KEY TO PRONUNCIATION

Three methods are used to indicate the pronunciation of the words forming the headings of the separate articles:

(1) By dividing the word into syllables, and indicating the syllable or syllables to be accented. This method is followed where the pronunciation is entirely obvious. Where accent marks are omitted, the omission indicates that all syllables are given substantially the same value.

(2) Where the pronunciation differs from the spelling, the word is re-spelled phonetically, in addition to the accentuation.

(3) Where the sound values of the vowels are not sufficiently indicated merely by an attempt at phonetic spelling, the following system of diacritical marks is additionally employed to approximate the proper sounds as closely as may be done:

| a, as in fate, or in bare. | eu, a long sound as in Fr. jeane, = Ger. long ö, as in Söhne, Götze (Goethe). |
| ã, as in alcan, Fr. âme, Ger. Bahn=a of Indian names. | eu, corresponding sound short or medium, as in Fr. peu=Ger. ò short. |
| â, the same sound short or medium, as in Fr. bat, Ger. Mann. | ö, as in note, morn. |
| a, as in fat. | o, as in not, frog—that is, short or medium. |
| â, as in fell. | ö, as in move, two. |
| œ, obscure, as in rural, similar to u in but, é in her: common in Indian names. | ū, as in tube. |
| é, as in me=î in machine. | u, as in tub: similar to é and also to a. |
| e, as in met. | ù, as in bull. |
| ê, as in her. | û, as in Se abune=Fr. û as in dô, Ger. û long as in grün, Bühne. |
| i, as in pine, or as ei in Ger. Mein. | ō, the corresponding short or medium sound, as in Fr. but, Ger. Müller. |
| ï, as in pin, also used for the short sound corresponding to ê, as in French and Italian words. | oi, as in oil. |
| ou, as in pound; or as ow in Ger. Haus. | ou, as in pound. |

The consonants, b, d, f, h, j, k, l, m, n, ng, p, sh, t, v, and z, when printed in Roman type, are always given their common English values in the transliteration of foreign words. The letter c is indicated by s or k, as the case may be. For the remaining consonant sounds the following symbols are employed:

| ch is always as in rich. | erally much more strongly trilled. |
| d, nearly as th in this = Sp. d in Madrid, etc. | s, always as in so. |
| g is always hard, as in go. | th, as th in thin. |
| k represents the guttural in Scotch loch, Ger. nach, also other similar gutturals. | th, as th in this. |
| ñ, Fr. nasal ñ as in bon. | w always consonantal, as in we. |
| r represents both English r, and r in foreign words, in which it it is gen- | x = ks, which are used instead. |
| erally much more strongly trilled. | y always consonantal, as in yea (Fr. ligne would be re-written lénay). |
| zh, as s in pleasure = Fr. j. |
Interstate Commerce Commission, an important body created by an act passed by the Congress of the United States and signed by President Cleveland on Feb. 4, 1887. This act was extensively amended by another act of March 2, 1889, and was supplemented by later acts, notably the Elkins act of 1903, the Hepburn act of 1906, the Mann-Elkins act of 1910, the acts of 1912 and 1917, and the transportation act of 1920. The original act provided for a commission of five members; this was increased to seven members in 1906, to nine members in 1917, and to eleven members under the transportation act of 1920.

The original act, with its amendments, applies to common carriers (except water), including railroads, sleeping-car companies, petroleum pipe lines, and telephone, telegraph, cable and express companies. The act requires all rates to be reasonable and just; prohibits preferential rates, or undue or unreasonable preferences, or advantages in rates or facilities; forbids the charging of a higher rate for a shorter than for a longer haul over the same line, in the same direction, the shorter being included within the longer haul, or the charging of any greater compensation as a through rate than the aggregate of the intermediate rates subject to the act. The commission is authorized under certain circumstances to permit the pooling of freights of different and competing railroads, and to permit the acquisition by one carrier of the control of another carrier in any manner not involving the consolidation of such carriers into a single system for ownership and operation. The act of February, 1920, authorizes the commission to make rates which will yield the carriers a fair return. The rate of return is fixed at 5 1/2 per cent, to which may be added, in the discretion of the commission, not exceeding one-half of 1 per cent for improvements, betterments, or equipment, for the two years March 1, 1920-March 1, 1922.

Interval (int′er-val), in music, the distance between two given sounds, or their difference in point of gravity or acuteness. Intervals are simple when confined within the octave, and compound when they exceed it, and are named according to the distance of the two boundary notes. Thus the interval of a whole tone (CD) is called a second, of a whole tone and a semitone (CE b) a minor third, etc. All the intervals of any major scale reckoning up from the key-note are major. Intervals a semitone less are minor. If they are a semitone greater than major, they are augmented; if a semitone less than minor, they are diminished. See Music.

Intestacy (in-test′a-ni), in law, the condition resulting from one’s dying without having left a will. In such event the property to the heirs or next of kin. See Descent.

Intestine (in-test′i-n; Lat. intestinum, from intesti, within), the name given to the convoluted membranous tube which extends from the right or pyloric orifice of the stomach to the anus, and which receives the ingested food from the stomach, retains it for a longer or shorter period, mix it with the bile, pancreatic juice, and intestinal secretions, gives origin to the lacteal or absorbent vessels which take up the chyle and convey it into the current of the blood, and which, lastly, conveys the fecal or indigestible products from the system. In man it is usually divided into the small intestine, which comprehends the duodenum, jejunum, and ileum; and the large intestine, comprehending the cecum, colon, and rectum. Three distinct coats are to be distinguished in the structure of the small intestine; these, named from without inwards, are known
as the serous, muscular, and mucous coats. The innermost or mucous coat presents several interesting structures. Among these are the circular constrictions, or closely folded transverse plaits of the mucous membrane, the functions of which would appear to be those of serving materially to increase the digestive surface or area of the intestine, and thoroughly mingle the ingesta with the secretions. The surface of the membrane is covered with innumerable fine projections termed villi, which give to it almost a velvety texture. Each villus is found under the microscope to be an outstanding process of the mucous membrane, containing internally an artery giving off minute ramifications, a vein by which the venous blood is returned, and, lastly, the lacteal or absorptive vessel. The function of the villi, which are most numerous in the duodenum, is predominantly that of the absorption of the chyle or fluid product of digestion, as a preliminary to its transmission to the current of the blood or circulation. Four varieties of glands are also connected with the small intestine, the first three being named after their respective discoverers, Lieberkühn, Peyer, and Brünner, and the other variety occurring singly—the 'solitary' glands—and in groups—Peyer’s patches. The exact functions of these bodies are not well known. The duodenum lies in the epigastric region, and makes three turnings, receiving by a common opening between its first and second flexure the bile-duct and the pancreatic-duct. The conversion of the chyme from the stomach into chyle is thus accomplished in the duodenum. The jejunum, commencing at the left side of the second lumbar vertebra, becomes insensibly and gradually continuous with the ileum, which, terminating the small intestine, becomes continuous with the large intestine in the right iliac fossa, and, passing into the colon or first portion of the large intestine, which is divided from the small intestine by the ileo-cecal valve. Below the point at which the ileum opens into the colon we find a short blind sac continuous with the colon, and known as the cecum; and attached to the lower extremity of the cecum, and communicating with the cecal cavity, we find a little closed tube, to which the name of appendix vermiformis is applied.

We next find the colon to ascend in the right lumbar region, in front of the kidney. This portion is known as the ascending colon. It then crosses the abdominal cavity to the left side, and becomes the transverse colon; and finally descends as the descending colon, in front of the left kidney into the left groin, where, after making a curve like the letter $S$, the sigmoid flexure of the colon— it terminates in the last portion of the intestinal tract. This last portion, known as the rectum, finally terminates in the anus. The large intestine measures from 5 to 6 feet in length; the small intestine measures from 16 to about 24 or 26 feet in length; so that the entire intestinal tract may be regarded as being about five or six times the length of the body itself. The three coats of the small intestine are repeated in the large intestine. The mucous or inner coat is not elevated to form villi in the large, as in the small intestine, and only two kinds of glands, the glands of Lieberkühn, and the solitary glands, are to be distinguished in the large intestine. The function of the large intestine is chiefly excretory, but a certain power of absorption is also exercised by its vessels. The food is propelled along the entire intestinal tract by the alternate contraction of the longitudinal and circular muscular fibers, by which means it is gradually pushed along the tube with a vermicular or peristaltic movement. The ileo-cecal valve serves to prevent regurgitation of matters into the small intestine after they have passed into the colon. The mesenteric is the term given to the fold of peritoneum by means of which the small intestines are attached to the spine. The blood-vessels supplying the intestinal tube are the superior and inferior mesenteric arteries and their branches, derived from the abdominal aorta. The veins of the intestines empty their contents into the vena portae, which distributes itself through the liver, and from the blood of which the bile is secreted by the hepatic or bile-ducts. The nerves of the intestines are derived from the sympathetic or ganglionic system of nerves, and have also a connection with the eighth cranial nerve—the pneumogastric nerve of the right side.

Intoning, the voice, differing from chanting chiefly in the fact that in the latter case the cadence is more developed, the divisions more rhythmical, and the music in continuous harmony. The practice prevails in the Greek, Roman, Anglican, and Lutheran churches.

Intoxication, the state produced by the excessive use of alcoholic liquids. In the first stage the circulation of the blood becomes somewhat more rapid, and all the functions of the body and mind are exercised with more freedom. In the second stage the effect on the brain is more decided. The peculiarities of character, the faults of temperament, manifest themselves without
Intrenchment

Intrenchment (in'trench'ment), any work that fortifies a post against the attack of an enemy. The word is generally used to denote a ditch or trench with a parapet. See Fortification.

Introit (in'tro-it), a psalm or passage of Scripture sung or chanted while the priest proceeds to the altar to celebrate mass; now used for any musical composition designed for opening the church service.

Intuition (in-tü'-ish'un), in philosophy, the act by which the mind perceives the agreement or disagreement of two ideas, or the truth of propositions, immediately, or the moment they are presented, without the intervention of other ideas, or without reasoning and deduction.

Intussusception (in-tus'-a-sip'-ish'un), in pathology, the descent of a higher portion of intestine into a lower one: generally of the ileum into the colon. When it takes place downwards, it may be termed progressee; when upwards, retrograde.—In

Invalides (in've-läd), Hôtel des, a splendid hospital for disabled soldiers at Paris, in the suburb of St. Germain, erected by Louis XIV between 1670 and 1673. A soldier must have served ten years to be received into this hospital on account of poverty or infirmity. In vaults under the dome lie the remains of Turenne and several other great French commanders, including those of Napoleon I, deposited here December 15, 1840.

Inventory

Inventory (in've-nar'i), a Scotch royal burgh and seaport, capital of the county of Argyll, beautifully situated near the head of Loch Fyne, 42 miles northwest of Glasgow; having the castle of the Duke of Argyll in the immediate vicinity. Pop. 1398.

Invercargill (in-ver-kā'gill), a town of New Zealand, county of Southland, province of Otago, situated near the mouth of the New River, about 150 miles s. w. of Dunedin. It is well built, and has an Athenaeum, hospital, public halls, street tramways, breweries.
Inverness

foundries, flour-mills, etc. The surrounding district is pastoral and agricultural. It is connected by rail with the port of Campbelltown 17 miles distant, and situated near the entrance to Bluff Harbor. Here there is excellent accommodation for the largest vessels at all times of the tide. Pop. 7289.

Inverness (in-ver-nes'), a burgh of Scotland, capital of the county of the same name, and chief town in the Highlands. It is beautifully situated, partly on low ground, partly on a gentle acclivity, on both sides of the Ness. The town is well built, among the chief edifices being the county buildings, a fine castellated structure, containing the court-house and jail; the town-hall, the episcopal cathedral, and the Royal Academy. The industries include ship-building, rope-making, tanning, distilling, brewing, etc., and there is a considerable trade. Large vessels unload at the quays. Inverness received a burg charter from William the Lion in the twelfth century. Pop. 21,238.—The county, which is the largest in Scotland, stretches diagonally across the island from sea to sea, and includes on the west the island of Skye, several smaller islands, and all the outer Hebrides, except the north part of Lewis. Area, 4255 square miles, of which a very small portion is under tillage. Great part of the surface is barren heath, useless except for sporting purposes, but a considerable portion is suited for rearing cattle and sheep. The surface generally is mountainous, and presents much fine scenery. Near the southwestern extremity of the Caledonian Canal is Ben Nevis, 4406 feet high, the loftiest mountain in Great Britain. The principal rivers are the Spey, Ness, and Beauly, on all of which there are valuable salmon fisheries. Some of the lakes are of considerable size, and beautifully situated. The largest is Loch Ness, forming part of the Caledonian Canal route. Extensive tracts are held as deer forests, in which the red and roe deer roam at will. The arboreal and productive land lies chiefly on the sea coast, and on the banks of the lakes and rivers. Gaelic is the prevailing language. Pop. 90,104.

Invertebrata

Inverness

Invertebrata (in-ver-te-brâ'ta), a collective term for the five great lower divisions or sub-kingsoms of the animal series, which agree in not having a vertebral column or backbone, used in contradistinction to the highest group of the animal kingdom, to which the name Vertebrata or Vertebrate animals is given, all of which possess a vertebral column. In the system of Cuvier the Invertebrata were divided into the Radiata, Articulata, and Mollusca. Succeeding naturalists split up Cuvier's Radiata into the sub-kingsoms Proisosa (single-celled animals), Ctenelertata (sponges and corals), and Echinodermata (starfish, etc.). Those with the Annelosa (worms), Arthropoda (crustaceans, insects, etc.), and Mollusca (shellfish), now form the recognized divisions of the Invertebrata. In these no structure analogous to the vertebrate spine is found. Where hard parts exist in them they are generally placed on the outside of the body, and thus constitute an evo-skeleton, or outer skeleton—as opposed to the endoskeleton, or internal skeleton of the Vertebrata. The shell of the crab or lobster is a familiar example. The limbs of Vertebrata are never more than four in number, while those of the Invertebrata may be very numerous. Among Vertebrata also reproduction is purely and solely sexual, but in Invertebrata asexual reproduction is common, many of them reproducing their species by gemmation or budding, and by fission.

Investiture

Investiture (in-ves'ti-tür), in the feudal law, was the open delivery of a fee or fief by a lord to his vassal, thus, by external proof, affording evidence of possession; or the formal introduction of a person into some office or dignity. Investiture was often performed by the presentation of some symbol to the person invested, as a branch of a tree, etc. The investiture of persons with ecclesiastical offices or dignities is historically the most important phase of the subject. The estates and honors which composed the ecclesiastical temporalities were considered to partake of the nature of fiefs, and therefore to require similar investiture from the lord. Charlemagne is said to have introduced this practice, and to have invested the newly-consecrated bishop by placing a ring and crozier in his hands. The custom does not appear to have been opposed during the lapse of two centuries from his reign, but the church at last protested strongly against it. Alexander II issued a decree against lay investiture in general. This was revived by Gregory VII (Hildebrand), who, having succeeded in annulling the prerogative of the emperors to nominate or confirm popes, sought to disjoin entirely the ecclesiastical from the civil rule. In 1075 he issued a bull forbidding under penalty of excommunication lay investiture and the enfeoffing of prelates with the ecclesiastical temporalities. Henry IV, emperor of Germany, vigorously resisted the pope, but was (1077) obliged to submit and perform severe penance for his acts of opposition.
The struggle then begun with Henry IV by Gregory was carried on by his successors, and it was not till the papacy of Calixtus II, in 1122, that the question was settled in favor of the pope. By a concordat then arranged at Worms Henry V resigned forever all pretense to invest bishops by the ring and crosier, and recognized the freedom of elections; the new bishop, however, was to receive his temporalities by the scepter. In England Paschal II was engaged in a contest little less fierce than that with the emperor. Anselm, the primate, refused to do homage to Henry I, for his see. The king asserted an unqualified right of investiture, which the pope as unqualifiedly denied. After a protracted struggle the controversy ended in England, as it did afterwards in Germany, by compromise. Paschal offered to concede the objections against hommage provided Henry would forego the ceremony of investiture. To this he agreed (1107).

**Invoice**

(in'vois), an account in writing of the particulars of merchandise transmitted to a purchaser, giving price and quantity, note of charges, and any other needful details. By sending an invoice along with goods a merchant gives official advice to his correspondent of the understood terms of a contract. If the goods are received and the invoice retained this will be held valid evidence in law of the contract.

**Involute** (in'yu-10t), in geometry, the curve traced by any point of a string when the latter is unwrapped, under tension, from a given curve.

**Involution** (in-vo-lu'shun), the calculation of any power of a quantity, that is, the multiplication of a quantity by itself any number of times. Thus $2 \times 2 \times 2 = 8$; here 8, the third power of 2, is found by involution. **Evolution** is the opposite process.

**Iodine** ([i'yu-din]; Gr. io'n, a violet), a peculiar non-metallic elementary solid substance, symbol I; atomic weight 127. It exists in the water of the ocean and mineral springs, in marine molluscan animals, and in seaweeds, from the ashes of which it is chiefly procured (see *Kelp*). It exists also in certain land-plants and in cod-liver oil. It is found in certain minerals, the water of certain rivers, and the rain-water of several towns. At the ordinary temperature of the atmosphere it is a solid crystalline body. It unites readily with chlorine, potassium, etc., with the emission of light and great heat. It is a non-conductor of electricity, and, like oxygen and chlorine, is a negative electric. Like chlorine, it destroys vegetable colors, but with less energy. Its color is white, but as ordinarily seen is a bluish or grayish black and of a metallic luster. It is often in scales, resembling those of micaeous iron ore; sometimes in brilliant rhomboidal plates or in elongated octahedrons. The specific gravity of solid iodine is 4.847. At 225° it fuses, and enters into ebullition at 347°. Its vapor is of an exceedingly rich violet color, a character to which it owes its name. This vapor is remarkably dense, its specific gravity being 8.782. Iodine has a very acrid taste, and its odor resembles that of chlorine. It is an irritant poison; but in small doses has been of great service in certain forms of glandular disease. It is largely used in photography, in the preparation of aniline colors, and in other ways. It is very sparingly soluble in water, but dissolves copiously in alcohol and 'n ether, forming dark brown liquids. It possesses strong powers of combination, and forms, with the pure metals, and most of the simple non-metallic substances, compounds which are termed *iodes*. With hydrogen and oxygen it forms *iodic acid*; combined with hydrogen it forms *hydriodic acid*. This is a colorless gas, which strongly reddens litmus, and decomposes many chlorides. Starch is a characteristic test of iodine, forming with it a compound of deep blue color. This test is so delicate that a solution of starch dropped into water containing less than a millionth part of...
Iodoform

iodine is tinged blue by it. The great consumption of iodine is in medicine; it is employed in its pure state, but much more frequently in the form of iodide of potassium, which has been found of great benefit in goitre, scrofula, disease of the liver and spleen, in syphilitic affections, rheumatism, etc., as well as in lead-poisoning. Iodide of iron is another useful medicine, being employed in chlorosis, anaemia, and glandular affections.

Iodoform (i-dou-form; CHI₃), a substance analogous to chloroform in composition, but in which iodine replaces chlorine. It is in the form of small, solid yellow crystals, and is prepared by the action of alcohol and other bodies on iodine and potash. It is nearly insoluble in water, but dissolves in ether or in alcohol. It is used in medicine as an antiseptic, and acts slightly as an anodyne; it is successfully applied to ulcers and sores of various kinds, and is used as a snuff for cold in the head.

Iola (i-o'la), a city, county seat of Allen Co., Kansas, on the Neosho River, 40 miles w. of Fort Scott. It is the center of the Kansas natural gas fields; has large zinc smelters, cement works, iron works, candy and other factories, etc. Pop. (1920) 8613.

Iolite (i-o-lit). See Dichroite.

Ion (i'on), an ancient Greek tragic poet, a native of Chios, who flourished about 450 B.C. His tragedies were represented at Athens with great applause, and he is greatly commended by Aristophanes, Athenaeus, etc.

Iona (i-o'na), an island of Scotland, one of the Inner Hebrides, belonging to the county of Argyle, separated from the southwest extremity of Mull by the Sound of Iona, 1 ¼ miles wide, and about 7 ¼ miles southwest of Staffa. The name is believed to be a misreading of Iova, Ioua, a name that occurs in old MSS., but the most common ancient name was I, Y, Hye (or similar forms). It was also commonly called I-colm-till or I-columb-kill, that is, 'isle of Columba's cell' or 'isle of Columba of the cell' (or church). It is about 3 miles long by 1 ¼ miles broad. It derives its interest from its history and old ruins, the remains of religious establishments of uncertain date, but popularly attributed to Columba, who took up his residence here in 563. They are all, however, of a much more recent date. The principal ruins are those of the cathedral church of St. Mary, of a nunnery, five chapels, and of a building called the Bishop's House. St. Oran's Chapel, as it is called, is supposed to be the most ancient; it is small, being only 60 feet by 20 feet. Attached to it is a burying-ground, in which various kings of Scotland, Ireland, and Norway are said to have found their last resting-place. The most extensive ruin is that of the church of St. Mary, which is cruciform, surmounted at the intersection of the nave and the transept by a square tower of about 70 feet in height. The length of the transept is 70 feet, and that of the body of the church, east to west, 160 feet. The island is now easily reached in summer by steamers daily from Oban. Pp. 243.

Ionia (i-o'ni-a), that part of the seacoast of Asia Minor which was inhabited by Ionian Greeks, a beautiful and fertile country opposite the islands of Samos and Chios, which also belonged to it. According to tradition the Greek colonists came over from Attica about the middle of the eleventh century B.C., and founded twelve towns, which, though mutually independent, formed a confederacy for common purposes. These included Phocaea, Ephesus, Miletus, etc., and latterly Smyrna. Commerce, navigation, and agriculture early rendered them wealthy and flourishing, but the country was made tributary by Creuseus, king of Lydia, and later by Cyrus, king of Persia (557 B.C.). With an interval of independence they remained under Persia until this empire was overthrown by Alexander the Great, 334-331 B.C., when they became a part of the Macedonian Empire. Ionia, at a later period, became part of the Roman province of Asia. It was later devastated by the Saracens.

Ionia, a city, county seat of Ionia Co., Michigan, on Grand River, 34 miles E. of Grand Rapids. The car shops of the Pere Marquette R. R. are here. It has manufactures of furniture, automobiles, etc., and lumber and farm interests. The State Reformatory and State Hospital are here. Pop. (1920) 6835.

Ionian Dialect. See Greek Language, under Greece.

Ionian Islands, a number of Greek islands in the Ionian Sea, extending along the western and southern shores of Greece, of which the largest are Corfu, Cephalonia, Zante, and Cephalonia, others being Ithaca or Thera, Paxos and Santa Maura; area, 1097 square miles. All are extremely mountainous; and were it not for the vine, olive, and currant, especially the last, they could support but a small number of inhabitants. The climate is more uniformly temperate and humid than that of the mainland. The staple exports are oil, currants, valonia, wine, soap, and salt. The few manufactures are
Ionian Mode

chieflly textile and ornamental. The religion is that of the Greek Church. The Ionian Islands often figure in the ancient history of Greece, but only singly. In 1386 Corfu voluntarily surrendered itself to Venice, and soon after the other islands placed themselves under its protection. In 1797 the French became masters. In 1809-10 they were occupied by British troops, and in 1815 the seven islands were formed into a republic, under the protectorate of Great Britain. They were transferred to Greece in 1864. Pop. about 250,000.

Ionian Mode, an old ecclesiastical mode or scale represented by the modern scale of C major. See Greece (History) and Ionia.

Ionian Sea, the ancient name of that part of the Mediterranean which lies between the south part of Italy and Greece.

Ionic Order, one of the orders of classic architecture, the distinguishing characteristic of which is the volutes of its capital. In the Grecian Ionic (1) the stylobate consists of three receding equal steps the combined height of which is from four-fifths to a whole diameter; (2) the column, which includes band, shaft, and capital, is rather more than nine diameters in height, the shaft being fluted with twenty-four flutes and alternating fillets; while (3) the entablature is rather more than two diameters in height. The volutes are connected on the flanks by a peculiar roll-molding, called the baluster or bolster. In the Roman Ionic, a modification of the later style, the stylobate is lofty and not graduated; the shaft diminishes one-tenth of a diameter and has twenty fillets and flutes; the capital, which is two-fifths of a diameter, has its volutes a little lower than the other, and a square abacus with molded edges covers the whole. The chief examples of the Grecian Ionic are those of the Athenian Acropolis; while those of the Roman Ionic are found in the temple of Fortuna Virilis and the Coliseum at Rome.

Ionia (i-on'ik), the earliest school of Greek philosophy, a school which attempted to explain the phenomena of nature from the forces and attributes of matter itself. It taught the doctrine of the immediate unity of matter and life, according to which matter is by nature endowed with life, and life is inseparably connected with matter. The originator of this school, and indirectly of Greek philosophy in general, was Thales, who flourished about 600 B.C. The other chief philosophers of the school were Anaximander, Anaximenes, Heraclitus, and Anaxagoras. See the separate articles.

Iona (i-o'na), the term given by Michael Faraday (1791-1867) to the components of chemical compounds set free by electrolysis, being distinguished as ammonia when set free at the positive pole, and as amines, when at the negative pole.

I. O. U., a written acknowledgment of debt, usually made in this form:—To Mr. A. B. I. O. U. Ten Dollars.—C. D. May 12th, 1880. An acknowledgment of debt made in this form requires no stamp. It is not negotiable. The letters I. O. U. are of course used instead of the words 'I owe you.'

Iowa (i'-wa), one of the central United States, bounded on the north by Minnesota, east by Wisconsin and Illinois, south by Missouri, and west by Nebraska and South Dakota, from which it is separated by the Missouri River; area 56,147 square miles. It is well watered, its streams being all affluents of the large rivers which bound it on the west and east. To the Mississippi flow the Wapsipinicon, Iowa, Cedar, Skunk, and Des Moines, with a general s. e. course. To the Missouri flow the Big and Little Sioux and other streams. The surface is undulating, nearly four-fifths consisting of prairies originally covered with a rich coat of coarse grass, forming excellent pasturage. The climate is very healthy, and winter continues from December to March; the summer heat is tempered by frequent showers. The soil is in general very good, consisting of a deep black mould, intermingled in the prairies with sand, red clay, and gravel. The eastern and central portions are rich in minerals. Coal is mined to a considerable extent, and zinc, iron and lead are found. The coal-holds cover an area of 20,000 sq. miles, the lower measure being the most important. The output by the statement of 1912 was valued at $13,152,068. Limestone, gyp-
Iowa City

Ipswich

sum, and clay are abundant. Iowa is a great agricultural state, producing immense quantities of corn and oats, hay, barley, etc., and also stands high in regard to dairy farming. The chief fruit crop is apples. Other industries include the manufacture of brick, farm implements, flour-milling, pork-packing, machinery, cement works, etc. The length of railways open for traffic is about 10,000 miles. It possesses exceptional advantages for river trade, and the smaller streams supply abundant water-power. There is a State University (at Iowa City) and a flourishing State College of Agriculture and Mechanical Arts (at Ames). The settlement of Iowa began in 1833, when the first purchase of land from the Indians took place; its territorial government was instituted in 1838, and it was admitted into the Union in 1846. The capital and chief city is Des Moines. The other principal cities are Sioux City, Davenport, Cedar Rapids, Dubuque, Waterloo, Council Bluffs, etc. Pop. (1900) 2,231,853; (1910) 2,224,771; (1920) 2,404,021.

Iowa City, a city, county seat of Johnson Co., Iowa, on Iowa River, 54 miles w. by n. of Davenport. It is the seat of the Iowa State University (opened, 1855; 4400 students) and other educational institutions. It has manufactures of jewelry, flour, farm implements, perfume, etc. Pop. 11,267.

Ipecacuanha (i p-e-kak-0'a-na), a substance used in medicine, of a nauseous odor and repulsive, bitterish taste, the dried root of several plants of the nat. order Rubiaceae growing in South America. All the kinds have nearly the same ingredients, but differ in the amount of the active principle which they contain. The best is the annulated, yielded by the Cephalis Ipecacuanha, a small shrubby plant, a native of Brazil, Colombia, and other parts of South America. When given in very small doses ipecacuanha improves the appetite and digestive powers; in a somewhat larger dose it may be given to increase the secretion from the mucous membrane of the air-passage; and in a still larger, from 15 to 20 grains, it occasions vomiting. It is also capable, by being combined with other substances, of producing increased perspiration, as in the well-known ipecacuanha powder. The name of American ipecacuanha is given to the Euphorbia Ipecauanha, a plant which grows in sandy places in North America. It is emetic, purgative, and diaphoretic.

Iphigenia (if-i-je-na'), in Greek legend and poetry, daughter of Agamemnon and Clytemnestra. To avert the wrath of Ar忒mis, whom Agamemnon had enraged by killing a consecrated hind, and who detained the Greek fleet at Aulis that had been prepared for the Trojan war, Iphigenia was to be sacrificed on the altar; but a hart was miraculously substituted for her, and she was conveyed in a cloud to Tauris. She became a priestess there to Ar忒mis, and saved her brother Orestes when on the point of being sacrificed.

Ipomoea (ip-o-mé'a), a large genus of plants of the nat. order Convolvulaceae, consisting mostly of twining prostrate herbs, widely distributed in warm regions. The species of most importance is I. Purga, which yields the jalap of commerce. See Jalap.

Ipsambul (ip-sam'bul), ABUSAM'BUL, or ABUSIM'BEL, a village of Nubia, on the left bank of the Nile; remarkable for containing two of the most perfect and magnificent specimens of Egyptian rock-cut temples existing. The façade of one of them is adorned with several stupendous colossal sitting statues of Rameses II (the Great), the largest pieces of Egyptian sculpture yet discovered.

Ipsara. See Psara.

Ipsica. See Modica.

Ipsus (ip'sis), a small town of Phrygia, Asia Minor, famous for a great battle fought B.C. 301. See Antigonus.

Ipswich (ip'sich), a river-port of England, capital of Suffolk, on the Orwell. It contains many interesting specimens of mediaeval architecture. The public buildings include a fine town-hall, a new post-office, a custom-house, county courthouse, cavalry barracks, theater, etc. The industries embrace agricultural implements, machinery, artificial stone, artificial manure, silk, tanning, ropes, lime and cement, brewing, shipbuilding, etc. Ipswich is a town of great antiquity. It was originally called Gippswhich, from the neighboring river Gipping. King John gave it its first charter. Pop. (1811) 73,639.
Ipswich, a town in Essex County, Massachusetts, on the Ipswich River, three miles from the sea and 27 miles N.N.E. of Boston. Its industries include cotton and woolen millery, heels, isinglass, bricks, etc. Pop. (1920) 6200.

Iquique (i-kē'kā), a seaport of Chile, in the province of Tarapaca, recently a fishing village, but now a considerable town with an important trade, its rise being due to the extensive deposits of nitrate of soda and borax, and the silver mines, etc., in its neighborhood. It has suffered much from earthquakes, and in 1870 was blockaded, bombarded, and finally captured by Chile. Pop. 42, 440.

Iraq (i-rā'de), a decree or command of the Sultan of Turkey directed to the grand vizier, whose duty it is to provide for the state at large.

Irak Ajemi (ē-rāk ājē-mē), an interior province of Persia, separated from the Caspian Sea by Ghilan and Mazanderan; area, about 138,000 sq. miles, a large part of which in the east is occupied by salt deserts, the rest being largely mountainous, with some fine valleys and rich plains. The chief towns are the capital, Teheran, and Isphahan.

Irak Arabi (a-rā'bē), the district lying between the rivers Tigris and Euphrates, at the lower part of their course, corresponding nearly to the ancient Babylonia.

Iran (ē-rān'), or Eran (Old Persian, Aryan; Zend, Aryan, that is, land of the Aryans), the name given by the ancient Persians to their native land, and still used by the modern Persians, though it is also employed in a wider sense to designate the whole of the country from the Indus to the Tigris, in contradistinction to Turan, the name often employed as synonymous, with Turkestan.

Iranian Languages (ē-rān'ī-lan), a family of languages belonging to the Indo-European stock, closely allied to the Indian group, and called by the philologists Persian, from the best-known member of the family. The two oldest known Iranian languages are the Old Persian of the cuneiform inscriptions and the Old Bactrian or Zend, the latter the language in which the Zend-Avesta or sacred writings of the Parsees is composed. The Middle Iranian languages are the Pehlevi, and still later the Parsee, which are preserved in the commentaries to the Zend-Avesta. The latter approaches pretty closely to the modern Persian. The most important of the New Iranian languages is the modern Persian, in which has been produced a very rich and celebrated literature. The Afghan or Pushtu, and the dialects of the Kurds, form separate branches of the Iranian family.

Irawadi (ir-ō-wā'dē). See Irrawaddy.

Iribit (ēr-bē't), a town in Russia, in the government of Perm, on the frontiers of Siberia, at the confluence of the Irit and the Niza. It is noted for a great annual fair, held in the month of February. Pop. 20,064.

Ireland (Irish, Erin; in Latin, Hibernia), the more western and smaller of the two principal islands of which the United Kingdom of Great Britain and Ireland is composed, is separated from Great Britain on the east by the Irish Sea, and surrounded on all other sides by the North Atlantic Ocean. Measured diagonally, the greatest length is 300 miles; and the greatest breadth is 212 miles; the central breadth, nearly between the bays of Dublin and Galway, is 110 miles. The area is 32,531 square miles. Ireland is divided into four provinces of Leinster, Ulster, Munster, and Connacht, and into 32 counties.

The population in 1841 was 8,175,124; in 1851, 6,552,385, the decrease being partly owing to the famine resulting from the potato disease in 1846-47, and partly to emigration. Since 1851 over 4,000,000 emigrants have left the country. The returned population, at 1911 census, 4,381,951. The capital is Dublin; the other chief towns are Belfast, Cork, Limerick, and Londonderry.

Surface.—The coast, forming a line of nearly 3000 miles, is, in general, bold and rugged, and diversified by numerous indentations, some of which run far into the land and form excellent natural harbors. There are a considerable number of islands, chiefly on the west coast, the largest being Achill. The mountains, generally speaking, rise in isolated masses at a short distance from the coast, the interior having the form of a vast plain, in which are extensive tracts of bog. The Macgillcuddy's Reeks, in the southwest, are the highest, the culminating summit being Carrauntoohil, 3414 feet. The mountains of Wicklow, in the southeast, reach the height of over 3000 feet (Lugnaquilla is 3039). Rivers are not only numerous but are very equally distributed over the surface. The Shannon, in the west, the largest river of Ireland if not of the United Kingdom, is navigable to its source in Lough Allen, forming a waterway of 240 miles. The other rivers of
most importance are the Bandon, Lee, Blackwater, Suir, and Barrow, which enter the sea on the south, the Liffey and the Boyne, entering the sea on the east, the former having the capital at its mouth, the latter being the largest river which discharges itself into the Irish Sea on the east coast; and the Bann and the Foyle, which enter the sea on the north coast, at a great distance from each other. Ireland possesses a large number of lakes (or loughs). Lough Neagh, in the northeast, is a quadrangular expanse 17 miles long by 10 broad, and is the largest lake of the United Kingdom. Among the others the lakes of Killarney, in the southwest, are pre-eminent for beauty, and attract numerous visitors.

Geology and Minerals.—The mountains are formed of vast masses of primary and metamorphic rocks, while the secondary formations spread over the interior. Basaltic rocks are almost entirely confined to the northeast, where they form the island of Dornegal, as well as in the northeast. The lower rocks of the Silurian system form no considerable portions of the whole island, covering large portions of the north-northeast and southwest as well as parts of the west. The Old Red Sandstone has its largest continuous development in the county of Cork, but rises to the surface at numerous isolated spots. The rocks next in the series belong to the Carboniferous system; at the bottom of which lies the Mountain Limestone, the most extensively developed of all the rocks of Ireland, occupying almost the whole interior. In some cases, particularly in the southwest, the coal measures occupy considerable areas, but the quality of the coal is generally very inferior, and it is worked only to a very small extent, the yearly output being only about 100,000 tons. The strata higher in the geological series than the coal are very partially developed. Of other minerals than coal Ireland yields small quantities of iron ore, lead ore, slate, alum, salt, etc.

Climate.—The climate is on the whole moister, milder, and more equable than that of the greater part of Britain. It is highly favorable to vegetation, and allows plants to grow in the open air that can do so in very few places in Britain; some species of plants also being peculiar in Ireland alone of the British isles, as for instance the strawberry-tree or arbutus, found in the southwest.

Agriculture.—As regards agriculture, Ireland has great advantages, for though there is a great extent of moorland, there is also a very large area of arable surface, covered with a deep friable loam of remarkable richness. Notwithstanding, agriculture on the whole is in a backward state, a result largely due to the smallness of the holdings, and to the evils of overcropping. However, a steady diminution is now taking place in the number of very small holdings. The rearing of live stock and dairy-farming are largely carried on. By far the largest grain crop is oats; the chief green crop is potatoes, which cover an area about one and a half times as large as in Great Britain. Potatoes had become the main food of the people by the end of the seventeenth century, and a potato famine occurred as early as 1739. Another staple crop, especially in the north, is flax. Much benefit very gradually accrued to Irish agriculture from the operation of the Irish Land Act of 1881, the main provisions of which have been briefly summarized under the terms ‘fair rent,’ ‘fixity of tenure,’ and ‘free sale.’ By the first of these every tenant who objects to his rent or the rent the landlord wishes to exact, is entitled to have a ‘fair rent’ fixed for him by a court, this rent to remain unaltered for fifteen years. By ‘fixity of tenure’ the law recognizes that the tenant has a certain right in his holding in virtue of which he is not to be arbitrarily removed from it without compensation, and which enables him on leaving his farm to obtain the best price he can get for yielding up his possession. The ‘free sale’ of this right of tenancy is restricted only in so far as that it must be to one person only (except under agreement with the landlord), that the landlord may object on sufficient grounds to the person purchasing, and that he also has the right of preemption. At the expiration of the fifteen years the landlord may resume possession of the holding on paying the tenant compensation for improvements effected by him, and also paying him the value of his tenant-right, both being determined by the court should the parties be unable to agree. This act, amended and extended in 1887, has been supplemented by the Land Purchase Act of 1903.

Industries and Trade.—Of industrial employments the linen manufacture is the chief and is in a very flourishing condition. It has increased in a remarkable manner within the last fifty or sixty years, and Belfast, its center, has now
become the first city of Ireland. The woolen manufacture at the outset outstripped that of linen; but it was hampered by unjust restrictions imposed by Parliament at the instance of the woolen manufacturers of England. The brewing of porter and distillation of whiskey form important industries. The fisheries employ a considerable number of persons, but far fewer than they should. The salmon fisheries are valuable and are increasing in value. The trade is only of a moderate bulk. The main articles of export consist of agricultural produce, the greater part of which finds its market in Great Britain. These articles include grain, live stock, salt and fresh meat, eggs, butter, etc. Of manufactured articles linen is the chief export, whiskey and potatoes are also exported. The trade with foreign countries is inconsiderable. The inland trade is much facilitated by the rivers and canals, on the improvement and construction of which respectively large sums have been spent.

Religion.—The prevailing religion is the Roman Catholic. The Reformation never made much progress, and though the Protestant Episcopal Church was established by law it was only the church of a small minority. In 1860 an act was passed for its disestablishment. Previously the clergy were supported by a tithe rent-charge, the proceeds of the church lands, etc., but by the new act, taking effect from January 1, 1871, the property and tithes formerly belonging to the church were vested in commissioners, who had charge of the winding up of the church's financial affairs, and their powers were in 1881 transferred to the Irish Land Commission, who are now engaged in completing the work. Part of the funds thus liberated has been expended on education and the relief of distress. At the head of the Roman Catholic Church are four archbishops, who take the title of Armagh, Dublin, Cashel, and Tuam, and twenty-four bishops. The whole of the Irish Roman Catholic clergy are supported solely by voluntary contributions. The number of priests is 3200, more than half being curates. There are numerous monasteries and convents. The Presbyterian Church is chiefly confined to Ulster, where it may be said, especially in the counties of Down and Antrim, to be the leading religious denomination. Its ministers are supported by voluntary contributions, seat-rents, and church funds. According to the census of 1911 there were in Ireland 3,342,870 Catholics (73 p. c. of population); Episcopal, 576,611; Presbyterian, 440,525; Methodist, 62,382; Independent, 9138; Baptist, 8123.

Education.—The principal educational institutions are Dublin University and the three Queen's Colleges of Belfast, Cork, and Galway. The Queen's Colleges were formerly connected with an examining and degree-conferring body (Queen's University); but for this a similar body, the Royal University of Ireland, was substituted in 1882, £20,000 being yearly granted from the surplus funds of the Irish Church. The Royal College of Science, established in 1857, supplies a complete course of instruction in science applicable to the industrial arts. The Catholic University of Ireland, established in 1854, consists of University College, Dublin, St. Patrick's College, Maynooth, and several other colleges. The seminaries for the education of the Catholic priesthood are numerous, the most prominent being the College of Maynooth, founded in 1795, and formerly receiving annually from government £26,300, for which, by the Irish Church Act of 1868, a sum of £372,331 was paid in compensation. The General Assembly's Theological College, Belfast, and the Magee College, Londonderry, are Presbyterian colleges. The chief elementary schools are those under the superintendence of the Commissioners of National Education. (See Britain.) In 1878 an act was passed setting apart £1,000,000 from the Irish Church surplus fund for the promotion of immediate secular education by means of special examinations, exhibitions, prizes, etc.

Government.—Ireland, by the Act of Union, became in 1801 an integral part of the United Kingdom, and shares in its legislation by means of twenty-eight representative peers in the House of Lords, and 103 representatives in the House of Commons. The representative peers are elected for life by the whole body of Irish peers. The lord-lieutenant, who represents the sovereign, is the head of the executive, and holds his court in Dublin Castle. He is assisted by a privy-council and a chief-secretary, who takes the most active part in the administration of affairs. As in England, the chief legal functionaries are a lord chancellor, a lord chief-justice, and a master of the rolls. The Irish police force is a semi-military body, paid out of the Consolidated Fund.

History.—The beginning of the history of Ireland is enveloped in fable. As in Western Europe generally, the earliest inhabitants are believed to have been of Iberian race, and, therefore, akin to the modern Basques. They were followed by the Celts, different tribes of whom probably arrived at different times, giving
rise to such names as Firbolga, Milesians, etc. Among these the Scots were the latest, and latterly got the upper hand, so that their name became generally applied to all the inhabitants. There is no evidence that the Irish had the use of letters before the middle of the 5th century, when Christianity and Christian literature were introduced by St. Patrick. Subsequently Ireland became the seat of western learning, and its monasteries were the schools whence missionaries proceeded throughout continental Europe. Its internal condition, however, was far from satisfactory. Divided among a number of hostile kings or chiefs, it had been long torn by internal wars, and for nearly two centuries ravaged by the Danes, members of whom settled in the country, when, in the beginning of the 11th century, Brian Borombe united the greater part of the island under his scepter, restored tranquillity and subdued the northern invaders. After the death of Brian at the close of the battle of Clontarf, 1014, gained against the Danes and their Irish allies, the island relapsed into its former state of division and anarchy. In this state of matters Henry II of England obtained a papal bull giving him the right to subdue it, and the way was paved to this when Dermot, prince of Leinster, who had been driven from the country, was reinstated by the aid of Richard de Clare (Strongbow) and other Norman nobles. In 1171 Henry entered Ireland himself, and partly through the favor of the clergy and his affability, the great princes did homage to him and acknowledged his supremacy. Many Norman barons and their followers now settled in the country, but the English power was far from being established over it. For long only a part was recognized as English territory (generally known as the Pale), and this was governed by various nobles, subject to a viceroy. The nobles quarreled among themselves, and were very often at open feud. In 1315 Edward Bruce, brother of the Scotch king, landed at the head of a large force, and was crowned king, but was defeated by the English in 1317 near Dundalk. The English power was greatly reduced by this expedition, however, and a number of the barons renounced their allegiance to England, and adopted the Irish language, laws, manners, and customs. This led to the passing of the Statute of Kilkenny (1397), forbidding, under severe penalties, intermarriages between English and Irish, the assumption of Irish names by persons of English blood, the use of the Irish language, the native (Breton) law, etc. But the English rule became so weak that the viceroy found it necessary to protect the Pale by payments of money to the Irish chiefs, and this state of matters long continued. In the reign of Henry VII (1485) was passed Poyning's Act (so called from Sir Edward Poyning, lord-deputy of Ireland), which provided that all former laws passed in England should be in force in Ireland, and that no Irish Parliament, that is, the Parliament of the English settlers, should be held without previously stating the reasons why it was to be summoned, and the laws it was intended to enact. At the beginning of the sixteenth century the greater part of the island still remained unconquered by the English. The native Irish lived according to their old customs under their own chiefs, and resisted all attempts to Anglicize them.

Henry VIII assumed (by act of the Irish Parliament) the title of King of Ireland, instead of Lord, which he had before borne as a vassal of the Pope, and the Irish chiefs generally acknowledged his authority; but the change of religion was bitterly opposed, and Mary was easily able to undo all that had been done in this direction by her two predecessors. Elizabeth imposed a Protestant clergy upon the people, and her reign was marked by a series of risings, which terminated in the reduction of the whole island. Great stretches were taken from the Irish chiefs, and distributed among English noblemen and others, who were to settle their new estates with English farmers. Little was done in this way, however, compared with the great plantation of the North by James I, under whom 800,000 acres of land in Ulster were declared forfeited, a large part of this being entirely withdrawn from the Irish, and divided among Scotch or English settlers. In 1641 there began an attempt to shake off the English yoke, in which great atrocities were perpetrated on both sides. In 1649 Cromwell was appointed lieutenant, and energetically, but cruelly, reduced the whole country within nine months. The next struggle was that which followed the Revolution, when James II landed in 1689, and hoped to regain his crown by French and Irish aid. He failed to reduce Londonderry, which held out, enduring the extremity of famine, till it was relieved by some ships from England. In the following year (1690) William III arrived, and on the 1st of July gained a decisive victory over the forces of James on the Boyne, near Drogheda. In 1691 another victory was gained over the Irish at Aughrim in Galway, and in October
Limerick, the last place that held out for James, capitulated, a treaty being concluded at the same time, by which the Catholic Irish were to be allowed the free exercise of their religion. The Treaty of Limerick was ill kept by the English. By a decree of Parliament upwards of 1,000,000 acres were confiscated and divided among Protestants. Cruel penal laws were passed against those who adhered to the Catholic religion. The Catholic ecclesiastical dignitaries were banished; the subordinate priests were not allowed to leave their counties; no Catholic could hold a public office, acquire landed property, enter into a marriage with a Protestant, etc.

Although these laws were not always rigorously carried out, yet they excited great bitterness of feeling, and produced frequent revolutionary associations (Whiteboys and others), which mark the history of Ireland. In 1778 the penal laws against the Catholics, though not repealed, were made much more lenient. Catholic advancement was permitted to acquire landed property, to erect schools, and to observe their own religion under fewer restrictions. In 1782 Poyning's Act was repealed, and freedom of legislation allowed to the Irish, though Catholics were still excluded from Parliament, and did not even have the franchise till 1793. The French revolution had a great effect on the minds of the Irish people, and it was partly through this influence that the Society of United Irishmen was formed, and that rebellion broke out in 1798. Great atrocities were perpetrated, but the rising was speedily crushed. A body of French soldiers, 1500 strong, landed in Killala Bay, but were compelled to surrender.

The British government now resolved to put a stop to the Irish seditious English Parliaments, and an act providing for the legislative union of the two countries passed the Irish Parliament in May, 1800, and the British Parliament in July of the same year, in virtue of which the union was effected on the 1st of January, 1801. But although this measure bound the destinies of the two countries still more closely, yet it was far from putting an end to the troubles which had so long divided them. In 1829, mainly through the efforts of O'Connell, the Catholic Emancipation act was passed, under which Catholics could take a seat in Parliament and were admitted to most public offices. (See Catholic Emancipation.) The Irish national party now tried to repeal the Union, for which purpose O'Connell founded the Repeal Association. This movement collapsed in 1843, and afterwards the potato famine in 1845, and again in 1846, cast all other interests into the background. To mitigate this calamity Parliament granted enormous sums of money; yet thousands died from starvation, and hundreds of thousands emigrated to America. Anarchical outrages, agrarian murders, and other acts of violence distracted the land. Meanwhile O'Connell died, and his party was replaced by one still more advanced, called the Young Ireland party. In these circumstances the French revolution in 1848 had a great effect upon Ireland. The leaders of the Young Ireland party, Smith O'Brien, Mitchell, Juby, Meagher, and others, entered into relations with the provisional government at Paris, and the people began openly to exercise themselves in the use of arms. But the rebellion turned out a mere farce. After the famine and great emigration a general improvement became visible among the inhabitants. Agriculture revived, and the manufacturing industries began to compete with those of England. The year 1845 witnessed a new conspiracy designed to separate England and Ireland. This originated in the United States, when the numerous Irish during the civil war in that country hoped for a rupture between it and England, of which they might take advantage. This conspiracy, the members of which called themselves Fenians (see Fenians), soon spread to Ireland; but before they could take any overt action in that island their design was stifled by the British government (1865-66). The ministry now resolved to do all in their power to render the Irish people loyal and contented; and accordingly the Irish Episcopal Church was disestablished in 1869, and another act was passed to improve the tenure of land in 1870.

In 1871 the demand for local self-government—'Home Rule'—made itself felt. It was led by the 'Nationalists,' who did not insist upon absolute severance from Great Britain, but merely demanded the setting up of an Irish Parliament for matters exclusively Irish. In 1880 Ireland became the scene of an agitation carried on mainly by a body known as the Land League. The movement was so lawless that two special acts, the 'coercion' acts, and an encroachment preservation act, were passed. Still further to redress Irish grievances a land act was also passed in 1881. The chief provisions of which have already been mentioned. The Land League was suppressed, but a body called the National League was soon organized in its place. In 1885, 88 Nationalist members (under the lead-
ership of Mr. Parnell) were returned to Parliament, and their pressure on the government led to Mr. Gladstone's scheme in 1886 and 1893, by which Ireland was to receive a Parliament of her own and the Irish members to be withdrawn from the Imperial Parliament. This and the accompanying scheme for the buying out of Irish landlords were rejected by Parliament and the majority of the constituencies. The third Home Rule Bill, introduced by Mr. Asquith in April, 1912, and finally enacted into law, May 25, 1914, met with violent opposition in parts of Ulster where the population is Protestant. Preparations were made for armed resistance, and a volunteer army of 100,000 drilled for service; but the outbreak of the European War in 1914 put an end to demonstrations. (See Britain and Home Rule.) A serious revolt by a faction calling themselves the Sinn Féin Society (meaning 'Ourselves Alone'), began April 24, 1916, Dublin being its chief seat. It was vigorously suppressed after a week's time. It caused the loss of property estimated at $1,000,000, and the lives of 240 soldiers and citizens; 1,000 were taken prisoners of whom fifteen were executed, including Sir Roger Casement, a former British consul and leader of the uprising, and Padraic (Patrick) Pearse, who was provisional president of the 'Republic of Ireland.' Redmond, the leader of the moderates in Ireland, pleaded for the enforcement of the Home Rule Bill; but Lloyd George, who succeeded Asquith as premier, declared Ulster must not be coerced. The Sinn Féin party grew in power and prevented the extension of the conscription law to Ireland. At the election of December, 1918, Sinn Féin representatives won by great majorities. On January 21, 1919, they proclaimed Ireland a republic, with Eamon de Valera as President. During 1919 and 1920, anarchy prevailed in the island. British police and soldiers were slain by Sinn Féiners; and in reprisal Irish men and women were shot down by British forces. The City Hall of Cork and other public buildings and many private dwellings were burned. Terence MacSwiney, mayor of Cork, imprisoned as a supporter of Sinn Féin, refused food and died in prison. At the beginning of 1921 another Home Rule Bill was enacted, providing for two parliaments in Ireland.

Language and Literature.—The Irish language belongs to the Gaedelic branch of the Celtic stem of languages, being closely akin to the Gaelic of Scotland and the Manx, and more remotely allied to the British dialects (Welsh, Cornish, and Armoric). The modern dialects or varieties of Irish, which differ very much from the ancient, are spoken by the rural classes in Connaught and Munster, and the more ancient parts of Ulster. In 1901 there were 64,000 people in Ireland who spoke Irish only, and over 885,000 who could speak it along with English. Gaelic may be considered a comparatively modern form of ancient Irish.

Irish literature is varied and extensive. One of the earliest historic pieces is a metrical life of St. Patrick. Among the most important of the heroic tales is the Tain Bo Cuailnge or Cattle Spoil of Cuailnge, the center of a series of epic tales. A number of poems and tales forming a cycle of their own may be called Ossianic; most of them are comparatively modern. The glosses written into Latin works of Irish ecclesiastics, in the monasteries on the Continent founded during the seventh and eighth centuries, are among the oldest specimens of the language. Many bardic remains belong to the period of the English conquest, but after that date Irish poetry declined. Many bards, however, who were still maintained by the native chiefs, helped by their songs to keep up a national feeling hostile to the English domination. The native authorities for Irish history may go back to St. Patrick at the very earliest. The oldest of kings dates from the middle of the eleventh century. The oldest and by far the ablest annalist, whose works have been at least partially preserved, is Tigernach O'Brian, who belonged to the royal family of the O'Connors of Connaught. He died in 1608. The other chief annals are the Ulster Annals, the Annals of Inisfallen, and the Annals of the Four Masters (from its four conjoint compilers). The most important Irish manuscripts are contained in the library of Trinity College, and the Royal Irish Academy, Dublin, in the Bodleian Library, and the British Museum. Among modern Irish writers may be mentioned the leader of the Celtic Renaissance, George Russell, 'A.E.;' the novelist, George Moore; the poet, William Butler Yeats; the dramatist, George Bernard Shaw; and the various playwrights of the Irish National Theater, including Yeats, J. M. Synge, Lady Gregory, etc.

