate, flattened, and presents two suckers (whence the name), of which the anterior is perforated by the aperture of the mouth. A branched water-vascular system is present, and opens posteriorly by a small aperture. All the animals of this genus present the phenomenon known as 'alternation of generations.'

Distress (dis'tres'), in law, is the taking of a personal chattel of a wrongdoer or a tenant, in order to obtain satisfaction for the wrong done or for rent or service due. If the party whose goods or cattle are seized disputes the injury, service, duty, or rent, on account of which the distress is taken, he may replevy the things taken, giving bonds, at the same time, to return them or pay damage in case the party making the distress shows that the wrong has been done, or the service or rent is due. Another description of distress is that of attachment, to compel a party to appear before a court when summoned for this purpose. The distresses most frequently made are on account of rent and taxes and damage-feasance.

Distribution of Plants. See Botany.

District Attorney (dis'trikt), the public prosecutor within a defined district. One is elected in each county in each state, and the Federal government also appoints one for each United States judicial district. The state district attorney prosecutes criminals before the state courts, while the government official prosecutes offenses against the Federal government and conducts civil actions in its behalf.

District Courts (dis'trikt), an important series of courts in the United States, each under a single judge, and having original jurisdiction in civil, criminal and admiralty causes, in which the general government or officers of the government are concerned. They are now over one hundred in number. Generally there is one for each State, but the larger States have more than one.

District of Columbia. See Columbia.

Districts, CONGRESSIONAL, the divisions in the United States which each return a representative to Congress. Their number varies at different times, being fixed after each decennial census.

Ditch (ditch), a trench in the earth made by digging, particularly a trench for draining wet land, or for making a fence to guard enclosures, or for preventing an enemy from approaching a town or fortress. In the latter sense it is called also a fosse or moat, and is dug round the rampart or wall between the scarap and counterscarp. See Fortification.

Dithyrambus (dith'-ir a m' bus), DITH'YRAMB, in Greek literature, a poem sung in honor of the god Bacchus or Dionysus, at his festivals. It was composed in a lofty and often inflated style; hence the term is applied to any piece of an impetuous and irregular character.

Ditmarsches (dit'mar-shaes; German, Dit' mar schens), a district of Holstein, in Germany, consisting of a monotonous flat stretching along the German Ocean, between the mouths of the Elbe and the Eider, and so little raised above the sea as to require the protection of strong embankments. The area is 500 sq. miles, and the total pop. above 70,000.

Dittany (dit'a-nil), the popular name of the plants of the genus Dictamnum, an herb of the rue family (Rutaceae), found in the Mediterranean region. The leaves are pinnate, the large white or rose-colored flowers are in terminal racemes. The plant is covered with oily glands, and the secreted oil is so volatile that in hot weather its vapor becomes slightly inflammable. D. Frasenella and D. albus are found in gardens. The dittany of the United States is Cunila Marianus, a labiate plant. The dittany of Crete in Origines, and the bastard dittany is a species of Marrubium (horehound), both labiates.

Diu (di'), an island of Hindustan, belonging to the Portuguese, on the northwest coast, off the south extremity of Gujerat, from which it is separated by a very narrow channel. It is 7 miles in length, from E. to W., and 2 miles in greatest breadth from N. to S. On a point on the east end of the island stands the town of Diu. It was formerly the seat of a considerable commerce, but
Diuretics (di-ə-re'tiks), medicines intended to increase the secretion and discharge of urine. They either act directly on the kidneys, exciting these organs to increased action; or indirectly by first influencing the circulation. Of the first class are squill, broom, juniper, alcohol, potash, etc.; of the second, digitalis, elaterium, cream of tartar, etc.

Diurna (di-ər'na), a name sometimes given to the diurnal lepidopterous insects or butterflies.

Divan (di-vən'), a Persian word having several significations. It is used in Turkey for the highest council of state, the seat of a stocks diet and among the Turks for the large hall for the reception of visitors. Among several oriental nations this name is given to certain collections of lyric poems by one author. The divans of Hafis and Saadi, the Persian poets, are among the most important. In Western Europe the term is applied to a café, and to a kind of cushioned seat.

Divers (di'vers), birds remarkable for the habit of diving. The divers (Colymbidae) are a family of swimming birds (Natatorioidea), characterised by a strong, straight, rather compressed pointed bill about as long as the head; a short and rounded tail; short wings; thin, compressed legs, placed very far back, and the toes completely webbed. They prey upon fish, which they pursue under water, making use partly of their wings, but chiefly of their legs and webbed feet in their subaqueous progress. The leading species are the great northern diver (Colymbas glacialis), the red-throated diver (C. septentrionalis), and the black-throated diver (C. atriceps). These birds inhabit the Arctic seas of the New and Old worlds; they are abundant in the Hebrides, Norway, Sweden and Russia. The great northern diver, loon, or ember goose, is about 2 ft. long, and is of handsome plumage.

Dividend (di-vənd), literally what is to be divided, a term used in arithmetic and in reference to stocks, etc. In the latter sense it is the interest or profit a stockholder earns and paid to the proprietors. It also signifies the payment made to creditors out of the estate of a bankrupt.

Dividers (di-vəders), a pair of compasses or similar instrument, among Engineers, a machine for dividing engine, marking the divisions on the scales of scientific, mathematical, or other instruments. Some of these perform work of extraordinary fineness and accuracy.

Divi-divi, LIRI-DEND, or LIRI-DAVY, the pods of Cassipina coriaria, a tree which grows in tropical America, and a member of the family which yields sapan, brazil, and other red woods. The pods are about 1 inch broad and 3 inches long, but are generally bent or curled up. They are highly astringent, containing a large proportion of tannic and gallic acids, for which reason they are used by tanners and dyers.

Divination (div-i-nə'shən), the art of divining; a foretelling future events, or discovering things secret or obscure, by the aid of superior beings, or by other than human means. In ancient methods divination was divided into two kinds, natural and artificial. Natural divination was supposed to be effected by a kind of inspiration or divine afflatus; artificial divination was effected by certain rites, experiments, or observances, as by sacrifices, observation of entrails and flight of birds, lots, omens, positions of the stars, etc. Among modes of divination were: asinomancy, by asses; belomancy, by arrows; biblomancy, by the Bible; omamancy, by dreams; pyromancy, by fire, etc.

Divine Right (di-vən'), the claim set up by some sovereigns or their supporters to the absolute obedience of subjects as ruling by appointment of God, inasmuch that, although they may themselves submit to restrictions on their authority, yet subjects endeavoring to enforce those restrictions by resistance to their sovereign's acts are considered guilty of a sin. The most recent claim of this character is that made by William II of Germany.

Diving (div'ing), the art or act of descending into water to considerable depths, and remaining there for a time. The uses of diving are important, particularly in fishing for pearls, corals, sponges, examining the foundations of bridges, recovering valuables from sunken ships, and the like. Without the aid of artificial appliances a skilful diver may remain under water for two, or even three minutes; accounts of longer periods are doubtful or absurd. Various methods have been proposed and engines contrived to render diving more safe and easy. The great object in all these is to furnish the diver with fresh air, without which he must either make but a short stay under water or perish. See Diving-bell, Diving-dress.

Diving-bell, purpose of enabling persons to descend and to remain below the
Diving-dress

surface of water for a length of time, to perform various operations, such as examining the foundations of bridges, blasting rocks, recovering treasure from sunken vessels, etc. Diving-bells have been made of various forms, more especially in that of a bell or hollow truncated cone, with the smaller end closed, and the larger one, which is placed lowermost, open. The air contained within these vessels prevents them from being filled with water on submersion, so that the diver may descend in them and breathe freely for a long time, provided he can be furnished with a new supply of fresh air when the contained air becomes vitiated by respiration. This is done by means of a flexible tube, through which air is forced into the bell. A form, called the nautilus, has been invented which enables the occupant, and not the attendants above, to raise or sink the bell, move it about at pleasure, or raise great weights with it and deposit them in any desired spot.

Diving-dress, a waterproof dress of India rubber cloth used by professional divers, and covering the entire body except the head. The dress has a neck-piece or breastplate, fitted with a segmental screw bayonet joint, to which the head-piece of the helmet, the neck of which has a corresponding screw, can be attached or removed. The helmet has communicates with an air-pump above. To allow of the escape of the used air there is sometimes another flexible tube, which is led from the back part of the helmet to the surface of the water. But in the more improved forms of the dress, the breathed air escapes by a valve so constructed as to prevent water from getting in, though it lets the air out. Leaden weights are attached to the diver, and his shoes are weighted, that he may be able to descend a ladder, walk about below, etc. Communication can be carried on with those above by means of a cord running between the diver and the attendants; or he may converse with them through a speaking tube or a telephonic apparatus. One form of diving-dress makes the diver independent of any connection with persons above the water. It is elastic and hermetically closed. A reservoir containing highly compressed air is fixed on the diver's back, which supplies him with air by a self-regulating apparatus at a pressure corresponding to his depth. When he wishes to ascend he simply inflates his dress from the reservoir. Another form, known as the Fleuss dress, makes the diver also independent of exterior aid. The helmet contains a supply of compressed oxygen, and the exhaled breath is passed through a filter in the breast-piece which deprives it of its carbonic acid, while the nitrogen goes back into the helmet to be mixed with the oxygen, the supply of which is under the diver's own control, and to be successively breathed. A diver has retained an hour and a half under 35 feet of water in this suit.

A considerable enlargement of the field of deep-sea diving is the result of the invention recently of a form of diving apparatus which is unaffected by the limitations hitherto imposed on work of this kind. A possible depth of 204 feet is recognized by the British Admiralty regulations under the conditions that obtain with the common form of diving suit. Yet this depth has probably never been reached. One hundred feet is the average descent of the average diver and 150 feet his maximum. With the new apparatus a submergence of 212 feet has been obtained, and this might have been indefinitely extended had there been a greater depth of water at the place where the experiment took place—Long Island Sound during the latter part of 1914.

The new diving apparatus is constructed entirely of metal, is rigid and is made of such materials that it is strong enough to resist the great pressures found in the depths to which it can penetrate. The material used is an alloy of alum-
num, and the diving case weighs complete about 500 pounds. When in the air, the man inclosed in it is incapable of imparting movement to it, but in the water, which counterbalances the dead weight of the apparatus, he can easily move the articulated sections as well as give himself motion through the water. The articulated portion consists of about 50 turning joints, fixed with leather packing, which swells and has an increased effectiveness under increased water pressure. To prevent the pressure-force of the deep sea from jamming the joints, roller bearings are so arranged about them that freedom of action is constantly maintained. The diving case is not absolutely water-tight, nor is it desired that it should be so, as the slight leakage acts as a lubricant to the joints, and aids in their movements. The danger arising from the intake of water thus into the diving case is averted by the action of an ingenious pump appliance, which serves two purposes: that of pumping the water out and pumping the air in. The diver in this invention carries his pump with him and has air supplied to him at atmospheric pressure. At the back of the diving case is a recess and in it is installed a compact but powerful pump, which sucks from the feet of the suit all leakage and forces it at once outward. This pump is worked by compressed air, and the air after performing its mechanical part of driving the pump, is exhausted into the suit for the diver to breathe and then passes to the surface through the free space in an armored rubber tube, within which are led down to the diver the compressed air pipe for driving the pump, and the electrical connections for telephone and lamp. Thus the diving case receives a thorough ventilation, and it has been found that should the pump fail to work for a number of minutes there would still be enough air remaining in the diving case and the tube space to supply the diver's needs for at least the length of time he is being hauled to the surface. During the experiment in Long Island Sound the pump was stopped for ten minutes, while the diver was at a depth of 100 feet. He suffered no inconvenience, and when the compressor again was started he was lowered to a depth of 212 feet. If such a condition as failure of the pump to work for ten minutes had arisen during a descent in the old elastic diving dress the result must necessarily have been fatal. Nor is a delay necessary in hoisting the diver clad in the new diving apparatus to the surface. According to the British Admiralty regulations, should a diver go down to a depth of 204 feet, the time of his ascent must be not less than one hour and a half. In the Long Island Sound experiments the diver was hoisted to the surface in 87 seconds. He was totally unaffected by the abrupt change in pressure, although the deepest he had ever been was 90 feet, and on that occasion he had suffered from bleeding at the nose and ear.

**Divining Rod** (di-vin'ing), a wand or twig of hazel or willow used especially for discovering metallic deposits or water beneath the earth's surface. It is described by G. Agricola (De re metallica, 1546). It has also a modern interest, which is set forth by Prof. W. F. Barrett, F.R.S., the chief modern investigator. The use of the divining rod at the present day is almost wholly confined to water finding, and in the hands of certain persons it undoubtedly has produced results along this line that are remarkable, to say the least. The professional water-finder provides himself with a forked twig, of hazel, for instance, which twig, held in balanced equilibrium in his hands, moves with a sudden and often violent motion, giving to the onlooker the impression of life within the twig itself. This apparent vitality of the twig is the means whereby the water-finder is led to the place where he claims underground water to exist, though its presence at that particular spot was hitherto wholly unsuspected. While failure is sometimes the outcome of the water-finder's attempts, success as often, and, indeed, according to the testimony of Prof. Barrett, more often crowns his efforts. Various explanations, scientific and other, of the phenomenon have been advanced. Prof. Barrett ascribes it to 'motor-automatism' on the part of the manipulator of the divining rod, that is, a reflex action excited by some stimulus upon his mind, which may be either a subconscious suggestion or an actual impression. He asserts that the function of the forked twig in the hands of the water-finder may be to act as an indicator of some material or other mental disturbance within him. While a hazel or willow twig seems to be preferred by the professional water-finder, twigs from the beech, holly or any other tree are employed; sometimes even a piece of wire or watch spring is used, with apparently as good results.

**Divisibility** (di-vis'a-bil'i-ti), that general property of bodies by which their parts or component particles are capable of separation. Numerous examples of the division of matter to a degree almost exceeding be-
Division may be easily instanced. Thus, glass test-plates for microscopes have been ruled so fine as to have 225,000 spaces to the inch. Cotton yarn has been spun so fine that one pound of it extended upwards of 1,000 miles, and a Manchester spinner is said to have attained such a marvelous fineness that one pound would extend 4770 miles. One grain of gold has been beaten out to a surface of 52 square inches, and leaves have been made 307,500 of which would go to make an inch of thickness. Iron has been reduced to wonderfully thin sheets. Fine tissue paper is about the 1200th part of an inch in thickness, but sheets of iron have been rolled much thinner than this, and as fine as one 4800th part of an inch in thickness. Wires of platinum have been drawn out so fine as to be only the 30,000th part of an inch in diameter. Human hair varies in thickness from the 250th to the 600th part of an inch. The fiber of the coarsest wool is about the 500th part of an inch in diameter, and that of the finest only the 1500th part. The silk fiber, as spun by the worm, is about the 5000th part of an inch thick; but a spider's fiber is only the 30,000th part of an inch in diameter; insomuch that a single pound of this attenuated substance might be sufficient to encompass our globe. The triturating and levigation of powders, and the perennial abrasion and waste of the surface of solid bodies, occasion a disintegration of particles almost exceeding the powers of computation. The solutions of certain saline bodies, and of other colored substances, also exhibit a prodigious subdivision of matter. A single grain of the sulphate of copper, or blue vitriol, will communicate a fine azure tint to five gallons of water. In this case the sulphate must be attenuated at least 10,000,000 times. Odors are capable of a much wider diffusion. A single grain of musk has been known to perfume a large room for a space of twenty years. At the lowest computation the musk had been subdivided into 320 quadrillions of particles, each of them capable of affecting the olfactory organs. All this goes to demonstrate the extraordinary minuteness of the constituent particles of matter.

Division (di-vizh'un), in arithmetic, the dividing of a number or quantity into any parts assigned; one of the four fundamental rules, the object of which is to find how often one number is contained in another. The number to be divided is the dividend, the number which divides is the divisor, and the result of the division is the quotient. Division is the converse of multiplication.

Division, in military matters, a portion of an army consisting of two or more brigades, composed of the various arms of the service, and commanded by a general officer. In the navy, a select number of ships in fleet or squadron of men-of-war. The term has been practically abolished since the introduction of gigantic heavily-armed ironclad ships into the navy.

Division, the mode of determining a question at the end of a debate. The speaker puts the question, and declares whether in his opinion the 'Ayes' or the 'Noes' have it. Should his opinion not be acquiesced in by the minority, the house is cleared, and the 'Ayes' directed to go into the right lobby and the 'Noes' into the left, where they are counted by two tellers appointed for each party.

Division of Labor, a principle employed in great industries for the simplification of the work to be done by each of the workmen engaged in it. The separation of complicated processes into a series of simple operations not only results in a great saving of time, but also demands much less ability on the part of the workman, in order that he may acquire the necessary skill in performing any particular operation. Owing to both of these causes, the saving of time, and the employment of cheaper labor, the cost of producing complicated articles is, by the application of this principle, immensely reduced. Division of labor tends to the invention of machinery, and to the effectual use of machinery when invented. It increases the skill and dexterity of the individual workman; it effects a great saving of time and capital, and it conduces to the more economical distribution of labor by classing work-people according to their capacity. It has, however, a deteriorating effect on the laborer's usefulness as an all-round workman.

Divorce (di-vôrs') is a separation, by law, of husband and wife and is either a divorce a vinculo matrimoni, that is, a complete dissolution of the marriage bonds, or a divorce a mensa et thoro (from bed and board), whereby the parties are legally separated, but not unmarried. The causes admitted by different codes of laws as grounds for the modification or entire dissolution of the marriage contract, as well as the description of tribunal which has jurisdiction of the proceedings, and the form of the proceedings, are various. Divorce was permitted by the law of Moses, but
forbidden in the New Testament, except for unchastity. The early laws of Rome permitted the husband to divorce his wife for adultery and many other alleged offenses. The facility of divorce continued, without restriction, under the Roman emperors, but as the modern nations of Europe emerged from the ruins of the Roman Empire, they adopted the doctrine of the New Testament. Marriage, in the Roman Catholic Church, besides being a civil contract, was considered a sacrament of the church, which it was unlawful to dissolve. The ecclesiastical courts could indeed annul a marriage, but only for a cause that existed at the time the marriage was contracted, such as prior contracts, impotency, etc. For any cause arising after marriage, the wife could only pronounce a divorce a menas et thoro, which did not leave either party free to marry again, this being only a separation. A divorce a vinculo matrimonii, for any cause arising subsequent to marriage, could formerly be obtained in England only by an act of parliament, and the ecclesiastical courts must have previously pronounced a divorce a menas et thoro. According to present English practice, the husband may obtain a divorce for simple adultery; but if the wife be the petitioner, she must show that her husband has been guilty of certain kinds of adultery, or of adultery combined with desertion or gross cruelty. In Scotland, from the time of the Reformation, divorce might be obtained by either party on the ground of adultery, marriage being held to be only a civil contract, and as such under the jurisdiction of the civil courts. In the United States marriage is considered to be a civil contract, and the laws as to divorce and the facility or difficulty of obtaining it, differ greatly in the several states. Thus, formerly in South Carolina divorce was not granted for any cause. At present in most of the states, divorce is allowed for adultery, habitual drunkenness, desertion for a specified period, etc. In some states the matter is left wholly or partly to the discretion of the courts. Difficult legal questions have arisen from the granting of divorces in one state for reasons not sufficient in another, and the desirability of having Federal enactments making the practice uniform has been much debated.

Dix (diks) DOROTHEA L., an American philanthropist, born in Worcester, Massachusetts. She became deeply interested in the condition of criminals, lunatics and paupers, and visited almost every state in the Union in her efforts to relieve the unfortunate. Her exertions had much to do with the establishment of lunatic asylums in Pennsylvania, New York, North Carolina and several other states; and by unceasing efforts she succeeded in 1854 in having a bill passed by Congress appropriating 10,000,000 acres of the public lands as an endowment for such asylums. This bill was vetoed by President Pierce. Besides tracts for prisoners, etc., she published several anonymous works: The Garland of Flora, Evening Hours, etc. She died in 1887.

Dix, JOHN A., statesman, was born in Boscawen, New Hampshire, in 1798. He received a military training, but afterwards studied law. At a critical time in 1861 he was appointed Secretary of the Treasury. In the Civil war, under the first call for troops he organized seventeen regiments. After the defeat at Bull Run, by his energetic measures, he saved Maryland from going over to the Confederate cause. In 1872 he was elected governor of New York. He was a man of culture and a distinguished orator. He died in 1879.

Dixon (diks'non), WILLIAM HEPWORTH, miscellaneous writer, born at Manchester in 1821; died at London in 1878. In 1848 he published a memoir of Howard, the philanthropist, which was followed by the Life of William Penn (1851), and by a work on Admiral Blake (1852). In 1853, after having been a contributor, he became chief editor of the Athenaeum, a post which he retained till 1869. During this period he published several very popular works, including the Personal History of Lord Bacon, The Holy Land and New America, the last being followed by Spiritual Wives. After his retirement from the Athenaeum, and in the last ten years of his life, he gave to the world somewhere about twenty-five volumes of history, travel and fiction, among others, Free Russia; Her Majesty's Tower; The Switzers; History of Two Queens, Catherine of Aragon and Anne Boleyn, etc.

Dixon (diks'non), a city, capital of Lee Co., Illinois, on the Rock River, 98 miles w. of Chicago. It has manufactures of flour, ploughs, shoes, etc. Pop. 7216.

Dizful (dez'fûl), a town of Persia, near the western boundary, on the river Dizful; a place of great trade and manufactures. Pop. 35,000.

Dizier (diz-er), Sr., a town of North-eastern France, dep. Haute-Marne, on the Marne where it becomes navigable, 36 miles southeast of Châlons. There are several blast-furnaces and other works. Pop. 10,082.
Djidda. See Jiddah.

Djokdjakarta (djo-kvy-o-kar'ta), a Dutch residency in the island of Java, on the south coast, with a capital of the same name. Its forests abound in teak. Its natural fertility is great, and rice, coffee and tobacco are extensively cultivated. It is ruled by a sultan who is dependent on the Dutch. Pop. 560,000. The town is large and regular, and the seat of the Dutch resident, which is a fort commanding both the palace and the town. Pop. 58,500.

Dmitrof (dmy-trof'), a town of Russia, in the government and 45 miles north of Moscow. It has manufac-tures of cloths, leather and porcelain. Pop. 4550.

Dmitrovsk (dmy-troks'), a town in Russia, in the govern-ment of Orel, on the highway from Mos-co to Kiev. There are manufactures of leather and soap. Pop. 5259.

Dnieper (nay-per; Russian, Dnjejpr, dniepr; anciently borysthecnes), a great river of Russia which rises in the government of Smolensk, flows first southwest, then southeast, and again southwest to the Black Sea. It begins to be navigable a little above Smolensk, and has a total length, including windings, of 1250 miles. Among its tributaries are the Berezina, the Priepet, the Desna and the Psioi. In its lower course there are important fisheries. Between Kiev and Alexandrovsk it forms a series of cataracts, which are now being removed by blasting of the rocks. Since 1823 there have been steamboats on the river, and the trade carried by it is considerable.

Dniester (nes-tet; Russian, Dniestr; anciently tyras), a large river of Europe, which has its source in the Carpathian Mountains, in Austrian Galicia, enters Russia near Zhitomir, and emptied itself into the Black Sea, after a course of about 750 miles. Its navigation is difficult on account of frequent shallows and rapids.

Doab (do-ab; that is, Two Waters), a name in Hindustan applied indiscriminately to any tract of country between two rivers. The tract between the Ganges and the Jumna is usually called the Doab; other similar tracts have their distinctive names, the Punjab being divided into five districts of this kind, Bari-Doab, Rechna Doab, Sind-i-Sagar Doab, etc.

Doberan (dub'er-ăn), or Dobberan, a German watering place in Mecklenburg-Schwerin, 2 or 3 miles from the Baltic. There are mineral springs, bathing establishments, etc. Pop. 5000.

Dobell (dub-uhl'), Sydney, an English poet and man of letters, born in 1824. His first poem, The Roman, appeared in 1850, and was favorably received by the critics. Among his other works are Balder, Sonnets on the War, England in Time of War, etc. He died in 1874.

Döbeln (dub'len), a town of the kingdom of Saxony, about 40 miles southeast of Leipzig, with a great trade in grain and manufactures of cloth, yarn, leather, lacquered wares, etc. Pop. (1905) 18,907.

Dobran. See Dobberan.

Dobereiner's Lamp (dub'er-nerz), a contrivance for producing an instantaneous light, invented by Professor Dobereiner, of Jena, in 1824. The light is produced by throwing a jet of hydrogen gas upon recently prepared spongy platinum, when the metal instantly becomes red hot, and then sets fire to the gas. The action depends upon the readiness with which spongy platinum absorbs gases, more especially oxygen gas. The hydrogen is brought into such close contact with oxygen (derived from the atmosphere) in the pores of the platinum that chemical union, attended with evolution of light, takes place.

Dobrudja (dubr-ud'ja), the, a territory forming part of the kingdom of Roumania, included between the Danube, which forms its boundary on the west and north, the Black Sea on the east, and on the south a line stretching from Silistria to a point a few miles south of Mangalia. There are some fertile spots, but on the whole it is marshy and unhealthy. The population is of various nationalities, Rouma-nians, Bulgars, Greeks, Turks and Jews. The inhabitants support themselves by rearing sheep and buffaloes. The principal town is Badagah. Pop. 267,908.

Dobson (dub'son), Henry Austin, an English poet, born at Plymouth in 1840; entered the British civil service in 1856. He published Vignettes in Rhyme, Proverbs in Porcelain, and other poems, chiefly graceful lyrics, often in French form. He also wrote lives of Fielding, Steele, Goldsmith, etc.

Docetæ (do-së'te; from Greek dokein, to seem or appear), the name given, in the earlier ages of the church, to those who denied the reality of the human form of Christ, maintaining it to be merely a phantom or shadow. In the sense of regarding Christ's body as
The supporting blocks beneath the keel. Additional supports are put out to the walls.

The method of dry docking a large ship. After warping the vessel into the dock, the gates are closed and the water pumped out, allowing the vessel to settle on

U.S. BATTLESHIP "MISSISSIPPI" IN DRY DOCK AT LEAGUE ISLAND
a heavenly and ethereal, instead of a human one, docetism had its partisans even among the orthodox.

**Dock** (dok), a name applied to different plants of the genus Rumes, belonging to the rhubarb family (Polygonaceae). These are large herbaceous plants, with stout roots, alternate and often entire leaves, and bearing panicles of small, greenish flowers. They are very troublesome as weeds, but the roots of some of them are used medicinally as astringents.

**Docket** (docquet, dok'et), in law, a term variously used, as for a summary of a larger writing; a small piece of paper or parchment containing the heads of a writing; an alphabet and list of cases in a court, or a catalogue of the names of the parties who have suits depending in a court.

**Docks** are usually artificial enclosures for the reception of vessels, and provided with gates to keep in or shut out the tide. They are called **wet-docks** when they are intended to receive vessels for loading and unloading, the gates being in this case constructed so as to keep in the tide, and thus preserve the water within the dock as nearly as possible at the uniform level of high water. They are called **dry-docks**, or **graving-docks**, when they are intended to admit vessels to be examined and repaired, the gates in this case being such as to keep out the tide while the shipwrights are engaged on the vessel. There is another kind of dry-docks called **floating-docks**, which float on the surface of the water, and may be sunk sufficiently to allow of a vessel being floated into them, and then raised again, by pumping the water out of the tanks round the sides. One of the chief uses of a wet-dock is to keep a uniform level of water, so that the business of loading and unloading ships can be carried on without any interruption, and without danger of damage to the vessel from straining, low tides, storms, etc. The first wet-docks constructed in England were those now called the Commercial Docks, in London, which existed in a much less extensive form so early as 1600. In 1800 the West India Docks were constructed, and were followed by the East India Docks, Millwall Docks, London Docks, the St. Katharine Docks and the Victoria Docks, affording, together with those at Tilbury, more than 600 acres of water accommodation, besides wharf and warehouse grounds, where all kinds of appliances and machinery for the speedy and convenient transfer of goods and cargoes are in use. Some of the warehouses are extremely capacious, the tobacco warehouse of the London Docks being itself nearly 5 acres in extent. Next after the London docks come those of Liverpool, which extend more than 6 miles along the north bank of the Mersey, and cover, together with the Birkenhead docks, nearly as large a total acreage as those of London. There are important docks also in the maritime cities of France and other countries of Europe, where the height of the tides renders such constructions necessary.

Graving-docks are built of strong masonry, and their entrance is closed either by swinging gates opening in the middle, and when shut presenting a salient angle to the water in which rest or anchor from which the dock is entered, or by a framework called a **caisson**, built like the hull of a ship, with a keel and a stem at both ends. When the caisson is empty it floats, and may be removed to admit of a vessel being floated into the dock. The caisson being then placed at the entrance and filled with water, again sinks into the grooves intended for it and closes the graving-dock. The water is then pumped out, leaving the ship dry and supported by wooden blocks and props. With regard to floating-docks, a common type of construction is the iron floating-dock built in watertight compartments, and not closed in at either end. It is sunk to the required depth by the admission of water into so many of the compartments, till the vessel to be docked can float easily above its bottom, and is then raised by pumping out the water until the ship can be propped up as in a dry-dock.

A kind of dry-dock, called the **hydraulic lift dock**, consists of a double row of iron columns, each of which contains a hydraulic press. All these hydraulic presses can be worked simultaneously by a powerful steam engine, and their combined action has the effect of raising a series of transverse iron girders stretching from the columns on one side to those of the other. An iron pontoon is first floated above these girders, and then sunk so as to rest on them, and the ship to be docked is floated above the pontoon and supported by the girders upon the pontoon, so that the ship is in no way connected with the columns on each side. The hydraulic presses are then set to work, the girders with the pontoon and ship are raised high enough for the water to be run out of the pontoon, which is then sufficiently buoyant to float the ship. The pontoon may now be floated away clear of the dock, and another take its place. By this
Dockyards, establishments supplied with all sorts of naval stores, materials and conveniences for the construction, repairs and equipment of ships of war. In England the royal dockyards are at Chatham, Sheerness, Portsmouth, Devonport and Pembroke, besides the Deptford and Woolwich storeyards. There are also royal dockyards at Haulbowline in Cork Harbor, at the Cape of Good Hope, Gibraltar, Malta, Halifax, Bermuda, Antigua, Jamaica, Sierra Leone, Trincomalee, Singapore, Hong-Kong, Esquimalt (Vancouver's Island), Fernando Po, Sydney and Shanghai. The dockyards are under the direct control of the Admiralty, with a rear-admiral as superintendent. In the United States there are nine important navy yards, located at Brooklyn, N. Y.; Boston, Mass.; Portsmouth, N. H.; Philadelphia, Pa.; Portsmouth, Va.; Mare Island, Cal.; New London, Conn.; Pensacola, Fla.; Washington, D. C. and Port Orchard, Wash.

Doctor (do'k'tur), a term literally signifying teacher. In the middle ages, from the twelfth century, it came into use as a title of honor for men of great learning, such as Thomas Aquinas (Doctor Angelicus), Duns Scotus (Doctor Subtilis). It was first made an academical title by the University of Bologna, and emperors and popes soon afterwards assumed the right of granting universities the power of conferring the degree in law. The faculties of theology and medicine were soon included, but for a long time the faculty of arts retained the older title of Magister, till the German universities substituted that of Doctor. The title of Doctor is in some cases an honorary degree, and in other cases (as in medicine and science) conferred after examination. The title of D.C.L. (Doctor of Civil Law), for example, at the University of Oxford and at Trinity College, Dublin, is an honorary degree, and so also are those of D. D. (Doctor of Divinity) and L.L.D. (Doctor of Laws) at the Scotch universities. The popes and the archbishops of Canterbury exercise the right of conferring the degree of Doctor with law and divinity. In the United States seats of learning, while usually conferred after examination, it is common to give an honorary degree to persons of distinction, without regard to their educational fitness.

Doctor's Commons, was a college founded for the Doctors of the Civil Law in London, and was at one time the seat of the court of arches, the archdeacon's court, the court of admiralty, etc. The practitioners in these courts were called advocates and proctors. In 1857 an act was passed empowering the college to sell its property and dissolve, and making the privileges of the proctors common to all solicitors.

Doctors of the Church, a name given to four of the Greek Fathers (Athanasius, Basil, Gregory Nazianzen and Chrysostom) and three of the Latin Fathers (Jerome, Augustine and Gregory the Great). The Roman Catholic Church recognizes others 'Doctors,' including, besides those already mentioned. Ambrose, Hilary, Cyril, John Damascene, Chrysogonus, Leo, Isidore, Peter Damian, Ambelin, Bernard, Thomas Aquinas, Bonaventura, Francis de Sales and Alphonse de Liguori. The title is posthumous.

Doctrinaires (dok-tri-närz), a section of French politicians, represented by the Duc de Broglie, Royer-Collard, Guizot and others, who became prominent after the restoration in 1815. They favored a constitutional monarchy with a balance of powers similar to that which then existed in Britain. In the chambers they thus occupied a place between radicals and ultra-royalists. They received the name of doctrinaires because they were looked upon more as theoretical constitution-makers than practical politicians, and the term is now used with a wider application to political theorists generally.

Doddert (dod'ërt), the common name of the plants of the genus Cuscuta, a group of slender, branched, twining, leafless, pink or white, annual parasites. The seeds germinate on the ground, but the young plant shows its parasitic habit by speedily attaching itself to some other plant, from which it derives all its nourishment. They are chiefly natives of temperate climates, and are often very destructive to flax, clover and other crops. There are fifty species in two genera.
Doddridge (dod’ri), PHILIP, an English Dissenting divine, born in London in 1702. He was an earnest pastor, and the author of many hymns, devotional treatises, etc. The Rise and Progress of Religion in the Soul and The Family Expositor are among the best works he wrote. He died in 1761.

Dodecagon (dō-dek’a-gon) a figure enclosed by twelve equal straight lines.

Dodecahedron (dō-dek’a-hedron), a regular solid contained under twelve equal and regular pentagons, or having twelve equal bases.

Dodecandra (dō-de-kand’ri-a; Greek dōdeka, twelve), in botany, the twelfth class of Linnaeus, comprising plants having twelve to eighteen stamens.

Dodge, MARY ABIGAIL, author, born in Hamilton, Massachusetts, in 1838; died in 1866. Her works, written under the name of Gail Hamilton, are piquant and humorous, including Country Living and Country Thinking, Gala Days, Battle of the Books, Twelve Miles from a Lemon, etc.