Ireland. John, Archbishop, was born in County Kilkenny, Ireland, in 1838, and came to the United States in his boyhood. He studied theology in France, served as chaplain in the Civil War, and afterwards became rector of the cathedral at St. Paul, Minn. In 1888 he was made archbishop of St. Paul. Yale conferred the degree of LL.D. upon him in 1901. He died Sept. 26, 1918.
Irenæus, Saint, Bishop of Lyons, a pupil of Polycarp, was probably a native of Smyrna, and born between 120 and 140 A.D. He is generally supposed to have suffered martyrdom at Lyons, in the persecution under Septimius Severus in 202. He actively opposed the Gnostics. Only some fragments remain of his Libri adversus Haereses, written in Greek. There is, however, a very ancient Latin version.

Irene, Empress of Constantine, was born at Athens about 752 A.D., and in 789 married Leo IV, after whose death she (780) became regent during the minority of her son, Constantine VI. She had during the life of her husband been banished from the imperial palace for her devotion to the worship of images; but in 788 A.D., a council of bishops held at Nice under her auspices restored image worship in the Eastern Church. When Constantine had grown up he took the reins of government himself, and reigned alone seven years, when his mother had him arrested and his eyes put out, and he was at last murdered. Irene was the first woman who reigned over the Eastern Empire. She had ordered many nobles into banishment to secure more firmly her power, but Nicephorus, her treasurer, through their influence gained the imperial throne, and exiled her in 802 to the isle of Lesbos, where she died of grief in 803.

Ireton, Henry, a Parliamentary general in the English revolution, was born in Nottinghamshire in 1610. Descended from a good family, he was brought up to the law; but when the civil contests commenced he joined the Parliamentary army, and by the interest of Cromwell, whose daughter Bridget, he married in 1640, he became commissioner-general. He commanded the left wing at Naseby, which was defeated by the furious onset of Rupert, and himself made prisoner, but some hours after he recovered his liberty. He was an implacable enemy of the king, had a principal hand in framing the ordinance for his trial, and sat himself at one of the judges. Ireton accompanied Cromwell to Ireland in 1649, and was left by him as lord-deputy. He reduced the natives to obedience with great rigor, but cruelty. He was one of the plagues before the walls of Limerick, 1651, and was buried in Westminster Abbey 1652.

Iriarte, a genus of South American palms, tall-growing trees, of which one species, I. esoroshira, the natchuba or paximba palm, yields a hard kind of wood used for building, and exported for umbrella handles, etc.

Iridaceae, a natural order of endogenous plants, mostly herbaceous, and with equitant leaves (that is, leaves overlapping entirely in a parallel manner), three stamens with extrose anthers, and an inferior ovary; natives chiefly of the middle parts of Europe and North America and the Cape Colony. They have beautiful flowers, and include the iris, gladiolus, crocus, iris, etc.

Iridescence, the sheen of mother-of-pearl and other objects which have a finely-grooved surface. It is due to the interference between the waves of white light reflected from different levels in the grooving, the reflected light presenting colors which vary according to the angle of reflection.

Iridium, a metal of a whitish color, not malleable, discovered in the black scales which remain when native platinum is dissolved in aqua regia; specific gravity about 22.4; symbol Ir. It takes its name from the variety of colors it exhibits while dissolving in hydrochloric acid. It is the most infusible of metals. It forms a number of alloys, one of which, iridosmine, occurs native. The alloy with gold is malleable and much resembles gold in appearance, while that with copper is very hard, pale red in color, and ductile.

Iridosmine, a native compound of iridium and osmium, forming an osmode of iridium, in which the iridium is partly replaced by platinum, rhodium and ruthenium. It is used for pointing gold pens, and iridium is obtained from it.

Iris, in Greek mythology, the fleet golden-winged messenger of the Olympian gods. Iris was originally the personification of the rainbow, though she does not appear as such in the Homeric poems. She is represented with wings attached to her shoulders and a herald's staff in her left hand, representative of her office of messenger.

Iris, the muscular curtain stretched vertically in the anterior part of the eye, perforated by, containing, and forming the colored circle around the pupil. See Eye.

Iris, a plant that gives name to the natural order Iridaceae, and is also called flag and flower-de-lis. The plants of the genus Iris, some of which are medicinal and others merely ornamental, are found in many localities over Europe,
Irish Moss

Asia, and America. They usually grow in moist places, bearing flowers of various colors but the prevailing tint is blue. The stinking iris (I. foetidissima) of southern England has purple flowers and ill-smelling leaves. Orris-root consists of the root-stock of some species, as I. florentina. The most admired species are the Persian (I. persica), the snake's head (I. tuberosa), the Chalcedonian, the Spanish, and the English.

Irish Moss. See Carrageen.

Irish Sea, the sea between Great Britain and Ireland, north of St. George's Channel and south of the North Channel, 130 miles long and about 60 miles wide. It contains the islands of Anglesey and Man.

Irish Terrier (ter'r-er), a breed of the terrier class that has come into great popularity. This dog is held to be indigenous in Ireland, and is not the result of any cross, though the breed has been greatly developed and improved largely since 1874, when it began to attract attention at the bench-shows. The color of the coat went through various selective changes from lint-white, gray, black-and-tan, and brindle, to bright red. Red, or wheaten color, is now the established standard for this breed. The principal points of the Irish terrier are: A long head, with flat skull, narrow between the ears; strong and muscular jaws; the jaws and head together giving a square aspect of conformation. Ears V-shaped, small drooping forward close to cheek. Eyes, dark hazel, small, full of life and intelligence. Back, straight and strong. Legs, straight. Tail, usually docked, free of feather and carried jauntily. Coat, hard and wiry. Weight, 22 to 24 pounds. In temperament the Irish terrier is one of the most gentle, most loyal, and, to those he knows, one of the best-tempered of dogs.

Iritis (ir'i-tis), inflammation of the iris of the eye. Iritis may arise from wounds in the iris, from too prolonged continuous use of the eye, or from constitutional predisposition induced by syphilis, scrofula, etc.

Irkutsk (ir-kot'sk), a town in Southern Siberia, capital of government of same name, at the junction of the Irkut with the Angara, about 40 miles from Lake Baikal. It is the residence of the governor-general of Eastern Siberia, has a cathedral and a number of public buildings. Manufactures woollens, linens, leather, etc., and carries on a good trade in tea and other articles imported from China, furs, etc. Pop. 108,168. The government, which is bounded by Yenis-

Iron (i'rn), the most universally distributed and the most generally applied of all the metals (Lat. ferrum; symbol Fe). It is the most tenacious of the metals, having a breaking strain of 106,000 lbs. per sq. inch of section; and two pieces can be perfectly welded together when raised to a white heat. It is so ductile that it can be drawn into wire as fine as the human hair. It occurs chiefly in the earth's crust in combination with oxygen, but it is also found in combination with several other elements, and sometimes, although rarely, native or in the metallic state. There are two varieties of native iron, the telluric and the meteoric. The former occurs in small quantities only, in grains and thin plates, associated with other metals, principally lead and copper. It is of a white color, as can be seen on a freshly fractured surface, but in contact with air it takes a steel-gray color. Meteoric iron is a pale steel-gray, very malleable and tough, flexible but not elastic. It has been found in masses in various parts of Europe, Africa, and America, and derives its name from having traveled through the air in the form of meteors, and having been brought to the earth from outside space by the attraction of gravity. All the specimens of meteoric iron analyzed contained nickel, most of them also cobalt, besides copper, manganese, and other minerals.

It is from one or the other of its ores that the iron of commerce is obtained. The ores of iron are very numerous, but the oxides, carbonates, and sulphides are the most important. And, from the manufacturing point of view, the following are the most valuable:—1. Magnetic Iron Ore. This, the richest of all the ores of iron, contains, when perfectly pure, 72.41 per cent. of metallic iron. It is iron black in color, with a metallic lustre, highly magnetic (especially the specimens of it that are called native lodestone), and extremely fusible. It is most commonly found in paleozoic rocks, generally in beds and large masses. Some mountains in Lapland and Chile consist almost entirely of this variety of ironstone. In Sweden it exists in great abundance and purity, and good bar-iron is produced from it. It is plentiful also in Norway and Russia, the East Indies and China, and in North America occurs in beds in granitic mountains in the northeast part of the United States, and in many other
Iron

Various parts of Great Britain also possess deposits of magnetic ore. Its specific gravity varies from 4.24 to 5.1. 2. Hematite or Specular Iron Ore, Red Hamatite. This mineral in its purest state contains about 70 per cent. of iron. Specular ore is a deep steel-gray in color, with a brilliant, and often iridescent tarnish externally; its fracture exhibits a brilliant luster. It is opaque in large fragments, but the edges of small thin scales are of a blood-red color by transmitted light. It occurs crystalline and lamellar, hard and massive, earthy and friable. This ore is found in the older rocks, especially gneiss and granite, both in beds and veins. Great Britain has vast deposits of hematite in Cumberland, Lancashire, Devonshire, and Cornwall, the red ores being chiefly utilized by British smelters. France, Germany, Russia, and North and South America, have large deposits of the crystalline variety. 3. Brown Iron Ore, Brown Hamatite. This variety consists essentially of hydrated ferric oxide, and contains when pure about 69 per cent. of iron along with about 16 per cent. of combined water. Brown iron ore occurs plentifully in France, Germany, Belgium, and in England, chiefly in the Forest of Dean, in Devonshire, Lincolnshire, and near Durham. Brown hematite is generally a yellow powder, sometimes passing into a brown or velvet black. It affords a very malleable and much harder iron than the red ore, and very good steel. Before the blowpipe it blackens and magnetizes but after calcination and cooling the powder becomes red, and in this state is much used for polishing metals. There are also many varieties of brown hematite, to which distinctive names are applied. Bag iron ore is a variety of brown hematite which occurs in most European and many American countries, and is so named from its being chiefly found in marshy places. It is considered to be of recent formation, and the iron obtained from it can but rarely be used for sheet-iron, and never for wire. 4. Spatite Iron Ore. This mineral, as the name implies, resembles rather an earthy than a metallic substance, and consists essentially of ferrous carbonate. In its purest state it contains 48.27 per cent. of iron, and occurs in the older rocks and in limestone strata in veins and beds. The chief deposits of this mineral are in Styria and Westphalia, and large deposits exist also in the Pyrenees, in New Grenada, and in Great Britain. This ore is very valuable for making steel, being free from those substances which act injuriously in its manufacture. Spatite ironstone is often associated with considerable quantities of clayey and coaly matter; when the former substance predominates the ore is known as argillaceous or clay-band ironstone; when the coaly matter is in excess the ore is called carbonaceous or black-band ironstone. These varieties occur in most of the coal-fields of Great Britain, and supply the greater part of the iron produced there. It is also worked in France at the coal-fields of the Gard, of the Aveyron, and near St. Etienne. In America this ore also occurs, widely distributed. The color of the clayey carbonates of iron varies from reddish-brown through yellow-brown to dark brownish-black. 5. Iron Pyrites. This mineral, when pure, consists of 53.33 per cent. of sulphur combined with 46.67 per cent. of iron, and is the most widely distributed of all the ores of iron. It occurs in many forms disseminated in rocks, veins, and beds, investing other minerals, sometimes inclosed in them. The ordinary color is brass-yellow, but owing to decomposition often assumes grayish and brownish tints. Before the blowpipe it melts, giving out a sulphurous odor, and leaving a blackish slag, which is magnetic. This ironstone is chiefly used as a source of sulphur, but in Siberia it is worked for the small percentage of gold it contains. Before the ores pass into the smelter's hands they are subjected to the preliminary process of calcination or roasting. The object of this operation is to separate water, carbonic acid, sulphur, and other volatile substances from the ore, and at the same time to render the ore more porous. This is now generally effected by placing the ironstone over a coal-fire at the bottom of a kiln; when the ore is red-hot a fresh layer, 6 or 9 inches in depth and mixed with coal, is added, and so on until the kiln is filled. When the bottom layer is cold it can be withdrawn, and the process thus becomes continuous. Formerly ores were roasted in piles in the open air, but this wasteful and irregular method is now only resorted to in localities where time and fuel are of little consideration. Ironstone loses from 25 to 30 per cent. of its weight by calcination; the black-band variety, which almost supplies its own fuel, from 40 to 50 per cent.

The smelting of the iron is the next process, that is, the production of the metallic iron from the ore. The iron-smelter must carefully consider the nature of the ores to be treated, and the due admixture of different varieties; the most suitable fuel; the production and maintenance of a high and even temperature; and he must also select such materials
to mix with the ores as shall form with the non-essential constituents of the ironstone a slag which shall remove all hurtful ingredients, being so liquid as to float on the surface of the molten iron and flow easily from it. The most advantageous combination of ores can only be determined by experience, but as regards fuel there is generally no choice. Until the beginning of the seventeenth century charcoal was exclusively used for iron-smelting, but coal and coke have now taken its place, except in those countries where forests still abound and charcoal can be procured readily and cheaply. Chief among iron-smelting appliances is the blast-furnace, and the great progress made in the production of pig-iron during the past 30 years is largely due to the better-constructed furnaces. In those of the most recent type the waste gases of the furnace are utilized for raising heat and steam, with a consequent large saving in fuel, and the residual or by-products which were formerly lost are also collected, all tending to reduce cost of manufacture. (See Blast-furnace.) The molten iron, as it runs from the furnace, is conducted along channels excavated in strong binding sand into molds of the same material, in which it solidifies, forming what is known as pigs. For casting purposes the pig-iron is generally melted in a special furnace, called a cupola furnace. This apparatus consists of a cylindrical-shaped furnace, varying from 7 to 10 feet high, and having an internal diameter of about 3½ feet; it is composed of thick iron plates strongly riveted together, protected inwardly by a layer of binding sand about 9 inches thick, the whole being lined with fire-clay bricks. (See Casting.)

To obtain malleable or wrought iron, it is necessary to free the pig-iron from the sulphur, phosphorus, silicon, and excess of carbon it contains, as these substances lessen the tenacity of the iron, and render it unfit for rolling into bars or plates. But a small quantity of carbon (under 1 per cent.) is essential to the formation of good malleable iron; perfectly pure iron would be too soft. The means by which the elimination of foreign materials from, but retention of a small amount of carbon in, iron is accomplished are partial oxidation of the iron, succeeded by the removal of the foreign substances in the form of oxides, partly by volatilization and partly by combination with the already oxidized iron in the form of slag. This is done by the process of puddling. Formerly the iron-puddler submitted the pig-iron to a refining process previous to passing it into the puddling furnace, but since the introduction of Danks' and other furnaces, and the substitution of machine for hand-labor, this preliminary process has been generally abandoned. In the ordinary puddling-furnace there is a hearth, on which the pig-iron is placed, and a grate separated from it, in which the fuel is placed. In this furnace the iron is subjected to a great heat, but it is only the heated gases that are allowed to play upon the metal, the shape of the furnace being designed to throw the heated gases down on to the surface of the molten mass on the hearth. In the furnace there is a suitable aperture through which the puddler thrusts his rake or rabble, and so stirs up the metal, thus assisting in the process of oxidation. When the iron is sufficiently purified the puddler works it together into balls or blooms weighing each about 60 lbs. When the whole of the metal has been collected into blooms the door of the furnace is closed, and the temperature is raised to a full welding heat. The blooms are then carried to a powerful squeezer or to a steam-hammer. The melted slag is thus forced out of the ball, which is at the same time welded into a compact mass of metal, ready to go through the puddling rolls, which consist of grooved iron cylinders. These cylinders revolve in opposite directions, so that the metal in passing through them is powerfully compressed, whereby any slag remaining in it is squeezed out. The iron while still hot is cut into pieces by a pair of shears, which pieces are bound together by wire, and subjected to the operation of re-heating or passing through the mill-furnace. The bars are heated to a welding temperature, then again passed through the rolling-mill, whereby they are converted into a single bar. This bar may be again bent upon itself and again rolled, thereby producing what is known as best bar or wire iron. This iron is very tough and tenacious: it may be bent or even tied in a knot when cold without exhibiting the least sign of fracture. If iron breaks off when bent in a cold state it is said to be cold-short: while if it stands this treatment, but becomes brittle at a high temperature so as to be unfitted for welding. It is called red- or hot-short. The presence of foreign elements influences these two properties of iron in a marked degree: thus a very small amount of sulphur, even such a quantity as .05 per cent., causes bar-iron to become red-short. Bar-iron possesses a specific gravity varying from 7.3 to 7.9. The melting point is estimated at being about 2900° Fahr., and of cast-iron 1920° Fahr.
Iron and Steel-clad Vessels

By the Siemens regenerative and other similarly constructed furnaces, malleable iron and steel are now prepared directly from the ore. In recent years 'malleable castings' have been introduced. The castings are made by ordinary cast-iron, and rendered malleable by the removal of the carbon. In large cast-iron pots the castings are laid with alternating layers of powdered red haematite, and the whole is kept at a temperature of about 1650°Fahr., or cherry-red heat, for 72 hours. On cooling, the castings are found to consist of nearly pure iron, and to be perfectly malleable, and, therefore, workable.

If iron is heated frequently or carelessly it ceases to be fibrous and loses its tenacity; it is then said to be burnt. To restore it to its original condition, a ferritin very can be forged in the manner needed. This may also be done by heating the piece of iron to bright redness, and plunging it into a boiling saturated solution of sea-salt until it is of the same temperature, about 250°Fahr. After this the metal can be easily doubled in the cold.

It is not always easy to draw the line between iron and steel, and many varieties of metal come into the market under the name of steel which in reality are alloys of iron with other metals, such as wolfram, manganese, chrome, etc. It is admitted by all metallurgists that one of the characteristics of true steel is that it hardens when heated and then suddenly cooled in water; but wolfram steel, for instance, exhibits the very opposite property. Experienced workmen can distinguish iron from steel by the musical note emitted on striking. A more certain method consists in treating the metal with diluted nitric or sulphuric acid. If the surface remains unaltered, or nearly so, when touched with a drop of either acid, the metal is iron; in the case of steel a black mark will be left, owing to the liberation of carbon.

Pure iron is a silver white metal, with a strong lustre, very tenacious, capable of receiving a high polish, and so soft as to be easily cut with a knife. It may be obtained by heating nitride of iron in a stream of hydrogen, or by electrolytic precipitation but, according to Matthiesen, however metallic iron is obtained it always contains a certain proportion of carbon. Its chemical analogies to iron are closely related to the metals cobalt, nickel, and chromium; it belongs to the hexad group of metals, and forms a large series of salts. The atomic weight of iron is 55.9 or 56. Iron dissolves slowly in dilute nitric acid; if not diluted, this acid rapidly oxidizes it. Dilute sulphuric acid dissolves this metal easily, but if concentrated, it has no action in the cold, whereas, on heating to ebullition, the iron is dissolved with evolution of sulphurous acid gas. Iron is also dissolved in hydrochloric acid and in aqua regia.

The principal iron manufacturing countries are the United States, Great Britain, Germany, France and Belgium. The production of iron and steel has made rapid strides in the United States. This country has now a much larger output than any other, and iron being an importer has become a great exporter. Great beds of iron ore occur in Pennsylvania, West Virginia, Tennessee, Alabama, in Michigan and other States bordering Lake Superior, in Missouri, Arkansas, Wyoming and some other States. There are immense beds of bog-iron in Washington. Pennsylvania is the greatest iron-producing State. For the manner in which iron is converted into steel, see Steel.

Besides its numerous other uses, iron is of great value medicinally, especially as a tonic and restorative of the blood. Hence it is very efficacious in anaemia and chlorosis, in rickets and scrofula, and in convalescence from various illnesses. In neuralgia it is often beneficial, and especially when given along with quinine. Some of its preparations have a styptic or astringent effect. It is given in many forms, as the carbonate, citrate, sulphate, perchloride, etc. Mineral waters often owe their useful properties to iron, being then known as chalybeate springs.

Iron-bark (Eucalyptus resinifera, one of the 'gum-trees'), an Australian tree growing to the height of 100-150 feet, with heavy, strong, and durable timber. It is, however, difficult to work and apt to be 'shaky.'

Iron and Steel-clad Vessels, a term now applied to all vessels protected from the fire of heavy guns by thick plates of iron or steel, usually backed by wood. The iron-clad is comparatively a modern invention, and it was not until 1859 that Britain began to introduce such vessels into her navy; but since that time greater changes have taken place in the construction of warships than in all previous ages. The idea of protecting vessels by iron was first practically applied to some floating batteries by the French in the Crimean war. The shells thrown by the cannon then in use were calculated to make terrible havoc among the crowded crews of the wooden battleships of that period and some extra protection became necessary. The first iron-clad, La Gloire, was constructed by the French in 1858, a wooden ship
sheathed from end to end in 4 1/2-in. iron plates, an armor then considered invulnerable. The first British iron-clad, the Warrior, was launched in the Thames in December, 1860, an iron frigate with air-tight compartments, 4 1/2-in. iron armor and 18-in. wood backing, the two ends of the vessel unprotected. It remained, however, for the United States to demonstrate the practical value of this new idea in naval warfare. This took place in 1862, when the first battle ever fought between iron-clad ships took place in Hampton Roads, the Confederate broadside-ship Merrimac engaging with the Monitor, the turret-ship devised by.

vessel suffered seriously and the crew escaped almost unhurt, was a practical lesson in naval warfare that overturned all older ideas and put an end to the career of wooden warships. Throughout that war the value of the new idea was abundantly proved by the use of iron-clad river boats and turretted monitors in ocean and harbor conflict, and after the close of the war the principal nations set themselves actively to work in building fleets of iron and steel-clad warvessels. This was especially the case with England and France, the remaining nations showing much less alacrity and the United States giving little signs of following up the lesson it had taught. The American Monitors had proved the value of the turret method of carrying and working guns. In this the heavy guns were carried in revolving iron turrets of great strength, which rose above the deck, having openings only for the muzzle of the guns. This was quickly ap-

Captain Ericsson. The result of this conflict, in which neither French adopted a new idea, known as
the barbette method. In this, open towers or turrets rising above the deck were employed, the heavy guns firing over the edge of the turrets, and being in some cases so mounted that they could be lifted to fire and lowered again, there being thus little danger to the crew in loading them. The principal advantage of this type was the height at which guns could be carried, and the danger to guns and crews, as for the old broadside method of carrying guns, this practically vanished except in the cases of the minor armament and the machine guns, which were necessarily more exposed.

The basis of all protection on the modern war vessel is the protective deck, and it is common to the battleship, armored and protected cruisers and many gunboats. It is a heavy steel deck covering the whole of the vessel at or a little above the level of the water-line, extending the entire length of the ship and firmly secured at the ends to the heavy stem and the stern post. At the sides it usually slopes, meeting the sides of the ship 3 or 4 feet below the water-line. Below this heavy deck lie the vital organs of the vessel, the boilers and machinery, the magazines and the shell rooms, the ammunition passages and all the equipment of the ship; most dangerous and would create the greatest havoc. For safety every opening on this deck is covered with a heavy steel grating to prevent, as far as possible, fragments of shell from passing below.

The most vulnerable part of the vessel is her water-line, for, if a shell should enter and explode here, tearing a large hole, the vessel would quickly capsize and sink; it is here, therefore, that the heaviest armor, called the water-line belt, is usually placed. A warship might as well be sunk, however, as rendered useless in battle, and the one thing that modern naval battles have shown, is the absolute impossibility of working the guns when they are exposed to a modern battery of rapid-fire and automatic guns; as a result of this all the later battleships, armored cruisers and protected cruisers alike, have increased the protection of the broadside batteries and exposed gun positions, even at the expense of the water-line belt. The foregoing description, in a general way, portrays the disposition of armor usually employed on the battleship type, but it may be considered to apply as well to armored cruisers, although the latter are given greater speed at the expense of protection and armament. The design and building of battleships shows a constant development. Each new vessel is, in many respects, an improvement on her immediate predecessor; there is some uncertainty, however, as to the best type. The trend of development has been in the following directions: for the battleship, a reduction in the size of the largest guns, made possible by improvements in material and higher velocity of projectiles; an increase in the size of rapid-fire guns; a much improved quality of armor, with a greater proportion of the ship covered by same; an increase in speed and fuel capacity, and a saving in machinery weights due to the introduction of the water-tube boiler and to a generally higher grade of material; the increasing use of oil as fuel, and, finally, a gain in size of the whole vessel.

Iron Cross, a Prussian order, instituted March 10, 1813, by Frederick William III, to be conferred for distinguished services in war. It was made of iron to commemorate the grim 'iron' period at which it was created. The decoration consists of a Maltese cross of iron, edged with silver, and is worn round the neck or at the buttonhole. The order was revived by William I in 1870, on the eve of the great war with France. The grand cross, a cross double the size, is presented exclusively for the gaining of a decisive battle or the capture or brave defense of a fortress.

Iron Crown, a golden crown set with precious stones, with which anciently the kings of Italy were crowned. It has received the above name from an iron circle in it, forged, according to tradition, from a nail of the cross of Christ. The order of the Iron Crown was founded in 1809 by Napoleon, as king of Italy, and refunded seven years later as an Austrian order of civil and military merit.

Iron Gate, a narrow part in the course of the Danube below where it leaves Austrian territory and becomes the boundary between Servia and Roumania. The water rushes through it in dangerous rapids and eddies, rendering navigation serious and formerly impossible.

Iron Hat, a headpiece of iron some-what hat-shaped, worn as armor from the twelfth to the seventeenth century.

Iron Mask, the man with the, an unknown personage kept in various French prisons, who for a long time excited much curiosity. All that is known of him is that he was above middle height, of a fine and noble figure, and delicate brownish skin, that he had a pleasant voice, was well educated, and fond of reading and guitar playing, and
that he died in the Bastile in 1793. The mask he wore seems to have been of black velvet, not iron. Conjecture has given him many names. He was stated to be in turn the Count of Vermandois (a natural son of Louis XIV and De la Vallière), the Duke of Beaufort, the Duke of Monmouth, the son of Anne of Austria (mother of Louis XIV) by some favorite, and twin-brother of Louis XIV, but all these assertions have been unable to stand the test of thorough investigation. What seems most probable is that he was Count Girolamo Matthioli, first minister of the Duke of Mantua, who had betrayed the interests of Louis XIV by failing to secure for him, as he had pledged himself to do, in consideration of a large bribe, possession of the fortress of Casale which gave access to the whole of Lombardy. For this offense the courage of Versailles lured him to the French frontier, secretly arrested and imprisoned him in the fortress of Pignerolo. The secret was preserved so carefully, on the supposition that Matthioli was the ill-fated prisoner, because his seizure and detention were flagrant violations of international law and likely to cause trouble.

Iron Mountain, a city of Michigan, capital of Dickinson county, 51 miles w. of Escanaba. It was organized in 1888 from part of Breitung township, has extensive iron mines and ships large quantities of excellent ore. Pop. (1920) 8251.

Irons, shackles, fetters, or bilboes, especially those used to confine the ankles of prisoners on board ship in former times.

Ironsides, Old, a name given to the U. S. frigate Constitution (q. v.).

Ironstone, a city, county seat of Lawrence Co., Ohio, on Ohio River, 134 miles s. e. of Cincinnati. It is the center of an iron ore, coal and fireclay district; has various iron industries, cement works, wood-working plants, etc. Pop. (1920) 14,007.

Iron-wood, a name given to various trees from the quality of their timber. The iron-wood or hop-hornbeam of America (Ostrya virginica), nat. order Cupuliferae, is a tree with a trunk not exceeding 6 in. in diameter, with very hard wood, so heavy that it sinks in water, and foliage resembling that of birch. The species of the genus Sideroxylon, known as iron-wood, are natives of the tropics and also of New Zealand, the Cape, etc. The N. interme, or smooth iron-wood of the Cape, has long been cultivated in the greenhouses of Europe. Diospyros Edénum (the ebony) is also named iron-wood, as is the Metrosidéros vera of Java.

Ironwood, a city of Gogebic Co., Michigan, 135 miles w. of Marquette. It has iron works and lumber industries. There are rich iron mines and valuable timber in vicinity. Pop. (1910) 12,821; (1920) 15,739.

Irony (Gr. εἰρωνεία, dissimulation), a form of speech in which the meaning intended to be conveyed is contrary to the natural meaning of the words. Irony, as a rhetorical device, becomes a most effective weapon for ridiculing an antagonist.

Iroquois (ir-u-kwä), the joint name given by the French to a once powerful confederacy of six North American Indian tribes (Mohawks, Oneidas, Senecas, Onondagas, Cayugas and Tuscaroras). They formerly resided on the Mohawk River, and extended their conquests to the Mississippi and beyond the St. Lawrence. Warlike and well organized, it is probable that but for the settlement of the whites they would have secured dominion from Canada to the Gulf of Mexico. They came into early conflict with the French and proved a barrier to their southward advance from Canada. Some of the tribes are now extinct, some have made considerable advances in civilization, while others have fallen into a state of squalid misery. Part of the Canadian Indians are Iroquois.

Irradiation (ir-rā-di-ā′shun), that effect on the eye through which brilliantly illuminated white surfaces and self-luminous bodies, when emitting white light, appear to the eye much larger than they really are.

Irrational Quantities (i-rash-un′ral), or Surds, are quantities which we cannot exactly determine, because they cannot be expressed in terms of a primary unit. Thus $\sqrt{2}$ is an irrational quantity, being equal to 1.4142... with an indefinite number of decimals. The ratio of the circumference of a circle to its diameter is an irrational quantity, 3.14159...

Irrawaddy (ir-rā-wā′dē), IRAWADI, a large river traversing Lower and Upper Burmah from north to south, falling into the Indian Ocean by various mouths and forming a great delta. Its source is in East Tibet. The Irrawaddy is the main artery of Burmah, the bulk of the trade is carried on by its means, the valleys through which it flows are the most fertile and populous, and on its banks are the principal towns (Mandalay, Ava, etc.), with Rangoon and Bassein on two of its mouths. The length of the river is about 1200 miles.
Irredentism

Irredentism, as used in Italy, is applied to the policy that has for its object the reclaiming of certain sections of territory populated by Italians but under the government of Austria-Hungary. The Italian phrase, Italia Irredenta, so frequently employed during the war, means "unredeemed Italy." After 1861, when the present kingdom of Italy was established, the Papal States, Venetia, the district around Trieste and the district around Trent, were still—though inhabited mainly or in part by Italians—not included in the kingdom. Venetia and the Papal States were annexed in 1866 and 1870. This process of winning Italy from foreign control came to be called irredentism, and after 1870 the term Italia Irredenta was applied to Trieste and the Trentino, these being territories still unredeemed. Irredentism steadily declined following the inclusion of Italy in the Triple Alliance in 1882, but gained in force after the annexation of Bosnia and Herzegovina by Austria-Hungary in 1908. For Greater Italy was the slogan that inspired the gallant Italian soldiers in their spectacular attack on the Austrians in 1917 and 1918, which succeeded in reclaiming the whole of the Irredenta. (See European War, Italy.)

Irrigation (ir-i-ga’shun), the art of increasing the productiveness of soils by the artificial supply of water to them. This is an old agriculture, and reference to it exist in very early records, especially in Egypt, India and China. In countries with very small rainfall, and subject to droughts, agriculture without irrigation would be uncertain and unprofitable. For this reason the British government has promoted extensive irrigation works in India. The greatest irrigation work is the Ganges Canal, 445 m. long. Irrigation has long been practiced in Turkestan and it was the basis of the Babylonian kingdom of the far past. In the south of Europe, particularly in Italy and Spain, irrigation works of a high order have existed from ancient times. In the western States it is largely employed. There are many systems of distributing the water in irrigation to suit the special requirements of different surfaces. The work is done by the construction of great dams, fitted to hold back the waters of mountain streams and of the melting snows of winter and feed them to the land during the farming season.

The United States Reclamation Service was organized as a bureau of the Interior Department, under the Reclamation Act of June 17, 1902. It is engaged in the investigation, construction and operation of irrigation works in the arid and semi-arid States of the West. Thirty projects have been authorized, for construction or operation for irrigation of lands in Arizona, California, Colorado, Idaho, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Texas, Utah, Washington and Wyoming. These projects aggregate 5200,000 acres and the major works aid in serving an additional 1,000,000 acres.

The Service has built on the 30 projects over 12,000 miles of canals, ditches and drains, including 100,000 canal structures and involving the excavation of 174,000,-000 cubic yards of materials. In connection with this work there have been constructed 100 storage and diversion dams with an aggregate volume of 13,700,-000 cubic yards, including the Arrowrock dam, highest in the world (349 feet), the Elephant Butte dam on the Rio Grande, forming the largest artificial irrigation reservoir in the United States, and the longest roller crest dam in the world located on the Grand River in Colorado. The net construction cost to June 30, 1919, was $1,225,833,000.

The largest irrigable area is that of the Boise project in Idaho, 327,552 acres; net cost of construction to June 30, 1919, $11,973,276. The next is the North Platte in Nebraska-Wyoming, 251,450 acres; cost $10,540,005 to June 30, 1919.

Irritability (ir-i-ta-bil’i-ti), that function of a nerve or muscle in which it responds to certain stimuli, or that property in plants by which stimuli cause movements, as in the sensitive plant.

Irtish (ir’tish), a large river of northeastern Asia, rises in the Altai Mountains in Chinese territory, forms Lake Zaisan, then flows N. N. W. through Asiatic Russia, and after a course of 1800 miles falls into the Obi. It receives the waters of several important rivers, and has important sturgeon fisheries.

Irvine (ér’vin), a seaport of Scotland, in Ayrshire, on the Irvine, 24 miles southwest of Glasgow. It has a good harbor, and there are chemical works (for explosives, etc.), engineering, foundry, and shipbuilding works. Pop. 9607.

Iving (ér’ving), Edward, the founder of the sect called Irvingites. He was born in 1782, at Annan, Scotland; died at Glasgow, in December, 1834. He went in 1805 to the University of Edinburgh, and having entered the ministry of the Established Church, was appointed in 1819 assistant to the celebrated Dr. Chalmers in Glasgow. In 1822 he became minister of the Caledonian Asylum.
Irving

Chapel, a Presbyterian place of worship in London. His impressive eloquence, combined with singularity of appearance, and his mannerisms, soon brought him into notice, and for a time the great as well as the fashionable flocked to hear him. In 1823 he published a work called *For the Oracles of God, Four Orations*, which sold extensively. About two years later he wrote an *Introductory Essay to Bishop Horne's Commentary on the Book of Psalms*, considered one of the best products of his pen. His theological peculiarities were well set forth in a collection of *Sermons, Lectures, and Occasional Discourses*, issued at London in 1828. These attracted much attention, and brought him shortly afterwards into conflict with the presbytery, with the result that in 1832 he was dispossessed of his pastorate at Dublin in 1833 the presbytery of Annapolis, which had licensed him, deposed him from the ministry. He was charged with holding Christ guilty of original and actual sin, and denying the doctrines of atonement, satisfaction, imputation, and substitution. He was a believer in the speedy coming of Christ, and held that miraculous gifts of apostolic times had not ceased to be bestowed on the Christian Church. An excellent biography of Irving was written by Mrs. Oliphant. See *Irvingites*.

Irving, HENRY, (originally John Henry Brodrribb) an English actor, born in 1838. He was for a time a clerk in London, but adopted the theatrical profession, his first appearance being at Sunderland in 1850. After playing for nearly three years in Edinburgh he appeared at the Princess' Theater, London, in 1859. After a short stay here, and a few months in Glasgow, he went to Manchester, where he remained for five or six years. Having returned to London in 1865, he appeared in *Eliza Flowers*, *Rogues, Hunting Down, Uncle Dick's Darling*, etc.; but his first marked success was as *Digby Grant* in Albery's *Two Roses* (in 1870), which was followed by his powerful impersonation of *Mathias* in *The Belle of New York*. His next noteworthy parts were *Charles I, Eugene Aram*, and *Richclieu*, in the plays so named. In 1874, at the Lyceum Theater, he sustained the part of *Hamlet* so successfully as to raise himself to the first place among English actors. His chief Shakespearean parts subsequently played are *Macbeth*, *Othello*, and *Richard III*. In 1878 he leased the Lyceum Theater for himself, and put on the stage in excellent style *Othello*, *The Merchant of Venice*, *Much Ado About Nothing*, *Romeo and Juliet*, *Twelfth Night*, *Faust*, *Macbeth*, etc., playing in them the principal character along with Miss Ellen Terry. His plays performed in the English provinces were equally successful with those in London, and he met with equal favor in his repeated visits to the United States. He was knighted in 1897. Died suddenly at Bradford, England, in 1905. He was buried in Westminster Abbey.

Irving, WASHINGTON, one of the best American writers, was born in New York in 1783; died in 1859. He was the son of a Scotsman who had emigrated to New York before the Revolution, and had become a merchant of some standing. He was educated for the legal profession, but his tastes were in the direction of literature, and already in 1802 his *Letters of Jonathan Oldstyle* appeared in the *New York Mercury*. *Chronicle*. Shortly afterwards, being threatened with pulmonary disease, he sailed for Europe, visited most continental countries, and did not return to America until March, 1806. In the same year he was called to the New York bar. His pen was now very busy, and his sketches of Dutch character, in his *Knickersocket's History of New York*, which made its appearance in December, 1809, proved him possessed of quaint and genial humor to a high degree. About this time he joined his two brothers as a sleeping partner in a mercantile venture, and in 1815 visited England. The failure of his brothers' business made him resolve to follow literature as a profession, and he settled in London. A series of papers which he now wrote, entitled *The Sketchbook*, first published at New York, 1818, met with such success that an enlarged edition was published in London two years later. For seventeen years, until 1832 Irving resided in Europe, principally in England. From travel to travel. This was a period of great literary activity and brought forth some of his most famous works, such as *Bracebridge Hall*, *The Tales of a Traveler*, and *The Life of Columbus*, for which 1000, 1500 and 3000 guineas respectively were paid him by the publishers. He also acted for a time as secretary to the American Embassy in London, and the University of Oxford honored him in 1831 with the degree of B.C.L. Having returned to New York in the spring of 1832 he accompanied the expedition for the removal of the Indian tribes beyond the Mississippi, and collected the material for his *Tour on the Prairies*, published in 1836. From 1842 to 1846 he acted as United States ambassador at Madrid, and on his return in that year he retired to his country-
Irvingites

Irvingites (ér’vin-gits), a name given to believers in, and followers of, Edward Irving, forming a sect properly designated as the Catholic Apostolic Church. They have a considerable number of churches in the United Kingdom, and a few unimportant congregations exist also in Germany, France, Switzerland, Canada and the United States. The Irvingist estabishment is the belief in a revival of the spiritual gifts of the first ages of the church, such as speaking in 'unknown tongues,' and prophesying. In their constitution, which they claim to be a development of the primitive church, they adopted the four-fold ministry of 'apostles, prophets, evangelists and pastors and teachers' (Eph. iv. 11). Two years after Irving's death the number of apostles had been completed to twelve. They recognize all Christian communities, and embody in their ritual portions of those used in different sections of the church, including the Roman and Greek Catholic. The ministry is supported by tithes. The second coming of Christ is a hope of the members.

Irvington, a town of Essex County, New Jersey, 3 miles s. w. of Newark. It has smelting works and steel, rope, and tool factories, and many other industries; also a large freight depot of the Lehigh Valley R. R. Pop. 23,488.

Isaac (Is’ak), Heb. (he will laugh'), one of the Hebrew patriarchs, the son of Abraham by Sarah, so called to denote the laughter and gladness occasioned by his birth. He is remarkable as the offspring of very old age. Sarah being ninety and Abraham a hundred years old at the time of his birth; for his miraculous escape from death as a burnt offering; and for the fraud perpetrated upon him, at his wife Rebecca's instigation, by his son Jacob, to the injury of Esau. He died at Hebron, 137 years old, and was buried in the cave of Machpelah, the resting place of Sarah and Abraham, and of Rebecca.

Isaac I, Commentus, Emperor of Constantinople, raised to the throne in 1057. He brought about great reforms in the administration of the empire, and repelled an inroad of the Hungarians, but abdicated in favor of Constantine Ducas in 1059, and retired to a convent, where he died in 1061.

Isabella of Castile (iz’ä-bel’ä), daughter of King John II of Castile and Leon, consort of Ferdinand the Catholic, was born 1451, married 1459, and died 1504. She was a woman of great charms, courage, and sagacity, and contributed no small share to the many remarkable events of the reign of Ferdinand V, including the introduction of the Inquisition, 1480; the discovery of America by Columbus, 1492, to which she lent material and moral aid; and the conquest of Granada, and the expulsion of the Moors.

Isabella II, ex-queen of Spain, daughter of Ferdinand III, was born in 1830, and succeeded her father three years after, her mother being appointed queen-regent. The early years of her reign were disturbed by a rising in favor of her uncle, Don Carlos, who, if the Salic law had not been set aside, would have ascended the throne instead of her, but this was finally quelled in 1830. She was declared of age in 1843, and in 1846 was married to her cousin, Don Francisco d'Asis. Her reign was so despotic and her life so licentious that a revolution took place in 1858, which drove her from the country. She resigned her claims to the crown in favor of her son Alfonso, who ascended the throne in 1875. She died in 1904.

Isæus (i’sē-us), an Athenian orator, who lived between 420 and 348 B.C. He was a pupil of Lysias and Isocrates, and, like them, became a teacher of eloquence and writer of orations, chiefly judicial. Eleven of his orations are extant. His style is clear, forcible, and concise.

Isaiah (iz’ā-yā; Heb. Yesayahuah, 'Salvation of Jehovah'), the first of the great Hebrew prophets. He began his predictions in the last years of Uzziah's reign. Of his father, Amoz, we know nothing, and of the circumstances of his life but little. We know, however, that he had great influence over the kings and people of Judah, and he is supposed to have died at a good old age at Jerusalem, at the beginning of Manasseh's reign. The first portion of the writings that pass under his name consists chiefly of declarations of sin and threatenings of judgments, while the last 27 chapters, together with some previous ones, hold out promises of a glorious future for Israel. The style throughout is clear and simple, yet dignified and sublime in the highest degree. His author-
ship of the last 27 chapters is denied by some eminent critics, who unite in ascribing them to a later prophet, perhaps also called Isaiah, while others believe that the name Isaiah stands for a school of prophets; but the integrity of the book has still many able defenders.

Isar (ēzär'), a European river which rises in Tyrol, about 6 miles N. E. of Innsbruck, enters Bavaria, flows past Munich, and latterly joins the Danube; course above 190 miles.

Isatis (īsā-tīs), the genus of plants to which woad belongs.

Isauria (īsō'ri-a), in ancient geography, a country in Asia Minor, bordering on Lycaonia, Phrygia, Pisidia, Cilicia, and Pamphylia. Its capital, Isaura, was destroyed by the Romans.

Iscia (īski-ā), an island of Italy, 26 square miles in extent, in the Gulf of Naples, with beautiful scenery and a fertile soil, producing excellent wine and fruits. It is entirely volcanic in character, and is noted for its warm mineral springs and volcanic convulsions. In 1881 and 1883 earthquakes caused great loss of life and property. Several shocks have been experienced since, but without disastrous results. The capital, Ischia, with some 7000 inhabitants, is a favorite resort of tourists in Italy. Other towns are Casamicciola and Forio, both of which suffered severely in 1883. Pop. 26,801.

Ischium (īski-ūm), the inferior posterior part of the pelvic arch in vertebrates; a part of the hip-bone.

Ischl (ēshl), a fashionable watering place in Upper Austria, on the Traun, 50 miles S. W. of Linz, celebrated for its salt baths. The Austrian emperor has a residence in the neighborhood. Pop. of commune, 9046.

Iseo (ē-shō'), or Sarino, a picturesque lake in Upper Italy, between Brescia and Bergamo, and formed by the waters of the Oglio; length 15 miles; average breadth, 6 miles.

Isère (ēsär'), a river which rises in France, by the department of Isère, to which it gives its name, and joins the Rhone 5 miles above Valence; length about 190 miles, of which nearly 90 are navigable.

Isère, a department of Southeastern France: area 3185 square miles. It is generally mountainous, the highest summit being Le Grand Pelvoux, 13,158 feet. The whole department belongs to the basin of the Rhone, which drains a great part of it directly, the only other important river being the Isère. The soil is generally fertile, and produces abundant cereal and leguminous crops; the vine and mulberry being also cultivated. Lead, copper, and iron are found in considerable quantities; also coal, marble, slate, granite, and porphyry, and the iron mines employ a number of blast furnaces. There are numerous paper, silk, and cotton mills. Grenoble is the capital. Pop. 562,315.

Iserlohn (ēzér-lōn), a town of Prussia, province of Westphalia, with manufactures in brass, bronze, tin, and iron, cutlery, zinc and iron furnaces, etc. Pop. (1910) 31,214.

Isernia (ē-zér-nē-ā; Latin, Æsernia), an episcopal city of South Italy, on a spur of the Apennines, province Campobasso. Pop. 38,252.

Ishim (īsh-em'), a river of Western Siberia, a tributary of the Irtil.

Ishmael (īsh-mā-ēl; Hebrew, Yish-mā-ēl, 'Whom God hears'), the son of Abraham by Hagar. He married an Egyptian wife, and had twelve sons and one daughter, who became the wife of Esau. He died when 137 years old. It was predicted that he was to become 'a great nation,' and the Arabs, especially the Bedouins, are often regarded as descendants of Ishmael.

Ishmaelites (īsh-māl-itz), Ishmaelites, the descendants of Ishmael. See Ishmael.

Ishmaelites, or Ishmaelians, a Mohammedan sect originating in the first century of the Hegira, and deriving its name from Ishmael or Ismael, one of Ali's descendants. From the eighth to the twelfth century they were powerful in the East, and distributed themselves over Irak, Syria, Persia, and Egypt.

Ishpeming (ish-pee-ming), a city of Marquette county, Michigan, 15 miles N. W. of Marquette. There are extensive iron mines, with very rich ores, large quantities of which are shipped. There are machine shops, powder works, etc. Pop. (1920) 10,500.

Isidore (īz'-dōr), the name of three Spanish ecclesiastics, of whom the most famous was Isidore of Seville, who flourished at the beginning of the seventh century. He was the most profound scholar, the most eloquent orator, and the ablest prelate of his age and country, and consequently exercised a powerful influence over the development of Latin Christianity. He was made bishop of Seville in 600 or 601, presided over the Councils of Seville, 619, and Toledo, 633; and died at Seville in 636. Several of his works, which embrace
divinity, history, philosophy, etc., were translated into English as early as the middle of the sixteenth century.

**Isidorian Decretals**, a spurious collection of decrees belonging to the ninth century, which were for a long period regarded as authentic. See *Decretals*.

*Isinglass* ("is-ing-glass"), a gelatinous substance, of which the best kind is prepared from the swimming bladder or sound of the sturgeon, dried and cut into fine shreds, while the American article is obtained from the same part in the cod, hake, etc. It is the basis of the Russian glue, which is preferred to all other kinds for strength. A test solution is also prepared from it, by means of which tannic acid may be distinguished and separated from gallic acid, the former giving it a yellowish-white precipitate. Isinglass boiled in milk forms a nutritious jelly, and a solution in water, with a very small proportion of some balsam, spread on black silk, is the court plaster of the shops. It is also used in fining sheries and other white wines, and in making mock pearls, stiffening linens, silks, gauzes, etc. With brandy it forms a cement for porcelain and glass.

*Isis* ("is-əs"), the principal goddess of the Egyptians, the sister and wife of Osiris, representing the moon, as Osiris did the sun. The Egyptians believed that Isis first taught them agriculture, and as the Greeks offered the first ears gathered to Ceres, so did the Egyptians to Isis. She is represented under various forms. In one representation she has the form of a woman, with the horns of a cow, as the cow was sacred to her. She is also known by the attributes of the *louis* on her head, and the *sistrum* in her hand, a musical instrument which the Egyptians used in the worship of the gods. She is often accompanied by her infant son, *Horus*. In one celebrated Egyptian statue she was shown with her face veiled. She was particularly worshipped in Memphis, and at a later period throughout all Egypt. From Egypt her worship passed over to Greece and Rome, and the abuses which it occasioned at Rome caused its frequent prohibition there. It was, however, repeatedly revived. The Romans never considered the worship, which was introduced among them by Sulla (B.C. 86), altogether repulsive, and its attendant immorality was vigorously lashed in the satire of Juvenal.

*Isis*, as *Mare's-tail coral*, from its likeness to the plant of that name (*Hippūris*). It is found chiefly in the Indian Seas, in the Pacific Ocean, and on the coasts of America.

*Isis*, the upper part of the river Thames, before its junction with the Thame.

*Iskanderoon* ("is-kăn-dĕ-rŏn"), or *Iskenderoon*. See *Aleandretta*.

*Isla* ("is'ə-lə), Jose Francisco de, born at Segovia in 1714; died at Bologna in 1783; a Spanish satirist after the model of Cervantes. His fame rests principally upon his *History of Fray Gerundio*, a satire on the monks of his time, a book which fell under the ban of the Inquisition. He translated *Gil Blas* into Spanish.

*Isla de Pinos* ("Isle of Pines"), an island lying south of the western portion of Cuba, to which it belongs, 40 miles by 34, with good pastures and valuable timber. The American residents sought to have it annexed by the United States, but this was officially repudiated in 1905.

*Islam* ("is-lăm"), that is, complete submission and submission to the will of God, is the name given in Arabic to the religion originated by Mohammed. The fundamental doctrine of Islamism, and the only one it is necessary to profess to be a Moslem, is expressed in the common formula of faith: 'There is no God but Allah, and Mohammed is his prophet,' to which the Shiabs or Shites, that is, the majority of Persian and Indian Moslems, add 'and Ali is the vicar of God.' See *Mohammedanism*.

*Island* ("Iłänd"), a portion of land entirely surrounded by water, and smaller in size than the great masses of land known as continents. Islands are of all sizes, from mere dots of land or rock in the sea to a great mass like Australia, which is often spoken of as a continent. Islands are divided into two distinct classes: continental islands, lying in proximity to continents, and pelagic or oceanic, from their position in the oceans. Continental islands occur along the margin of the continents, and are generally of the same geological structure. Pelagic islands are mostly of volcanic or coral formation. A cluster of islands, such as
Islands of the Blessed

the West Indies, the Canaries, the<br>Hebrides, etc., are called an archipelago.

Islands of the Blessed, according<br>to the Grecian mythology, islands which were<br>supposed to lie westward in the ocean,<br>where the favorites of Zeus, snatched from<br>death, lived in perpetual happiness.

Isle of France. (II.) See Mauritius.

Isle of Man. See Man.

Islay (i'la), an island of Scotland, one<br>of the Inner Hebrides, forming<br>part of Argyllshire, and separated by the<br>Nound of Islay from the island of Jura.<br>Area, 246 square miles. Pop. 6387.

Isle of Pines, in the W. Indies, is<br>about 30 miles S. of Cuba, of which it forms a dependency;<br>area about 1200 square miles. The own-<br>ership of the island was left unsettled by the<br>treaty of 1803; but in April, 1907, the<br>Supreme Court decided that it was not<br>American territory. Pop. about 3200.

Isle of Wight. See Wight.

Islip, a town of Suffolk Co., N. Y., 40<br>miles E. of New York city, con-<br>tains a village of the same name, on<br>Great Suffolk Bay. It has a large trade<br>in fish and oysters, and is a well-known<br>summer resort. Pop. (1910) 18,346.

Ismail, a town and river-port in the<br>Russian government of Bessar-<br>bia, stands on the north bank of the<br>Kilia branch of the Danube, 48 miles from<br>the mouth of that river. It was formerly<br>a Turkish fortress. Pop. 34,000.

Ismailis, a Mohammedan sect. Like the<br>rest of the Shia, or party of Ali, they held that the dignity of<br>Imam, or head of the true faith, was in-<br>herent in the house of the Prophet and the<br>line of Ali. They arose in Syria and<br>Persia, taking their name from one Ismail<br>(about 770 A. D.), whom they regarded as the<br>seventh and last of the Imams.

Isleworth, a Middlesex parish, on the<br>left bank of the Thames, 12 miles w. s. w. of London, England; noted for its market gardens and nurser-<br>ies. Pop., including Heston, 43,316.

Islington, once a suburb of London, England, but now forming<br>one of the metropolitan boroughs, is situ-<br>ated 2 miles N. of St. Paul's. The Agricul-<br>tural Hall (1861), where the great<br>national cattle and horse shows are held, accommodates 50,000 people. Pop. (1911)<br>227,423.

Ismailia (is-mä-î'le-ā), a trading post<br>in E. Sudan on the Upper<br>Nile. Pop. (1907) 10,373.

Ismid (is-mî'd), ISMID, a town of Asia<br>Ming, on the Sea of Marmora, seat of a Greek metropolitan and an<br>Armenian archbishop. It represents the<br>ancient Nicomedia. Pop. 20,000.

Isnik. See Nicza.

Isobatic Lines (i-su-bâr'tik), lines<br>drawn on a map or globe through all places where the baro-<br>meter is at the same height at a certain<br>time. Telegraphic communication enables these lines to be drawn with some accuracy.

Isoclinal Lines. See Isothermal Lines.

Isochronism (i-sok'run-izm; Gr. isos,<br>equal; chronos, time), the property by which a pendulum, or a<br>balance wheel, or an oscillating particle<br>(as of air) conveying sound vibrates<br>through longer or shorter arcs in the same<br>time (or nearly so). Given a certain<br>length of spring, all the vibrations, large<br>or small, are isochronous. If the spring<br>is shortened the large vibrations take place<br>quicker than the short ones; if, on<br>the contrary, the spring is lengthened, the<br>small arcs are performed quicker than the<br>large ones. For small oscillations a pendu-<br>lum is almost exactly isochronous, but<br>it is only with the cycloidal pendulum that perfect isochronism is obtained.

Isoclinic Lines (i-su-kli'nik). See<br>Isogonic Lines.

Isocrates (is-sok'ra-těz), an ancient<br>Greek orator, born at Ath-<br>ens 436 B.C. He spoke seldom in public;<br>but he prepared orations for others, and<br>trained many able orators, among his<br>pupils being Iseas, Hyperides, Lycurgus,<br>etc. His patriotism was sincere, and<br>his desire for the freedom of Greece so<br>intense that he starved himself to death<br>in his ninety-eighth year from grief at<br>the unhappy battle of Cheronea. He was<br>master of a graceful literary prose style,<br>but was accused of being too wordy and<br>of carrying elaboration too far, his periods being formed with endless labor.<br>Twenty-one of his orations are still ex-<br>tant.

Isogonic Lines (i-so-gon'ik), lines<br>drawn on a map through all places where the declination of the magnetic needle is the same. Iso-<br>clinic lines are drawn through places<br>where the inclination or dip of a mag-<br>netic needle is the same; the zero isoclinic<br>line (drawn through places where there<br>is no dip) is called the magnetic equa-<br>tor.

Isola Bella (i-so-lâ'î-lâ), one of the Bor-<br>romeo Islands in Lake Maggiore. See Borromeo Islands.
Isola Grossa, a long, narrow island in the Adriatic, on the coast of Dalmatia.

Isola Madre, one of the Borromean Islands (which see).

Isomerism (i-som-er-izm; Gr. iso, equal; me-ra, a part), literally equality of parts, a chemical term first applied by Berzelius in the case of bodies which, although identical in composition, that is, as regards number and nature of atoms, have nevertheless different chemical properties. It is supposed to be due to different grouping of the atoms of each molecule, or to the varying amount of energy employed in its formation.

Isomorphism (i-su-morf-izm; Gr. iso, equal, morphe, form; that is, 'equality in form'), is the phenomenon observed where chemical bodies composed of different elements, but equal in atomic quantity and combination, affect the same crystalline form. It was formerly supposed that every substance had its own peculiar crystalline form. Mitscherlich, however, showed that certain elements or groups of elements may replace one another in salts without altering the crystalline form of the compound.

Isonandra (i-so-nan'dra), a genus of plants, order Sapotaceae, one species of which, I. gutta, is known as the gutta-percha tree.

Isoperimetric (i-sa-per-i-met'ri-kal), in geometry, a term applied to figures which have equal circumferences or perimeters.

Isopoda (i-sop'o-da; Gr. isos, equal; po-sas, podos, foot), an order of crustaceans having sessile eyes and a depressed body; the thoracic and abdominal rings free, except the first thoracic, which is united with the head. The feet are of equal size and move in the same direction. The Isopoda vary widely in habits; some, like the wood-lice, are terrestrial, and inhabit damp situations, such as under stones, and moss, and under the bark of trees; others live as parasites on fishes, and in the gill chambers or on the outer surface of shrimps, crayfish, and other higher crustaceans; and while some forms are exclusively marine, others inhabit fresh water.

Isothermal Lines (i-suth'er-mal), lines drawn on a map or globe through places which have the same mean annual temperature. (See Climate.) Isothermal lines are drawn through places having the same mean temperature during the hottest month of the year. Isochelinental or Isochelinal lines are drawn through places having the same mean temperature during the coldest month in the year.

Isotonic Sea-water (i-sot-on'tik), a solution of sea-water having salts dissolved in such proportion as to occasion no change of volume in red blood corpuscles brought into contact with the solution. The idea of the use of injections of isotonic sea-water in the treatment of disease first occurred about 1892 to Rene Quinton, then professor of biology in the University of France. Many interesting experiments were conducted by Quinton and others. It was shown that a dog which had been bled almost to death could be revived by the injection of a similar amount of sea-water. In a few days the dog was as well as ever and its blood, when analyzed, was found to contain a greater proportion of hemoglobin than before. The first public dispensary was opened by Quinton in Paris in 1907, with highly satisfactory results. The diseases that have yielded to isotonic sea-water treatment are eczema, acne, gastric and intestinal diseases, constipation, typhoid fever, auto-intoxication, croup, tuberculosis, lupus, chronic nephritis, neurasthenia, and many other surgical operations with high satisfaction results.

Ispahan (i-spah-hun') or Isfahan, a very ancient city of Persia, and for centuries its capital, in the province of Irak-Ajemli, on the river Zendarud, 210 miles south of Teheran, the present Persian capital. It was once one of the most magnificent cities in the East, but little is now left of its former splendor. The manufactures are still extensive, however, and Ispahan is the emporium of the inland commerce of Persia. Pop. 80,000, not more than one tenth of former.

Israel, and Israelites. See Jews.

Israelis (es-ri'alz'), Joser, Dutch painter, born a Groningen, 1524, of Jewish parentage. He attracted attention in the Paris Salon of 1857 and soon gained world fame by his works, which reveal a mastery of technique and color as well as intense national spirit and deep human emotion.

Issik-kul, Issyk-kul (i-sis'ik-kul'), a lake of Central Asia, in the Russian province of Semirechenk, south of Lake Balkhash, about 110 miles long by 36 broad, with brackish water abounding in fish. It receives many streams, but is gradually decreasing in size.

Issoire (is-wair'), a French town, department of Puy-de-Dome, 19 miles s. s. e. from the departmental cap-
Issoudun (is-o-doon), a French town, department of Indre, 17 miles N. E. of the departmental capital, Châteauroux. It has manufactures of steam engines, agricultural implements, woollen, cottons, etc. Pop. (1906) 10,666.

**Issue** (ish'oo), in law, the point or matter depending in a suit on which two parties join and put their cause to trial. It is a single, definite, and material point issuing out of the allegations of the parties, and consisting regularly of an affirmative and negative. It is either an *issue in law* to be determined by the court, or *in fact* to be ascertained by a jury.

**Issus** (is'sus), anciently a town of Cilicia, in Asia Minor, on the Gulf of Issus. Here Alexander of Macedon gained a complete victory over Darius (B.C. 333).

**Issy** (is-se), a suburban quarter in the southwest of Paris, with a strong fort.

**Istambol.** See Constantinople.

**Istar** (is'tar), the ancient Babylonian god of war and destruction.

**Isthmian Games** (ist'me-an), public games of ancient Greece, so called because they were celebrated on the Isthmus of Corinth, and having a similar character to the Olympian, Nemean, and Pythian games. The Greeks in general took part in them, and the principal exercises were boxing, wrestling, foot, horse, and chariot races, and throwing the discus. They were celebrated in April and May, in the first and third year of each Olympiad, and the victors were rewarded with wreaths of pine leaves. The origin of these games is lost in antiquity, but they were generally regarded as originated in honor of Poseidon (Neptune). See Games.

**Isthmus** (ist'mus, is'mus), in geography, a neck of land by which two continents are connected, or a peninsula is united to the mainland. Such are the Isthmus of Panama, connecting North and South America, and the Isthmus of Corinth, connecting the Morea with Northern Greece.

**Istria** (is'tri-a), a peninsula of triangular form, projecting into the northeast corner of the Adriatic Sea, part of the Austro-Hungarian Dominions. The surface is mountainous, particularly in the north. The soil is generally thin and gravelly, but the forests, which are extensive, yield excellent timber, and the vine, olive, and mulberry are successfully cultivated. Area, 1,000 square miles. Pop. 344,173.

**Italy** (it'a-li), a kingdom in Southern Europe, consisting in the main of a large peninsula, having a singular resemblance to a boot in shape, stretching southwards into the Mediterranean, but also including a considerable portion of the mainland and the islands of Sicily, Sardinia, Elba, Iachia, Lipari Islands, etc. It is bounded on the north and northwest by the Alps, which separate it from Austria, Switzerland, and France, and on the northeast by Austria; elsewhere it is washed by the Mediterranean, or the Adriatic, an arm of the latter. The area is about 110,000 square miles. For administrative purposes it is divided into sixty-nine provinces, which are grouped under sixteen departments (compartimenti territoriali), some of them consisting of only a single province. The following table furnishes a list of the departments, with their area and population:

Kingdom of Italy......110,550 34,686,663

From 1861, when the Kingdom of Italy was constituted, until 1882 Turin was the capital. Florence was then selected, and in 1871 Rome. The largest town is Naples; next in order are Milan, Rome, Turin, Palermo, Genoa, Florence, and Venice. The foreign possessions include Eritrea, the Dhalak Islands on the Red Sea coast of Africa, Somaliland on the Gulf of Aden, and Tripoli, which was taken from Turkey in 1911.

**Physical Features.**—Among the principal physical features of Italy are the Alps, on its northern frontiers; and the chain of the Apennines, which run down the middle of the peninsula through its whole length to the Straits of Messina, while numerous branches are thrown off laterally, and form an endless succession of wooded hills, olive-clad slopes, and fertile valleys. In the north, enclosed
between the ranges of the Alps and Apennines, is a vast and fertile plain, intersected by the Po and its tributaries. Two active volcanoes belong to the kingdom, Vesuvius in South Italy and Etna in Sicily. The eastern shore of Italy is generally flat and uninteresting, presenting particularly along its northern part a series of sandy islands and lagoons, which damp up the mouths of the rivers, and occasion the formation of pestilential marshes. On the west coast the same thing is occasionally seen, as in the case of the Pontine Marshes and the Tuscan Maremma; but as a rule the west coast is more elevated, and often presents delightful scenery, as round the Gulf of Genoa and the Bay of Naples. The only river of any magnitude is the Po, which has a length of about 450 miles before it enters the Adriatic. It is fed by streams both from the Alps and the Apennines, the Ticino, Adda, Oglio, etc., from the former, the Trebbia, Secchia, etc., from the latter. The Adige (in Germany, the Etsch) has its mouth at no great distance from the Po, and is partly fed in the same way. In the peninsular part of Italy are the Arno, Tiber, Garigliano, Volturno, etc. There are a number of lakes, of which the most important are Lakes Maggiore, Lugano, Como, and Garda in the Alpine region; Lakes Trasimene, Bolsena, and Albano in the Apennine region. Italy is rich in useful minerals, but the scarcity of coal prevents the full development of mining industry. Sulphur, salt, iron, and marble are the chief, though small quantities of lead, copper, zinc, silver, and borax are also obtained.

Climate.—In the south of Italy the climate resembles that of Africa, being dry and burning and subject to the sirocco. In the northern regions, the neighborhood of the Alps, and the abundance of water-courses, serve to maintain a pleasant temperature. Yet this region is at times extremely cold, especially in the interior of the great plains. In general the climate of Italy is healthy, except marshy districts such as the rice plantations of Lombardy, the Tuscan Maremma, the Campagna of Rome, and the Pontine Marshes, responsible for the spread of malarial fevers. The Riviera or coast of the Gulf of Genoa is a favorite winter resort from more northern regions.

Vegetable Products. Agriculture.—The natural productions of the soil of Italy are as various as its climate. In the Alpine regions all plants belonging to temperate climates flourish, while the southern regions possess almost a tropical flora. Agriculture forms the chief support of the population, and the land, where not mountainous, is generally productive, although the system of culture adopted is in most parts defective, and large areas remain untilled. The best cultivation, aided by an excellent system of irrigation, is found in Lombardy, Venetia, Piedmont, Tuscany, and the parts of Emilia adjoining the Po. Most kinds of cereals, including rice and maize, are cultivated, and the wheat in particular is of fine quality, but is not sufficient for the home consumption. Hemp, flax, tobacco, hops, saffron, and, in the extreme south, cotton and sugar-cane are cultivated. Fruits are the object of attention everywhere; and in the cultivation of the olive in particular Italy surpasses all other European states. The fruits include oranges and lemons in the warm regions of the south, besides figs, peaches, apricots, almonds, etc. There is a very large production of wine, but only a few of the wines have any reputation in other countries. The rearing of live-stock is an important industry. The cheese of Italy is famous, especially the Gorgonzola and the Parmesan.

Manufactures.—Since the consolidation of the Italian kingdom, the manufactures of the country have made considerable advances. The most important of these are the silk manufactures, Italy as regards the production of raw silk being in advance of all the other countries of Europe. Lombardy, Piedmont, and Venetia are the great centers for its preparation. Nearly 3,000,000 spindles are employed in spinning. The weaving is less developed. The cotton manufactures are also centered in Upper Italy, chiefly in Lombardy, and have much increased of late. Woolen manufactures are also chiefly carried on in Upper Italy. In the iron industry the department of Lombardy stands at the head; more particularly the provinces of Brescia, Como, and Milan. Tanning, the manufacture of linen, of paper, gold and silver wares, articles in bronze, musical instruments, the making of gloves, boots and shoes, felt and silk hats, are also considerable industries. The manufacture of tobacco is a state monopoly. Of special repute are the cameos and mosaics of Rome, Naples, and Florence; the filigree and coral work of Genoa; the plaited straw and the earthenware manufactures of Italy generally.

Trade.—The foreign trade is mainly with France and Algeria, Great Britain, Austria, and Germany. The chief imports are wheat, raw cotton, and cotton manufactures, coal, iron and machinery,
wool, sugar, coffee; the chief exports, raw silk, olive oil, wine, fruits, eggs, coral, hemp, marble, rice, sulphur. The principal ports are Genoa, Leghorn, Messina, Naples, Palermo, Venice, Brindisi and Catania. The total length of railways opened for traffic in 1810 was about 11,000 miles; of telegraph lines, 40,000 miles, nearly two-thirds of the whole belonging to the government.

Constitution and Government.—The constitution of the Kingdom of Italy is a limited monarchy, based upon the Fundamental Statute granted by King Charles Albert to his Sardinian subjects March 4, 1848. The king, who is hereditary, exercises the power of legislation only in conjunction with a national parliament, consisting of two chambers. The first chamber is called the senate, and is composed of the princes of the blood, and an indefinite number of members appointed for life by the king. The second chamber is called the chamber of deputies, and consists of 508 members, who are elected by a majority of all the citizens above twenty-one years of age who are in the enjoyment of civil and political rights. Each province has the right of independent administration, and the executive power is intrusted to a provincial council. In each province the power of the state is represented by a prefect, who is supported by a council. The executive power of the state is exercised by the king through responsible ministers. In 1911 the budget estimates were total revenue, $490,070,190; expenditure, $480,706,977; public debt, $2,645,000,000.

Army and Navy.—All men capable of bearing arms are under obligation of military service from their twenty-first to the end of their thirty-ninth year. Of the young men of the age of twenty-one, 80,000 are levied annually for the standing army, while the rest are entered in the army of reserve. In 1910 the strength of the standing army on the war footing was in all 1,043,000; the number unorganized but available for duty was estimated at 1,200,000, making the total for the whole military service 2,243,000. The navy was made up of 13 battle-ships and 29 cruisers, with a large number of torpedo boats and destroyers.

Religion and Education.—The Roman Catholic is the state religion, but all other creeds are tolerated, and adherents of all religions have equal municipal and political rights. The pope has his seat at Rome, and his palaces of the Vatican and the Lateran, and his villa of Castel Gandolfo, are not under the jurisdiction of the state. In 1861 the law annihilating ecclesiastical jurisdiction and the privileges of the clergy was extended to the whole of the kingdom, and in 1866 a bill was passed for the suppression (with certain exceptions) of religious houses throughout the kingdom. Elementary education is nominally compulsory, and is entirely supported from the municipal rates; but the number who can neither read nor write still remains very large. For secondary instruction there are a large number of gymnasia and technical schools, and for the higher education there are no less than twenty-one universities, many of them of ancient foundation, and at one time of considerable renown. The oldest are those of Bologna (founded in 1110), Padua (1222), Naples (1224), Rome (1244), Perugia (1230), Pisa (1329), Siena (1349), Pavia (1390), Turin (1412), and Parma (1422).

Money, Weights, and Measures.—The present monetary system of Italy is the same as that of France, the lira being equal to the franc, and divided into 100 centesimi, as the franc is into 100 centimes. The lira is accordingly equal to about 19 cents. The weights and measures of Italy have also been adopted from France, with only such modifications in their names as are necessary to give them an Italian form.

History.—The ancient history of Italy will be found under Rome. The modern history begins with 473 A.D., when Odoacer, chief of the Herulians, a German tribe which had invaded the country, was proclaimed king of Italy. After a reign of twelve years he and his followers were overpowered by the Ostrogoths under Theodoric the Great. The Ostrogoths were in turn subdued by Byzantine troops, and Italy came under the dominion of the Eastern emperors, who ruled through an exarch residing at Ravenna. In 568 the Lombards (Langobardi), a German people originally from the Elbe, led by their king, Alboin, conquered the Po basin, and founded a kingdom which had its capital at Pavia. The kingdom of the Lombards included Upper Italy, Tuscany, and Umbria, with some outlying districts. But on the northeast coast the inhabitants of the lagoons still retained their independence, and in 697 elected their first doge, and founded the republic of Venice. (See Venice.) Ravenna, the seat of the exarch, with Romagna, Rimini, Ancona, and other maritime cities on the Adriatic, and almost all the coasts of Lower Italy, remained unconquered, together with Sicily and Rome. The slight dependence of this part of Italy on the court of Byzantium disap-
peared almost entirely in the beginning of the eight century. The power of the pope, though at first recognized only as a kind of paternal authority of the bishop, grew steadily in these troubled times, especially in the struggle against the Lombard kings. In consideration of the aid expected against King Astolphus, Pope Stephen III (154) not only anointed the king of the Franks, Pepin, but appointed him patrician or governor of Rome. In return Pepin presented the exarchate of Ravenna, with the five maritime cities, to the pope, thus laying the foundation of the temporal power of the holy see. At the invitation of Pope Hadrian I, Charlemagne made war upon Desderius, the king of the Lombards, took him prisoner in his capital, Pavia (774), and united his empire with the Frankish monarchy, Italy, with the exception of the duchy of Benevento and the republics of Lower Italy, thus became a constituent part of the Frankish monarchy, and the imperial crown of the West was bestowed on Charlemagne (800). On the breaking up of the Carolingian empire Italy became a separate kingdom, and the scene of strife between Teutonic invaders. At length Otto the Great was crowned emperor at Rome (961), and the year after became emperor of what was henceforth known as the Holy Roman Empire.

During the following centuries the towns and districts of North and Middle Italy gradually made themselves independent of the empire, and either formed themselves into separate republics or fell under the power of princes bearing various titles. A large part of Middle Italy at the same time was under the dominion of the popes, including the territory granted by Pepin, which was afterwards enriched by Norman conquests. In Southern Italy there were in the time of Charlemagne several independent states. In the ninth century this part of the peninsula, as well as Sicily, was overrun by Saracens, and in the eleventh century by Normans, who ultimately founded a kingdom which embraced both Lower Italy and Sicily, and which, though it more than once changed masters, continued to exist as an undivided kingdom till 1282. In that year Sicily freed herself from the occupation of the then French by the aid of Pedro of Aragon (see Sicilian Vespers), and remained separate till 1435. It was again separate from 1458 to 1504, when both divisions were united with the crown of Spain. With Spain the kingdom remained till 1713, when Naples and Sicily were divided by the Treaty of Utrecht, the former being given to Austria, the latter to the Duke of Savoy. In 1720 they were again united under Austria, but in 1734 were conquered from Austria and passed under the dominion of a separate dynasty belonging to the Spanish house of Bourbon. See Sicilies, Kingdom of the Two.

The history of medieval Italy is much taken up with the party quarrels of the Guelfs and Ghibellines, and the quarrels and rivalries of the free republics of Middle and Upper Italy. In Tuscany the party of the Guelfs formed themselves into a league for the maintenance of the national freedom under the leadership of Florence: only Pisa and Arezzo remained attached to the Ghibelline cause. In Lombardy it was different, Milan, Novara, Lodi, Vercelli, Ast and Cremona formed a Guelf confederacy, while the Ghibelline league comprised Verona, Mantua, Treviso, Parma, Piacenza, Reggio, Modena and Brescia. Commercial rivalry impelled the maritime republics to mutual wars. At Mejorla the Genoese annihilated (1284) the army of the Pisans, and completed their dominion of the sea by a victory over the Venetians at Curzola (1298). See Pope, Genoa, Florence, etc.

Up till the time of the Napoleonic wars Italy remained subject to foreign domination, or split up into separate republics and principalities. The different states were banded to and fro by the chances and intrigues of war and diplomacy between Austria, Spain and the House of Savoy. During the career of Napoleon numerous changes took place in the map of Italy, and according to an act of the Congress of Vienna, in 1815, the country was parcelled out among the following states:—(1) The Kingdom of Sardinia, consisting of the island of Sardinia, Savoy, and Piedmont, which the Genoese territory was now added. (2) Austria, which received the provinces of Lombardy and Venetia, these having already been acquired by her either before or during the time of Napoleon. (3) The Duchy of Modena. (4) The Duchy of Parma. (5) The Grandduchy of Tuscany. (6) The Duchy of Lucca. (7) The States of the Church. (8) The Kingdom of the Two Sicilies. (9) The Republic of San Marino. (10) The Principality of Monaco. The desire for union and independence had long existed in the hearts of the Italian people, and the governments at Naples, Rome, Lombardy, and other centers of tyranny were in continual conflict with secret political societies. The leading spirit in these agitation in the second quarter of the nineteenth century was Giuseppe Massi.
Italy

who in the end contributed much to the liberation of his country. The French Revolution of 1848 brought a crisis. The population of Lombardy, Venetia, Parma, and Modena took up arms and drove the Austrian troops in retreat to Verona. Charles Albert, King of Sardinia, then declared war against Austria, and was at first successful, but his forces were severely defeated at Novara (March, 1849), when Charles Albert abdicated in favor of his son, Victor Emmanuel. Meanwhile the pope had been driven from Rome, to a Roman republic had been established under Mazzini and Garibaldi, the leader of the volunteer bands of Italian patriots. Rome was, however, captured by the French, who came to the aid of the pope (July, 1849), who resumed his power in April, 1850, under the protection of the French, and the old absolutism was restored. Similar attempts at revolution in Sicily and Naples were also crushed, but the secret societies of the patriots continued their operations. In 1859, after the war of the French and Sardinians against Austria, the latter power was compelled to cede Lombardy to Sardinia, and in the same year Romagna, Modena, Parma, and Piacenza were annexed to that kingdom, which was, however, obliged to cede the provinces of Savoy and Nice to France. In the south Sicilians revolted, and supported by a thousand volunteers, with whom Garibaldi sailed from Genoa, to their aid, overthrew the Bourbon government in Sicily. Garibaldi was proclaimed dictator in the name of Victor Emmanuel. In August Garibaldi crossed to Naples, defeated the royal army there, drove Francis II. of Jaeta, and entered the capital on September 7th. Sardinia intervened and completed the revolution, when Garibaldi, handing over his conquests to the royal troops, retired to Caprera. A plebiscite confirmed the union with Piedmont, and Victor Emmanuel was proclaimed King of Italy, thus suddenly united almost, in Mazzini's phrase, 'from the Alps to the sea.' Only the province of Venice and the Roman territory still remained outside. The former was won by Italy's alliance with Prussia, in 1866 against Austria. The temporal power of the pope was still secured by French troops at Rome, till the French garrison was withdrawn at the outbreak of the Franco-German war in 1870, when Italian troops took possession of the city in the name of King Victor Emmanuel. On June 30, 1871, the seat of government was formally removed from Florence to Rome. In 1878 Victor Emmanuel died, and was succeeded by his son, Humbert I, under whom the general history of the country was uneventful. Bank scandals drove the Giolitti ministry from office in 1893, and Signor Crispi was invited by King Humbert to form a new cabinet. In 1896, attempting to establish a protectorate over Abyssinia, the Italians were defeated with great loss, and Crispi was succeeded by Marquis di Rudini. Humbert was assassinated July 29, 1900, and was succeeded by his son as Victor Emmanuel III. Until the advent of the Young Turks in power in Turkey, the foreign policy of Italy meant Austria only; but on September 20, 1911, Italy declared war against Turkey, claiming that Italian enterprise in Tripoli had been systematically crushed. This war led the Italian troops far into the desert region of that section of North Africa, and indeed, after a year's contest, in victory for the Italian troops. In the treaty of peace, signed October 10, 1912, the extensive region of Tripoli and Cyrenaica was ceded to Italy, giving that country a hold in northern Africa which it had long coveted.

When Europe, during the early years of the 20th century, became divided into two great political alliances, that of Great Britain, France and Russia, and that of Germany and Austria-Hungary, Italy joined the latter, pledging itself to aid its allies if forced into a war of defense. In August, 1914, when the great European war began, Germany looked on Italy as pledged to come to the aid of the central empires, but the Italian government refused to be bound by the agreement, maintaining that the war which had broken out was one of offense, not of defense. Since the alliance had been made without the consent of the Italian people, the political relations of Europe had materially changed, and the sympathy of Italy lay rather with the so-called Entente powers than with the Teutonic empires. During the greater part of the opening year of the war Italy stood aloof, declining to be drawn into the struggle. But it was busy in preparation for possible hostile relations, General Cadorna, its capable chief of staff, making active military preparations, covering the training of the regular army of Italy and the gathering of military supplies for possible contingencies. More or less hostile relations had for over a century existed between Austria and Italy, the latter country maintaining that the mountain region of the Trentino and the region bordering on the seaport of Trieste belonged to Italy and had been unjustly incorporated into the Austrian empire. This sentiment was strongly felt by the Italian people, the government eventually yielded to the de-
sire of the nation, and on May 24, 1915, Italy formally declared war against Austria. The contest that followed was one of remarkable character. It was almost completely a mountain war, the battle fronts being stretched along the highest altitudes at which warfare has ever been carried on. All the advantageous positions were in prior possession of the Austrian forces, which had to be faced in their nests amid the snow-clad Alpine summits at a height of 10,000 feet above sea level. It was a powerful, well-supplied and well-organized army with which General Cadorna began this work. The Tyrolean mountain city of Trent, which dominates a region claimed as a normal part of Italy, was one of the strongholds upon which Italy centered its efforts, the other being the seaport of Trieste at the northeastern extremity of the Adriatic Sea, also claimed as former Italian territory. The war directed towards these strongholds of Austria continued for over two years, the Italian forces pushing their way northward and eastward over the mountain summits and through their valleys, the army fighting with a courage and energy that gave them a strong hold on the approaches to the points of vantage.

This vigorous forward movement of the Italian armies was of great advantage to the Entente powers, which Italy had informally joined. It held a great part of the Austrian army in the Tyrolean mountain region and deprived Germany of the aid of the latter to an important degree. Italy began her advance just at the time that the Russian army was obliged to retreat from Galicia, and Cadorna's strong army may have saved the forces of Russia from complete disaster. The same may be said of the war on the western frontier. At the time when the German attack on Verdun began Cadorna made a strenuous advance along the Isonzo River, preventing Austria from sending to the aid of the German Crown Prince the large number of troops and artillery which had been prepared for that purpose. At a later date, when the Austrians had gained a small section of Italian territory, Cadorna attacked them with such energy that it was impossible to move troops against the Russians who at this date, July, 1916, were penetrating the Carpathians in their most vigorous movement of offense. The great effort of Italy during 1917 was directed against the port of Trieste, the army pressing forward from point to point over the mountain ridges by which nature had guarded that stronghold, until it began to seem as if Austria's chief seaport was doomed and the great effort of Cadorna and his army was to lead to a vital Austrian defeat.

In November, 1917, however, the Austrians, heavily reinforced by the Germans, made a sudden assault upon the Italians, who had been demoralized by peace propaganda, and the shattered armies were compelled to retreat to the line of the Piave. General Diaz replaced Cadorna, and a new attitude of defiance swept through the ranks. Aided by detachments of French and British troops the Italians flung themselves on the Austrians with irresistible impetuosity and compelled the enemy to surrender. The armistice with Austria-Hungary was signed November 3, 1918. Italy had a million casualties, and her war expenditure was 812,000,000,000.

As a result of the war Italy gained a large section of territory formerly held by Austria-Hungary (see Treaty), all of the Irredenta (q.v.) being reclaimed, including Trieste and the Trentino. D'Annunzio (q.v.) took Fiume by a coup.

**Italy, Literature of.**—The Italian language is one of the Romance tongues, or tongues derived from the Latin, and is therefore a sister of French, Spanish, and Portuguese. It is derived not from the literary language of Rome as we know it, but from the old popular dialect or *Lingua Romana rustica*. German races contributed words to its vocabulary. Latin kept its place so long here in its natural home that the new popular speech was slow to develop; and in fact the earliest literary products of Italy are poems written in the Provençal and French languages. But about the close of the thirteenth century native poets arose, who indeed imitated the Provençals as to the form of their compositions, but wrote in their own language. Among the most important of these early poets is the Florentine, Guido Cavalcanti (died 1300), who contributed much to the development of Italian language and poetical style. But the great luminary of this period, and by far the greatest poet of the thirteenth century, was Dante (1265-1321). (See Dante.) In Italian prose the oldest book is Ristoro d'Arezzo's *Composizione del Mondo*, written about the middle of the thirteenth century. In this department Dante also takes a high place with his *Vita Nuova*, and *Convivio*. Francesco Petrarca (Petrarch, 1304-74), another of the great lights of Italian literature, exhibits in his sonnets and canzoneti a vein less profound and transcendental than Dante's, but more humanly tender and passionate. Boccaccio (1313-75), a writer of great erudition and fertility, who produced classical translations, biographies, poems, etc., is Italy's first great story teller. He is the master of the ornate classical style in prose to which he first gave high artistic form. His great work
In the Decamerone, a collection of a hundred tales. Among the other productions of the 13th century, the historical works of Giovanni Villani and Dino Compagni, the latter of great value, though doubtful authenticity, the travels of Marco Polo, and the letters of St. Catherine of Siena. Among the comic poets of the time are Bindo Bonichi, Cecco Nucoli, Andrea Orgagna and Antonio Pucci.

During the fifteenth century the intellectual energy of Italy was almost entirely absorbed in the study of the ancient classics. This period is known as the Renaissance, or the revival of arts and letters. Italy had at this time become wealthy by commerce, and was enjoying comparative peace. Her cities were full of learned Greek refugees from Constantinople; many of her states were full of families such as those of the Medici at Florence, the Este in Ferrara, the Gonzaga in Mantua, whose names are identified with the most munificent patronage of learning and art. In the midst of this classical enthusiasm there was some danger of the national literature and language being neglected, but towards the end of the century Italian literature revived with the Canto di Nasciuto of Lorenzo de' Medici and Ballate of Poliziano, the chivalrous epic Orlando Innamorato of Bandello, the Morgante Maggiore of Luigi Pulci, and the Mambriano of Francesco Bello (Cieco of Ferrara).

During the first half of the sixteenth century the Renaissance movement perfected itself in every kind of art. In history the most noted names are Machiavelli (1469-1527), and Francesco Guicciardini (1482-1540). Among the great poets of the period are Lodovico Ariosto (1474-1533), author of Orlando Furioso, a romantic epic, written in continuation of the Orlando Innamorato of Bandello, and Torquato Tasso (1544-95), whose Gerusalemme Liberata is Italy's chief heroic poem. Among the lyricists of this century we may mention Guidiccioni di Lucca, Pietro Bembo, Michelangelo Buonarroti, and Vittoria Colonna. Berni, Cammelli and Grazzini deserve mention among humorous and burlesque writers, and Bandello among story tellers. Better known, however, are Giorgio Vasari (1512-74), himself an eminent painter, but more celebrated as a delightful gossip on art and artists: Benvenuto Cellini (1500-70), the famous artist in metal, whose autobiography is one of the most instructive lights on the spirit and manners of the age, and Giordano Bruno (1550-1600), a bold speculative and unshackled champion of liberty of thought. In the period which followed poetical and imaginative literature degenerated into mannerism and affectation. Of exceptional power was Alessandro Tassoni (1565-1635), who wrote the Socchia Rapite, a burlesque epic, and unquestionably the most important poetical production in Italian of the seventeenth century. Salvator Rosa, also, better known as a painter, wrote satiric verse of some merit. But the most eminent names of this period are those of scientific and philosophic writers. Among the former are Galileo Galilei (1564-1642), Torrielli (1588-1647), Viviani (1622-1703); among the latter are Tommaso Campanella (1568-1639), and Giambattista Vico (1668-1744). Among historians the names of Sarpi, Davila, Bentivoglio, and Pietro Giannone deserve mention. Towards the end of the century two schools of poetry arose, which was mainly a reaction against the existing turpitude and affected style. The Academy of Arcadia was instituted (1690) to promote simplicity of style and the choice of simple pastoral subjects. The Arcadian produced no considerable poet, the chief names being Crescimbeni, Gravina, Frugoni and Zappi.

About the middle of the eighteenth century a complete revolution took place in Italian literature, which was preceded and accompanied by a general elevation of public life. The influence of English and German literature began to communicate a more healthy tone to the national literature. Gasparo Gozzi (1715-96) in the periodical L'Osservatore, and Giuseppe Baretti in a journal called the Frasita Letteraria, contributed perhaps more than any others, by their forcible and lively satire, to bring about this improvement. In dramatic literature the libretti of Pietro Trapassi (1699-1762), better known by his assumed name of Metastasio, had considerable merit, though tending to over-refinement of sentiment and expression. In 1713 Scipione Maffei, celebrated also as an archaeologist, produced the tragedy of Mercury, highly landed at that time. But the two great names in the Italian drama are, in comedy, Carlo Goldoni (1512-74), and in tragedy, Vittorio Alfieri (1749-1803).

Towards the end of the century the writings of the publicists, Gaetano Filangieri and Cesare Palizzi, indicated the growth of a social science under the cover of treatises on legislation and penal laws.

From the intellectual and political ferment which arose about the beginning of the nineteenth century Italy in particular received a much-needed stimulus. In poetry Ugo Foscolo (1778-1827), though following classical models and
traditions, writes with the force and novelty of a new epoch. Vincenzo Monti (1754-1838), had a rich poetic vein and a facile talent. Giambattista Niccolini (1781-1861), another poet of the same school, espoused liberal ideas and opened a new path to Italian tragedy. The historians of the period were Carlo Botta (1766-1837), and Pietro Colletta (1775-1851). Alessandro Manzoni (1785-1873) has given Italy a few lyrics of the first rank, but his greatest work was I Promessi Sposi, a historical novel, eminently realistic in style, with powerful objective creation of character. A place almost equally high is held by Giacomo Leopardi (1798-1837), the greatest lyric poet since Dante, and one of the most perfect writers of prose. The historicopolitical writings of Vincenzo Gioberti (1801-52), and Giuseppe Massini (1805-72) contributed powerfully to stimulate national feeling. After the year 1850 political literature became less important. The dominating figure of this later period was Giosefo Carducci (1835-1907), who upheld the Romantic and, who, though so great as a poet, was also a distinguished critic and historian. Other poets are Chiariini, Guoli, Graf, Massini, Marradi, Paccoli, Panzacchi, Guerrini (Lorenzo Stocchetti), Ada Negri, Baccelli and Rapisardi. The dramatists include Cossa, Testa, Martini, and Ferranti, representing the older schools, and Giacomo and Rossetta, representing the modern. Gabriele d'Annunzio (born 1848), who has produced extraordinary works not only in drama but in poetry and fiction, may be said to represent the literary aspirations of young Italy. Guglielmo Ferrero (born 1872), is widely known as a historian, and Edmondo de Amicis (1846-1906), as a writer of philosophy, travels and fiction.

**Ithaca Lake.** See Mississippi River.

**Ithaca** (ith'aka), now Thiaiki, one of the Ionian Islands, on the west of Greece, between the mainland and Cephalonia, 17 miles long, and not above 4 broad. It is rugged and uneven, and divided into nearly equal parts, connected by a narrow isthmus. The inhabitants are industrious agriculturists and mariners, and build and fit out a considerable number of vessels. They seem to be of pure Greek race, and the women are famed for their beauty. Ithaca was the royal seat of Ulysses, and is minutely described in the Odyssey. Schliemann has recently made important excavations, and has identified several sites mentioned by Homer. Vathi, the modern capital, trades largely in oil, wine, raisins, and currants, and has a pop. of about 6000; that of the island is about 13,000.

**Ithaca,** a city, county seat of Tompkins Co., N.Y., in the beautiful Finger Lakes Region, at the head of Cayuga Lake. It is the seat of Cornell University (q. v.); Ithaca Conservatory of Music; Cascadilla School. It is a terminal of the State Barge Canal and has silk, steel, stone, paper, and other industries. Pop. (1910) 14,802; (1920) 17,004.

**Ito,** Prince Hidemitsu, a Japanese statesman, born in 1841. After visiting Western countries he became an active reformer, and was minister in 1862. This position he had occupied four times when he resigned in 1901. He was the father of the present Constitution of Japan, and played a leading part in many great reforms. After the war with Russia he was given the task of converting Corea, into a Japanese province, and as part of this duty he compelled the Corean king to sign away his sovereign rights, thus winning the hatred of the Coreans. In 1907 he was raised to the dignity of Prince and in 1906 recalled to become president of the privy council. While in Harbin he was assassinated by a Corean, on October 26, 1909.

**Ito,** Count Yoko, a Japanese naval commander, born in Satsuma province in 1843. He became rear-admiral in 1886, and admiral in 1898. He was in command of the combined Japanese squadrons in the great battle of the Yellow Sea, September 7, 1894, and did much to bring the war with China to a happy close. For his services in the war he was created a viscount and appointed chief of the naval general staff, a part which he held during the Russo-Japanese war. He died January 14, 1914.

**Itri,** (Stré), a town of South Italy, in the province of Caserta, 6 miles N.W. of Gaeta, on a hill. Pop. 5677.
Iru (ɪˈtuː), Hitu', or Yutu, a town of Brazil, province of São Paulo, on the Tiete. Pop. 10,000.

Iturœ, Iturœ (ɪˈtuːrɛ), a district in central Palestine, stretching northeastward from Mount Hermon.

Iturbide (ɪˈtuːrˈbɪd), Augustín de, a distinguished Spanish-American, born at Valladolid, in Mexico, in 1787. On the breaking out of the revolutionary troubles in Mexico he joined the royalist party, and displayed such valor and ability that in 1813 he rose to the chief command of the army, but latterly went over to the other side, quickly bore down all opposition, and became so popular that he proclaimed himself Emperor of Mexico in 1822. His reign was one of trouble, and came to an end in less than a year, by his abdication. Congress granted him a yearly pension on condition of his leaving the country, and he resided in Leghorn about a year, when he made an attempt to recover the crown. He landed with but a single attendant, and was arrested and shot in 1824.

Itzhoe (ɪˈtsɛ-hoʊ), a town of Prussia, in Schleswig-Holstein, in a valley enclosed by wooded hills, on the Stór, 32 miles northeast of Hamburg. It is the oldest town in the duchy, being founded by Charlemagne in 806. Pop. 15,649.

Iulus (ɪˈluːs), a genus of Myriapoda, order Chilognatha, including worm-like animals known as millipedes, allied to the centipedes.

Ivan (ɪˈvæn), or Ivan, the name of several rulers distinguished in Russian history.—Ivan III (or I), grand-prince of Moscow, was born in 1440; ascended the throne in 1462; died in 1506. He greatly enlarged his hereditary possessions, and married Sophia, niece of the last Byzantine emperor, thus introducing the double-headed Byzantine eagle into the Russian coat of arms. He was the first that bore the title of Czar of Great Russia, and proclaimed the unity and the indivisibility of the Russian dominions.—Ivan IV (or II), grandson of the former, was born in 1530; succeeded in 1534, was crowned in 1547; died in 1584. His atrocities gained him the name of The Terrible. Yet he did much to civilize and improve his people, introduced learned men artists and mechanics into Russia, and concluded a commercial treaty with England. He killed his eldest son in a fit of rage.

IvanoVo (ɪˈvənə-və), a town of Russia, government of Vladimir, an important center of the Russian cotton manufacture, and hence styled 'the Russian Manchester.' Pop. (1912) 167,720.

Ivies (ɪvəz), St., a seaport town of England, in Cornwall, picturesquely situated on St. Ives Bay, 18 miles W.N.W. from Falmouth. Pop. 7,179.

Ives (ɪvəz), Frederick Eugene, an American inventor especially noted for his work in photography, born at Litchfield, Conn., Feb. 17, 1856. He has invented processes in halftone, photogravure, orthochromatic photography, and color photography.

Iviga (ɪˈvɪgə; ancient Ebānas), an island of the Mediterranean belonging to Spain, 52 miles from Majorca, one of the Balearic Islands; area, 190 square miles; pop. 25,506. It is fertile, producing corn, wine, oil, fruit, etc. Salt forms, with fish and wood, the chief export. The capital is of the same name, and has a good harbor. Pop. 23,524.

Ivory (ɪˈvuːr), the osseous matter of the tusks of the elephant, and of the teeth or tusks of the hippopotamus, walrus, and narwhal. Ivory is esteemed for its beautiful white or cream color, its hardness, the fineness of its grain, and its susceptibility of a high polish. That of the African elephant is most esteemed by the manufacturer for its density and whiteness. It is used as a material for knife-handles, pianoforte keys, etc. The ivory of the hippopotamus is preferred by the dentist, being free from grain and much harder and of a purer white than that of the elephant. The shavings and sawdust of ivory may by burning be converted into a black powder, used in painting, named ivory black. Ivory may be stained or dyed; a black color is given it by a solution of brass and a decoction of logwood; a green one by a solution of verdigris; and a red by being boiled with Brazil wood in lime-water. The use of ivory, chiefly for ornamental purposes, was well known in early ages. Among the Greeks it was employed for statuary purposes, etc. The medium weight of an elephant's tusk is 60 lbs., but some are found weighing 170. Ivory is an important article of African trade, and the number of elephants annually killed must be great; indeed, the extermination of this noble animal is only a question of time.

Ivory, Vegetable. See Ivory-palm.

Ivory-black, a fine kind of soft black pigment, prepared from ivory dust by calcination, in the same way as bone-black. See Bone-black.

Ivory Coast, part of the coast of Guinea, between Cape Apollonia and Cape Palmas. The eastern portion of it belongs to Britain.
Ivory-nuts. See Ivory-palm.

Ivory-palm (*Phyteléphas macrocar-
ca*), a low-growing, palm-
lke plant, order Pandanææ, native of
the warmer parts of South America. It
has a creeping caudex or trunk, terminal
pinnatifid leaves of immense size, male
and female flowers on different plants,
and fruit in the form of a cluster of
drupes, weighing about 25 lbs. when ripe.
Each drupe contains 6 to 9 seeds, as
large as a hen's egg, the albumen of
which when ripe is close-grained and very
hard, resembling the finest ivory in tex-
ture and color. It is therefore often
wrought into buttons, knobs for doors or
drawers, umbrella handles and other
articles, and is called Vegetable Ivory.
The seeds are also known as Corozo-
nuts, and are imported in considerable
quantities.

Ivrea (iv-rä'ä), a town of North Italy,
province of Turin, picturesquely
situated on the Dora Baltea, with a
cathedral, said to have been founded in the
5th century on the site of a heathen
temple. Pop. 11,600.

Ivry-la-Bataille (iv-raj-lä-ba-
d-a'ye), a village in
France, 40 miles w. of Paris, where a
battle was gained by Henry IV in 1596
over the forces of the League.

Ivry-sur-Seine (iv-raj-sor-
sen'), a town of France, on
the Seine, 3 miles s. s. e. from Paris.
It has a fine church, the remains of an old
castle, asylum for lunatics, various manu-
factures, and extensive wine cellars
hewn out of the rock. Pop. 35,455.

Ivy (i'vi), a climbing plant of the genus
Hedera (H. Helix), nat. order
Araliææ. The leaves are smooth and
shining, varying much in form, from oval
entire to three and five lobed; and their
perpetual verdure gives the plant a beau-
tiful appearance. The flowers are green-
lish and inconspicuous, disposed in globose
umbels, and are succeeded by deep green
or almost blackish berries. H. Helix
(the common ivy) is found throughout
parts of Asia and Africa. It is plentiful
almost the whole of Europe, and in many
in Britain, growing in hedges, woods, on
old buildings, rocks and trunks of trees.
A variety, called the Irish ivy, is much
cultivated on account of the large size
of its foliage and rapid growth. Several
varieties of Ivy are grown in American
gardens. The Ivy attains a great age,
and becomes several inches thick. The
wood is soft and porous, and when cut
into very thin plates may be used for
filtering liquids. In Switzerland and the
south of Europe it is employed in making
various useful articles. The ivy has been
celebrated from remote antiquity, and
was held sacred in some countries, as
Greece and Egypt. Its medicinal prop-
erties are unimportant. Chinese ivy
(*Parechites Thunbergii*) is a climbing
shrub with privet-like leaves and sweet-
scented flowers.

Ixia (iks'-i-a), a genus of plants of
the Irid family, natives of the
Cape of Good Hope, and prized for their
large and showy flowers.

Ixion (iks'-i-on), in Greek mythology,
king of the Lapithæ in Thessaly,
who for his wickedness was punished in the
infernal regions by being tied to a
perpetually revolving fiery wheel.

Ixmiquilpan (es-mik-ë-kwîl'pan), a
town of Mexico, State
of Hidalgo, 80 miles north of the city of
Mexico, with silver mines in its neigh-
borhood. Pop. about 12,000.

Ixodes (iks'-ô-des), the 'Ticks'
(which see).

Ixtle (iks'-tâl), a Mexican fiber, probably
the production of a species of the
pineapple family.

Izdbar (iz'dö-bâr), a hero of early
Babylonia, possibly a real
personage, but converted into a deity and
worshiped. In the cuneiform inscrip-
tions feats similar to those of Hercules
are ascribed to him.

Izucar (iz-so-kâr'), a town of Mexico,
90 miles southeast of the cap-
ital, at the base of Popocatepetl, the cen-
ter of a rich sugar region. Pop. about 9000.
J, the tenth letter in the English alphabet, and the seventh consonant. The sound of this letter coincides exactly with that of ʧ in genius. It is therefore classified as a palatal, and is the voiced sound corresponding to the breathed sound ʧ (as in church). The sound does not occur in Anglo-Saxon, and is introduced through the French. As a character it was formerly used interchangeably with ʤ, and the separation of these two letters in English dictionaries is of comparatively recent date.

Jaal-Goat (ja'alk-gōt; Capra Jaala), a species of goat found in Egypt, Abyssinia and Mount Sinai.

Jabalpur (ja'bal-pûr), Jubbulpore, a town of Hindustan, capital of Jabalpur district, Central Provinces, a modern town with wide and regular streets, an important railway station and center of trade, situated amid rocks at an elevation of about 1500 feet above the level of the sea. It has a school of industry, in which large quantities of tents and carpets are made. Pop. 110,030. The district has an area of 3918 sq. miles, a pop. of 687,233. A division or commissionary of the Central Provinces has also the same name. It has an area of 18,088 sq. miles; a pop. of 2,201,636.

Jabiru (ja'bir-u), a name of wading birds of the crane kind, resembling the stork, and inhabiting South America, Africa and Australia.

Jaborandi (ja-bo-ra'ndi), a powerful drug obtained from the leaves and root of one or more plants of the genus Pilocarpus, order Rutaceae, natives of Brazil. It causes a great increase of the saliva and profuse perspiration.

Jacamar (jak'a-mâr'; Gałbûga), a genus of brilliant birds nearly allied to the kingfishers, differing however by the form of their beak and feet. They live in damp woods, and feed on insects. Most, if not all, are natives of tropical America.

Jacana (jak'a-na), the common name of gratorrallar or wading birds of the genus Parra, having long toes with very long nails, so that they can stand and walk on the leaves of aquatic plants when in search of their food, which consists of worms, small fishes, and insects. They inhabit marshes in hot climates, and somewhat resemble the moorhen, to which they are very closely allied.

Jacaranda (jak'a-ran'da), a name of several South American trees, nat. order Leguminosae, yielding the fancy woods known as violet-wood, king-wood, and tiger-wood. A genus of Long-tailed Jacana (Parra serrata). Brazilian tree is also called Jacaranda, and some species of it yield rosewood. It belongs to the nat. order Bignoniaceæ.

Jacare (ja-kâ'râ), a species of Brazilian alligator, Jacare or Alligator sclerops.

Jacitara-palm (ja-sî-ta'ra-pâm; Desmoncus macrocanthus), a palm found in the forests of the lowlands of the Amazon district in South America. It has a slender flexible stem, often 60 or 70 feet long.

Jack (jak), from Fr. Jacques, James, which being a very common personal name in France, came to stand for any common fellow or menial, and was substituted for the equally common English name John. Hence its application is such terms as boot-jack, smoke-jack, roasting-jack, etc., and also in several senses alone, as to the knaves in a pack of cards, the small bowl aimed at in a game of bowls, and a small pike as opposed to the full-grown fish. There are also such uses as Jack-of-all-trades, Jack-knife, Jack-fool, Jack-ass, Jack-pudding, etc.; also a jack is an apparatus for raising great weights by the application of strong screws. The flag called a jacks
is strictly one displayed from a staff on the end of the bowser. See Union Jack.

Jack, or JACA (Artocarpus integrifolius), a tree of the bread-fruit genus, a native of India. The fruit grows to a larger size than the bread-fruit, often weighing more than 30 lbs.; but it is not so palatable.

Jackal (jak'kal), an animal of the dog genus (Canis aureus), resembling a dog and a fox, a native of Asia and Africa. The general color is a dirty yellow. The jackal is gregarious, hunting in packs, rarely attacking the larger quadrupeds. They feed chiefly on carrion, and are nocturnal in habits. The jackals interbreed with the common dog, and may be domesticated. The common jackal is the most widely distributed. The jackal follows the trail of the larger carnivora as they roam the country for prey, in the hope of securing some share of the creatures which they destroy or wound. It has been called the Lion's Provider by reason of its companionship with the larger animal. As a matter of fact the lion is the jackal's provider often times. The black-backed jackal (C. mesomelas) is an inhabitant of South Africa and abounds in the Cape Colony, Union of South Africa; sometimes called the Cape jackal. It is similar in size to the common jackal, but is distinguished from that animal by the mottled black and white spots on its back. Jackals are hunted with foxhounds and greyhounds in some parts of India.

Jackass, laughing. See Laughing.

Jack-boot, large boots reaching above the knee, used by horsemen (military and other) as a sort of protection for the legs.

Jackdaw (jak'daw; Corvus monedula), common European bird of the crow family, smaller than the rook, having a comparatively short bill and whitish eyes; hinder part of the head and neck of a grayish color, back and wings glossy black. The average length is about 12 inches. The nests are built in towns, spires, and like elevated situations, and often in towns. The eggs, from five to six, are of a greenish color. Its food consists of worms, insects and larves. Like the rooks, they are gregarious. They are readily domesticated, and may be taught to pronounce words distinctly.

Jack-in-the-Pulpit, the popular name given to a species of Arum, common in wet woodlands in the United States. The name comes from its erect spathe, standing within the long sheath of its perioles. The fruit is bright scarlet berries.

Jack-Rabbit, or jackass, rabbit, a large rabbit (Lepus calotis) of the Western United States. It has very long ears and its gait is a series of long leaps.

Jackson, a city, county seat of Jackson county, Michigan, 16 miles west of Detroit, on the main line of the Michigan Central Railroad; an important railroad center, with eight railroad divisions radiating in all directions. Its largest industries include manufactures of automobiles, auto parts, agricultural implements, corsets, machinery, etc. Pop. (1910) 31,433; (1920) 48,374.

Jackson, the capital of the State of Mississippi, on Pearl River, 180 miles N. of New Orleans, in an extensive cotton-growing region. It is a railroad center and has important industries including cottonseed-oil mills, iron foundries, lumber and wood-working mills, etc. It has the Capitol building, governor's mansion, Millsap College (M. E.), and Bellhaven College for women. Pop. (1910) 21,262; (1920) 22,817.

Jackson, a city, county seat of Jackson Co., Ohio, 44 miles N. E. of Portsmouth, on Baltimore & Ohio and other railroads. Coal and iron are largely mined and there are iron furnaces, railroad shops, etc. Pop. (1920) 5842.

Jackson, a city, county seat of Madison Co., Tennessee, on Forked Deer River, 78 miles N. E. of Memphis. It has various industries, and ships thousands of bales of cotton annually; also has large grain and truck interests. It is the home of Union University and Memphis Conference Female Institute. Pop. (1910) 15,779; (1920) 18,690.