Dodge, CHARLES WILDE, an English writer, born in 1833; died in 1868. An English clergyman, and mathematical lecturer in Christ Church College from 1855 to 1881, he wrote works remarkably alien to mathematical pursuits. Under the nom de plume of Lewis Carroll he was the author of the highly popular Alice in Wonderland, Through a Looking Glass, and other works in a fantastic and original vein.

Dodo (dō’dō; Didus ineptus), an extinct genus of birds once abundant on the island of Mauritius, and assigned by naturalists to the order Columbe or pigeons, though an extreme modification of the type. It was a massive, clumsy bird, larger than a swan, covered with down instead of feathers, with short, ill-shaped legs; a strong, bulky, hooked beak, and wings and tail so short as to be useless for flight. Its extinction was due to its organization not being adapted to the new conditions, which colonization and cultivation introduced.

Dodon (dō-dō’nə), a celebrated locality of ancient Greece, in Epirus, where was one of the most ancient Greek oracles. It was a seat of Zeus, whose communications were announced to the priestesses in the rustling of the leaves on its oak tree and the murmuring of water which gushed forth from the earth.

Dodsley (dods’li), ROBERT, an English poet and dramatist, born in 1703; died in 1764. Among his writings was a tragedy, entitled Cleone, which had some success on the stage. A selection of Fables in prose, with an Essay on Fables prefixed, was one of his latest productions. He planned the Annual Register (commenced in 1758); the Collection of Old Plays, twelve vols. 12mo., which now chiefly sustains his name as a publisher; and the Collection of Poems by Different Hands, six vols. 12mo.

Dog, JOHN, and RICHARD ROE, two fictitious personages of the English law whose names were formerly used in a suit of ejectment. This fictitious form of procedure was abolished in 1852.

Doe, a fortified town of Holland, province of Gelderland, at the junction of the Old and New Yssel. Pop. 4442.

Dog (Canis vulgarius), a digitigrade, carnivorous animal, forming the type of the genus Canis, which includes also the wolf, the jackal, and, as a subgenus, the fox. The origin of the dog is a much-debated question, some considering the breed derived from the wolf, an opinion which is based on resemblances of structure, the susceptibility which the wolf shows of being domest-
Dogbane, the fact of the two animals breeding together and producing fertile young, and the equality in the period of gestation. But all these points are subject to exceptions and reservations which make the matter doubtful. It is generally agreed that no trace of the dog is to be found in a primitive state, the dog of India, and dingo of Australia being believed to be wild descendants from domesticated ancestors. Several attempts to make a systematic classification of the varieties of dogs have been made, but without much success, it being difficult in many cases to determine what are to be regarded as types, and what as merely mongrels and cross-breeds. Colonel Hamilton Smith divides dogs into six groups, as follows:—(1) Wolf-dogs, including the Newfoundland, Esquimaux, St. Bernard, shepherd's dog, etc.; (2) Watch-dogs and Castle-dogs, including the German hound, the Danish dog, the matin dog, etc.; (3) Greyhounds, the lurcher, Irish hound, etc.; (4) Hounds, the bloodhound, stag-hound, foxhound, setter, pointer, spaniel, cocker, poodle, etc.; (5) Cur-dogs, including the terrier and its allies; (6) Mastiffs, including the different kinds of mastiffs, bulldog, pug-dog, etc. (See the articles under these names.) Dogs have in the upper jaw six incisors, two strong curved canines and six molars on each side, the first three, which are small and have cutting edges, being called false molars in the lower jaw are six incisors, two canines, and on each side seven molars. The forefoot have five toes the hind-feet four or five, the claws are strong, blunt and formed for digging, and are not retractile. The tail is generally long, and is curled upwards. The female has six to ten mammae; she goes with young nine weeks, as a rule. The young are born blind, their eyes opening in ten to twelve days; their growth ceases at two years of age. The dog commonly lives about ten or twelve years at the most, twenty.

Dogbane (Apocynum androsaemifolium), an American plant found from Canada to Carolina, belonging to the nat. order Apocynaceae (which see). The whole plant is milky; the root is intensely bitter and nauseous, and is employed in America instead of ipecacuanha. Another species (A. Cannabinum) yields a useful fiber, and is known as Canada or Indian hemp.

Dog-cabbage. See Dog's-cabbage.

Dog-cart, a sort of double-seated gig with seats for four persons, those before and those behind sitting back to back it is often furnished with a boot for holding dogs.

Dog-days, the name applied by the ancients to a period of about forty days, the hottest season of the year, at the time of the heliacal rising of Sirius, the dog-star. The time of the rising is now, owing to the precession of the equinoxes, different from what it was to the ancients (July 1); and the dog-days are now counted from July 3 to August 11, that is, twenty days before and twenty days after the heliacal rising.

Doge (dôj; from Latin dux, a leader, later a duke), formerly the title of the first magistrates in the Italian republics of Venice and Genoa. The first doge of Venice elected for life was Paolo Anafesto, in 697 and in Genoa. Simon Boccazera, in 1339. In the former city the dignity was always held for life; in the latter, in later times, only for two years. In both cities the office was abolished by the French in 1797.

Dogfish, a name given to several species of small shark, common around the British Isles. The rough skin of one of the species (Scyllium catillus), the lesser-spotted dogfish, is used by joiners and other artificers in polishing various substances, particularly wood. This species is rarely 3 feet long. S. canicula, the greater dogfish, is from 3 to 5 feet in length. It is blackish-brown in color, marked with numerous small, dark spots. Both species are very voracious and destructive. Their flesh

Small-spotted Dogfish (Scyllium catillus)
Dogger

American seas, and is sometimes used as food. It is fierce and voracious.

Dogger (d o g' e r), a Dutch vessel equipped with two masts and somewhat resembling a ketch. It is used particularly in the German Ocean for the cod and herring fisheries.

Dogger-bank, bank of the German Ocean, celebrated for its cod-fishery. It commences about 36 miles east of Flamborough Head and extends E. N. E. to within 60 miles of Jutland, in some places attaining a breadth of about 90 miles, though it terminates merely in a point, where the shallowest water over it is 9 fathoms.

Dog-grass. Same as Couch-grass.

Dog-lichen, the popular name of a plant, Pettidea canina, common on damp ground, stones and trunks of trees. It was formerly supposed to be a specific for hydrophobia. Also known as ash-colored ground liverwort.

Dogma (dog'ma), an article of religious belief, one of the doctrines of the Christian faith. The history of dogmas, as a branch of theology, exhibits in a historical way the origin and the changes of the various Christian systems of belief, showing what opinions were received by the various sects in different ages of Christianity, the sources of the different creeds, by what arguments they were attacked and supported, what degrees of importance were attached to them in different ages, the circumstances by which they were affected, and the mode in which the dogmas were combined into systems. Lectures on this subject are common in the German universities.

Dogmatics (dog-mat'i kiks), a systematic arrangement of the articles of Christian faith (dogmas), or the branch of theology that deals with them. (See Dogma.) The first attempt to furnish a complete and coherent system of Christian dogmas was made by Origen in the third century.

Dog-parsley, same as fool's parsley.

Dog-rose, the Rosa canina, or wild brier, nat. order Rosaceae. By the Dutch invention of forming standards much use is made of the dog-rose for budding purposes.

Dog's-bane. See Dogbane and Aposy-naceae.

Dog's-cabbage, Dog-Cabbage. Thelyp- sonum cynosbati, a smooth, succulent herb, nat. order Chenopodiaceae, found in the south of Europe.

Though it is slightly acrid and purgative, it is sometimes used as a pot-herb.

Dog's-fennel, a British plant found in cultivated fields (Anthemis Cotula), with acrid, emetic properties. It derives its name of dog's-fennel from some resemblance of its leaf to fennel and from its bad smell.

Dog's-mercury, Mercurius peren- nis, nat. order Euphorbiaceae, an herb common in Britain. It has poisonous properties, and may be made to yield a fugitive blue dye.

Dog's-tail Grass (Cynosurus), a genus of grasses. Cynosurus cristatus is a perennial found wild all over Great Britain in pastures, lawns and parks. Its roots are long and wiry, and descending deep into the ground ensure the herbage against suffering from drought. Its stem is from 1 to 2 feet high and its leaves are slightly hairy.

Dog-star, a name for Sirius, the star that gives their name to the dog-days (which see).

Dog's-tooth Ornament, an architectural ornament or molding consisting of square four-leaved flowers with projecting centers placed in close contact with each other. It is the characteristic decorated molding of Early English architecture.

Dog's-tooth Violet, Erythronium den-s-canis, a liliaceous plant grown in gardens, so called from the appearance of its white bulbs.

Dog-tooth, or CANINE TOOTH, one of the teeth in the human jaw placed between the foretooth and the grinders. They are sharp pointed, resembling a dog's teeth.

Dog-tooth Spar, a form of calcic carbonate or calc-spar found in Derbyshire and other parts of England, and named from a supposed resemblance to a dog's tooth.

Dog-watch, a nautical term distinguishing two watches of four hours each (4 to 6 P.M. and 6 to 8 P.M.). All the other watches count four hours each, and without the introduction of the dog-watches, the same hours would always fall to be kept as watch by the same portion of the crew.

Dogwood, of the genus Cornus, but specifically applied in Britain to C. san-
Doiley (doil'i), a small ornamental napkin used at table to set glasses on at dessert.

Doit, an ancient Scottish coin, of which eight or twelve were equal to a penny sterling. In the Netherlands and Lower Germany there was a coin of similar name and value.

Dolabra (du-lbra), the Latin name for a cet. See Cetaceae.

Dolbear (dol'ber), AMOS EMERSON, scientist, was born at Norwich, Connecticut, in 1837; died in 1910. He was professor at Kentucky University, 1867-74, and afterward of physics and astronomy at Tufts's College. He made inventions in telegraphy and wrote Art of Projecting, The Speaking Telephone, Matter, Ether and Motion, Natural Philosophy, etc.

Dolce (dol'chä), or DOLCEMENTE, in music, an instruction to the performer that the music is to be executed softly and sweetly.

Dolci (dol'chë), CARLO, a celebrated painter of the Florentine school, was born at Florence in 1610, and died there in 1666. His works, principally heads of madonnas, saints, etc., have a character of sweetness and melancholy. Among his chief productions are St. Cecilia at the Organ and Herodias with the Head of John the Baptist, both in the Dresden Gallery, and St. Andrew in Prayer, at the Pitti Gallery.

Dolcinites (dol'chë-nîts), a Christian sect of Piedmont, so named from their leader Dolcino. They arose in 1304 as a protest against the Papacy, but were suppressed by the troops of the Inquisition in 1307.

Doldrums (dol'drums), among seamen, the parts of the ocean near the equator that abound in calms, squalls and light, baffling winds; otherwise known as the horse-latitudes.

Dôle (döl), a town in France, Jura, 28 miles southeast of Dijon. It is of Roman origin, was long the capital of Franche Comté, and has some interesting antiquities. The manufactures are Prussian blue, hosiery, ironware, leather, etc. Pop. (1906) 11,106.

Dole, SANFORD BALLARD, was born in the Hawaiian Islands, of American parentage, in 1844. He studied law, practiced it in Honolulu, and became a member of the Hawaiian legislature and judge of the supreme court. He was a leader in the reform movement of 1887 and on the formation of a republic in 1893 was made its president. When Hawaii was annexed to the United States he continued in power as governor of the islands, and of the Territory of Hawaii in 1900. He has been an United States district judge in the territory since 1903.

Dolcerite (dol'er-it), a variety of traprock composed of augite and labradorite with some titaniferous magnetic iron ore and other minerals.

Dolgelley (dol-geth'le), a town of Wales, capital of Merioneth County, near the foot of Cadair Idris. It has manufactories of woolens, flannels and cloths. Pop. (1911) 2160.

Dolichocephalic (dol-i-ko-sef'a-lık), long-headed; a term used in ethnology to denote those skulls in which the diameter from side to side is less in proportion to the longitudinal diameter (i.e., from front to back) than 8 to 10.

Dolichos (dol'i-kos), a genus of leguminous plants, suborder Papilionacaeae. They are found in the tropical and temperate regions of Asia, Africa and America, and all produce edible legumes. D. sesquipedalis, which is also grown in the south of France, has pods a foot in length and containing seven to ten kidney-shaped seeds. D. lignosus is one of the most common kidney beans in India. D. tuberdus of Martinique has a fleshy, tuberous root which is an article of food.

Dolichosaurus (dol-i-ko-sa'rus; long-snout snake) is a real snake-like reptile found in the chalk, whose remains indicate a creature of aquatic habits, from 2 to 3 feet in length.

Dollar (dol'ær), a silver or gold coin of the United States, of the value of 100 cents. The same name is also given to coins of the same general weight and value, though differing somewhat in different countries, current in Mexico, a great part of South America, Singapore, the Philippine Islands, etc. The name is from the Dutch (also Danish and Swedish) daal, from Ger. thaler, so named from Ger. thale, a daal, because first coined in Joachim's Thal, in Bohemia, in 1518. The sign$, used in
Dollart

This country to signify a dollar, is supposed to date from the time of the pillar dollar of Spain. It was known as the "Piece of Eight," meaning 8 reals, the curve being a partial representation of the figure 8. The two vertical strokes are thought to represent the Pillars of Hercules, which were stamped upon the coin itself.

Dollart (dol'art), The, a gulf of the German Ocean, at the mouth of the Elbe, between the Dutch province of Groningen and Hanover. It was originally dry land, and was formed by irruptions of the sea, which took place in 1277 and 1530, overwhelming thirty-four large villages and numerous hamlets.

Döllinger (de-ul'ing-er), Johann Joseph Ignaz, a celebrated German theologian and leader of the Old Catholic party, born at Bayreuth, in Bavaria, in 1799. In 1822 he entered the church, and soon after published The Doctrine of the Eucharist during the First Three Centuries, a work which won him the position of lecturer on church history at the University of Munich. In later years he took an active part in the political struggles of the time as representative of the university in the Bavarian parliament, and as delegate at the Diet of Frankfort voted for the total separation of church and state. In 1861 he delivered a course of lectures, in which he attacked the temporal power of the papacy. But it was first at the Ecumenical Council of 1869-70 that Dr. Döllinger became famous over Europe by his opposition to the doctrine of papal infallibility. In consequence of his opposition to the Vatican decrees he was excommunicated in 1871 by the Archbishop of Munich. A few months later he was elected rector of the University of Munich, and in 1873 rector of the Royal Academy of Science. Among his numerous works we may notice Origins of Christianity, A Sketch of Luther, Christianity and the Church, etc. He died in 1890.

Dollond (dol'ond), John, an English optician of French descent, born in 1706; died in 1761. He devoted his attention to the improvement of refracting telescopes, and succeeded in constructing object-glasses in which the refraction of the rays of light was corrected. Subsequent members of the family have distinguished themselves in optics, astronomy, etc.

Dolman (dol'man), a long robe worn by the Turks as an upper garment. It is open in front, and has narrow sleeves. It has given its name to a kind of loose jacket worn by ladies.

Dolmen (dol'men), a name sometimes used as a synonym of "cromlech," sometimes in a distinctive sense. Sir John Lubbock maintains that cromlech should be applied to a stone circle, dolmen to a stone chamber, such circle or chamber consisting of huge stones set up often in prehistoric times for religious or sepulchral purposes or as memorials of some important event. See Cromlech.

Dolmonieu (dol-o-myu'), Dédat Guy Silvain Tancrède Grasset de, a French geologist and mineralogist, born in 1750 at Dolomieu (Isère). After some years of military service he devoted himself to geological researches. He accompanied the French expedition to Egypt, but was shipwrecked on his return off the coast of Taranto, and imprisoned and harshly treated by the Neapolitan government. He died in 1801. Among his works are Voyages aux îles de Lipari, etc. (1783); Sur le Tremblement de Terre de la Calabre (1784); Philosophie minéralogique (1802).

Dolomite (dol'um-it), a mineral, also called magnesian limestone. It is composed of carbonate of calcium and carbonate of magnesium, and varies from gray or yellowish white to yellowish brown. It abounds in the Apennines, Tyrol, Switzerland, Tuscany, North America, England, etc. A variety called bitternspur, and sometimes rhombespur, is found in crystals having the form of a rhomboid; color grayish, yellowish, or reddish brown, easily scratched with the knife, and semitransparent. A second variety is denominated pearlspur, which has crystals of curvilinear faces and a pearly luster.

Dolomite Mountains, Dolomites, a group of European mountains belonging partly to Tyrol, partly to North Italy, having the Piave and Rienz on the east and north; the Adige and Eisack on the west. They are named from the prevalence of the mineral dolomite, and present most interesting and picturesque scenery, the peaks being endlessly varied in form. The highest summit is the Cima del Marmolata (10,972 ft.); other peaks are the Scaunes, the Cimon della Pala, the Langkofel, etc.

Dolphin (dol'fin; Delphinus), a cetaceous animal, forming the type of family (Delphinide) which includes also the porpoises and narwhal. Dolphins are cosmopolite animals, inhabiting every sea from the equator to
the poles; they are gregarious, and swim with extraordinary velocity. The common dolphin (Delphinus delphis) measures from 6 to 10 feet in length, has a long, sharp snout with numerous, nearly conical teeth in both jaws; its flesh is coarse, rank and disagreeable, but is used by the Laplanders as food. It lives on fish, mollusca, etc., and often may be seen in numbers around shoals of herring. The animal has to come to the surface at short intervals to breathe. The blowhole is of a semilunar form, with a kind of valvular apparatus, and opens on the vertex, nearly over the eyes. The structure of the ear renders the sense of hearing very acute, and the animal is observed to be attracted by regular or harmonious sounds. One or two young are produced by the female, who suckles and watches them with great care and anxiety, long after they have acquired considerable size. Compactness and strength are the characteristics of the genus. The name is also commonly but improperly given to a fish, Coryphaena hippurus, a member of the mackerel family, the beauty of whose colors when dying has been much celebrated by poets. They abound within the tropics, are about 4 or 5 feet long, very swift in swimming, and are used as food, though said sometimes to be poisonous.

Dom, a Portuguese title corresponding with the Spanish Don.

Domain (do-mæn), same as Domus (which see); also applied especially to crown lands or government lands.—Right of eminent domain, the dominion of the sovereign power over all the property within the state, by which it is entitled to appropriate any part necessary to the public good, compensation being given.

Dombrowski (d o m b r o v'skë), Jan Henryk, a Polish general, distinguished in the wars of Napoleon, was born in 1755. He supported the rising of the Poles under Kosciusko in 1794. In 1796 he entered the service of France, and at the head of a Polish legion rendered signal services in Italy in 1796–1801. He took a distinguished part in the invasion of Russia in 1812, and also in the campaign of 1813. After Napoleon's abdication he returned to Poland and the year following was made a Polish senator by Alexander I. He died in 1818.

Dome (döm), a vaulted roof of spherical or other curvature, covering a building or part of it, and forming a common feature in Byzantine and also in Renaissance architecture. Cupola is also used as a synonym, or is applied to the interior, dome being applied to the exterior. (See Cupola.) Most modern domes are semieliptical in vertical section, and are constructed of timber; but the ancient domes were nearly hemispherical and constructed of stone. Of domes the finest, without any comparison, ancient or modern, is that of the Rotunda or Pantheon at Rome (142½ feet internal diameter and 143 feet internal height).

Section of Dome of San Pietro in Montorio. Rome at end of Fifteenth Century. Erected under Augustus, and still perfect. Among others the most noteworthy are St. Sophia at Constantinople (104 × 201 feet), the cathedral of Santa Maria del Fiore at Florence (139 × 310 feet), St. Peter's at Rome (159 × 330 feet), St. Paul's London (112 × 215 feet), the Hotel des Invalides (80 × 173 feet), and the church of St. Geneviève at Paris (67 × 190 feet). The figures represent the internal diameter and height in English feet. The finest dome in America is that of the Capitol at Washington, built of cast-iron.

Domenichino (d o m e n i k o d o m e n i k o), Domenico Zampieri, an Italian painter of great eminence, of
he Lombard school, born at Bologna in 1581 or 1582. He studied under Annibale Carracci, and afterwards went to Rome, where he became painter to Pope Gregory XV. Among his best works are the Kommunion of St. Jerome in the Vatican Museum, the History of Apollo, the Martyrdom of St. Agnes and the Triumph of David. He died at Naples in 1641.

Domesday Book (or Doomsday), a book containing a survey of all the lands in England, compiled in the reign and by the order of William the Conqueror. The survey was made by commissioners, who collected the information in each district from a sworn jury consisting of sheriffs, lords of manors, prebendaries, bailiffs, villeins—all the classes, in short, interested in the matter. The extent, tenure, value and proprietorship of the land in each district, the state of culture, and in some cases the number of tenants, villeins, serfs, were the matters chiefly recorded. The survey was completed within a year. Northumberland, Durham, Cumberland and Westmoreland were not included in the survey, probably for the reason that William’s authority was not then (1086) settled in those parts. The Domesday Book consists of two volumes, each folio and one quarto. It has been twice republished, the last time (1801-9), in perfect facsimiles of the original.

Domestic Animals, such as are shorn and kept as men, and are to some extent in a name state; as the dog, cat, ox, sheep, wine, horse, ass, elephant, camel, llama, reindeer, etc.

Domfront (don-fron), a town of France, dep. Orne, picturesquely situated on a steep rock above the Varenne, 35 miles w. n. w. of Alençon. Pop. (1906) 2215.

Domicile (dom’i-sil), in law, the place where a person has a home or established residence. Domicile is often an important question in determining the efficacy of legal citations, the validity of marriage, the right of succession to property, etc. For some purposes what is called a temporary domicile is sufficient, but in questions of marriage and succession it is the permanent domicile that determines the decision. A permanent domicile may be constituted by birth, by choice, or by operation of the law. To constitute a domicile by choice both actual residence and the intention to make it the permanent home are required. It is a legal principle that the wife takes the domicile of her husband.

As a general rule the old domicile, and especially the domicile of origin, continues till a new one has been acquired.

Dominant (dom’i-nant), in music, the fifth tone of the diatonic scale, and which assumes the character of a keynote itself when there is a modulation into the first sharp remove. Thus, C is the dominant of the scale of C, and D. the dominant of the scale of G.—Dominant chord, in music, that which is formed by grouping three tones, rising gradually by intervals of a third from the dominant or fifth tone of the scale. It occurs almost invariably immediately before the tonic chord which closes the perfect cadence.

Domingo (dó-mén-gö), S. A. N., capital of the Dominican Republic (or San Domingo) in the island of Hayti. It lies on the southeast coast at the mouth of the Ozama, and has a commodious port. It is the oldest European city in the New World, having been founded in 1496 by Bartholomew Columbus. Pop. est. 20,000 to 25,000.

Dominic (dom’i-nik), Saint, the founder of the order of the Dominicans, was born in 1170 at Calahorra, in Old Castile. He early distinguished himself by his zeal in the service of the reform of the Church. He made a pilgrimage to the Holy Land, was ordained, and went to Rome to obtain permission to found a religious institution in the style of the Cistercian monks. He was received by Pope Honorius III, and the order of the Dominicans was created. In 1215 he went to Rome to obtain the sanction of Pope Innocent III to erect the order into a new order of preaching friars. His request was only partially granted, and it was the succeeding pope, Honorius III, who first recognized the importance of a preaching order, and conferred full privileges on the Dominicans. He also appointed Dominic Master of the Sacred Palace or court preacher to the Vatican, an office which is still held by one of the order. Dominic died at Bologna in 1221, and was canonized in 1234 by Pope Gregory IX. St. Dominic is usually considered the founder of the Inquisition, which is supposed to have originated with his mission to the Albigenses; but his claim is denied, on the ground that two Dominican monks were appointed inquisitors in 1198.

Dominica (dom’i-né’ká), a British West India island, so named because discovered by Columbus on a Sunday (Sp. domingo), a member of the united colony of the Leeward Islands between Martinique and Guadeloupe. It is about 20 miles in length,
north to south, and 12 miles in breadth east to west area, 291 square miles. It is rugged and mountainous, but it contains many fertile valleys and is well watered. The shores are but little indented, and are entirely without harbors; but on the west side there are several good anchorages and bays. The principal exports consist of sugar, molasses, cocoa and lime-juice. The imports and exports amount each to about $250,000 annually. Dominica was ceded by France to Great Britain in 1763. Roseau is the capital. Pop. 28,894, largely negroes and including about 300 descendants of the aboriginal Caribs.

Dominical Letter (do-min’-kal), in chronology, properly called Sunday letter, one of the seven letters of the alphabet, A B C D E F G, used in almanacs, ephemerides, etc., to mark the first seven days of the year and all consecutive sets of seven days to the end of the year, so that the letter for Sunday will always be the same. If the number of days in the year were divisible by seven without remainder, then the year would constantly begin with the same day of the week; but as it is the year begins and ends on the same day, and therefore the next year will begin on the day following, and on leap years two days following, so that the same series is not repeated till after four times seven, or twenty-eight years.

Dominican Republic (dō-min’-i-kan), or SAN DOMINGO, a republic occupying the eastern portion of the island of Hayti; area, about 18,000 square miles. It is fertile and exports mahogany, sugar, tobacco, cocoa, etc., but its resources are as yet but little developed. It formerly belonged to Spain, and is the oldest colonial settlement in America. Its inhabitants are chiefly negroes and mulattoes, and the government is in the hands of the negroes. Pop. estimated at 500,000. See Hayti.

Dominicans (do-min’-i-kans), called also predicants, or preaching friars (predicatores), derived their name from their founder, St. Domin. At their origin (1216, at Toulouse) they were governed by the rule of St. Augustine, perpetual silence, poverty and fasting being enjoined upon them; and the principal object of their institution was to preach against heretics. Their distinctive dress consists of a white habit and scapular with a large black mantle, and hence they have been commonly known as Black Friars. They were almost from the first a mendicant order. They spread rapidly not only in Europe, but in Asia, Africa and America. In England there were fifty-eight Dominican houses at the dissolution of the monasteries, and the Blackfriars locality in London took its name from one of their establishments. They produced some famous scholars, such as Albertus Magnus and Thomas Aquinas, and became formidable as managers of the Inquisition, which was committed exclusively to them in Spain, Portugal and Italy. In 1425 they obtained permission to receive donations, and ceased to belong to the mendicant orders, paying more attention to polemics and theological science. With the Franciscans, their great rivals, they divided the honor of ruling in church and state till the sixteenth century, when the Jesuits gradually superseded them in the schools and courts. They obtained new importance in 1620 by being appointed to the censorship of books for the church. Among notable Dominicans we may mention Savonarola, Las Casas and Lacerdaire. There are establishments of the Dominicans in England, Ireland and the United States.

Dominium (dō-min’-i-um), a term in the Roman law used to signify full ownership of a thing.

Domino (dom’-i-no), formerly a dress worn by priests in the winter, which, reaching no lower than the shoulders, served to protect the face and head from the weather. At present it is a masquerade dress worn by gentlemen and ladies, consisting of a long silk mantle with wide sleeves and a masking hood. The name is also given to a half-mask formerly worn on the face by ladies when traveling or at masquerades.
Dominoes, a game played with small, flat, rectangular pieces of ivory, about twice as long as they are broad. They are marked with spots varying in number. When one player leads by laying down a domino, the next must follow by placing alongside of it another which has the same number of spots on one of its sides. Thus, if the first player lays down 6-4, the second may reply with 4-2, or 6-3, etc.; in the former case he must turn in the 4, placing it beside the 4 of the first domino, so that the numbers remaining out will be 6-2; in the latter case he must turn in the 6 to the 6 in like manner, leaving 4-3, to which his opponent must now respond. The player who cannot follow suit loses his turn, and the object of the game is to get rid of all the dominoes in hand, or to hold fewer spots than your opponent when the game is exhausted by neither being able to play.

Domitian (do-mish'e-an) or in full Titus Flavius Domitianus Augustus, Roman emperor, son of Vespasian, and brother of Titus, was born in A.D. 51, and in 81 succeeded to the throne. At first he ruled with a show of moderation and justice, but soon returned to the cruelty and excesses for which his youth had been notorious. He was as vain as he was cruel, and after an ineffective expedition against the Catti, carried a multitude of his slaves, dressed like Germans, in triumph to the city. He executed great numbers of the chief citizens, and assumed the titles of Lord and God. He established the most stringent laws against high treason, which enabled almost anything to be construed into this crime. At length a conspiracy, in which his wife Domitia took part, was formed against him, and he was assassinated in his bedroom, in A.D. 96.

Domone (dō'mō), or Domone D'Ossola, a town of North Italy, province of Novara, in the center of a plain on the great Simpson road. Pop. about 3000.

Domremy la Pucelle (dōn-rē-mē lä pū-sēl), the birthplace of Joan of Arc, a small French village, department of the Vosges, seven miles N. of Neufchâteau. The house is still shown there in which she was born, and in the neighborhood is the monument erected to her memory.

Don, or Doone (dō'nē; ancient Tōna), a river of Russia, which issues from Lake Ivan-Ozeru, in the government of Tula; and flows s. W. to within 37 miles of the Volga, where it turns abruptly s. W. for 236 miles, and falls into the Sea of Azof; whole course nearly 1300 miles. The chief tributaries are: right bank, the Donetz and Voronej; left, the Khoper and Manitsch. Although not admitting vessels of much draught, the Don carries a large traffic, especially during the spring floods, and a canal connects it with the Volga system of navigation. It has also very extensive and productive fisheries.

Don (don), a river of Scotland, County Aberdeen, rising near the Bankshire border. It flows tortuously e. through the whole breadth of Aberdeenshire, and falls into the North Sea a little to the north of Aberdeen, after a total course of 82 miles. Its salmon fisheries are of considerable value.—Also, a river of Yorkshire, England, which rises near Cheshire, and joins the Ouse after a course of about 70 miles. It is navigable for small craft to Sheffield.

Dom (Latin, dominus, a lord or master), a Spanish title of honor, originally given only to the highest nobility, afterwards to all the nobles, and finally used indiscriminately as a title of courtesy. It corresponds with the Portuguese Dom. During the Spanish occupation it was introduced and became naturalised in some parts of Italy, and was particularly applied to the priests.

Donaldson (don'al-sun), John Wil- liam, an English scholar, born in London in 1801. He studied at London University and at Trinity College, Cambridge, where he was elected a fellow. His first work was The Theater of the Greeks, a work showing much erudition. In 1839 he published The New Crotalus, which was among the earliest attempts to bring the philological literature of the Continent within the reach of the English student. In 1844 appeared the first edition of Var- romanian, a work on Latin similar in
Donatello

scope to the *Cratylus*. Among his other writings are grammars of the Hebrew, Greek and Latin languages. He died in 1861.

**Donatello** (don-át’le-lo, properly *Donatotto di Betto Bardis*), one of the revivers of the art of sculpture in Italy, was born at Florence between 1382 and 1387. His first great works in marble were statues of St. Peter and St. Mark, in the church of St. Michael in his native town, in an outside niche of which is also his famous statue of St. George. Along with his friend Brunelleschi he made a journey to Rome to study its art treasures. On his return he executed for his patrons, Cosmo and Lorenzo de’ Medici, a marble monument to their father and mother, which is of high merit. Statues of St. John, of Judith, David and St. Cecilia are among his leading works. He died at Florence in 1466.

**Donatio mortis causa**, is a gift of personal property made in prospect of the death of the donor and consummated by that event.

**Donati’s Comet** (dó-ná’ti), so called from the Italian astronomer Donati, who first observed it in June, 1858. Next to the comet of 1811 it is the most brilliant that appeared during the century. It was nearest the earth on October 10, 1858.

**Donatists** of African schismatics of the fourth century, so named from their founder Donatus, Bishop of Casa Nigra in Numidia, who taught that though Christ was of the same substance with the Father, yet that he was less than the Father; that the Catholic Church was not infallible, but had erred in his time and become practically extinct, and that he was to be the restorer of it. All joining the sect required to be rebaptized, baptism by the impure church being invalid.

**Donatus** (do-ná’tus), *Ælius*, a Roman grammarian and commentator, born in A.D. 333. He was the preceptor of St. Jerome, wrote notes on Virgil and Terence, and a grammar of the Latin language so universally used in the middle ages that ‘Donat’ became a common term for grammar or primer of instruction.

**Donau** (don-ou). See *Danube*.

**Donaueschingen** (dônou-ah’ing-en), a town of Baden. Germany, 29 miles east by south of Freiburg. It contains the Prince of Fürstenberg’s palace, in the garden of which is a basin of clear sparkling water that is asserted to be the true source of the Danube. Pop. 5000.

**Donauwörth** (dôn-ou-würt), a town of Bavaria, at the confluence of the Wörnitz and Danube. It was formerly a free imperial town, and was stormed by the Swedes under Gustavus Adolphus in the Thirty Years’ war, 1632. Pop. 5,000.

**Donax** (dôn-ak’), *Arundo donax*, a species of grass or reed inhabiting the southern parts of Europe: it grows to a great height and is used for fishing-rods, etc.

**Don Benito** (dôn bá-né’tö), a town of Spain, province of Badajoz. It has manufactures of woolens, and a trade in cattle, grain, etc. Pop. 10,565.

**Doncaster** (dôn’kas-ter), a municipal borough and market town of England, West Riding of Yorkshire, on the river Don, well built, with straight, broad streets. The parish church, with its tower 170 feet high, Christ Church, the town hall and the theater are among the chief public buildings. It has manufactures of ropes, canvas, machinery, etc. It has been long celebrated for its annual races, now held in the middle of September. Doncaster was originally a Roman station on the line of the old Roman Watling Street. Pop. (1911) 30,630.

**Dondrah Head** (dôn’dra), the southern extremity of the island of Ceylon. It was the site during part of the seventh century of the Singhalese capital, numerous remains of which are still to be found.

**Donegal** (dôn’jal), a maritime county of Ireland, province of Ulster, bounded n. and w. by the Atlantic Ocean; area, 1876 sq. miles, of which about a fifth is under crops. The coast is indented with numerous bays, the most remarkable being Lough Swilly. It is the most mountainous county in Ireland, but has some fine fertile valleys. Mount Errigal, the loftiest summit, is about 4600 feet high. The streams and lakes are small, but numerous and abounding in fish. The climate is moist, the subsoil chiefly granite, mica slate and limestone, and the principal crops oats, potatoes and flax. Spade husbandry is much employed, and agriculture generally is in a very backward state. The manufactures are limited, and consist chiefly of linen cloth, woolen stockings and worked muslin. The fisheries are extensive and valuable, and form the chief employment of the inhabitants of the coast and islands. Grain, butter
and eggs are exported. The minerals include marble, lead, copper, etc., but are not wrought to advantage. Pop. 173,722.—Donnal, the county town, is a small seaport on the bay of the same name, at the mouth of the river Esk. Pop. 1214.