Jackson, Andrew, soldier and President, was born in the border region of North and South Carolina, in 1767, of Irish ancestry. In his 14th year, during the war of the Revolution, he joined a regiment of volunteers to fight in the cause of independence. After losing two brothers in the struggle and himself receiving a severe wound, he left the military service and engaged in the study of law, removing in 1788 to Nashville, Tennessee, when he began practice. He took part in framing the Constitution of Tennessee, was elected to the United States Senate in 1797, and resigned and became a judge in the Supreme Court of Tennessee in 1798. When, in 1812, war was declared against England, he was made major-general of the Tennessee militia and in 1813 marched against the Creek Indians, then
Jackson

in serious revolt, and completely defeated them. He was subsequently ordered to the defense of New Orleans against the British invasion of 1814, and in 1815 repulsed the invading forces with great loss. In 1817-18 he fought against the Seminole Indians of Florida, worsted them, and in 1821 was made governor of Florida, which Spain had sold to the United States. He was elected United States Senator again in 1823, and ran for President in 1824. Though he had the largest vote, he failed to obtain a majority over the other candidates, and lost the election by the vote of the House of Representatives. He was elected in 1828 and again in 1832, and in 1836 had Martin Van Buren elected by his influence. An honest and upright man, he was dictatorial and obstinate, and his career was sullied by several acts of undue severity. In 1837 he retired to his estate in Tennessee and died there on June 8, 1845.

Jackson, Charles Thomas, scientist, was born at Plymouth, Massachusetts in 1806, and was graduated at Harvard Medical College in 1823. He was appointed State geologist of Maine in 1836 and of New Hampshire in 1840, and published reports on their geology; also Mineralogy and Geology of Nova Scotia. He claimed to have been the first to point out, in 1832, the applicability of electricity to telegraphy, and also to have been the original discoverer of anaesthetics. He received for this the Montegau prize of 2500 francs from the French Academy of Sciences in 1852. He died in 1880.

Jackson, Helen Hunt, authoress, was born at Amherst, Massachusetts, in 1831; died in 1885. She married a Mr. Hunt, who died in 1863, and married Mr. Jackson. Removing to Colorado Springs, Colorado, she became warmly interested in the treatment of the Indians by the government, and strove earnestly to better their condition. She was appointed in 1883 to investigate the condition of the Indian Indians of California, and studied the history of the early Spanish missions. She wrote on the Indian subject A Century of Dis- honor, also Verses by H. R., Bits of Talk, etc.

Jackson, Thomas Jonathan, better known as Stonewall Jackson, a general in the Confederate army, born in 1824 in Virginia. In 1842 he entered the military academy at West Point as cadet. Four years later he received a second-lieutenant's commission, and was engaged in the Mexican war, and for his gallantry was made a captain, and afterwards raised to the rank of major. In 1851 he resigned his commission and was appointed professor of mathematics and artillery tactics in the military institute at Lexington, Virginia. On the outbreak of the Civil war, in 1861, he entered the Southern army with the rank of brigadier-general. He commanded the reserve at Bull Run, and acquired his cognomen of 'Stonewall' by the firmness of his troops and his own coolness in the heat of the action. By the end of the year he was made major-general. In June, 1862, he repelled Fremont at Cross Keys, and routed McDowell near Port Republic. He took a leading part in the second battle of Bull Run, captured Harper's Ferry in September, during Lee's March to Antietam, and was prominent in the subsequent battle of Antietam. He also took part in the battle of Fredericksburg and the victory at Chancellorsville was largely due to him. He was wounded inadvertently by his own men in this battle, and died May 10, 1863. He was a man of indomitable energy and deep religious feeling, and was regarded as a soldier of remarkable ability, greatly aiding General Lee by his daring and brilliant movements.

Jackson, William, an English musical composer, born in 1730; died in 1803. Having studied music in London, in 1777 he was made organist of the cathedral in his native city, Exeter, where he passed the rest of his life. His musical compositions, especially his songs and duets, are still justly popular, and are distinguished by chasteness of conception, ingenuity and truth of expression.

Jacksonville, a city of Florida, capital of Duval county, on the St. John's River, about 26 miles from its mouth. The river is navigable for steamboats 200 miles farther up. Jacksonville is the largest city and the center of commerce for Florida, while its mild winter climate has made it a popular place of resort. It has a large trade in naval stores, lumber, etc., and has shipyards, engineering works, iron-foundries, and various other industries. It has steamship communication with northern ports. Pop. (1910) 57,999; (1920) 91,563.

Jacksonville, a city of Illinois, on the Mississippi River, a fertile prairie, near a small affluent of the Illinois River. It has been called the 'Athens of the West,' and is distinguished for the elegance of its public buildings, and for the number of its educational and charitable institutions, among which are the Illinois College, the State asylums for the blind, the insane and the deaf and dumb. It has
large woolen mills, cigar factories, plan-
ing mills, etc. Pop. (1920) 15,713.

Jacob (já'kúb), the son of Isaac, and
the grandson of Abraham, the
last of the Jewish patriarchs, and the
true ancestor of the Jews. Having craft-
ily obtained from the blind and infor-
m Isaac the blessing of the first-born in
place of his brother Esau, he was obliged
to flee from the anger of his brother, and
took up his abode with his uncle Laban.
Here he served twenty years, and ob-
tained Leah and Rachel as his wives.
On his return to Canaan he was met by an
angel, with whom he wrestled all night,
and having gained the victory was there-
after named Israel, that is, the hero of
God. Hence the Hebrews from him are
called Israelites. A severe blow to him
in his old age was the loss of his favorite
son Joseph, whose brothers had sold him
to Ishmaelite merchants, and led Jacob
to believe that he had been devoured by
wild beasts. Joseph subsequently became
the highest officer at the court of Pharaoh
in Egypt, and thus was the means of
bringing the whole house of his father to
that country. Jacob died, aged 147 years,
approximately about 1800 B.C., and ac-
cording to his wish was buried in the
tomb of Abraham, before Mamre in
Canaan.

Jacobabad (já-kób-á-bád'), a town of
Hindustan, the military
and civil headquarters of the Upper Sind
frontier district, Bombay. Pop. 11,552.

Jacobean Architecture, a term
applied
to the later style of Elizabathian archi-
tecture from its prevailing in the time
of James I (L. Jacobus, James). It
differed from the pure Elizabethan chiefly
in having a greater admixture of debased
Italian forms.

Jacob (já-kób'), FRIEDRICH HEIN-
rich, a German philosopher,
born in 1743; died in 1819. He first en-
gaged in commerce, but quit business on
receiving a public appointment. He
formed acquaintance with many of the
most eminent literary men of the day, in-
cluding Goethe, Wieland and Herder. Sub-
sequently he was made president of the
Bavarian Academy at Munich, retiring in
1813. His views had some analogies
with those of Hamilton and the Scotch
school. Thought, he affirms, cannot ex-
plain facts but only connect them. The
existence of objects that affect us cannot
be demonstrated, but we are directly con-
vinced of their existence in the act of per-
ception. The knowledge of God is pres-
ent to us through the heart in virtue of
the divine spirit within us, which comes
directly from God. His most noted works
are the philosophic novels, Alteville's Brief-
sammlung and Woldemar; a work on
the doctrine of Spinoza, in Letters to
Moses Mendelssohn; David Thun über
den Glauben, on Idealism and Realism.

Jacobins (ják'ú-binz), the most fa-
mous of the clubs of the first French revolution. When the states-
general assembled at Versailles in 1789,
it was formed and called the Club Bréton.

Jacobean Architecture.—Waterston Hall, Dorset.

On the removal of the court and national
assembly to Paris it acquired importance
and rapidly increased. It adopted the
name of Société des Amis de la Constitu-
tion, but as it met in a hall of the former
Jacobin convent in Paris, it was called
the Jacobin Club. It gradually became
the controlling power of the revolution,
and spread its influence over France,
1200 branch societies being established
before 1791, and obeying orders from the
headquarters in Paris. In 1791 the pub-
lication of the Journal de la Société des
Amis de la Constitution increased the
zeal and number of the societies. The
Jacobins were foremost in the insurrec-
tionary movements of June 20 and Au-
gust 10, 1792: they originated the for-
midable commune de Paris, and changed
their former name to Les Amis de la
Liberté et de l'Égalité. For a while
they ruled supreme, and the Convention
itself was but their tool. Robespierre
was their most influential member; they
ruled through him during the Reign of
Terror, and were overthrown after his
downfall in 1794. In that year the Convention forbade the affiliation of societies; the Jacobin Club was suspended and its hall was closed. The term Jacobin is now used in Britain to designate anyone holding extreme views in politics.

Jacobites (ják-ū-bitz), a party in Britain (so styled from Lat. Jacobus, James), who after the revolution in 1688 continued to be the adherents of the deposed King James II and his posterity. In Ireland they were soon put down by conquest. In England the revolution was accomplished with the apparent consent of all parties; but in a year or two the Jacobite party gained considerable influence, and continued to dislike the government of William throughout his reign. After the accession of Anne and the death of James their efforts slackened for a time; but towards the close of her reign they revived. Bolingbroke and Oxford, with others of the Tory ministers of Anne, were in treaty with the son of James II, and either really or preternaturally negotiated for a restoration. On the arrival of George I broke out in Scotland, supported by a more insignificant rising in the north of England. The failure of both these movements damped the enthusiasm of the English Jacobites, but in Scotland the party maintained its influence until the outbreak of 1745 put an end to its political importance, though some ultra-Jacobites did not think themselves justified in transferring their allegiance to the house of Brunswick till the death of Cardinal York, in 1807.

The hopes and wishes of the Jacobites found expression in many beautiful songs, which form an interesting portion of the national literature.

Jacobites, Monophysite Christians in the East, who were united by a Syrian monk, Jacobus Bardai (575) during the reign of Justinian, into a distinct religious sect. The Jacobites, so styled from their founder, consist of about 30,000 or 40,000 families, and are governed by two patriarchs, ap pointed by the Turks, with the title of the Patriarch of Antioch, who, under the style of Patriarch of Jerusalem, has his seat at Diarbekir; his other resides in a monastery near Mardin, under the style of Patriarch of Adz. Circumcision before baptism and the doctrine of the single nature of Christ (hence their name Monophysites) are common to them with the Copts and Abyssinians; but in other respects they deviate less than the other Monophysites from the discipline and liturgy of the orthodox Greek Church.

Jacob’s Ladder (Polemonium caeruleum), a herbaceous perennial plant, common in the center and south of Europe and found in the temperate parts of Asia and North America. It has a smooth stem about 2 feet high, and a terminal panicle of bright blue (sometimes white) flowers. Great medicinal virtues were once ascribed to it, but all now found in it is a slight astrigency.

Jacquard (zhāk-ār), Joseph Marie, the inventor of the famous machine for figured weaving named after him, was born at Lyons in 1752. His parents were silk weavers, and he learned the same trade. After a long period of hardship, during which he shared in some of the campaigns of the revolution, he made his name famous by the invention of his new loom, which was publicly exhibited in 1801. He endeavored to introduce it into general use in Lyons, but was mobbed, and all but lost his life. Ultimately, however, his invention was bought by the French government, and he was able to spend the latter part of his life in comfortable independence. The subsequent prosperity of Lyons is largely attributable to his invention, and a more enlightened generation erected a statue to him on the very spot where his loom had been destroyed by the mob. He died in 1834.

Jacquard Loom, a form of loom, the characteristic of which is a contrivance appended to it for weaving figured goods in various colors. See Wearing.

Jacquerie (zhāk-rē), the name given to the rising of the French peasantry against their lords in the middle of the fourteenth century after the battle of Poitiers. They committed great devastations and outrages, particularly in the northeast of France. They were at length quelled by Captal de Buch and Gaston Phébus, count of Foix. The term Jacquerie is derived from Jacques Bonhomme, a familiar epithet for a peasant.

Jactitation of Marriage, in the common law, a boasting or giving out by a party that he or she is married to another, whereby a common reputation of their marriage may follow.

Jade, or Yahde (yā’dě), a small strip of coast territory belonging to the Prussian province of Hanover, but locally in the grand-duchy of Oldenburg, at the entrance of Jade Bay. It was acquired by the Prussian government for the purpose of constructing a naval port and shipyard, and here has grown up Wilhelmshaven (which see).
Jade (jād), an ornamental stone, also called nephrite, a native silicate of calcium and magnesium, usually of a color more or less green, of a resinous or oily aspect when polished, hard and very tenacious. It has been used by rude nations for their weapons and implements, and has been and is highly prized for making carved ornaments in China, New Zealand, and among the native races of Mexico and Peru. Jade celts or axes are common among uncivilized races, and prehistoric specimens have been found in Europe, though the stone itself is not found there. A similar stone, more properly called jadeite, is frequently confounded with jade proper. It is a silicate of aluminum and sodium.

Jañ (jā'ñ), a picturesque town of Andalusia, Spain, capital of the province of Jaen, on the Jaen, a tributary of the Guadalquivir, 122 miles E. N. E. of Seville. It is the seat of a bishop, and has two cathedrals. Pop. 26,434.

Jaffa (jā'fə; anciently oppa), a maritime town in Palestine, 31 miles northwest of Jerusalem, picturesquely situated upon an eminence, the port of Nablus and Jerusalem, with which latter it is connected by railway. It exports oranges (an excellent variety), soap, grain, sesame, olive oil, etc. Pop. above 20,000.

Jaffna (jaf'na), or Jaffnapatam, a town in Ceylon, at the northern extremity of the island, originally a Dutch settlement, and still thoroughly Dutch in its architecture and aspect. Most of the inhabitants are Tamils and Moors. Pop. (1911) 40,539.

Jagannath (jag-an-nil'tha; Skr. Lord of the World), often written Jagannaut, the name given to the Indian god Krishna, the eighth incarnation of Vishnu, and to a very celebrated idol of this deity in a temple specially dedicated to Jagannath at Puri, a town in Orissa, on the Bay of Bengal. It is a very rudely-cut wooden image, having the body red, the face black, and the arms gilt; the mouth is open and blood-red; the eyes are formed of precious stones. It is covered with magnificent vestments and seated upon a throne between two others—his brother Bala-Rama and Subhadra, colored respectively white and black. Great numbers of pilgrims, sometimes a hundred thousand, at the time of the festivals of Jagannath, assemble from all quarters of India to pay their devotions at his shrine. On these occasions the idol is mounted on a huge car resting on sixteen wheels, which is drawn by the pilgrims; and it has been stated and credited that formerly great numbers of the congregated people were wont to throw themselves under the wheels, and were thus crushed to death, the victims believing that by suffering this sort of death they would be immediately conveyed to heaven. This statement, however, is no longer accepted; it being now claimed that 'the rare deaths at the car festival were almost always accidental.'

Jägerndorf (yā'gər-norf), a town of Austria, in Silesia, on the Oppa, 13 miles northwest of Troppau. It is walled, has a handsome church, a ducal palace, and manufactures of woollens, etc. Pop. 14,675.

Jaggery (jag'eri), a coarse brown sugar made in the East Indies by the evaporation of the juice of several species of palms. It is chemically the same as cane-sugar.

Jaghire (jag'hir), in Hindustan, a term closely corresponding to the fief of mediæval Europe. It is an assignment of the government share of the produce of a portion of land to an individual, either personal or for the support of a public establishment.

Jago, St., several cities, islands, etc. See Santiago.

Jaguar (jag'wär), Felis onca, the American tiger, a carnivorous animal of South and Central America, sometimes equaling a tiger in size, of a yellowish or fawn color, marked with large dark spots and rings, the latter with a dark spot in the center of each. It rarely attacks man unless hard pressed by hunger or driven to bay. The skin is valuable, and the animal is hunted by the South Americans in various ways.

Jahde. See Jade (Prussian territory).

Jahn (yahn), Otto, a German philologist and archaeologist; born in 1813; died in 1869. He studied at Kiel, Leipzig, and Berlin, traveled in France and Italy, on his return qualified himself for university teaching, became professor extraordinary of archaeology and philology at
Greifsward in 1842, and full professor in 1845. In 1847 he was called to a similar chair in Leipzig, but lost this post in 1851 for his political action. In 1855 he was called to Bonn as professor of antiquities and director of the art museum. His writings on classical art and antiquities were very numerous; he also edited works of Greek and Latin authors, and published valuable contributions to the history of German literature, as also on various musical subjects. 

Jail, of legal confinement. See Prison.

Jail Fever, a dangerous disease once very prevalent in prisons, and which is now considered to be merely a severe form of typhus fever (which see).

Jainas (jī'nəs), or Jainas, a Hindu religious sect, which, from the wealth and influence of its members, forms an important division of the Indian population. The sect was very numerous and important in the eighth and ninth centuries of the Christian era, and they have left many monuments of their skill and power in the fine temples built in different parts of the country. Jainism was an offshoot of Buddhism, with which it has many leading doctrines in common, but is distinguished from it by its recognition of a divine personal ruler of all, and by its political leanings towards Brahmanism. The Jains reverence certain holy mortals, who have acquired by self-denial and mortification a station superior to that of the gods; and they manifest extreme tenderness for animal life.

Jaintia Hills (jän'ti-a), a collection of hills in Assam, giving name to a district of about 2000 square miles, with 50,000 inhabitants.

Jaipur (jā-pōr'), or Jeyapore, a state in Rajputāna, Hindustan, governed by a maharajah, under the political superintendence of the Eastern States Agency; area, 15,579 sq. miles. The soil, except in the southeast, is mostly sandy; the surface of the country is diversified by hill ranges. Corn, cotton, tobacco, opium and sugar-cane are extensively raised. There are manufactures of enamel work on gold, of woven cloth, etc. Pop. 2,658,666. —The capital, Jaipur, one of the finest of modern Hindu cities, has regular streets, with large, handsome houses. There is a college, a school of arts, an industrial museum, a hospital, fine gardens and several beautiful temples. Pop. (1910) 137,008.

Jaisalmer (jīz̩-əl-mər'), or Jeybulmeer, a state of India in Rajputāna, under the political superintendence of the Central India Agency; area, 16,447 square miles. It is mostly a sandy desert with sparsely scattered villages. Water is scarce, the wells going down to a depth of 400 feet in some cases. The climate is dry and healthy. Pop. 73,376. —Jaisalmeer, the capital, is situated on a rocky ridge. The palace, the Jain temples in the fort, and the houses of the wealthy are remarkable for exquisite stone-carving. Pop. 7137.

Jaipur, Jeyba (jā-pōr), a town of Hindustan, on the Baitaran, in Cuttack district, Bengal. It is held in considerable sanctity among the Brahmins, who celebrate an annual fair in honor of the 'Goddess of the Waters' of Hindu mythology. Pop. 12,111.

Jalalpur (ja-lāl-pōr), a town of Hindustan, in Gujarāt district, Punjab, with a government school and a shawli manufacture. Pop. 12,533.

Jalandhar (ja-lānd-hār'), or Jullundur, a town of Hindustan, headquarters of district of same name, in the Punjab; with a good trade, military cantonment, excellent American Presbyterian mission school, etc. Pop. 67,735. —The district, a fertile tract between the Sutlej and the Beas, has an area of 1,332 sq. miles, a pop. of 917,587. A division or commissionership has also this name; area 19,400 sq. miles; pop. 4,306,622.

Jalap (ja-lāp; so called from Jalapa, in Mexico, whence it is imported), the name given to the tuberous roots of several plants of the nat. order *Ipomoea* purga*.* being the most important. This is a

Jalap Plant (*Ipomoea purga*).
Jalapa, or Jalapa (â-lápâ), a city of Mexico in the department of and 52 miles northwest of Vera Cruz. It is the residence of the wealthiest merchants of Vera Cruz, and enjoys a fine climate. The jalap root is found abundantly here. Pop. (1910) 34,816.

Jalapa (ja-loun'), a town in a district of the same name, in the N. W. Provinces of India, 110 miles s. e. of Agra, in a swampy and unhealthy locality. Pop. 5975. - The district consists of a plain west of the Jumna; area, 1,469 sq. miles; pop. 399,726.

Jalesar (ja-lásur'), a town of Hindustan, in Etah district, N. W. Provinces. Pop. 15,600.

Jalisco (â-lí-skó), or Guadalajara, a State of Mexico, bounded on the west by the Pacific. It is chiefly mountainous, but well watered and wooded, and the climate is healthy. The soil is fertile, and wheat and barley are abundantly produced. The capital is Guadalajara. Pop. 1,153,801.

Jalpaiguri (jal-plâ-gú'ré), a town of Hindustan, headquarters of district of same name, in Bengal, on the Teesta; pop. 9708. - The district lies south of Bhatan, and north of Kuch Behar; area 2962 sq. miles; pop. 787,380.

Jamaica (jâ-mâ'kâ), one of the West India Islands, 80 or 90 miles s. of Cuba, the third in extent of the islands, and the most valuable of those belonging to the British; 146 miles in length east to west, and 49 miles broad at the widest part; area, 4256 square miles. It is divided politically into three counties—Cornwall, Middlesex and Surrey; its capital is Kingston. The island as a whole is very beautiful, and much of it is fertile. The coast is indented with a number of good harbors, of which Port Royal or the harbor of Kingston is the most considerable. The interior is traversed by lofty mountains in all directions; the principal chain, called the Blue Mountains, reaching the height of 7270 feet. The declivities are steep, and covered with stately forests. Jamaica is well watered, having numerous rivers and springs. Earthquakes of a violent character have been frequent. The climate in the districts along the coast is, in most places, exceedingly hot, but is not on the whole unhealthy; on the high lands the air is temperate and pure, while even on the low grounds the heat is greatly moderated by the cool sea-breezes which set in every morning. There are two rainy and two dry seasons. Native trees include the ballanta, rosewood, satinwood, mahogany, lignum vitae, lancetwood, ebony, Jamaica cedar, silk cotton tree, bamboo, coffee, cocoa, and several species of palm. The common vegetables grow in the hills and the plains produce plantains, yams, cassava, ochre, beans, pease, ginger and arrowroot. The principal fruits are orange, grapefruit, lime, grapes, pineapple, mango, bananas, melons, avocado pear, breadfruit and tamarind. Of flowering plants there are over 2000 distinct species, and of ferns 450 species. The largeness of these numbers may be to some extent accounted for by differences of altitude, temperature and humidity. Some of the flowers are very beautiful. Domestic fowls thrive well, and cattle raising has become profitable. Fruit, sugar, rum, coffee, dye-woods, and pimento form the chief exports, more than half of which go to the United States; foodstuffs, coal, clothing and other manufactured goods the chief imports. The government is vested in the governor, assisted by a privy council, and a legislative council composed of fifteen members, nine elected, the others nominated or ex-officio. The English Church is presided over by a bishop, assisted by a regular staff of parochial clergy. The Baptists, Methodists, Presbyterians and other Protestant bodies are well represented, and there is a considerable number of Roman Catholics and Jews. Education is not compulsory, and the percentage of illiteracy is very high. Population, 831,000, of whom less than 16,000 are white. Kingston, the capital, has a population of 57,000. Other towns are Spanish Town (pop. 7200), Port Antonio (pop. 7000), and Montego Bay (pop. 6000).

Jamaica was discovered by Columbus in 1494, in his second expedition to the New World. In half a century the cruelty of the Spanish conquerors exterminated the natives. The island was taken by Cromwell in 1655, and ceded to England by the treaty of Madrid in 1670. Since the abolition of slavery the prosperity of Jamaica has greatly decreased. Of late many Chinese and Coolies have been employed in agriculture. In 1865 a serious revolt broke out among the blacks at Morant Bay, and was put down with considerable severity by Governor Eyre. Since that time signs of disaffection have disappeared, and a greater state of com-
fort is said to prevail among the inhabitants generally. Politically dependent on Jamaica are the Cayman Islands, and the Turks and Caicos Islands.

Jamaica, State of New York, now included in the borough of Queens, New York City.

Jamalpur (jä-nil-pôr'), a town of Hindostan, in Monghyr district, Bengal, with large workshops belonging to the East India Railway Co. Pop. about 15,000.—Also a town in Maimang Singh district, Bengal, on the Brahmaputra. Pop. 14,727.

James, Sr., called the Greater, the son of Zebedee and the brother of John the Evangelist. Christ gave the brothers the name of Boanerges, or sons of thunder. They witnessed the transfiguration, the restoration to life of James' daughter, the agony in the garden of Getsemane, and the ascension. St. James was one of the apostles who suffered martyrdom, having been slain by Herod Agrippa A.D. 44. There is a tradition that he went to Spain, of which country he is the tutelary saint.

James, Sr., called the Less, the brother of our Lord, who appeared to him in particular after His resurrection. He is called in Scripture the Just, and is probably the apostle described as the son of Alpheus. He was the first bishop of Jerusalem, and in the first apostolic council spoke against those wishing to make the law of Moses binding upon Christians. The progress of Christianity under him alarmed the Jews greatly, and he was put to death by Ananus, the high priest about A.D. 62. He was the author of the epistle which bears his name.

James, Sr. of the Sword (San Jago de la Espada), a military order in Spain, instituted in 1170 by Ferdinand II. King of Castile and Leon, to stop the incursions of the Moors. The knights had to prove their noble descent for four generations.

James I., King of Scotland, one of the Stuart kings, born in 1394, was the son of Robert III by Annabella Drummond. In 1405 his father wished him to be conveyed to France in order that he might escape the intrigues of his uncle, the Duke of Albany, but the vessel in which he was being conveyed was taken by an English squadron, and the prince was carried prisoner to London. Here he received an excellent education from Henry IV and, to relieve the tedium of captivity, he applied himself to those poetical and literary pursuits in which he afterwards so highly distinguished himself. Robert III died in 1406, but James was not allowed to return to his kingdom till 1424. Previous to his departure he married Euphonia Beaumont, daughter of the Earl of the Earl of Somerset, a lady of the blood royal of England. On his return to Scotland he caused the Duke of Albany and his son Murdoch to be executed as traitors, and proceeded to carry on vigorous reforms, and, above all, to improve his revenue and curb the ambition and lawlessness of the nobles. The nobility, exasperated by the decline of their authority, formed a plot against his life, and assassinated him at Perth in 1437. Besides his poem, The King's Quhair (or Book), by which he ranks high among romantic poets, two humorous poems, excellent, though coarse, are often ascribed to him—Christ's Kirk on the Green and Peblis to the Play.

James II., King of Scotland, son of James I, was only seven years of age when his father was assassinated in 1437. During his minority the kingdom was distracted by struggles for power between his tutors, Livingston and Crichton, and the great house of Douglas. In 1449 he married Mary of Gueldersland. He later allied himself with the Douglas, but being deprived of all real power, he resolved to free himself from the galling yoke. This he did in 1452 by inducing the Earl of Douglas to come to Stirling Castle, where he stabbed him with his own hand. He then quelled a powerful insurrection headed by the next earl, whose lands were confiscated. In 1460 he infringed a truce with England by besieging the castle of Roxburgh, and was killed by the bursting of a cannon in the 29th year of his age.

James III., King of Scotland, son of James II, was born in 1453. The kingdom during his minority was governed in turn by Bishop Kennedy and the Boyd family. During his life James was controlled by favorites. Prominent among these was Cochran, a mason, through whom one brother of James was obliged to flee the kingdom, and another was put to death. The nobles seized Cochran and five others and hanged them. A plot was subsequently formed to dethrone the king, and though many peers remained loyal to him the royal army was defeated at Sauchie, near Stirling, in 1488, the king's son being on the side of the victorious nobles. James escaped from the field, but was murdered during his flight.

James IV, King of Scotland, born in 1472, son of James III, was in his sixteenth year when he suc-
succeeded to the throne, having been voluntarily or by compulsion on the side of the nobles who rebelled against his father. During his reign the ancient enmity between the king and the nobility seems to have ceased. His frankness, bravery, skill in manly exercises and handsome person won the people's hearts, and he ruled with vigor, administered justice with impartiality, and passed excellent laws. Henry VII, then king of England, tried to obtain a union with Scotland by politic measures, and in 1503 James married his daughter, Margaret. A period of peace and prosperity followed. French influence, however, and the discourtesy of Henry VIII in retaining the jewels of his sister and in encouraging the border chieftains hostile to Scotland, led to angry negotiations, which ended in war. James invaded England with a large force, and himself and many of his nobles perished at Flodden Field in 1513.

James V, of Scotland, born in 1512, succeeded in 1513, at the death of his father, James IV, though only eighteen months old. His mother, Margaret of England, governed during his childhood but the period of his long minority was one of lawlessness and gross misgovernment. James assumed the reins of government in his 17th year. He married Magdalen, daughter of Francis I of France, and on her death Mary of Lorraine, daughter of the Duke of Guise. Henry VIII, having broken with Rome, and eager to gain over his nephew to his views, proposed an interview at York; but James never came, and this neglect enraged Henry. A rupture took place between the two kingdoms, but James was ill supported by his people, and the disgraceful rout of his troops at Solway Moss broke his heart. He died in 1542, seven days after the birth of his unfortunate daughter Mary.

James I, of England and VI of Scotland, the only son of Mary, Queen of Scotland, by her cousin Henry, Lord Darnley, was born at Edinburgh Castle in 1566. In 1567 (his mother being forced to resign the crown) he was crowned at Stirling, and his childhood was passed under the direction of the Earl of Mar, and the tuition of the famous Buchanan. He had much trouble with his nobles, a party of whom made him captive at Ruthven Castle in 1582; but a counter party soon set him at liberty. When his mother's life was in danger he exerted himself in her behalf (1587); but her execution took place, and he did not venture upon war. In 1589 he married Princess Anne of Denmark. In 1603 he succeeded to the crown of England, on the death of Elizabeth, and proceeded to London. One of the early events of his reign was the Gunpowder Plot (q. v.). He soon allowed his lofty notions of divine right to become known, got into trouble with Parliament, and afterwards endeavored to rule as an absolute monarch, levying taxes and demanding loans in an arbitrary manner. In 1606 he established Episcopacy in Scotland. In 1613 his daughter Elizabeth was married to the elector Palatine, an alliance which ultimately brought the present royal family to the throne. He wished to marry his son Charles, Prince of Wales, to a Spanish princess, but this project failed, and war was declared against Spain. The king, however, died soon after, in 1625. James, though possessed of good abilities and a good heart, had many defects as a ruler, prominent among them being subservience to unworthy favorites and disregard for the kingly dignity. He was also vain, pedantic, and gross in his taste and habits. His name is sullied by the part he played in bringing Raleigh to the block. In his reign the authorized translation of the Bible was executed.

James II, of England, second son of Charles I and of Henrietta Maria of France, was born in 1633, and immediately declared Duke of York. During the civil war he escaped from England and served with distinction in the French army under Turenne, and in the Spanish army under Condé. At the Restoration, in 1660, he got the command of the fleet as lord high-admiral. He had previously married Anne, daughter of Chancellor Hyde, afterwards Lord Clarendon. In 1671 she died, leaving two daughters, who became successively queens of England. Having openly avowed the Roman Catholic faith, on the Test Act being passed to prevent Catholics from holding public employments he was obliged to resign his command. He was afterwards sent to Scotland as lord high commissioner, where he persecuted the Covenanters. He succeeded his brother as king in 1685, and at once set himself to attain absolute power. A rebellion headed by the Duke of Monmouth (his nephew) was easily put down, and this encouraged the king in his arbitrary measures. He even accepted a pension from Louis XIV that he might more readily effect his purposes, especially that of restoring the Roman Catholic religion. The result of this course of action was the revolution of 1688 (see England), and the arrival of William, Prince of Orange. Soon James found himself completely deserted, and having quitted the country he
James III, the Pretender. See Stuart (James Edward Francis).

James, George Payne Rainsford, an English novelist, born in London in 1801. While still very young he manifested a considerable turn for literary composition, and produced, in 1822, a Life of Edward the Black Prince. Some years afterwards he composed his first novel, Hoochit, which was shown in manuscript to Sir Walter Scott, and published in 1829. Its success determined him towards fiction, and a series of novels, above sixty in number, followed from his pen in rapid succession, besides several historical and other works. Among them may be mentioned Darnley, De L'Orme, Lord Montague's Page, Philip Augustus, Henry Masterton, Mary of Burgundy, The Gipsy, History of Chivalry, Life of Charlemagne, etc. He accepted the office of British consul, first at Richmond, Virginia, and afterwards at Venice, where he died in 1860.

James, Henry (1843-1916), an American novelist, born in New York, educated chiefly in France and Switzerland, and at Harvard Law School. He began literary work as a contributor to magazines and soon commanded an ever-growing audience by his keen psychological analysis of human nature, his wealth of vocabulary and his fine literary finish. He traveled extensively, and spent a great deal of his time in Europe. When the great European war broke out, in 1914, he was unable to understand why the United States did not instantly side with the Allies against Germany: his sympathies were so strongly with Great Britain that he renounced allegiance to America and in 1915 became a British subject. His first novel, Watch and Ward, was published in 1871. This was followed by two other books that were widely acclaimed. In 1877 he published his Travels and Sketches; and two years later he wrote The American, which has taken rank as a public favorite with The Bostonians, published in 1886, The Sacred Fount (1901), The Ambassador (1903), and The Golden Bowl (1905). His publications include A Passionate Pilgrim, Roderick Hudson, French Poets and Novelist, The Europeans, Daisy Miller, An International Episode, Life of Hawthorne, A Bundle of Letters, Confession, Diary of a Man of Fifty, Washington Square, The Portrait of a Lady, Terminations, What Maisie Knew, The Outcry, The Small Boy and Others. His novels and tales depended for their interest on the portrayal of character rather than on incident. In his later years his style became involved and intricate, losing much of its early charm through ultra-refinement.

James, William, psychologist, brother of the above, was born in New York in 1842. After 1872 he was connected with Harvard in professorships of psychology and philosophy, and won eminence in his special field. His Principles of Psychology is highly esteemed, and he wrote various other works of value, one of the latest being Pragmatism, A New Name for Some Old Ways of Thinking. In his later years he became a convert to spiritualism. He died in 1910.

Jameson (jä'me-son), Sir Leander Starr, British physician and colonial administrator, popularly known as 'Dr. Jim,' was born in Edinburgh in 1853 and was educated for the medical profession at University College Hospital, London. In 1878 he went to South Africa, where he practiced medicine, numbering Oom Paul Kruger and other distinguished South Africans among his patients. He became the companion of Cecil Rhodes and schemed for the enlargement of British influence. One of his schemes took the form of a military raid in the Transvaal in 1885 in support of a projected uprising in Johannesburg connived at by Rhodes. He was captured, but instead of executing him President Kruger handed him over to England for punishment. He was imprisoned, but returned to South Africa and became premier of Cape Colony. Died Nov. 26, 1917.

James River, a river of Virginia, passes the towns of Lynchburg and Richmond, and communicates, through Hampton Roads and the mouth of the Chesapeake Bay, with the Atlantic. Its general course is south of east, and its length is 450 miles. The first English settlement in America was formed at Jamestown, 32 miles from the mouth of this river, in 1607.

James' Bay, the southern extension of Hudson Bay, called from Captain James, who wintered here in 1631-32 while trying to find the N.W. passage. Within it there are numerous rocks and islands, and its navigation is dangerous.

James' Powder, a medicine in which antimony is the most important ingredient.
Jamestown (jamstoun), the site of the first British settlement in the United States. Its locality was on the James River, Virginia, about 32 miles above its mouth. It was burned in the Bacon rebellion of 1676 and only a few ruins remain, including the old church tower. It gave the name to an exposition held near Norfolk in 1907, the three-hundredth anniversary of its settlement.

Jamestown, a city and summer resort of Chautauqua county, New York, on the outlet of Chautauqua Lake, which supplies water power. It is one of the leaders in the manufacture of wooden and metal furniture. Other products are textiles, metal goods, knitted and worsted fabrics, pianos, automobile parts, etc. Pop. (1910) 31,207; (1920) 38,017.

Jamestown, Stutsman Co., North Dakota, on James River, 96 miles E. of Bismarck, in a rich farming region. Seat of Jamestown College, St. John's Academy, and State Hospital for insane. It has flouring mills, etc. Pop. (1920) 6627.

Jamieson (jam-é-son), John, a Scottish philologist and theologian (1759-1838), born at Glasgow. The work by which he is chiefly known is his Etymological Dictionary of the Scottish Language.

Jammu (jum-mou), JAMU, or JUMMOO, a portion of Cashmere (which see).

Janina. See Jumna.

Jamnotri (jam-no-par), or JUMNO-TRI, a celebrated place of pilgrimage in Hindustan, in the province of Garhwal, 185 miles N. N. E. of Delhi, at the source of the Jumna, with hot springs 10,849 feet above sea-level.

Jamuna (jam-nu-nk), the name of several rivers of Northern India, the chief being the lower section of the Brahmaputra, and that which connects it directly with the Ganges.

Janauschek (jan-oushek), FRANCESCA, R. M., an eminent actress, born at Prague, Bohemia, in 1830; died in 1904. She gained a high standing as a tragedienne, playing in Germany, England, the United States, and dwelling in the latter country in her later life. She rendered unstintingly in England the most exacting roles in Shakespearean tragedy.

Janesville (jan-vil), a city, capital of Rock county, Wisconsin, on both sides of Rock River, with active trade and manufactures, including large cotton factories, woolen and flour mills, agricultural implements, carriages, furniture, pens, etc. Here is the State School for the Blind. Pop. 18,293.

Janin (zhan-n), JULES GABRIEL, French critic, and author of a number of novels and other works, was born in 1804, and died in 1874. He devoted himself to journalism at an early period, and from 1830 till his death he was connected with the Journal des DÉbats. In 1870 he was made a member of the French Academy. His first novel, L'Ané Mort et la Femme Guillotine, appeared in 1829, and was quickly followed by the Confession; Barnave, a political novel; Contes Fantastiques; Contes Nouveaux. Among other works of his are Voyage en Italie; Histoire de la Littérature Dramatique; Béarn est et son Temps; etc.

Janina (ya-ni-na), a town of northwestern Greece, on lake of same name, 200 miles N. W. Athens. Formerly a villagetta in the Turkish empire, it was ceded to Greece in 1913 at the close of the Balkan war (q. v.). It was the stronghold of Ali Passa (q. v.), the Lion of Janina, 1788-1822. The fortress and splendid seraglio, built on a promontory jutting down into the lake, are now in ruins. Pop. 22,000.

Janizaries (jan-i-za-riz; Turkish, Jeni-i-cheri, new soldiers), an Ottoman infantry force, somewhat analogous to the Roman pretorians, part of them forming the guard of the sultan. They were originally organized about 1330, and subsequently obtained special privileges, which in time became dangerously great. The regular janizaries once amounted to 60,000, but their numbers were afterwards reduced to 25,000. The irregular troops amounted to 300,000 or 400,000. Their power became so dangerous and their insurrections so frequent that several unsuccessful attempts were made to reform or disband them. At various times sultans had been deposed, insulted, and murdered by the insurgent janizaries. At last, in June, 1826, they rebelled on account of a proposal to form a new militia, when the sultan, Mahmoud II., having displayed the flag of the Prophet, and being supported by their aga or commander-in-chief, defeated the rebels and burned their barracks, when 8000 of them perished in the flames. The corps was abolished, and a curse laid upon the name. As many as 15,000 were executed, and fully 20,000 were banished. The Nizam, a corps of troops under modern organization, took their place.

Jan-Mayen (yan-may-en), a small volcanic island in the Arctic Ocean, 150 miles from the coast.
of East Greenland. In Beerenberg, an extinct volcano, it rises to the height of 6870 feet. The island was discovered in 1611 by the Dutch navigator Jan Mayen, and was used as an Austrian polar station for scientific observations in 1882-83.

Jansen (jān’sen), Cornelisz, usually known as Jansenius. See Jansenists.

Jansenists (jān’sen-istz), Jansenism, the sect or party and its doctrines, which owed their origin to the teaching of Jansenius (which see). In his great work Augustinus, published in 1640, Jansenius maintained the Augustinian doctrine of free grace, and recommended it as the true orthodox belief, in opposition to the semi-Felagianism of the university. The book was condemned by Urban VIII in 1642, in the bull In Eminenti; but its doctrines were supported by many distinguished French and other theologians, and the scholars of the Port Royal, namely, Nicole, Fuscal and Arnauld, undertook the defense of Jansenism. Another bull, in which the pope (1653) particularly condemned five propositions from the Augustinus, also met with a strong opposition. In 1656 Alexander VII issued a special bull by which the Jansenists were required either to recant or secede from the Roman Catholic Church. It was found impossible to force them to an unconditional subscription to this bull; and in 1668 an agreement with Clement IX, by which a conditional subscription was permitted, obtained for them a temporary respite. The party stood its ground under the protection of Innocent XI (died in 1689), who tolerated them as much as he could. Father Quesnel’s Moral Reflections on the New Testament—the most universally read book of this period—gave it new support, but also led to the bull Unigenitus (1713), which condemned 101 propositions from the Reflections. This bull excited much indignation in France, and was strongly resisted; but the Jansenists were rigorously censured unless they accepted the bull unconditionally. In consequence great numbers emigrated to the Netherlands, and their power as a party rapidly declined. This was hastened in 1731 by the fanatical excesses of many Jansenists, especially of the Convulsionists (which see) and others, which encouraged ridicule, favored repressive measures, and ultimately extinguished the Jansenists as a party in France. As a sect, they still survive in the Netherlands. They call themselves, by preference, the disciples of St. Augustine. Each bishop on his appointment notifies his election to the pope, and craves confirmation. The non-acceptance of the bull Unigenitus, however, has caused all their advances to be rejected, and as they have rejected the doctrine of the immaculate conception and the decrees of the Vatican Council, they stand further apart than ever from the orthodox Catholic Church, though between them and the Old Catholics there are friendly relations.

Jansenius (jān-sā-nee-us), Cornelius, (properly Cornelisz Jansen), a Dutch theologian. He studied at Utrecht, Louvain and Paris; secured a professorship at Bayonne; returned to Louvain in 1617, where he obtained the degree of doctor, and took a prominent part in the affairs of the university. He was appointed professor of Scripture in 1630, and was promoted to the bishopric of Ypres in 1636. In this city he died of the plague in 1638, leaving an unblemished reputation for piety and purity of morals. He had just completed his great work, the Augustinus, a book which gave rise to a great religious controversy. See Jansenists.

Janssens (jān’sens), Abraham, a Dutch historical painter, born about 1569; died about 1632. He was the contemporary and rival of Rubens, though the place which he occupies beside him is very subordinate. He is chiefly admired for his coloring and accuracy of design, his most important works being Scriptural scenes. Many of his pictures are in the Flemish churches, while others are in the galleries of Munich, Vienna, Berlin and Dresden.

Januarius (jan-u-ā’ri-us), St., Bishop of Benevento, was beheaded at Puzzuoli in the beginning of the fourth century, a martyr to the Christian faith, and is honored as the patron saint of the people of Naples, where his body lies buried in the crypt of the cathedral. His head and two vials of his blood are preserved in a separate chapel. These vials are brought near the head of the saint on three festivals each year, notably September 19, the anniversary of the martyrdom. On these occasions, if the blood becomes of a clear red color and moves briskly in the vial, the patron saint is said to be propitious, but by remaining congealed it betokens disaster.

January (jan’ē-a-rē), the first month of the year, consisting of 31 days. It was by the Romans held sacred to Janus, from whom the name was derived. The Roman year originally began with March, and consisted of only
Janus

ten months. Numa is said to have added January and February. See Calendar.

Janus (ja'nus), an ancient Latin divinity, after whom the first month of the year was named. He was held in great reverence by the Romans, and was represented with two faces, one looking forward, the other backward. All doors, passages and beginnings were under his care. His principal festival was New Year's Day, when people gave each other presents. The temple of Janus, which was open in time of war and closed in time of peace, was shut only three times in the long space of 700 years—once in the reign of Numa, again after the first Punic war, and the third time under the reign of Augustus A.D. 74. Vespasian also closed it in A.D. 71.

Janvier (jan'ver), Thomas A., author, born at Philadelphia, 1849. He did editorial work on several Philadelphia newspapers, resided for a number of years in Mexico, and made it the scene of several works, as The Aztec Treasure House; Stories of Old New Spain; Legends of the City of Mexico, etc. He wrote also The Uncle of an Angel, In Old New York, The Passing of Thomas, The Dutch Founding of New York, and various other works. He died in 1913. His sister ('Margaret Vandegrift') wrote a number of juvenile stories and verses, etc.

Japan (ja'pan'), an island empire in the North Pacific Ocean, lying off the east coast of Asia. It comprises four large mountainous and volcanic islands, viz., Hondo, Kiushiu or Kiusiu, Shikoku or Sikok and Yesso, besides many other islands and islets, and in particular the Loo-Choo or Riukiu and the Kurile groups. The largest island, Hondo or Niphon, is 800 miles long, and from 50 to 100 miles broad. By the Japanese Niphon or Nipon is employed to describe the whole empire. The name 'Jipun,' altered to Japan, is the Chinese designation, and it first became familiar to Europeans. The official return gives Japan an area of 147,855 square miles and a pop. (1910), of 59,751,919.

Physical Features.—The Japanese islands form part of the line of volcanic action commencing with the Aleutian Isles and terminating in the islands of Southern Asia. The coasts of the larger islands are extremely irregular, being deeply indented with gulfs, bays and inlets, which form magnificent harbors. The surface also is generally uneven, and in many instances rises into mountains of great elevation. The island of Hondo is traversed throughout its whole length by a chain of mountains, the highest peak being Fusi-yama (12,230 feet), a dormant volcano covered with perpetual snow. The volcanic vents are numerous in Yesso, Hondo and Kiushiu, and earthquakes are frequent. The minerals comprise copper, lead, iron, antimony and sulphur; gold and silver are found, though not to a great extent. Coal is mined in various parts. The rivers are of no great length; Tonegawa, the longest, is only about 172 miles. Biwa, in the south of Hondo, is the principal lake, being some 80 miles in length, with an extreme breadth of 20 miles. The harbors most frequented by foreigners are the treaty ports of Yokohama, Hiogo (or Kobe), Nagasaki, Hakodate, Niigata and Osaka.

Climate.—The climate ranges from an almost Arctic cold in the north to a nearly tropical heat in the south. In the island of Yesso winter begins about October and continues to April, its course being marked by severe frosts and snowstorms; while in Yokohama, again, the winter is genial, with a bright sky, and a temperature much like England. From July to September the thermometer often ranges as high as 96° in the shade.

Products.—The vegetation of Japan is very varied, in consequence of its wide range of temperature. Rice of excellent quality, as also wheat, barley, sugar-cane and millet are largely grown; while ginger, pepper, cotton and tobacco are cultivated in considerable quantities. Tea and raw silk are largely produced. The Japanese are skilful gardeners, and the fruits raised include strawberries, melons, plums, persimmons, figs, loquats and oranges. Of flowers and flowering shrubs the camellia, azalea, hydrangea, lilies, poppies, the chrysanthemum, daphne and wistaria are indigenous. The forests are extensive; in the south the palm, banana and bamboo flourish; while in the north, cedar, pine, maple, and the kadzi or paper-tree are abundant. The chief domestic animals are the horse, which is small and hardy; the ox, which is used as a beast of burden; the dog, which is held sacred; and the cat, which is of a short-tailed species. Rabbits and guinea-pigs are household pets. Bantam fowls, chickens, ducks and pigeons are reared for food. Of the wild animals, deer are numerous in the north; bears are to be found in Yesso, while boar, wolves, badgers, foxes, monkeys and hares are not uncommon. Birds are plentiful; falcons, pheasants, ducks, geese, teal, storks, pigeons, ravens, larks, pelicans, cranes, herons, etc. Fish is one of the chief foods, the principal varieties being salmon, cod, herring, sole and mackerel. There are also tortoises, lizards,
Japan

scorpions and centipedes; and of the insect tribes there are white-ants, winged grasshoppers, and several beautiful varieties of moths.

People.—The Japanese may be regarded as belonging to the great Mongolian family, though ethnologists recognize more than one element in the population. They are generally distinguished by broad skulls and high cheek-bones; small, black eyes, obliquely set; long, black hair, and a yellow, or light-olive complexion; some are good looking, and many are well made, active and nimble. They are a frugal, skilful, persevering, courageous race, who combine these characteristics with much frankness, good humor and courtesy. A Japanese gentleman's dress is a loose garment made of silk, gathered in at the waist by a girdle, and extending from neck to ankle; while over this is thrown a wide-sleeved jacket. In the country a short cotton gown is worn, while the lower classes generally wear scant clothing. The hair is shaved off the front part of the head, while on the back and sides it is gathered up into a knot and fastened with long pins. As regards both clothing and hair-dressing, the women very much resemble the men. They also paint and powder themselves to excess. Polygamy is not practised, but a husband can have as many concubines as he can afford. The Japanese are a holiday-loving people, and delight in the theater. Their two principal religions are Buddhism and Shintoism. The chief observances of Shintoism are ancestral worship and sacrifice to departed heroes. Buddhism is the popular religion. A considerable number of Christian missionaries are now actively engaged in the country. The Japanese language is dual in its nature. Originally a polysyllabic Mongolian tongue, it has been greatly enriched by the addition of many Chinese words, the latter being much used by the literary and governmental classes. The literature of Japan is extensive, and includes all departments—historical, scientific, biographical, but is especially copious in poetry and romance. Contact with Europe has affected literary production; European and native writings are now mostly read.

Industries and Trade.—In native and imitative manufactures the Japanese are exceedingly ingenious. Their artistic treatment of copper, iron, bronze, silver and gold is of the finest, while in stone carvings, mosaics, wicker, tortoise-shell, crystal, leather, and especially in wood lacquer-work, they are skilful in the highest degree. Of textile fabrics they excel in cotton-goods, silks, brocades, and especially in figured silk goods. Paper is largely made, and its uses range from a handkerchief to a house. Japanese decorative art is remarkable for patient but facile treatment of bird, beast, and flower; the absence of perspective and chiaroscuro seems even to add to its effect. The modern art productions, however, have been debased by imitations of bad European work. The chief export is silk, tea, and coming next, while the imports are mostly textile fabrics, sugar machinery, etc. The standard money unit is the gold yen or dollar, divided into 100 sen. The coinage consists of gold, silver, and copper pieces, from the value of 20 yen to 1/10 sen. There is also a paper currency. The principal weight is the picul, equal to 133 lbs. avoirdupois.

Government, etc.—The government of Japan till recently was an absolute monarchy, but a new constitution was proclaimed in February, 1889, providing for the establishment of a house of peers, partly hereditary, partly elective, partly nominated by the emperor or mikado (as the ruler is called), and of a house of commons of 300 members, elected by all men 25 years of age, and paying taxes to the amount of 25 dollars annually. There is also a cabinet, which includes the prime minister and the statesmen at the head respectively of the foreign office, the treasury, war, navy, education, public works, religion, justice, and the imperial household. There are resident ministers in most European countries and in the United States. Railways are now used over a length of very near 5000 miles,
Japan

with about 18,000 miles of telegraph line, while the postal system throughout the empire is excellent. Education is compulsory, the school age being from the 6th to the 14th year. There is a university at Tokyo, with affiliated colleges. Conscription is the rule, and the army numbers 450,000 men in peace, with a war establishment of 1,500,000. The navy numbers about 150 vessels. The wars with China and Russia, demonstrated Japanese strategy in war, and gave a great impetus to the navy, which now has 11 modern battleships, first class in every sense, and a considerable number of older battleships and of cruisers.

History.—The Japanese profess to have an accurate chronology from 660 B.C., but little confidence can be placed in their annals previous to the tenth century after Christ. A long line of emperors or mikados reigned over Japan, but for some six hundred years all real power was in the hands of the shogun or chief minister. Japan was first made known to Europe by Marco Polo, under the title of Zipangu. In 1542 it was visited by Mendes Pinto, representing the Portuguese, and in 1549 the Jesuit missionary, St. Francis Xavier, arrived and converted many of the natives to the Church of Rome. From the overbearing character of the Portuguese traders on the one hand and the jealousy of the Japanese priests, fomented by sectarian troubles, an edict was issued excluding missionaries from the country, and in 1640 the Portuguese were finally expelled and the Christian converts largely massacred. The Dutch East India Company established a trading settlement in 1600, which for more than two centuries formed Japan's sole channel of intercourse with the external world. In 1854 a United States fleet, under Commodore Perry, succeeded in inducing the Japanese to abandon their policy of isolation and since then their country has been rapidly modernized. A treaty was made with the United States, and others soon after with several European nations. These treaties made by the Shogun led to the revolution in the island empire, which ended in victory for the mikado and his restoration to his ancient supremacy, the Shogunate being abolished. A complete change now took place. The Japanese rapidly became converted to western ideas, both political and social. In July, 1894, war was declared with China on the question of their respective claims to Corea. The Japanese successes brought it to a triumphant end in April, 1895. By the treaty of Shimomoskei the terms of which included recognition of Corean independence, which had been the chief cause of the war, thecession to Japan of Formosa and some surrounding islands, with the peninsula of Liao-Tung, including Port Arthur, a large war indemnity, and a very great relaxation of restrictions on foreign industry and commerce in China. The success of Japan was in part negatived by the action of Russia, France and Germany, which countries, by threats of war, forced her to return to China the Liao-Tung Peninsula, obtaining in return only a small increase in the indemnity. The subsequent action of Russia in extending the Trans-Siberian Railway to Port Arthur, leasing this port from China, and increasing her military force in Manchuria, led the Japanese government to insist on a withdrawal of these troops, and in 1904 brought on the Russo-Japanese war (which see). The success of Japan in this great conflict raised the island empire to the level of the leading powers of the world, a position which Japan is making every effort to hold by a rapid increase in her military and naval strength, an alliance with Great Britain, and a remarkable development in commerce and manufacture. Mutsuhito, the ruling mikado from 1867 to 1912, was succeeded by his son Yoshihito. At the outbreak of the European war in 1914, the Mikado 'advised' Germany to close the port of Kiaochow and withdraw from the Pacific. This was not done and Japan declared war on Germany, and, after a three months' siege, captured Kiaochow, Nov. 7, 1914. By the treaty of Versailles (see Treaty), June 28, 1919, Germany renounced in favor of Japan, all her rights in the Shantung province (see Shantung). Corea, which had been annexed by Japan, attempted to regain independence in 1919, but the movement was quashed.

Japanning, the act of applying varnish to such articles as wood, metal, leather and papier-maché, in imitation of the lacquered work of Japan and China. The article to be japanned, being made thoroughly dry, is first brushed over with two or three coats of seed-lac varnish to form the priming. The next coat of varnish is mixed with the ground tint desired, and where a design is intended, it is now painted with colors. The whole is then covered with additional coats of varnish, which are dried and polished as applied. See Lacquering.

Japheth (ja'feth), one of the sons of Noah (Gen., ix, 24). His descendants, according to Gen. vii, 5, peopled the isles of the Gentiles and thus Japheth is often considered the ancestor of most European races.
Japura (kā'-pō'ra), or Caqueta (kā-kā'ta), a large river of South America, an affluent of the Amazon. It has its sources in the mountains of Colombia and its whole length is upwards of 10,000 miles, the last 350 being in Brazilian territory. The navigation is interrupted by a great cataract, which occurs in lat. 1° 10' s.; lon. 72° 20' w.

Jardine (jar'din), Sir William, a practical zoologist of high attainments, was born in Edinburgh in 1800, and died in 1874. He is best known as the editor of the celebrated Naturalists' Library. His chief works comprise a history of the British Salmonidae, the Ichthyology of Annam, etc.

Jardinière (zha-rēn-yār'), an ornamental stand for growing plants, used in decoration of an apartment.

Jargon (jär'gon), JAR'GOON, a mineral, usually of a gray or greenish-white color, in small irregular grains, or crystallized in quadrangular prisms surmounted with pyramids, or in octahedrons consisting of double quadrangular prisms.

Jargonelle (jär-gu-nel'), a variety of early pear, of fine quality, so called from resembling in color the mineral jargon.

Jarl (ja'rl), a word of Scandinavian origin, the same as earl, and applied in the early history of the Northern European kingdoms to the lieutenants or governors appointed by the kings over each province.

Jarnac (zha-ră-k), a town of France, in the department of and on the river Charente, where a battle was fought March 13, 1569, between the Catholics under the Duke of Anjou, and the Huguenots under the Prince of Condé. The Protestant forces were defeated. Pop. (1906) 4,483.

Jarool. See Bloodwood.

Jaroslav (yā'ro-slaw), a town of Galicia, Austria, on an affluent of the Vistula, 62 miles w. n. w. of Lemberg, with a castle and a handsom cathedral, manufactures of woollens and linens, etc. Pop. (1910) 23,965.

Jaroslav (yā'ro-slaw), a town of Russia, capital of the government of same name, on the Volga, 162 miles northeast of Moscow. It is the see of an archbishop, and has a theological seminary and a college. Pop. 70,610.—The government has an area of 13,000 square miles and a pop. of 1,072,478. The surface is generally flat and in several places very marshy. It is watered by the Volga and other rivers. The soil is by no means fertile, and the grain produced falls short of the home consumption.

Jarrah (jar'ah), a timber tree of West Australia, the Eucalyptus marginata, or rostrum, yielding a very durable wood, useful for railway sleepers, jetties, etc., not being liable to the attack of the white ant and the shipworm.

Jarrow (jar'ro), a town of England in Durham, on the Tyne, 6 miles below Gateshead. Its rapid growth from a village to a large town is due to the development of its shipbuilding and iron-smelting industries. The town contains a mechanics' institute, an infirmary, and the church of St. Paul's, where the venerable Bede was buried, and where some of his relics are still preserved. It gives name to a parliamentary division of Durham. Pop. 33,732.

Jasher (ja'sher), Book of, a lost Hebrew work, twice mentioned in the Bible (Josh., x, 13, and II Sam., i, 18), and about which various conjectures have been made. Some authorities suppose that it was a series of annals; others that it was a Hebrew minstrelsey celebrating the exploits of the national heroes. Whatever its contents may have been, it is seems from the specimens preserved to have been metrical in form.

Jasmin (jas'min). Jacques, or Jaquou, JAUSMIN, the chief modern Provençal poet of France, inheritor of the language as well as the spirit of the troubadours, was born in 1708, and died in 1864. Himself of humble parentage, and by trade a hair-dresser, all his poems and songs are written in the peasants' patois of the Garonne. His poetry deserved and acquired more than a local celebrity, and was warmly welcomed not only in Southern France, but throughout the whole of Europe. His principal works are Lou Chaltibari ('The Charivari'), a mock-heroic poem; L'Abu- cly de Castel Cuillé ('The Blind Girl of Castel Cuillé'), his masterpiece in poetry, which has been translated by Longfellow; Las Papillotes de Jasmin ('The Curl-papers of Jasmin'); and Loux doys Frays - bessaus ('The Two Twin-Brothers'), 1847.

Jasmine (jas'min), Jas'MIN, the popular name of plants of the genus Jasminum. They are elegant, branched, erect or climbing shrubs, with imparipinnate, trifoliate, or simple leaves, and (usually cymose) white or yellow flowers, from some of which delicious perfumes are extracted. There are about 100 species, most of them Asiatic; some
occur in south and a few in tropical Africa, while one is a native of South-
ern Europe. The Carolina jasmine is Gelsemium nitidum. Also written Jea-
samine.

Jason (jā'sun), in Greek legend, a king of Iolcos in Thessaly, celebrated for his share in the Argonautic expedition. On his return to Iolcos with Medea as his wife, he avenged the murder of his par-
ents and his brother by putting Pelias to death. Unable to retain possession of his throne, however, he fled to Corinth, where, after some time, he married Glauce (or Creusa), daughter of the king, and put away Medea and her children. (See Medea.) Different accounts, of legendary character, are given of his death. See Argo-
naught.

Jasper (jas'per), an impure opaque colored quartz, less hard than diant or even than common quartz, but which gives fire with steel. It is entirely opaque, or sometimes feebly translucent at the edges, and presents almost every variety of color. It is found in metamorphic rocks, and often occurs in very large masses. It admits of an elegant polish, and is used for vases, seals, snuff-
boxes, etc. There are several varieties, as red, brown, blackish, bluish, Egyptian. —Agate jasper is jasper in layers with chalcedony.—Porcelain jasper is only baked clay.

Jassy (yāsh'ə), a town of Roumania, in Moldavia, on the Bachtin, sev-
eral miles from the Pruth. It is built on two hills, and covers a large space, the houses being generally provided with gar-
dens. It has a university, a museum with a public library, a theater, several hos-
pitals, fine hotels and shops. There are few manufactures, but the trade is of some importance, and a great deal of business is done at the fairs. Pop. 75,882, 40,000 being Jews.

Jastrow (yāst'ro̯v), Marcus (Mor-
deck), a Hebrew scholar, was born at Rogasen, Russian Poland, in 1829; died in 1903. He removed to the United States and in 1866 became a rabbi in Philadelphia. He made many contributions to Jewish literature, including a Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literature. Two of his sons became prominent:—Joseph, born in 1863, professor since 1888 in the University of Wisconsin, and author of The Subcon-
scious and other works on psychology.—Moritz, born in 1861, professor of Semitic languages in the University of Pennsyl-
vania, and a recognized authority on Semitic religions, languages and litera-
ures.

Jasz-Berény (yās-te'ran'ya), a market town of Hungary, 38 miles E. N. E. of Buda-Pest, on both sides of the Zagyva. Pop. 26,701.

Jataka (jā-ta'ka), a celebrated Pali work of about the third cen-
tury A.D., containing legends relating to the birth of Buddha, and much prized by the Buddhists.

Jatamansi (jā-ta-man'si), an East Indian name for spikenard.

Jateorhiza (jā-te-o'ri'za), the genus of plants to which ca-
humba belongs.

Játiva (hā-te'vā), a city of Spain, province of and 36 miles s. S. W. Valencia, near the confluence of the Guadamar and Albayda. Pop. 12,600.

Jatropha (jat'ro̯-fa), a genus of woody plants with alternate stipulate leaves and cymes of small flow-
ers, belonging to the nat. order Euphor-
biaceae, inhabiting the tropical parts of America. The roots of J. Manihot yield manioc or cassava. J. elastics yields an elastic substance used as caoutchouc.

Játs (jāts), an Indian race occupying a large part of the Punjab and half of the Rajput States. They are hardy, industrious, agricultural people, rearing large flocks of camels in the desert districts of Sind. Their religion varies with locality, and embraces Brah-
nanism, the Sikh tenets and Mohammed-
nism.

Jauer (vo'nér), a town of Prussia, province of Silisia. 10 miles s. s. E. of Liegnitz, on the Neisse, with manufactures of cigars, cloth, worsted, leather, etc. Pop. 13,024.
Jaundice (jān'dis), is not specifically a disease, but is rather the discolored matter in the bile, shown by a greenish-yellow color of the skin. This discolored matter is caused either by it being shed into the bile ducts leading to some obstruction in the intestines.

Jaunpur (joun'pur), a town and district of the United Provinces, British India, on the river Gomti, over which there is a fine bridge. It is an old town, and has some beautiful specimens of architecture.

Jaunting-car which the passengers on folding-down seats placed at right angles to the axle, ride back to back on their feet near the generally a 'well' and a seat in front receiving luggage, for the driver.

Jaurès (zhó'rohs), JEAN LEON, a French Socialist and author, born at Castres, December 29, 1849. At twenty-six Parliament; lost later; taught philosophy at the Toulouse University; and returned to the Chamber in 1892, where his eloquent speeches made him a political force as the acknowledged champion of socialism. In 1904 he founded the socialist paper, L’Humanité, and was also the author of Les Preuves; Affaire Dreyfus (1900), Action socialiste (1899), Etudes socialistes (1902), and, with other collaborators, Histoire socialiste (1902). He was assassinated July 31, 1914, at the outbreak of the European war, probably because of his anti-military views.

Java (jā'va), an island in the Indian Archipelago; the chief of the Dutch colonial possessions; capital Batavia. It is separated by the Strait of Malacca from Sumatra, and by that of Bali from Java, and extends about 630 miles from east to west; greatest breadth, 128 miles; area, 48,830 square miles. Java and the smaller adjacent island of Madura are divided into seventeen provinces or residences, of which the pop. in 1917 amounted to 34,157,383. Volcanic mountain chains running from east to west and rising to such points as Semeru (12,250 feet) and Slamet (11,830 feet); low-lying marshy tracts in the north, with such safe and land-locked harbors as Batavia and Surabaya; in the south a rocky unbroken coast washed by the heavy surf of the Indian Ocean; these are its chief characteristics. The mountains, covered with large forests, are separated by exceedingly fertile valleys. With the exception of marshy tracts the climate is as salubrious as that of any other intertropical country; and the more elevated regions are even healthy. The vegetation is varied. Rice is the chief cereal, but coffee and sugar are the staple products; spices are also grown, and some cotton is raised. Other products are cochineal, pepper, tobacco and tea. The famed poison tree, or upas (Antiaris toxicaria), is a noted Javanese plant. The forests consist mainly of teak. There are about 100 kinds of mammalia inhabiting Java. These include the one-horned rhinoceros, tiger, panther, tiger-cat, wild hog, several kinds of deer, several kinds of monkeys (but not the orang-outang, which occurs in the neighboring island of Borneo), and enormous bats. The ox, the buffalo and the goat are among the domestic animals. Birds are numerous. Serpents of a venomous kind are frequent, as also are crocodiles, lizards and the land tortoise. The native population belong to the Malay race, and are brownish yellow in complexion, with long, thick, black hair. They are sober, patient and industrious, but quick to avenge affront. In religion they are nominally Mohammedan. The great mass are devoted to agriculture, living in villages each governed by a native chief. Most of the land belongs to the Dutch government, which obtains a large revenue from the island. Till lately it was the custom to utilize the forced labor of the natives in what was called the 'culture system.' The principal exports are coffee, sugar, tea (the production of which is constantly increasing), tin, rice, cinchona, indigo, spices, tobacco, hides and India-rubber. Railways have been introduced, and telegraphic communication is developing rapidly. A governor-general rules Java and the whole of the Dutch East Indies. The history of Java is unknown previous to the eleventh century, when the Hindus founded a dynasty and converted the natives to Brahmanism. This was overthrown by an invasion of the Mohammedans in 1478. They were succeeded by the Portuguese, who arrived in 1511, and these were followed by the Dutch in 1595, who wrested from them the supremacy.

Javelin (jav'e-lin), a short spear thrown from the hand, and in ancient warfare used by both horse and foot soldiers. The Roman javelin (pilum) had a barbed iron head and a wooden shaft, the whole length being nearly 7 feet.

Jaxartes (jak'sär'tez). See Sir-Daria.
Jay (jē), a genus and subfamily of birds belonging to the family of the crows (Corvidae). The jays have the upper mandible or bill notched or indented near its tip, and the feathers on the top of the head are erectile, and can be elevated at will, to form a kind of crest. These birds are readily domesticated, possess a harsh grating note, and are admirable mimics. They feed on fruits, seeds, worms, insects and the eggs and young of other birds, etc. The common or European jay (Garrulus glandarius) is the size of an ordinary pigeon, the general color is a light brown inclining to red, while the larger or primary wing-feathers are of a brilliant blue, marked out by bands of black. The blue color reaches its highest brilliancy in the North American blue jay (Garrulus Cyanurus cristatus), which otherwise closely imitates its European representative both in size and habits. The blue jay is exceedingly well known in the United States. Another American jay is the Canada jay or 'whiskey jack' (Perisoreus canadensis), a bird of rather somber coloring, but of the bold, noisy and active habits of others of the jays.

Jay, John, an American jurist and statesman, born in 1745; died in 1829. In 1768 he was admitted to the bar, and in 1774 was chosen a delegate to the first American Congress, which met at Philadelphia. He was a member of the second Congress, and in 1778 he was appointed minister plenipotentiary to Spain. In 1782 he was appointed one of the commissioners to negotiate a peace with Britain, and, along with Adams and Franklin concluded a treaty with the British. Returning to the United States he was appointed head of foreign affairs, and afterwards chief justice. In 1794 he was sent as envoy extraordinary to Great Britain, and concluded a treaty which has been called after his name, and $1,000,000 was given to Americans on account of illegal captures by British vessels, the E. boundary of Maine was fixed, etc. The treaty excited bitter opposition on the part of the party that favored France, but was finally accepted. While present in England he was elected Governor of New York, and after filling two terms was nominated and confirmed in his former office of Chief Justice of the Supreme Court. This honor he declined and spent the remainder of his life in privacy.

Jazyges (ja-z'ez), a Sarmatian tribe, composed of bold, savage horsemen, dwelling in wagons and tents, its home being to the north of the Sea of Azov. In the first Christian century they moved westward to Hungary, whence they kept up a fierce warfare with the surrounding peoples. Their power was finally broken by the Huns and Goths. Hungary has a district named Jazygia, but its Magyar inhabitants have no connection with the ancient Jazyges.

Jeanette (ja-net'), a borough of Westmoreland Co., Pennsylvania, 26 miles E. of Pittsburgh. It has immense glass plants and rubber tire works. Also has foundry, planing mill, etc. Pop. (1910) 8077; (1920) 10,627.

Jeanette Expedition. See North Expeditions.

Jebb (jeb), Richard Claverhouse, Greek scholar, was born at Dundee, Scotland, in 1841. Educated at St. Columba's College, Dublin, the Charterhouse, London and Cambridge University, he was graduated as senior classic at Trinity College in 1862. In 1863 he became public orator of that university, and in 1875 he was called to fill the Greek chair in Glasgow University, which he resigned in 1889, on being appointed Greek professor at Cambridge. His best-known works are The Attic Orators: Modern Greece: Life of Richard Bentley: Homer: Introduction to the Iliad and Odyssey; and his admirable edition of Sophocles. He died in 1906.

Jedo. See Tokio.

Jefferson (jef-er-sun), Joseph, actor, was born in Philadelphia, Pennsylvania, in 1832. After the usual career of a strolling actor, in 1858 he came forward prominently as Asa Trenchard in 'Our American Cousin,' which ran for more than 150 nights. His great part, however, was that of 'Rip Van Winkle,' in which his success was phenomenal, and which he continued to play almost uninterrupted for many years to admiring audiences. He died April 23, 1905.

Jefferson, Thomas, the third President of the United States,
was born April 13, 1743, at Shadwell, Albemarle County, Virginia. He studied for two years at the college of William and Mary, Williamsburg, and then commenced the study of law. In 1775 he took a member of the provincial legislature, and in 1776 he was elected a member of the Congress of the Declaration of Independence, which (in a slightly modified form) was signed on July 4, 1776. In 1779-81 he was governor of Virginia. In May, 1784, Congress elected him minister plenipotentiary to France, in addition to Adams and Franklin; next year he was appointed sole minister, and his residence in Europe lasted about five years. On his return he was appointed Secretary of State by Washington, an office which he continued to fill until the end of 1783, when he resigned in consequence of dissensions with Hamilton. In 1789 he was elected Vice-President of the United States; but he was seldom consulted by the President, and he was out of harmony in many political views with the government. In 1800 he was re-elected President, defeating John Adams, the former President. The most important public act of his administration was the purchase of Louisiana from France, an act which enormously extended the area of the United States.

Jeffrey, Francis, Lord, a Scottish judge and critic, was born at Edinburgh in 1773, and died in 1850. He was educated at Edinburgh High School, the University of Glasgow and Queen's College, Oxford, and passed advocate in 1794. He took part in establishing the Edinburgh Review in 1802 (with Sydney Smith, Lord Brougham and others), and after two numbers had been issued was installed as its editor, a position he held for twenty-six years. In 1831 he was made Lord-advocate, and he sat for several years as member of parliament for Edinburgh. He was made a Lord of Session in 1834, and continued during a period of sixteen years to be one of the ablest and most popular judges of the supreme court in Scotland.

Jeffrey of Monmouth. See Geo.

Jeffreys (je-fréz), George, Baron, an infamous English judge, commonly known as Judge Jeffreys, was born in 1648, and died in the Tower in 1689. Soon after commencing his professional career he was chosen recorder of London; and he was appointed, successively, a Welsh judge and chief justice of Chester, created a baronet in 1680, and later appointed chief justice of the King's Bench. He was one of the advisers and promoters of the arbitrary measures of James II, and for his sanguinary and inhuman proceedings against the adherents of Monmouth on the so-called “bloody western circuit,” was rewarded with the post of lord high-chancellor (1685). On the arrival of the Prince of Orange, the chancellor, who had disguised himself as a seaman, was detected and carried before the lord-mayor, who sent him to the lords in council and by whom he was afterwards committed to the Tower.

Jehoshaphat (je-hosh'a-fat), son of Asa, fourth king of Judah, 915-800 B.C. He was noteworthy in his strenuous endeavors to abolish the use of idols. Jehoshaphat denotes ‘Jehovah's judgment.’

Jehovah (je-hó'vá: Heb. Yahveh), the popular pronunciation of the sacred name of God among the Hebrews, represented in the text of the Old Testament by the four consonants J (or Y). H. V. H. The Hebrews cher-
ished the most profound awe for this
name, and this sentiment led them to
avoid pronouncing it, and to substitute
the word Adonai, which signifies the lord,
which custom still prevails among the
Jews. In some portions of the Pentateuch
Jehovah is the name regularly ap-
piled to God, in others Elohim: this has
led to a theory of there being two authors
respectively for these portions. See
Elohim.

Jehu (je'hū), the founder of the fifth
dynasty of the kingdom of Israel.
He was a commander in the army of
Jehoram, when Elisha sent one of the
‘children of the prophets’ to consecrate
him king of Israel at Ramoth-Gilead
(a.c. 805). He immediately attacked
Jehoram, whom he slew in battle, and
then entered upon a work of extermina-
tion in which were slain seventy of
Ahab’s children and forty-two brothers
of Ahaziah, king of Judah. He died after
a reign of twenty-eight years. His name
occurs more than once on the monuments
discovered at Nineveh.

Jeissk. See Ieisk.

Jejunum (je-jō’num; Lat. jejunus,
empty), the second por-
tion of the small intestine, succeeding
the duodenum, and so named from its
generally being found empty after death.
See Intestine.

Jeletz. See Ieletz.

Jellico eclipse. Sir John Rushworth, a
British admiral, born De-
cember 5, 1859. He entered the navy
when thirteen; served in the Egyptian
war in 1882; served in China, 1895–1901,
and was in command of the naval brigade
during the attempted relief of the Peking
Legations. He served as rear-admiral in
the Atlantic Fleet, 1907–08, and from 1914
to 1916 was in command of the Grand
Fleet during the European war.

Jelly (jel’i), a name for such sub-
stances as are liquid when warm,
but which coagulate into a gelatinous
mass when cold. Animal jelly is prepared
from the soft parts of animals, and even
from bones when sufficiently crushed. It
is a colorless, elastic, transparent sub-
stance without taste or smell, and it
is soluble in warm water. Analysis
shows that its constituents are carbon,
hydrogen, nitrogen, with a possibility of
sulphur. Vegetable jelly is prepared
from the juice of unripe fruit heated in
a solution of water to 40° C. This ex-
tract when boiled with sugar forms a
pleasant and wholesome substance. Doc-
tors now incline to the opinion that ani-
mal jelly is less nourishing than ordinary
animal food.

Jelly-fishes, the popular name of cer-
tain coelenterate an-
imals, of the class Hydrozoa, found in the
sea, and often familiarly called Sea-blub-
bers and Sea-nettles, from their appear-
ance and stinging property. When in
the water they present a singularly beau-
tiful appearance, one of the most common
resembling a clear crystalline bell, which
swims gracefully through the water by
alternately expanding and contracting its
body. They are very voracious, and move
upon their prey (minute animals) with
great rapidity, seizing it with their long,
stinging tentacles. The phosphorescence
of the sea is to some extent explained
by the pale light which they diffuse in
the darkness. See Medusae.

Jelum. See Jehelum.

Jemappes (za-máp), a village of Bel-
gium, in Hainault, near
Mons, on the Scheldt, celebrated as the
place of the first great battle in the
French revolutionary war, fought Novem-
ber 6, 1792, when the French under
Dumouriez defeated the Austrians.

Jena (ya’nä), a town of Germany, in
the grand-duchy of Saxe-Weimar,
12 miles east of Weimar, on the Saale,
a place of little importance except for
its university, which was opened in 1558. It has in all 94 professors and lecturers, an anatomical theater, botanical garden, zoological museum and other scientific collections, observatory, library of 200,000 volumes, and about 600 students. On October 14, 1806, the Prussians (70,000 men) under Prince Hohenlohe were defeated here by the French under Napoleon (90,000 men). Pop. 26,355.

Jenikale. See Jenikale.

Jenisei, a river of Siberia. See Jenisei.

Jenner (jen'er), Edward, an English physician, celebrated for having introduced the practice of vaccination as a preventive of the smallpox. He was born at Berkeley in Gloucestershire in 1749; studied at London under the celebrated anatomist John Hunter, and afterwards settled in Gloucestershire as a medical practitioner. About 1776 the belief common among the peasants that casual cowpox acquired in milking cows was a preventive of smallpox caused him to try his inquiries to the subject, and led to the introduction of the process of vaccination in 1796. His method at first met with great opposition from the medical profession, but was ultimately universally accepted both by his own and foreign nations. Parliamentary grants to the extent of over £30,000 were made to him, and congratulatory addresses were sent to him by continental monarchs. He died at Berkeley in 1823. He published an Inquiry into the Causes and Effects of Cowpox (1796), Further Observations on Variolae Vaccinae (1797), and a celebrated paper on the cuckoo in the Philosophical Transactions. See Vaccination.

Jenner (jen'er), Sir William, born at Chatham in 1813, was educated at University College, London, where he was graduated M.D. in 1844. He became in 1848 professor of pathological anatomy, and in 1857 of clinical medicine in the University College; in 1861 physician to the queen; in 1862 professor of the principles and practice of medicine in University College; in 1868 he was made a baronet, and in 1881 was elected president of the College of Physicians. Dr. Jenner wrote a number of papers on specific diseases, and was the first to establish the difference in kind between typhus and typhoid fevers. Died in 1883.

Jennings, Sarah. See Marlborough, Duke of.

Jenolan Caves, a series of great caves in the limestone strata of the Blue Mountains of New South Wales, 100 miles w. of Sydney. Discovered in 1841, they were made a government reservation in 1866. In grandeur, magnitude and variety of cave scenery they approach the Mammoth Cave of Kentucky.

Jephtha (jep'tha), one of the Hebrew judges, who led the Ammonites, but having rashly made a vow that if he was victorious he would sacrifice to God as a burnt-offering whatever should first come to meet him from his house, he was met on his return by his daughter, his only child, whom he sacrificed, in consequence, to the Lord (Judges, xi, 29, 40). Some commentators have maintained that this meant devoting her to perpetual virginity in the tabernacle. Jephtha ruled six years as a judge and general (Judges, xi, xii).

The sacrifice of Jephtha's daughter is the subject of Handel's last oratorio, and of a Latin drama by George Buchanan.

Jerboa (jér-bó'á; Dipus), a genus of small animals belonging to the order Rodentia or Gnawers, having extremely long hind limbs, which gives them an extraordinary power of leaping, so that their movement seems more like flying than running. The forelimbs are armed with short, powerful claws, with which they excavate their burrows and extract the roots on which they chiefly live. They are gregarious and nocturnal in their habits, and hibernate during the colder seasons. The jerboas are found chiefly in Asia and Northern Africa. The typical species is the Egyptian form (Dipus aegyptius).

Jereed (je-ré'd), a wooden javelin about 5 feet long, used in Persia and Turkey, especially in mock fights.

Jeremiah (jer-e-mi'á), the second of the great prophets of the Old Testament, flourished during the darkest period of the Kingdom of Judah, under Josiah, Jehoahaz, Jehoiakim, Jeconiah and Zedekiah. He was called to the prophetic office about 629 B.C., in the reign of Josiah, and lived to see the capture of Jerusalem by Nebuchadnezzar in 586 B.C., who offered him a home at Babylon, but he preferred to stay among the wretched remnant of the people left in Judah. He is said to have been stoned to death in Egypt by some of his country-
men, who were irritated by his rebukes. He wrote two Old Testament books, the Prophecies of Jeremiah and the Lamentations. The text of the prophecies is in a somewhat confused state, there being no chronological order. Jeremiah wants the dignity and splendor of Isaiah, but exhibits great tenderness and elegiac beauty of sentiment. Some critics also attribute to him the book of Deuteronomy and several of the Psalms. See also Jews.

Jerez, or Xerez (he-reth'), de la Frontera, a town of a. w. Spain, in Andalusia, province of Cadiz, 16 miles N. E. of Cadiz. It is a well-built and flourishing town, with some handsome edifices, chiefly churches and the Alcazar, an old Moorish castle in ruins. It is noted for its wines, known under the name of sherry, which is exported in large quantities. Pop. 63,473.

Jerez de los Caballeros (or Xerez; kâ-väl'-ya-rôs), a town of Spain, province Badajoz, partly surrounded by a wall, which dates from the time of the Moors. Pop. 10,271.

Jerfalcon. See Falcon.

Jericho (jer'-i-kô), a considerable town of ancient Judah, on a plain about 7 miles N. E. of Jerusalem, noted, especially in Solomon's time, for its balms gardens and its thickets of palm-trees and roses, and carrying on a flourishing trade in balsam and spicess. It was the key of Palestine, and was therefore invested and taken by the Israelites, who had passed the Jordan under Joshua to conquer this country. Its site at the present is occupied by the village of Rihah. Taken by British Feb. 22, 1918.

Jerked Beef, from the Chilian word charqui, beef cut into strips of about an inch thick, and dried in the sun to preserve it. It is used in Chile and other parts of South America, and has been tried in Australia. When well prepared it will keep for a great length of time.

Jerkin-head, in architecture, the end of a roof when it is formed into a shape intermediate between a gable and a hip, the roof being hipped or inclined backwards from this level.

Jeroboam (jer-o-bô'am), the name of two kings of Israel.—JEROBOAM I, the son of Nebat, on Solomon's death (973 B.C.) was made king of the ten tribes who separated from Judah and Benjamin. He made Shechem his capital, forbade his subjects to resort to the temple at Jerusalem, and set up golden calves at the shrines of Dan and Bethel. He died in the 22d year of his reign.—JEROBOAM II, the most prosperous of the kings of Israel, reigned 823-782 B.C. He repelled the Syrians, took their cities of Damascus and Hamath, and re-conquered Ammon and Moab. But licentiousness and idolatry were prevalent during his reign. The authorities for the history of his time are II Kings, I Chron., Amos, and Hosea.

Jerome (jer'6m), JEROME K., author, born at Walsall, England, in 1861. His humorous writings include Three Men in a Boat, Idle Thoughts of an Idle Fellow, Second Thoughts of an Idle Fellow, etc. As a dramatist he achieved remarkable success with The Passing of the Third Floor Back.

Jerome, St., full name EUSEBIUS HIERONYMUS SOPHONIUS, one of the most learned fathers of the Latin Church, was born sometime between 331 and 345 in Dalmatia, of wealthy parents. He was baptized in Rome, went, in 373, to Antioch in Syria, and in 374 retired to the desert of Chalcis, where he passed four years in severe mortifications and laborious studies. He left his solitude to be ordained prebendary at Antioch, went to Constantinople to enjoy the instruction of Gregory of Nazianzen, and in 382 returned to Rome, where his expositions of the Holy Scriptures gained him many adherents, especially among the rich and noble ladies, two of whom, St. Marcella and St. Paula, became celebrated for their piety. St. Paula accompanied him in 386 to Bethlehem, where she founded four convents, in one of which Jerome remained till his death about 420. His Latin version of the Old Testament from the original language was the foundation of the Vulgate. He took an active part in many controversies, notably those regarding the doctrines of Origen and Pelagius.

Jerome of Prague, a Bohemian dissenter, born about 1360-70, in faith and sufferings the companion of the famous John Huss. Together they made a vigorous crusade...
Jerrod

against the dissoluteness of the clergy, the worship of relics, etc. When Huss was imprisoned in Constance, Jerome hastened to his defence, but was seized and carried thither in chains (1415). After much suffering he consented to recant his heresies, but on being subjected to a new examination solemnly retracted his recantation, and made a vigorous vindication of the principles of Huss and Wickliffe. On May 30, 1416, he was burned at the stake, and his ashes were thrown into the Rhine.

Jerrod (Jer-rod), Douglas, an English humorist and play-writer, born in 1803, the son of the manager of the Sheerness Theater. After being for a short time a midshipman, he was bound apprentice to a printer in London. His first play, More Frightened than Hurt (1818), was not at first successful, but his Black-eyed Susan (1822) ran for 30 successive nights at the Surrey Theater. Jerrod's subsequent dramas were the Rent-day, Nell Gwynne, The Housekeeper, The Prisoner of War, Bubble of a Day, Time Works Wonders, St. Cupid, The Catechum, The Heart of Gold, and several others. He contributed extensively to periodical literature, founding and conducting successively the Illuminated Magazine and Douglas Jerrold's Shilling Magazine, and subsequently editing Lloyd's Weekly Newspaper. To Punch he contributed his inimitable Mrs. Caudle's Curtain Letters to his Son, etc. Though a vigorous master of satire and repartee, his sayings had no personal malvolence. He died in 1857.

Jersey (Jer-zil), the largest and most valuable of the Channel Islands of England, about 15 miles off the northwest coast of France; greatest length, east and west, about 12 miles; greatest breadth, 7 miles in area, 44.87 sq. miles. Its coast, particularly on the north, is extremely rugged and precipitous, and deeply indented all round, and has a number of good bays and harbors, the chief of which are St. Aubin and St. Helier. The island is fertile, abundantly wooded and well cultivated. The climate is particularly mild and agreeable. Wheat is the principal cereal raised, and large quantities of grapes, peaches, pears and other fruits are exported, as also vegetables, and especially early potatoes for the London market. Cows of the famous Jersey or Alderney breed are reared and exported in great numbers. The lower class speak a sort of old Norman French dialect, while French is the language of the upper classes and the law courts. Jersey has its own legislature, known as the 'States.' Appeals lie to the king in council. The island is attached to the diocese of Winchester, the principal town, St. Helier. Pop. 62,706.

Jersey City, a city, capital of Hudson co., New Jersey, opposite New York, from which it is divided by the Hudson (North) River and with which it is connected by ferries and tunnels. It contains the mainland terminals of practically all the railroads reaching New York City except New York Central lines. It is one of the manufacturing cities of the United States, and has a large export trade. The principal manufactures are sugar, soaps and perfumery, tobacco, graphite products, locomotives, etc. Several lines of transatlantic steamers have their docks here. In 1913 it adopted the commission form of government. Pop. (1900) 206,433; (1910) 297,779; (1920) 300,864.

Jersey Shore, a borough of Lycomising Co., Pa., on Susquehanna River, 12 miles w. s. w. of Williamsport. Has silk works, car shops, foundry, cigar factories, etc. Pop. 6103.

Jerusalem (Jer-us-alem; Ar. El-Kuds), one of the most ancient and interesting cities in the world, in Palestine, in the maritime section of Syria. It stands on an elevated site (about 2500 feet above the sea) within the fork of two ravines, the Valley of Jehoshaphat on the east, and the Valley of Hinnom on the south and west, while a third ravine or valley—the Tyropoeon—partially traverses the city from south to north. On the east side of this valley is Mount Moriah, now the Mohammedan quarter of the city, where anciently stood the palace and temple of Solomon. Immediately south of this stood the mountain fortress of Zion, known as the City of David, and later as the Akra, or Lower City. This part of the city is now waste. According to another view, however, the 'City of David' is the Upper City on the opposite or western side of the Tyropoeon Valley, and to this the name of Zion is given by current tradition. This part is where the quarter of the Armenians, the citadel, and the Protestant church now are. Of the three walls which Jerusalem eventually possessed, the first wall, that of David, was for the defense of this Upper City (the traditional, but probably not the ancient Zion). The second wall took in a considerable area on the east and northeast, while a new town or suburb, Bezetha, which grew up on the north of this, was enclosed by a third wall, built by Agrippa 1. The present limits are much the same.
as those indicated by the third wall, only
that the old Lower City and the southern
part of the old Upper City are unpopulated places outside the modern
walls. Of the seven gates only five are
now used. The interior of the city is
much occupied by mosques, churches and
convents. The houses are substantially
built of stone, and present in most cases
no windows to streets, which ac-
cordingly—gener-
ally narrow, il-
paved and slo-
ing to the center
—are merely long
lanes with dead
walls on each
side of them. In
the north-
west quar-
ter is the
Church of the
Holy Sepulcher,
so called because
alleged to contain
under its roof the
very grave in
which the Savi-
our lay. This
church, which
was built by He-
lena, the mother
of Constantine
the Great, is re-
markable for the
richness of its
decorations and
the number of
pilgrims by whom
it is visited. A
large area in
the east of the city is
occupied by the
enclosures known
as El Haram-Esh-Sherif ('The Noble
Sanctuary'), which is in the form of a
regular parallelogram surrounded on all
sides by a lofty wall. The most conspic-
ous building within is the Mosque of
Opus, called also Kubbet-es-Sakhrah
('Dome of the Rock'), a splendid
structure of octagonal form which occu-
pies the site of the Jewish Temple.
Among the notable convents are the
Latin convent, and the still more exten-
sive Armenian convent capable of ac-
commodating 1000 pilgrims. Within the
last twenty years or so a considerable
improvement has taken place in the ap-
pearance of the city as well as of the
surrounding country. Among the rest,
hotels in which all modern conveniences
and comforts may be enjoyed have been
erected for the hosts of pilgrims and
travelers who annually visit the place.

The population is given as about 60,000,
of whom about two-thirds are Jews. Of
the remainder about two-thirds are Chris-
tians and one-third Mohammedans. The
first railway to Jerusalem was opened in
1893.

Jerusalem is not mentioned by name
till about B.C. 1500, when it was in the
hands of the Jebusites. The lower part
was wrested from
them by Joshua,
but the upper
part continued in
their possession
till the time of
David, who took
up his residence
in the stronghold
of Zion, and made
Jerusalem the
capital of his
kingdom. It
reached the
height of its glory
under Solomon,
after whose time
it declined. In
586 Nebuchadne-
zar took and de-
stroyed the city
after a long siege,
and carried off
those of the in-
habitants whom
the sword had
spared as cap-
tives to Babylol.
On the return
from the cap-
tivity the temple
was rebuilt, B.C.
515. The walls
were not rebuilt
till the time of
Ezra and Nehemiah, 455 B.C. The
city had regained a considerable degree
of prosperity, when it was sacked and
its walls leveled by Antiochus of Syria
in 168. Under the Maccabees Jerusalem,
in common with Judea, became once more
independent, 165 B.C. It next became
tributary to Rome, and had been greatly
beautified and enriched with a fine new
temple by Herod when the Saviour ap-
peared. In A.D. 36 Jerusalem was
taken by a party of Jews who had re-
volted against Rome. Titus, the son of
the emperor Vespasian, regained it in
the year 70, after a terrible siege; the
temple was burned, and the city razed
to the ground. In 131 Hadrian ordered
the city to be rebuilt, but it continued
depressed till the beginning of the fourth
century, when, Rome having become
Christian, Jerusalem shared in the bene-
JERUSALEM DELIVERED

On December 9, 1917, the Holy City was surrendered to the British forces. Carrying out the customs of the Crusaders, the Commander-in-chief, General Allenby, is making his triumphal entry through the Jaffa Gate on foot and accompanied by his staff and the commanders of the French and Italian forces who operated in the drive through Palestine, the heads of the political missions and the military attachés of France, Italy and the United States.
Jerusalem Cherry, a name given to two shrubs of the genus Solanum (potato genus) cultivated as ornamental plants.

Jervis, Sir John. See Vincent, Earl of St.

Jesi (yä'sē), a town in Italy. See Jesi.

Jessamine. See Jasmine.

Jesso, an island of Japan. See Yesso.

Jesulmeer, or Jevsulmeer. See Jesus Meer.

Jester (jas'tər), or Court Foot, a bufoon or person maintained by the noble and wealthy to make sport by jests and merry counsels for them and their friends. The professional jesters usually wore a motley or parti-colored dress, and a cap or crown of gay colors furnished with bells and asse's ears, or crowned with a cock's comb. In Britain the last-mentioned jesters were regularly attached to the royal household seems to have been Archie Armstrong, the jester of James I and Charles I.

Jesuit Porcelain, a name given to Japanese porcelain, which the Jesuits had caused to be decorated with Madonnas, images of the saints, and Christian emblems. It is now rare.

Jesuits (jes'-ū-it), or Society of Jesus, the most celebrated of all the Roman Catholic religious orders, founded in the sixteenth century by Ignatius Loyola, and established by a papal bull in 1540, the founder being the first general of the order. The members, in addition to the usual vows of poverty, chastity and implicit obedience to their superiors, were bound by a fourth, viz., to go whithersoever the pope should send them, as missionaries for the conversion of infidels and heretics, or for the service of the church in any other way. The popes Paul III and Julius III, seeing what a support they might have in the Jesuits against the Reformation, granted to them privileges such as no body of men in the church or state had ever before obtained. They were permitted to enjoy all the rights of the mendicant and secular orders; to be exempt from all episcopal and civil jurisdiction and taxes, so that they acknowledged no authority but that of the pope and the superiors of their order; to exercise every priestly function, parochial rights notwithstanding, among all classes of men, even during an interdict; and they could absolve from all sins and ecclesiastical penalties, dispense themselves from the observance of fasts and probation of meats, and even from the use of the breviary. Their general was invested with unlimited power over the members, the dispersion of whom throughout society, with the most entire union and subordination, was made the basis of the order. The constitution of the body was drawn up great part by Loyola himself, but the second general, Laynez, had much to do in directing its early movements. The order soon approved itself to the pope by its zealous activity, and its success as the most effectual barrier against the growing power of Protestantism. The Jesuits carefully avoided all appearance of spiritual pride, often wore the ordinary garb of the country, and generally dealt with all matters in a spirit of worldly policy and accommodation to circumstances. Their grand object was the establishment of the papal power, not only against Protestantism, but against all the claims of kings and national churches. In 1541 their foreign missions were begun by Francis Xavier in the Portuguese East Indies, and were attended with great success. Other Jesuits went to South America, and labored successfully in Brazil and Paraguay. In Europe they became the teachers of the higher classes, and introduced on a grand scale improvements in the current system of instruction. The young
nobility were almost exclusively sent to them, and even from Protestant countries. It was in Catholic countries, however, that their strength lay; in England and the Protestant states of the north they were not so successful, their repeated attempts to establish themselves there proving fruitless.

Yet notwithstanding the great favor which they enjoyed at courts and among the people, the non-Jesuit clergy, the older orders of monks, the universities, and the learned men of the age soon began to dread the powerful influence which the society was rapidly acquiring, while their pro-papal spirit made them the objects of suspicion and jealousy to statesmen, on account of their opposition to Gallican principles. For this reason the parliament and higher clergy of France for twenty years resolutely resisted the attempts of the Jesuits to gain a footing in that country. It was owing chiefly to the favor of the Guises that they at last, in 1562, were legally recognized in France under the name of Fathers of the College of Clermont, with a humiliating renunciation of their most important privileges. They appeared in Germany about 1549, and soon secured chairs in the universities of Prague, Ingolstadt, Cologne, Munich, Trier, Augsburg, and other places. They showed remarkable political talent in the thirty years' war, in which the league of the Catholics could do nothing without them. But while they were thus successful in this part of Europe, in France and the Netherlands the Jansenist controversy injured their position, and the character of the Jesuits received a fatal wound from the pen of Pascal, whose famous Provincialis letter, written with admirable wit and argument, unduly exaggerated the dangerous element of their doctrines and practices, and the accommodating morality which allowed interest and external circumstances to determine the rule of conduct, which, according to his false assertion, counseled evasiveness and mental reservation.

Towards the middle of the eighteenth century a general hostile movement against the Jesuits, alleging incompatibility of their privileges with the rights of others, prompted a powerful movement against them in various countries. In 1759 the efforts of the minister Pombal brought about their expulsion from Portugal, and the confiscation of their possessions in that country. In France the commercial complications of a Jesuit trading-house at Martinique with some French merchants led to an inquiry which involved them financially. Louis XV tried to save the society by demanding a reform of its constitution, a demand refused by the general of the order, Lorenzo Ricci, in the famous terms, Sint ut sunt, aut non sint ("Let them be as they are, or cease to be"). The result was a decree issued in 1764 for the abolition of the order in all the French possessions. Three years later they were expelled from Spain and soon after from Naples, Parma and Malta; and finally in 1773 Pope Clement XIV was induced to publish his famous bull Dominus ac Redemptor Noster, by which the Society of Jesus was temporarily suppressed in most countries. They were then obliged to quit their houses, lay aside the garb of the order, renounce all intercourse with one another, and either enter some of the other orders or put themselves under the superintendence of the bishops. They received annuities from the revenues of their confiscated estates, except in Portugal, in which country they were prohibited from residing, as also in Spain; while in the States of the Church, in Upper Italy and in Germany, Hungary, Poland and even in France they were suffered to remain as private persons. An attempt in 1787 to revive the society under the name of Vincentines was unsuccessful; but in 1814 Pius VII issued a bull (Solicitude omnium Ecclesiarum), which re-established it in almost the same form from which it had fallen. In 1815 a college was given them at Modena, and they did not delay to accept the invitations of the kings of Sardinia, Naples and Spain. Subsequently they found entrance into all European countries. In Italy, since the establishment of the new kingdom, in 1861, the Jesuits have had no legal existence, but continue, nevertheless, an influential and well-known body. In Britain they have been permitted to open several educational institutions. In Ireland also they have a number of important institutions, and, within a recent period in Scotland. They have also colleges in the United States and in Canada. Their enemies assert it was through them that the Ecumenical Council of 1870 was held, and that they have had a decided influence in shaping the recent policy of the papal authorities. By the law of July 4, 1872, they were expelled from the German Empire, and they were expelled from Portugal after the revolution of 1910. In 1890 they were expelled from their conventual establishments in France, and a considerable number of them went to Britain. Despite all the opposition to them the Jesuits have now in the world more than 200
Jesuits' Bark

colleges and 50,000 students, while their priests number nearly 7,000.

Jesuits' Bark, or Peruvian Bark, the bark of a certain species of Cinchona, so called because it was first introduced into Europe by the Jesuits. See Cinchona.

Jesuits' Nut, a name sometimes given to the fruit of the Trapa natans. See Trapa.

Jesus (jē'zūs), son of Sirach, the author of the apocryphal book called Ecclesiasticus (which see).

Jesu Christ (Iē'sus, the Greek form of Joshua or Jesuah, contracted from Jehoshua, meaning, help of Jehovah, or Saviour; Christos, the Greek translation of the Hebrew Messias, anointed), the founder of the Christian religion; born in Bethlehem, according to the received chronology in the year 7 B.C., but in reality some four years earlier, that is, in 4 B.C. He was born of the Virgin Mary, of the tribe of Judah, who was betrothed to Joseph, by occupation a carpenter. Two genealogies of Joseph, differing very much after the time of David, are given, one by Matthew, chap. 1; the other by Luke, chap. iv. Our information concerning him is derived almost entirely from the accounts of his life written by the four evangelists, Matthew, Mark, Luke, and John, and incidental notices in other parts of the New Testament. Before the birth of the Holy Child, Joseph and Mary, then residing in Nazareth, went to Bethlehem to be taxed, and it was there, in a manger, the inn being full, that Jesus was born. On the night of his birth an angel announced the coming of a Saviour to shepherds tending their flocks by night in the field. On the eighth day he was circumcised according to the law of Moses. Soon after his birth he was hailed by the adoration of the Magi or wise men of the East, who were miraculously directed to the house where the young Child was, and presented royal gifts. Herod, alarmed at hearing of the birth of one who was to be King of the Jews determined to destroy all the male children of Bethlehem and its vicinity of the age of less than two years, for the purpose of effecting the death of Jesus. But Joseph, being miraculously warned of the danger, fled to Egypt with his Virgin and her child, and on his return, after the death of Herod, went to reside at Nazareth in Galilee, whence Jesus was often called a Nazarene. We have no further accounts of Jesus till his twentieth year, when his parents took him with them to Jerusalem. Here after being lost for three days he was found in the temple sitting among the doctors, hearing them and asking them questions. Regarding the following eighteen years of his life the evangelists are silent. He is supposed during this period to have followed his father's occupation, that of carpenter. At the age of about thirty he appeared as a public teacher, having been baptized in the Jordan by John, who recognized him as the Messiah. He then retired to the wilderness, where he passed forty days in fasting, meditation and prayer previous to being tempted of the devil, as described by the evangelists. He then began to select his disciples, to teach publicly, and perform miracles. Among the notable incidents of his public career, as narrated by the evangelists, are, the changing of the water into wine at the marriage in Cana of Galilee (his first miracle); the driving of the traders out of the temple during the feast of the passover; the curing by a word of a nobleman's son lying ill at Capernaum; his scornful reception as a preacher in the city of Nazareth on account of his humble parentage; the calling of the twelve apostles; the sermon on the mount; the healing of the centurion's servant and the restoration of the widow's son at Nain to life; the healing of the man at the pool of Bethesda; the miraculous feeding of 5000 persons with five loaves and two fishes; the calming of the tempest on the lake of Gennesaret; his healing the Syrophoenician woman's daughter of an unclean spirit; the transfiguration on the mountain; the raising of Lazarus at Bethany; the cure of blind Bartimæus at Jericho; the entry with triumph into Jerusalem; the fourth feast of the passover with his disciples, known as the Last Supper; the agony in the garden of Gethsemane; the betrayal and the condemnation before the sanhedrim; the trial before Pilate, and the crucifixion on Golgotha or Mount Calvary. The body of Jesus was taken down from the cross by Joseph of Arimathæa, and placed in a tomb about which the Jewish priests set a guard. But on the third day, i.e. on the day thence called the Lord's day and made the first day of the week, he rose from the dead, appeared to his disciples and others, and on the fortieth day after his resurrection, while with his disciples on the Mount of Olives, was visibly taken up into heaven. These events of his public life are generally considered to have occupied three years.

Jesus College, Cambridge, an institution founded by Alcock, bishop of Ely, in 1496.

Jesus College, Oxford, was founded
1571. Many of the fellowships and schools are confined to persons born or educated in Wales. The college is thus distinctively a Welsh one. This was the first college founded on Protestant principles.

Jet, a solid, dry, black, inflammable fossil substance, harder than asphalt, susceptible of a good polish, and glassy in its fracture, which is conchooidal or undulating. The finest quality and chief supply of it is found at Whitby, England, in beds of the Upper Lias shale. Spain also supplies fine jet, and much is obtained in France. It is the altered fossilized wood of coniferous trees, being a peculiar form of lignite. It is wrought into buttons and personal ornaments of various kinds.

Jetsam (jet'sam), or Jetson, goods thrown overboard from a ship in danger. See Flotsam.

Jette, or Jetee (jet'e), the fiber of Marsdenia tenacissima, a small climbing plant of the nat. order Asclepiadaceae, growing in some elevated regions of North India. The fiber is fine and silky and of great strength.

Jetison. In maritime law, the act of throwing overboard all or part of a ship's cargo as a matter of necessity, either in order to lighten the vessel, to prevent capture by an enemy or for other justifiable cause. A ship's master upon the high seas has the right by law to jetison a cargo in the extremity of danger. The loss in such case does not fall upon the master of the ship or the ship's owners, but on the owners of the cargo primarily. They, however, are entitled to a pro rata contribution from the several persons interested in the ship, freight and cargo by the doctrine of general average, though there are exceptions to this rule when the cargo is carried on the deck. When the cargo jetisoned is insured the insurer receives the average.

Jetty (jet'ē), a kind of pier or artificial projection of stone, brick, wood, or other material, affording a convenient place for landing from and discharging vessels or boats, or serving as a protection from the violence of the waves; or a jetty may be built out from the bank of a stream obliquely to its course, and employed either to direct a current on an obstruction to be removed, as a bed of sand or gravel, or to deflect it from the bank which it tends to undermine or otherwise injure. In this last sense jetties have been successfully used to deepen river mouths or retard the advance of a bar, as at the mouths of the Mississippi, the Columbia, the Maas, the Danube, the Vistula, and other rivers.

The jetties at Galveston harbor, Texas, extend about 6½ miles from the island to the outer bar, and are the longest in the world. The Mississippi jetties are composed of brush, woven into wooden frames. Flimsy as they seem, they have been very durable and successful in deepening the channel. Many harbors, such as Calais, Ostend, etc., depend on jetties for their existence.

Jeux Floraux (zhē fôr-ô; Floral Games), a poetic contest and festival annually celebrated in Toulouse, and having its origin in a poetical college, Collège du Gai Savoir, founded in 1323 by seven troubadours. Its annual fête is still celebrated, and a volume of the competition pieces is published yearly.

Jevons (jév'ouns), William Stanley, an English writer on logic and political economy, born at Liverpool in 1835. He was educated at University College, London; held an appointment in the royal mint in Australia from 1854 to 1859; was graduated at London University in 1862; was appointed professor of logic, mental and moral philosophy, and Cobden lecturer on political economy in Owens College, Manchester, afterwards professor of political economy in University College, London, a post which he resigned in 1881. Among his works are Elementary Treatise on Logic (1870), Theory of Political Economy (1871), Principles of Science (1874), and many essays and addresses on economic questions. Those entitled The Coal Question, the Value of Gold, Money and the Mechanism of Exchange, may be specially mentioned. He was drowned whilst bathing in 1882.

Jew-bush, a plant of the nat. order Pedilanthus tithymaloides, Euphorbiaceae. It grows in the West Indies, and is used in decoction as an antisyphilitic, and in cases of suppression of the menses. It is also called Milk-plant.

Jewell (jē'el), John, Bishop of Salisbury, born in 1522; died in 1571. He was educated at Oxford, embraced the principles of the Reformation, and contributed greatly both by his work as a college tutor and by his sermons and writings to the progress of Protestantism. On the accession of Mary he at first temporized to avoid persecution, but finally in 1554 escaped to Frankfort. On the accession of Elizabeth in 1558 he returned to England, took part in all the measures for the thorough establishment of Protestantism, and became Bishop of Salisbury in 1560. He is famous for his many controversial writ-
New Fish

New-fish, the name given to two species of large fishes well known in American waters. The one known also as the guassa or black grouper (Pomatomus saltans) sometimes reaches the weight of seven hundred pounds; the other (Stereolepis gigas) inhabits particularly the Californian coast, often weighs five hundred pounds, and has flesh of excellent quality.

Jewish Era.