Donetz (do'nez), a Russian river which rises in the government of Kursk, flows south and east, forming the boundary of several governements, and, after a course of 400 miles, joins the Don.

Dongola (don'gō-la), a district of Upper Nubia, extending on both sides of the Nile from about lat. 18° to lat. 20° N. It formerly belonged to Egypt and was the seat of a pasha, but after the evacuation of all the country south of Wady Halfa in 1886, by the Egyptian government, it was left in an unsettled state. Its chief products are dates, cotton, indigo and maize. The population is a mixture of Arabs and indigenous Nubians. Its chief town is Dongola or El Ordeh, on the left bank of the Nile. Pop. 10,000.

Doni (do'ni), a clumsy kind of boat used on the coast of Coromandel and Ceylon; sometimes decked and occasionally furnished with an outrigger. The donis are about 70 feet long, 20 feet broad, and 12 feet deep, have one mast and a lug-sail and are navigated in fine weather only.

Donizetti (don-e-zet'ē, or do-nil-zet'-te), Gaetano, an Italian composer, born in 1798, at Bergamo. He studied music at Bologna under the distinguished Abbé Mattei. His first opera, Enrico dì Borgogna, was represented at Venice in 1818. In 1822 his Zorziide dì Granata gained him the honor of being crowned on the Capitol. In 1830 appeared his Anna Bolena, which first, along with Lucrezia Borgia and Lucia dì Lammermoor—the latter his masterpiece—acquired for him an European fame. In 1835 Donizetti was appointed professor of counterpoint at the Royal College of Naples, but removed in 1840 to Paris, bringing with him three new operas, Les Martyrs, La Favorita and La Fille du Régiment, of which the last two are among his most popular productions. Of his other operas none except Linda dì Chamouni (1842) and Don Pasquale (1843) achieved any special triumph, though he wrote in all sixty-four operas. He died in 1848.

Donjon (do'njon), the principal tower of a castle, situated in the innermost court or bailey, which the garrison could make the last line of defense. Its lower part was commonly used as a prison. See Casle.

Don Juan (Sp. pron. ho'-án'), the hero of a Spanish legend which seems to have had some historical basis in the history of a member of the noble family of Tenorio at Seville. Ac-

In the time of Henry VIII. A, the Donjon.

According to the legend, Don Juan was a libertine of the most reckless character. An attempt to seduce the daughter of a governor of Seville brought the indignant father and the profligate don into deadly conflict, in which the former was slain. Don Juan afterwards, in a spirit of wild mockery, goes to the grave of the murdered man and invites the statue of him erected there to a revel. To the terror of Don Juan the 'stony guest' actually appears at the table to bear him away to the infernal world. The legend has furnished the subject for many dramas and operas. The most famous of the latter is Mozart's Don Giovanni, which has made the story familiar to everybody. Among the former are Bur-lador de Sevilla, by Telles, Don Juan ou Le Festin de Pierre, by Molière, and The Libertine by Shadwell. The Don Juan of Byron bears no relation to the old story but in name and in the libertine character of the hero.

Donkey (dōn'gē), a domesticated ass; so called from dun, in relation to its color.

Donkey-engine (dōn'gē), a small engine used in various operations where no great power is required. Thus, a donkey-engine is often stationed on the deck of a ship to work a crane for loading and unloading.

Donne (dōn'), John, a celebrated poet and divine, was the son of a merchant of London, in which city he was born in 1573. He studied both at Oxford and Cambridge. In his nineteenth year he abjured the Catholic religion, and became secretary to the Lord Chancellor Ellesmere, but finally lost his
office by a clandestine marriage with his patron's niece. The young couple were in consequence reduced to great distress, till his father-in-law relented so far as to give his daughter a moderate portion. By the desire of King James, Donne took orders, and, settling in London, was made preacher of Lincoln's Inn. In 1621 he was appointed Dean of St. Paul's. He was chosen prolocutor to the convocation in 1623-24. He died in 1631, and was interred in St. Paul's. As a poet, and the precursor of Cowley, Donne may be deemed the founder of what Dr. Johnson calls "metaphysical class of poets. Abounding in thought, this school generally neglected versification, and that of Dr. Donne was particularly harsh and unmusical. His style is quaint and pedantic; but he displays sound learning, deep thinking and originality of manner. Besides the works already mentioned, he wrote Letters, Sermons, Essays on Divinity and other pieces.

Donnelly (don'el-i), Ignatius, author; born at Philadelphia, Pennsylvania, in 1831. For many years he resided in Minnesota, several times representing that State in Congress. He wrote Atlantis, Ragnarok and other works, and claimed to have found a cryptogram in Shakespeare's plays which, in substance, transferred their authorship to Francis Bacon. He died in 1901.

Donnybrook (don'ni-brök), a village of Ireland, now mostly in the parliamentary borough of Dublin. Its famous fair, which seldom passed off without riot and bloodshed, was abolished in 1855.

Donora (dō-nō'ra), a borough in Washington Co., Pennsylvania. Has wire, nail and fence mills, blast furnaces, etc. Pop. 5174.

Don Quixote (Sp. pron. kē-kō'tē), the title of a famous romance by Cervantes. (See Cervantes.) The name of the hero, Don Quixote, is used as a synonym for foolish knight-errantry or extravagant generosity.

Doo (dō), George Thomas, an English engraver, born in 1800; died in 1886. He became early known as an excellent artist, and was appointed historical engraver to William IV, and subsequently to Queen Victoria. He was elected an associate of the Royal Academy in 1856, and next year academician.

Doom Palm (dōm). See Down Palm.

Doomsday Book (dōm'sdāy). See Domesday Book.

Doomster (dōm'ster), a name formerly given in Scotland to the public executioner. See Deemster.

Doon (dōn), a river in Ayrshire, Scotland, which, after a course of 30 miles, falls into the Firth of Clyde. It is celebrated in the poems of Burns.

Dor (dōr), Doms, the black beetle, Geotrupes stercorarius, one of the most common of beetles, of a stout form, less than 1 inch long, black with metallic reflections. It may often be heard droning through the air towards the close of the summer twilight. See Dung Beetle.

Dora (dō'ra), the name of two rivers in Northern Italy, both tributaries of the Po. The D. Balza rises on the southern slopes of the Mont Blanc group and falls, after a course of about 100 miles, into the Po below Châtillon; the D. Riparia, about 75 miles long, rises in the Cottian Alps, and joins the Po below Turin.

Dora D'Istria. See Griza, Helena.

Dorak (dō'rak), a town of Persia, province Khusistan, 300 miles s. w. of Bagdad. It has a considerable commerce, this being aided by a canal which connects the Dorak with the Karun. Pop. 6000.

Doran (dō'ran), John, an English writer, born in 1807; died in 1878. He began writing when a mere youth, and produced a great number of books, among them being Lives of the Queens of England of the House of Hanover, Monarchs retired from Business, History of Court Fools, The Princess of Wales, Their Majesties' Servants (a history of the English stage from Betterton to Kean). A Lady of the Last Century (Mrs. Montague), London in Jacobite Times.

Dorcas Society (dōr'kas, from the Dorcas mentioned in Acts, ix), an association generally composed of ladies for supplying clothes to the poor. Frequently the members of the society meet at stated times and work in common. Partial payment is generally required from all recipients except the very poor.

Dorchester (dör'ches-ter), a municipal borough of England, chief town of Dorsetshire, 118 miles s. w. of London. There are large cavalry and infantry barracks a little to the west of the town. The trade consists chiefly in agricultural produce. Dorchester was an important Roman station (Durnovaria), and many interesting Roman remains are still to be found in the vicinity. It was a parliamentary borough till
Dordogne, when it was merged in the county. op. (1911) 9642.

Dordogne (dor'don), a department of France, which includes the greater part of the ancient province of Périgord, and small portions of Limousin, Angoumois and Saintonge. Area, 560 square miles, of which about a third is fit for the plow. The chief minerals are iron, which is abundant, slate, limestone, marble and other stone. Mining, iron manufacture, etc., are carried on to a considerable extent, and there are a number of vineyards. The climate is mild but somewhat changeable. Pop. 1906) 447,052.—The river DORDOGNE, its principal river of the department, rises on the banks of the Puy-de-Sancy, flows 196 miles, and after a course of 290 miles unites with the Garonne in forming the Gironde.

Dordrecht (dor'drekt). See Dort.

Doré (dor-ré), Paul Gustave, a prolific French draughtsman and painter, born at Strasbourg, January 6, 1833. He studied at Paris, contributing, when only sixteen years of age, comic sketches to the Journal Pour Rire. He distinguished himself greatly as an illustrator of books. His illustrations of Gabinet des Peintures, of Perrault's Tales, Sue's Wandering Jew, Dante's Divina Commedia, and Cervantes' Don Quixote displayed great fertility of invention, and the fine fantasy of his landscapes and the dramatic effectiveness of his groups. In later years Doré also won fame as a sculptor. He died in 1883.

Doree (dor're), a fish. See Dory.

Dorema (dor-re'ma), a genus of plants, nat. ord. Umbelliferae. D. ammoniacum, a Persian species, yields the ammoniacum of commerce, a milky juice that exudes from punctures on the stem and dries in little 'tears.'

Doria (dor're-á), one of the most powerful families of Genoa, became distinguished about the beginning of the sixteenth century, and shared with three other leading families, the Fieschi, Grimaldi and Spinola, the early government of the republic. Among the older heroes of this family are Omero Doria, who, in 1284, commanded the Genoese fleet which at Meloria annihilated the power of Pisa; Lamba Doria, who, in 1296, defeated the Venetian Dandolo at the naval battle of Cursola; Paganino Doria, who, in the middle of the fourteenth century, distinguished himself by great victories over the Venetians. But the greatest name of the Dorias is that of Andrea, born at Oneglia in 1466, of a younger branch of the family. After serving some time as a condottiere with the princes of Southern Italy, he was entrusted by the Genoese with the reconstruction of their fleet. Disagreement with the Genoese factions drove him to take service with Francis I of France, in which he highly distinguished himself, and in 1527 he took Genoa in name of the French king. But, being displeased with the projects of Francis for reducing Genoa to a place of secondary importance, he went over to the service of Charles V (1529), carrying with him the whole influence and resources of Genoa. He reestablished order in Genoa, reorganized the government, and although refusing the title of doge practically controlled its affairs to the end of his life. As imperial admiral he performed many services for Charles, clearing the seas of Moorish pirates and assisting the emperor in his expeditions to Tunis and Algiers. In 1547 his authority was threatened by the conspiracy of Fieschi, and he narrowly escaped assassination in the tumult. He died in 1560.

Dorians (dor-lans), one of the four great branches of the Greek nation who migrated from Thessaly southwards, settling for a time in the mountainous district of Doris in Northern Greece and finally in Peloponnesus. Their migration to the latter was said to have taken place in B.C. 1104; and as among their leaders were certain descendants of Hercules (or Heracles), it was known as the return of the Hercules. The Dorians ruled in Sparta with great renown as a strong and warlike people, though less cultivated than the other Greeks in arts and letters. Their laws were severe and rigid, as typified in the codes of the great Doric legislators Minos and Lycurgus. (See Sparta.)

—The Doric dialect was characterized by its broadness and hardness, yet, on account of its venerable and antique style, was often used in solemn odes and choruses.

Doric Mood (dor'ik), or Dorico Mode, in music, was of a grave and manly character, adapted both to religious services and war.
Doric Order, in architecture, is the oldest, strongest and simplest of the three Greek orders, and the one that is best represented among the remains of ancient Greek architecture. The Doric column is distinguished by its want of a base (in the more ancient examples, at least), by the small number of its flutings, and by its massive proportions, the true Greek Doric having the height of its pillars six times that of the diameter. The capital was small and simple, and the architrave, frieze and cornice were rather plain and massive.

Dorigny (do-re-nye), the name of several French painters and engravers. Michael, born in 1617, became professor in the Academy of Paris, and died in 1665. Louis, son of the preceding, was born in 1654, settled in Italy, and died in 1742. Sir Nicholas, brother of Louis, born in 1698 at Paris, was the most celebrated of the three. He spent eight years in engraving the famous cartoons of Raphael at Hampton Court, and was knighted by George I. He died in 1746.

Doris (dor'is), anciently a small and mountainous region of Northern Greece, at one time the abode of the Dorians (which see).

Doris. See Sea-lemon.

Dorking (dork'ing), a town of England, county of Surrey, 22 miles s. w. of London, largely consisting of villa residences. Large numbers of fowls, known as Dorkings, of an excellent breed, having five claws on the foot, are reared here, and sent to the London markets. Pop. (1911) 7850.

Dormant State (dor'mant), a state of torpidity in which certain animals pass a portion of the year. In cold and temperate climates this period of long sleep takes place during the winter months, and is properly called hibernation. It commences when the food of the animal begins to get scarce, continues for a longer or shorter period, and is deeper or lighter according to the habits and constitution of the animal. Bats, bears, some animals of the rodent order, such as the porcupine, the dormouse, some squirrels, etc., all the animals belonging to the classes of Amphibia and Reptilia, such as tortoises, lizards, snakes, frogs, etc., and many species of molluscs and insects, hibernate more or less completely, retiring to suitable places of concealment—the bat to dark caves, the hedgehog to fern-brakes, snakes to holes in trees, etc. During hibernation there is a great decrease of heat in the bodies of the animals, the temperature sometimes sinking to 40° or even 20° Fahr., or in general to a point a little above that of the surrounding atmosphere. The respiration as well as the pulsation of the heart is exceedingly slow, and the irritability of the animal often so low that in some cases it can be awakened only by strong electric shocks. With frogs and amphibious reptiles the dormant state is very common, and if the temperature is kept low by artificial means they may remain dormant for years. The term estivation has been used to describe a similar condition into which certain animals, such as serpents and crocodiles, in tropical countries pass during the hottest months of the year.

Dormer Windows (dor'mer), are windows inserted in the inclined plane of a sloping roof, on a frame rising vertically above the rafters. They are named dormer windows because they are found chiefly in attic bedrooms (Fr. dormir, to sleep).

Dormouse (dor'mous; m'yor's), a genus of mammiferous quadrupeds, of the order Rodentia. These little animals, which appear to be intermediate between the squirrels and the mice, inhabit temperate and warm countries, and subsist entirely on vegetable food. Their pace is a kind of leap, but they have not the activity of squirrels. While feeding they sit upright and carry the food to their mouth with their paws. The dormice pass the winter in a lethargic or torpid state, reviving only for a short time on a warm sunny day, when they take a little of their hoarded stores and then relapse into the dormant state. They bring forth three or four at a birth.

Dornbirn (dörn'birn), a manufacturing town of Austria in Vorarlberg, about 6 miles from the Lake of Constance. Pop. 18,062.

Dornick (dor'nik), a kind of stout figured linen fabric used for tablecloths, and generally checkered.
Dornoch (dor’noḵ), a seaport and parliamentarily and royal burgh of Scotland, county of Sutherland, at the entrance of the Dornoch Firth, the seat of the extinct bishopric of Caithness. It is one of the Wick district of parliamentarily burghs. Pop. 624.—The Dornoch Firth runs inland for about 16 miles between Ross-shire and Sutherlandshire.

Dorogobush (da-ra-ga-būsh’), a town of Russia in the government of and 55 miles E. N. E. of Smolensk, on the Dnieper. Pop. 6640.

Dorohei (dō’ro-hoi’), a town of Roumania in N. W. Moldavia, near the Austrian frontier. Pop. 12,701.

Dorp, a former town in the Rhine province of Prussia, on the Wupper. It has important manufactures of cutlery, paper, etc. It is now part of the town of Solingen.

Dorpát (dor’pát), a town of Russia, government of Livonia, on the Embach, about 135 miles N. E. of Riga. Dorpá is chiefly remarkable for its university and other educational establishments. It is an ancient town, and was once a member of the Hanseatic union. In 1704 it passed definitively into the hands of Russia. The vernacular language is Esthonian, but that of the learned is German. Pop. 42,421.

D’Orsay (dor’sā). ALFRED, COUNT, a dilettante artist and man of fashion, born at Paris in 1798; died in 1852. When a young man he visited England, and became acquainted with Byron and other literary and fashionable celebrities. He married a daughter of the Earl of Blessington, but after the earl’s death a separation took place, and D’Orsay became an inmate of Gore House, which the Countess of Blessington had made the center of a famous literary coterie. A zealous Bonapartist, he followed Prince Louis Napoleon to Paris in 1849, and enjoyed his favor till his death.

Dorse (Morhus Callarius), a fish of the cod genus, called also Baltic cod.

Dorset (dor’set), DORSETSHIRE, a maritime county in the south of England, having on the south the English Channel; area, 988 sq. miles. The general surface of the county is undulating; its principal elevations being chalk hills known as the North and South Downs, upon which immense flocks of sheep are pastured. On the south on the borders of Hampshire and along part of the seacoast, is a heathy common. A great part of the county is in pasture, and dairy husbandry is extensively carried on. Neither coal nor ores of any kind are found, but the quarries yield the well-known Portland stone. Pipe-clay, plastic clay and potter’s clay also abound. The principal manufactures are those of flax, canvas, duck, silk and woolens. The fish frequenting the coast are of various kinds, but the mackerel is the most abundant. Near the mouth of Poole harbor is a prolific oyster bank. Dorchester is the county town. Other towns are Bridport, Poole and Weymouth. Pop. (1911) 223,274.

Dorset, EARLS OF. See Sackville.

Dorstenia (dor-stè’ni-a), a genus of plants, nat. order Urticaeae or nettles, found in tropical America. They have their naked flowers buried in a flat, fleshy, somewhat concave receptacle. D. Contraspermum and other species have a stimulant and tonic rhizome, which is used medicinally under the name of contraspermum (which see).

Dort, or DORDRECHT (dort, dor’drek’t), a town of Holland, province of South Holland, 14 miles S. E. of Rotterdam, on the Merwede, an arm or part of the Maas, and on an island separated from the mainland by an inundation in 1421. It is an old town, with a fine Gothic church (Groote Kerk, ‘Great Church’), a good town house, museum, etc. It was formerly of more importance than now, but it still carries on an extensive trade, being not only near the sea, but by the Rhine, the Maas and other water communications, connected with an immense extent of inland territory. Pop. (1910) 47,304.

Dort, SYNOD OF, an assembly of Protestant divines convoked at Dort in 1618-19. Besides the Dutch and Walloon divines, it included representatives from England, Scotland, Switzerland and part of Germany, in all about 62 native and 24 foreign deputies. The synod was convoked principally for the sake of crushing the Arminian party, and extreme measures were taken to prevent that party being represented in the assembly or having a free voice there. The result was the condemnation of the Arminians and the dogmatic establishment of Calvinism in the Reformed church. The synod also sat on foot the Dutch translation of the Bible known as the Dort Bible.

Dortmund (dort’mōnt), a city of Prussia, province of Westphalia, situated on the Emmerich, 47 miles N. N. E. of Cologne. It has rapidly increased in recent years, its prosperity being due to its becoming the center of several important railway systems, to the opening of extensive coal mines in
the vicinity, and to the active manufactures of iron, steel, machinery, railway plant, etc. There are also a number of breweries, potteries, tobacco factories, chemical works, etc. It was once a free imperial Hanseatic town, and the seat of the chief tribunal of the Vehme. Pop. (1910) 214,226.

Dory (dō'ri), or JOHN DORY (Zeus faber), a fish belonging to the mackerel family, celebrated for the delicacy of its flesh. It seldom exceeds 18 inches in length, and is yellowish green in color with a blackish spot on each side, which, according to an old superstition, is the mark of St. Peter's forefinger and thumb. The dory is found on the Atlantic shores of Europe and in the Mediterranean. The name John Dory is supposed to be derived from the French jaune dôr, golden yellow.

Dosithaeans (dō-sith'e-ans), an ancient sect among the Samaritans, so called from their founder Dositheus, who was a contemporary and associate of Simon Magus, and lived in the first century of the Christian era. They rejected the authority of the prophets, believed in the divine inspiration of their founder, and had many superstitious practices.

Dosso Dossi (dō'sō do'sē), an Italian painter of the Ferrara school born in 1479; died in 1542. He was much honored by Duke Alfonso of Ferrara, and immortalized by Ariosto (whose portrait he executed in a masterly manner) in his Orlando. Modena and Ferrara possess most of his works.

Dost (dōst), MOHAMMED KHAN, born about 1790, a successful usurper who obtained possession of the throne of Afghanistan after the flight of Ahmad Shah in 1818. He ruled with very great ability, and although driven from his throne by a British army was ultimately restored, and later became a steady supporter of British power in the East. See Afghanistan.

Dostoieffsky (dos-to-yef'ski), FEO-DO-MICHALOVITCH, a Russian novelist, born in 1818; died in 1881. After serving as an officer of engineers he devoted himself to literature, but becoming connected with communistic schemes he was banished to the mines of Siberia, from which he returned in 1856 to resume his literary activity. His first novel, Poor People, came out in 1846. Among his works that have appeared in English are Crime and Punishment, Injury and In insult, The Friend of the Family, The Gambler, The Idiot and Prison Life in Siberia.

Dothan (dō-than), a city in Houston Co., Alabama, 119 miles S.W. of Montgomery. It has iron, turpentine and fertilizer works. Pop. 7016.

Dotis (dō'tis), or Tóth or Tórra, a market town of Hungary, county Komorn, 37 miles W.N.W. of Budapest. It has a castle of the Esterhazy family, and manufactures of woolens and stoneware, etc. Pop. 7220.

Dotterel (dō'ter-el; Charadrius mori-ellus), a species of plover which breeds in the north of Europe, and returns to the south for the winter. In Scotland it appears in April and leaves in August, the young being hatched in July. It is found all over Europe and Northern Asia. Several species of the genus are represented in the United States, including the golden plover, the killdeer and piping plover.

Douai (dō-ul), or DOUAI, a town of France, department Nord, on the Scarpe, 18 miles south of Lille. It is one of the oldest towns in France, of which it became part by the Treaty of Utrecht. It is strongly fortified, has a fine town house, several handsome churches, an academy of arts and law, a lyceum, museum and public library, Benedictine college, hospital, etc.; a cannon foundry, linen manufactories, machine-works, tanneries, etc. There was here for a long time, a college for British Roman Catholic priests, the most celebrated of its kind. Pop. (1911) 36,314.

Douai Bible, the English translation of the Bible of the Douai version among English-speaking Roman Catholics, and executed by divines connected with the English College at Douai. The New Testament was published in 1582 at Rheims, the Old in 1609-10 at Douai, the translation being based on the Vulgate. Various revisions have since materially altered it.

Douarnenez (du-ar-né-nè), a seaside resort of France, Finistère, on a beautiful bay of the same name, 13 miles northwest of Quimper. It depends chiefly on the sardine fishery. Pop. (1906) 18,472.

Double Entry. See Bookkeeping.
Double Flowering is the development, often by cultivation of the stamens and pistils of flowers into petals, by which the beauty of the flower is enhanced and its reproductive powers sacrificed.

Double Insurance, the effecting of two insurances upon the same goods. In marine insurance it is lawful for a shipper to insure his goods twice, but only to give an additional security in the event of the failure of the first underwriters. In the event of a loss it is ultimately divided among the underwriters in the ratio of the risks they have taken.

Double Standard of Monetary Value. See Currency, Bimetallism.

Double Stars, or Binary Stars, stars which are so close together that they appear as one to the naked eye, but are seen to be double when viewed through a telescope, or when photographed. One of these stars may revolve about the other, or both may revolve round a common center. See Stars.

Doublet (dup'let), a close-fitting garment, covering the body from the neck to a little below the waist. It was introduced from France into Eng-

garment received its name from being originally lined or wadded for defense.

Doublet, felt stone composed of two pieces of crystal, with a color between them, so that they have the same appearance as if the whole substance of the crystal were colored.

Double-vault, vault built over another so that a space is left between the two. It is used in domes or vaulted roofs when the external and internal arrangements require vaults differing in size or shape, the outer and upper vault being made to harmonize with the exterior of the building, the inner or lower with the interior. See Dome.

Doubloon (dub-lön'), a coin of Spain and of the Spanish American states, originally double the value of the pistoles. The doubloon of Spain is of 100 reals and equivalent to about $5.00. The doubloon of Chile is equivalent to $3.65.

Doubs (dȫ), a department of France, having Switzerland on its eastern frontier. Its surface is traversed by four chains of the Jura. The temperature is variable, and the climate somewhat rigorous. About a third of the land is arable, but much of the greater part is covered with forests. Maize, potatoes, hemp and flax are the principal crops. Much dairy produce is made into Gruyère cheese. The minerals include iron, lead and marble. Pop. (1906) 298,438.

The river Doubs rises in the department to which it gives its name, flows first N. E., then W. W. till it joins the Saône at Verdun-sur-Saône; length, 250 miles.

Douche (düsh'), a jet or current of water or vapor directed upon some part of the body; employed in bathing establishments. When water is applied it is called the liquid douche, and when a current of vapor the vapor douche.

Douglas (dug'las), capital of the Isle of Man, is situated on the southeast coast of the island on a beautiful semicircular bay. It is frequented by immense numbers of visitors during the summer. Among the objects of interest are the House of Keys, the custom-house, the extensive breakwater, the promenade, etc. Pop. (1911) 21,101.

Douglas, a town in s.e. Alaska, on Douglas Island, opposite Juneau. Here are the famous Treadwell gold-mines.

Douglas, a city in Cochise Co., Arizona, 217 miles s.w. of El Paso, Texas; elevation, 4000 feet. Large copper-smelting industry. Pop. 18,672.
Douglas (doug'las), a family distinguished in the annals of Scotland. Their origin is unknown. They were already territorial magnates at the time when Bruce and Balliol were competitors for the crown. As their estates lay on the borders they early became guardians of the kingdom against the encroachments of the English, and acquired in this way power, habits and experience which frequently made them formidable to the crown. We notice in chronological succession the most distinguished members of the family. JAMES, son of the William Douglas who had been a companion of Wallace, and is commonly known as the Good Sir James, early joined Bruce, and was one of his chief supporters throughout his career, and one of the most distinguished leaders at the battle of Bannockburn, which in battle with the Moors while on his way to the Holy Land with the heart of his master, in 1333.—ARCHIBALD, youngest brother of St. James, succeeded to the regency of Scotland in the infancy of David. He was defeated and killed at Halidon Hill by Edward III, 1333.—WILLIAM, son of the preceding, was created first earl in 1357. He recovered Douglasdale from the English, and was frequently engaged in wars with them. He fought at the battle of Poitiers. He died in 1384.—JAMES, the second earl, who, like his ancestors, was constantly engaged in border warfare, was killed at the battle of Otterburn in 1388. After his death the earldom passed to an illegitimate son of the Good Sir James, Archibald the Grim, Lord of Galloway.—ARCHIBALD, son of Archibald the Grim, and fourth earl, was the Douglas who was defeated and taken prisoner by Percy (Hotspur) at Homildon, September 14, 1402. He was also taken prisoner at Sedgebury, July 23, 1403, and did not recover his liberty till 1407. He was killed at the battle of Verneuil, in Normandy, in 1427. Charles VII created him Duke of Touraine, which title descended to his successors.—WILLIAM, sixth earl, born in 1422, together with his only brother David was assassinated by Crichton and Livingstone at a banquet to which he had been invited in the name of the king, in Edinburgh Castle, on November 24, 1440. Jealousy of the great power which the Douglases had acquired from their possessions in Scotland and France was the cause of this deed.—WILLIAM, the eighth earl, a descendant of the third earl restored the power of the Douglases by a marriage with his cousin, heiress of another branch of the family; was appointed lord-lieutenant of the kingdom, and defeated the English at Falkirk. Having later strayed into a treasonable league, he was invited by James II to Stirling and there murdered by the king's own hand, February 22, 1452.—JAMES, the ninth and last earl, brother of the preceding, took up arms with his allies to avenge his death, but was finally driven to England, where he continued an exile for nearly thirty years. Having entered Scotland on a raid in 1484, he was taken prisoner and confined in the abbey of Lindores, where he died in 1488. His estates, which had been forfeited in 1455, were bestowed on the fourth Earl of Angus, the "Red Douglas," the representative of a younger branch of the Douglas family, which continued to flourish long after. The fifth Earl of Angus, Archibald Douglas, was the "Black Douglas," one of whose sons was Gawan Douglas, the poet. He died in a monastery in 1514. Archibald, the sixth earl, married Queen Margaret, widow of James IV, attained the dignity of regent of the kingdom, and after various vicissitudes of fortune, having at one time been attainted and forced to flee from the kingdom, died about 1540. He left no son, and the title of Earl of Angus passed to his nephew David. James Douglas, brother of David, married the heiress of the Earl of Morton, which title he received on the death of his father-in-law. His nephew, Archibald, eighth Earl of Angus and Earl of Morton, died childless, and the earldom of Angus then passed to Sir William Douglas of Glenbervie, his cousin, whose son William was raised to the rank of Marquis of Douglas. Archibald, the great-grandson of William, was raised in 1703 to the dignity of Duke of Douglas, but died unmarried in 1761. When the ducal title became extinct, and the marquisate passed to the Duke of Hamilton, the descendant of a younger son of the first marquis. The line of Angus or the Red Douglas is now represented by the houses of Hamilton and Home, who both claim the title of Earl of Angus.

Douglas, a Scottish botanist, born in 1798. In 1823, as botanical collector to the Horticultural Society of London, he came to the United States, and in 1824 went to California, collecting many rare plants and trees. In 1827 he returned to England, and some years later sailed on another expedition to the Sandwich Islands, where he met his death by an accident in 1834.

Douglas, Gawan, an early Scottish poet of eminence. He was the son of Archibald, earl of Angus, and
Douglas

was born at Brechin about 1474. He received a liberal education, commenced at home and completed at the University of Paris. On returning to Scotland he took orders in the church, and ultimately became Bishop of Dunkeld. He died of the plague in 1522 in London, where he had been obliged to take refuge on account of political commotions. He translated Virgil's *Aeneid* into verse with much spirit and elegance, prefixing original prologues to the different books of the original. This was the first poetical translation into English of any classical author. It was written about 1512, and first published in 1553. He also wrote *The Palace of Honor* and *King Hart*, both allegorical poems.

Douglas, Sir Howard, Baronet, a British general, born in 1776, the son of Admiral Sir Charles Douglas. He served in Spain in the Peninsular war, and acquired much reputation by his writings on military subjects, especially by his *Treatise on Naval Gunnery* (1819). From 1823 to 1829 he was governor of New Brunswick, and from 1835 to 1840 lord high-commissioner of the Ionian Islands. He attained the rank of general in 1851, and died in November, 1861.

Douglas, Stephen Arnold, an American statesman, born in Vermont in 1813; died in 1861. Having gone to Jacksonville, Illinois, he became an attorney, was appointed attorney-general for the State, and in 1843 was elected a member of the United States House of Representatives. In 1847 he was member of the Senate, and by re-election remained a member of this body till his death. He was especially prominent in connection with the question as to the extension of slavery into new states and territories, which he maintained was a matter to be settled by the people of the respective states or territories, and not by Congress. There was a memorable contest between him and Abraham Lincoln for the Senate in 1858. Douglas being elected. He was the candidate of the Northern Democracy for the presidency in 1860, but was defeated by Lincoln.

Douglas, Frederick, an American lecturer and journalist, was the son of a negro slave, and was born at Tuckahoe in Maryland, about 1817. Although his father was a white man, he was, according to the law, reared as a slave. In 1832 he was purchased by a Baltimore shipbuilder, but made his escape in 1838. As he had taught himself to read and write, and showed talent as an orator, he was employed by the Anti-slavery Society as one of their lecturers. In 1845 he published his autobiography, and afterwards made a successful lecturing tour in England. In 1870 he started a journal entitled *The New National Era*; in 1871 he was appointed secretary of the commission to Santo Domingo; in 1872, presidential elector; in 1877, marshal for the District of Columbia; commissioner of deeds for that district, 1881-86; and Minister to Hayti in 1890. He died in 1895.

Doulton (dōl'tun), Sir Henry, was born at Lambeth, England, in 1820; entered his father's pottery establishment, and in 1848 started near Dudley, what became the largest pottery in the world. The revival in art pottery was mainly due to him and since 1870 the Doulton pottery has gained the highest awards at exhibitions throughout the world. He was knighted in 1877.

Douma. See Duma.

Doum Palm (dōm), a palm tree, *Hyphaene thebaica*. It is remarkable, like the other species of the genus, for having a repeatedly branched stem. Each branch terminates in a tuft of large, fan-shaped leaves. The fruit

![Doum Palm](image-url)
Douro. An infusion of the rind is also used as a cooling beverage in fevers. The seed is borne, and is made into small ornaments. Ropes are made of the fibers of the leaf-stalks.

Douro (dó'ró), or DUERO, one of the largest rivers of the Spanish Peninsula, which, flowing west, traverses about one-half of Spain and the whole of Portugal, and, after a course of 500 miles, falls into the Atlantic 3 miles below Oporto. It is navigable for small vessels for about 70 miles.

Douw (dó'w), GERARD. See Dow, Gerard.

Dove (duv'), See Turtle-dove and Pigeon.

Dove, a river of England in Derbyshire, the favorite stream of Izaak Walton. After a course of 39 miles through highly picturesque scenery it falls into the Trent.

Dove (dó've), HEINRICH WILHELM, a German physicist, distinguished by his researches into the laws of climate and meteorological phenomena, was born in 1803; and died in 1879. Among his works are: Meteorological Researches (1837), Distribution of Heat on the Surface of the Globe (1852), and Law of Storms (1857).

Dove-plant. See Holy Spirit Plant.

Dover (dó'ver), a borough of England, County Kent, 67 miles southeast of London. It lies on the coast of the Strait of Dover, and is 21 miles distant from Calais on the French coast. It is an important railway terminus, and as a port for mail and packet service with the continent has a large passenger traffic. Shipbuilding, sailmaking, and fisheries are the chief industries. The harbor has been much improved in recent years. The entrance is in the name of the Admiralty Piece, which is nearly half a mile in length. The celebrated castle of Dover stands on a chalk cliff 350 feet in height. Pop. (1911) 43,047.

Dover, a city, capital of the State of Delaware and of Kent Co., in that State, 48 miles s. of Wilmington. It is in a large fruit-growing district, and has canning industries. Pop. 3720.

Dover, a city, capital of Strafford Co., New Hampshire. It is situated on both sides of the Cochecho, which has here a fall of over 30 feet, affording abundant water-power for the large manufactories of cotton and woolen goods, shoes, machinery, belting, glue, lumber, etc. It is the oldest town in the State, having been settled in 1623. Pop. 18,247.