Jews (jōz), a Semitic race of people also known as Hebrews and Israelites, and whose early history is identified with that of Palestine or the Holy Land, and whose early history is the Old Testament. But the chronology is obscure and difficult to harmonize. Jewish history may be considered as beginning with the emigration of the patriarch Abraham, ancestor of the race, from the land of Chaldea, probably about 2000 B.C. Abraham removed to the southeast of Palestine, where we find his descendants flourishing when they were led to migrate to Goshen, in Egypt. The interval is filled up with the history of the patriarchs, Abraham, Isaac and Jacob (which see). Joseph, a son of Jacob, had become viceroy of Egypt, and his father and brothers were received with high favor by the Pharaoh who then ruled in this country. But in course of time the condition of the Israelites, under the rule of the Pharaohs, changed for the worse. They were treated as bondmen, and forced labor was exacted of them in an unreasonable degree. According to some authorities the Pharaoh who began to oppress the Israelites was Ramses 11, and their deliverance took place under his son. (See Egypt.) It was perhaps about 1320 B.C., others say 1381 B.C., that a deliverer in the person of Moses led the Israelites out of the land of bondage, where they had resided for some 400 years. By this time they formed a large community, divided into twelve tribes, named respectively after Reuben, Simeon, Judah, Issachar, Zebulun, Benjamin, Dan, Naphtali, Gad and Asher, sons of Jacob. The sons of Joseph, Manasseh and Ephraim, sons of Joseph. Under the leadership of Moses they went into the wilderness, and through him received the law of the Ten Commandments on Mount Sinai and the whole policy by which they were to be governed as a people. A ceremonial of sacrifice was instituted, and Aaron, the elder brother of Moses, and his sons consecrated as a hereditary priesthood, the priestly functions thus falling to the tribe of Levi. The nation was established as a theocracy, and this principle, however, often forgotten in times of repose, continued henceforward to be the inspiring idea of national unity throughout the frequent crises of Jewish history. The emigrants first settled at Kadesh on the southern borders of Palestine, where they remained for many years, this being the period spoken of in the Scriptures as the forty years’ wandering in the wilderness. They now marched northward to find new settlements in Palestine, which they had to wrest by force from the Canaanites. Moses died before entering the promised land, and was succeeded as leader by Joshua, under whom the Israelites advanced to the conquest of the territories of the Canaanites west of Jordan. The former inhabitants, however, were not entirely subdued, but retained possession of a number of cities, and the twelve tribes settled in districts which were more or less cut off from one another, and which formed an exceedingly loose union of small states under the tribal chiefs, at times hard pressed by neighboring peoples. It was only long after, and by a gradual process of absorption, that the Canaanite territories and their inhabitants became amalgamated with the Israelites.

After the death of Joshua, about 1220, or according to another chronology 1427 B.C., a succession of judges or military leaders arose. Among the more remarkable of these judges were Barak, Deborah the prophetess, Gideon, Jephthah, Samson and Samuel. About 1070 the Philistines, who inhabited the coast and the low-lying plains west of the mountains of Judah, had defeated the Israelites and subdued part of the country when Samuel, the ‘last judge in Israel,’ was inspired to declare to Saul, a Benjamite, his destiny to become king, and anointed him as such. Saul soon proved his fitness for the post by his successful leadership of the Israelites, and continued to organize the forces of Israel, and to fight with varying success against their enemies till his disastrous defeat and death at Mount Gilboa, after which the power of the Philistines again predominated on the west side of Jordan. On the other side of the river the military skill of Abner still preserved a kingdom for Saul’s son, Ishboseth, and gradually reasserted with some success his authority in Ephraim and Benjamin. But in Judah David, a native of Bethlehem, a warrior whom Saul’s jealousy had driven into exile and alliance with the Philistines,
and who had previously been anointed king in place of Saul, established a separate principality, the capital of which was at Hebron. For seven years a hot war was waged between the two Hebrew states, and ended only with the murder of Abner and Ishboseth, when all the tribes acknowledged David as king. David now transferred his residence from Hebron to Jebus, a fortified city which he wrested from the Canaanites, and called the city of David, afterwards Jerusalem. He assailed and subdued the Philistines, Moabites, Edomites, Ammonites, and other surrounding nations, till all the country from the N. E. end of the Red Sea to Damascus acknowledged his authority. To this prosperous kingdom succeeded his son Solomon (B.C. 933, or by some chronology 1015). His reign, owing to the warlike reputation which the nation had acquired under David, was entirely peaceful. He had no military tendencies, but he took great pains to arrange the administration of the kingdom in an orderly way, and his wisdom as a ruler and judge became proverbial. His alliances with Tyre and Egypt enabled him to carry on an extensive and lucrative commerce. He built the celebrated temple in Jerusalem, and extended and improved the city. His harem contained 700 wives, spoken of as princesses, besides 300 concubines. But with these, and with the extended commerce of the kingdom, it was inevitable that foreign elements should be introduced into the Jewish national life. Thus Solomon erected altars for the deities and the worship of the Moabites, the Ammonites, the Sidonians and other nations; and the severe simplicity of old Hebrew manners gave place to luxury and craft.

The splendor of Solomon's reign had entitled heavy exactions upon the people. When Rehoboam, Solomon's son, succeeded, they came with Jeroboam at their head and demanded that he should make their yoke lighter. Rehoboam answered scornfully, whereupon ten tribes revolted and set up Jeroboam, as king of a separate kingdom of Israel, with its capital first at Sichem, later at Samaria. Judah, along with a part of Benjamin and the tribe of the Levites, remained loyal to the dynasty of David. After an unsuccessful attempt to conciliate the ten tribes of Israel, Rehoboam was forced by an invasion of Shishak of Egypt to give up the hope of uniting the two kingdoms. In the next generation things had changed so much that Asa, king of Judah, was obliged to seek the help of Benhadad of Syria against King Baasha of Israel. Baasha was succeeded by Elah, Elah by Zimri and Zimri by Omri, under whom the kingdom of Israel seems to have grown powerful. Omri established the capital of the kingdom at Samaria (about 906 B.C.), and subjugated the Moabites. The son of Omri, Ahab, married Jezebel, princess of Tyre, an event which led to the extension of Phoenician idolatry in Israel. As Solomon had done before, Ahab built a temple for the Syrian Baal in his capital. In his reign and subsequently the great prophets Elijah and Elisha played an important part. Ahab was slain at Ramoth-gilead in battle against the Syrians. He was succeeded by Ahaziah (853-851), and Joram (851-843). The latter was slain by Jehu, a captain of the army, who had been anointed king by command of Elisha. Jehu (841-814) now made a clearance in Samaria of Syrian idolatries, destroying the temple of Baal and putting the priests to death. Under Jeroboam II, fourth in the line of Jehu, the kingdom reached a high point of prosperity (790-749). After Jeroboam's death there was a quick succession of kings, Zachariah, Shallum, Menahem, Pekahiah, Pekah, none of any significance. Under Pekah the kingdom of Israel became tributary to the Assyrians. (See Assyria.) Hoshea, Pekah's successor, made an ineffectual attempt to free the country from the Assyrian yoke; but finally, in 722, Samaria was captured by the Assyrian king, Sargon, the kingdom of Israel virtually destroyed, and the chief inhabitants carried away and settled in Assyria and Media.

Generally, while the kingdom of Israel had been flourishing, that of Judah had stood in the background. Rehoboam was succeeded by Abijam, Asa, Jehoshaphat, the last a powerful and fortunate king. In the hope of uniting an empire with the kingdom of Israel, Jehoshaphat married his son Jehoram (848-844) to Athaliah, the daughter of Ahab of Israel. After the murder of her son Ahaziah by Jehu, Athaliah seized the supreme power in Jerusalem, and put to death her own grandchildren in order to destroy the line of David, Joash alone being miraculously rescued. Athaliah was overthrown and put to death and the young Joash raised to the throne (797-799). His successors were: Amaziah (797-792), Uziah (792-740), Jotham, Ahaz and Hezekiah (727-686). Under Ahaz and Hezekiah Isaiah delivered his sublime prophecies. Hezekiah was one of the greatest reforming kings; his influence extended widely over the Kingdom of Israel, now in extreme decline. He was miraculously delivered from an invasion of Sennacherib, king of
Jews

Assyria, by the destruction of the Assyrian army. (See Assyria.) Josiah (641-609 B.C.) was the last of the pious kings of Judah. He was killed in battle against Necho, king of Egypt. After him there was an uninterrupted succession of weak and incapable monarchs, till under Zedekiah (597-585 B.C.) the capture of Jerusalem by Nebuchadnezzar, B.C. 588, put an end to the monarchy, Jerusalem being destroyed and many of the people being carried captive to Babylon. The prophet Jeremiah flourished from the reign of Josiah to the captivity.

In 538 Babylon was taken by Cyrus, king of Persia, who restored the Jews and appointed Zerubbabel governor of Judaea, as a Persian province. The great majority of the Jews remained in Persia, however, only about 42,000 returning and settling chiefly in the vicinity of Jerusalem. About 454 a second return of exiles was led from Persia by Ezra. Along with Nehemiah, who had been appointed Persian governor of Judaea, Ezra promulgated the new law-book, practically identical with the Pentateuch. From the time of Nehemiah to the fall of the Persian empire the Jews continued to live in peace as Persian subjects, but enjoying their own institutions. When Alexander the Great overthrew the Persian empire the Jews readily submitted on being promised the free exercise of their religion (B.C. 322). After the division of Alexander's empire Palestine was long a possession of the Ptolemies of Egypt, under whom it enjoyed a period of tranquility. It was under the patronage of Ptolemy Philadelphus (reigned B.C. 285-247), according to tradition, that the Septuagint or Greek version of the Old Testament Scriptures was made. After the death of Ptolemy Philopator Antiochus the Great of Syria became master of Palestine (B.C. 198). An Egyptian and a Syrian party now arose among the Jews, and gave occasion to civil dissensions, which led Antiochus IV (Epiphanes) to invade Judea (B.C. 170), when he took Jerusalem by storm and slaughtered the inhabitants without distinction of age or sex, and endeavored to compel the Jews to give up their religion. At length, under the leadership of the Maccabees or Hasmonaeans, a Jewish revolution was successful. In 167 B.C. John Hyrcanus, son of Simon, a brother of Judas Maccabaeus, completed the independence of Judea, and extended his dominion over the ancient limits of the Holy Land. During his reign the rival seats of the Pharisees and Sadducees became established. Aristobulus I, the son of Hyrcanus, assumed the title of king, which was held by his successors. In B.C. 63 Pompey, called in to help the Pharisees, took Jerusalem, and made the Jews tributary to the Romans. Subsequently Herod the Great, who entirely threw off the Jewish manners and cultivated the favor of the Romans, was recognized as King of Judaea by the Roman senate. It was B.C. 4, the last year of his reign, that the birth of Christ took place at Bethlehem. In A.D. 64 Judaea and Samaria became a Roman province under a procurator, who had his seat at Caesarea, and was subordinate to the prefect of Syria. Pontius Pilate, under whom our Lord's public ministry and crucifixion occurred, was made procurator A.D. 26. For a time the country was again ruled by a king, Herod Agrippa, A.D. 41-44. He persecuted the Christians and put the Apostle James to death. In A.D. 65 a party of the Jews revolted from the Roman yoke and roused the whole of Palestine to insurrection. Vespasian was sent by Nero to suppress it, but before the war was finished he was called to the empire and left his son Titus to conclude it. The result was the capture and destruction of Jerusalem, A.D. 70, an event that deprived the Jews of the center of unity to which their national life had hitherto clung. After an insurrection headed by Bar-Cochba, 132-135, Hadrian completely razed to the ground the remains of Jerusalem left by Titus, and erected in their place a Gentile city, with the title Aelia Capitolina. Jews were then forbidden to enter this city on pain of death, and the name of Jerusalem was not revived for it till the time of Constantine. See Jerusalem.

Thenceforth the Jews became more and more a scattered people, without a country they could call their own. Under the Roman emperors their treatment varied. Under the Emperor Julian they ventured to make preparations for a new temple in Jerusalem. Although this attempt failed, they derived great advantages from their patriarchates (presidencies of the sanhedrim), which were established—one at Tiberias for the Western Jews (429); the other for the Jews beyond the Euphrates, latterly at Bagdad. These two patriarchates became points of union, and flourishing Jewish academies arose in the East to serve as seminaries for their learned rabbis. One of the works of these scholars was the collection of the traditionary expositions of the Old Testament, and additions to it, which was completed A.D. 500, and received, under the name of the Talmud, as a rule of
faith by the scattered communities of Jews. (See Talmud.) In time the scattered Jews made themselves masters of the commerce of the Old World, and, as money-lenders and brokers, were often of great importance to princes and nobles. Even during the dreadful persecutions which they underwent from the cruelty of the Christians they still continued prosperous in Christian countries. They lived more happily, however, among the Mohammedans, although they were distinguished by dishonorable brands and oppressed by heavy taxes; and during the Moorish supremacy in Spain their prosperity was great and their learning flourishing. In the cities of France, Germany and Italy, after the eleventh century, particular streets and inclosed places were assigned to them as a sort of outcasts, in consequence of which, in the persecutions during the Crusades, thousands often fell victims at once to the popular fury. They were generally pronounced incapable of civil rights and public offices. In Spain and Portugal during the fifteenth century they yielded to force, and multitudes suffered themselves to be baptized, many were put to death by the Inquisition, and at last they were banished from the peninsula. It was only in the end of the last century that the Jews began to be put on a level with other citizens, France leading the way after the Revolution, and Prussia, following (1811). After repeated unsuccessful attempts to procure their admission into the British Parliament the object was at last effected in 1858. Anti-Semitic movements have resulted in the oppression of Jews in many countries, notably in Russia under the Czars. The most remarkable circumstance connected with the modern Jews is the tenacity with which they cling to their ancient religion and the purity in which on the whole they have retained their characteristics in the midst of alien peoples. The capture of Jerusalem from the Turks during the European war gave fresh impetus to the idea of re-founding a national Jewish state. (See Zionism.) The total number of Jews throughout the world is estimated at 13,000,000; of which over 6,000,000 were under the government of Czarist Russia, over 3,000,000 were in the United States, 1,313,687 in Austria; 1,675,666 in Poland. In New York City alone there were 1,450,000 Jews in 1918. See also Hebrew Language and Literature.

Jew's-Harp, a toy musical instrument, the teeth, which gives a sound by the motion of a tongue of steel, which, being struck by the hand, vibrates against the breath.

Called also Jews' Trump, or simply Trump.

Jeypore. See Jaipur.

Jezreel (jez'ré-l), a city of Palestine, chosen by Ahab, king of Israel, as his chief residence.

Jezreelites (jez'ré-lítz), a religious sect founded by James Jeshon Jezreel, his real name being James White, who died in 1855. The revelations which he pretended to have received were contained in The Flying Roll, which represent the Jezreelites as being animated by the just spirits who withstood Satan at his rebellion in heaven, and who shall enjoy a greater state of bliss than Gentile Christians, who have the spirits which, though not rebellious, did not actively withstand Satan. The headquarters of the sect are at Gillingham, Kent.

Jhaláwár (ja'há-wár), an Indian native State in Rájputána; area, 2,994 sq. miles; pop. 340,488. Capital, Jhaira Patan, or Patan; pop. 23,000.

Jhang (jung), a town of Hindustan, in the Punjab, about 3 miles from the Chenab. Pop. (with adjoining Mughana) (1901) 24,382.—Jhang district has an area of 5702 sq. miles; pop. 378,695.

Jhansi (juh'násé), a fortified town in Hindustan, in Gwaltore state, Central India Agency; pleasantly situated amid tanks and groves of fine timber trees. Within the town stands the fort on a rock. Pop. 55,724.

Jhelum (juh'lám), Jhilam (juh'lam) (anciently Hydaspes), a river of India, the most westerly of the five great rivers that intersect the Punjab. It rises in Cashmere, flows south, forming the boundary between Cashmere and the Punjab, then southwest through the Punjab, and finally falls into the Chenab. Its whole course is about 450 miles, and it is navigable for the flat-bottomed boats of the country from its junction with the Chenab up nearly to its emergence from the mountains. —There is a town of same name on the right bank of the river, with military cantonments. Pop. 21,107.

Jib, a triangular fore-and-aft sail extended on a stay stretching from a bowsprit or jib-boom to a mast, the jib-boom being a continuation of the bowsprit by a spar run out from the extremity of it.

Jiddah (jid'dá), or JEDDAH, one of the chief trading ports of Arabia, on the Red Sea, 60 miles west of Mecca, of which it is the port. It has a considerable trade, and thousands of
Joan of Arc

Jitomir (jit’o-mir’), or Zhitomir, a town of Russia, capital of the government of Volhynia, on the left bank of the Teterew, 80 miles w. of Kiev. Pop. 65,422.

Joachimsthal (yo’o-a-kim’s-tal’), a town of Bohemia, in a valley of the Erzgebirge, near the frontier of Saxony, 70 miles w. n. w. of Prague. It depends chiefly on its valuable lead and silver mines. Thaler pieces derived their name from being first coined here. Pop. 7378.

Joan (jo’an), the female pope, according to a story long believed, but now acknowledged to be a fiction, was said to have been a native of Malin, who, falling in love with an Englishman named Fulda, traveled with him and his wife, acquired the title of Joan, and was raised to the papal chair, under the name of John VIII (885-886). She governed the church well, but having become pregnant she was delivered in a solemn procession, and died on the spot.

Joanina. See Janina.

Joan of Arc (Jenne d’Arc—properly Daro), the Maid of Orleans, a heroine in French and English history, was born in the village of Domrémy, in Champagne, now department of the Vosges, in 1412. While she was a young girl she began to be deeply affected by the woes of her country, much of which was conquered by the English, leaving only a small portion of it, the French king, Charles VII. In 1429 Orleans was besieged by the English, and its fall would have ruined the cause of Charles. At this time Joan, who had been noted for her solidities and pious enthusiasm, began, as she declared, to see visions and hear angelic voices, which ultimately called upon her to take arms for Charles, to raise the siege of Orleans, and conduct Charles to Rheims to be crowned. At first she was regarded as insane, but eventually she found her way to the king and his councillors, and having persuaded them of her sincerity, received permission to hasten with Dunois to the deliverance of Orleans. In male dress, fully armed, she bore the sword and the sacred banner, as the signal of victory, at the head of the army. The first enterprise was successful. With 10,000 men she marched from Blois, and on April 20, 1429, entered Orleans with supplies. By bold sallies, to which she animated the be-
sieged, the English were forced from their intrenchments, and Suffolk abandoned the siege (May 8, 1429). Other successes followed; Charles entered Rheims in triumph; and at the anointing and coronation of the king, July 17, Joan stood at his side. She was wounded in the attack on Paris, where Bedford repulsed the French troops, but continued to take part in the war till May 25, 1430, when she was taken prisoner by the Burgundians, and sold to the English. She was taken to Rouen, and after a long trial, accompanied with many shameful circumstances, condemned to death by the judges as a sorceress. On submitting to the church, however, and declaring her revelations to be the work of Satan, her punishment was commuted to perpetual imprisonment. But pretenses were soon found to treat her as a relapsed criminal, and as such she was burned at Rouen, May 30, 1431, and her ashes were thrown into the Seine. She died with undaunted fortitude. Twenty-five years after, a council constituted by Pope Callixtus III to examine the charges against the Maid of Orleans, pronounced her innocent. Voltaire, in a notorious burlesque, Southeuil, Schiller, and others have made her subject of their verse. Schiller's drama still remains the most interesting literary monument of her fame. After 1875 there arose a movement toward a canonization of this remarkable woman. This led in 1900 to her being beatified by Pius X, the reigning Pope; and in 1920 she was canonized by Pope Benedict XV; a just tribute to her noble character.

Job (Job), the hero of an ancient Hebrew poem, which forms one of the books of the Old Testament. He was an upright man, with a family of seven sons and three daughters, with large herds and numerous servants, is suddenly, with the permission of Jehovah and by the agency of Satan, deprived of his possessions and his children, and smitten with a sore disease, yet submits patiently to the divine will. Three friends come to console him, and a large part of the poem is occupied with the speeches of his friends, who attribute his misfortunes to wickedness and hypocrisy, and his reply to them, until near the close, when God himself is introduced answering Job out of a whirlwind. In the sequel Job is delivered from his calamities, lives 140 years, becomes richer than he had been before, and has seven sons and three daughters. The design of the book seems to be to enlarge men's views of the providence of God. It was probably written between the seventh and the fifth centuries B.C., and is certainly not earlier than the time of David. The authorship of the story is unknown.

Jockey Club, a club for the regulation of horse-racing.

Jodhpur (jōd-pōr' or Marwar, a town of Hindustan, capital of the state of Jodhpur. The city has many handsome buildings, and is surrounded by a strong wall with seventy gates. Pop. 60,400.—The state of Jodhpur is the largest in Rajputana, having an area of 35,000 sq. miles; it is well watered by the Luni and its affluents. Pop. 1,093,563.

Joel (jō'el), one of the twelve minor prophets. Nothing is known of his life. He is generally supposed to have been contemporaneous with Hosea and Amos. The immediate occasion of his prophecy was a pestilence in 1857, caused by a visitation of locusts and other destructive vermin, but it expands in a style of high sublimity into predictions of future prosperity when the divine judgments should have purified the nation. Joel is quoted by St. Peter. Acts II. 16, 21.

Joffre (zhōfr'), General Joseph Jacques Césaire, a French soldier, born at Rivesaltes, a small town in the Pyrenees, Jan. 4, 1852. He was educated at the College of Perpignan and the Ecole Polytechnic, Paris. He joined the French army as 2nd lieutenant during the Franco-Prussian War (1870-71) and rendered distinguished services in the Formosa and Tonkin-China campaigns in 1885; and in the Sudan, 1892-94; and in Madagascar in 1892, rising to the rank of general of Division. In 1913 he was made chief of the general staff of the French army. On the outbreak of the European War (q.v.) he took command in the field and won the brilliant battle of the Marne, stopping the German advance on Paris. In December, 1915, all the French armies in Europe were put under his command. In December, 1916, he was relieved from active service and in 1917 headed the French Commission to the United States to discuss American participation in the war.

Jogues (zhóz'), Isaac, a Jesuit missionary in North America, a native of Orleans, France. After laboring in Michigan, he visited the Mohawks in 1642, was tortured and mutilated, but escaped. Returning in 1646, he discovered Lake George (called by him Holy Sacrament), and was again tortured and murdered by the fierce savages.

Johannesburg (yo-hin'nes-berg), a city in Transvaal Union of S. Africa, the central point of the gold-fields of the district stretching southwest from Pretoria to Potchefstroom, and known as the Witwatersrand. The
John, one of the apostles, often distinguished as St. John the Evangelist, the reputed author of the fourth Gospel, three epistles, and the Revelation, was the son of Zebedee and Salome, and the brother of James. Previous to his call by Jesus he was a fisherman on the Sea of Galilee, together with his father, his brother, and Simon Peter and Andrew, who were his partners. John, together with Peter and James, was admitted to a more confidential intercourse with Jesus than the other apostles, and he is repeatedly spoken of as 'the disciple whom Jesus loved.' His Gospel was written later than any of the others — according to some critics to refute particular heresies of certain2 of our Lord's conversation and discourses than the other Gospels, and is also more doctrinal in character. Of the three epistles the first has much resemblance to the Gospel; but the other two were composed undoubtedly by the early fathers. As to the Revelation, see Revelation. After the death of Jesus John continued at Jerusalem, and we afterwards find him at Samaria (Acts iii. 14-25). Tradition handed down by the fathers makes him die at Ephesus, and if he wrote the Revelation he must have been banished to Patmos. The time of his death is unknown.

John, called the Baptist, theforerunner of Christ, was born six months before Jesus (their mothers were cousins), of a Levitical family in Judaea. He lived an austere life, given up to solitary meditations, till A.D. 29, when he began to preach in the deserts of Judaea, announcing that the kingdom of heaven was at hand, and proclaiming himself as the forerunner of the Messiah. He baptized many converts, and testified to the higher mission of Jesus at the time of his baptism in the Jordan. To gratify a vindictive woman, Herod Antipas, tetrarch of Galilee, caused him to be beheaded in prison. But for long afterwards his disciples continued to form a separate body, and are said to have established the still existing sect of Sabians or St. John Christians, in Persia, distinguished for their veneration of John the Baptist.

John, among whom are the following:—John i (St. John), pope in 523-526. Theodoric sent him to Constantinople, to induce the Emperor Justin to adopt milder measures towards the Arians, and on his returning without success Theodoric threw him into prison, where he died.—John XII succeeded Pope Agapetus II in 956, when only eighteen years old. He was the first pope who changed his name on his accession to the papal dignity. His life was so licentious and disorderly that the Emperor Otho had him deposed by a council in 963, and Leo VIII elected in his stead. But on Otho's departure John returned to the city with a strong body of followers and drove out Leo. He died in 964.—John XXII, a native of Cahors, was elected pope at Lyons in 1316, after the death of Clement. He resided at Avignon, and took an active part in the disputes of the emperors Louis of Bavaria and Frederick of Austria. He died in 1334.—John XXIII (Balthasar Cossa), born in Naples, was a pirate in his youth, afterwards studied at Bologna, and was elected pope in 1410, by the Council of Pisa, after the death of Alexander V, on condition that, if Gregory XII and Benedict XIII would resign, he would also retire to end the schism. He summoned the Council of Constance, demanded by the Emperor Sigismund, in 1415, and was deposed by this council as guilty of a long list of heinous crimes. For some years he remained in custody, but was ultimately pardoned by Pope Martin V, and made a cardinal. He died in 1419.

John, King of England, born in 1166, was the youngest son of Henry II, by Eleanor of Aquitaine. Being left without any particular provision, he got the name of Sans Terre, or Lackland; but his brother, Richard I, on his accession, conferred large possessions on him. Despite this, he tried to seize the crown during Richard's imprisonment in Austria. He obtained the crown on the death of Richard in 1199, although the French provinces of Anjou, Touraine and Maine declared for his nephew, Arthur of Brittany, who was lineally the right heir to the crown, then with the King of France. A war ensued, in which John recovered the revolted provinces and received homage from Arthur. In 1201 some disturbances again broke out in France and the young Arthur, who had joined the malcontents, was captured and confined in the castle of Falaise, and afterwards in that of Rouen, and never heard of more. John was universally suspected of his nephew's death and the States of Brittany summoned him before his liege lord Philip to answer the charge of murder, and in the war which followed, John lost Normandy, Anjou, Maine and Touraine. In 1205 his great quarrel with the pope began regarding the election to the see of Canterbury, to which the pope had nominated
Stephen Langton. The result was that Innocent III laid the whole kingdom under an interdict, and in 1211 issued a bull deposing John. Philip of France was commissioned to execute the decree, and was already preparing an expedition when John made abject submission to the pope, even agreeing to hold his kingdom as a vassal of the pope (1213). John’s arbitrary proceedings led to a rising of his nobles, and he was compelled to sign the Magna Charta, or Great Charter, June 15, 1215. But John did not mean to keep his agreement, and, obtaining a bull from the pope annulning the charter, he raised an army of mercenaries and commenced war. The barons, in despair, offered the crown of England to the dauphin Louis, who accordingly landed at Sandwich, May 30, 1216, and was received as lawful sovereign. The issue was still doubtful when John was taken ill and died at Newark, October, 1216, in the forty-ninth year of his age.

John II, King of France (1319-64), surnamed the Good, was a monarch distinguished alike for his incapacity and his misfortunes. In 1350 he was defeated and taken prisoner by the Black Prince at the battle of Poitiers, and was detained at Bordeaux and at London till released at a heavy expense to his country by the Peace of Bretigny in 1360; but on learning that his son, the Duke of Anjou, who had been left as a hostage in England, had effected his escape, he returned to London, where he died in 1364.

John III (Sobieski), King of Poland, son of Mark Sobieski, a Polish captain, was born at Oleasko, in Galicia, in 1592; served in the French army, returned to Poland to repel the Russians in 1648, and greatly distinguished himself in several campaigns against Cossacks, Tatars and Turks, especially by his defeat of the last in the great battle of Chocim in 1663. The year after, on the death of Michael Corybut, he was chosen king. His most celebrated achievement was the relief of Vienna, besieged by a great army of Turks, whom he decisively defeated Sept. 12, 1683. His last years were disturbed by the intrigues of his own family and the anarchy of the country, which he was unable to control, and in which he foresaw its approaching downfall. He died June 17, 1696.

John, Knights of St., or Knights Hospitallers of St. John, afterwards called Knights of Rhodes, and finally Knights of Malta, were a celebrated religious order, originating in a monastery founded at Jerusalem in 1048 by some merchants from Amalfi. The monastery was dedicated to St. John the Baptist, and the monks, who were called Brothers of St. John or Hospitallers, had the duty of caring for the poor and sick, and in general of assisting pilgrims. In 1118 the order was regularly instituted as a military order, with the duty, in addi-
John Bull, a red jacket or tabard, charged with a white cross. In 1798 Malta was unexpectedly attacked and taken by Bonaparte, and about the same time the extensive properties belonging to the order in various countries were confiscated. It still exists nominally.

John Bull, in order to designate was first employed by counterpart in the United States is Brother Jonathan (which see). See Dory.

John of Austria, commonly called Don John of Austria, the natural son of the emperor Charles V, was born at Ratisbon in 1545. In 1570 he conducted a campaign against the recalcitrant Moors of Granada with great vigor and relentlessness, and in the following year he commanded the allied fleet which won the great naval battle of Lepanto over the Turks (October 7, 1571). This was one of the greatest naval combats in history, and put an end to Mohammedan supremacy in the Mediterranean. In 1576 he was appointed governor of the Netherlands, and had just won along with the Prince of Parma the victory of Gemblours (1578) over William the Silent, when he died, not without suspicion of having been poisoned by his jealous half-brother, Philip II.

John of Gaunt, a corruption of Ghent, where he was born in 1339, was fourth son of Edward II and his queen Philippa, daughter of the Earl of Hainaut. He was created Duke of Lancaster in 1362; served in the French wars, and became governor of Guienne. He assumed in right of his wife the title of King of Castile, invaded the kingdom to assert his claims, but subsequently relinquished them in favor of Prince Henry of Castile, who had become his son-in-law. His eldest son, Bolingbroke, became king of England as Henry IV. He died February 3, 1399.

John of Leyden. See Anabaptists.

John o' Groat's House (popularly Johnny Groat's House), a house formerly situated about 1 ½ miles west of Duncansby Head, and forming about the most northern extremity of the mainland of Great Britain. According to legend, it was built in octagonal form, with eight doors, and contained an eight-sided table, to prevent disputes on precedence in the Groat fam-

John's, Eve of Saint, a popular celebration of remote antiquity, held on the vigil or eve of the feast of the nativity of John the Baptist, June 24 (Midsummer Day). On the eve of the feast it was the custom in former times to kindle fires (called St. John's fires) upon hills in celebration of the summer solstice, and various superstitions were long practised on this occasion. The custom still lingers in some parts of Europe.

John's, St. See Saint John's.

John's, St., Antigua. See Antigua.

John Scotus. See Erigena.

Johns Hopkins University, one of the foremost universities of the United States, founded in 1876, in Baltimore, Maryland, by Johns Hopkins, a merchant of that city, and endowed by him with more than $3,000,000. Besides the library there are well-equipped laboratories for chemistry, biology, etc. There is an extensive teaching staff, and instruction is given to two grades of students, graduates and undergraduates. The former are such as have taken a degree here (that of B.A. or elsewhere, and wish to carry their studies further, this university giving special attention to advanced studies of various kinds, as well as to original research. A number of periodicals are issued in connection with the university. There are, besides numerous scholarships, about twenty fellowships, each of the value of $500 annually. A hospital, also endowed by Johns Hopkins, is connected with this institution. Its present endowment amounts to more than $4,500,000.

Johnson (J'hnson), Andrew, seventeenth president of the United States, born in North Carolina in 1808; died in 1875. He was self-educated; entered Congress as a Democrat in 1843, and the Senate in 1857. In 1864 he was nominated as vice-president by the Republican party, and elected with Abraham Lincoln. He became president upon the assassination of Lincoln in April, 1865. During his term of office he was in constant conflict with the Senate and House of Representatives on account of his efforts to restore the Confederate States to their full former status without consultation with Congress. He was finally impeached by the House of high crimes and misdemeanors (February, 1868), and tried before the Senate, the trial ending in an acquittal, the requisite two-thirds major-
Johnson, Richard W., soldier, was born in Livingston County, Kentucky, in 1827, and was graduated at West Point in 1849. In 1862 he was made a major in the regular army, and as general of volunteers commanded a division at the battles of Stone River and Chickamauga. He served under Sherman in Georgia in 1864, took part in the battle of Nashville and commanded a division of cavalry in the pursuit of the Confederates. He died in 1897.

Johnson, Rossiter, author, born at Rochester, New York, in 1840; was graduated at Rochester University in 1863. His works comprise Phagoros; Idler and Poet, poem: History of the War of 1812; History of the Old French War, etc. He edited series of books and clyclopiaedia and was an associate editor of the Standard Dictionary.

Johnson, Samuel, an eminent English author, son of a bookseller, was born at Lichfield in 1709; died at London in 1734. He received his early education partly at the free school of Lichfield, and partly at Stourbridge, in Worcestershire. In 1728 he entered Pembroke College, Oxford, but was obliged by poverty to retire after three years without taking a degree. He became successively an usher in Leicestershire, a bookseller's drudge in Birmingham, and the head of a school established with some money he acquired by marrying, in 1733, Mrs. Porter, the widow of a mercer, considerably older than himself, but to whom he was sincerely attached. The school speedily failed; and in 1737, removing to London, Johnson entered on his long course of literary toil. His reputation rose very slowly; the greater part of his time was wasted for many years on desultory and occasional efforts. A large proportion of his writings appeared in the Gentleman's Magazine, or as pamphlets; and most of these are quite forgotten. His two poetical satires, London (1728) and The Vanity of Human Wishes (1749), are striking specimens of reflection and diction, but neither they nor his tragedy of Irene entitle him to be considered as a great poet. Rasselas (1759), written in a week to pay for his mother's funeral, is one of the most interesting and characteristic of his works. His two sets of periodical essays,
The Rambler (1750-52) and The Idler (1758-60), were at first coldly received, but after collected and reprinted they became very popular. For eight years from 1747 Johnson's attention was chiefly engaged upon his Dictionary of the English Language, a work which appeared in 1755, and is highly honorable to the author in the circumstances in which it was produced, but is of little real philosophical value. The dictionary, though it raised his fame, added little to his worldly means; and Johnson lived in poverty till 1762, when he obtained, through Lord Bute, a pension of £300 a year. He was therefore in easy circumstances, and could enjoy without restraint the society of Burke, Reynolds, Gibbon, Garrick, Goldsmith, and others in the famous club which became a formidable power in the world of letters. In 1765 began his intimacy with the family of Mr. Thrale, the great brewer, and in the same year appeared his long-promised edition of Shakespeare. In 1773 Johnson made a tour to the Hebrides in company with his friend Boswell, of which he gives a highly instructive account in his Journey to the Western Isles of Scotland. In 1775 he received the diploma of D.C.L. from the University of Oxford, and soon after visited France in company with the Thrales. His last literary undertaking was his Lives of the Poets, which was completed in 1781. He was buried in Westminster Abbey. Boswell's Life may be said to convey a more favorable impression of Johnson's real strength, both in thought and language, than anything in the works which he wrote and published.

Johnson, Tom Lipton, reformer, was born at Georgetown, Kentucky, in 1854. He invented street railway devices, became the owner of several railways, and was an iron manufacturer in Cleveland, Ohio, of which city he was reform mayor, 1901-10. He was a prominent advocate of the 'single tax' theory and vigorously sought to establish three-cent railway fares. In this he succeeded in Cleveland. He died April 1, 1911.

Johnson, Sir William, a British officer, was born in Ireland in 1715; died in 1774. Migrating to America, he settled near the Mohawk River, New York, became a friend of the Indians, and was adopted as a sachem by the Mohawks. In 1755 he won an important victory over the French army at Fort George. For this he the government presented him 100,000 acres of land in the Mohawk valley, where he built the village of Johnstown.

Johnstown, a city of Broome Co., New York, on Susquehanna River, adjoining Binghamton. There are manufactures of boots and shoes, furniture, boxes, felting, spoons. Name changed from Lestershire in 1816. Pop. 8807.

Johnstown, a resort and post town in Washington Co., Tennessee, in a picturesque mountain region; altitude, 1631 feet; on the Memphis to Washington Highway. It has a National Soldiers' Home, State Normal School, and 3 railroads. Pop. (1910) 8502; (1920) 12,442.

Johnston (jont'ôn), a town of Providence Co., Rhode Island, adjoining Providence. It has worsted and other mills. Pop. (1920) 6855.

Johnston, Albert Sidney, Confederate soldier (1803-62), born at Washington, Kentucky. His services in the Black Hawk and Mexican wars were distinguished. On the outbreak of the Civil War he resigned command of the Department of the Pacific to take part with his native South. In the battle of Shiloh (q.v.), in which he commanded (April 6, 1862), he received a mortal wound. He was one of the ablest of the Confederate leaders.

Johnston, Joseph Eggleston (1809-91), an American soldier and Confederate general in the Civil War, born in Virginia. He served in the Seminole Indian and Mexican wars. In the Civil War the victory of Bull Run was due to his reinforcement of Beauregard's army. He was opposed to Sherman in North Carolina in 1865 when the surrender of Lee ended the war.

Johnstown, a city of Williamson Co., Illinois, in the southern part of the State, in a coal-mining and fruit and farm region. It is on the Chicago and Eastern and the Illinois Central railroads. Pop. (1920) 7137.

Johnstown (jont'ôn), a town in Cambria Co., Pennsylvania, on Stony Creek and Conemaugh rivers, 78 miles S. E. of Pittsburgh. It is the center of a rich mining and manufacturing district. There are here great steel mills employing nearly 18,000 men; also numerous other industries, with an annual payroll of over $55,000,000. Within the vicinity 76 coal mines produce 10,000,000 tons of coal a year. The town was laid
waste May 31, 1889, by the bursting of a
dam near South Fork, 10 miles distant.
Johnstown has the commission form of
government. Pop. (1910) 55,482; (1820)
67,327.
Johnstown, a city, county seat of
Fulton Co., New York, 40 miles w. n. w. of Albany, on Cayadutta
Creek, and on the Fonda, Johnstown &
Gloversville R. R. It was settled in 1780
and was named for Sir William Johnson
(q.v.), who held many councils with the
Indians here. The Americans defeated the
British at Johnstown in 1781. It has manu-
factures of gloves, underwear, leather,
etc. Pop. (1920) 10,008.
Joint-stock Companies, a species
of partnerships in which a number of persons
contribute funds or stock for the purpose
of carrying on a trade or other profitable
object. The management is vested in
certain members called directors; and the
general body of shareholders take no ac-
tive part in the concerns of the company
beyond exercising a control over the acts
of the directors on special occasions. The
capital is generally divided into equal
shares, each member holding one or more,
and in proportion to the number participates
in the profits. After the stock of a
company of this sort has been fully
subscribed no one can enter it without
previously purchasing one or more shares
from some of the existing members. No
member can demand payment of his share
from the company, but he may, without
consent of his fellow members, transfer
his share to another person. In nearly
all the States of this country joint-stock
companies are now, by statute, invested
with some of the privileges of corpora-
tions. Five or more persons associated
for any lawful purpose may, by subscrib-
ing their names to a memorandum of asso-
ciation, form an incorporated company,
with or without limited liability. The
distinction between limited and unlimited
liability companies is, that if an unlimited
company contract any debts, no matter
how large, every member is liable, if his
fellow-members turn out unable to bear
their proportions, to pay the whole of
these debts to the extent of his fortune,
whereas if the company is limited, each
member can in no event be called upon
to pay more than he expressly guaranteed.
A company may be registered in one of
three forms: 1. as a company limited by
shares, where the liability of each mem-
ber is limited to the amount unpaid on
the shares; 2. as a company limited by
guarantee, where the liability of each
member is limited to such amount as he
undertakes in the memorandum of asso-
ciation to contribute to the assets of the
company if it should be wound up; and
3. an unlimited company, where there is
no limit to the liability of the members.
In the first two cases the word 'limited'
must be added to the name of the com-
pany, and the amount of capital, object,
place of business, and declaration of
the limit or the amount of guarantee
must be entered in the memorandum of
association, which must be accompanied
by articles of association providing for
the management of the company. In
Britain an annual list of members must
be forwarded to the registrar of joint-
stock companies, an official appointed by
the Board of Trade; and there must be
at least one office for registration in each
of the three kingdoms. A general meet-
ing of the company must be held at least
once a year. A company may be wound
up whenever it passes a special resolution
to that effect; also whenever it does not
commence business within a twelvemonth
after incorporation, or if it suspends its
business for a whole year; also whenever
its members are reduced to less than
seven; whenever it is unable to pay its
debts; and lastly, whenever the court
thinks it just and equitable that it should
be wound up. Joint-stock companies are
now common in all countries.
Joint-tenants, are those that hold
lands or tenements, or
other property, as goods and chattels, by
one title, without partition. In a joint-
tenancy the last survivor takes the whole,
as if the estate had been given to him
only, unless any of his companions have
conveyed away their shares by deed.
Jointure (jointūr), in law, a provi-
sion for a wife to take effect on
her husband's death.
Joinville (zhwan-vel), Jean, Sieur
de, a French historian, born
in Champagne about 1224; died about
1317. He early entered the service of
Thibaut, king of Navarre, and in 1248
raised a troop of nine knights and 700
armed soldiers, and accompanied Louis
IX in his first crusade to the Holy Land.
He rose high in favor with Louis, shared
his captivity returned with him to
France in 1254, and spent much of his
time at court. His Histoire de St. Louis,
which is one of the most valuable literary
productions of the middle ages, has been
often reprinted.
Joists (joists), in carpentry, are the
beams of timber to which the flooring of rooms and the laths of a ceiling
are nailed, and which rest on the walls
or girders, and sometimes on both. They
are laid horizontally, and in parallel
equidistant rows.
Jokai (yō'kē-ē), Mór, a Hungarian novelist, was born at Komorn in 1825. His first novel, Working Days, was published in 1845, after which he became a prolific and popular author, producing in all about 200 volumes of romances and novels, dramatic poems, humorous essays, etc. He died in 1904.

Joliba (jōl'ī-ba). See Niger.

Joliet (jōl'ēt), a city, county seat of Will Co., Illinois, on Des Plaines River and Illinois & Michigan Canal, on several railroads. It is noted for extensive manufactures of steel, wire, automobiles, farm implements, machinery, milk cans, and many other industries, including the largest art-calendar factory in the world. Pop. (1910) 34,670; (1920) 38,406.

Joliette, capital of Joliette Co., Quebec, on Assiniboine River, 36 miles N.E. of Montreal. Water power and many industries. Pop. 9000.

Joliet (jōl'ēt), Louis, a French-Canadian explorer, born at Quebec in 1640; died in 1700. In 1672, at the instance of Frontenac, governor of New France, he volunteered to explore the Mississippi. After much travel and adventure, descending the Wisconsin and Illinois rivers, they reached the Mississippi and finally made certain that it emptied into the Mexican Gulf. On his return journey, his maps and papers were lost in the Lachine rapides. He tried in vain to persuade the French government to colonize the Mississippi valley. Labrador was explored by him, and he was given the office of royal hydrographer. It is disputed that he was the first to explore the Mississippi.

Jomelli (yō-mel'ē), Niccolo, an Italian musical composer, born in 1714; died in 1774.

Jomini (zhō-mi'nē), Henri, Baron, a distinguished soldier and military historian, born at Payerne, canton of Vaud, Switzerland, in 1779. He first served with the troops of his own country, but in 1804 joined the French army as lieutenant andINPUT REDUCED TO 10KB, CONTINUE
commending his zeal, prudence and intrepidity. At the conclusion of peace Jones went to Paris as American agent for prize-money. In 1787 he entered the Russian navy as rear-admiral, and performed valuable service against the Turks. He died at Paris in 1792. His remains were discovered in that city in 1906 and brought to the United States, to be interred in the Naval Academy grounds at Annapolis.

Jones, Owen, a British artist and decorator, born in 1809. He studied art under Lewis Vulliamy, and traveled in Italy, Turkey, Egypt and Spain. In the last-mentioned country he collected the materials for his great work on the Alhambra—Plans, Sections and Details of the Alhambra, completed in 1845. In 1842 Jones published his Designs for Mosaic and Tessellated Pavements, and in 1846 the Polychromatic Ornament of Italy. He was appointed a superintendent of the works for the Great Exhibition of 1851, and afterwards director of decorations at the Sydneyra Crystal Palace, and had the special superintendence of the Egyptian, Greek, Roman and Alhambra Courts. In 1856 his Grammar of Ornament was published, and it still remains a textbook of examples, if not of principles. His last important work was his Examples of Chinese Ornament (1867). He died in 1874.

Jones, Sir William, an English lawyer and oriental scholar, born in 1746. He was educated at Harrow and Oxford, and early acquired a reputation as a linguist, Hebrew, Persian, Arabic and even Chinese, besides German, Italian, French, Spanish and Portuguese, being among his acquisitions. In 1770 his translation (in French) of the life of Nadir Shah from the Persian appeared; in 1771 his grammar of the Persian language; in 1771 his Poësies Asiatiques Commentariorum, Libri Sex; and in 1781 his translation of the seven Arabic poems known as the Moalldkat. He had been called to the bar in 1774, and in 1783 was nominated judge in the supreme court of Judicature, Bengal, and knighted. Here he did much for the furtherance of oriental studies, being one of the first Europeans to study Sanskrit, founding the Royal Asiatic Society, translating the Sakuntala, the Ordinances of Manu, besides tales, poems, extracts from the Vedas, etc. He also undertook a digest of the Hindu and Mohammedan laws, which he did not, however, live to complete. He died in Calcutta in 1794.

Jonesboro, a city, capital of Craighead county, Arkansas. 67 miles N.W. of Memphis, Tennessee. It is a lumber center and has large wood-working and other industries. Pop. 9384.

Jonqueurs (zhon-lur), a class of French minstrels in the middle ages who used to wander about entertaining people by song, music, story, etc., and sometimes by juggling feats, tumbling, etc.

Jönköping (yohn-cheop'ing), a town of Sweden, capital of the län of same name, at the southern extremity of Lake Vatter, 83 miles E.N.E. of Gothenburg. It is in general well built, and has manufactures of matches, leather, etc. Pop. (1911) 26,969.

Jonquil (jon'kwil), a bulbous plant of the genus Narcissus (N. Jonquilla), allied to the daffodil. It has long lily-like leaves, and spikes of yellow or white fragrant flowers. The sweet-scented jonquil (N. odorata), a native of southern Europe, is also generally cultivated. Perfumed waters are obtained from jonquil flowers.

Jonson (jon'sun), Ben or Benjamin, a celebrated English poet, the contemporary and friend of Shakespeare. He was the posthumous son of a clergyman, and was born in 1674, at Westminster. He was placed at the Westminster grammar school, under Camden, at an early age, where he laid the foundation of his learning, but was ultimately withdrawn, it is said, by his stepfather, a master bricklayer, who wanted his assistance in the business. He soon tired of this occupation, entered the army as a private soldier, and showed much personal courage during a campaign in Holland. Returning to England he began his career as an actor, and in 1598 his drama Every Man in His Humor was printed. About this time Jonson was in some
danger of the gallows on account of hav- ing slain an actor in a duel, and was actually imprisoned for some time. In 1599 he brought out his comedy of Every Man out of His Humor, which was followed by Cynthia's Revels (1600); the Poetaster (1602); and Sejanus, a tragedy (1603). The festivities which welcomed the new king, James I, gave a new impulse to the representation of masques, in the composition of which the ready talent of Jonson was employed by the court itself, the celebrated Inigo Jones doing the decorations. In 1604 he had some share with Chapman and Marston in writing Eastward Ho, certain passages of which, reflecting satirically on the Scotch nation, drew down the anger of the king, and nearly cost the authors their noses and ears. In 1605 his comedy of Volpone, or the Fox, appeared; in 1609 Epicene, or The Silent Woman; in 1610 the Alchemist; in 1611 Catiline, a tragedy; and in 1614 Bartholomew Fair, a complete picture of Elizabethan life. In 1613 Jonson made a tour in France as governor of Sir Walter Raleigh's eldest son. In 1618 he visited Scotland, staying for some time with Drummond of Hawthornden, whose notes of his guest's conversation are among the best accounts we have of Jonson's personality. In 1619 he returned to England, received the honorary degree of A.M. from Oxford University, and on the death of the poet laureate was appointed his successor, and the salary raised to the sum of £100 by Charles I. Much of his time was spent at the Apollo, Mermaid, and other taverns, feasting, drinking and engaging in those brilliant contests of wit in which in earlier days Shakespeare also took part. His later days were spent, not perhaps in much pecuniary prosperity, but certainly in fame and honor, as the acknowledged chief of English literature. He died in 1637, of an attack of palsy, leaving behind him an unfinished pastoral drama of great beauty. The Sow Shepherd. He was buried in Westminster Abbey, where a monument was erected to his memory with the inscription, 'O rare Ben Jonson.' Jonson's best dramas are excellent in plot and execution, have strongly conceived characters and excellent traits of humor, but he is sometimes forced and unnatural, and deals perhaps too much with passing manners and eccentricities. He had a genuine lyrical power, seen in his short poems and the songs interspersed in his masques.

Joplin (jop'lin), a city of Jasper county, Missouri. It is the commercial center of the southwest Missouri lead and zinc region. Has numerous foundries, machine shops, machinery supply houses, etc. Pop. (1920) 29,855.

Joppa. See Jaffa.

Jordaens (yor'dáns), Jakob, historical and portrait painter, born at Antwerp in 1594. He studied under his father-in-law, Van Oort, and then under Rubens, and has the reputation of being, after Rubens, Antwerp's greatest painter. His pictures, the subjects of which are mostly mythological scenes, and scenes from Flemish popular life, banquets, etc., are to be found in the chief European collections. His style is less elevated and powerful than that of Rubens, but preserves more of the national Flemish humor and realistic force. He died in 1678.

Jordan (jör'dan), the largest river in Palestine, and one of the most celebrated rivers in the world. It rises from several sources, uniting in Bahr el-Huleh, or the Waters of Merom. From this point it flows with a rapid current in a narrow rocky bed, and falls after a southerly course of about 10 miles into Lake Tiberias. Shortly after leaving the south end of this lake it enters a broad valley or ghor, called in the Bible 'the plain'; and continuing a southerly but singularly crooked course of about 70 miles direct distance, or 200 including windings, falls into the north end of the Dead Sea, having received the Zerka or Jabok, also on the left, and numerous smaller affluents. The upper part of the valley of the Jordan is hilly, arid, and barren, but it becomes more level and fertile as it approaches the Zerka. The river is muddy and full of small fish. In the dry season it is shallow, with an average width of from 30 to 50 yards. At its mouth it is about 180 yards broad and about 3 feet deep. It is subject to great inundations during the winter season. The valley of the Jordan forms one of the most remarkable depressions in the world, the Dead Sea being 1312 feet below sea-level, and the total fall of the river being about 2300 feet.

Jordan, David Starr, naturalist, born at Gainesville, New York, in 1851. He became professor of biology at Butler University, Indianapolis, and subsequently in the University of Indiana. He investigated for the Census Bureau the marine industries of the Pacific coast, 1879-81. He has been president of Leland Stanford, Jr., University since 1891, and has written numerous works, including a Manual of Vertebrates, Synopsis of the Fishes of North America, and many other works and papers on scientific and general subjects.
Jordan, William George, editor, born at New York in 1864; educated at the College of New York; was successively editor of Book Chat, Current Literature, Saturday Evening Post and Search Light. In 1907, he proposed the organization of a House of Governors, to work for uniform legislation between the States. This led, in 1908, to the call by President Roosevelt, of a convention of governors at Washington, at which arrangements were made for annual meetings. An organization was formed of which Mr. Jordan was appointed secretary. He is the author of Mental Training, The Power of Truth, The Crown of Individuality, The House of Governors, etc.

Jornandes (or-nan’dès; properly Jordanes), the historian of the Goths, and himself a Goth, was born about 500 A.D., was at first a vassal of the bishop of some Italian city, probably Ravenna of Cremona. Of his two works the chronicle De Regnibus et Temporibus Successionis is of value only when it approaches his own time. The other work, De Rebus Geticis, treating of the Goths, based on the lost history of Cassiodorus, is invaluable.

Jorullo, Xorullo (ho-rul’yo), a volcano of Mexico, in the department of Michoacan, 160 miles southwest of Mexico, thrown up in 1759; height, about 4150 feet. There are at present scarcely any signs of activity about the mountain.

Joseph, one of the two sons of the Patriarch Jacob by his favorite wife Rachel. His father's preference for him drew down the enmity of his elder brothers, who sold him to Ishmaelitish slave-dealers, by whom he was sold to Potiphar, a distinguished officer in Egypt. The story of his elevation to the position of vice-regent of Egypt and the settlement of his father and brothers there is well known (Gen. xxxvii.—). Authorities still differ as to the period in Egyptian history to which Joseph's life belongs, some placing it before, others under, and others after the time of the Hyksos or shepherd kings of Egypt.

Joseph, the husband of Mary the mother of Jesus, was a descendant of the house of David, though resident at Nazareth, where he followed the trade of a carpenter. Early tradition represents him as an old man at the time of his marriage, and he seems to have died before the commencement of the public ministry of Jesus. His day in the Roman Catholic calendar is March 19.

Joseph of Arimathæa, i.e., of Rabbi Benjamin, a member of the Jewish Sanhedrim, who, though a believer in Jesus, had not the courage to make open profession of his faith. Nevertheless, after the crucifixion he went to Pilate and begged the body of Jesus, and along with Nicodemus buried it in his own garden. According to tradition he went as apostle to England. His day of celebration is March 17th.

Joseph I, Emperor of Germany, eldest son of Leopold I, born in 1678; became emperor in 1705. He was a zealous member of the alliance against France in the war of the Spanish succession, in which the victories of Marlborough and Eugene won glory for the imperial arms. He died in 1711.

Joseph II, Emperor of Germany, son of Francis I and Maria Theresa, was born in 1741. He was elected king of the Romans in 1764, and on the death of his father, 1765, German emperor, succeeding his mother, however, in the hereditary estates of the House of Austria only in 1780. He at once commenced an extensive scheme of reforms, but the country was not prepared for such sudden changes, and he was compelled to give up most of his plans. In 1788 he visited Catherine II at Cherson, and in league with her made war against Turkey. He died in 1790.

Joséphine (zhō-sā-fen), Empress of the French, was born in Martinique, June 24, 1763, being the daughter of Lieutenant Tascher de la Pagerie. She married in 1779 Vicomte Alexandre Beauharnais, by whom she had two children, Eugène and Hortense. In 1794 her husband, who had been commander of the army of the Rhine, was executed by order of the Convention. She herself had a narrow escape, having been included in the list of proscription. After the fall of Robespierre she paid a visit to Napoleon to thank him for restoring the sword of her husband, and so pleaded him that he soon after married her (1796). She became a beneficent element in his life, and her amiable manners won the hearts of everybody and helped to secure her husband's position. When Napoleon ascended the throne in 1804 she was crowned along with him. But the fact that the union was childless stood in the way of Napoleon's ambition to become the founder of a dynasty, and in 1809 Joséphine was divorced, retiring to her beautiful seat of Malmaison, with the title of empress-queen-dowager and an annual grant of two million francs. She died in May, 1814.
Joseph's-coat, a popular American name for *Amaranthus tricolor*. Joseph's-flower, the *Tragopogon pratensis* or yellow goat's-beard. See Goat's-beard.

Josephus (Iō-e'fus), Flavius, the historian of the Jews, was born at Jerusalem in 37 A.D., and was carefully educated. In 64 A.D. he made a journey to Rome, and was introduced to Poppaea, the wife of Nero. On his return he found his countrymen preparing to throw off the Roman yoke, and having tried in vain to persuade them of the hopelessness of such a struggle, he accepted the post of defending the province of Galilee, and actually held the fortified town of Jotapata against the whole Roman army for forty-seven days. He was captured at the fall of the city, was afterwards present in the Roman army at the destruction of Jerusalem (A.D. 70), and went with Titus to Rome, assuming the family name of his patron, Flavius, he lived in learned leisure. Here he wrote (in Greek) *The History of the Jewish War; The Antiquities of the Jews*, giving a history of the Jews from the earliest times to the reign of Nero; an *Antapology*, mostly relating, however, to the time of his military activity; and a work on the *Antiquity of the Jewish People*, directed against Apion, an Alexandrian grammarian. The date of his death is uncertain. He certainly saw the end of the century.

Josua (Josh'a-a), the successor of Moses in the command of the Israelites, was the son of Nun, of the tribe of Ephraim. His name was first Hyram, but was changed by Moses into Josua (Jehovah's help), of which Jesus is the Greek form. He was the only one, with the exception of Caleb, who brought back an encouraging report from the land of Canaan. He was nominated by the command of the army of Israel, led the Israelites over the Jordan, and in the course of seven years conquered the greater part of Palestine, and divided the country among the tribes. He died at Shunem in Mount Ephraim at the age of 110. His history is contained in the canonical book which bears his name, and of which he has been usually regarded as the author; but modern critics have shown that it is a composite narrative, and contains many events which took place after Josua's death.

Josiah (Jos-a'a), King of Judah, succeeded his father Amon at the age of eight years (639 B.C.). He is characterized in the Scriptures as doing "that which was right in the sight of the Lord." He took an active part in the reform of public worship, and commenced the restoration of the temple, during the progress of which the high priest Hilkiah discovered the book of the law, thought by some to be substantially the same as the book of Deuteronomy. The prescriptions it contained gave a decided direction to the reform movement which the king conducted with great vigor. In his thirty-first year, prompted probably by friendship to the King of Assyria, he marched out against Pharaoh Necho, who was on his way to attack that kingdom. The two armies met at Megiddo, where Josiah was slain.

Josika (Yo'shika ká), Miklos, Baron, a Hungarian novelist, born in 1796. He entered the army but resigned to write. Drawn into politics he became a supporter of Kossuth, and during the revolution of 1848 was a member of the committee of national defence. On the fall of the revolutionary government he escaped to Brussels. He died in 1865. His novels, of which *Abafi* is the most popular, are historical in character.

Josquin des Prez (Zhos-kaăn da prä), a musical composer, born between 1450 and 1455 in Northern France. He received an appointment in 1515 in the papal chapel at Rome, and latterly became chaplain to Louis XII. He died at Condé in 1521, where he held a canonry.

Jotuns (Yo'tuns), in northern mythology, immense giants and magicians who had command over the powers of nature, and lived in dark caves in their kingdom of Jotunheim, from which they waged perpetual war against the Esir, the bright gods of Valhalla. Originally they represented the destructive forces in nature. They were cunning, malignant, versed in witchcraft, but not highly intelligent.

Joubert (zhô-bár), Joseph, born at Montignac, Périgord, May 6, 1754; died at Paris, May 4, 1824. A French moralist and man of letters. Extracts from his manuscripts, under the title of *Pensées*, were edited by Chateaubriand, and later (1842), under the title *Pensées, Maximes, et Correspondence*, by Paul Raynal.

Joubert (jo'bertz), Petrus Jacobus, Boer president, born at Congo, Cape Colony, in 1824. He migrated from Cape Colony with the Boers, settled in the Transvaal, was elected to the Volksraad in 1863, and made president in 1874. War having begun against the
British in 1880, he won a decided victory against them in 1881, a treaty of peace following. He was elected vice-president in 1883, contested the Presidency in 1888, and in 1899 commanded the army in Natal, defeating the British in several engagements, and besieging Ladysmith for several months. He died in 1900.

Joudpore. See Jodhpur.

Jouffroy (zhôrfrawl), Théodore Simon, a French philosopher, born in 1796. He studied philosophy under Cousin, held the position of professor of philosophy in different colleges and normal schools; taught for some years in the College of France, and became a member of the Academy. He died at Paris in 1842. In philosophy he was mainly a follower of the Scottish school of Reid and Steward, some of whose works he translated into French. His own principal works are Mélanges Philosophiques and Cours d’Esthétique. As an original thinker Jouffroy has no claim either to profundity or intellectual brilliancy, but he had a talent for popular exposition, and followed prudent lines of speculation.

Jougs (juz), an instrument of punishment formerly used in Scotland, consisting of an iron collar which surrounded the neck of the criminal, and was fastened to a wall or tree by an iron chain.

Joule (jool), James Prescott, an English physicist, born in 1818. He studied under Dalton, the chemist, made researches in electromagnetism, about 1840 turned his attention to the subject of heat, and ultimately established the theory of the mechanical equivalent of heat. His published work consists mainly of papers read before the Royal Society, of which he was made a fellow in 1850, receiving its medal in 1852 and the Copley medal in 1870. He received in 1878 a civil list pension of £200 in recognition of his services to science. His most important achievement was that of settling the mechanical equivalent of heat, which established that the quantity of heat capable of increasing the temperature of 1 lb. of water by one degree Fahrenheit requires for its evolution the expenditure of mechanical energy represented by the fall of 772 lbs. through the space of one foot. He died in 1889. See Heat.

Jourdan (zhôrdan), Jean Baptiste, Count, marshal and peer of France, born in 1762; died in 1833. He distinguished himself under Dumouriez, was made a general of division in 1793, defeated the Austrians at Wattignies and at Fleurus, drove them beyond the Rhine, and took the fortress of Luxembourg, but was defeated at Höchst, and again at Würzburg (1796). In 1799, the Directory having given him the command of the army on the Danube, he crossed the Rhine at Basel, but was encountered by the Archduke Charles, who completely defeated him at Stockach. In 1803 he became a member of the senate, and in 1804, on the establishment of the empire, obtained the rank of marshal, the title of count, and a seat in the council of state. After the restoration he was raised to the peerage. He entered with spirit into the revolution of 1830. He wrote two works—Mémoires pour servir à l’Histoire de la Campagne de 1796, and Opérations de l’Armée du Danube.

Journalism (jûrn’al-izm). See Newspapers.

Journey-weight, a term applied to the weight of certain parcels of coin, which were probably considered formerly as a day’s work. The journey-weight of gold is 15 troy lbs., which is coined into 701 sovereigns, or 1402 half-sovereigns. A journey-weight of silver weighs 00 lbs. troy, and is coined into 712 crowns, or 1534 half-crowns, or 3060 shillings, or 7920 sixpences.

Jovellanos (hôvel-yên’o’), Gaspar Melchor de, a Spanish statesman and writer, born in 1744; died in 1811. It is mainly as a political economist and legislator that he stands in front rank as a Spanish writer; but he also wrote satires and miscellaneous pieces, a tragedy, El Pelayo, etc.

Jovianus (jôv’é-an’us), Flavius Claudius, a Roman emperor, was originally a captain of the household troops of the emperor Julian, whom he accompanied in the disastrous campaign against the Persians in which Julian lost his life (A.D. 363). After Julian’s death he was proclaimed emperor by the troops, but could only extricate his army by ceding to the Persian monarch the five provinces beyond the Tigris. He was found dead in his bed when on his way to Constantinople, 364.

Jowett (jôv’et), Benjamin, an English scholar, master of Balliol College, Oxford, was born in 1817; died in 1893. He studied at Oxford, was elected to a fellowship in 1838, and became regius professor of Greek in 1855.
In 1855 he published a commentary on the Epistles of St. Paul. He was one of the leaders of the Broad Church Movement. In 1870 he became master of Balliol. He translated Plato.

Jowett, John Henry (1814–92), a British clergyman, pastor of St. James' Congregational Church, New-Hamstead-on-Tyne, 1859–65; Carr's Lane, Birmingham, 1865–1911. In 1911 he became pastor of Fifth Avenue Presbyterian Church, New York, and returned the pastorate till 19, when he returned to England.

Juan (Juan), the Spanish form of John. See Don Juan.

Juan de Fuca (Juan), Strait of, the strait between Vancouver Island and the State of Washington on the west coast of the United States.

Juan Fernandez, so called from the name of its discoverer, also sometimes Mas-a-Tierra, an island in the South Pacific Ocean, about 400 miles off the coast of Chile, to which it is 18 miles long and 6 miles broad at the broadest part, mountainous, and of rugged aspect. Parts of it are fertile, producing various kinds of timber, pears, figs, grapes, cherries, etc. There are excellent fish. The island is occupied by a hundred of settlers, whose chief occupation is the furnishing of fresh vegetables, water, and wood to the whaling or other vessels that call here. De Foe is said to have founded his Robinson Crusoe on the history of the solitary residence here for four years (1704–09) of a Scotch sailor, Alexander Selkirk, though his location of the island meant by De Foe is now denied.

Juarez (Ay-ruh-sheh), Benito Pablo, President of the Mexican Republic, was born of pure Indian parentage in 1806. He was elected President in 1858. He declared the suspension of public payments for two years to Europeans, a step which occasioned the interference of Britain, Spain and France. Troops were landed in Mexico in 1862, but Britain and Spain soon retired, leaving Napoleon III to carry out his views alone. Maximilian of Austria came on Napoleon's invitation to assume the throne, but Juarez, in spite of defeat and losses, continued to hold the resistance, and when Napoleon under pressure from the American government withdrew his troops in 1867, the republicans carried all before them. Maximilian was captured and shot after a mock trial, and Juarez was re-elected to the presidency (1867), which position he held till he died (1872).

Juba I (joo'-ba), king of Numidia, North Africa, in the first century B.C. On the breaking out of the civil war Juba fought against Cesar, but being conquered in a battle at Thapsus, and abandoned by his subjects, he slew himself, in B.C. 46. His son, Juba II, was led in Cesar's triumph at Rome, was carefully educated, and, having gained the favor of Augustus, received in marriage the daughter of Antony and Cleopatra, and was restored to the kingdom of his father, in B.C. 30, which some years after he exchanged for Mauritania. He wrote a history of Rome in Greek, a history of Arabia, treatises on the drama, painting, grammar, etc., of which only fragments are extant. He probably survived till 18 or 19 A.D.

Jubaea (joo'-be-a), a genus of palms. See Cocito.

Jubbulpore. See Jabalpur.

Jubilee (joo'-bi-lé), a festival of the Jews, held every fiftieth year. During this year all slaves or captives were to be released; all estates which had been sold reverted to their original proprietors or their descendants; and the ground was to lie fallow. It has been doubted whether the law of jubilee was ever actually observed until after the return from the Babylonian exile, when, for a time at least, it came into operation. In 1300 a jubilee was instituted by Boniface VIII, who issued a bull granting plenary indulgence to all pilgrims who should visit Rome that year and perform certain ceremonies. The result was a vast concourse of pilgrims, from whom the church drew so much profit that in 1350 Clement VI declared a jubilee every fiftieth year, and in 1389 Urban VI every thirty-third year, and in 1470 Paul II every twenty-fifth year. The Reformation, which interfered with the sale of indulgences, sensibly diminished both the enthusiasm and the profits. The last jubilee, the twenty-third, was held in 1900.

Judæa (joo'-dah), a term applied but after the return of the Jews from exile to that part of Palestine bounded east by the Jordan and the Dead Sea, north by Samaria, west by the Mediterranean, and south by Arabia Petraea. See Palestine.

Judah (joo'-dah), the fourth son of the patriarch Jacob by his wife Leah, the progenitor of one of the twelve tribes. See Jews.

Judas (joo'da's), surnamed Iscarioit. meaning, perhaps, the man of Kerioth, a village of Judæa, was one of the twelve apostles of Jesus, and betrayed
Judas, or Jude, brother of James, one of the twelve apostles. Matthew and Mark call him Thaddaeus or Judas the younger, named Lebbaeus. Nothing is known of his life. By many he is considered the author of the epistle of Jude. See Jude, Epistle of.

Judas Maccabæus. See Maccabees.

Judas-tree (Cercis Silicium), nat. order Leguminosae, is a native of the Levant, Spain, south of France, Italy, etc. It grows to the height of about 20 feet, with pale green leaves and beautiful purple flowers, which are eaten mixed with salad or made into fritters. O. canadensis, or red-bud, another species, growing in Canada and the United States, is smaller.

Jude (Jude), Epistle of, one of the books of the New Testament. Its canonicity was questioned by the primitive church, and often since. The Asiatic churches did not make use of it till the fourth century, nor was it known in the West till towards the close of the second. Its quotation from the apocryphal book of Enoch raised a prejudice against it, but it was eventually allowed to take its place as a portion of the sacred canon. It is a passionate denunciation of heretics and false teachers and has been supposed by some to be written by Judas, the brother of the Saviour, and not by Judas, the brother of James (see above).

Judge (jud), a person duly invested with authority to determine causes or questions between parties according to law. The term is quite a general one, being applicable to any one appointed to sit in a court of law and try causes. The title of justice is used for the judges of the Supreme Courts, etc. The judge at common law decides points of law, and enables the jury rightly to decide questions of fact, while in equity he decides both classes of questions. A judge cannot be prosecuted for the consequences of his decisions, except in the case where he may have acted without jurisdiction, nor can he officiate in a case where he has a personal interest, unless it be merely his common interest as a citizen, taxpayer, etc.

Judge Advocate, an officer appointed to preside at the proceedings of courts-martial, his duties being to summon witnesses, administer oaths, take a minute of the proceedings, advise the court on points of law, etc.

Judges, in Hebrew history. See Jews.

Judges, Book of, a canonical book of the Old Testament, so called because the greater part of the narrative is occupied with the history of the judges who were raised up to deliver their countrymen from the oppressions of their neighbors. The first chapter, although formally connected with the book of Joshua by the opening sentence, evidently contains a separate portion of the history of the Israelitish invasion of Canaan, the first settlement, indeed, west of the Jordan, in which the tribes of Judah and Simeon play a distinct part in the conquest. The 8th verse of the 2d chapter again connects the work with the concluding part of the book of Joshua, and in the chapters which follow the history of the nation is written from an ideal and poetic point of view, which gives it unity, the judges being represented as successive rulers, although in most cases their history and influence were merely local. The third part of the book begins at chap. xvii, and has no formal or chronological connection with what has gone before, and has sometimes been called an appendix.

Judgment (ju'gment), in law, the judicial determination and decision of a court in an action. It is either interlocutory or final. In the former case it is given only on some particular point or proceeding, and does not complete the action in the same way as the final judgment, upon which, unless it be appealed against, suspended, or recalled, execution may follow.

Judgment-debt, in law, a debt settled on the security of the debtor's goods and chattels. Such debts have the preference of being paid in full, as compared with simple contract debts.

Judith (Ju'dith), widow of Manasses, a Jewish heroine, whose history is given in the apocryphal book which bears her name. Judith is represented as going out to the tent of Holo
Juglans, an Assyrian general who was besieging Bethulia, the city in which she lived, charming her with his beauty, and taking advantage of the admission to his tent, thus afforded her, cut off his head with his own sword while he slept.

Juglans, Harry Pratt, American political scientist and educator, born in Jamestown, N. Y., in 1849, graduated from Williams College in 1870, from 1870 to 1885 he was teacher and principal in the high school, Troy, N. Y., and 1885-92, professor of history in the University of Minnesota. In 1892 he was appointed professor in the University of Chicago, and in 1907 was elected president. His works include Europe in the Nineteenth Century, The Growth of the American Nation and The Essentials of a Written Constitution.

Juglandaceae (jug-lan-dâ-se-e), the walnut tribe, a nat. plants, chiefly found in North America. They are trees with alternate pinnate stipulate leaves and bisexual flowers, the males, in catkins, the females in terminal clusters or loose racemes. Besides the walnut the order includes the butternut and hickory.

Jugoslavia (yû-gô-slâ-vî-a), a kingdom in the northwest part of the Balkan peninsula, also known as the Serb-Croat-Slovene State. It was formed in 1918 by the union of Serbia, Croatia and Slavonia, following the defeat of Austria-Hungary in the European war (q. v.), and was one of the signatories of the treaties of 1919 (see Treaty). The former kingdom of Servia had an area of less than 31,000 square miles and a population of 2,000,000. The new state of Jugoslavia has an area of nearly 100,000 square miles and a population of 9,000,000. Roughly, Jugoslavia comprises the former Austro-Hungarian territories of Carniola, Croatia and Slavonia and Herzegovina, and part of Dalmatia, as well as the kingdom of Montenegro and the kingdom of Servia as it existed prior to 1918.

Jugular Vein (jug'û-lâr), one of the large trunks by which the greater part of the blood that has circulated in the heart, face and neck is returned to the heart. There are two on each side, one external or superficial, and an internal or deeper.

Jugurtha (jû-gûr-thâ), a king of Numidia, a natural son of Micipsa, his father's brother, and king of Numidia after Masinissa (r. c. 149), adopted him, and brought him up with his own sons, Adherbal and Hiempsal. Micipsa did his best to conciliate him, and declared him joint-heir to the crown with his two sons. But after the death of Micipsa Jugurtha had Hiempsal murdered and drove Adherbal from the country. Adherbal appealed to Rome, and after several Roman expeditions into Numidia, Jugurtha was captured (r. c. 106), led in triumph of Marcus at Rome, and finally thrown into a dungeon, where he was starved to death.

Juiz de Fora (zhô'-is' dâ fo'rá), or Parahyuna, a town of Brazil, province of Minas Geraes, on the Parahyuna River. Pop. 8000.

Jujube (jû-zö'b), the popular name of a genus of spiny and deciduous shrubs or small trees, genus Zizyphus, nat. order Rhamnaceae. The species are numerous, and of several the fruit, which is blood-red or saffron-colored, with a sweet granular pulp, is wholesome and pleasant to eat. The common jujube (Z. vulgâris) is a native of Syria, from which it was introduced into Europe. The fruit is dried and forms an article of commerce.

Jujuy (hû-hû'), a town of the Argentine Republic, capital of a province of same name, is situated on the Rio Grande, and carries on an active trade with Chile and Bolivia. Pop. 4159. —The province has an area of 19,000 sq. miles, and a pop. of 55,450.

Julep (jû'lêp; from Persian, guilâb, rose-water), a sweet drink, specifically in medicine, a solution of sugar in aromatic water, but not so concentrated as syrup. In the United States the name is given to a drink composed of spirituous liquor, as brandy or whiskey, sugar, pounded ice, and a seasoning of mint. It is also called mint-julep.

Julia (jû'li-a), the only child of the emperor Augustus, was his daughter by his second wife Scribonia, and was born r. c. 39. She was first married (r. c. 25) to her cousin, the young Marcellus, and afterwards to Marcus Vipsanius Agrippa, to whom she bore three sons and two daughters. On Agrippa's death, in r. c. 12, she was married to Tiberius, who left her on account of her licentiousness. Augustus banished her to Pandateria, a desolate
island on the coast of Campania, ultimately allowing her to live in Rhegium. After the death of the emperor, Tiberius turned her with great severity. She died in A.D. 14, in poverty and distress. Her son Agrippa had been put to death by Tiberius shortly before.

Julian (ʒuːlɪˈæn), Flavius Claudius Julianus, a Roman emperor, whom ecclesiastical writers have surmised the Apostate, son of Julian Constantius (brother of Constantine the Great), was born at Constantinople in 331. When hardly six years old his father and several members of his family were murdered by the soldiers of his cousin, the emperor Constantius. He was brought up in the Christian religion, studied philosophy and letters, and resided in Athens, where he was induced to embrace paganism. Having received command of an army against the Germans, he defeated them at Strasburg, and drove them beyond the Rhine. He also displayed great talent as an administrator in Gaul. The emperor now became jealous of Julian, and recalled his best troops under pretense that he wanted to employ them against the Persians. This order caused rebellion among the soldiers, who proclaimed their leader Julian emperor in March, 360, in spite of his own resistance. Constantius prepared to proceed against him, but soon after died, and Julian was generally recognized as emperor. He began by putting a stop to many abuses, and limiting the splendor of his court, and was thus able to remit to the people the fifth part of all their taxes. He sought to restore the heathen worship in all its splendor, and on that account opposed Christianity as much as was in his power, without, however, persecuting the Christians themselves. He even sought to falsify the words of Christ by rebuilding the Jewish temple. In 363 he headed an expedition against the Persians, and took several cities, but was mortally wounded. He was an able ruler, and had also a reputation as an author. Some of his works have come down to us, including speeches, letters, and satirical pieces; the latter are distinguished for wit and humor. He wrote also a work against the Christian religion, of which we have yet some extracts.

Julian Calendar. See Calendar and Epoch.

Jülich (jʊˈliːh), a town of Rhenish Prussia, 17 miles northeast of Aix-la-Chapelle. It was long the capital of an independent duchy. Pop. 5459.

Julien (ʒuˈlɛ.n), Stanislao Agnani, the leading Chinese scholar of his day, was born at Orleans, France, in 1769, and died in 1873. Possessed of an extraordinary linguistic faculty, he taught himself Greek, English, Italian, Spanish, Portuguese and German, and in 1823 commenced the study of Chinese under Abel Rémusat. At the end of twelve months he published a Latin translation of the philosopher Mencius. Thenceforth ancient and modern Chinese, Manchu, the Mongolian tongues, and later Sanskrit, were the subjects of exact and profound study. In 1832 he became professor of Chinese at the Collège de France; librarian at the Bibliothèque Nationale, 1839; president of the college, 1855; commander of the Legion of Honor, 1863. His most important work was entitled Voyages des Pélerins Boudhistes (Paris, 1853-58).

Juliers. See Jülich.

Julius (ʒuˈliːəs), the name of three popes.—Julius I, born in Rome, chosen pope in 337; died in 352. He summoned a council which approved his conduct in sustaining Athanasius in his contest against the Arians in 342.—Julius II (Giuliano della Rovere), was elevated by his uncle Sixtus IV to the rank of a bishop and cardinal, was appointed papal legate to France, in 1503 was elected pope, and died 1513. Immediately on his elevation to the pontificate he planned the complete restoration of the papal sovereignty in its ancient territory, and the extinction of foreign domination and influence in Italy. Refusing to attend the Council of Pisa convened by the King of France, he in 1511 formed the Holy League, to which Spain, England and Switzerland were parties. In 1512 he made open war against Louis XII. The French defeated the papal army near Ravenna, but were soon after defeated in Italy. Julius is considered one of the most worldly of the popes, but was a far-sighted and patriotic sovereign, and a liberal and judicious patron of art and literature. To get means for building St. Peter's he ordered preaching of indulgences, which was one of the immediate causes of the Reformation.—Julius III (Giovanni Maria Giocchi), a Roman of low birth, was made cardinal by Paul III in 1536, took an active part in the Council of Trent as papal legate, was elected pope in 1550, and in the following year reopened the Council of Trent, which had been suspended for upwards of two years. He attempted a union with Nestorians. He died in 1555.

Julius Cæsar. See Caesar.
Jullundur. See Jalandhar.

Julus. See Julius.

July (jū-lī'), the seventh month in our calendar, in the Roman year it bore the name of Quintilis, as originally the fifth month. Its change of name to Julius was in honor of Julius Caesar, who was born on the 12th of the month.

Jumilla (jū-mīl'-ə), a town of Spain, in the province of and 35 miles N. N. W. of Murcia. Pop. 16,446.

Jummoo (jum-mōo'), or JAMU, a portion of the state of Cashmere. See Cashmere.

Jumna (jūm'nā), a river of Hindustan, which rises in the Himalayas, in the native state of Garhwal, near Jamnouri, at the height of 10,849 feet. It flows in its upper course in a generally s. w. direction, then bends to the e. and passing the cities of Delhi and Agra falls into the Ganges at Allahabad, after a course of 860 miles. Some trade is carried on by means of clumsy barks. Two important irrigation works—the Jumna Eastern and the Jumna Western Canals, derive their supply of water from this river. The former is 160 miles long, and irrigates about 250,000 acres annually. The latter has a length of 453 miles, and irrigates on an average about 300,000 acres.

Jumnouri. See Jamnouri.

Jumping-deer, the black-tailed deer (Cervus leucos), found in the United States to the west of the Mississippi.

Jumping-hare (Pedetes capensis), a species of jerboa found in Southern Africa, and so named from its general resemblance to a hare, while its jumping mode of progression, necessitated by the elongated nature of the hind legs, have procured for it its specific and popular distinction.

Jumping-mouse (Meriones hudsonicus), is found in America generally, but is especially an inhabitant of the fur territories. Like the jumping-hare, it is classified by some along with the jerboas, and is one of the smallest of these forms.

Jumping-rabbit, the aIacIag a (which see).

Junagarh (jū-nā-gər), a native state of India, in Gujarat. Bombay presidency. Area: 3283 sq. miles. The surface is generally level, but rises on the Ginnar Hills to 3966 feet. The soil is generally good, but irrigation is extensively required. The nawab or ruler pays tribute both to the British government and to the Gaekwar of Baroda. Pop. 395,428.

The capital, Junagarh, situated under the Girnar and Datar Hills, is one of the most picturesque cities in India, and has recently been greatly improved by the erection of a number of public and other buildings. Pop. 34,251.

Junee (jūnī-ē), or JUNCA'EAE, the rush order, a small nat. order of endogenous plants, so named from the typical genus Junica. It is principally composed of obscure herbaceous plants with brown or green glaucous hexandrous flowers, the perianth being in two series, as in Liliasceae, but calycine instead of petaloid. Some of them, as the common rush, are employed for making mats, chair-bottoms and brooms.

Junction City, a city, capital of Gray County, Kansas, 71 miles west of Topeka. It is an agricultural center, and has manufactures of military boots, tents, gloves, etc. Fort Riley, a large military post, is four miles away. Pop. (1920) 7365.

Juncus. See Junee and Rush.

June (jūn; Lat. Junius), the sixth month in our calendar. It consisted originally of twenty-six days, to which it is said Romulus added four; and Numa took away one. Julius Caesar again lengthened the month to thirty days, and it has ever since remained unaltered.

Juneau (jū'no), a city, the capital of Alaska, situated on the coast 100 miles N. E. of Sitka. It is a wholesale supply point for Alaska, with mining and fishing interests. It succeeded Sitka as the seat of government in 1908. Pop. 1644.

June-berry, a North American wild cherry tree (Amelanchier canadensis) common in Canada and the States, and allied to the medlar. The fruit is pear-shaped, about the size of a large pea, purplish in color, and a good article of food. Service-berry and Shadbush are other names.

Jung, Johann Heinrich, commonly called Jung Stilling, a German writer, was born in 1740, and died in 1817. Poor in his youth, and apprenticed to a tailor, he at length succeeded in studying medicine at Strasburg, where he lived in intimacy with Goethe, and afterwards became a physician at Elberfeld. He was subsequently professor at Heidelberg, then for a number of years at Marburg, and later at Heidelberg...
again. He has himself described the greater part of his life in Heinrich Sti- 
ling's Leben (1800), and Heinrich Sti- 
ling's Alter (1817). His works dealing 
with pietistic mysticism are numerous, 
including Theobald oder die Schwärmer, 
Das Heimweh, etc. Much opposition was 
excited by his strange works on spirits— 
Theorie der Geisterkunde ("Theory of 
Spirit-knowledge"), and the Apology for 
the same, which is connected with his 
Scenen aus dem Geisterreiche ("Scenes 
from the Spirit-world").

Jung, Sir Salab, Dewan or Prime 
Minister of Hyderabad, was 
born in 1829, and died in 1883. He is 
chiefly remembered for the energy with 
which he held in check his native state 
during the mutiny in 1857-58. When he 
visited England in 1870 he was knighted 
in recognition of his valuable services to 
British rule in India.

Jung-Bahadur, Sir, Prime Minister 
of Nepal, was born 
in 1816; died in 1877. His uncle held 
a high position under the king, who 
appointed the nephew commander-in-chief 
of the army. When the premier was 
assassinated in 1846 Jung-Bahadur re- 
venged him on his murderers and suc- 
cceeded as premier. A conspiracy against 
him was quenched in blood, the king and 
queen were banished and the heir-appar- 
ent was raised to the throne. He 
helped the British in the mutiny of 1857, 
and in reward was knighted and given 
the Grand Cross of the Star of India.

Jung-Breslau. See Inouvaclaus.

Jungermanniacae, a group 
of cryptograms closely resembling mosses, 
usually regarded as a suborder of 
Hepaticae, but sometimes classed as a 
separate natural order. Most of them 
have distinct leaves. They inhabit the 
trunks of trees or damp earth, in cool 
moist climates.

Jungfrau (jung'froo; 'Maiden'), a 
mountain of Switzerland, 
in the Bernese or Helvete Alps, on the 
frontiers between the cantons of Bern 
and Valais, 12 miles s. s. e. Interlaken. 
It is one of the most magnificent moun- 
tains in Switzerland and the loftiest cal- 
careous mountain in Europe; height 
13,670 feet. It was first ascended in 
1804.

Jungle (jung'gl), properly an Indian 
term applied to a desert and 
uncultivated region wherever covered with 
wood and dense vegetation or not, but in 
English it is applied to land covered with 
forest trees, that impenetrable brush- 
wood, or any coarse, rank vegetation.

Jungle-fever, a species of disease 
prevalent in the East Indies and other tropical regions, a 
severe variety of remittent fever. It is 
characterized by the recurrence of paroxysms and of cold and hot stages. 
The remissions occur usually in the morning 
and last from eight to twelve hours, the 
fever being mostly typically developed at 
night.

Jungle-fowl, a name given to two 
groups of birds, the one 
a native of Australia, the other of India, 
Java, etc. The jungle-fowl of Australia 
is Megapodus tenuis. See Megapodus. 
The other birds called jungle-fowl are of 
the same genus as the domestic fowl, 
which is believed to be derived from one 
or other of them. The Indian jungle fowl 
 Gallus Sonnerati is abundant in the 
higher wooded districts of India. It is 
about equal in size to an ordinary do- 
metic fowl, but more slender and grace- 
ful in its form; the colors are rich and 
beautiful.

Juniata (ji'ni-a'ta), a borough of 
Blair Co., Pennsylvania, ad- 
joining Altoona. Pop. (1920) 7660.

Juniata River, a stream in Pennsyl-
vania, formed near 
the center of the State by the junction of the 
Little Juniata and Frankstown 
branch, flowing in a generally e. course 
and emptying into the Susquehanna 14 
mi. above Harrisburg. It is about 150 
mi. long, and though not navigable is 
noted for its picturesque scenery. 
Beside it are the Pennsylvania canal and 
railroad, the latter frequently crossing the 
stream.

Junin (ju-nin'), a department of Peru, 
embracing the wildest parts of the 
Cordilleras; area about 28,000 sq. 
mi.; pop. 394,303.

Juniper (ji'ni-pér), the name of hardy 
exogenous ever- 
green trees and 
shrubs of the 
genus Junip- 
érus, chiefly 
atives of the 
northern parts of 
the world. 
They belong to the nat. order 
Coniferae, group Gymnospermeae. 
About twenty 
pecies are known, the most important 
of which are the J. communis. J. sabina. 
or savin. J. Virginiana, and J. Bermudia- 
ana. J. communis, or common juniper,
Junius

is a common bush growing wild in all the northern parts of Europe. The berries require two years to come to maturity, when they assume a bluish-black color. They are used extensively in Holland in the preparation of gin, which owes its characteristic flavor to them. They yield an essential oil, which is a powerful diuretic. J. sabina or savin also yields a powerful diuretic, and an oil which is a local irritant. J. Virginiana and J. Bermudiana are trees. The former is the common red cedar of North America; the latter is known as Bermudas cedar. Both yield a wood used by cabinet-makers, etc., and in the manufacture of pencils.

Junius (30 n.), a signature attached to certain letters on public affairs which first appeared in The Public Advertiser, a London paper published by Woodfall, from which they are copied into most of the other journals of the time. The earliest letters date January 21, 1709; the last January 21, 1772. After they were completed and published by Woodfall, with a dedication to the English nation and a preface by the author. Other letters bearing the same characteristics, but having different signatures, appeared between April 28, 1767 and May 12, 1772, and are given in the younger Woodfall's edition as the Miscellaneous Letters. This edition was published in 1812 in three vols., and included Junius' private letters to Mr. H. S. Woodfall, and a preliminary essay by Dr. J. Mason Good. An enlargement and improved edition was published in Rohn's Standard Library, edited by John Wade, with an essay by the editor in favor of the claims of Sir Philip Francis to the authorship. Although fully a century has elapsed since the publication of these papers, their authorship seems as far from being settled as ever. In seeking for a probable author of these letters the chief difficulty has been to find any one who combined the knowledge, circumstances, distinctive omnia, and literary skill displayed by Junius. He supported the court party against America, favored triennial parliaments, and opposed the abolition of rotten boroughs. He was evidently well acquainted with court and city politics, the management of public offices, the private intrigues of the time, and if not a lawyer he had considerable knowledge of law. Besides this he seems to have been a man of rank and fortune, for we find him writing to Woodfall: "I am far above all pecuniary views"; and he expressly asserted that, 'My rank and fortune place me above a common bribe.' With these characteristics and this wide information he united a boldness, vehemence, and rancor which, combined with his epigrammatic and unsparing invective, rendered him an object of terror to those whom he attacked. Public suspicion at the time was fixed most strongly on Burke and Viscount Sackville. But Burke denied the authorship spontaneously to Dr. Johnson, and apart from considerations drawn from his temper, style, and turn of thinking, on several points Burke and Junius were in direct opposition to each other. That Viscount Sackville was the author received considerable belief at the time. His rank, fortune, temper, and talents concur to make it probable, while the friends and enemies of Sackville and Junius coincide. Yet the proof is far from complete in favor of this hypothesis. An attempt was also made to show that Lord Temple was the author, on the ground that the political and personal connections of Junius and Lord Temple were the same, and that his talents, age, circumstances, style of writing and thinking, rendered the hypothesis probable. The opinion that Sir Philip Francis (died 1818) was Junius has been probably the most common. But the internal argument is against the supposition: Francis was but twenty-seven when the first letters were written, and he never displayed before or after any proofs of a capacity or knowledge equal to the compositions of Junius. This opinion was supported by Macaulay; but of his five grounds for ascribing the authorship to Sir Philip Francis, two of them are known to be erroneous suppositions.

Junius, FRANCISCUS, a Dutch scholar, born in 1589, lived for about thirty years in England, then in Holland, and died at Windsor in 1677. Of Anglo-Saxon and the ancient Germanic literatures he had an extensive knowledge; he published a glossary of Gothic, and a work on English etymology (Etymologicon Anglicanum), and left a valuable collection of MSS. 

Junk, a flat-bottomed ship used in the waters of China and Japan, sometimes reaching 1000 tons. It has a high forecastle and poop, and ordinarily three mast of considerable height, each mast being in one piece, with a lug-sail, generally of bamboo splits. The bow is bluff, the stern full, and there is a very large rudder.

Juno (Jo'no), the most exalted divinity of the Latin races in Italy next to Jupiter, of whom she was the sister and wife; the equivalent of the Greek Hera. She was the queen of heaven, and under the name of Regina (queen) was wor-
shipped in Italy at an early period. She bore the same relation to women that Jupiter did to men. She was regarded as the special protectress of whatever was connected with marriage, and females from birth to death had her as a tutelary genius. She was also the guardian of the national finances, and a temple, which contained the mint, was erected to her under the name of Juno Moneta on the Capitoline. See also Hera.

Junot (ʒuːˈnoʊ), André, Duke of Abrantes, a French marshal, was born in 1771, and died in 1813. He was intended for the bar, but on the outbreak of the revolution joined a volunteer battalion, and soon attracted notice. At the siege of Toulon, in 1793, he became secretary to Napoleon, who afterwards took him with him into Italy and Egypt in the capacity of aide-de-camp. In Egypt he was advanced to the rank of general of brigade. In 1800 he was made commandant of Paris, and he particularly distinguished himself at the battle of Austerlitz in 1805. In 1807 he was sent with an army into Portugal, and made his entry without opposition into Lisbon, his success being rewarded with the title of Duke of Abrantes. On the arrival of the British he first allowed himself to be defeated at Vimeira, and was then obliged to submit to the humiliating convention of Cintra. Although he subsequently took part in the campaigns (1809) against Austria, (1810) against Spain, and (1812) against Russia, he failed to retrieve his reputation. In 1813 he became insane, and lost his life by leaping from a window.

Junta (ˈhun-tə; Spanish, an assembly), in Spain, a high council of state. It was originally applied to an irregularly summoned assembly of the states, as distinguished from the Cortes or Parliament regularly called together by the authority of the king.

Jupati Palm (ˈjʊ-pə-təl; Raphia farinosa), a palm which grows on the rich alluvial tide-washed soil on the banks of the Lower Amazon and Pará rivers in Brazil. The trunk is only 6 or 8 feet high and 1 foot in diameter. The leaves rise nearly vertically from the trunk, bending out on every side in graceful curves, forming a magnificent plume 70 feet in height and 40 in diameter. Leaves have been measured 48 and 60 feet long, and even these are not the largest. The leaf-stalks, which measure from 12 to 15 feet in length, are used by the natives for a variety of purposes, as for the walls of houses, baskets, boxes, etc. Their rind yields fibrous filaments (raphe fiber), which are imported into Europe for agricultural tics, bands, etc.

Jupiter (ˈjʊpə-tər), or JUPITER, the supreme deity of the Latin races in ancient Italy, the same as the Greek Zeus, and the Sanskrit dyaus (which means the sky); the second part being the same as the Latin pater, father. As the supreme deity Jupiter received from the Romans the title of optimus
Jupiter

maximus (best greatest), and as the deity presiding over the sky he was considered as the originator of all the changes that took place in the sky. From him accordingly proceeded rain, hail, and the thunderbolt, and he it was that restored serenity to the sky after it had been obscured by clouds. Hence the epithets of Pluvius (rainy), Tonans (thundering), etc., were applied to him. The most celebrated of his temples was that on the Capitoline Hill dedicated to him as Jupiter Optimus Maximus, jointly with Juno and Minerva. He was represented with a scepter as symbolical of his supreme authority. He maintained the sanctity of oaths; he was the guardian of all property; and every Roman was believed to be under his protection, and that of his consort Juno, the queen of heaven. White animals were offered up to him in sacrifice, his priests wore white capes, and his chariot was represented as drawn by four white horses.

Jupiter, is the largest planet of the solar system, and the fifth (excluding the asteroids) in order of distance from the sun. Its mean diameter is about 86,000 miles; its polar diameter about 84,570; its mean distance from the sun 483,000,000 miles; its period of revolution round the sun 11 years 10 1/3 months; its orbit is inclined to the ecliptic at the angle 1° 18' 40.3". The inclination of its axis is very small (3° 5'), so that changes in the seasons must be almost unknown; its volume is over 1300 times that of the earth, but its mass is only 300,877 times. Its surface shows belts of dark and light shade, which are usually but not always parallel to each other, undergo quick changes, and seem as though they merged into one another. To account for these rapid changes in its atmosphere it seems reasonable to believe that its interior mass is intensely heated similarly to that of the sun, hence the intense light proceeding from this planet. Jupiter has eight moons, four of large size discovered by Galileo in 1610, and four small ones recently discovered by aid of photography. They appear, like our moon, to make one revolution on their axis while passing once round the planet, the time of one revolution of the 4 large ones being from 1 day 18 hours 27 minutes to 16 days 16 hours 32 minutes. Europa, the smallest of these, has a diameter of 2045 miles; Ganymede, the largest, has a diameter of 3558 miles. These recently discovered are very much smaller. The moons appear from the earth to move in nearly straight lines from one side of the planet to the other, so that the planes of their orbits are nearly the same as the ecliptic and the orbit of Jupiter; they are eclipsed in the shadow of the planet, and their own shadows may be seen passing over the planet’s surface. From observation of the eclipses of Jupiter’s satellites Römer discovered that the propagation of light is not instantaneous, and thus calculated its velocity.

Jupiter Ammon. See Ammon.

Jupon (jø-pon’), Juppion, a tight-fitting military garment without sleeves, formerly worn over the armor, and descending just below the hips. It was frequently richly embazoned and highly ornamented.

Jura (jø-ra), an island of Scotland, one of the inner Hebrides, in the county of Argyle; length 36 miles, mean breadth 7. Its general aspect is exceedingly wild and rugged, and it is chiefly devoted to the rearing of cattle.

Jura (zhú-ra’), a department in the east of France, bordering on Switzerland; area, 1938 sq. miles. A large part is covered by the Jura mountains (see next article), and it is drained by the Ain and the Oignon. The pastures are both extensive and rich, and the cattle reared on them, together with their dairy produce (including Gruyère cheese), form the chief source of wealth. Iron is worked, marble and alabaster abound, and there are salt springs in different quarters, from which salt is made. Lons-le-Saulnier is the capital. Pop. 261,288.

Jura a chain of mountains in Central Europe, partly belonging to France, partly to Switzerland, between which they form a sort of natural barrier, extending from southwest to northeast, and exhibiting a number of parallel ridges. The greatest length is some 200 miles, from Belley in France, department of Ain, to the banks of the Rhine; and the greatest breadth about 63 miles, between the Lake of Geneva and the banks of the Doubs. The principal geological formation is the Jura limestone, with greensand, belonging to the lower cretaceous series. Stalactite caves are numerous. The two chief rivers which have their source in the chain are both French—the Ain and the Doubs—and descending from its western slopes, belong to the basin of the Rhone. Its highest points are Crêt de la Neige, Raculet, Mont Tendre and Dole, the heights of which are respectively 5651, 5645, 5517 and 5514 feet.

Jurassic System (jø-ras’ik), the name given by geologists to what is termed in England the Oolite system of strata, it being very characteristic of the Jura Mountains.
Jurisprudence

The name is used in a wider sense to include both the Oölite and Liaas.

Jurassic Sea-lizard (Ichthyosaurus communis).

Jurisprudence (jús-pris-prú'denz), the science of law.—Medical Jurisprudence, another name for forensic science (which see).

Juruá (shút-rú'-á), a little-known river of Northwestern Brazil, which rises on the borders of Peru and enters the Amazon on the right. Length 700 or 800 miles.

Jury (jú'ri). The origin of trial by jury is not traceable to any single legislator or any particular period. It seems to have had its beginning in certain primitive customs of the northern European races, and received special developments from different nations. By the Anglo-Saxons, a person who was accused of crime was permitted to summon twelve of his neighbors, called compurgators, who swore to his innocence. This was the origin of an institution which took settled and vigorous form after the Norman Conquest, gradually developing into its present form.

In criminal trials two juries act, the grand jury and the petit jury. The grand jury may consist of any number more than eleven and less than twenty-four men, who have been summoned by a mandate from the sheriff of the county. Their names are returned on a piece of parchment which is called a panel. The oath having been administered, they are usually instructed by the presiding judge in the nature and number of the offenses about to be brought before them. They then proceed to consider in private the statement or indictment which is brought against the accused by the prosecution. Should they agree, to the number of twelve, that the accusation has a basis of truth, they bring into court what is called “a true bill.” If, on the contrary, they find that there is no sufficient foundation for the accusation, they ignore the bill, and require the dismissal of the accused. When a true bill is found by the grand jury it usually forms the basis of the subsequent prosecution. The grand jurymen is qualified by being a freeholder of his county, to what amount is not clearly defined.

Petty or petit juries consist of twelve persons, and no more, for the trial of all criminal offenses, and of all issues of fact in civil cases at the common law. The jury is selected by ballot from those summoned. If all the jurors do not appear, or any of them are justly objected to and set aside, in virtue of the right of challenge exercised by the parties to a suit (see Challenge), the deficiency is usually supplied by making a new panel. The jury being then sworn is placed in the jury-box, and the evidence given. No juror is at liberty to leave the box without permission of the Court. Unless the case be a criminal one, in which the prisoner is charged with a misdemeanor, the jury are allowed to go home on engaging not to allow themselves to be spoken to on any subject connected with the trial. When the prisoner is charged with treason or felony the jury are usually allowed to retire only in custody of the sheriff and his officers, who are sworn to keep them together, and not to speak to them with reference to the trial. When the evidence has been led it is usual for the presiding judge to instruct the jury in the points of law which apply to the case. It is thus that their duties are divided—the jury dealing with the facts, and the judge with the law of the case. The jury usually form an independent judgment upon the facts, and their finding is considered final. To consider their verdict they usually withdraw to a private room, where no intercourse with other persons is permitted, and where, when the session is protracted, food and other necessaries are supplied. Upon returning into court they publicly assent to such verdict as they have agreed upon. In the United States if they fail to agree among themselves the jurymen are discharged by the judge, and the cause whether civil or criminal can be tried anew, at the pleasure of the court. The jury is an Anglo-Saxon institution and has only recently been adopted in the continental nations of Europe. In France the verdict of a majority of the jury is sufficient.

Another kind of jury is the coroner’s jury, summon to inquire into cases of sudden or violent death. The inquiry is made in presence of the body, and at the place where the death happened. The jury may consist of any number above eleven, and usually numbers twenty-three; twelve must concur in the finding. Persons found guilty of the death are reserved for trial by a petty jury.

Jury-mast, a temporary mast erected in a new ship, or in place of one that has been carried away by tempest, battle, etc.

Jussieu (shú-zhý'), a French family belonging to Lyons, which has
produced a number of distinguished botanists, of whom the following are the principal:—ANTOINE DE, born in 1620; died in 1718.—BERNARD DE, brother of the above, born in 1629; died in 1677.—ANTOINE LAURENT DE, nephew of the above, born in 1748; died in 1836. His work entitled Genera Plantarum formed the first complete exposition of the natural system of classifying plants, which has now taken the place of the artificial Linnaean system. His other chief work was Principes de la Methode Naturelle des Vegetaux.—ADRIEN DE, son of the preceding, born in 1707; died in 1833. By his researches and publications he placed himself in the front rank of botanists. His best-known work was Traité Elémentaire de Botanique, for use in higher-class schools, which far excelled all previous works of the kind.

Juste-milieu (zhûst-mê-lyew), a French expression signifying 'the true mean'; specifically applied to that method of administering government which consists in maintaining itself by moderation and conciliation between the extreme parties on either side.

Justice, a judicial magistrate entrusted with the conservation of the peace. In Britain the first judicial proceedings are held before him in regard to arresting persons accused of grave offenses; and his jurisdiction extends to trial and adjudication for small offenses. In case of the commission of a crime or a breach of the peace a complaint is made to one of these magistrates. If he is satisfied with the evidence of a commission of some offense, he issues a warrant directed to a constable, tries the party if the offense be within his jurisdiction, and acquits him or awards punishment. The justices meet in petty or quarter sessions, where all cases of a trivial sort are tried by them, and the statute business of the county is administered. These duties are all performed gratuitously, and not always efficiently, and in recent years there has been an occasional outcry against 'the great unpaid.' Besides qualifications of rank, any person having an estate of £100 per annum free of charge is eligible for the office. In Scotland the duties of a justice of the peace are more limited than in England, at least in practice. A rank or property qualification is not necessary. In Canada there are everywhere justices of the peace, holding their commissions from the crown, as in Britain, and having similar duties within their respective jurisdictions. The same is the case in other British colonies.

In the United States the office is held only by special appointment, and the tenure is different in different states; but the commission is usually for three or four years, or some other specific limited period. Their position is similar to that of the justices in Britain. In some of the states they have a right to celebrate marriages.

Justice, Lords, in Great Britain, persons formerly appointed by the sovereign to act for a time as his substitute in the supreme government, either of the whole kingdom or of a part of it. Thus when George I went abroad in May, 1719, he entrusted the government during his absence to thirteen lords justices; and nineteen lords-justices and guardians were also appointed when George IV went to Hanover in 1821. The lord-lieutenant of Ireland is a familiar example of a lord-justice. The title Lords-justices of Appeal is in England given to a certain number of judges belonging to the appeal division of the Supreme Court of Judicature.

Justice in Eyre, or Itinerant Justices, in England, justices who travel about over fixed circuits dispensing justice, the judges of assize in fact. Such itinerant judges were first appointed in 1176; in Magna Charta they were required to visit each county annually.

Justiciary Court (jus-tâ-i,ar), the supreme criminal court in Scotland, consisting of the lord justice-general (who is the president), the lord justice-clerk, and five commissioners of justiciary, who are also lords of session. The judges go on circuit to three districts, viz.: Jedburgh, Dumfries and Ayrl.; Glasgow, Inverary and Stirling; and Dundee, Perth, Aberdeen, and Inverness. One lord can hold a circuit court, and there is no appeal from his judgment.

Justifiable Homicide. See Homicide.
Justification (jus-ti-fi-kā'ışun), a theological term employed to designate the act by which a person is accounted just or righteous in the sight of God, or placed in a state of salvation. This conception of God as a judge who absolves the sinner on account of Christ's merit and imputed righteousness is based upon the Pauline writings, and which received its most pronounced expression during the time of the Reformation.

Justin (just'in), Justi'nus, the name of two emperors of the East.—Justin I, born in 450; died in 523 A.D., a peasant of Dacia, rose from a common soldier to be commander of the imperial guard, and on the death of Anastasius in 518 the party directed by his relatives re-established the civil administration to the questor Proclus, and between them the empire was governed with a fair amount of success.—Justin II ascended the throne on the death of his uncle, Justinian I, in 565. He repressed enemies outside the empire and harassed with internal discord, he in 574 solved his difficulties by abdicating in favor of Tiberius, captain of the guard. He died in 578.

Justin, Marcus Justinianus Justi'nus, a Latin historian, who probably lived at Rome in the second or third century after Christ, although some assign him a later date. He made an epitome of the general history of antiquity by Trogus Pompeius, a native of Gaul, who lived in the time of Augustus, and whose work is no longer extant. This epitome, although incorrect in detail, is valuable for its compressed reproduction of the old histories.

Justinian I, Flavius Anicius Justinianus, surnamed the Great, nephew of Justin I, Emperor of the East, celebrated as a lawyer, was born of an obscure family in 483 A.D., and died in 565. Patronized by his uncle, who, from a Thracian peasant, had become emperor, he so flattered the senate and dazzled the people that he was made consul, and took the title of Nobilissimus. On the death of his uncle, with whom he had latterly shared the imperial power, he was proclaimed emperor, and married an actress named Theodora. During his reign the empress exercised a great influence by a system of fear, and the Blues became so violent that in his attempt to quell the tumults the emperor's own life was in jeopardy, and a great part of Constantinople was destroyed by fire. Aided by his generals, he was able subsequently to restore to the Roman empire a part of its former possessions, as when Belisarius in 523 and 529 defeated the Persians, and achieved victories in Africa, and when Narses, another of his generals, put an end to the Ostrogoth rule in Italy. Turning his attention to the laws, Justinian commissioned tenlearned civilians to draw up a new code, and the result was the Corpus Juris Civilis, or body of civil law. This was a work which still remains of great value to the legal world. He took great interest in building cities, fortifications, and churches; among the latter he rebuilt the church of St. Sophia at Constantinople. To maintain his public munificence he oppressed the people with taxes, and suffered his servants to commit the most flagrant crimes. His reign of thirty-eight years was a great period in the empire's history, but the emperor's variegated rule was by reiteration of a second Apology, a Dialogue with Trypho the Jew, all still extant, besides other works. He is of importance in the history of Christian dogma.