Dover, a town of Morris Co., New Jersey, 12 miles N. N. W. of Morristown. It has rolling, knitting, and silk mills, etc. Pop. 7468.

Dover, STRAITS OF, the narrow channel between Dover and Calais which separates Great Britain from the French coast. At the narrowest part it is only 21 miles wide. The depth of the channel at a medium in the highest spring tides, is about 25 fathoms. On both the French and English sides the chalky cliffs show a correspondence of strata which leaves no room for doubt that they were once united, this being also known through other evidence.

Dover's Powder, a preparation frequently used in medical practice to produce perspiration. It consists of 1 grain of opium, 1 of ipecacuanha, and 8 of sugar of milk, in every 10 grains, which constitute a full dose. In preparing it the ingredients must be thoroughly mixed.

Dovetailing, in carpentry, is the fastening of boards together by letting one piece in the form of a dovetail into a corresponding cavity in another. The dovetail is the strongest kind of jointing.

Dovre-Ejeld (dó'veré-je'ld), an assemblage of mountain masses in Norway, forming the central part of the Scandinavian system, and extending as a plateau 2000 feet high E. N. E. from lat. 62° N. to lat. 63°. It is generally composed of gneiss and mica schist. One of the mountains belonging to it is Snehaetta, 7620 feet.

Dow, or Douw (properly Dow), Graaf, an eminent painter of the Dutch school, was the son of a glazier, and born at Leyden in 1613. He studied under Rembrandt, and united his master's manner in chiaroscuro with the most minute finish and delicacy. His pictures are generally of small size and mostly scenes of family life. Dow died in 1675.

Dow, Neal, reformer, born at Portland, Maine, about 1803; died in 1897. Elected a member of the legislature, he procured the passage of the famous 'Maine liquor law,' prohibiting the sale of ardent spirits. This law still prevails in Maine, though a vigorous effort to repeal it was made in 1911. He was twice mayor of Portland and a brigadier general in the Civil war.

Dowagiac (dô-wá'jé-a-k), a city of Cass Co., Michigan, on a river of the same name, 35 miles S. W. of Kalamazoo. It has good water-power, flour and lumber mills, and various other industries. Pop. 6063.
Dower (dou'ær), in common law, is the right which a wife (not being an alien) has in the lands and tenements of which her husband dies possessed. By common law this right amounts to one-third of his estate during her life; by local custom in England and state law in the United States it is frequently greater. Where the custom of _guardianism_ prevails the widow's share is a half, and that of _free-bench_ gives her a third of a copysold. The term is also applied to the property which a woman brings to her husband in marriage, but this is more correctly _dowry._

Dowie (dou'ær), JOHN A., a religious fanatic, born in Scotland, became a pastor in Australia, afterwards sought the United States and settled near Chicago, founding a lacemaking industry near Waukegan, Illinois. Here he started a religious improve-ment, naming the place Zion and his followers Zionites. He announced that he was the prophet Elijah returned to earth, and managed the business affairs of the place so shrewdly that Zion became a flourishing town, its finances being kept in his hands. In 1903 he projected at great expense a crusade upon New York, for the purpose of converting that religious city, but the effort ended in complete failure. In 1906 he sought Mexico, planning new settlements, but a revolt against him broke out in Zion, where his management had given rise to dissatisfaction, and he was deposed on charge of polygamy, W. G. Vollva, succeeding. He died on March 9, 1907.

Doulas (dou'las), a kind of coarse linen formerly much used by working people for shirts; this use of it is now generally superseded by calico.

Dowlatabad. See Doulatabad.

Down (dou'n), a county of Ireland, in Ulster, bounded on the north by Belfast Lough and on the east by the Irish Sea, area, 960 sq. miles, of which over five-sixths are productive. The surface is very irregular, and in parts mountainous, Stieve Donard in the Mourne Mountains, being 2796 feet high. Agriculture is comparatively advanced, oats, wheat, flax and potatoes being the principal crops. The native breed of sheep is small, but valued for the delicacy of its mutton and the fine texture of its wool. The principal manufactures are linen and muslin. The fisheries on the coast, principally cod, haddock and herring, are considerable. The county town is Downpatrick; others are Newbards and Banbridge. Pop. 269,335.

Downing, ANDREW JACKSON, landscape gardener, was born at Newburgh, New York, in 1815. The son of a nurseryman, he became interested in similar pursuits; in 1841, published an excellent treatise on Landscape Gardening, and in 1845 Fruits and Fruit Trees of America, which was highly successful. He was a contributor to the Horticulturist from 1846 to 1852, when he was drowned in consequence of the burning of the steamboat _Henry Clay_, on the Hudson River.

Downpatrick (doun-pat'rik), a market town and seaport of Ireland, county town of Down, 21 miles S. W. of Belfast. It is the seat of the diocese of Down Connor and Downmore, has a cathedral, and is celebrated as the supposed burial place of St. Patrick. Pop. 3621.

Downs (douns), a term given to undulating grassy hills or uplands, especially applied to two ranges of undulating chalk hills in England, extending through Surrey, Kent and Hampshire, known as the North and South Downs. The word is sometimes used as equivalent to downs or sandhills.

Downs, THE, a celebrated roadstead for ships, extending 6 miles along the east coast of Kent in England, protected on the seaward side by Goodwin Sands.

Dowry. See Dower.

Doxology (doks-ol'-ji; from Greek _doxa_, praise, glory and _logos_), a set form of words giving glory to God, and especially a name given to two short hymns distinguished by the title of _greater_ ('Glory be to God on high,' etc.) and _lesser_ ('Glory be to the Father,' etc.). Both the doxologies have a place in the Church of England liturgy, the latter being repeated after every psalm, and the former used in the communion service.

Doyen (dwa-yen'), GABRIEL FRANCOIS, a French painter, born in 1723, was a pupil of Vanloo, and afterwards studied at Rome. Returning to Paris in 1753 he worked long without recognition, but at length won fame by his great picture, _Virginia's Death_. Catharine II invited him to Russia soon after the outbreak of the Revolution. He settled at St. Petersburg, where he died in 1809.

Doyce (dou's), ARTHUR CONAN, novelist, was born at Edinburgh in 1859. He became a doctor, but devoted himself to literature after 1890. He is best known from his ingenious detective stories, _The Adventures of Sherlock Holmes_, etc., but also wrote a number of
able historical novels, *The White Company, Micah Clarke,* etc.

**Doyle**, RICHARD, an artist, born at London in 1826; died in 1883.
He was long well known as a constant contributor of satirical designs in *Punch,* and also showed much talent in illustrations to Leigh Hunt's *Jar of Honey,* Thackeray's *Newcomes* and his *Rebecca* and *Rovenia,* Ruskin's *King of the Golden River,* etc. In later life he devoted himself to water-color painting.

**Dozy** (dō'zi), REINHART, a Dutch orientalist and historian, born in 1820; died in 1885. He was thoroughly versed in most of the Semitic tongues, and spoke and wrote almost all the European languages with facility. Among his works (sometimes in Dutch, sometimes in French) are *Histoire des Musulmans d'Espagne* de 711 à 1110; *Glogau de l'Islamisme; Supplements aus Dictionnaires Arabes.*

**Dracæna** (dra-sē'na), a genus of endogenous evergreen plants, nat. order Liliaceae. It includes the dragon-tree of Teneriffe (D. Draco), celebrated for producing the resin called dragon's blood. (See *Dragon's Blood, Dragon-tree.*) Several species of Dracaena are cultivated in greenhouses for the beauty of their foliage, but many of the fine plants known by this name belong to other genera.

**Drachenfels** (d'rā-hen-fels; 'dragon rock'), the castled crag of Drachenfels,' as Byron calls it, a hill in Rhenish Prussia, about 8 miles southeast of Bonn, rising 900 feet above the Rhine, and crowned by the old castle of Drachenfels.

**Drachma** (d'rāk'ma), the unit of weight and of money among the ancient Greeks. It was the principal Greek coin, was made of silver, and was worth (the Attic drachma) about 1.75 cents. As a weight among the Greeks it was about 2 dwt. 7 grains troy.

**Draco** (d'rā'ko), a legislator of Athens, about 620 B.C., whose name has become proverbial as an inexorable and bloodthirsty lawyer, and whose laws were said to have been written in blood, not ink.

**Draco**, the Dragon, a constellation of the northern hemisphere, containing, according to Flamsteed, eighty stars. The star (γ) Draconic is celebrated as the one used in determining the coefficient of aberration of the fixed stars.

**Dracocephalum** (d'rā-kō-sef'ā-lum; 'dragon's head'), a genus of odoriferous annual and perennial herbs, nat. order Labiate, mostly found in the north of Asia, Europe and America. The most generally cultivated species is *D. canariensis,* or Canary balm of Gilead.

**Dracunculus** (dra-kun'kū-lus), a genus of plants, nat. order Araceæ, with a long, spotted stalk. They are natives of Southern Europe. *D. vulgaris* (green dragon) is common in English gardens. Its flowers are black, very fetid, and give out exhalations which produce headache, giddiness and vomiting.—*Dracunculus* is also a genus of thread worms.

**Draft, or Draught** (draft), a bill drawn by one person another. (See *Bill.*) Also a rough copy of any document intended to be afterwards transcribed. See *Conscription.*

**Drag, generally uncovered and seated round the sides.** (1) An apparatus for retarding or stopping the rotation of one wheel or of several wheels, in carriages especially. (3) An apparatus, consisting of a frame of iron with a bag-net attached, used to recover articles lost in the water.

**Drag-net**, a net drawn along the bottom of a river or pond to catch fish. The use of drag-nets is usually prohibited in rivers where fish breed, as it takes all indiscriminately.

**Drago Doctrine** (drā'go), a political suggestion, supplementary to the Monroe Doctrine, originally devised by Signor Calvo, Argentine Minister to France, but offered by Dr. Louis Drago, Argentine Minister of Foreign Relations, at the 1906 Pan-American conference at Rio de Janeiro. It is to the effect that no nation has a right forcibly to undertake to collect debts due to its citizens by another nation. Its purpose was to protect the Latin-American nations from forcible acts or invasion on the plea of collecting debts, by European nations. The doctrine was adopted by the Congress, with the agreement that it, with a general arbitration scheme, should be submitted to The Hague tribunal.

**Dragoman** (drag'o-man), a word of Eastern origin, the general name for a guide and interpreter among Europeans throughout the East, and especially for those in the Levant countries.

**Dragon** (drag'ōn), a fabulous monster. The stories regarding which reach back almost as far as history. Its form is described as generally resembling that of a winged and two-legged serpent, the body covered with scales, the head
Dragon, or DRAGON-LIZARD, a name for several species of lizards inhabiting Asia, Africa and South America. The common flying lizard (Draco volans), the best type of the genus, is about 10 or 12 inches in length, the tail being extremely long in proportion to the body. The sides are furnished with peculiar extensions of the skin, forming a kind of wings, which help to support it in the air when it springs from branch to branch. Its food consists almost exclusively of insects.

Dragonet (drag'un-et), the common name of certain fishes of the Goby family. The gemmous dragonet (Callionymus lyra) is found in the British seas.

Dragon-fly, a family (Libellulidae) of neuropterous insects. They have a large head, large eyes and strong, horny mandibles. They are beautiful in form and color, and are of very powerful flight. The great dragon-fly (Ehena grandis) is about 4 inches long, and the largest of the European species. They live on insects, and are remarkable for their voracity. The dragon-fly deposits its eggs in the water, where the larvae and pupae live on aquatic insects. The larval stage lasts for a year. The family is of very wide distribution. The small blue dragon is a common European form. In the United States the dragon-fly is often spoken of as the devil's darting-needle.

Dragonnades, or DRAGONADES (dраг ū-nād'ës'), the name given to the persecutions directed against the Protestants chiefly in the south of France, during the reign of Louis XIV.

Bands of soldiers, headed by priests, marched through the villages, giving the Protestant inhabitants the alternative of renouncing their faith or being given over to the extortions and violence of the soldiery. The dragons were conspicuous in these expeditions, to which they gave their name. The dragonnades drove thousands of French Protestants out of France.

Dragon’s Blood, a resinous juice, usually obtained by incision from various tropical plants, as Calamus Draco, Dracaena Draco, Pterocarpus Draco, etc. The varieties differ in composition, and are often much adulterated. It is opaque, of a reddish-brown color, brittle, and has a smooth, shining, conchoidal fracture. It is soluble in alcohol and oil, but scarcely so in water. It is used for coloring varnishes; staining marble, leather and wood; for tooth tinctures, etc.

Dragon’s-head, a name of certain plants of the genus Dracocephalum (white dragon) or D. Drago (dra-gôn’), a kind of mounted soldier, so called originally from his musket (dragon) having on the muzzle of it the head of a dragon. At one time dragonoons served both as mounted and foot soldiers, but now only as the former. In the British army there are heavy and light dragonoons. The first dragon regiment, the Scots Greys, was formed in 1681.

Dragoon-bird. Same as umbrella-bird.

Draguignan (dраг-e-näyn'), a town of Southern France, capital of dep. Var, in a beautiful valley, 41 miles northeast of Toulon. It has some interesting edifices and manufactures of silk, soap and leather. Pop. (1906) 7766.

Drainage Tubes (dраг nyl'), are used in surgery to effect a discharge of matter from an abscess or other collection of exudate when the source of the exudate matter cannot be excised. They are usually made of India rubber or caoutchouc, and are introduced into the abscess or wound so that one end is in contact with the seat of discharge, while the other reaches to the surface of the skin.

Draining (dраг nîn'), in agriculture,
Draining

soil by withdrawing the water from it by means of channels that are generally covered over. The successful practice of draining in a measure depends on a proper knowledge of the superficial strata, of their situation, relative degrees of porosity, etc. Some strata allow water to pass through them, while others, more impervious, force it to run or filtrate along their surfaces till it reaches more level ground below. In general, where the grounds are in a great measure flat and the soils of materials which retain the excess of moisture, they require arti-

ficial means of drainage to render them capable of yielding good crops whether of grain or grass. The wetness of land which makes it inferior for agricultural purposes, may appear not only as surface water, but as water which flows through the lower strata, and to draw off these there are the two distinct operations of surface draining and under-draining. The rudest form of open drains are the deep furrows lying between high-backed ridges, and meant to carry off the surplus water after the soil is completely saturated, but in doing so they generally carry off also much of the best of the soil and of the manure which has been spread upon it. The ordinary ditch is a common form of water course useful in certain cases, as in hill pastures. But covered drains at a depth of 4 feet or so are the common forms in draining agricultural lands. They are generally either stone drains or tile drains. Stone drains are either formed on the plan of open culverts of various forms, or of small stones in sufficient quantity to permit a free and speedy filtration of the water through them. The box drain for instance, is formed of flat stones neatly arranged in the bottom of the trench, the whole forming an open tube. In tile drains, tiles or pipes of burnt clay are used for forming the conduits. They possess all the qualities which are required in the formation of drains, affording a free ingress to water, while they effectually exclude vermin, earth and other injurious substances. Drainage tiles and pipes have been made in a great variety of forms, the earliest of which, since the introduction of thorough draining, was the horseshoe tile, so called from its shape. These should always rest on soles, or flats of burned clay. Pipe tiles, which combine the sole and cover in one piece, have been made of various shapes, but the best form appears to be the cylinder. An important department of draining is the carrying off of the waters which are the sources of springs. Sometimes the judicious application of a few simple drains, made to communicate with the watery layers, will often dry swamps of great extent, where large sums of money, expended in forming open drains in the swamp itself, would leave it but little improved. In the laying out of drains the first point to be determined is the place of outfall, which should always afford a free and clear outlet to the drains, and must necessarily be at the lowest point of the land to be drained. The next point to be determined is the position of the minor drains; in the laying out of which the surface of each field must be regarded as being made up of one or more planes, as the case may be, for each of which the drains should be laid out separately. Level lines are to be set out a little below the upper edge of each of these planes, and the drains may then be made to cross these lines at right angles. By this means the drains will run in the line of the greatest slope, no matter how distorted the surface of the field may be. All the minor drains should be made to discharge into the main, and not directly into an open ditch or water course. As a general rule, there should be a main to receive the waters of the minor drains from every 5 acres. The advantages of drainage are obvious. In the first place, it allows the soil to be brought into a more suitable condition for the growth of plants, aiding in producing the finely divided and porous state by which the roots and rootlets can spread themselves at will in order to obtain the needed supplies of food, air and moisture. It also allows the sun's rays to produce their full effect on the soil and plants without being robbed of great part of it by the stagnant water.
Drain-trap, a contrivance to prevent the escape of foul air from drains, and to allow the passage of water into them. They are of various forms. In the traps represented below it will be seen that there must always be a certain quantity of water maintained to bar the way against the escape of the gas from the drain or sewer. When ad-

Drain-trap.

ditional liquid is conveyed to the trap there is, of course, an overflow into the drain. In the left-hand figure the gas is prevented from escaping by a metal plate thrown obliquely over the drain mouth and dipping into the water in the vessel beyond it.

Drake (drák). Sir Francis, an English navigator, born at Tavistock, in Devonshire, in 1539, or, according to some authorities, in 1545. He served as a sailor in a coasting vessel, and afterwards joined Sir John Hawkins in his last expedition against the Spaniards (1567), losing nearly all he possessed in that unfortunate enterprise. Having gathered a number of adventurers around him, he contrived to fit out a vessel in which he made two successful cruises to the West Indies in 1570 and 1571. In 1572, with two small ships, he again sailed for the Spanish Main, captured the cities of Nombre de Dios and Vera Cruz, and took a rich booty, which he brought safely home. In 1577 Drake made another expedition to the Spanish Main, having this time command of five ships. On this, the most famous of his voyages, Drake passed the Straits of Magellan, plundered all along the coasts of Chile and Peru, sacked several ports, and captured a galleon laden with silver, gold, jewels, etc., to the value of perhaps $1,000,000. He then ran north as far as 48° N. lat., seeking a passage to the Atlantic, but was compelled to return to Port San Francisco on account of the cold. He then steered for the Moluccas, and holding straight across the Indian Ocean, doubled the Cape of Good Hope, and arrived at Plymouth, November 4, 1580, being thus the first of the English circumnavigators. As there was no war between England and Spain, the proceedings of Drake had a somewhat dubious character, but the queen maintained that they were lawful reprisals for the action of the Spaniards, and showed her favor to Drake by knightling him on board his own ship. Five years afterwards Drake was again attacking the Spaniards in the Cape Verde Islands and in the West Indies, and in 1588 particularly distinguished himself as vice-admiral in the conflict with the Spanish Armada. In 1593 he represented Plymouth in parliament. His later expeditions, that in 1595 against the Spanish West Indies and that to Panama, were not so successful, and his death, which took place in 1596 at sea off Porto Bello, was hastened by disappointment.

Drake, Joseph Rodman, poet, born in New York in 1796; died in 1820. The poems of his which are still remembered are his beautiful work of imagination, The Calprint and his patriotic lyric, The American Flag.

Drakenberg Mountains (drá'ken-burg), a range of S. Africa forming the western frontier of Natal, and rising to the height of 9000 ft., a continuation of the Quathlamba range.

Drama (drama; literally 'action' from a Greek word, meaning to act or do), the term applied to that form of art which represents action by introducing personages as real and employed in the action itself. There are many different forms of drama, but they all agree in presenting imitation in the way of action—from the titanic plays of Aeschylus, in which gods move, to the highly realistic dramas of Ibsen and the wordless dramas of Gordon Craig and Max Reinhardt. The dramatic instinct seems to be universal and we find the drama as a literary form arising spontaneously in vari-
ous countries. The Book of Job in the Bible is one example. It was in Greece, however, that the ancient drama reached its highest development; and it is from the Attic form chiefly that the modern has been gradually evolved. The Greek drama, like the mystery and morality plays which contributed so largely to the development of the English drama, was religious in origin, arising directly out of the related worship of Dionysus, Bacchus, Apollo and Demeter. 'Both tragedy and comedy,' says Aristotle, 'originated in a rude and unpremeditated manner—the first from the leaders of the dithyramb, and the second from those who led off the phallic songs.' In the earliest extant examples, the tragedies of Aeschylus (525–456 B.C.) unfolded a complete story, while the chorus occasionally takes part in the dialogue, but usually merely explains incidents or moralizes upon the action. The number of dramatis personae varied, but never more than three appeared on the stage at once, except as mute persons. The art of Sophocles (496–406) was more perfect than that of Aeschylus and was never excelled. Euripides (480–406), though far removed from the naive faith and devout of the idealism of his great contemporaries, was more humane than they in his social philosophy and deeper in his psychological insight. These three names represent Greek tragedy, and the name of Aristophanes represents comedy, satirizing with a fearlessness never since equalled, persons and political events of the day. The tragedies seem to have been composed for the most part in trilogies, sometimes followed by a fourth play, comic or satiric in character. Each division observed certain Unities, which were handed down for succeeding generations, by the great critic, Aristotle. The Unity of Time ruled that not more than twenty-four hours should elapse between the beginning and end of the action embodied in the play; the Unity of Place, that the scene should not be changed; and the Unity of Action that no independent subplot should be permitted.

Latin poets, among whom Plautus and Terence as writers of comedy, and Seneca as a writer of tragedy may be mentioned, added nothing to the drama, following Greek models absolutely. And after the fall of Rome the drama virtually ceased to exist until it emerged in the medieval period as a wholly new and independent growth in the mystery plays, dealing with scriptural events; the miracle plays, dealing with the legends of the saints; and the morality plays, allegorical in character. As early as the 9th century mysteries were introduced into the church services. These were in Latin, but in the 11th century we find mysteries being composed in the vernacular, and characters and incidents outside of the Scripture narrative being introduced. In France, where dramatic performances had never fallen entirely into the hands of the clergy, progress toward forms approaching the modern drama was speedy, though the earliest play, Adam, still revealed its connection with the religious drama. In Italy, where ancient popular dramatic entertainments survived even more abundantly than in France, the secular drama had its earliest development, and from both Italy and Spain France received the models upon which her plays of the Renaissance were based. The native comic drama of France was, indeed, in danger of dying out; until the genius of Molière (1622–73) effected a happy compromise between the vernacular, the Terentian and the Spanish comedy. In tragedy, the greatest names are Corneille (1606–84) and Racine (1639–99). The tragedy was largely Greek in construction but without choruses, and the metrical structure unalterable—alexandrines or iambic trimeters in rhymed couplets. The comedy allowed greater freedom and might be written in either prose or verse. Theunities of place, and even to some extent, of action, were often neglected. Comedy gradually gave way to a new species of drama, known as comédie larmoyante, an extremely sentimental variety which later was transformed by D. Diderot (1713–84) and others into the tragédie bourgeoise, from which the comic element was to all intents and purposes extruded. Diderot's own plays were a literary rather than a theatrical success, but are important in the history of play-writing as being the first attempt to make of the theater an agent of social reform and entrusted to it the gospel of philanthropy. This form of drama undoubtedly helped make room for the great romantic writers—Dumas (1802–70), Hugo (1802–85), de Musset (1810–57) and others. Through these France again became the central seat of the drama in Europe. The romantic school, however, was not destined to exercise a permanent control over French public taste. A. Dumas, the younger (1824–95), set himself to reform society by means of the stage and Victorien Sardou (1831–1908) applied himself to every kind of serious or serial comic drama. Henri Becque in the latter nineteenth century wrote two successful naturalistic plays, Les Corbeaux and La Parisienne, and it was his disciples who in 1887 brought about the opening of the Théâtre Libre. Of the many authors
Drama

here producing, Eugene Brieux was the only one who secured an assured position on the regular stage. For the weak points of modern institutions are strong in technique and characterization. Other authors of the 'new comedy' not directly connected with the Théâtre Libre are George de Porto Riche, Henri Lavedan, Paul Hervieu, Maurice Donnay, and Jules Lemaître. Edmund Rostand, whose Cyrano de Bergerac brought him a world-wide poetic type.

In Italy tragedy began to be written in the vernacular early in the 16th century. It followed the models of Seneca, and the chorus did not disappear altogether until the 18th century. The earliest tragedy seems to have been Pistola's Pamíla (1499). Tragedians of the 17th century sought by the introduction of musical airs, to compromise with the rising danger of the popularity of the opera. Writers of the 18th century directed their efforts to a general increase in freedom of treatment and S. Maffei with his Meropé achieved one of the most brilliant of all recorded dramatic successes. Count V. de Ferrari (1749-1839), the greatest of Italian tragic poets, gave a political coloring and wrote with an impassioned eloquence well loved by Italian audiences. The writer of the first Italian comedy is unknown, but Ludovico Ariosto (1474-1533) was the first master, writing scholarly comedy in blank verse with a dactylic ending to the line. The comic dramatists of the 17th century had to struggle against competition of the musical drama, the popular farcical entertainments, and those introduced in imitation of Spanish examples, and had practically fallen into decay when its form was undertaken by C. Goldoni (1707-93). He drew his characters from real life and sought to improve the ethical status of the drama. Goldoni remained for long the model in Italian comic art. Among modern writers Gabriele d'Annunzio holds first place.

Spain is the only country of Europe which shares with England the distinction of having achieved at an early date a national form of the regular drama. The author of the Spanish drama was J. de la Enciza, whose representaciones were dramatic dialogues of a religious or pastoral character. The first of the great writers was Cervantes (1547-1616), but his plays display ignorance of the laws of dramatic construction and their action is episodical. It was for Lope de Vega (1562-1635) to establish the permanent nature of the Spanish drama. In variety and fertility of production he has no rival, though through his followers Spain soon became possessed of a dramatic literature of enormous quantity and activity. F. Calderón de la Barca (1600-81) was the most brilliant of this school. At the end of the 17th century with the decline of the power of Spain, the national literature, too, fell into decay.

Of the great European countries, Germany, at least until modern times, contributed little to the development of the drama, except through criticism. At the close of the Sturm und Drang period, there was a wealth of sentimental production of which Schiller's early drama, The Robbers, is characteristic. Schiller in his later work and Goethe stood upon a different level, and Goethe's Faust is one of the masterpieces of world literature. In the modern period a strong naturalistic school developed, Hauptman, Sudermann and Wedekind achieving international fame along the lines laid down by Ibsen.

The Norwegian dramatist, Henrik Ibsen (1828-1906), has vitally influenced the whole course of the modern drama, making it the vehicle for a frank and fearless delineation of human nature. The appearance of Ibsen's satirical comedy, The Pillars of Society in 1877, of A Doll's House in 1879, and of Ghosts in 1881 marked the beginning of a new era.

In England as in France the miracle, mystery and morality plays existed. The transition from the morality to the regular drama was effected by the intermixture of historical personages with abstractions, which led to the chronicle history, and by the introduction of types of real life. A further step in advance was taken by John Heywood in the 16th century, who wrote 'interludes', short farces in the French manner. Pageants had flourished in England from early times, and the masque, another form of spectacular dramatic entertainment, was introduced from Italy. In the earliest extant English tragedy, however, Gorboduc, first acted January 18, 1562, before Queen Elizabeth, the direct influence of Seneca and the classical traditions may be seen, although the subject is wholly British. Of the chronicle histories The Famous Victories of Henry the Fifth, known to have been acted before 1588, may be mentioned. Latin comedies had been performed in the original or in English versions as early as the reign of Henry VIII and Ralph Roister Doister by Nicholas Udall, which is claimed to be the earliest extant English comedy, is clearly an adaptation of the Miles Gloriosus of Plautus. Gammer Gurton's Needle, printed in 1575, was another early comedy. From such beginnings the Elizabethan drama
Drama

grew. Through the hands of Lyly, Kyd, Marlowe, Peele and Greene it passed to Shakespeare and other contemporaries. Rhymed couplets had given way to blank verse, and the foundations of historical and other drama well laid. The great names of the Elizabethan era, the most brilliant period in all dramatic history, are Shakespeare, Marlowe, Jonson, Peele, Greene, Webster, Massinger, Middleton, Heywood, Beaumont and Fletcher, Ford, and Dekker. The drama spent itself in about a century, and after the period of Puritan ascendency, it was French models rather than English that appealed to writers. ‘Heroic’ plays, written in rhymed couplets were introduced. This form was followed by Dryden, Otway, Etheredge, Wycherley and others, although Dryden later returned to blank verse. Congreve (1670–1729) and Vanbrugh (1668–1726) carried this newer English comedy to its highest development, and the plays of Congreve are still by their wit and style, classic. Most of the Restoration drama, however, was so licentious that a later age would not tolerate it.

Comedy received new life through the work of Goldsmith (1728–74), and with Sheridan (1751–1816) the true comedy of manners was restored. The early nineteenth century produced little of note except literary dramas such as Shelly’s Cenci. In general the theatre lacked ideas and contact with life. These faults were to some extent corrected by T. W. Robertson (1829–71) and his disciple H. J. Byron. The advent of Sir Henry Irving at the Lyceum Theater in 1878 made for the improvement of the production of plays, and though complaint was frequently made that he did not encourage modern dramatists, he did produce Tennyson’s Queen Mary, The Falcon, The Cup, and Becket. In 1878 appeared the first of Sir Arthur Pinero’s plays and ten years later he held an assured position as an original and fertile dramatist of no small literary power. Henry Arthur Jones was still known as little more than an able melodramatist, though Saints and Sinners had made some attempt at a serious study of provincial life. The later works of both Pinero and Jones and Oscar Wilde’s brilliant comedies recalled the writers of the Restoration, and established anew the originality and force of the English drama. Meantime the production of Ibsen’s plays in England had shown a new approach to moral problems and a freer technique. The Independent Theater, which was one of the theaters introducing Ibsen, produced in 1892 George Bernard Shaw’s Widowers’ Houses. The author soon gained wide popularity by his clever and audacious satires. Further may be mentioned the work of John Galsworthy, in The Silver Box, Strife, Justice, etc.: of James Barrie, whose delightful humor relieves the seriousness of the English stage; of Stephen Phillips, whose poetic dramas are still written with an eye to the demands of the stage; of Stanley Houghton, author of Hindle Wakes; and of the writers of the Irish National Theater—J. M. Synge, W. B. Yeats, Lady Gregory, Padraic Colium, William Boyle and others.

In America, where English plays are largely produced, there is a strong movement toward nationalism in drama. Bronson Howard (1842–1908) was the first deserving of mention, but he was still under the influence of the English. Denman Thompson in The Old Homestead, 1886, achieved a popular success. Augustus M. Thomas produced a number of locality studies; Clyde Fitch in a wide variety of plays scored still greater successes. William Gillette, Charles Klein, and David Belasco are noted both as stage producers and as playwrights. William Vaugh Moody produced in The Great Divide, 1907, a play of more artistic pretensions; and Percy Mackaye has also written literary drama with no small success. Edward Sheldon, author of Salvation Nell and The Nigger, is a graduate of Harvard, where through Professor George P. Baker, a powerful influence on the literary as well as the dramatic character of plays came to be exercised.

No history of the modern drama would be complete without mention of the work of Gordon Craig, who has inaugurated a movement for a new and impressionistic system of stage setting, and Max Reinhardt, who, as director of the Deutsches Theater, Berlin, has evolved an artistic drama of spectacular and emotional appeal.

Draughts (drafts), a game resembling chess in being played on a board divided into sixty-four checkered squares. Each of the two players is provided with twelve pieces or 'men,' placed on every alternate square at each end of the board. The men are moved forward diagonally to the right or left one square at a time, the object of each player being to capture all his opponent’s men, or to hem them in so that they cannot move. A piece can be captured only when the square on the diagonal line behind it is unoccupied. When a player succeeds in moving a piece to the further end of the board (the crownhead), that piece becomes a king, and has the power of moving or capturing diagonally backwards or forwards. When it so happens that neither of the players
brave

Drawing

as sufficient advantage in force or position to enable him to win, the game was drawn. Checkers is the common American name of the game. The first mention of the game is in 1551.

Brave, or Draught (drāv’t, drōn), an European river which rises in the Black Sea in the Crimea and flows down through the Ukraine to the Sea of Azov. It is navigable for about 200 miles.

Dravidian (dri-vi-di-an), a term applied to the vernacular tongues of the great majority of the inhabitants of Southern India, and to the people themselves who must have inhabited India previous to the advent of the Aryans. The Dravidian languages are generally considered to belong to the Turanian class, and the family consists of the Tamil, Telugu, Canarese, Malayalam, Tulu, Toda, Gond, Rajmahal, Oraon, etc. Only the first four mentioned have a literature, that of the Tamil being the oldest and the most important.

Drawback (dra’bak), usually a certain amount of duties or customs due paid back or remitted to an importer when he exports goods that he has previously imported and paid duty on, as, for instance, tobacco, etc.; or a certain amount of excise paid back or allowed on the exportation of home manufactures.

Drawbridge (dra’br’il), a bridge with a lifting floor, such as were formerly used for crossing the litches of fortresses, or any movable bridge over a navigable channel where the height of the roadway is insufficient to allow vessels to pass underneath.

Modern drawbridges across rivers, canals, the entrances of docks, etc., are generally made to open vertically, and the movable portion is called a bascule, bascule bridge, or lifting bridge; a turning, or swing bridge; or a rolling bridge, in accordance with the mode in which it is made to open. Swing bridges are usually divided into two parts meeting in the middle, and each moved on pivots on the opposite sides of the channel, or they may move as a whole on a pivot in the middle of the channel. Rolling bridges are suspended from a structure high above the water, and are propelled backwards and forwards by means of rollers.

Drawing (drā’ing) is the art of representing upon a flat surface the forms of objects and their positions and relations to each other. The idea of nearness or distance is given by the aid of perspective, foreshortening and gradation. The term drawing, in its strict sense, is only applicable to the representing of the forms of objects in outline, with the shading necessary to develop roundness or modeling. In art, however, the term has a wider significance. Highly finished paintings in water-color are called drawings, as are also sketches or studies in oils. Drawing, in its restricted sense, may be divided into these kinds: (1) pen drawing; (2) chalk drawing, which may include lead pencil drawing; (3) crayon drawing; (4) drawing shaded with the brush or hair pencil; (5) architectural or mechanical drawing. Pen drawings are often confined to pure outlines; an appearance of relief or projection being given by thickening or doubling the lines on the shadow side. Finished pen drawings have all the shading produced by combinations of lines. Chalk drawings (including lead pencil drawings) are most suited for beginners, as errors can be easily corrected. Black, red and white chalks are used. When the chalk is powdered and rubbed in with a stump, large masses and broad effects can be produced with much rapidity. A combination of hatching and stumping is generally preferable to adhering exclusively to either mode. Crayon drawings are those in which the true colors of the objects represented are more or less completely wrought out with different colored crayons. Drawings shaded with the brush are outlined with the pencil or pen, the shading being laid on or washed in with the brush in tints of Indian ink, sepia, or color. Architectural and mechanical drawings are those in which the proportions of a building, machine, etc., are accurately set out for the guidance of the constructor; objects are in general delineated by geometric or orthographic projection. The great schools of painting differ from one another as much in their drawing as in their painting. In Italy the Roman school, through Raphael's fine sense for the beautiful and expressive in form, and through his study of the antique, became the true teacher of beautiful drawing. The Florentine school tried to surpass the Roman precisely in this particular, but it lost by exaggeration what it had gained by learning and a close study of anatomy. In the Lombard school a tender style of drawing is seen through harmonious coloring and in the Venetian school the drawing is often veiled in the richness of the color. The Dutch
Dredging (dred'jìng), a term applied by engineers to the operation of excavating soil or rock under water and depositing the excavated material on board scows for removal. The mechanical, power-operated dredges are of several forms. One of the most common is the 'clam-shell' dredge, consisting of a pair of large, heavy iron jaws, hinged at the back, in general form resembling a pair of huge clam shells. This with its attachments is called the grapple. In operation it is lowered with open jaws, and by its own weight digs into the ground that is to be excavated. Traction is then made on the chains controlling the jaws, which close; the grapple is hoisted to the surface and its contents
The upper view shows a ladder dredge, which operates by means of buckets on a continuous chain, dipping the contents of the buckets into the scow which lies alongside. The lower view shows a suction dredge, which operates on soft mud or sands, pumping the discharge through the pipe seen at the left of the illustration. The pipe may be carried to any desired point and used for filling.
Dred Scott Case, a famous case before the United States Supreme Court, the decision in which, delivered by Chief Justice Taney, March 6, 1857, awakened intense interest and led to serious results. The plaintiff, Dred Scott, was a slave in Missouri, his owner took him to Illinois, and also to Minnesota, then a territory, both free soil regions, where he kept him for years, afterwards moving back to Missouri, a slave state. The plan of Scott was that his residence in Illinois and Minnesota made him a free man. The decision was that he was a chattel, 'without rights or privileges except such as those who held the power and the government might choose to grant him.' The decision nationalized slavery by degrading the slave to the level of a horse or a plow and overrode every sentiment of humanity respecting him. Thenceforth the settlement of the slavery question drifted towards armed arbitration.

Drenthe (drent'fe), a province of Holland, bounded by Hanover, Overijssel, Friesland and Groningen; area, 1030 square miles. It is in general more elevated than the surrounding provinces, especially in the center. The soil is generally poor, and the surface largely consists of heath and morass, but the province is famed for its horses and cattle. Drenthe is remarkable for the great number of so-called 'giants' graves' or barrows scattered over the country. Its capital is Assen. Pop. 149,551.

Dresden (dres'den), the capital of the kingdom of Saxony, is situated in a beautiful valley on both sides of the river Elbe, which is here spanned by three stone bridges. It is first mentioned in history in 1206, and has been the residence of the sovereigns since 1485, was greatly extended and embellished by Augustus the Strong (1694-1736), and rapidly increased during the nineteenth century. Among the chief edifices, besides several of the churches, are the Museum (joined on to an older range of buildings called the Zwinger), a beautiful building containing a famous picture gallery and other treasures; the Japanese Palace (Augusteum), containing the royal library of from 300,000 to 400,000 volumes, besides a rich collection of manuscripts; the Johanneum, containing the collection of porcelain and the historical museum, a valuable collection of arms, armor, domestic utensils, etc. belonging to the middle ages. The royal palace is unattractive externally, but has a fine interior. It contains (in what is called the Green Vault) a valuable collection of curiosities, jewels, trinkets and works of art. The theater is one of the finest structures of the kind in the world. The city is distinguished for its excellent educational, literary and artistic institutions, among which are the Polytechnic School, much on the plan and scale of a university; the Conservatory and School of Music, the Academy of Fine Arts, etc. The manufactures are not unimportant, and are various in character; the china, however, for which the city is famed, is made chiefly at Meißen, 14 miles distant. The commerce is considerable, and has greatly increased since the development of the railway system. The chief glory of Dresden is the gallery of pictures, one of the finest in the world, which first became of importance under Augustus II, king of Poland and elector of Saxony, but owes its most valuable treasures to Augustus III, who purchased the greater portion of the gallery of the Duke of Modena for $900,000. The pictures number about 25,000, and in particular comprise many fine specimens of the Italian, Dutch and Flemish schools. Besides this fine collection the museum contains also engravings and drawings amounting to upwards of 350,000. There is here also a rich collection of casts exemplifying the progress of sculpture from the earliest times, and including copies of all the most important antiques. Dresden being thus rich in treasures of art, and favored by a beautiful natural situation, is the sum-
Dresden China

Formerly recognized as distinct formations.

Dripstone

Drip, in mining, the course or direction of a tunnel or gallery; or a passage between two mine shafts.

Drift Sand, sand thrown up by the waves of the sea, and blown when dry some distance inland until arrested by large stones, tree roots, or other obstacles, round which it gradually accumulates until the heaps attain considerable dimensions, often forming dunes or sand-hills.

Drill, a tool used for boring holes in wood, metal, stone, ivory, etc. It consists of a sharp tool to which a circular motion is communicated by various contrivances. For drilling iron, steel, etc., a lathe driven by steam is generally used, the drill being fixed into a chuck and the work pressed against it as it revolves. For rock-boring the diamond rockdrill, an instrument with cutting edges made of boulter or black diamond, is now generally adopted. See Boring.

Drill, a fine linen texture of a satiny finish, used for gentlemen's summer dresses. Plain drills are worked with five shafts, fancy patterns with eight.

Drill, the course of instruction in which a soldier or sailor is taught the use of arms and the practice of military and naval evolutions.

Drill (Cynocephalus leucophaeus), a species of baboon, of a smaller size and less fierce disposition than the mandril, and, like it, a native of the coast of Guinea. The face and ears are bare and of a glossy black color; the palms of the hands and soles of the feet are also naked and of a deep copper color.

Drilling (drilling), the plan of sowing in parallel rows as distinguished from sowing broadcast. It was introduced into England by Jethro Tull, who published his work on the subject in 1731. The crops which are now generally drilled are turnips, onions, beans, peas, carrots, various kinds of grain, flax, etc. The first form of drill was of very simple construction and was only adapted for sowing one row at a time.

Drink. See Dietetics.

Drinking Fountain, an erection, often ornate and artistic, on or near a public thoroughfare or place of resort, for supplying people, and sometimes also horses, dogs, etc., with water to quench their thirst.

Dripstone (drip'ston), a projecting tablet or molding over the
Driving-wheel

head of a doorway, window, archway, or niche to throw off the rain. It is also called a weather molding, and label when it is turned square. It is of various forms; sometimes a head is used as a termination or support, at others an ornament or simple molding is adopted.

Driving-wheel, in machinery, a wheel that communicates motion to another or others; in railway locomotives the large wheel which is fixed upon the crank-axle or main shaft.

Drogheda (drok'ē-da), an ancient town and seaport, and county of itself, formerly a parliamentary borough of Ireland, in the counties of Meath and Louth, on both sides of the Boyne, about 4 miles from the sea, 26 miles north of Dublin. The Boyne is here crossed by a railway viaduct of 18 arches and 95 feet high. Flax and cotton are spun; there are also saltmills, breweries and tanneries; and the fisheries are increasing. There is a good export trade in cattle, sheep, grain, butter, eggs, etc. The town was for a long time strongly fortified, and was taken by Cromwell with great slaughter in 1649; it surrendered to William III immediately after the battle of the Boyne. Pop. 19,148.

Drohobycz (drobō'bič), a town of Austria, in Galicia, 41 miles s. s. w. Lemberg. Its Catholic church is one of the handsomest in the country. It has an important trade, particularly in salt, obtained from springs in the vicinity. Pop. 19,148.

Droit d'Aubaine (droit dō-bān'), an old rule in some European countries, by which the property of a deceased foreigner was claimed by the state, unless the defunct had a special exemption. In France, where it was not abolished till 1819, the Scotch, Savoyards, Swiss and Portuguese were exempted.

Droitwich (droit'itch), a town and parliamentary division of England, in the county and 6 miles n. n. e. of Worcester, on the Salwarp. It is famous for its brine springs, from which salt has been manufactured for more than 1000 years. Pop. of town 4146.

Drôme (drōm), a southeast department of France, covered almost throughout by ramifications of the Alps, the average height of which, however, does not exceed 4000 feet; area, 2508 square miles, of which about one-fourth is waste, one-third under wood, and a great part of the remainder under tillage and pasture. A considerable extent of the area is occupied by vineyards, and several of the wines produced have a high reputation, especially Hermitage. Olives, chestnuts and silks are staple productions. Valence is the capital. Pop. (1906) 297,270.

Dromedary (dro'mē-dār'i). See Camel.

Dromore (dro'mōr), an episcopal city, Ireland, County Down, on the Lagan, here crossed by two bridges, 16 miles southwest of Belfast. Its cathedral contains the tomb of Jeremy Taylor. Pop. 2307.

Drontheim (dron'thim). See Trondheim.

Dropsy (drop'si), a disease which consists in the collection of serous or watery fluid in the cellular tissue, or in different cavities of the body. It receives different appellations according to the particular situation of the fluid. When it is diffused through the cellular tissue, either generally or partially, it is called anasarca; when it is deposited in the cavity of the cranial it is called hydrocephalus; when in the chest, hydrothorax, or hydrothoraces; when in the abdomen, ascites; in the uterus, hydrometra; within the scrotum, hydrocele; and within the ovary, ovarian dropsy. Obstructive organic disease of the heart and degenerative diseases of the kidneys are the most common causes of general dropsy. The treatment often includes removal of the fluid from the cavities containing it by tapping or puncturing; otherwise drugs which stimulate excretion by the skin, bowels and kidneys are employed, but all remedies frequently prove ineffectual.

Dropwort (from the small tubers on the fibrous roots), Spiraea flâpendula, nat. order Rosaceae, a British plant of the same genus as queen-of-the-meadow, found in dry pastures. The hemlock dropwort, or water dropwort, is Creuza fistulosa.

Droseraceae (dros-er'ē-ā'se-ē), a nat. order of albuminous, exogenous plants, consisting of marsh
Drosky

herbs, whose leaves are usually covered with glands or glandular hairs. It contains six genera, including the sundew (drosētra), and Venus’ fly-tray (Dionæa). (See Sundew and Dionæa.) They have no known qualities except that they are slightly bitter. The leaves are generally circinate in the bud, as in ferns.

Drosky (dros’kɪ), a kind of light, four-wheeled carriage used by the Russians. It is not covered, and in the middle there rises a sort of bench placed lengthways on which the passengers ride as on a saddle; but the name is now applied to various kinds of vehicles, as the common cabs plying in the streets of German cities, etc.

Drosometer (dros-om’e-ter; G r e e k , drosos, dew, and metron, a measure), an instrument for ascertaining the quantity of dew which falls. It consists of a balance, one end of which is furnished with a plate fitted to receive the dew, the other containing a weight protected from it.

Drouais (dru’-waz), JEAN GERMAIN, a French historical painter, born at Paris in 1763; died at Rome in 1788. His chief pictures are The Canaanitish Woman at the Feet of Jesus, Dying Gladiator and Marius at Minturnæ.

Drouet (dru’-e), JEAN BAPTISTE, Comte d’Erlon, French general, born in 1765; died in 1844. He served in the campaigns of the Moselle, Meuse and Sambre (1793-96), in the Peninsula, and at Waterloo, where he commanded the first corps d’armée. In 1834-35 he was governor-general of Algeria, and in 1843 was made a marshal.

Drouyn de Lhuys (droy de’luwes), ÉDOUARD, a French statesman and diplomatist; born in 1806; died in 1881. He entered the diplomatic service in 1831, and was chargé d’affaires at The Hague during the events which led to the separation of Belgium from Holland. In 1840 he was head of the commercial department under the minister of foreign affairs. Opposition to Guizot caused his dismissal in 1845. He became minister for foreign affairs in 1848, ambassador to London in 1849; and again foreign minister in 1851 and in 1863. On the fall of the empire he fled to Jersey, but subsequently returned to France.

Drowning (drou’ning) is due to the air being prevented entering the lungs, owing to the mouth and nostrils being immersed in a liquid, the liquid being commonly water. Death may, therefore, occur by drowning in a small quantity of water. Thus, a child may fall head downwards into a tub and be drowned, though the tub is not half full of water, sufficient to cover the mouth and nostrils being all that is necessary, and a man overcome by a fit or by drunkenness may fall on a road with his head in a ditch or pool of water and thus meet death. Death by drowning is thus due to suffocation, to the stoppage of breathing, and to the entrance of water into the lungs. When death has been caused by drowning, the skin presents the appearance called goose skin (cutis anserina), the face and surface of the body generally are usually pale, a frothy liquid is found in the lungs and air-passages, and about the lips and nostrils; water may be found in the stomach, and clenched fingers, holding substances grasped at, may serve to show that a struggle has taken place in the water, and that the body was alive at the time of immersion. Complete insensibility arises, it is probable, in from one to two minutes after submersion, recovery, however, being still possible; and death occurs in from two to five minutes. So long as the heart continues to beat, recovery is possible; after it has ceased it is impossible. Newly born children and young puppies bear submersion longer than the more fully grown.

For the restoration of the apparently drowned, several methods are suggested. Those of Dr. Sylvester, recommended by the English Humane Society, and Dr. Benjamin Howard, of New York, will be described. Which ever method is adopted, the following steps must first and immediately be taken: Pull the body up on to dry ground. Send immediately for medical assistance, warm blankets, dry clothing, brandy and hot water, if any one is at hand to send. No drink must be permitted, however, in treating the person, so that if only one person is on the spot he must begin to treat the person instantly, without seeking assistance. Remove all clothing from the neck and chest. Fluid substances of dress removed so as to make a firm pillow, which is to be placed under the shoulder, so that the upper part of the body is slightly raised and the head slightly thrown back. Cleanse the mouth and nostrils, open the mouth and pull forward the tongue. If natural efforts to breathe are made, try to stimulate them by brisk rubbing of the sides of the chest and of the face. If no effort to breathe is made, proceed to produce the entrance and outflow of air from the lungs by Sylvester’s or Howard’s method.
Sylvester's method: Stand or kneel behind the person's head, grasp each arm at the elbow, draw both arms simultaneously upwards till they are extended in line with the body, as a man places them when he stretches himself. Let this movement occupy about 2 seconds. This enlarges the chest and causes the entrance of air to the lungs. Without a pause carry the arms down to the sides, making them overlap the chest a little, and firmly press them on the chest. This movement should occupy another 2 seconds. It expels air from the lungs. Repeat the movements, and maintain them steadily and patiently at the rate of 15 times a minute, until breathing has been fully restored, or until medical aid arrives, or until death is certain. An hour is not too long a time to persist, and so long as there seems the least effort to breathe the efforts must be persevered in.

Howard's method: Place the body on its face, with the roll of clothing under the stomach; the head being supported on the arm as shown in Figure 1. Pull the body over the roll of clothing to expel water from the chest. Then turn the body on the back, the shoulders being supported as shown in Figure 2. Kneel over the body. Place both hands on the lower part of the chest, so that the thumbs hook in under the lowest ribs and the fingers are spread out on the chest. Steadily press forwards, raising the ribs, your own body being thus thrown leaning forward. This enlarges the cavity of the chest and causes air to enter. When the ribs have been raised to the utmost extent, with a slight effort push yourself back to the more erect position, allowing the ribs to recoil to their former position. This expels the air. Repeat the process 15 times a minute. One person will find it more easy to maintain this method for a prolonged period than Sylvester's, especially if the patient be big and heavy.

Meanwhile, if other persons are present, they should be occupied in rubbing the body and limbs (always upwards) with hands or warm flannel, applying hot flannels, bottles, etc., to the limbs, feet, armpits, etc. As soon as the person is sufficiently restored to be able to swallow, give small quantities of hot brandy and water, hot wine and water, hot coffee, etc., and use every effort to restore and maintain warmth.

Drowning was formerly a mode of capital punishment in Europe. The last person executed by drowning in Scotland suffered death in 1611. In Ireland there
was an execution by drowning so lately as 1777.

**Droylsden** (droyls'den), a local board district in England, Lancashire, 3½ miles E. of Manchester, of which it is practically an outlying suburb. It has cotton factories. Pop. (1911) 13,259.

**Droz** (droy), **FRANCOIS-XAVIER JOSEPH**, a French moralist and historian; born at Besançon in 1773; died in 1850. In 1806 he published an *Essai sur l'Art d'être Heureux*, which was very popular; and in 1823 *De la Philosophie Morale, ou des Différents Systèmes sur la Science de la Vie*, which procured his admission into the Academy. His reputation is, however, founded chiefly on his *Histoire du Régne de Louis XVI*.

**Droz** (droy), **PIERRE JACQUET**, a Swiss mechanician, born at Chaux-de-Fonds in 1721; died in 1790. Among his many contrivances were a compensation pendulum, a writing automaton, and an astronomical clock.—**HENRI LOUIS JACQUET**, son of the preceding, born in 1752 at Chaux-de-Fonds; died at Naples in 1791; followed the same line as his father, and constructed an automaton, representing a young woman, which played different tunes on the harpsichord, and a pair of artificial hands for a young man who was mutilated, by means of which he was enabled to perform most of the necessary offices for himself.

**Drugget** (drug'et), a coarse kind of woolen felt or cloth, formerly used by the lower classes for purposes of clothing, but now chiefly used as a covering for carpets.

**Drugs**, a general name for any substance, vegetable, animal, or mineral, used in the composition or preparation of medicines; also applied to ingredients used in chemical preparations employed in the arts.

**Druids** (drö'ids), the priests of the Celts of Gaul and Britain. According to Julius Cæsar, they possessed the greatest authority among the Celtic nations. They had some knowledge of geometry, natural philosophy, etc., superintended the affairs of religion and morality, and performed the office of judges. They venerated the mistletoe when growing on the oak, a tree which they likewise esteemed sacred. They had a common superior, who was elected by a majority of votes from their own number, and who enjoyed his dignity for life. They took unusual care to fence themselves round with mysteries, and it is probable that they cherished doctrines unknown to the common people; but that they had a great secret philosophy which was handed down by oral tradition is very unlikely. Of their religious doctrines little is known.

**Druids**, The Order of, friendly societies which originated in a club of ‘Druids’ founded in London for mutual entertainment in 1780. They now form a great number of lodges or ‘groves,’ established for the mutual benefit of the members. They adopt a system of ceremonies professedly based on Druidical traditions. The order has extended to America, Australia, Germany, etc. A ‘grove’ was established in New York in 1833, and from this the order spread rapidly through the United States. From the past officers was organized a supreme body entitled ‘Grand Grove of the United States of the United Ancient Order of the Druids,’ which declared its independence of the British Supreme Grove and made an entire change in the ritual, adding a number of new degrees.

**Drum**, a musical instrument of percussion, of Oriental origin, either cylindrical or hemispherical in shape, with the end or ends covered with tightened parchment, which is stretched or slackened at pleasure by means of cords with sliding knots or screws. Drums are of three kinds: (1) the long or bass drum played with stuffed nob drumsticks, and used only in large orchestras or military bands; (2) the side-drum, having two heads, the upper one only being played upon by two sticks of wood; (3) the kettle drum, a hemisphère of brass or copper, the end of which is covered with parchment, always used in pairs, one drum being tuned to the keynote, and the other to the fifth of the key, the compass of the two together being an octave.

**Drum**, in machinery, a short cylinder or cylinder-like object revolving on a horizontal axis for the purpose of turning wheels or shafts, etc., by means of belts or bands passing round it.

**Drumclog** (drum-klo'g), a moorland tract in Lanarkshire, Scotland, 6 miles S.W. of Strathaven, the scene of a skirmish between ClavARPose and the Covenanters, in which the former was defeated (1679).

**Drumfish, Drum, Pogonias chromis,** and other species of the same genus, fishes found on the Atlantic coasts of the United States, and so named from the deep drumming sound they make in the water. They usually weigh about 20 lbs.

**Drum-major**, the title of the non-commissioned officer whose duty it is to teach and direct the
drummers. He marches at the head of the band carrying the regimental baton.

Drummond (drum′mənd), Henry, biologist and theologian, was born at Stirling, Scotland, in 1851; died in 1897. In 1877 he became lecturer, and in 1884 professor of natural science in the Free Church College of Glasgow. His book, *Natural Life in the Spiritual World*, an effort to reconcile the doctrines of Christianity and evolution, excited great attention and was very widely read. Other works were *The Ascent of Man, The Greatest Thing in the World, Tropical Africa*, etc.

Drummond, Thomas, the inventor of the lime-ball light known by his name, was born at Edinburgh in 1797; and died at Dublin in 1840. He was educated at Edinburgh and at Woolwich, and entered the army as an engineer. In 1819 he became assistant to Colonel Colby in the trigonommetrical survey of Great Britain and Ireland. He invented a heliostat, and first used the light which bears his name about 1825 during the survey of Ireland. He subsequently entered political life, and became in 1835 under-secretary for Ireland, a county which he practically ruled with the utmost success for five years.

Drummond, William, of Hawthornden, a Scottish poet distinguished for the elegance and tenderness of his verses, was born at Hawthornden House, 1 mile from Edinburgh, in 1585; died in 1640. He was educated at the University of Edinburgh; after which he spent four years in foreign travels, residing for a part of the time at Bourges, to study the civil law. On his return to Scotland he retired to Hawthornden and gave himself up to the cultivation of poetry and polite literature, and here he spent the most of his life. He entertained Ben Jonson for three weeks on the occasion of a visit which the English dramatist made to Scotland in the winter of 1618-19, and took notes of Jonson's conversation, which were first published in 1711. He was the first Scottish writer to abandon the native dialect for the language raised to supremacy by the Elizabethan writers. His chief productions are: *The Cypress Grove*, containing reflections upon death; *Flowers of Zion*, or *Spiritual Poems*; *Tears on the Death of Miliades* (that is, Prince Henry); *Poems, Amorous, Funereal, Divine, Pastoral*, in *Sonnets, Songs, Scatinae, Madrigals, The River Forth Feasting* (on King James' visit to Scotland in 1617); *Polemo-Mividius, or the Battle of the Dunghill*, a macaronic poem; and *History of the Lives and Reigns of the Five Jameses, Kings of Scotland*. As an historian he is chiefly remarkable for an ornate style, and a strong attachment to the High Church principles of the Jacobites.

Drummond Light, a very intense light produced by turning two streams of gas, one of oxygen and the other of hydrogen, in a state of ignition upon a ball of lime. This light was proposed by Thomas Drummond (see article) to be employed in lighthouses. See Limelight.

Drunkenness (drung′kn-nes), the state of being drunk or overpowered by alcoholic liquor, or the habit of indulging in intoxication. A similar condition may be produced by numerous agents, but the term is always applied to the act or habit of drinking alcohols to excess. By the common law drunkenness is an offense against the public economy, and those found drunk are liable to fine or imprisonment. Drunkenness is no excuse for any crime, but it renders a contract invalid if either of the parties was in a state of complete drunkenness when the contract was signed.

Drunken Parliament, in Scottish history, a name given to the privy-council, which, under its powers as representing the estates between sessions, met at Glasgow and passed an act (October 1, 1602) to remove the recusant ministers from their parishes within a month. All the members were said to have been drunk except Lockhart of Lee, who opposed the measure.

Drupaceae (drū-pä′se-ē), a name given by some botanists to that division of rosaceous plants which comprehends the peach, the cherry, the plum and similar fruit-bearing trees.

Drupe (drūp), in botany, a stone fruit; a fruit in which the outer part of the pericarp becomes fleshy or softens like a berry while the inner hardens like a nut, forming a stone with a kernel, as the plum, cherry, apri-
cot and peach. The stone enclosing the
kernel is called the endocarp, while the
pulpy or succulent part is called the
mesocarp. In some fruits, as those of
the almond, the horse-chestnut and coco-
nut, the mesocarp is not succulent, yet,
from their possessing the other qualities
of the drupe, they receive the name. The
date is a drupe in which the hard stone
or endocarp is replaced by a membrane.

Drury Lane Theater, one of the
principal theaters in London, was established
in the reign of James I. In 1671 it was
burned down, and was rebuilt by Sir
Christopher Wren between 1672 and
1674, but again consumed in 1809. On
this occasion it was rebuilt by B. Wyatt,
and was reopened on October 10, 1812,
with an address composed by Lord Byron.
It was in connection with this opening
that James and Horace Smith wrote the
Rejected Addresses. Nearly all the great
English actors from Betterton and Gar-
rick have been more or less connected
with Drury Lane.

Druses (druses), a curious people of
mixed Syrian and Arabian origin, inhabiting the mountains of
Lebanon and Anti-Lebanon, in whose faith are combined the doctrines of the
Pentateuch, part of the tenets of Chris-
tianity, the teachings of the Koran, and
the Sufi allegories. They describe them-
selves as Unitarians and followers of
Khalif Hakim Biamr-Allah, whom they
regard as an incarnation of deity, the
last prophet, and the founder of the
true religion. They are nearly all taught
to read and write; but are exceedingly
turbulent, their conflicts with their neigh-
bors the Maronites having often caused
much trouble to the Turkish government.
Their total number (exclusive of women
and children) has been estimated at from
70,000 to 75,000.

Drusilla (druz-ila), a daughter of Her-
rod Agrippa I, king of the
Jews. She was born in A.D. 38; married
Azizus, king of Emesa, whom she divorced
in order to marry Felix, procurator of
Judea. She is thus the Drusilla who is
mentioned in the Acts, and was probably
present when Paul preached before Felix.

Drusus (drus-us), the name of several
distinguished Romans, among
whom were:—MARCUS LIVIUS, orator
and politician; became tribune of the
people in 122 B.C. He opposed the
policy of Caius Gracchus, and became
popular by planting colonies.—MARCUS
LIVIUS, son of the above, was early a
strong champion of the senate or aristoc-
ратic party, but showed great skill in
manipulating the mob. He rose to be
tribute of the people, and was assassi-
nated in B.C. 91.—NERO CLAUDIUS, brother
of the Em; eror Tiberius, born in B.C. 38.
By a series of brilliant campaigns he
extended the Roman empire to the Ger-
man Ocean and the river Elbe, and was
hence called Germanicus. By his wife
Antonia, daughter of Mark Antony, he
had a daughter, Livia, and two sons,
Germanicus and Claudius, the latter of
whom afterwards became emperor. He
died in B.C. 9.

Dryad (dri-ad), a wood nymph, in the
Greek mythology. They were
supposed to be the tutelary deities of trees.
Each particular tree or wood was the
habitation of its own special dryad.

Dryander (dri-ând’er), Jonas, a
Swedish naturalist and
pupil of Linnaeus, born in 1748; died in
1810. He settled in England in 1782,
and was connected with the Royal and
Linnean societies till his death.

Dryandra (dri-án’dra), named from
the Swedish naturalist
Dryander, a genus of Australian shrubs,
with hard, dry, evergreen, generally ser-
rated leaves, and compact, cylindrical
clusters of yellow flowers, nat. order
Proteaceae. The species are esteemed by
cultivators for the variety and peculiar
forms of their leaves.

Dryburgh Abbey (dri’burgh), a
monastic ruin in
Scotland, consisting of the nave's western
gable, the gable of the south tran-
sept, and a fragment of choir and
north transept of an abbey founded in
1150 on the banks of the Tweed, about
5 miles E. S. E. of Melrose. It is cele-
brated as the burial place of Sir Walter
Scott and his family.

John Dryden.

Dryden (dri’den), John, an English
poet, was descended from an
Dry-Farming

ancient family, his grandfather being Sir Erasmus Dryden, of Canons Ashby, Northamptonshire. He was born near Aldwinkle. Northamptonshire, in 1631, and was admitted a king's scholar at Westminster under the celebrated Dr. Busby, whence he went to Trinity College, Cambridge. In London he acted as secretary to his cousin, Sir Gilbert Pickering, a favorite of Cromwell; and on the death of the Protector wrote his Heroic Stanzae. At the Restoration, however, he hailed the return of Charles II in Astrea Redux, and from that time his devotion to the Stuarts knew no decay. In 1661 he produced his first play, The Duke of Guise. This was followed by a number of others until the great fire of London put a stop for some time to theatrical exhibitions. In the interval Dryden published the Annals Mirabilis, a historical account of the events of the year 1666, one of the most elaborate of his productions. In 1668 he also published his celebrated Essay on Dramatic Poetry—the first attempt to regulate dramatic writing. Dryden was shortly afterwards appointed to the offices of royal historiographer and poet laureate. He now became professionally a writer for the stage, and produced many pieces, some of which have been strongly censured for their licentiousness. The first of his political, and poetical satires, Absalom and Achitophel (Monmouth and Shaftesbury) was produced in 1681. On the accession of James in 1685 Dryden became a Roman Catholic, and defended his position in a poem, The Hind and the Panther. At the Revolution he was deprived of his office and income. During the remaining ten years of his life he produced some of his best works, including his admirable translations from the classics. His poetic translation of Virgil appeared in 1697, and soon after, that masterpiece of lyric poetry, Alexander's Feast, his Fables, etc. He died May 1, 1700, and was buried in Westminster Abbey. Dryden is unequalled as a satirist among English poets, and the best of his tragedies are unsurpassed by any since written. His poetry as a whole is more remarkable for vigor and energy than beauty, but he did much to improve English verse. He was also an admirable prose writer. In character he was modest and kindly. Dry Farming, a method of farming recently developed and coming into ever wider use. The United States Department of Agriculture through its experiment stations has made a careful study of the conditions, possibilities and limitations of the practice, and the following is a brief abstract of the results:

In defining the term dry farming it is explained that the practice includes (1) deep plowing before the rainy season sets in, in order to provide in the soil a capacious water storage reservoir and an ample space for root development; (2) light, deep, even seeding or planting in a well-prepared, moist soil; (3) frequent, thorough, level cultivation before as well as after sowing or planting; (4) the use of seed bred and selected for the conditions prevailing; (5) the use of machinery of large capacity; (6) the adoption of methods for the concentration of crops.

Crops must be selected or developed that will fit the environment, and there is ample field for investigation in the improvement and development of crops adaptable to dry lands. Wheat stands at the head among cereal crops. The durum or macaroni wheats do especially well; but other varieties are also grown, as are oats, rye, barley and spelt. The millet similar are among the best-paying dry-farming crops. There are few legumes that have shown value on dry lands, but peas, beans and alfalfa are the most promising of development. Vegetables and both shade and fruit trees are being grown in districts where dry farming is practiced.

Fall seeding of cereals, wherever the conditions will permit, is preferable to spring seeding, and it is important to retain the snow upon the land, especially in sections where it forms the chief part of the total precipitation. The snowfall may be retained by leaving the ground rough after the late fall plowing, by throwing up borders across the field at right angles with the prevailing winds, or by planting hedge rows or shrubbery across the field at short intervals. Usually less seed should be planted per acre under dry-farming conditions than is used in humid sections. The less precipitation, the smaller should be the amount of seed planted.

Drying Machine (d r'ing ma-shen), a machine used in bleaching, dyeing and laundry establishments, consisting of two concentric drums or cylinders, one within the other, open at the top, and having the inner cylinder perforated at its side with numerous small holes. The goods to be dried are placed within the inner cylinder; and the machine is then made to rotate with great velocity, when, by the action of centrifugal force, the water escapes through the holes in the side.

Drying-oil, the name given to linseed...
been heated with oxide of lead; they are the bases of many paints and varnishes. When exposed to the air they absorb oxygen, and are converted into a transparent, tough, dry mass or varnish.

**Dryobalanops** (dř t-o-bal'an-ops).

**Dryophis** (dřt-o-fis), a genus of non-venomous tree serpents.

**Dry Pile**, a form of the ordinary voltaic pile, in which the liquid is replaced by some hygroscopic substance, as paper which has been moistened with sugar and water and allowed to dry, chiefly useful in the construction of microscopes of great delicacy.

**Dry Point**, a sharp-pointed instrument used by engravers to incise fine lines in copper without the plate being covered with etching ground or the lines bit in by acid. This tool is much employed in working the more delicate portions of plates produced as etchings.

**Dry Rot**, a well known disease affecting timber occasioned by various species of fungi, the mycelium of which penetrates the timber, destroying it. *Polyporus hybridus* is the dry rot of oak-built ships; *Merulius lacrymans* is the most common and most formidable dry rot fungus in Britain, found chiefly in firewood; while *Polyporus destructor* has the same prevalence in Germany. Damp, unventilated situations are most favorable to the development of dry rot fungi. Various methods have been proposed for the prevention of dry rot; that most in favor is thoroughly saturating the wood with creosote, which makes the wood unfit for vegetation.

**Dual** (dül), in grammar, that number of words in some languages to designate two things, while another number (the plural) exists to express many. The Greek, Sanskrit and Gothic of ancient languages, and the Lithuanian and Arabic of modern, possess forms of the verb and noun in which two persons or things are denoted. The Anglo-Saxon *wit* ('we two') and *yit* ('ye two') are dual forms.

**Dualine** (dů-lín), a blasting powder, consisting of a mixture of about twenty parts of saltpeter, thirty parts of fine dry dust and fifty parts of nitroglycerine. It has advantages over gunpowder where blasting has to be done in soft stone or coal; but in hard rock dynamite is preferable.

**Dualism** (důl-izm), the philosophical exposition of the nature of things by the hypothesis of two dissimilar primitive principles not derived from each other. Dualism in religion is chiefly confined to the adoption of a belief in two fundamental beings, a good and an evil one, as is done in some Oriental religions, especially that of Zoroaster. In metaphysics, dualism is the doctrine of those who maintain the existence of spirit and matter as distinct substances, in opposition to idealism, which maintains that we have no knowledge or assurance of the existence of anything but our own ideas or sensations. Dualism may correspond with realism in maintaining that our ideas of things are true transcripts of the originals, or rather of the qualities inherent in them, the spirit acting as a mirror and reflecting their true images or it may hold that, although produced by outward objects, we have no assurance that in reality these at all correspond to our ideas of them, or even that they produce the same idea in two different minds.

**Duane** (du-an'), WILLIAM J., an eminent lawyer and statesman, born at Clonmel, Ireland, of American parentage, in 1780. His father, William Duane (1760-1835), was a political editor, who for many years published in Philadelphia an influential Democratic paper, the *Aurora*. The son was admitted to the bar in 1803 and practiced in Philadelphia. He was the legal adviser of Stephen Girard, whose last will he wrote. After serving in the Pennsylvania legislature, he was in 1833 appointed Secretary of the Treasury by President Jackson, who soon after ordered him to remove the deposits of public money from the Bank of the United States. This Duane refused to do and was in consequence removed from office. He wrote *The Law of Nations Investigated in a Popular Manner*. DIED, 1860.

**Dubarry** (dúbá-ri), MARIE JEANNE, COMTESSE, mistress of Louis XV, was born at Vaucouleurs in 1746. She came young to Paris, entered on an immoral course, and was presented to the king in 1769, who had her married for form's sake to the Count du Barry. She exercised a powerful influence at court, and with some of her confidants completely ruled the king. Important offices and privileges were in her gift, and the courtiers abased themselves before her. After the death of Louis she was dismissed from court and sent to live in a convent near Meaux. She re-
ceived a pension from Louis XVI. During the reign of terror she was arrested as a royalist and executed, November, 1793.

Du Bartas (dú-bart-ta), Guillaume de Salluste, Sieur. See Bartas.

Dubitza (dò-bit'za), a fortified town of Bosnia, on the right bank of the Unna, about 10 miles from its confluence with the Save. In the sixteenth and seventeenth centuries it was a frequent point of contention between Austria and Turkey. In 1788, with the rest of Bosnia, it passed under Austrian administration. Pop. 6000. On the opposite bank of the Unna, in Croatia, stands Austrian Dubitza, with upwards of 3000 inhabitants.

Dublin, the metropolis of Ireland, is situated in County Dublin, on the east coast of the island, at the mouth of the Liffey, the banks of which for more than two miles from the sea are lined with quays. The river, which divides the city into two unequal parts, is crossed by numerous bridges. In the old part of the city the streets are irregular, narrow and filthy; in the more modern and aristocratic quarters there are fine streets, squares and terraces, but with little pretension to architectural merit. The public buildings, however, are especially numerous and handsome. The main thoroughfare, east to west, is by the magnificent quays along the Liffey. The principal street at right angles to the river is Sackville Street, a splendid street 650 yards long and 40 yards wide, forming a thoroughfare which is continued across the river by O'Connell Bridge, a magnificent structure the same width as Sackville Street. The principal public secular buildings are the Castle, the official residence of the viceroy; the Bank of Ireland, formerly the Irish parliament house; Trinity College; the courts of justice; the custom house; the King's Inns; the post-office; rotunda; corn exchange; commercial buildings; the mansion house; city hall or corporation buildings, etc. The most important literary and scientific institutions are Trinity College (Dublin University); the Royal University; the Royal College of Science; the Roman Catholic University; the College of Surgeons; the Royal Dublin Society; the Royal Hibernian Academy of Painting, Sculpture and Architecture; the Royal Irish Academy for Promoting the Study of Science, Literature and Antiquities; the Archeological Society; the Royal Zoological Society. Dublin contains two Protestant Episcopalian cathedrals—St. Patrick's Cathedral, erected in 1190, and thoroughly restored between 1860 and 1865; and Christ's Church, built in 1038 and also recently restored, both restorations being carried on by private munificence. The Roman Catholic Cathedral is a very large edifice. The charitable institutions are numerous and some of them possess splendid buildings. There are several extensive military and constabulary barracks in the city and vicinity. A little northwest of the city, up the Liffey, is the Phoenix Park, with an area of 1750 acres. In it are the Viceregal Lodge, the residence of the lord lieutenant; the chief secretary's and under-secretary's official residences; the Royal Hibernian Military School, and the depot of the Royal Irish Constabulary; also the quarters of the Royal Zoological Society. The manufactures carried on are of little note: poplins, for which Dublin has been long celebrated, are still in some request, and brewing and distilling are largely carried on. Dublin is an important town. Its early history is obscure. It was held by the Danes for more than three centuries from 836. Pop. 290,638.—The county, which is in the province of Leinster, on the east coast of the island, has an area of 354 square miles, about a third of it under crops of various kinds, chiefly grass and clover. The surface on the whole is flat, but the ground rises at its southern boundary into a range of hills, the highest of which—Kippure—is 2413 feet above the sea. There is about 70 miles of sea-coast, the chief indentation being Dublin Bay. The principal stream is the Liffey, which intersects the county w. to e. Important water communications are the Royal and the Grand canals, both centering in Dublin, and uniting the Liffey with the Shannon. The manufactures are unimportant, but the fisheries are extensive. Pop. 398,356.

Dublin, a city, capital of Laurens Co., Georgia, on the Ocone River, 58 miles s. e. of Macon. It has manufactures of cotton, cottonseed oil, naval stores, etc. Pop. 8000.

Dublin, University of, an institution founded in 1591, when a charter, or letters-patent, was granted by Queen Elizabeth for the incorporation of the 'College of the Holy and Undivided Trinity,' the University and Trinity College being practically the same. The corporation now consists of a provost, seven senior fellows, twenty-six junior fellows and seventy foundation scholars. The senate of the university consists of 'the chancellor of the university, or, in his absence, of the vice-chancellor, and
such doctors or masters of the university as shall have and keep their names on the books of Trinity College. The senate possesses the right of electing the chancellor of the university; it is also the body which grants degrees. The fellows are appointed for life, after an examination. The college possesses a library of about 200,000 printed volumes and 1700 manuscripts. It has also a botanic garden and museum. In 1613 James I granted to the university the right of returning two members to Parliament. One was taken away at the Union, but was restored by the reform bill of 1832.

**Dubnitza** (dúb-nit'zá), a town in Bulgaria, 25 miles s. s. w. of Sofia. It has extensive ironworks and some manufactures of silk. Pop. about 8000.

**Dubno** (dúb' nó), a town of European Russia, government of Volhynia. It was a place of some importance before the annexation of Western Poland by Russia. Pop. 13,785, in great part Jews.

**Dubois** (dúb-bwä'), Guillaumes, a French cardinal, was the son of an apothecary; born in 1561; died in 1723. He became tutor to the Duke of Chartres, afterwards Duke of Orleans and regent, and maintained his influence by pandering to the vices of his pupil. He became privy-councillor and overseer of the duke's household, and minister for foreign affairs under the regency. The archbishopric of Cambrai having become vacant, Dubois ventured to request it of the regent, although he was not even a priest. The regent was astonished at his boldness; but he obtained the post, having in one morning received all the clerical orders, and, a few days after, the archbishopric. By his consummate address he obtained a cardinal's hat, and in 1721 was appointed prime minister.

**Dubois** (dúb-bwä'), Paul, a French sculptor, born in 1829; died in 1905. He first studied law, but in 1856-58 gave himself up to sculpture under Tousaint at Paris, and then went to Italy, where the sculptors of the early Renaissance, Donatello, Luca Della Robbia, etc., had a decided influence upon him. Among his works are a St. John, a Narcissus, a Madonna and Child, Eve Awakening to Life, a Figure of Song for the opera-house at Paris, and numerous busts; but his greatest work is the monument of General Lamoricière in the Cathedral of Nantes, with figures of Military Courage, Charity, Faith and Meditation, which rank among the best products of French plastic art.

**DuBois** (dú-bois' or dō-bois'), a town of Clearfield County, Pennsylvania, 120 miles e. n. e. of Pittsburgh, 1400 feet above sea level. It has large coal cars and machine shops, flour mills, glass and clay works, etc. Pop. 12,623.

**DuBois-Remond** (dú bwa' rä-mônd), Emile, a German physicist, and an especial authority on animal electricity, born at Berlin in 1818; died in 1896. He studied theology, geology and anatomy and physiology, and became professor of physiology in the University of Berlin in 1858.

**Dubossari** (dúb-dô-sä'ri), a town of South Russia, gov. of Kherson, on the Dniester, 100 miles n. w. of Odessa. Pop. 13,276.

**Dubovka** (dúb-bôv' ká), a town of South Russia, gov. of Saratov, on the Volga; has an extensive river trade in wool, iron, oil, grain, etc. Pop. 16,370.

**Dubuque** (dú-bük'), on the right bank of the Mississippi, county seat of Dubuque County. It occupies an important commercial position as a railway center, and is the manufacturing metropolis of Iowa, having immense wood working, iron and clothing plants. Tributary thereto is also a wealthy agricultural region. It is the oldest town in the state and is the center of a large trade by river and rail. It has various large educational establishments. The city was settled in 1833, but the site was occupied by a trading and mining camp of French Canadians, established by Julien Dubuque in 1788. Pop. 45,000.

**Ducange** (dú-känzh'), Charles Dufresne, Sieur a French historian and linguist, was born in 1610 near Amiens; died at Paris in 1688. He studied in the Jesuits' College at Amiens, afterwards at Orleans and Paris. At this last place he became parliamentary advocate in 1631, and in 1645 royal treasurer at Amiens, from which place he was driven by a pestilence, in 1638, to Paris. Here he devoted himself entirely to literature and published his great works, viz., his Glossaries of the Greek and Latin peculiar to the Middle Ages and the Moderns; his Historia Byzantina, the Annales of Zonaras, the Numismatics of the Middle Ages, and other important works.

**Ducas** (dū'kas), Michael, a Byzantine historian, who flourished in the fifteenth century. His Historia Byzantina, which contains a reliable ac-
count of the siege and sack of Constantino

cle, was largely used by Gibbon.

Ducat (duk'ät), a coin formerly com-
mon in several European states, espe-
cially in Italy, Austria and Russia.
It was either of silver or gold; average
value of the former, 75 cents to $1.00;
and of the latter about $2.32. It was
named from being first coined in one of
the Italian duchies—Lat. ducatus, a
duchy.

Ducatoo (duk-a-tōn’), formerly a
Dutch silver coin worth 3
gulden 3 stivers, or $1.30. There were
coins of the same name in Italy. In
Tuscany its value was about $1.35, in
Flanders slightly more, and in Venice about
$1.18.

Du Chaillu (du-shāl'yə), Paul Bel-
loni, traveler, born at
Paris in 1835. He spent his youth in the
French settlement at the Gaboon, on the
west coast of Africa, where his father
was a merchant. In 1852 he went to
the United States, of which he after-
wards became a naturalized citizen. In
1855 he began his first journey through
Western Africa, and spent till 1859 alone
among the different tribes, traveling on
foot upwards of 8000 miles. He col-
clected several gorillas, never before
hunted, and rarely, if ever, before seen
by any European. The result of this
journey was published in 1861. A second
expedition was made in 1863, an account
of which, under the title A Journey to
Ashango Land, appeared in 1867. The
Land of the Midnight Sun, an account
of a tour in Northern Europe (1881),
had a considerable success. He also
published a number of books intended for
youth, and based on his travels. His
latest work was The Viking Age, a
treatise on the ancestors of the English-
speaking peoples. He died in 1903.

Duchesne, or Du Chesne (du-shən'),
André, a French histor-
ian, born in 1816; died in 1910. His
most important works were his collection
of French historians—Historia Fran-
corum Scriptores; Historia Normanorum
Scriptores 838-1220; Histoire d’Ange-
terre, d’Écosse et d’Irlande; Histoire des
Papes.

Duchn (dúhn). See Duckn.

Duchoborzi (dük-o-bôr’tsë), a Rus-
sian sect of religious
mystics which came first into notice in
the eighteenth century. They hold that
human souls existed before the creation
of the world, and fell in that former exis-
tence. Their doctrinal system is, how-
ever, not well known; but their ethical
teachings have a striking resemblance
to those of the Quakers. They are now
few in number. Some are in Canada.

Ducis (dū-sēs'), Jean Franois, a
French dramatic writer, born at
Versailles in 1738; died in 1816. Of his
original works, the tragedy Abyfar was
much admired; but he is now best known
for his adaptations of Shakespere to the
Parisian stage.

Duck, the name common to all the
web-footed birds constituting the
Linnean genus Anas, now raised into
a subfamily Anatine, and by some natu-
rals divided into two subfamilies,
Anatine and Fuliguline, or land ducks
and sea ducks. The ducks are very
numerous as species, and are met with
all over the world. They are often
migratory, going northward in summer to
their breeding-places. Their food is
partly vegetable, partly animal. The
common mallard or wild duck (Anas
Boschas) is the original of the domestic
duck. In its wild state the male is
characterized by the deep green of the
plumage of the head and neck, by a
white collar separating the green from
the dark chestnut of the lower part of
the neck, and by having the four middle
feathers of the tail recurved. The wild
duck is taken in large quantities by de-
coys and other means. Some tame ducks
have nearly the same plumage as the wild
ones; others vary greatly, being gener-
ally duller or pure white, but all the
males have the four recurved tail feath-
ers. There are several favorite varieties
of the domestic duck, those of Normandy
and Picardy in France, and the Aylesbury
ducks in England, being remarkable for
their great size and delicacy of flesh.
The musk duck, erroneously called the
covy duck (Cairina moschata), a native of
South America, is the largest of the
duck kind, and approaches nearly to
the size of a goose. The canvas-back duck
(which see) is peculiar to America, and
is celebrated for the excellence of its
flesh. Other species of ducks are the
shoeler, remarkable for the strange
form of its bill; the gadwall, which is
more rare in America than in Europe;
the pintail or sprigtail, remarkable for
the form of its tail, abundant in both
hemispheres; the black or dusky duck,
peculiar to America, and very abundant;the summer or wood duck, remarkable
for its great beauty, and for its migra-
tions being directly opposed to those of
the other species; the teal; the eider
duck, so well known for its valuable
down; the scoter; the pochard or rudd;
the scaup ducks or blue-bill; the
long-tailed duck; the harlequin duck, all
found on both continents.
Duck, a species of coarse cloth made of flax, lighter and finer than canvas.

Duck-bill, or DUCK-BILL. See ORNITHORHYNCHUS.

Ducking-stool, a stool or chair in which common scolds were formerly tied and plunged into water. They were of different forms, but that most commonly in use consisted of an upright post and a transverse movable beam on which the seat was fitted or from which it was suspended by a chain. The ducking-stool is mentioned in the Doomsday survey; it was extensively in use throughout the country from the fifteenth till the beginning of the eighteenth century, and in one rare case at least—at Leominster—was used as recently as 1800.

Duckweed (dük'wèd), the popular name of several species of LEMNA, nat. ord. Lemnaceae, plants growing in ditches and shallow water, floating on the surface, and serving for food for ducks and geese. Five species are known in Europe, and others are common in America. They consist of small fronds bearing naked unisexual flowers.

Duckworth (dük'wa:rh), Sir John Thomas, a British admiral, born in 1748; died in 1817. He joined the navy when eleven years of age, and was post-captain in 1780. In 1783, on the breaking out of the French war, he was appointed to the command of the ORION, 74, forming part of the Channel fleet under Lord Howe, and distinguished himself in 1794 in the great naval victory gained by that celebrated admiral. In 1796 he aided in the capture of Minorca. From 1800 to 1806 he rendered important services on the West India station, in particular gaining a complete victory over a French squadron, for which he received a pension of £1000 a year and the thanks of both houses of parliament. In 1807, having been ordered to Constantinople, he forced the passage of the Dardanelles, but suffered severely from the Turkish batteries in returning. Between 1810 and 1813 he was governor of Newfoundland, in 1817 he was appointed to the chief command at Plymouth. In 1813 he was created a baronet.

Duclos (dük-kloö), Charles Pinet, a French novelist, writer of memoirs and grammarian, born in 1704 at Dinant; died in 1772. He became secretary of the French Academy, and on the resignation of Voltaire he was appointed to the office of historiographer of France. His writings are lively and satirical. Among the best are Confessions du Comte de B—— (1741). Considerations sur les Mœurs de ce Siècle, Mémoires secrets sur les Règles de Louis XIV et XV and Remarques sur la Grammaire générale de Port-Royal.

Ductility (dük-ti'l-i-ti), the property of solid bodies, particularly metals, which renders them capable of being extended by drawing, while their thickness or diameter is diminished, without any actual fraction or separation of their parts. On this property the wire-drawing of metals depends. The following is nearly the order of ductility of the metals which possess the property in the highest degree, that of the first mentioned being the greatest; gold, silver, platinum, iron, copper, zinc, tin, lead, nickel, palladium, cadmium. Dr. Wollaston succeeded in obtaining a wire of platinum only 1/30,000th of an inch thick in diameter. The ductility of glass at high temperatures seems to be unlimited, while its flexibility increases in proportion to the fineness to which its threads are drawn.

Dudden (dö'dun), an English river which flows 20 miles along the boundaries of Cumberland and Lancashire to the Irish Sea, and is the subject of a series of sonnets by Wordsworth, written in 1820.

Du Defand, Madame. See Deffand.

Duderstadt (döö'der-stat), an old German town, province of Hanover, 10 miles east from Gottingen, formerly a member of the Hanseatic League and a place of some importance. Pop. (1906) 5225.

Dudevant (doo-van'), Armande Lucile Aubire Dupin, Madame better known by the nom de plume of George Sand, one of the greatest of French novelists, born in 1804; died in 1876. She was the daughter of Maurice Dupin, an officer of the republican army, who was descended from a natural daughter of Marshal Saxe. Until the age of fourteen she was brought up at the Chateau of Nobant, near La Châtre (department of Indre), mostly under the care of her grandmother, afterwards spending nearly three years in an Augustinian convent in Paris. In 1822 she married Baron Dudevant, to whom she bore a son and a daughter; but in 1831 separated from him, and took up her residence in Paris. In conjunction with Jules Sandeau, a young lawyer, she wrote Rose et Blanche, which was published in 1831, with the pseudonym Jules Sand. The reception it met with
Dudley afforded her an opportunity of publishing a novel solely by herself—Indiana, under the name of George Sand, which she ever after retained. Indiana had a brilliant success, but excited much criticism by its extreme views on social questions. This was also the case with many others of her works, a considerable number of novels appearing within the first few years after her début. She visited Italy with Alfred de Musset; and lived eight years with Frédéric François Chopin, the composer. These relations also influenced or occasioned some of her works (as Elle et Lui, 1858). In 1836 she obtained a judicial separation from her husband, with the care of her children. She took an active interest in the revolution of 1848, and contributed considerable to the latter newspapers and other political literature. In 1854 she published Histoire de Ma Vie, a psychological autobiography. Among her later novels are: La Mare au Diable, François le Champé, La Petite Fadette, Jean, Teverin de Filleule, Les Maîtres Sonneurs, L’Homme de Neige, Pierre qui Roule and Monsieur de Sylvestre. Her published works consist of upwards of sixty separate novels, a large number of plays, and numerous articles in literary journals—Her son MAURICE DUDEVANT, born at Paris in 1825, has written several novels, etc., and has attained a certain reputation as an artist.

Dudley (dud’l), a town of England, in an isolated part of Worcestershire enclosed by Staffordshire, 8 miles west by north of Birmingham. It is situated in the midst of the ‘black country’, and has extensive coal mines, iron mines, ironworks, and limestone quarries. It produces nails, chain cables, anchors, vises, boilers, fire irons, and has also steel works, brickworks, brass foundries, etc. There are the remains of a castle, said to have been founded in the eighth century by a Saxon prince called Dwed, who has given the town its name. Pop. (1911) 61,032.

Dudley, Sir EDMUND, born in 1442; executed in 1510; noted in English history as an instrument of Henry VII in the arbitrary acts of extortion by the revival of obsolete statutes and other unjust measures practiced during the latter years of his reign. On the accession of Henry VIII he was arrested for high treason, and perished on the scaffold with his associate, Sir Richard Empson.

Dudley, Lord Guilford, son of John, Duke of Northumberland, was married in 1553, to Lady Jane Gray, whose claim to the throne the duke intended to assert on the death of Edward VI. On the failure of the plot Lord Guildford was condemned to death, but the sentence was not carried into effect till the insurrection of Wyatt induced Mary to order his immediate execution (1554).

Dudley, John, Duke of Northumberland, son of Sir Edmund Dudley, minister of Henry VII; was born in 1502; beheaded in 1553. He was left by Henry VIII, one of the executors named in his will, as a kind of joint-regent during the minority of Edward VI. Under that prince he manifested the most insatiable ambition, and obtained vast accessions of honors, power and emoluments. The illness of the king, over whom he had gained complete ascendancy, aroused his fears, and he endeavored to strengthen his interest by marrying his son Lord Guildford Dudley to Lady Jane Grey, descended from the younger sister of Henry VIII, and persuaded Edward to settle the crown on his kinswoman by will, to the exclusion of his two sisters, the Princesses Mary and Elizabeth. The death of the king, the abortive attempts to place Lady Jane Grey on the throne, and the ruin of all those concerned in the scheme are among the most familiar events in the annals of England.

Dudley, Robert, Earl of Leicester. Dudley Limestone, a highly fossiliferous limestone belonging to the Silurian system, occurring near Dudley, and equivalent to the Wenlock limestone. It abounds in beautiful masses of coral, shells and tri-lobites.

Duel (dû’l; from L. duelum, from duō, two), a premeditated and prearranged combat between two persons with deadly weapons for the purpose of deciding some private difference or quarrel. The combat generally takes place in the presence of witnesses called seconds, who make arrangements as to the mode of fighting, place the weapons in the hands of the combatants, and see that the laws they have laid down are carried out. The origin of the practice of dueling is referred to the trial by ‘wager of battle’ which obtained in early ages. This form of duel arose among the Germanic peoples, and a judicial combat of the kind was authorized by Gundealk, king of the Burgundians, as early as 501 A.D. When the judicial combat declined the modern duel arose, being probably to some extent an independent outcome of the spirit and institutions of chivalry. There was the country in which it arose, the sixteenth
Duel

Duff, Sir Mountstuart Elphinstone Grant, usually called Grant Duff, a British politician and writer, born in 1829; died in 1906. He was made under-secretary for India in 1868, and was governor of Madras, 1861-86. He was president of the Royal Geographical Society, 1889-95, and of the Royal Historical Society, 1892. He wrote *Studies in European Politics*, Ernest Renan, *Notes from a Diary*, etc.

Dufferin (dù-fer-in), Frederick Temple Hamilton-Blackwood, Marquess of, a British statesman and author, son of the fourth Baron Dufferin and a granddaughter of R. B. Sheridan, born at Florence in 1828; died in 1902. He began his public services in 1855, when he was attached to Earl Russell's mission to Vienna. Subsequently he was sent as commissioner to Syria in connection with the massacre of the Christians (1860) was Indian under-secretary (1864-66) under-secretary for war (1866); chancellor of the Duchy of Lancaster (1868-72); governor-general of Canada (1872-73); and ambassador at St. Petersburg (1879-81); at Constantinople (1882); sent to Cairo to settle the affairs of the country after Arabi Pasha's rebellion (1882-83); viceroy of India (1884-88); British ambassador to Italy (1889). In addition to the celebrity he had attained as a brilliant diplomatist, he was also a popular and successful author. In

century being the time at which it first became common. Upon every insult or injury which seemed to touch his honor, a gentleman thought himself entitled to draw his sword, and to call on his adversary to give him satisfaction, and it is calculated that 6000 persons fell in duels during ten years of the reign of Henry IV. His minister, Sully, remonstrated against the practice; but the king connived at it, supposing that it tended to maintain a military spirit among his people. In 1602, however, he issued a decree against it, and declared it to be punishable with death. Many subsequent prohibitions were issued, but they were all powerless to stop the practice. During the minority of Louis XIV more than 4000 nobles are said to have lost their lives in duels. The practice of dueling was introduced into England from France in the reign of James I; but it was never so common as in the latter country. Cromwell was an enemy of the duel, and during the protectorate there was a cessation of the practice. It came again into vogue, however, after the Restoration, thanks chiefly to the French ideas that then inundated the court. As society became more polished duels became more frequent, and they were never more numerous than in the reign of George III. Among the principals in the fatal duels of this period were Charles James Fox, Sheridan, Pitt, Canning, Castlereagh, the Duke of York, the Duke of Richmond and Lord Cambridge. The last-mentioned was the most notorious duelist of his time, and was himself killed in a duel in 1804. A duel was fought between the Duke of Wellington and Lord Winchelsea in 1829, but the practice was dying out. It lasted longest in the army. By English law, dueling is considered murder no matter how fair the combat may have been, and the seconds are liable to the same penalty as the principals. In 1813 the principal and seconds in a fatal duel were sentenced to death, though afterwards pardoned. An officer in the army having anything to do with a duel renders himself liable to be cashiered. In France dueling still prevails to a certain extent but the combats are usually very bloodless and ridiculous affairs. In the United States duels are now uncommon, and is recognized by law. The duels of German students, so often spoken of, seldom cause serious bloodshed. In the United States duels are now uncommon. In some of the states the killing of a man in a duel is punishable by death or by forfeiture of political rights, and in a large number the sending of a challenge is a felony. In the army and navy it is forbidden. Among the more famous duels of the early period were those in which Charles Lee was wounded by John Laurens; Gwinnett, a signer of the Declaration, was killed by Gen. McIntosh, and Alexander Hamilton was slain by Aaron Burr. Decatur was killed and Barron wounded fighting a duel. Andrew Jackson killed Dickinson, and fought several other duels. Col. Benton killed Lucas, and had other encounters. Henry Clay and John Randolph fought in 1826.

**Dufaure** (dù-før), Jules Armand, a French minister and statesman, born in 1786; died in 1881. In the Chamber of Deputies he became an influential leader of the Liberal party. Under the republic he was minister of the interior, but was driven from the public service by the counter-revolutionary d'état of 1851. Under Thiers he acted as minister of justice; and in 1876, and again from 1877 to 1879, he was head of the cabinet.
1847 he published *Narrative of a Journey from Oxford to Skibbereen during the year of the Irish Famine*; in 1860, *Letters from High Latitudes*; and at various times pamphlets on Irish questions. In 1891 he was appointed ambassador at Paris.

**Duffy, Sir Charles Gavan**, an Irish reformer, born at Monaghan in 1816. In 1842 he founded a journal called *The Nation*, in which he supported the policy of O'Connell. He was tried for treason in 1843, but was acquitted. He afterwards emigrated to Australia, where he held important government positions, becoming prime minister in 1871. He was knighted in 1873. His *Ballad Poetry of Ireland* is a household book in his native language. He also wrote *Young Ireland* and *Four Years of Irish History*. Died in 1903.

**Dufrenoy (du-fré-noa), Pierre Audemars**, a French geologist and mineralogist, born in 1792; died in 1857. He became director of the Geological Society of Mines, and published a great variety of papers on geology and mineralogy. In 1841 he published a great geological map of France with three volumes of text, and this was followed by his *Traité de Minéralogie*. He introduced a new classification of minerals, based on crystallography.

**Dufresne (du-frán). See Ducange.**

**Dufresny (du-fré-né), Charles Rivière**, a French comic poet, born in 1648; died in 1727. He was clever and versatile, and had great skill as a landscape gardener and an architectural designer. Among his dramatic pieces may be mentioned *L’Esprit de Contradiction*, *Le Mariage Fait et Vermeil* and *Le Double Veuvage*.

**Dugdale (du’dal), Sir William**, an English antiquary, born in 1605, of a good family in Warwickshire; died in 1686. He was made Chester herald in 1644; accompanied Charles I through the civil war; and after the Restoration received knighthood, and was appointed garter king-at-arms. In concert with Roger Dodsworth he produced an important work on English monasteries entitled *Monasticon Anglicanum*. Among his other publications were *Antiquities of Warwickshire, the Baronage or Peerge of England*, *Origines Judiciales, or Historical Memoirs of the English Law, Courts of Justice*, etc.; a *History of St. Paul’s Cathedral*, and various minor writings. He also completed and published the second volume of *Spelman’s Concilia*.

**Dugong** (*dú’gong*), a herbivorous mammal, the *Halicéro du- gong*, belonging to the order Sirenia, which includes the manatees. It is a native of the Indian seas; possesses a tapering body ending in a crescent-shaped fin, and is said sometimes to attain a length of 20 feet, though generally it is about 7 or 8 feet in length. The skin is thick and smooth, with a few scattered bristles; the color bluish above and white beneath. In its osteology it exhibits some points of correspondence with the Pachydermata. Its food consists of marine plants; it yields little or no oil, but is hunted by the Malays for its flesh, which resembles young beef, and is tender and palatable. A variety was discovered in the Red Sea by Rüppell, and called *Halicéro tabernacul*. **Dugout (dú-gú’t), a cave dug in the side of a hill for use as a dwelling, a hiding-place, or a refuge from cyclones or tornadoes. Many of these exist in the Western States of this country. The word is also applied to a canoe excavated from a log of wood.**

**Duguay-Trouin (dú-gú-a-trú’-án), René**, a distinguished French seaman born at St. Malo in 1773; died at Paris in 1798. As commander of a privateer he took many prizes from the British between 1800 and 1807. He then entered the royal marine as a captain, and signalised himself so much in the Spanish war that the king granted him letters of nobility, in which it was stated that he had captured twenty ships of war. By the capture of Rio de Janeiro (1711) he brought the crown more than 25,000,000 francs. Under Louis XV he rendered important services in the Levant and the Mediterranean.

**Du Guesclin (dú-gú-l’kla’-n), Bel- **

**Duisburg (du’s-búr’k), a flourishing town in Rheinland Prussia, 13 miles north of Düsseldorf. It is an ancient place, believed to be of Roman origin, early rise to be a free town, and**
Dujardin (dú-zhár-dan), Karel, a Dutch artist, who excelled in painting landscapes, animals and scenes in low life, born in 1640 at Amsterdam; died at Venice in 1678. His paintings are rare, and command high prices.

Duke (dúk; French duc, Spanish duque, Italian duca, all from Latin dux, leader, commander), a title belonging originally to a military leader. In Britain it is a title of honor or nobility next below that of a prince or princess of the blood-royal, and that of archbishop of the Church of England. The first hereditary duke in England was the Black Prince, created by his father, Edward III, in 1336. The duchy of Cornwall was bestowed upon him, and was thenceforward attached to the eldest son of the king, who is considered a duke by birth. The duchy of Lancaster was soon after conferred on Edward's third son, John of Gaunt, and hence arose the special privileges which these two duchies still in part retain. A duke in the British peerage, not of royal rank, is styled 'your grace,' and is 'most noble'; his wife is a duchess. (See Address, Forms of.) The coronet consists of a richly chased gold circle, having on its upper edge eight golden leaves of a conventional type called strawberry leaves; the cap of crimson velvet is closed at the top with a gold tassel, lined with sarsenet, and turned up with ermine. (See Coronet.) At various periods and in different continental countries the title duke (Herrzog in Germany) has been given to the actual sovereigns of small states. The titles 'grand-duke' and 'grand-duchess,' 'archduke' and 'archduchess,' are in use also on the European continent, the latter to distinguish the princes and princesses of the Austrian imperial family. In the Bible the word dukes is used, Gen., xxxvi, for the duces of the Vulgate.

Duke of Exeter's Daughter, a rack in the Tower of London, so called after its inventor, a minister of Henry VI.

Dukhn (dúkhn), a kind of millet (Holcus spicatus or Pennisetum typhoides), extensively cultivated in Egypt, also in Spain and elsewhere.

Dukinfield (dúk-ín-fild), or Duckinfield, a township of England, County Chester, separated by the Tame from Ashton-under-Lyne, and mostly within Stalybridge borough. Collieries, cotton factories, brick and tile works give employment to the inhabitants. Pop. (1911) 19,426.

Dulcamara (dúl-kam-á-ra; L. dulcis, sweet, and amarus, bitter; lit. bitter-sweet), Solanum Dulcamara, a common European hedge-plant, otherwise called bittersweet or woody nightshade. It is found in the United States from New England to Arkansas; its root on being chewed gives a sensation of bitterness, then of sweetness.

Dulce (dúl-ché), a lake of Guatemala, on the e. coast, communicating with the Gulf of Honduras by the lakelet el Golfeito. It is about 30 miles long by 12 broad, and affords profitable turtle hunting.

Dulcigno (dúl-ché-né-yó), a small seaport town, formerly in Albania, now in the principality of Montenegro, on the Adriatic, the seat of a Roman Catholic bishop. Pop. 5000.

Dulcimer (dúl-sí-mér), one of the most ancient musical instruments, used in almost all parts of the world. The modern instrument consists of a shallow trapezium-shaped box without a top, across which runs a series of wires, tuned by pegs at the sides, and played on by being struck by two cork-headed hammers. It is in much less common use in Europe now than it was a century or two ago, and is interesting chiefly as being the prototype of the piano. It is still, however, occasionally to be met with at rustic rejoicings, and in the hands of street musicians. The Hebrew psaltery is supposed to have been a variety of the dulcimer.

Dulcinists (dúl-sín-ists), followers of Dulcimus, a Layman of Lombardy, in the fourteenth century, who preached the reign of the Holy Ghost, affirming that the Father had reigned till Christ's incarnation, and that the Son's reign terminated in 1300. He was followed by a great many people to the

Italian Dulcimer.
Alps, where he and his wife were taken and burned by order of Clement IV.

**Dulia** (dú'li-a; Gr. douleia, service, from doulos, a slave), an inferior kind of worship or adoration, as that paid to saints and angels in the Roman Catholic Church. The Catholics recognize different degrees of worship. The lowest degree is the *dulia*, which is given to saints and angels. *Hyperdulia* is reserved for the Virgin alone; and *latria* is given to God and to each person in the Trinity.

**Dulse** (dúls), a sea-weed, the *Rhodomelania palmata*, used in some parts of Scotland as an edible. It has a reddish-brown or purple, leathery, veinless frond, several inches long, and is found at low water adhering to the rocks. It is an important plant to the Icelanders, and is stored by them in casks to be eaten with fish. In Kamchatka a fermented liquor is made from it. In the south of England the name is given to the *Irish* edulis, also an edible seaweed.

**Duluth** (du-luth'), a city, county seat of St. Louis County, Minnesota, at the S. W. extremity of Lake Superior, at the head of navigation on the Great Lakes and served by the Northern Pacific and numerous other railroads. The harbor has a water line of 49 miles, and the grain elevators, ore shipping docks and coal receiving docks are of the most modern type. The grain shipments are about 125,000,000 bushels yearly. The city is the outlet for the northern Minnesota iron mining region, and the site of a new steel plant of the United States Corporation, costing approximately $20,000,000. There are large lumber shipments, and the total tonnage of the port is over 40,000,000 tons yearly. The population, 1910 census, 78,466.

**Dulwich** (du'litch), a village of England, County Surrey, 5 miles south of London Bridge (pop. 14,975), noticeable chiefly on account of its college and schools, the former called the College of God's Gift, founded as a charitable institution in 1610 by Edward Allen or Alleyne, a distinguished actor in the reigns of Elizabeth and James I. Four parishes are benefited by the charity: St. Luke's, Middletown; St. Botolph's, Bishopsgate; St. Saviour's, Southwark; and St. Giles' Camberwell. Having outlived its usefulness, in 1807 an act was passed by which the college was reconstituted. It now consists of two branches, the educational and the eleemosynary, between which the surplus revenue is divided in the proportion of three-fourths to the former and one-fourth to the latter.

**Duma, Douma** (dú'ma), the Russian parliamentary assembly. This title, long borne by the municipal assemblies, was applied to the national assembly, or council of state, created by a decree of Czar Nicholas in 1905. In 1917 the Duma forced the abdication of Nicholas as Czar and attempted more vigorous war measures and internal reforms. But there rose a Council of Workmen and Soldiers which disputed control with the Duma. The Bolshevik element convoked a Constituent Assembly consisting of delegates elected by the people. This took the place of the Duma in the peace negotiations concluded in March, 1918. See Russia, Bolsheviki, etc.

**Dumas** (dú-mà), Alexandre, a favorite French novelist, born in 1802, the son of a republican general, and grandson of Marquis de la Falleteerie and a negress, Tienette Dumas. In 1823 he went to Paris, and obtained an assistant-secretaryship from the Duke of Orleans, afterwards Louis Philippe. He soon began to write for the stage, and in 1829 scored his first success with his drama *Henry III*. It was produced when the battle between the romanticists and the classicists was at its height, and was hailed as a triumph by the former school. The same year appeared his *Christine*, and in quick succession *Antony*, *Richard d'Arlington*, *Téréza*, *Le Tour de Nesle*, *Catharine Howard*, *Mlle. de Belle-Isle*, etc. Dumas had now become a noted Parisian character. The critics fought over the merits of his pieces, and the scandalmongers over his prodigality and *galanteries*. Turning his attention to romance, he produced a series of historical romances, among which may be mentioned *Les Deux*...
Dumas; La Reine Margot; Les Trois Mousquetaires, with its continuations Vingt Ans Après and Vicomte de Bragelonne. The Monte Cristo and several others are also well known to English readers through translations. Several historical works were also written by him: Louis XIV et son Siècle; Le Règne et Louis XV; Le Drame de '93; Florence et les Médecins, etc. The works which bear his name amount to some 1200 volumes, including about 60 dramas; but the only claim he could lay to a great number of the productions issued under his name was that he either sketched the plot or revised them before going to press. He earned vast sums of money, but his recklessness and extravagance latterly reduced him to the adoption of a shiftless, scheming mode of living. His Mémoires, begun in 1852, present interesting sketches of literary life during the restoration, but display intense egotism. In 1860 he accompanied Garibaldi in the expedition which freed Naples from the Bourbons. He died in 1870.

Dumas, Alexandre, son of the above, born in 1824; novelist and dramatist. His works treat mostly of the relations between vice and morals. His first novels, La Dame aux Camélias and Diane de Lys, were very successful, as were also the plays which were founded on them. His dramas, which are much superior to his novels, deal satirically with the characters, follies and manners of French society. He died in 1895.

Dumas, Mathieu, a French soldier and military writer, born in 1753; died at Paris in 1837. He early entered the French cavalry, took part in the war of the American Revolution, and was employed in the Levant and in Holland. At the commencement of the revolution he assisted Lafayette in organizing the national guard. On the triumph of the extreme party in 1797 Dumas was proscribed, but made his escape to Holstein, where he wrote the first part of Les Événements Militaires, a valuable source for the history of the period of which it treats (1798-1807). He was recalled from exile by Napoleon, who had become first consul. His first employment was to organize the reserve for the army of Italy. In 1802 he was appointed state councillor; in 1805 he became general of division, and was shortly afterwards Neapolitan minister in the service of Joseph Bonaparte. In 1808 he was actively employed in the arrangements for the war against Austria, fought in the battles of Essling and Wagram, and arranged the terms of the armistice of Znaim. He held the office of general intendant of the army in the campaign of 1812. After the restoration, Louis XVIII appointed him councillor of state, and gave him several important appointments connected with the army. In 1830 he aided in bringing on the revolution of July, and after the fall of Charles X he obtained the chief command of all the national guards of France, together with a peerage.

Du Maurier (də mɔʁiˈe), George Louis Palomilla Buxson, artist and caricaturist, was born in Paris, in 1834, but was a naturalized British subject. He went to England in 1851, and studied chemistry, but soon adopted art as a profession. After studying in Belgium and France he began to draw on good for Once a Week, the Cornhill Magazine, etc. He subsequently joined the Punch staff, and became famous through his weekly drawings for that publication. He also illustrated a large number of books. Tribby, a novel, created a sensation on its publication and gave him rank as an author. He also wrote Peter Ibbetson and The Martian. He died in 1896.

Dumb. See Deaf and Dumb.

Dumbarton (dəmˈbɑːrtən), a royal burgh and seaport of Scotland, chief town of Dumbarton Co., stands on the Leven near its junction with the Clyde, 16 miles w. n. w. Glasgow. Shipbuilding is carried on to a great extent, and there are foundries, engine works, etc. Originally it was called Acland, and it was the chief town of Cumbria or Strathclyde. Pop. 19,985. A little to the south is the famous rock and castle of Dumbarton, rising above the Clyde. There has been a stronghold here from the earliest times, and the fortress of Dumbarton occupied an important place in Scottish history.—The county of Dumbarton is partly maritime, partly inland, consisting of two detached portions, the larger and most westerly lying between the Clyde, Loch Long and Loch Lomond, and the far smaller portion being about 4 miles east from the former. The surface is usually mountainous, its greatest elevation being a little over 3000 feet. The lower lands are fertile, and in general well cultivated. There are coal mines in the smaller section. On the banks of the Leven and elsewhere are extensive cotton-printing and bleaching establishments; and there are extensive shipbuilding yards along the Clyde. Pop. 21,368.

Dumb-Bells, weights, usually in the form of two iron balls...
Dumb-cane, Araceae, the **Dieffenbachia seguina** of the West Indies, so called from its acridity, it causing when chewed loss of power of speech.

_Dumbness_ (dum'nes). See _Deaf and Dumb_. _Aphonia, Aphasia_.

_Dum Dum_ (dum'dum'), a military village and extensive cantonment, Hindustan, province of Bengal, 4½ miles N. E. of Calcutta. The village is famous as being the scene of the first open manifestation of the Sepoys against the greased cartridges, which led to the mutiny of 1857. Pop. 20,820.

_Dum Dum Bulletin_. See _Bulletin_.

_Dumfries_ (dum-fri'zi), a river port and railway center of Scotland, capital of the county of same name, and the chief place in the south of Scotland; situated on the left bank of the Nith, about 6 miles from its junction with the Solway Firth. It is connected with the suburb Maxwelltown (in Kirkcudbright) by three bridges, one dating from the thirteenth century. It is a pleasant, well-built town, with various handsome public edifices. There are iron foundries, hosiery and tweed factories, tanneries, coach-building works, etc. The river Nith is navigable to the town for vessels of above 60 tons, but the port has decreased in importance since the development of the railway system. Dumfries is a place of great antiquity. The church of the Minorites which once stood here was the scene of the murder of the Red Comyn by Bruce in 1306. Burns spent his closing years here, and the street in which he lived now bears his name. His remains rest under a handsome mausoleum, and a statue of him was erected in 1852. Pop. 18,142. The county abuts on the Solway Firth; area about 1100 square miles, of which about a third is under cultivation. The surface is for the most part mountainous, especially in the north and northwest districts, where some of the hills attain an elevation of over 2000 ft. Oats, potatoes and turnips are the most common products. Good cattle are raised, and are much in request for the English market. The sheep on the hill pastures are mostly Cheviots; on the lower and arable lands the Leicester breed prevails. The salmon fishery is of importance. The minerals most abundant are coal, lead, iron, antimony and gypsum. Coal and lead are worked to a small extent. Limestone and freestone abound in various parts. Pop. 72,571.

_Dumont_ (dō-mō̃). Pierre Étiénne, the friend and literary assistant of Mirabeau and Jeremy Bentham, was born at Geneva in 1750; died at Milan in 1829. He was ordained a minister of the Protestant Church in 1781. He attached himself to the democratic party in Geneva, and when the opposite party gained the ascendancy he went to St. Petersburg, in 1782, where he was appointed pastor of the French Reformed Church. Soon after he accepted an offer to act as tutor to the sons of Lord Shelburne, afterwards Marquis of Lansdowne, which brought him to London, where he became intimate with Jeremy Bentham and Sir Samuel Romilly. Visiting Paris during the first years of the revolution he gained the friendship of Mirabeau, whom he assisted in the composition of speeches and reports, and of whom he wrote some interesting recollections. On his return to London he formed that connection with Bentham which fixed his career as a writer; recasting, popularizing and editing Bentham's works in a form suitable for the reading public. He returned to Geneva in 1814 and became a senator.

_Dumont D'Urville_ (du-mō̃ du-rivil'), Jules Sébastien César, a French navigator, was born in 1790; killed in a railway accident between Paris and Versailles in 1842. After completing his studies at Caen he entered the French navy, in which he ultimately rose to be rear-admiral. In 1826-29 he commanded the corvette _Astrolabe_, which was sent to obtain tidings of La Pérouse, and to make hydrographic observations. He made surveys of the coasts of Australia, New Zealand, etc., and found remains of the shipwreck of La Pérouse on one of the Pacific islands. The result of this voyage was the publication of _Voyage pittoresque et découverte autour du Monde_. In 1837 he sailed with the _Astrolabe_ and _Zélée_ on a voyage of Antarctic discovery, and after many dangers, and having visited many parts of Oceania, he returned in 1840. On his return he began the publication of _Voyage au Polo Sud et dans l'Océanie_, which was finished by one of his companions.

_Dumouriez_ (dō-mō̃rij'), Charles François Duperré, a French general of great military talent, was born at Cambral in 1739, of a noble family of Flanders; died near Henley-on-Thames in 1793. He served as an officer in the Seven Years' war. In 1768 he...
Düna (dù'na), or WERNERN DIVNA, a river of Russia, which rises in the government Tver, about 15 miles w. of the source of the Volga, falls into the Gulf of Riga, has a course of about 650 miles, and waters the seven governments of Tver, Pskoff, Vitebsk, Mogileff, Vilna, Courland and Livonia, draining an area of about 65,000 sq. miles. It is navigable for a considerable distance, but is frozen for about four months each year.

Dünburg (dù'ni-burg), or DIVNA-BURG, a fortified town of Russia, government of Vitebsk, on the right bank of the Düna, or Divna, 112 miles s.e. from Riga. It carries on various industries, a considerable trade, and three yearly fairs. Pop. (1910) 110,912.

Dünamünde (dù'na-mùn-de; 'Düna-mouth'), a fortress and port of Russia, on the Gulf of Riga, at the mouth of the Düna, having a large winter harbor for the shipping of Riga.

Dunbar (dùn'bar), PAUL LAURENCE, an American poet, of pure African blood, born in Dayton, Ohio, July 27, 1872; died February 9, 1906. He published his first volume, Oak and Icy, in 1893, and his third volume, Lyrics of Lovely Life (1896), received high praise from the critics. In 1897 he was appointed to a position in the Library of Congress, which he held for several years; but he contracted consumption and returned to Dayton, where he died. He wrote partly in negro dialect and partly in conventional English; and besides his poetry published several novels, including The Sport of the Gods (1902). Other volumes of verse than those already mentioned were Poems of Cabin and Field (1899), Candle-lightin' Time (1902), and Howdy, Honey, Howdy (1905).

Dunbar, of all the old Scottish poets, was born, probably in East Lothian, about 1460-65. He seems to have become a begging friar of the Franciscan order, and made journeys in England and France, but he returned to Scotland about 1490, and attached himself to the court of James IV, from whom he received a pension. On the marriage of James IV to Margaret of England, Dunbar celebrated the event in a poem of great beauty, entitled, The Threiss and the Rose. His pension was ultimately raised, and he was the recipient of various additional gratuities, though he appears frequently to have addressed both the king and queen for a benefice, but always without success. After Flodden his name disappears from the royal accounts, and he probably died about 1520. His works, which consist of elaborate allegories, satirical and grimly humorous pieces, and poems full of brilliant description and luxuriant imagination, were first collected by David Laing (Edinburgh, 1834).

Dunblane (dun'blàn), an old episcopal city of Scotland, in Perthshire, 6 miles northwest of Stirling, on the Allan. The ancient cathedral, partly in ruins, dates from the twelfth century. About two miles from the town the indecisive battle of Sherriffmuir was fought in 1715, between the royal forces under the Duke of Argyre, and the
Duncan
(Dun’kan), Adam, Viscount, a Scottish naval officer, was born in Dundee, in 1731; died in 1804. He went to sea when young, and was a post-captain in 1761. In the following year he served at the taking of Havana; and in 1779 he shared in the victory of Admiral Rodney over the Spaniards. In 1789 he became rear-admiral of the blue, and in 1794 vice-admiral of the white squadron. The following year he was appointed commander of the North Sea fleet, and in October, 1797, won a brilliant victory over the Dutch fleet off Camperdown, for which he was rewarded with the title of Viscount Duncan and a pension of £2000 a year.

Duncan, Thomas, an eminent Scot- tish painter, was born in 1807; died at Edinburgh in 1845. He studied under Sir W. Allan, and was elected an associate of the Royal Academy in 1843. His principal works were illustrative of Scottish history and character. Among the best known of them are: The Abduction of Mary, Queen of Scots; Anne Page and Slender; Prince Charles Edward and the Highlanders entering Edinburgh after Prestonpans; Charles Edward asleep in a Cave after Culloden; The Martyrdom of John Brown of Priesthill, etc. His portraits are very highly esteemed.

Duncansby Head (Dun’kans-bi), a promontory in Caithness-shire, Scotland, forming the N. E. extremity of the Scottish mainland, 1¾ miles E. of John O’Groats House, and 1½ N. by E. of Wick. Close by the promontory are two insulated rocks, of fantastic form and great height, called the Stacks of Duncansby, which in spring and summer are covered with sea-fowl.

Dundalk (Dun’dak’), a seaport of Ireland, capital of the county of Louth, on Castletown River, about 2 miles above its mouth in Dundalk Bay. Its principal manufactures are rope and castings; the trade chiefly in cattle and agricultural produce, is extensive. Here Edward Bruce, brother of Robert Bruce, was defeated and slain by the English in 1318. Pop. 13,075.

Dundas (Dun’das), a name of a family several members of which held a conspicuous place in the legal and political history of Scotland.—Sir James Dundas, the first of Arniston, knighted by James VI, was the third son of George Dundas of Dundas, a descendant of the Dunbars, earls of March. His eldest son, Sir James, was member of parliament for Mid-Lothian, and was appointed one of the judges of the Court of Session (1662). His eldest son Robert was also raised to the bench of the Court of Session, and filled that station for thirty-seven years. He died in 1727. His eldest son Robert (1685-1753) was successively solicitor-general for Scotland, lord-advocate, member of parliament for the county of Edinburgh, and dean of the faculty of advocates. In 1737 he was raised to the bench, and on the death of Lord-president Forbes of Culloden, in 1748, he was appointed his successor. His eldest son Robert (1713-87) also attained to the positions of lord-advocate, and lord-president of the Court of Session. His brother, Henry Dundas, Viscount Melville, distinguished statesman, born in 1741; died in 1811. He obtained the post of solicitor-general in 1773, that of lord-advocate in 1775, and was made joint keeper of the signet for Scotland in 1777. In 1782 he was appointed treasurer of the navy and member of the privy-council; and from that time took a leading part in all the Pitt measures, and had supreme influence in Scotland. Among other offices he held that of first lord of the admiralty; and in 1805, he was impeached before the House of Lords of high crimes and misdeavors in his former office of treasurer of the navy, but was finally acquitted. He was created Viscount Melville in 1801, a title still borne by his direct descendant.

Dundee (Dun’dé), a city and seaport of Scotland, in the county of Forfar on the north shore of the Firth of Tay, about 8 miles from the open sea, 37 miles N. N. E. of Edinburgh; in population the third town in Scotland. It stretches along the Tay from east to west, and of late years has been greatly extended in both directions. The more recently formed streets are spacious and handsome, but most of those of more ancient date are narrow and irregularly built. The most conspicuous building is St. Mary’s Tower, or the Old Steeple, as it is popularly called, 156 feet high,
erected in the middle of the fourteenth century, and to which three modern parochial churches have been built in form of a cathedral, the nave, choir and transept, respectively, forming a separate church. Among public buildings are: the town hall, several public halls, the high school, exchange, infirmary, lunatic asylum, Albert Institute and free library, etc. The chief educational institution is the University College, open to both sexes, whose first session opened in 1833. Dundee has several public parks and recreation grounds and a good supply of water. The town has long been celebrated for its textile manufactures, particularly those of the coarser descriptions of linen, and it is now the chief seat of the linen trade in Scotland and of the jute trade in Great Britain, there being a great number of mills and factories engaged in the spinning and weaving of flax, jute and hemp. Shipbuilding is extensively carried on, and there are large engineering establishments, etc. Another branch of business is the northern seal and whale fishery. Dundee is also famous for its marmalade and other preserves and confectionery. The shipping accommodation includes five large wet docks, with a connected tidal harbor and graving docks. The railway facilities of Dundee were greatly increased in 1878 by the opening of a bridge across the Tay; but on December 28, 1879, the bridge was destroyed in a violent storm, when about 100 people in a train in the act of crossing lost their lives. A new bridge, to replace the one destroyed, was opened for traffic in June, 1887; it is a very substantial structure about two miles in length. Dundee was made a royal burgh by William the Lion, was twice in the possession of the English under Edward I, and was as often retaken by Wallace and Bruce. In 1645 it was besieged, taken, and sacked by the Duke of Montrose; and six years afterwards it was stormed by Montgomerie, when a great number of its inhabitants were put to death. In 1888 it was raised by royal grant to the rank of a city. Pop. 169,400.

Dundee, John Graham of Claverhouse, Viscount. See Graham.

Dundonald (dun-don'ald), Thomas Cochran, Tenth Earl of, a British admiral, was born in Lanarkshire in 1776; died in 1860. At the age of eighteen he embarked with his uncle, then Captain, and afterwards Sir Alexander Cochran, in the Hind, of twenty-eight guns, and soon distinguished himself by his daring and gallantry. In 1800 he was appointed to the speedy sloop-of-war of fourteen guns, and in the course of thirteen months captured over fifty vessels, but was at last captured himself. In 1805, while in command of the Pallas frigate, he took some rich prizes, and for the next four years in the Impérieuse performed remarkable exploits in cutting out vessels, storming batteries, destroying signals, etc. On his return to England he entered parliament, and by his attacks on the abuses of the naval administration made himself obnoxious to the authorities. He gave further offense by charging Lord Gambier, his superior officer, with neglect of duty (which was true); by denouncing the abuses of the prize-court, and the treatment of the prisoners of war. His enemies succeeded, in 1814, in convicting him on a charge—since proved to be false—of originating a rumor, for speculative purposes, that Napoleon had abdicated. He was expelled from parliament, deprived of all his honors, imprisoned for a year, and fined £1000. The electors of Westminster immediately paid his fine and reflected him, but he had to remain in prison till the expiration of his sentence. In 1818 he took service in the Chilean navy, his exploits greatly aiding the national independence of that country, as well as soon after of Brazil. In 1822 he was restored to his rank in the British navy. In 1831, by the death of his father, he had succeeded to the name and title of Earl of Dundonald; in 1841 he became vice-admiral of the blue; in 1848 he was appointed commander-in-chief of the North American and West India station; and in 1851 and 1854, respectively, he became vice-admiral of the white, and rear-admiral of the United Kingdom. He did much to promote the adoption of steam and the screw propeller in warships. He wrote an autobiography, which, though left incomplete, is a most interesting work.

Dunedin (dun-ed'in), capital of the provincial district of Otago, New Zealand, and the most important commercial town in the colony, stands at the upper extremity of an arm of the sea, about 9 miles from its port, Port Chalmers, with which it is connected by railway. Though founded in 1848, its more rapid progress dates only from 1861, when extensive gold-fields discovered in Otago attracted a large influx of population. It is well paved, lighted with gas, and has a good supply of water. There are many handsome buildings, both public and private: the municipal buildings, the post-office, hospital, lunatic asylum, government offices,
the university, high schools, the new museum, several banks (especially the Bank of New Zealand), the atheneum and mechanics' institute, the freemasons' hall, two theaters, etc. Wool is the staple export. Several woolen and other manufactories are now in exist-
ence. There is a regular line of steamers between this port and Melbourne, and communication is frequent with all parts of New Zealand. Through the opening of the new Victoria Channel from Port Chalmers vessels drawing 16 feet can now ascend to Dunedin at low water. Pop. (1911) 64,237.

Dunfermline (dun-far'm), a royal burgh of Scotland, county of Fife, 3 miles N. of the Firth of Forth, and 13 northwest of Edinburgh. The streets, though narrow, are well built. Dunfermline was early a favorite residence of the kings of Scotland, and here were born David II, James I, Charles I and his sister Elizabeth. The Benedictine abbey founded by Malcolm Canmore (1070) is now represented chiefly by the Abbey Church, underneath the pulpit of which are the remains of King Robert Bruce. Dunfermline early took the lead in the manufacture of table linen, and is still unrivaled by any other town in the kingdom. There are collieries in the neighborhood. Pop. 26,250.

Dun-fish, a name in the United States for cod cured by being split open, partially salted, piled up in a dark place under salt-grass or hay, and then closely packed; named from their dun color.

Dunganon (dun-gan'ən), a town of Ireland, County Tyrone, 35 miles west by south of Belfast. It has manufactures of linen and earthenware. Pop. 3694.

Dungarpur (dun-gar-pər), an Indian native state in Rajputana; area, 1440 sq. miles; pop. 100,103.—Dungarpur is also the name of the chief town and residence of the maharaja of the state. Pop. 6094.

Dungarvan (dun-gar'ven), a seaport of Ireland, County Waterford, on the Bay of Dungarvan, much resorted to for sea-bathing. The harbor is shallow, and the trade depends almost entirely on agricultural produce. Pop. 4850.

Dung Beetle, a name applied to a large number of coleopterous insects of the Lamellicorn family (or that family in which the antennae terminate usually in lateral leaflets) from their habit of burying their eggs in dung. The Geotrupes terebrarius, 'dor' or 'shard-borne' beetle, and the Scarabaeus sacer, or sacred beetle of the Egyptians, are examples.

Dungeness (dun-nēs'), a low headland on the S. coast of Kent, 10½ miles S. E. of Rye; has a lighthouse with fixed light.

Dunkeld (dun-keld'), a small town of Scotland, on the Tay, about 14 miles north by west from Perth; pop. 586. It is a very ancient place, and from 850, when Kenneth I removed the remains of St. Columba from Iona to a church which he had built here, became the metropolitan see of Scotland, still supplanted by St. Andrews. The choir of the ancient cathedral is still used as the parish church. Near it is Dunkeld House, the seat of the Duke of Athol, the grounds of which are the finest and most extensive in Scotland.

Dunkers (dunk'ərs), or Tunkers, a religious sect in the United States, founded in Schwartzminz, Germany, in 1708, and which takes its name from the Ger. Tunker, to dip, from their mode of baptizing converts. They reject infant baptism; use great plainness of dress and language; refuse to take oaths or to fight; and anoint the sick with oil in order to effect their recovery, depending on this unction and prayer, and rejecting the use of medicine. Every brother is allowed to speak in the congregation, and
their best speaker is usually set apart as their minister. They all emigrated to the United States, where they are found in nearly every State.

Dunkirk (dun-kirk); French, Dunkerque, a seaport town of France, department Nord, at the entrance of the Strait of Dover, surrounded by walls, and otherwise defended by forts and outworks. It has several fine churches, a college, a public library and a gallery of paintings; manufactures of earthenware, leather, soap, starch, ropes; sugar-refineries, breweries, distilleries, etc. It was a fortified place in the middle ages and the scene of many contests between the Spaniards and French. Pop. (1906) 35,767; with suburbs, 90,000.

Dunkirk (dun'kark), a city of Chautauqua Co., New York, on Lake Erie, 41 miles s. w. of Buffalo. It has an excellent harbor, with protecting breakwater. It is situated on the Lake Shore, Pennsylvania, Nickel Plate, Erie and D. A. V. railroads. It has considerable trade with the other lake ports and has a variety of industries, including the plant of the American Locomotive Company, one of the largest locomotive manufacturing plants in the world. Pop. 17,221.

Dunlin (dun'lin), a British bird (Tringa variabilis), a species of sandpiper, occurring in vast flocks along sandy shores. It is about 8 inches in length from the point of the bill to the extremity of the tail, and its plumage undergoes marked variations in summer and winter, the back passing from black with reddish edges to each feather to an ashen gray, and the breast from mottled black to pure white. The American Tringa alpina is a frequent visitor to Scotland, and there is some ground for believing that these large birds are merely varieties of the dunlin.

Dunlop (dun-loup'), a parish of Ayrshire, Scotland, which has given its name to an esteemed variety of cheese.

Dunmow (dun-mou'), G. E. A. T. and Little, two villages of England, county of Essex. The latter is remarkable for the ancient custom, recently revived, of giving a fitch of bacon to any couple who, a year and a day after their marriage, could swear that they had neither quarreled nor repented.

Dunmore (dun-mor'), a town of Lackawanna County, Pennsylvania, 2 miles from Scranton. It derives its prosperity chiefly from the anthracite coal mines which are worked in the vicinity, but has silk and other industries. Pop. 17,615.

Dunnet Head (dun-iet), a bold rock promontory in Caithness, with sandstone cliffs 100 to 300 feet high, the most northerly point of the mainland of Scotland, crowned when young by a lighthouse visible at a distance of 25 miles.

Dunnottar Castle (dun-ot-ar), an extensive ruin on the coast of Kincardineshire, Scotland.

Dunois (du-nwâ), Jean, Count of Orleans and of Longueville; a French hero, natural son of Louis, Duke of Orleans, born in 1402; died in 1488. Dunois made the name 'Bastard of Orleans' illustrious by his military exploits. He began his career with the defeat of Warwick and Suffolk, whom he pursued to Paris. Being besieged by the English, he defended Orleans until relieved by the Maid of Orleans. In 1450 he had completely freed France from the English, and was rewarded by the title of 'deliverer of his country,' the county of Longueville, and the dignity of high chamberlain of France.

Dunkerque (du-nkerk). See Dunkirk.

Duns, John, commonly called Duns Scotus, an eminent scholastic divine, born in 1265 or 1275, but whether in England, Scotland or Ireland is uncertain. He was admitted into an institution belonging to the Franciscan friars at Newcastle, whence he was sent to Merton College, Oxford. In 1301 he was appointed divinity professor at Oxford, and the fame of his learning and talents drew crowds of scholars from all parts. In 1304 he went to Paris, and was appointed professor and regent in the theological schools, in
which situation he acquired the title of 'the subtle doctor.' Duns opposed Thomas Aquinas on the subject of grace and free-will; and hence the Scotists are opposed to the Thomists. Duns was the apostle of realism, which was opposed to the systems of nominalism and conceptualism promulgated by the other sections into which the schoolmen were divided. He died, it is said, at Cologne in 1308, leaving behind numerous works.

Dunsinane (dûn-sin-ân'), a hill in Scotland, one of the Sidlaws, altitude 1012 feet, about 7 miles N. E. of Perth, with vestiges of a hill fort locally called Macbeth's Castle.

Dunstable (dûn-stâl), a town of England, county of Bedford, 32 miles northwest of London. It was an important Roman station, and had a palace and a priory founded by Henry I. Part of the latter is used as the parish church. Dunstable is famous for its manufactures of straw-plait.

Dunstan (dûn-stân), St., an Anglo-Saxon divine and statesman, was born at Glastonbury in 925; died at Canterbury in 988. As a youth he was remarkable for his learning and his skill in music, painting, carving and working in metals. He entered the Benedictine order, became an abbot, at Glastonbury, and in 945 was made abbot by King Edmund. After the death of Edmund, Edred, the next king, made him his prime minister and principal director in civil and ecclesiastical affairs. In the reign of Edwy he was banished, but was recalled by Edgar, and made Archbishop of Canterbury. He was again deprived of power on the accession of Ethelred in 975, and devoted the last years of his life to his diocese and the literary and artistic pursuits of his earlier days. He did much to improve education and to raise the standing and character of the priesthood. The old biographies of him have all a large legendary element.

Duodecimal System (dû-o-des'i-mal), in numeration, a system of numbers which is twelve. Duodecimal is a term applied to an arithmetical method of ascertaining the number of square feet, etc., in a rectangular area or surface, whose sides are given in feet, inches and lines.

Duodecimo (dû-o-des'i-mô; often contracted 12mo) is that form of volume in which each leaf forms a twelfth part of the sheet.

Duodecurnum (dû-o-dék'num), the commencement of the inter-
tinal canal, the first of the smaller intestines, so called because its length is about twelve fingers' breadth (Lat. duodeni, by twelves).

Dupanloup (dû-pân-lô), Félix Antoine Philibert, French prelate, born at St. Félix, in Savoy, in 1802; became a French subject by naturalization in 1838; died at Paris in 1878. He was ordained in 1825, appointed professor of theology at the Sorbonne in 1841, and Bishop of Orleans in 1849. From that time he took a prominent part in all the political and religious discussions in France. He belonged to the Gallican party, but submitted to the decisions of the council of the Vatican; and was a strenuous advocate for free education.

Dupleix (dû-plâ), Joseph, a French leader in India, born in 1697; died in 1763. He accumulated a fortune by commercial operations in India, and in 1742 was appointed governor of Pondicherry for the French East India Company. He formed the project of founding a French empire in India, and soon made himself master of the Carnatic partly by conquest and partly by political intrigue. He was opposed by Clive, and a long string of British successes caused the complete overthrow of all his plans.

Dupont (dû-pôn). Pierre, a French song writer, was born at Lyons in 1821; died at St. Etienne (Loire) in 1870. He was educated by his godfather, a priest, and began to write and compose songs at an early age. After issuing a series of poems in 1844 he went to Paris and obtained a place in the office of the secretary of the Institute. Some of his songs, such as Song of Bread and Song of the Workers, had a Socialist ring which proved obnoxious to the government which came into power in December, 1852. He was arrested, imprisoned and condemned to be banished for seven years; but his release was soon procured. His poems have been collected under the titles Cahiers de Chansons, La Musée Populaire, Chants et Chansons, Poésie et Musique, Études littéraires.

Dupont de Nemours (dû-pôn de né-môr), Pierre Samuel, a French political economist, born at Paris in 1759; died in America in 1817. He early gained a reputation for his writings on commerce and political economy, and was employed by Turgot and Vergennes in the public service. During the ministry of Calonne he became councillor of state, and in 1787 was secretary to the Assembly of the Notables. He was twice president of the National Assembly. During the revolu-
tion he opposed the extreme republicans, and escaped the guillotine narrowly at the downfall of Robespierre. From 1796 to 1802 he was in America, and on his return to France he refused all public office. He finally returned to America in 1815. Among his writings are Philosophie de l’Univers, Vie de Turgot, and a translation of Ariosto.

Düppel (dūp’əl), a fortified village in the province of Schleswig, Prussia, on the coast of the Little Belt. The place is of considerable strategical importance, and has been the scene of some severe struggles between the Danes, to whom it formerly belonged, and the Germans. It was captured by the Prussians in 1864, after a siege and bombardment which lasted nearly two months.

Dünyetren (dü-nı-tren’), Guillame, Barion, a French surgeon and anatomist; born in 1777; died at Paris, in 1835. He became in 1803, second, and in 1815 first surgeon to the Hôtel Dieu, Paris. The professorship of surgery at the medical faculty, conferred upon him in 1813, was exchanged in 1818 for a clinical lectureship in the above hospital. In 1823 he was appointed first physician to Louis XVIII, and retained the same situation under Charles X. He was considered the first French surgeon of his day; he made important discoveries in morbid anatomy.

Duquesne (dū-kān’), a borough of Allegheny Co., Pennsylvania, 12 miles s. e. of Pittsburgh. It has blast furnaces, steel works, etc. Pop. 15,727.

Duquesne (dū-kān’), Abraham, a French admiral, born in 1610; died in 1688. In his seventeenth year he was in the sea-fight off Rochelle, and distinguished himself during and after the year 1637 in the war against Spain. In 1647 he commanded the expedition against Naples. In the Sicilian war he thrice defeated the combined fleets of Holland and Spain, under the renowned De Ruyter. After he had reduced Algiers and Genoa, Louis XIV conferred upon him the fine estate of Bouchet, and made it a marquisate, with the title of Duquesne. He was a Protestant and the only person exempted from the banishment of his sect, occasioned by the repeal of the edict of Nantes.

Duquoin (du-kwō’ın’), a city of Perry Co., Illinois, 77 miles n. of Cairo. It has extensive coaling interests and various manufactures. Pop. 6000.

Dura Mater. See Brain.

Duramen (dū-rā’men), the name given by botanists to the central wood or heart-wood in the trunk of an exogenous tree. It is more solid than the newer wood that surrounds it, from the formation of secondary layers of cellulose in the wood cells.

Durance (dū-rans’), a river of France which rises in the Cottian Alps and after a course of over 215 miles joins the Rhone about 4 miles below Avignon. Though not navigable it serves for irrigation purposes.

Durand, Alice M. C. H., novelist, known under the pen name of Henry Greville. She was born at Paris in 1842; died in 1902. Her best tales are of Russian life, most of them having been translated into English. They include Days, La Francese Ogheera, Pidelka and many others.

Durango (dū-ran’gō), a town of Mexico, capital of the state of Durango, about 500 miles n. w. of Mexico, on an elevation 6845 feet above the sea, It is well watered, has a cathedral, a mint, manufactures of cotton and woolen goods, leather, etc. Pop. 31,092.—The state (area, 38,009 sq. miles) is partly mountainous and unproductive, but has valuable gold, silver and iron mines and also fertile tracts. Pop. 370,294.

Durango, county seat of La Plata Co., Colorado, on Las Animas River and the Denver and Rio Grand Railroad. Has smelting plant, coal and coke industries, gold and silver mines, farming, stock raising, etc. Pop. 6200.

Durant (dū-rant’), a city of Bryan Co., Oklahoma, 19 miles n. e. of Denison, Texas. It has large coaling and coke interests and smelting, iron and steel works. Pop. 6330.

Durante (dōr-ant’), Francesco, Italian musician, born in 1884; died in 1855. He attained a high degree of eminence in vocal church music, and he trained the most celebrated musical masters of the eighteenth century in Naples—Pergolesi, Sacchini, Piccini, Guglielmi, Jommelli, etc.

Durazzo (dū-rät’so), anciently Dyr-rahchium, or Epidamnus, a seaport in the principality of Albania. During the European war the Italians landed forces at Avlona and pushed forward to Durazzo in December, 1915. In February, 1916, the Austro-Hungarians captured the port. Pop. (1914) 5500.

Durban (dūr-ban’), or Port Natal, the chief port of Natal Union of South Africa. It was founded in 1834 and carries on a considerable trade. It is connected by rail with Maritzburg and the interior. Pop. 67,842.
The Great Indian Durbar

King George V and Queen Mary, as Emperor and Empress of India, receiving the Homage of His Royal Highness, the Rasul of Bhutan.
urbar (důr-bär'), an audience room in the palaces of the native incas of India; hence, a general reception by a prince or ruler. A magnificent durbar was held on December 12, 111, when King George V announced a coronation in person.

üren (důr'en), a town of Rhenish Prussia, on the right bank of the Roer, 16 miles E. by N. of Aix-la-Chapelle. It has important manufactures of woolens, paper, leather, rails, hardware, etc., and an extensive trade. Pop. (1905) 29,270.

Dürer (důr'er), Albert, a German painter, designer, sculptor and engraver on wood and metal, born at Nuremberg in 1471; died there in 1528. His father was a skilful goldsmith of Hungary. In 1486 he left his father's trade and became an apprentice of Michael Wolgemuth, then the best painter at Nuremberg. Having finished his studies, he entered upon his 'wanderjahre,' the usual course of travels of a German youth. On his return to Nuremberg he married the daughter of Hans Frey, a mechanic, who has been falsely accused for centuries of embittering his life and bringing him to his grave. In 1506 he went to Venice to improve himself in his art. His abilities excited envy and admiration. He painted the Martyrdom of Bartholomew for St. Mark's Church, which painting was purchased by the Emperor Rudolph and removed to Prague. He also traveled to Bologna, to improve his knowledge of perspective. On his return to Nuremberg his fame spread far and wide. Maximilian I appointed him his court painter, and Charles V confirmed him in this office. All the artists and learned men of his time honored and loved him, and for many years he was one of the chief burgurers of his native town. Profound application and great facility in the mechanical part of his art were the characteristics of Dürer, and enabled him to exert a great influence on German art. He was the first in Germany who taught the rules of perspective, and of the proportions of the human figure. He not only made use of the burin, like his predecessors, but was also among the first to practice etching. He invented the method of printing woodcuts with two colors. Among his masterpieces in painting are a Crucifixion, Adam and Eve and Adoration of the Magi, and portraits of Raphael, Erasmus and Melanchthon, who were his friends. Among his best engravings on copper are his Fortuna, Melancholy, Adam and Eve in Paradise, St. Hubert, St. Jerome and the Smaller Passion (so called), in sixteen plates. Among his best engravings on wood are the Greater Passion (so called), in thirteen plates; the Smaller Passion, with the frontispiece, thirty-seven pieces; the Revelation of St. John, with the frontispiece, fifteen plates; the Life of Mary, two prints, with the frontispiece. Dürer has also much merit as a writer, and published works on Human Proportion, Fortification and the Use of the Compass and Square.

Ducress (důr'es), in law, restraint or compulsion, is of two kinds; ducress of imprisonment, which is imprisonment or restraint of personal liberty; and ducress by menaces or threats (per minaces), when a person is threatened with loss of life or with some kind of injury. An act done under ducress is voidable or excusable.

D'Urfey (dů're-fè), Thomas, an English poet and wit, the grandson of a French Protestant refugee, was born at Exeter in 1633, and died in 1723. He abandoned law for literature, and wrote a large number of comedies of a licentious character. D'Urfey's name is now principally remembered in connection with his Pils to Purge Melancholy, a collection of songs and ballads, partly his own, and many of them coarse or licentious. His society was generally courted by the witty, and he enjoyed the favor of four successive monarchs.

Durga (důr'gə), a Hindu divinity, one of the names given to the consort of Siva. She is generally represented with ten arms. In one hand she holds a spear, with which she is piercing Mahisha, the chief of the demons, the killing of whom was her most famous exploit; in another a sword; in a third the hair of the demon chief; and in others, the trident discus, axe, club and
Durham

Durham (du'ram), an ancient city of England, capital of the county of the same name, on the river Wear, which is crossed here by four bridges, 14 miles s. of Newcastle. The principal public buildings are the ancient castle, the cathedral and other churches, the town hall, county prison, grammar school, etc. The educational institutions comprise the university, the grammar school, a training school for schoolmistresses and other schools. There are manufactures of carpeting and mustard. The cathedral occupies a height overlooking the Wear. The larger portion of it is Norman in style, with insertions in all the English styles. It was founded by William de Carlepho, assisted by Malcolm, King of Scotland, in 1093. The castle, a little north of the cathedral, was founded by William the Conqueror. It is now appropriated to the University of Durham, founded in 1832, and incorporated in 1837. Pop. (1911) 17,960.

Durham, a county in the north of England, bounded by the counties of Northumberland, Cumberland and Yorkshire, with the North Sea on the east. Its area is 1015 sq. miles, of which two-thirds are under cultivation. The western portion of the county is hilly, enclosing fertile valleys, the eastern portion is more level, and the center contains extensive coal fields. Lead, iron and millstones are also produced. The chief grain crops are wheat and oats; the chief green crops turnips and potatoes. The cattle are esteemed both for the dairy and for fattening. In connection with the commerce of the county may be noticed its foundries, ironworks, potteries, glasshouses, iron shipbuilding, engine and machine works, chemical works, etc. Pop. (1911) 1,377,176.

Durham, a city, capital of Durham County, North Carolina, 26 miles n. w. of Raleigh. It has snuff and tobacco factories and other industries. General Johnston surrendered here, April 26, 1865, to General Sherman, an event which practically ended the Civil war. Pop. 18,241.

Durham, Book of, a Latin text of the gospels, written by Bishop Eadfrith of Lindisfarne, with an interlinear Saxon gloss, finished in the year 720. It is now kept in the British Museum.

Durham, Earl of (George Lamb-ton), 'the Father of Canadian Federation,' born at London in 1792; died there in 1840. In 1838 he was sent to Canada to readjust matters after the rebellion of the preceding year. His report to the British government was made the basis of the settlement resulting in the Dominion Act of 1867.

Durham, Simon of, an English chronicler of the twelfth century; wrote Annals of England to the Reign of Henry I., particularly valuable for events connected with the N. of England. They were continued by John of Hexham.

Durian (du'ri-an), or Durion (Durio zibethinus), a large and lofty tree growing in the Malayan Archipelago. The large, yellow-green colored flowers, which are produced on the stem or main branches, and are followed by the large, fetid fruit, which is of the size of a man's head, and is a favorite food of the natives during the time (May and June) when it is in season. There are usually a second crop in November. The smell is offensive, like putrid animal matter, but with this is associated the most delicious flavor, which places it, notwithstanding the odor, in the opinion of many, in the foremost place among tropical fruits.

Durmast (dur'mast), a species of oak, Quercus sessilisflora, or ac-
Duroc

According to some, *Q. pubescens*, so closely allied to the common oak (*Q. Robur*) as to be reckoned only a variety of it. Its wood is, however, darker, heavier and more elastic, less easy to split, not so easy to bend, yet the least difficult to bend. It is highly valued, therefore, by the builder and cabinet-maker.

Duroc (dù-rokes), Michel Gérard Christophe, Duke of Friuli, a distinguished general under Bonaparte, was born at Font-à-Mousson in 1772; killed in 1813, at the battle of Bautzen. He served as aide-de-camp to Napoleon in the Italian and Egyptian campaigns. In 1805 he was made grand-maréchal of the palace; and was frequently employed in diplomatic missions, both he still think his full share in the wars of France till the time of his death. He was a great favorite of Napoleon, and was killed by his side.

Durla. See Dhurra.

Dürrenstein (dûr-ën-stin), a village in Lower Austria, on the Danube, 41 miles west by north of Vienna. Here are the ruins of the castle in which Leopold, Duke of Austria, imprisoned Richard Cœur-de-Lion on his return from Palestine, 1192.

Duruy (dû-roo-e), Victor, a French historian and educationalist, born at Paris in 1811. He was appointed successively teacher of history in the gymnasium of Henry IV, then at the Normal School and the Polytechnic School, inspector of the Academy of Paris, inspector-general of secondary education and minister of public instruction (1833-69). He is the author of the following works: *Geographie Politique de la République, Romaine et de l’Empire*, *Géographie Historique du Moyen Age*, *Histoire Romains, Histoire de France*, *Histoire Grecque*, *Histoire Populaire Contemporaine*, etc. Some of these are simply schoolbooks, but his *Histoire des Romains* (translated into English) and his *Histoire de la Grèce Ancienne* (translated into English) are extensive and important works, the former especially. He died in 1894.

Duryea (dù-rëa’), a village of Luzerne Co., Pennsylvania, on the Lackawanna River, 12 miles s. w. of Scranton. It has coal mining industries. Pop. 7487.

Duse (dooz’o), Eleonora, an Italian actress, born in Vigevano, on the border of Piedmont and Lombardy, in 1869. At an early age she became a popular favorite in Italy, and in 1893 made her first appearance in New York and London. She avoided all make-up and her art depended more on sympathetic insight and poignant intellectuality than on the usual theatrical emotionalism. Her most famous plays included *La Dame aux camélias*, Sudermann’s *Magda*, and d’Annunzio’s *La Città morta*, *La Gioconda* and *Francesco da Rimini*. She retired in 1914.

Düsseldorf (dûs’el-dorr), a town of Prussia, in the Rhenish province, beautifully situated among villages and gardens on the right bank of the Rhine, 22 miles n. w. of Cologne, one of the handsomest towns in the valley of the Rhine. It is a great focus of railway and steamboat communication, and has a number of handsome public buildings, and several remarkable churches. Among the public institutions, particular notice is due to the Academy of Fine Art, founded in 1767 by the Elector Theodore, and afterwards directed by Cornelius, Schadow, Bendemann, etc. It has the honor of having founded a school of painting, which takes the name of Düsseldorf, and has had a large number of distinguished pupils. The industries embrace iron, copper, leather, tobacco, carpets, chemicals, objects of art, etc., and the trade is large. Pop. (1910) 367,702.

Dust-brand. See *Smut*.

Dutch (ducht), the people and language of Holland or the Netherlands. See *Netherlands*.

Dutch Auction, a kind of auction in which articles are put up at a high price and lowered till a bidder is met with.

Dutch Clover, *Trifolium repens*, commonly called white clover, a valuable pasture plant. It has a creeping stem; the leaflets are broad, obovate, with a horseshoe mark in the center; the white or pinkish flowers are in a globular head.

Dutch Gold, an alloy of eleven parts of copper and two of zinc. Called also *Pinchbeck*. See also *Dutch Metal*.

Dutch Metal, an alloy containing 84.5-84.7 per cent. of copper and 15.5-15.3 per cent. of zinc, with a fine golden-yellow color, ductile, malleable and tenacious. When beaten out by a process analogous to that for gold-leaf, until the sheets are less than 1/50,000th part of an inch thick, it constitutes Dutch leaf or Dutch foil, and is used instead of gold-leaf for ornamental purposes.

Dutch Oven, a cooking chamber of tin-plate suspended in
Dutch Rush, a name for Prince Rupert's drops.

Dutchess (dutch), René Joachim Henri, a French physiologist, born in Poitou in 1776; died at Paris in 1847. He served for some time as medical attendant to Joseph Bonaparte during the Spanish campaign, 1808-09; but subsequently he returned to France, and retired to the estate of Châteaureault, where he devoted himself exclusively to physical and physiological studies. His chief works have been published in a collective form with the title Mémoires pour servir à l'Histoire Anatomique et Physiologique des Végétaux et des Animaux (1837, two vols.).

Dutteah, or Dattita. See Datia.

Duykerbok (duiker-bok), Cephalophus mugens, a small S. African antelope with short horns (none in the female) and a tuft of stiff hair between them.

Dvina, Northern. See Dwina.

Dvina, Western. See Dúna.

Dvorak (dvör'zhák), Antonin, a Bohemian musical composer, born near Kralup in 1841; died in 1904. He first became widely known by his Slavonic Dances (1878). He was director of the National Conservatory of Music in New York, 1892-99, and in 1901 was appointed director of the Prague Conservatory. His symphony, From the New World, produced in New York in 1893, is the most popular of his symphonies, and much of his concert music has earned a permanent place in concert programs. His works include an opera, König und Köhler, a cantata, The Spectre's Bride, and a Stabat Mater. His music is characteristically national, and owes much to melody and to the ingenious use of a wide variety of rhythms and intervals.

Dwale (dwał), a name of the deadly nightshade. See Nightshade.

Dwarf, a term applied to any animal or plant greatly below the usual size of its kind, particularly to a human being of small dimensions. Accounts of dwarf tribes have been common from early times, such tribes being located especially in Africa; and it has recently been discovered, by Du Chaillu, Schweinfurth, and later travelers that there are several dwarfish tribes throughout this continent. The Ombongo, a race of dwarfs, are described as living in woods near the Okanda River, in wretched huts made of branches. Other races are the Mabongo, and the Akka dwarfs of Central Africa (see Akka); and a race is said to exist in the Congo State, not as a distinct community, however, but mixed with other tribes. Similar dwarfish peoples live in the Philippine Islands and a tribe of them was discovered in 1910 in New Zealand (see Pygmy and Negrito). Persons of dwarfish stature may be found in all races, and were formerly a fashionable appendage to the courts of princes and the families of nobles. Jeffery Hudson, the favorite dwarf of Charles I, at the age of thirty is said to have been only 18 inches high, though he afterwards grew to 3 feet 9 inches. Bébé, the celebrated dwarf of Stanislas of Poland, was 33 inches; Wybrand Lolk, a Dutch dwarf, when sixty years of age was only 27 inches; Charles II. Stratton, 'General Tom Thumb,' was 31 inches high at the age of twenty-five; Francis Flynn, 'General Mite,' was only 21 inches at sixteen.

Dwarfing (dwarf'ing), the process of training up trees or shrubs for ornament in houses so as to cause them never to reach more than a very small size, by keeping them in poor soil, giving them little water, pinching off strong shoots, etc. Practiced among the Chinese and Japanese.

Dwight (dwít), Timothy, an American divine, born in Massachusetts in 1752; died in 1817. His father was Colonel Timothy Dwight, and his mother was a daughter of Jonathan Edwards. He served as chaplain in the Revolutionary army, and ultimately became president of Yale College. His Theology (1818) was for long a standard both in Britain and in America. He was also the author of two poems, the Conquest of Canaan and Greenfield Hill, besides numerous unimportant works, consisting of dissertations, occasional sermons, etc.

Dwina (dwe'-na), Northern, a Russian river formed by the union of two small streams in the government of Vologda. It flows in a northwesterly direction, and falls by four mouths into the White Sea. At Archangel, before
Dwina

It divides itself; it is 4 miles broad. It is navigable as far as Suchona, and is connected with the Volga by canal.

Dwina, Western. See Dsna.

Dyad (d'ad'; Greek dyas, the number two), in chemistry an elementary substance, each atom of which in combination with other bodies is equivalent of two atoms of hydrogen.

Dyaks (d'aks), the aborigines of Borneo, chiefly inhabiting the interior of the island. They are a finely formed race, of a yellow complexion, and are described as docile, industrious and superior to the Malays. The more advanced of them practice agriculture and dwell in neatly constructed and tolerably comfortable houses. In Sarawak they have made considerable advances in civilization. They are mostly heathens. The practice of head-hunting (hunting their enemies to make trophies of their heads) is practiced among them, but has been abolished where European influence prevails. See Borneo.

Dyas (d'as), in geology, a name for the Permian system.

Dyaus (dyas), the god of the sky in the older mythology of the Hindus. His name is etymologically connected with that of the Greek Zeus.

Dyce (dis), Alexander, a Shakespearean editor, born at Edinburgh in 1798; died in 1863. He was educated at Edinburgh and Oxford, but in 1827 settled in London, where most of his life was passed. He first became known by his editions of Collins, Peele, Webster, Marlowe, Skelton, etc., accompanied by notes and biographies of the authors. In 1840 he founded the Percy Society for the publication of ancient comedies and ballads. His chief work, however, was an edition of Shakespeare in six volumes, with notes, etc. (1853-58).

Dyce, William, an historical painter, born[i. 1806; died near London in 1864. He studied at Edinburgh and at Rome, and finally settled in London, being appointed, in 1838, head of the government school of design, Somerset House. He was elected a Royal Academician in 1840. Among his chief works are Francesco da Rimini (1837); Josiah Shooting the Arrow of Deliverance (1844); King Lear in the Storm (1851); Christabel (1855); The Good Shepherd (1866); the Baptism of Ethelbert, a large fresco for the Houses of Parliament, and a series of frescoes illustrative of the legends relating to King Arthur, for the same. See Vandyck.

Dyck, Sir Anthony van (van dik). See Vandyck.

Dyeing (d'ing), the art of fixing a new and permanent color on textile substances, usually cotton, linen, silk and wool. Some preliminary operations are necessary in order to cleanse the stuff from any foreign matters which would prevent the dye having free access to it, as well as to remove any natural coloring which would interfere with the production of bright, clear tints. Cotton and linen fabrics go through a prolonged series of operations in bleaching (which see). Silk is boiled in a solution of fine soap to remove the fatty matter; and wool is cleansed by scouring in weak soap or soda-lye or weak ammonia.

The process of dyeing varies much according to the stuff and the coloring matters used. In general animal fibers, like silk and wool, combine more easily with most colors than vegetable fibers such as linen and cotton. In the case of the former, for example, a simple immersion in aniline dyes is sufficient to produce a fixed color. Such colors are said to be substantive, in relation to the stuffs with which they thus combine. Dyes which will not unite directly with the fibers so as to produce a good and permanent color are termed adjective. These dyes require the intervention of another agent to fix them on the different stuffs, and the name of mordant is applied to those substances which are employed to make the stuff to be dyed and the dyeing color combine. Alum, acetate of aluminium, chloride of tin, salts of iron, albumen, gluten, tannin, etc., are common mordants. The mordant is generally dissolved in water into which the stuffs to be dyed are plunged. In some cases it is mixed with the color and both are simultaneously applied to the stuff. An important characteristic of mordants is their power of affecting the natural tint of the dye and thus enabling a variety of shades to be produced at reasonable expense. Thus, nitrates tend to give a yellow tinge to the colors, alumina deepens and oxide of tin brightens the natural tints. A process of dyeing to which the name of Aero-hydraulic Dyeing has been given consists in forcing the color through the material by hydraulic pressure. The advantages of the process (patented by Mr. G. C. Gibbs) are that the color is forced equally through any thickness of the stuff, which thus remains bright till completely worn out.

The dyestuffs in use at the present day are derived alike from the animal, mineral and vegetable kingdoms. Among animal dyes cochineal, the female insect of Coccus cacti, produces
Dyer

the most valuable of scarlet and crimson dyes. A kindred insect, Coccus ilicis, produces kermes, an important red dye. Galls, which are used both as a dye and a mordant, are produced by the puncture of insects on the leaves and branches of the oak and other trees. Among the vegetable dyes in common use, madder, the root of the Rubia tinctoria, is perhaps the most important, furnishing various shades of red, purple, brown and black, as well as the famous Turkey red. Munsiet is the root of a closely allied Indian plant. Logwood, Brazil-wood, sandal-wood, jasmin, sappan-wood are the chief woods used for dyeing purposes. For blue dyes, indigo, obtained from Indigofera tinctoria and Indigofera Anl., is still the most generally used. Safflower (obtained from the Carthamus tinctoria) yields a fine pink dye; various species of lichens give us a series of purple dyes known as archil, cudbear and limus. Among mineral pigments Prussian blue, a ferrocyanide of iron; ultramarine, now prepared as a compound of alumina, silica, soda and sulphur; chrome yellow, cobalt blues and arsenical greens are the colors most in use. Among the most notable additions to the list of coloring stuffs within recent years are the aniline dyes of coal-tar origin (see Anthene), which yield a great variety of brilliant colors, such as magenta, mauve, aniline, purple, roseine, violine, etc. From coal-tar also the two coloring principles of madder (alizarine and purpurine) have been artificially produced, and alizarine has almost entirely superseded the use of the madder root. There are few organic substances which under proper treatment will not yield coloring matter, and of late new coloring matters have been obtained from wood-sawdust, lichens, mosses, paper and cotton waste, bran, starch, sugar, soot, etc. In addition to those above mentioned other dyestuffs are alkanet, annatto, catechu, camwood, French berries, divi-divi, sumach, saffron, turmeric, woad, etc.

Dyer (d'èr), John, an English poet of the secondary class, born in Carmarthenshire in 1700, and educated at Westminster School. He became a painter, but not succeeding in that capacity took a regular job and was appointed to a small living. In 1727 he published his poem of Gronor Hill, in 1740 The Ruins of Rome, and in 1757 The Fleece, a didactic poem in five books. He died in 1755.

Dyer's-broom, an European and an American shrub (Genista tinctoria), formerly used with woad for dyeing green.

Dyer's-moss, a lichen, called also Archil or Archil. See Archil.

Dyer's-weed, Reseda Luteola, a genus as mignonette, otherwise called Yellow-weed, Weld or Wood, nat. order Resedaceae. This plant grows in waste ground; it affords a beautiful yellow dye, and is cultivated for that purpose.—Dyer's Greenweed is Genista tinctoria. See Dyer's-broom.

Dyestuffs. See Dyeing.

Dying Declaration, a deposition made by one who is in prospect of death. Such declarations are, as a general rule, admissible as evidence only in criminal and not in civil cases, and must be made, according to English and American, though not Scottish law, in the full consciousness of the danger of death.

Dyke. See Dike.

Dynameter (di-nam'-è-ter), an instrument used for measuring the magnifying power of telescopes. It consists of a small compound microscope, with a transparent plate, exactly divided, which is fixed to the tube of a telescope, in order to measure exactly the diameter of the distinct image of the object-glass. Also has same significance as Dynamometer.

Dynamic Theory, a hypothesis broached by Kant that all matter originated from the action of two mutually antagonistic forces—attraction and repulsion. All the predicates of these two forces are attributed by Kant to motion. As applied to heat, it is a theory or hypothesis—that now generally accepted as the correct one—which represents a heated body as being simply a body the particles of which are in a state of vibration. This vibratory movement increases as the body is still more heated, and diminishes proportionately as it more or less rapidly cools. It is called also the mechanical theory of heat.

Dynamic Unit. See Unit.

Dynamics (di-nam'-iks), the science which deals with the laws of force in their relation to matter at rest or in motion, and as such it is differentiated from Kinematics, which considers motion mathematically, and apart from the forces producing it. It is to Newton that we owe the clear statement of the three primary laws of force. These are: (1) that every body remains in a state of rest, or of uniform motion
Dynamics

along a straight line, unless it is compelled by force to change that state. (2) That change of motion is in proportion to the force employed, and occurs along the straight line in which the force acts. This change of motion includes both change of rate and of direction. (3) That, as the result of every action, there is also and always an equal reaction. These laws, which were formulated from experiment, involve the conception of force as a primary influence or action expressed in terms of space, time and matter. Now, in dealing with the laws of force, a standard of measurement is required which shall be applicable to all forces at all times, and we therefore require to begin by establishing units of space, time and mass. There are two systems of units in use, the one British, the other French. In the British system the foot is taken as the unit of length, and the second as the unit of time. In the French the centimeter is the unit of length, the second the unit of time; the unit velocity in the one case being that of one foot per second, in the other one centimeter per second. The British unit of mass is the pound (the mass of a certain lump of platinum deposited in the exchequer office, London); the French, the gramme; and, accordingly, the French units of space, mass and time are commonly known as the C.G.S. (centimeter, gramme, second) units. As the weight of a pound (or a gramme) is not the same at all parts of the earth’s surface it cannot give us of itself an absolute or dynamical unit of force, that is, an invariable unit; but taking it in conjunction with unit time and unit velocity, we do obtain such a unit. Two absolute units of force are in common use in dynamics, the poundal and the dyne; the latter being the absolute unit in the C.G.S. system. The former is that force which, acting on the mass of one pound for one second, generates in that mass a velocity of one foot per second. The latter is that force which, acting on the mass of one gramme for one second, generates in that mass a velocity of one centimeter per second. It is important in dynamics to distinguish between mass and weight. The mass of one pound is the quantity of matter equal to a certain standard quantity (a certain lump of metal) and is quite independent of force. The weight of one pound is the force with which the mass of one pound is attracted to the earth’s surface by the force of gravity. Another important term is momentum; the momentum of a body is motion at any instant is the product of the mass of the body and the velocity at that instant. Dynamics is divided into two great branches; statics, which treats of solid bodies at rest under the action of forces; and kinetics, which treats of the action of forces in producing motion in solid bodies. Formerly the latter alone was called dynamics, and to this, in conjunction with statics, the general name mechanics was given. In the wide sense dynamics includes also hydrostatics.

Dynamite (di'na-mit, din'a-mit), an explosive substance patented by Alfred Nobel in 1867. As originally made it consisted of a siliceous earth obtained at Oberlohe in Hanover and known as kieselpuur, impregnated with 75 per cent. of nitroglycerin (see Nitroglycerin), the object of the mixture being to facilitate the carriage and use of nitroglycerin by diminishing its susceptibility to explode by shock while not destroying its explosive force. The siliceous matter is of diatomaceous origin; it is extremely friable and porous, and has a considerable absorbent power. Dynamite thus prepared has the appearance of raw sugar. Diatomite, a substance superior to kieselpuur, is now also employed, and various other substances have been used to mix with the nitroglycerin, such as charcoal, sand, sawdust, etc. The mixture remains without change for a long period of time, unless exposed to water. It burns away quietly if a light is applied to it, but explodes if heated to a high temperature. Usually it is exploded by a specially arranged fulminating cap. Its explosive force is several times that of gunpowder, which it has largely superseded for blasting.

Dynamo, a machine used to generate electrical energy, hence known also as a generator. A dynamo differs from a motor in that the latter converts electrical energy into mechanical motion, whereas the dynamo converts mechanical motion into electrical energy. Under certain conditions the functions of the dynamo and motor are interchange-
whereby a mechanical force tending to move the conductor is produced. If motion result from this act of electric energy, that energy will become mechanical motion, and a motor will be required to govern its application.

The essential parts of any dynamo, expressed in simplest form, are the field magnet and the armature. These may be well illustrated by the original disk machine of Faraday, where the iron magnet between whose poles the magnetic field exists, is the field magnet; and the electrical conductors, represented by the rotating copper disk, correspond to the armature.

The field magnet, then, is the means of producing the magnetic flux. The magnetic flux is created by a current of electricity traversing many turns of wires wound upon iron cores. A north or a south pole is produced, depending upon the direction in which the current flows through the coil. The coils on the field magnets are connected in series and so arranged that the polarity changes consecutively from pole to pole.

The armature is a system of conductors moving in the magnetic field. The armature may revolve and the field magnet be stationary, as in most types of direct-current machines; the field magnet may revolve and the armature be stationary, as in the alternating-current type; or the field and armature coils may be stationary and the iron core revolve, as in the inductor-alternator type. As the construction of armatures of direct-current machines differs from that of alternating machines only in certain details, a description of the one may stand for that of the other. An armature is made up of an iron core mounted on a shaft; a number of conductors wound upon the surface of the core or sunk in slots near its surface, and a commutator. The object of the core is to facilitate the passage of lines of force from one pole of the field magnet to the other. The armature windings consist of wires distributed over the outside of the core, and they constitute the generating part of a direct-current machine. The commutator or collector is that part of the machine through which the revolving armature connects to the outside circuit by the brushes. The brushes, made of carbon for high potential machines, and copper for machines with a low potential, are placed in contact with the commutator or collector; their purpose, as stated above, is to convey the electric current between the revolving armature or field, and the stationary outside circuit.

The alternating current dynamo is distinguished from the direct current machine by the absence of a commutator, its place being taken by collecting rings, and there may be internal rotating fields and external stationary armature, instead of the usual direct current practice of stationary external field and revolving internal armature.

If there is but one set of coils on the armature frame, the machine is known as single phase. If, however, one or two more separate sets of coils are added revolving in the same field flux and spaced so that their electro-motive forces had maximum values at 180° of voltage, cycle apart, the result would be a two phase generator, and if 120° apart a three phase generator.

The alternating current dynamo is used to generate a current made up of half-waves of equal duration and intensity, but opposite direction. One half-wave is an alternation; two half-waves, one complete wave or cycle. Frequency is the term used to denote the number of cycles per second. Frequencies in common practice are 25, 60, 125 cycles per second. All alternators require direct current to excite their field magnets. This is commonly supplied by an exciter, a small separate direct current generator.

Some alternating machines have been built, however, with a special auxiliary winding in the armature slots, the current from which is rectified by a commutator on the shaft of the revolving fields, thus producing a direct current for exciting the field magnets. This type has not been extensively used, however, because of mechanical and electrical complications, also because of the development of a machine for regulating the voltage of the exciter according to the load on the main machine to secure uniform voltage with varying loads.

The motive power, called the prime mover, employed to drive a dynamo, may be the ordinary type of reciprocating steam engine, or it may be a gas engine, a water turbine, a steam turbine, a driving device capable of producing the maximum efficiency of the generator. Steam turbine-driven generators, also called turbo-generators, are now much in use, as, being constructed to form part of the generator itself, they economize in floor space, foundations, etc.

A further advantage of the steam turbine as a prime mover lies in the higher speed developed over the reciprocating engine. This makes for smaller units and lighter moving parts with a corresponding reduction in friction and weight, as well as first cost. Since the power of a generator is dependent upon its speed
Dynamometer
magneto machines lies in their greater compactness, arising from the fact that electro-magnets are much stronger than permanent steel magnets of the same bulk. The extensive use of dynamos as the principal commercial sources of electric currents may be said to date from the improvements introduced in their construction by Gramme, of Paris. For an explanation of their action, see Induction, Magneto-electric, Magneto-electricity.

Dynamometer (di-nə-mə-ter), any instrument for measuring the relative strength of men or animals, or the force of machinery. Commonly it consists of a spiral spring suitably applied. When the pull upon a draught implement, as a plow for instance, is the point to be determined, the dynamometer has a brak in the draught-chain, and the amount of extension or collapse which it suffers indicates the intensity of the strain.

Dyne (dīn), in physics, a unit of force. See Dynamics.

Dynograph (dīn′ə-graf), an apparatus used in modern railroad for testing the inequalities of the road-bed, the track, etc. It consists of a recording instrument mounted in a car and geared to the wheels thereof. An automatic pencil records the slightest roughness or inequalities, and locates them. See Cyclometer.

Dyrrhachium. See Durra.

Dysentery (dis′en-ter-i; Greek, dys, difficult, eisera, the bowels), a dangerous disorder of the intestines, known by fever; tenesmus; frequent, griping stools, which are chiefly mucous, sometimes mixed with blood, the natural faces being retained, or voided in small, compact, hard masses; loss of appetite, and emaciation. It may be occasioned by a sudden check in the perspiration, or the use of unwholesome and putrid food, or by noxious exhalations and vapors, and it is often the result of a specific contagion. When the symptoms run high, produce great loss of strength, and are accompanied with a putrid tendency and a fetid and involuntary discharge, the disease often terminates fatally in a few days. In some cases the febrile state wholly disappears after a time, while the proper dysenteric symptoms may be of long continuance. Hence the distinction into acute and chronic dysentery. Saline purgatives, and for severe cases laudanum (20 or 50 drops) or Dover's powder, are useful. The endemic dysentery of Egypt is a distinct disease caused by the presence of a worm in the intestines.

Dysmenorrhoea (dis-men′ř-a), a disease of women, consisting in painful or difficult menstruation, which may be caused in various ways.

Dysodile (dis-o-dil), a yellowish or greenish foliated mineral found in limestone, with remains of fish and of plants, which, when ignited, burns and emits a very bad smell.

Dyspepsia (dis-peps′i-a; Greek, dys, difficult, and pepe'sis, digestion), difficulty of digestion. The action of the stomach on the food is that usually designated as digestion, and it is the derangement of this process that is usually expressed by the term dyspepsia. This derangement may be caused by disorders of a very various and even opposite character. The subacute and chronic forms of gastric irritation and inflammation are the most common forms of dyspepsia, and are often caused by too highly seasoned or too abundant food and stimulant drinks, or by the improper use of emetics, tonics, or stimulants. Another class of dyspeptic diseases is connected with irritation of the mucous membrane of the duodenum, causing perversion of secretions and disorder of functions. A third class of dyspeptic diseases depends on the nerves connected with the digestive viscera. Hence arises an order of dyspeptic symptoms independent of any immediate affection of the stomach. Dyspepsia is therefore not a disease of a uniform character, but is rather attached as a symptom to a variety of diseases. The most common causes of dyspepsia are excesses of various kinds, especially in the quantity of food eaten. Persons of a sedentary life require less nutriment than those of active habits. Exercise and the quantity of food to be digested must be proportioned to each other. The quality of food as well as its quantity has to be considered. Good cookery, which renders the food tender and pulpy, is one preservative against dyspepsia. Tough and badly dressed meats, crude vegetables, hot bread and cakes, and the daily use of hot tea or coffee for breakfast are among the numerous causes of this ailment.

Dysphonia (dis-fō′né-a), a difficulty in speaking. The disorder known as 'clergyman's sore throat' is a common example. Rest of the vocal organs, tonics, muscular exercise, change of scene are generally needed to aid recovery.

Dyspnoea (dis-pn′é-a), a difficulty in breathing. It is sometimes hysterical, sometimes a symptom of dis-
ease of the heart or lungs. The treatment varies with the cause.

Dytiscus (dti's'kus), more correctly *Dyticus*. See Water-beetle.

Dzeren (dze'ren), Dzer'on, the Chinese antelope, a remarkably swift species of antelope (*Procapra gutturosa*) inhabiting the dry, arid deserts of Central Asia, Tibet, China and Southern Siberia. It is nearly 4½ feet in length, and 2½ high at the shoulder.

Dziggetai (dzig'ge-tai), or Kianu (*Equus Hemionus*), an animal found in Central Asia, allied both to the horse and ass. Its head is large like that of the ass, but in form resembles that of the horse. The ears also resemble those of the horse. It runs with a rapidity rivaling that of the best Arabian horses.

Dzoungaria (dzoun'ga-ri-a), a Chinese territory in Central Asia, stretching from about 43° to 48° N. lat. and from about 82° to 86° E. lon. It has an area of 147,950 sq. miles, and pop. 600,000. It is administratively connected with Kuldja and after the surrender of Kuldja by the Russians in 1880 came again under Chinese rule. Dzoungaria, once the center of an independent empire, was first conquered by the Chinese in 1757. Along with Outer Mongolia and Chinese Turkestan, as a consequence of the Chinese revolution, it declared its independence of the Chinese Empire in December, 1911, and organised a government of its own.