Jute (jōt), a textile fabric obtained from Corchorus capuulutris, a plant belonging to the nat. order Tiliaceae (lime or linden). The jute plant is a native of the warmer parts of India, where its cultivation is carried on, especially in Bengal, on an extensive scale. It is an annual plant, growing to a height of 12 to 14 feet. The fiber forms the inner bark of the plant, and possesses in an eminent degree the tenacity common to the bark of the plants of this order. The fiber is fine, and has a shining surface; it is injured by exposure to water, and hence is not well adapted for cordage and canvas, but is in extensive use for making bags, and in the United States and Great Britain serves many useful purposes, being mixed with hemp for cordage, and with silk in the manufacture of cheap satins; its principal use is in the manufacture of coarse cloth for bagging, and in making the foundation of inferior carpets, mats, etc. In Bengal, jute has been cultivated and its fibers woven into various fabrics since remote periods, but it is only since about 1830 that its manufacture has risen to importance in Europe. The headquarters of this branch of industry are at Dundee, Scotland. The rice, cotton, sugar, coffee, pepper, and other articles of East India commerce are almost wholly carried in gunny bags (as the jute bags are called), made and exported from Bengal.
Jütterbogk (yû'ter-bôk), a town of Prussia, province of Brandenburg, 30 miles s. s. w. of Berlin, with manufactures of woolens, and a church in which is preserved Tetzel's indulgence-box. Pop. 7407.

Jutland (ju'tlan; Danish, Jylland), the peninsular and most important portion of Denmark, surrounded on three sides by the sea—the Skager Rack, the Kattegat, and the North Sea, and on the south by Schleswig; area, 9755 sq. miles. A remarkable feature is the series of inland water-basins known as the Lillebæltsfjord, extending from the North Sea to the Kattegat, and finding their chief outlet near Aalborg. The outlet towards the North Sea is sometimes sanded up altogether. The highest point of Jutland is the Himmelbjerg, 550 feet above sea-level. There are many lakes and small rivers. The climate on the whole is temperate, but variable. Pop. 1,061,904.

Jutland, Battle of, the greatest naval battles of the world was fought on May 31, 1916, off the Jutland coast. For nearly two years the British Grand Fleet had been watching for a chance to engage the German High Seas Fleet, which had in vain been lurking in the Baltic behind the minefields and coast defenses of Heligoland and the Kiel Canal. On the afternoon of Wednesday, May 31, a British battlecruiser squadron scouting about 75 miles off the Danish coast and the entrance to the Skager Rack, sighted a part of the German High Seas Fleet. Soon the whole British fleet appeared and the British Grand Fleet was summoned by wireless. In the battle that ensued the Germans admitted losing a battlecruiser, four cruisers and five destroyers, with a loss in total tonnage of 23,015, an estimated money loss of $38,000,000. The British admitted losing three battlecruisers, three armored cruisers, and four destroyers; total tonnage lost, 114,100, estimated money loss, $115,000,000. There were between 4000 and 5000 men lost on each side. The battle was indecisive; and after the great conflict, the fleets returned to their bases. A British squadron of older battleships hurried up from the south but did not arrive till after the conclusion of the battle and returned without taking any part in the fighting.

Juvenal (ju've-nal)—Decimus Junius Juvenalis—a Latin satirical poet, was born probably about the year 42 B. C. at Aquinum, a Volscian town. He is said to have been the adopted child of a wealthy freedman; to have been by profession a pleader; to have died in Egypt as an exile in charge of a cohort of infantry. Nothing of this is certain; we only know that he resided in Aquinum and flourished about the end of the first century after Christ. His extant works are sixteen satires, composed in hexameters, and giving in powerful language, inspired by a bitter and heartfelt indignation, a somber picture of the corrupt Roman society of that era. His satires have also been translated by Gifford, and some of them by Dryden, while Johnson's imitations of the third and tenth (under the titles London, and the Vanity of Human Wishes) are well known.

Juvenile Courts (ju've-nal), tribunals for the trial of youthful offenders, who are usually sent to industrial schools or houses of detention, where they receive moral and industrial training. Courts for this purpose began their existence in Chicago in 1890, and have since been established in some form in many cities of the United States and elsewhere. They owe their origin to the growing conception that the methods formerly used of sending youthful delinquents to jail had the tendency to convert them into a class of criminals, while they might be made useful citizens by more judicious and humanitarian treatment. As yet this movement has been most successful in the States of the Mississippi Valley, though the cities of Denver and Boston have been conspicuous examples of success. Judge Lindsey, of the former city, did much to develop the new system of treatment, adopting in 1901 the plan of sending such delinquents to the Industrial School at Golden, Colorado, instead of to the city prison as heretofore. He trusted the young offenders so far as to send them to the school without escort, putting them upon their honor to go there. The result was that out of several hundred sent only five broke their word. A number of the States have adopted this method and New York and others have recently legislated upon the subject. Chicago has a magnificent Juvenile Court building, Philadelphia opened a model House of Detention in 1909, and Milwaukee and St. Louis have similar institutions. Buffalo was the first city in the State of New York to open a Children's Court. As an example of results the work at Chicago may be alluded to. In that city, in ten years, 31,257 children passed through the court, charged with truancy or delinquency of various kinds. The great majority of them were put on probation, and the records show that over 80 per cent. of the boys thus trusted were not brought into
court again. The same can be said for only 55 per cent. of the girls, showing that the treatment of the latter is the more serious problem of the two. The purpose of the houses of detention is the separation of youthful from adult criminals, but only a few cities have so far adopted them. Juvenile Courts have been opened in Canada and Australia and in several English cities, while the subject is under earnest consideration in a number of European countries. Houses of Detention differ from Houses of Refuge, long in existence in certain communities, in being temporary in their purpose, while in the latter unruly and vicious children are brought up under supervision and taught some useful trade.

Juvenile Offenders, is a term legally applied in Britain to young prisoners, as distinct from adult offenders. When the crime is theft, the criminal, if under 16, can be sent to a house of correction for three months or fined in a sum not over £3. Also the law permits a boy under 14 to be whipped with a birch rod to the number of 12 strokes. The magistrate has the power to send the offender, at the end of his imprisonment, to a reformatory for a term of from two to five years. If able, the parents or guardians of such children are often obliged to bear the expense.

Juxon (juks'ôn), William, an English prelate, born in 1562; died in 1603. After studying at St. John's College, Oxford, he became a student of Gray's Inn, with the view of qualifying for the bar, but took orders and obtained livings, first in 1609 at Oxford, and then in 1614 at Somerton. In 1621 he succeeded Laud as president of St. John's College; in 1627 was appointed vice-chancellor of the university, and about the same time chaplain in ordinary to Charles I, who gave him the deanery of Worcester and then the bishopric of London (1633). He had the melancholy privilege of soothing the king's last moments, and ministering to him on the scaffold. His fidelity cost him his bishopric, but at the Restoration he was made Archbishop of Canterbury.
K

Kabyles. See Berbers.

Kadapa. Same as Cuddapah.

Kadi. See Cadi.

Kadiak (käd’yak), KODIAK, an island south of Alaska, and like it belonging to the United States. The inhabitants, less than 3000 in number, resemble the Eskimos, and live by hunting and fishing, a considerable fur trade being done.

Kadom (käd’om’), an ancient town of Russia, government of Tambot, on the river Moksha. Pop. 6361.

Kaempfer (kämp’fer), ENGELBRECHT, a German traveler and physician, born in 1651; died in 1716. As secretary to a Swedish embassy, and afterwards as surgeon in the service of the Dutch East India Company, he traveled extensively in the East. His comprehensive work on Japan, translated from his manuscripts into English in 1727, was, for a very long period, the only reliable source of information about that country.

Kaf. See Caf.

Kaffa (kaf’fə), a mountainous territory to the south of Abyssinia, inhabited by one of the Galla tribes. It is supposed to be the home of the coffee-plant, which grows wild on the slopes of the Kaffa hills. The chief town is Bonga.

Kaffa. See Feodosia.

Kaffir-bread, a kind of sago obtained from the stems of one or two plants of the Cycas family, natives of S. Africa.

Kaffir Corn (Sorghum vulgare), a variety of millet cultivated in some parts of Africa.

Kaffir Ox, Buffalo.

Kaffirs (kaf’fers), KAIFRES, or CAF-FRES (from Arabic Kafir, infidel or unbeliever), the principal race inhabiting Southeastern Africa, a branch of the great Bantu family. The name
Kaffirs is now chiefly restricted to the tribes occupying the coast districts between Cape Colony and Delagoa Bay. They differ from the negroes in the shape of the head, it being more like that of Europeans; in the high nose, frizzled hair and brown complexion, which becomes lighter in shade in the tribes of the more southern districts. They are a tall, muscular race, the average height being from 5 ft. 9 in. to 5 ft. 11 in., and frugal and simple in their habits. Their chief occupation is raising and tending cattle and hunting; garden and field work is mainly performed by women. They are of a peaceful disposition, but in times of war they display considerable bravery, tactical skill and dexterity in the handling of their assegais beyond the Great Kei, but they were soon allowed to return. Another war (the fourth) broke out in 1846, and lasted nearly two years, with much suffering to both colonists and Kaffirs. Its result was an extension of British territory in the north and east, a portion between the Cape Colony and the Kei being reserved for the natives, and called British Kaffraria. In 1850 a Kaffir outbreak took place, and a bloody war followed, ending in 1853, soon after which British Kaffraria was made a crown colony. A sixth war occurred in 1877-78, owing its origin to disputes between the two tribes of the Fingoens and Gcalekas. For a subsequent war see Zululand.

Kaffraria (käf-frä’ri-a), literally the country of the Kaffirs, a name once applied to a large part of Southeastern Africa, but now limited to the coast district stretching from the Cape Colony to Natal, recently brought under British control. A tract of land southwest of the Kei used to be known as British Kaffraria, but since 1895 it has formed two districts of Cape Colony, namely, King William’s Town and East London. See Kaffirs.

Kafirstan (kä-fi-ris’tän’), or the country of Kaffirs (infidels), a tract northeast of Afghanistan, between India and the Hindu-Kush. It is very mountainous, especially the interior, and inhabited by a nation (the Siaposh) formed of different tribes, varying considerably in complexion. They live chiefly by cattle-raising and agriculture. Although hemmed in by Moslems, they have, excepting a few border tribes, resisted the spread of Islamism. Polygamy is practised, and they dress themselves in goatskins, or fabrics woven from goats’ hair, black being the almost universal color.

Kafiat (kaftan), or CAFTAN, a long vest or gown worn under a long cloth coat in Turkey, Egypt, Persia and other Eastern countries, tied round the waist with a girdle, and having long sleeves.

Kagoshima (ki-gō-shē’mā), a town in Japan, at the southern end of the island of Kiuishiu, on the Kagoshima Gulf. It was bombarded by a British squadron in 1803, and set on fire. In January, 1914, it was laid waste by the eruption of the volcano of Sakurajima. The population at that time was 36,000.

Kahau. See Proboscis Monkey.

Kaieteur (kä-e-tör), a waterfall in British Guiana, on the Potaro River, 822 feet high.
a hole in the center in which the boatmen sit, propelling the boat with a paddle.

Kaiserslautern (kīzərzˈlойtərn), a town in the Bavarian Palatinate, on the Lauter. It has manufactures of woolens, hosiers, stone ware and leather; breweries, glass works, paper and other mills, and important iron works. Pop. (1911) 54,659.

Kaiser Wilhelm Canal, commonly known as the Kiel Canal, is 61 miles long, and extends from Brunsbüttel on the Elbe to Holtenau on Kiel Bay. The passage occupies from eight to ten hours, and the saving is 200 miles. It was begun in June, 1887, and opened in June, 1895. Reconstructed at a cost of $35,000,000 to facilitate the passage of the largest war ship, it was reopened in 1914. By the peace of 1919 (see Treaty) it was opened to free passage of all ships.

Kaiser Wilhelm Land. See New Guinea.

Kaithal (kīˈθal), an ancient town of India, Punjab, Karnal district, with manufactures of lac ornaments and toys and salt peter refineries. Pop. 14,408.

Kakapo. See Ocy Parrot.

Kakodyle (kakˈo diˈl), or Cacodyle, a compound of hydrocarbon and arsenic, a clear liquid heavier than water, with an insupportably offensive smell and poisonous vapor. Its vapor, when mixed with air explodes if heated above 50° C. The oxide of kakodyle is alkarzin, which see.

Kalabagh (kāˈlābāg), a town of India, in the Punjab, on the Indus, close to hills and cliffs of solid rock salt, which is extensively quarried. Pop. 5,428.

Kaladgi (kaˈladʒi), a town of India in the south of Bombay Presidency. Pop. 7,024.

Kalafat (kaləˈfat), a town in Roumania, on the left bank of the Danube, about 1 mile east of Wid din, on the opposite bank. Since Roumania has become an independent kingdom it has made rapid progress. Pop. 7113.

Kalahari (kāˈləhərˈ), or KALI HARI, a desert region in Central South Africa, north of the Orange River, a large tract of which is included in the British protectorate of Bechuanaland. It is very flat, subject to long continued droughts, and has only dried-up river beds; nevertheless, it is not devoid of vegetation, patches of grass and shrubs occurring here and there. An abundant supply of watermelons and some remark-
able varieties of tubers, together with large herds of antelopes and other game, provide ample subsistence to the bushmen and Bakalahari inhabiting this barren region.

Kalalahasti (kā-la-hā-štī), a town of India, Madras Presidency, North Arcot district, with a temple of Siva, which is a place of pilgrimage. Pop. 9,835.

Kalakaua I (kal-ä-kō-ä), David, King of Hawaii, born in 1836; died in 1891. He became king in 1874, and in 1887 was compelled to grant a new constitution which much restricted his authority.

Kalamata (ka-la-mä-tä), a seaport of Greece, in the Morea, capital of the government of Messenia, at the head of the Gulf of Korone. It is the seat of an archbishop, and has an export trade in wool, oil, silk and figs. Pop. 15,997.

Kalamazoo (kal-a-mä-zöö), a city, county seat of Kalamazoo Co., Michigan, on the Kalamazoo River, and on 7 railroads, 49 miles s. of Grand Rapids. Here are Kalamazoo College (Baptist), Western State Normal School, and State insane asylum. It has the largest paper mill in the world. Other products are springs, corsets, automobiles, trucks, auto accessories, vegetable parchment paper products, etc. The region is noted for its celery and peppermint. Pop. (1910) 39,437; (1920) 43,838.

Kalb, Johann, Baron de, born in Bavaria in 1721; entered the French army as lieutenant in 1743; became captain 1747, and brigadier-general 1761. He was sent on a secret mission to America in 1768, and came again with Lafayette in 1777. He was appointed major-general, and served in New Jersey and Maryland. In April, 1780, he was sent to join the Southern army as second in command to Gates, and on August 16 was mortally wounded at Camden, S. Carolina, dying three days later.

Kale. See Cabbage.

Kaleidoscope (ka-lid'-ō-skōp), a well-known optical toy invented by Sir David Brewster, by which an infinite variety of symmetrical and often beautiful, colored designs is obtained. The ordinary kaleidoscope consists of a tube containing two glass plates acting as mirrors, which extend along its whole length and make an angle of 60° with one another. One end of the tube is closed by a metal plate with a small hole at its center, to which the eye is applied; at the other end there are two plates, one of ground the other of clear glass (the latter being next the eye), with a number of pieces of colored glass or beads lying loosely between them. When the eye is applied to the aperture the mirrors produce a beautiful symmetrical figure, and when the tube is turned about or shaken new images, always symmetrical, are formed. This arrangement may be modified in various ways. The instrument has been used by designers of patterns for printed calicoes, etc.

Kalendar. See Calendar.

Kali (kā-lī), a Hindu goddess, one of the forms of the consort of Siva, and therefore in some respects corresponding to Durga and other deities. She is represented as black, with four arms, wearing a necklace of skulls, and the hands of slaughtered giants round her waist as a girdle. Her eyebrows and breast appear streaming with the blood of monsters she has slain and devoured. One hand holds a sword, another a human head. She is the goddess of death and destruction, and goats and other animals are sacrificed on her altars. Ancient Hindu books even enjoined human sacrifices to this bloodthirsty goddess. Her worship is said to be characterized by vile secret rites.

Kali (kālī), a plant, a species of Salvia, or grasswort, the ashes of which may be used in making glass.

Kālidāsa (kā-li-dā'sā), one of the greatest Indian poets and dramatic writers, who lived, according to tradition, in the first century B.C., but some authorities assert that he flourished several centuries after the Christian era. His best production is the drama Sakuntala, which was first translated into English by Sir W. Jones (Calcutta, 1789), and at once aroused in Europe attention to Sanskrit literature. He was also the author of two other plays—Vikramorvasī ('The Hero and the Nymph'), and Mālarikā and Agnimitrā, while two epics and other works are ascribed to him, some of which have also been made accessible to the general public by translations.

Kalf. See Caliph.

Kalihari. See Kalahari.

Kalis (kā-līs; Polish, Kalisz), a town and province of Poland, formerly in Russian Poland, 140 miles s.w. of Warsaw. Area of province, 4,377 sq. miles; pop. 1,243,200. The town was founded in 655, and was the residence of the grand dukes of Poland. It is an important trade center and has manufactures of cloth, leather, flour, tallow, etc. It was incorporated with reconstructed Poland in 1918. Pop. 52,665.
Kalispell (kal’ispel), a city, county seat of Flathead Co., Montana, 138 miles N. of Missoula on Flathead Lake, and on the Great Northern R. R. It is a gateway city to the west entrance to Glacier National Park and has a large tourist business. The principal industries of the region are agriculture, horticulture, dairying, stock raising and lumbering. It has flour and planing mills. Pop. 5,147.

Kalmar (cal’mal’), a beautiful North American genus of shrubs, with cup-shaped rose or purple flowers disposed in corymbs, and belonging to the natural order Ericaceae, or heaths. The K. latifolia, commonly called mountain heather or calico bush, much valued in European gardens for its flowers and foliage, has its home in the Allegheny Mountains. Its trunk sometimes attains a diameter of 3 inches; the wood is very hard, closely resembling that of the box tree.

Kalocza (ka-lat’sha), a town of Hungary, 67 miles south of Budapest, near the Danube; a Roman Catholic archbishopric with fine cathedral and episcopal palace. Pop. 11,980.

Kalong. See Foz-bat.

Kalpi. See Calpee.

Kaluga (ka-lug’ga), a town and government of European Russia. The government is bounded by those of Moscow, Smolensk, Tula and Orel, has an area, mostly flat and sandy, of 11,942 square miles and a pop. of 1,287,300. The central parts are covered with immense pine and fir forests, the rest is poorly cultivated, producing chiefly grain, hemp and flax. Iron ore and a poor kind of coal are also raised. The town stands on an elevation on the right bank of the Oka, a navigable river, 114 miles s. w. of Moscow, has rope and canvas factories, and trades largely with Germany in leather, oil and candles. Pop. (1911) 49,728.

Kalusz (kal’ush), a town of Austria, in Galicia, 60 miles southeast of Lemberg, with natural deposits of potassium salts. Pop. 7,821.

Kama (ka’mä), the Hindu god of love, corresponding generally speaking, to the Greek Eros and Roman Cupid. He appears as a beautiful youth riding on a parrot, generally carrying a bow with a string formed of bees, and having five arrows, each tipped with a flower that is supposed to have some amorous
influence. Dancing girls or nymphs bear him company, and one carries his banner, the emblem on which is a fish or marine monster on a red ground.

Kama (kā'mā), the largest tributary of the Volga, rises in the Russian government Viatka, and after a course of 1150 miles flows into the Volga, 40 miles south of Kasan. Part of it is navigable for steamers, and ordinary barges can proceed as far as Perm.

Kamaka-mehe I, King of the Hawaiian Islands, born about 1753; died in 1819. Chief of one of the islands, he conquered the whole group and became the first king of Hawaii in 1781. Four others of the same title succeeded, Kamehamea III introducing a constitutional form of government in 1840, and Kamehamea V proclaiming a new constitution in 1864. These governmental changes were made under missionary influences.

Kamala (kā'mā-lā), a drug long known, under various names, to Indian and Arab physicians, as a specific against the tapeworm, introduced in the British Pharmacopoeia in 1864 as a vermifuge, in doses of 30 grains to a quarter of an ounce in syrup or gruel. It occurs as a brick-red powder, adherent to the fruit of the Rottlera Flaccida, formed by minute, roundish, semitransparent granules, mixed with stellate hairs, and is largely collected in the forests of Madras, where it forms an important source of revenue. The active principle of the powder lies in the 80 per cent. of resin it contains, which also supplies the coloring matter, called rotterin, used as a silk dye. Another variety, exclusively employed as a dye, comes from the east coast of Africa, but differs from the Indian product in the deep purple color, the coarseness of its particles, and the large simple hairs which are found mixed with it.

Kamaon. See Kumaon.

Kambaluc. See Cambaluc.

Kamenetz (kā'men-ets), a fortified town of Russia, capital of the government of Podolia, on the Smotritz. Pop. 38,113.

Kames, Lord. See Home, Henry.

Kampen (kām'pen), a town of Holland, on the Yssel, near where it enters the Zuider Zee. It has two interesting churches and a town hall. It was one of the towns belonging to the Hanseatic League, and still has some commercial importance, trading in dairy produce, etc. Pop. 19,664.

Kämpfer. See Kämpfer.

Kamptee (kām'tē), or Kamthi, a town of India, Central Provinces, Nagpur district, with an extensive military cantonment, a fine bridge over the Kanhan river, a Protestant and a Roman Catholic church, and a large trade. Pop. 38,888.

Kamptulicon (kamp-tu'l-i-kon), a floor covering first introduced to the general public in 1862. The best is made of India rubber, gutta-percha and powdered cork.

Kamimura (kām-im-urawa), Vice-Admiral Hikonjo, a Japanese naval officer, died August 3, 1916, aged 67. As commander-in-chief of the Second Squadron he took part in the Russo-Japanese war, for which he was awarded the title of baron and invested with the grand cordon of the Rising Sun and the first class order of the Golden Kite. He is believed to have led in the naval assault on the British Squadron against the German base at Tsing-Tao, China, in 1914.

Kamrup (kām-rōp'), a district of Assam, in the Brahmaputra Valley; area, 3,837 sq. miles. Pop. 538,187.

Kamien (kā'me-an), a name in Egypt for the simoom.

Kamchatka (kam-chat'ka), a large peninsula in the north-east of Asia. On the east it has the North Pacific Ocean, and on the west the Sea of Okhotsk; it is upwards of 900 miles in length and 190 in average breadth; square miles, 85,000. It is a Russian possession since 1706. A lofty mountain range extends the whole length of the peninsula. Some of the mountains are active volcanoes, and eruptions are of frequent occurrence. A number of hot springs also exist. The climate is very severe. Excepting in the valley of the Kamchatka River, the most fertile and populous settlement, the soil is but ill adapted for cultivation. The chief wealth of the country lies in its fur-producing animals, including the sable, the Arctic fox, the beaver and the bear. Game and fish of all kinds abound, and form the staple food of the inhabitants. The Kamchadales, once the predominant race of the peninsula, are a branch of the Mongol family, a low type physically and morally; but they are rapidly vanishing before the Russian settlers. In 1896 they were stated to be less than 2000. Their food consists mainly of fish seasoned with whale and seal fat. They believe in a creator and the immortality of the soul (including animals). They use dogs for draught purposes, and not the reindeer,
Kamyshin

like their neighbors. The Koryaks are a
wandering tribe, living in the northern
districts, and subsisting almost exclu-
sively on the produce of the reindeer.
The entire pop. is about 7500. The cap-
ital, Petropavlovsk, has a pop. of about
1000.

Kamyshin (ka-mish'ın), a town of
European Russia, at the
junction of the Kamyshinka and the
Volga, in the government and 106 miles
s. w. of Saratov. It was founded by
Peter the Great in the year 1710. Pop.
15,934.

Kanagawa (kä-na-gä'wa), a seaport
of Japan, in the island of
Honjo, or Nippon, on an inlet of the
Bay of Yedo, forming one place of trade
with the adjacent Yokohama, open to
British trade since 1859. Pop. 12,000.
See Yokohama.

Kanakas (ka-nä'kaz), the native
inhabitants of the Sandwich
Islands; in New Caledonia and the New
Hebrides the name is applied to all the
native laborers, without distinction of
origin.

Kanara. See Canara.

Kanari-oil (ka-nä'ri), an oil yielded
by the fruits of Cana-
rium commune, a tree of the Indian Ar-
chipelago and Southeastern Asia, often
called Java almond. The oil is used for
culinary purposes and for burning, and
is deemed superior to coconut oil. See
Canarium.

Kanaris (ka-nä'ris), Constantine, a
Greek sailor, born in the
island of Ipsara about 1790, and who
became famous in Europe in 1822 for his
daring exploits in firing the Turkish
fleets in the Chios and Tenos Straits.
In 1825 he unsuccessfully attempted the
destruction of the Turkish fleet in the
port of Alexandria, ready to carry Arab
troops to Morea. On his return to
Greece in 1828, the President, Capodis-
triás, gave him the command of a for-
tress and later on that of a squadron; a
trust which he amply justified by loyal
service at a most critical period. King
Otho raised him successively to the rank
of captain of the first class, admiral
and senator. He was minister of marine in
1846, 1848-49 and 1854-55. In 1862 he
took an active part in the overthrow of
the government of Otho.

Kanastér. See Canaster.

Kanauj (ka-noo'j), ancient city of
India, 49 miles from Cawnpore.

Kanazawa (kä-na-zä'wa), a town of
Japan, near the northwest
cost of the island of Hondo (Nippon),
with manufactures of silks, porcelain,
etc. Pop. (1908) 110,904.

Kanchil,

Kandahar, or CANDAHAR (kan-da-
här'), a town of consid-
erable commercial and strategical
importance in the south of Afghanistan, on
the direct route to India. It was held by
British forces in 1839-42 and 1879-81,
and the fortifications have recently been
much strengthened. The town lies 3484
feet above the sea, has a large transit
trade, and a pop. estimated at from 25,-
000 to 50,000.

Kandavu (kän-dä-vu'), the southern-
most island of the Fiji
group. It has a fine natural harbor, with
a port of call for steamers, and is sur-
rounded by a number of small islands,
called the Kandavu group.

Kandesh. See Khandesh.

Kandy. See Candy.

Kane (kän), ELISHA KENT, a surgeon,
traveler and Arctic explorer,
born at Philadelphia in 1820; died at
Havana in 1857. He was graduated as
M.D. at the University of Pennsylvania
in 1842, was attached as surgeon to the
American mission to China, and after-
wards visited India, Egypt and Greece.
In 1846 he rendered important service as
a volunteer in the United States army in
Mexico, in 1850 by his survey of the Gulf
of Mexico, and in the same year joined
the Grinnell Expedition, as medical and
scientific member, in the unsuccessful
search for Sir John Franklin. His ob-
servations led him to the belief that there
was a large open sea near the pole, and
with a view to penetrate it he organized
and commanded a second expedition,
which left New York in the Advance in
May, 1853. He succeeded in getting as
far as 75° 43' N. lat., where he was
frozen up for twenty-one months, and be-
ing harassed by scurv'y and want of pro-
visions was obliged to abandon the vessel.
A perilous journey of 1300 miles in boats
and sledges brought him back to Green-
land, and he again reached New York in
November, 1855. Much broken in
health, he sailed for Cuba to recruit, but
died there. The accounts of his two expedi-
tions added much to our knowledge of the
Arctic regions.

Kane, a borough of McKeen Co., Penn-
sylvania, 93 miles e. of Erie.
It has delightful air and water, and is a
health resort especially beneficial to fever
and asthma patients. It has large glass-
works, wood-working industries, etc. Pop.
(1920) 7283.
Kanem (kā' nem), a district of Central Africa, north and northeast of Lake Tchad, now belonging to Bornu, but formerly an independent state.

Kangaroo (kang-ga-rō'), the common name of a number of animals belonging to the marsupial order of mammals, indigenous to Australia, and first made known to Europe by Captain Cook. The most noticeable feature about the kangaroo is the disproportion between the upper and lower parts of the body. The head is small, deer-like in shape, with large ears; the forelegs small and five-toed; the hind legs very large and powerful, with four toes only on the feet. The tail is long, thick at the base, and helps to support the animal when sitting erect, the usual posture when not feeding; it also assists the hind legs in their long leaps (from 10 to 15 feet). The young are born very immature, and protected and nourished for about eight months in the marsupium, or pouch, into which the nipples of the mammary glands open. Kangaroos are herbivorous, and, where still plentiful, a serious pest to settlers, whose rifles have, however, considerably reduced their number. The hindquarters of the large species supply a tolerable substitute for venison, while their tails make excellent soup, and their skins good rugs and leather. The kangaroo includes many species, varying in size from a hare to a large sheep, and remains of still larger and extinct species have been found in the pleistocene deposits of Australia. The larger and most common kinds belong to the genus Macrurus, and include the giant kangaroo (M. giganteus), the red kangaroo (M. rufus), the brush kangaroo (M. tristis), and the three kangaroos of New Guinea belonging to the genus Dendrophylax; they have prehensile tails. The rock kangaroos of Northern Australia belong to the genus Petrogale.

Kangaroo Apple (Solanium laciniatum), a plant of the potato genus, belonging to Australasia and South America, with an edible fruit.

Kangaroo Grass (Anthistiria Australia), a tall and valuable fodder-grass of Australia, much liked by cattle.

Kangaroo Island, a long and barren island, area 1671 square miles, situated at the entrance to the St. Vincent Gulf, South Australia, 103 miles from Adelaide.

Kangaroo Rat (Hypsiprymnus), or more properly rat-kangaroo, a diminutive species of the kangaroo family, differing from the kangaroo proper in possessing canine teeth in the upper jaw, in its nocturnal habits, and its food, which consists chiefly of roots. Their movements are unlike those of the kangaroo. The little animals can sit erect upon their hind legs, but they are unable to make the vigorous leaps which are so characteristic of the kangaroo, nor can they manipulate their food with their forepaws and carry it to their mouth by means of these limbs. Their gait resembles a gallop rather than a series of leaps. They are very timid and harmless animals and have little of the fighting instinct, offering no resistance when captured. They seem to have a special fondness for potatoes and make havoc of the Australian kitchen gardens in their attempts to dig up and carry away the seed potatoes. In the United States the name is applied to a rat which inhabits the great plains near the Rocky Mountains and Mexico. It is a small animal, a little over four inches long, buff and white in color. It is a member of the Heteromyidae family and is related to the jerboa (q. v.). Kangaroos are smaller American rodents.

Kangra (kān'gra), a large district of Hindustan, in the Punjab, belonging mainly to the Himalayan chain; area, 9069 square miles. About a ninth is under cultivation, and large tracts are covered with forests. The inhabitants are a good-looking, fair-complexioned race, mild and peaceable, and much attached to their country. Pop. 768,124. Kangra, the capital, had a pop. in 1901 of 47,464.

Kaniza (kān'zā), market town of Hungary, district Zala, with large distilleries and fairs for grain, etc. Pop. 23,255.
Kankanoe, a town and county seat of Kankanoe Co., Illinois, on the Illinois Central, Big Four and Chicago, Indiana & Southern railroads. It has manufactures of implements, davenports, beds, sheet metal products, sewing machines, pianos, overalls, lime, cement, washing machines, cereals, etc. The State Hospital for the Insane is here. Pop. (1910) 13,986; (1920) 18,753.

Kano (ka'nō), a town and province of Nigeria, British West Africa. It is a Mohammedan center. Pop. of province 2,570,000; of town about 70,000.

Kansas (kan'zas), one of the United States, bounded north by Nebraska, east by Missouri, south by Oklahoma, west by Colorado; area, 82,158 square miles. It consists chiefly of undulating plains, well watered by the Arkansas and other rivers, the Missouri forming the boundary on the northeast. The soil is generally fertile, highly suitable for grain, vegetables and fruit, and cattle-raising is carried on very extensively. Kansas is one of the foremost agricultural States, especially in the production of corn. The climate is mild, and the winter short, but violent winds and sudden changes of temperature often mar the spring season. Although an agricultural state, Kansas has important and varied manufactures, the rivers supplying the motive power in many places. Slaughter- and meat-packing is an important industry, with by-products of soap and candles. Other industries are flour and gist-milling, car and shop construction. Bituminous coal, petroleum, building stone, lead, zinc, gypsum, salt, pumice, natural gas, etc., are among the minerals.

Education is well provided for, and there is a State university, an agricultural college, and other colleges and normal schools.

There are 11,500 miles of railroad. Prior to the Federal Prohibition Amendment (1920) Kansas had a State law prohibiting the manufacture and importation of intoxicating liquors. The largest cities are Kansas City, Wichita, and Topeka (the capital). Kansas originally belonged to the Louisiana Territory. Settlers had entered it in considerable numbers by 1853, and in later years it became the scene of a local war between the slaveholding and anti-slavery settlers. In 1861 it was admitted as one of the States of the Union. Pop. (1900) 1,470,496; (1910) 1,609,947; (1920) 1,769,257.

Kansas City, the second largest city of Missouri, on the Missouri River, at the mouth of the Kansas River (Kaw), opposite Kansas City, Mo. It is a commercial center and has packing plants, engineering works, car-wheel shops, iron and steel works, rubber-tire factories, flour mills, oil refineries, soap works, serum plants, foundries, machine shops, and many other industries.

The State Institution for the Blind, and other institutions. Pop. (1900) 51,548; (1910) 82,331; (1920) 101,177.

Kant, Immanuel, a celebrated philosopher, the founder of the 'critical' or Kantian philosophy, born at Königsberg, Prussia, in 1724; died there in 1804. He early showed great application to study, and was sent to the Collegium Fredericianum, and then (in 1740)
to the university of his native city. His progress at college and at the university was rapid and brilliant, his studies embracing in particular mathematics and physics, as well as philosophy. Leaving the university after three years, he engaged in tuition, and it was not till 1755 that he took his degree. Soon after this he was appointed one of the teachers in the Königsberg University, and lectured on logic, metaphysics, mathematics and natural philosophy, to which, at subsequent periods, he added natural law, moral philosophy, natural theology and physical geography. In 1770 he became a full professor, obtaining the chair of logic and metaphysics, a post that he occupied till 1797. It is impossible within our space to give anything like an exposition of the philosophy of Kant, which has profoundly influenced all subsequent philosophical speculations. Dissatisfied with the dogmatisms of Wolff and the skepticism of Hume, he set himself to investigate the field of metaphysics for himself, and in the first place proceeded to the examination of the origin, extent and limits of human knowledge. According to him, part of our knowledge is knowledge a priori or original, transcendental and independent of experience; part of it is a posteriori, or based on experience. What he calls the 'pure reason' has to do with the former. His great work named the Kritik der reinen Vernunft, 'Critique of Pure Reason' (first edition, Riga, 1781), contains the foundation for his whole system of philosophy. In the preface to a later work, the Kritik der Urteilskraft, 'Critique of the Power of Judgment' (Berlin, 1790), he defines 'pure reason' thus: Pure reason is the faculty to understand a priori principles; and the discussion of the possibility of these principles, and the delimitation of this faculty, constitute the critique of pure reason. In the first rank of such ideas as we do not derive from experience are space and time. Kant shows that all our perceptions are submitted to these two forms, hence he concludes that they are within us, and not in the objects; they are necessary and pure intuitions of the internal sense. The three original faculties, through the medium of which we acquire knowledge, are sense, understanding, reason. Sense, a passive and receptive faculty, has, as already stated, for its forms or conditions space and time. Understanding is an active or spontaneous faculty, and consists in the power of forming conceptions according to such categories as unity, plurality, causality, etc., which categories are applied to objects of experience through the medium of the two forms of perception, space and time. Reason is the third or highest degree of mental activity, and consists in the power of forming ideas. As it is the province of the understanding to form the intuitions of sense into conceptions, so it is the business of reason to form conceptions into ideas. Far from rejecting experience, Kant considers the work of all our life but the action of our innate faculties on the conceptions which come to us from without. He proceeds in a similar way with morality: the idea of good and bad is a necessary condition, an original basis of moral, which is supposed in every one of our moral reflections, and not obtained by experience. He treats this part of his philosophy in his Kritik der praktischen Vernunft—'Critique of Practical Reason' (1788).

Kanuri (kā'nu-re'), or Kanori, a Sou- danese people, who form the principal portion of the population of Bornu.

Kaolin (kā'lu-lin), a name first given by the Chinese to a pure white clay used by them in the manufacture of porcelain. Kaolin is the result of the decomposition of granitic rock, containing felspar, mica and quartz. Similar clays, differing slightly in color and in the percentage of constituents, are found at Scheneberg in Saxony, furnishing the material of Dresden china; at Arcogna, in France, employed for Limoges ware; and at St. Austell, in Cornwall, the source of supply for the British potteries. It is also found in enormous deposits in many parts of the United States, and is largely employed in pottery manufacture at Trenton, New Jersey, and East Liverpool, Ohio. In its natural state kaolin somewhat resembles mortar; by sorting and repeated filtration it is freed from all coarse ingredients, then dried in pans and sheds, and sent into the market cut into blocks.
Kapunda (ka-pun’da), a town in N. of Adelaide, South Australia, 40 miles from the copper mines. There are also quarries of fine marble. Pop. 1885.

Kapurthala (ka-por-tha-la), a native state of India, province Punjab, between the Beas and the Sutlej rivers; area 598 square miles, pop. 314,341. The capital, Kapurthala, lies 65 miles east of Lahore and 8 miles from the left bank of the Beas. Pop. 18,519.

Karachi (ka-rech’che). See Kurrachee.

Karaites (ka-ray’ts), a Jewish sect, founded about the middle of the eighth century by Anan Ben David, and which was for a long time the object of persecution by the orthodox Jews. They refuse to accept as divine or authoritative the traditions and doctrines of the Talmud, or those in the rabbinical writings, and adhere closely to the text and letter of the Old Testament. The sect never became very important, although thinly spread over many eastern countries. They are still found in Poland, Galicia, Alexandria and Constantinople; but their chief force is in the Crimea, where some thousands are said to exist.

Karakorum (k‘-re-kor’-um), a name sometimes given to the mountain range in Central Asia forming a sort of rampart between Cashmere and Eastern Turkestan, and forming the watershed between the Indus basin and that of the Tarim. The name is also given to a pass in this range, 18,000 feet above sea-level, on the direct road from India to Eastern Turkestan.

Karaman (k‘-ra-ma’n), a town of Asiatic Turkey, in the pashalik of Karaman, in the valley of the Taurus chain, formerly the residence of the pasha. Pop. 8000.

Karamania, or Caramania (k‘-ra-ma-nil’-né-á), a vilayet of Asiatic Turkey, in Asia Minor. It is traversed from east to west by the Taurus range, covered with oak and pine forests, and watered by the Kizil-Irmak, the Cyhoon, and other lesser rivers. The climate is genial, the soil rich, producing abundant harvests, and the vine and the fig grow in profusion. The chief occupation of the inhabitants, most of whom are Turks, is the rearing of live stock. The capital is Konieh.

Karamzin (k‘-ra-maz’en), Nikolai Mikhailovich, imperial Russian historiographer, born in a village of the government of Orenburg in 1765; died at St. Petersburg in 1826. He received a desultory education at a private school in Moscow, but made up the deficiency by extensive reading and continual travel. In 1792 he founded the Moscow Journal, and in subsequent years several literary periodicals. He did much to purify his native language, and gave a fresh impetus to Russian literature. His title to fame rests on his History of the Russian Empire (12 vols., St. Petersburg, 1816-24), a work written in fine style, with impartiality and penetration, and translated into several other languages, including English.

Kara-Su-Bazar (k‘-ra-soo-ba-zar’), a Russian town in the Crimea, formerly a very important market, but its commerce is declining. Pop. 12,961.

Karatchef (k‘-ra-tch‘ef‘), a town of Russia, government of Orel. Pop. 15,605.

Karauli (ka-roo’lë), a town of India, in Rajputana, capital of native state of same name, surrounded by walls and a moat, and containing a palace, handsome temples, etc. Pop. 23,482. The state, which is under the superintendence of the Bhurstone and Karauli Agency, has an area of 1208 square miles, and a pop. of 156,786.

Karens (k‘-renz), a pagan tribe of Burmah, formerly confined to a region beyond the Salween River, called Karen-ri, on the borders of Burma and Siam, but now distributed over various parts of Burmah. They are an intelligent and industrious race, many of them having become Christianized, chiefly through the agency of American missionaries. They are estimated at about 100,000, but the Karen dialect is stated to be spoken by six times that number.

Karikal (k‘-ra-kil’), or Carickal, a small French settlement in India, in the Carnatic, on the Coromandel coast, 150 miles s. of Madras. Area, 62 square miles; pop. 56,595.—Karikal, the capital, on the Cavery delta, has a pop. of 18,038, and a large export trade, chiefly in rice.

Karli (k‘-rel’), a celebrated Buddhist cave-temple of India. Poonah district of Bombay Presidency. It is rich in sculpture, and is divided, like a church, into nave and aisles, with an apse.

Karma (k‘-ram‘a), a Sanskrit word signifying the Brahminic conception of the future state of mankind. It expressed the whole of the actions, good and bad, which determine the soul's destiny. It was borrowed by the Buddhists and developed into an elaborate ethical speculation, the cause which influences every action or event; the sum
Karlsbad

of all merits and demerits. It arises from ignorance and may be overcome by right living and right thinking, the ultimate state being that known as Nirvana. See Buddhism.

Karlsbad, Karlsruhe, Karlsruhe. See Carlsbad, etc.

Karmathians (kɑr-'mɑθi-anz'), once a powerful Mohammedan sect, founded in Irak by Hamdan Karmat during the ninth century, who adopted the doctrines of the Ismaillis, and introduced communism among his rapidly increasing flock. Missionaries were trained to spread his creed, and one of them, Abu Said, gained a strong hold on the people of the Persian Gulf. The caliph, afraid of the influence of the new sect, sent an army for its suppression, but he was defeated, and Abu Said took possession of the whole country. His son Abu Tahir, who succeeded him, made further conquests, and became master of almost all Arabia, Syria and Irak; but under his successors this power rapidly declined, and was finally broken towards the end of the tenth century.

Karnak. See Thebes.

Karnal (kar-nål'), an Indian town and district, in the Punjab; area of district, 2396 square miles; pop. 883,225.—KARNAL, the headquarters of the district, trades largely with Delhi and Umballa. Pop. 23,559.

Karnool, or KARNOOL (kar-nool'), a town in India, in the presidency of Madras, situated in the fork formed by the junction of the Hundri with the Tungabhadra, with a dismantled fort. Pop. 25,376. The district has an area of 7788 square miles; a pop. of 818,000.

Karr, Jean Baptiste Alphonse, a French journalist and romance writer, born in 1808, and educated at the Collège Bourbon, Paris. In 1832 appeared his first novel, Sous les Tilleuls, originally written in verse, and which at once brought him into notice. Numerous other works followed in rapid succession, and he also contributed largely to journals and reviews, including the Revue des Deux Mondes. In 1835 he became editor of the Figaro, and in 1839 commenced in it the fortnightly Guêpes ('Wasps'), a publication which attracted much attention for its wit and humorous anecdotes and character sketches, and brought him considerable profit and much ill-will. In 1855 he retired to Nice, where he finally became an enthusiastic grower of fruit and flowers. Died in 1890. His daughter, Thérèse Karr, has published several works.

Karr (kar'ri), a valuable timber largely exported from Western Australia to Europe and America, and obtained from an enormous tree belonging to the Eucalyptus family.

Karros (kar-rozs), the name given in South Africa to the elevated tablelands, 3000 to 4000 feet above sea-level, lying between the mountain ranges. The soil is shallow but rich, and during the rainy season, or when artificially watered, vegetation is most profuse. The Karros form excellent pasture for cattle, sheep and Angora goats; and great tracts are now occupied as farms, the uncertain rainfall being supplemented by permanent springs and large reservoirs. The 'Great Karroo,' in the Colony, extends from east to west for 300 miles, with a breadth of 70 miles.

Kars (kärz'), a town on the Russian Turkish frontier in Asia, formerly a Turkish fortress, and the scene of several gallant defenses. Captured and annexed by the Russians in November, 1878, it has become the capital of a Russian province of the same name; area, 7305 square miles, pop. 349,100. It has since been connected with Batoum and Tiflis by military roads, and the fortifications have been much enlarged and strengthened. Pop. (1916) 35,462.

Karst (kärst), a mountain or elevated region of Austria, northeast of the Adriatic, in the Coastal Lands, Carniola, Croatia and Dalmatia.

Kartarpur (kar-tär-pōr), a town of India, Punjab, heredi-
Kartikeya

Kartikeya (kár-ti-ká’ya), the Hindu god of war. He is represented riding on a peacock, with six heads and twelve hands, in which numerous weapons are brandished.

Karun (ka-rón’), a navigable river of Southwestern Persia, falling into the Shatt-el-Arab, or joint stream of the Euphrates and Tigris. It has recently been opened to foreign trade as far as Ahwaz.

Karwar (kár-wär’), a seaport of India, Bombay Presidency, with a safe harbor and a good trade. Pop. 10,847.

Kasbin. See Kazvin.

Kashan (kás-shán’), a town of Persia, province of Irak-Ajemi, in a fertile plain 90 miles south from Isphahan. It is regularly built, has many fine mosques, etc., and its silks, carpets, jewelry, etc., are much esteemed. Pop. 35,000.

Kashgar (kásh-gär’), a Chinese town of Central Asia, in Eastern Turkestan, on a river of the same name, with considerable manufactures of cotton, linen, gold and silver cloths, carpets, etc., and an extensive trade, its position at the junction of several great routes making it the emporium of much of the commerce of Central Asia. Pop. estimated about 60,000.

Kashgar (kásh-kár’; Orië Polii), a large species of sheep in lofty plateaus of Central Asia. The male has very large horns bent circularly, while the female has horns resembling those of a goat.

Kashmir (kásh-mér’). See Cashmere.

Kasipur (káš-sé-pör’), a town of India, N. W. Provinces, a great place of Hindu pilgrimage. Pop. 14,667.

Kassai (káx-sa’), a river of Southern Africa, a tributary of the Congo system.

Kassala (káx-sa’la), a town in Nubia, on the March, a tributary of the Nile, 250 miles east of Khartoum, and about the same distance west of Massowah. It was formerly a place of importance, but has greatly declined since the rising of the mahdi. Pop. 20,000.

Kassel. See Cassel.

Kassimof (kás-si-móf’), a town of Russia, in the government of and 70 miles E. N. E. of Riazan, on the Oka. It has a large trade, and carries on tanning, boot and shoe manufacture, etc. Pop. 13,545.

Kastamuni (kás-tà-mó’né), a town of Asia Minor, capital of the Turkish vilayet of the same name, 100 miles N. N. E. of Angora. Pop. estimated at 10,000.

Kasar (kás-sér’), a town of India, Lahore district, Punjab.

Kater (ká’ter). Henry, an English writer on physics, born at Bristol in 1777; died in London 1833. He joined the Indian army, gained the rank of captain, and rendered great service by his trigonometrical surveys. He was knighted in 1814, and devoted his time to scientific pursuits—the seconds pendulum, terrestrial gravity, etc.

Katrine (ka-trín’), Loch, a picturesque and much-frequented lake, Scotland, county of Perth, 5 miles east of Loch Lomond; 10 miles long, in some places 2 miles broad, encircled by lofty mountains and rocky ravines clothed with trees. At its east end is the celebrated pass of the Trossachs, rendered famous by Scott’s Lady of the Lake. Through this pass a stream flows, carrying the surplus waters of the lake to Loch Acharn. The water-supply to the city of Glasgow is drawn from Loch Katrine.

Katsura (ká-tso’-rá), Prince Taro, a Japanese soldier and statesman, one of the leaders of the transition period; born in 1847; died October 10, 1913. After many years of varied service he became Minister of War (1898-1900) and Premier of Japan (1901-1905). In 1912 he was chosen Premier for the third time, but resigned within a few months.

Kattywar, or Kathiawar (kát-hí-á-wär’), a peninsula of Hindustan, Bombay Presidency, between the Gulf of Cambay and the Rann of Cutch. Most of it is occupied by the Kattywar Agency, formed by numerous small native states of Guzerat, many of which are tributary to the British government, to the Gaekwar of Baroda, or to the Nawab of Junagadh. The surface is generally undulating, the soil sandy and productive only where irrigated. Cotton is the principal crop. Area about 22,000 square miles. Pop. 2,752,000.

Katwijck (kát’wik), a place on the coast of Holland, near where the Rhine enters the sea by means of
Katydids, now much frequented for sea-bathing.

**Katydid** (kát’i-di’d; *Platyphylum coccineum*), a species of grasshopper of a pale green color, body about an inch long, found in many parts of the United States, and so named from the sound of its note. This is produced by the friction of the taborets in the triangular overlapping portion of each wing-cover against the other, and is strengthened by the escape of air from the sacs of the body, so as to be heard on a quiet night at a quarter of a mile distance. The females are noiseless.

**Katzbach** (kát’bák), a small river of Prussia, in Silesia, passing near Liegnitz, famous for the important and decisive victory which the Prussians under Blücher gained, August 26, 1813, over the French under Macdonald.

**Kauai** (kó’i), the most northerly island of the Sandwich group, 64 miles W. N. W. of Oahu, and 590 sq. miles in area. It is of volcanic formation, its extreme altitude being 6000 feet. Its soil is in places very productive, yielding coffee, rice and sugar. Pop. 20,784.

**Kaufmann** (kouf’man), MARIE ANGELICA, a distinguished painter, born at Coire, Switzerland, in 1741; died at Rome in 1807. She received instruction in drawing and painting from her father, himself a painter, and before the age of twenty she had become famous. The study of the Italian masters perfected her style, and while at Venice she was induced to go to London (in 1765), where she had a very successful career. Sir Joshua Reynolds is said to have been in love with her, but she married a Swedish adventurer calling himself Count Horn, from whom she afterwards obtained a divorce. In 1781 she married a Venetian landscape painter named Zucchi, returned the following year to Italy, and finally settled in Rome. She had been in the habit of painting figures, her faces are tender and elevating, her grouping and draping excellent, but her design often lacks energy and firmness, while her coloring is rather too brilliant. She was one of the original members of the Royal Academy.

**Kaukauna** (ká-ká’na), a city of Outagamie County, Wisconsin, on the Fox River, 7 miles N. E. of Appleton. There are paper and pulp mills, machine shops, etc. Pop. 5951.

**Kaulbach** (koul’bák), WILHELM VON, one of the greatest of modern German painters, born at Arolsen, Waldeck, in 1806; died at Munich of cholera in 1874. He studied at the art academy of Düsseldorf under Cornelius, whom he assisted in the execution of the frescoes of the Glyptothek or gallery at Munich, and subsequently succeeded in the Munich Academy. The desire of King Ludwig of Bavaria to make Munich the center of German art afforded free scope for his genius, and he was long engaged in the decoration of the Hofgarten, the Odeon, the palaces of Maximilian and Ludwig, and the new Pinacothek, for which he did the series of designs of contemporary groups of artists, architects, etc., executed in fresco on the exterior. His most ambitious pictures, with the exception of the *Madhouse* (1828), are to be found in a series (utilized in the decoration of the Berlin Museum) seeking to depict the progress of the human race in typical scenes from the great historic periods, and comprising the *Tower of Babel*, *Age of Homer*, *De-struction of Jerusalem*, *Battle of the Huns and Romans*, *The Crusades* and *The Reformation* (1834-83). Besides these, however, he left a large number of portraits, designs and illustrations of books, including the *Reineke Fuchs*, the Gospels, and the works of Shakespeare, Goethe and Schiller. As a colorist he was of inferior rank, his main strength lying in form and composition. In choice and handling of themes he showed the width of range of a mind of very high order, essaying with exceptional success all styles of his art from Michael Angelo to Hogarth; but the artistic value of his work is often lessened by a tendency to symbolism and allegory, and a too obvious straining after an idea. He belongs in the class or stands in the transition from the idealism of Cornelius to the more realistic schools of modern historical painters.
Kauri Pine (kō'ri), (D. a m ā r a
Austrālis), a tree peculiar to New Zealand, and found there
only at the northern extremity of the North Island. It reaches the height of
150 feet, and its timber is much valued for building purposes, for making furni-
ture, etc., but unfortunately the supply is not likely to hold out long. The resin
of this tree, the kauri gum, forms a valuable export, and is used in making fine
varnish, etc. Most of it is obtained in a fossil state, by digging.

Kava. See Ava'ava.

Kavanagh (kəvənā́), Julia, a Brit-
ish novelist, born at Thurles (Tipperary) in 1824; died at
Nice, in 1877. She was educated and lived much in Paris.

Daism Burns are some of her best novels, while Women in France of the Eighteenth
Century is an excellent biographical work.

Kaveri. See Cavery.

Kaye (kä), Sir John William, an
English writer, born in 1814; died in 1876. He was educated at Eton and Addiscombe Military College, served
as an officer in India until 1841, entered the civil service of the East India
Company in London in 1856, and became a secretary at the India office in the following
year. He was a shrewd observer, and made good use of his Indian, military and
official experience in the production of many historical and biographical
works, chief among which are his Histories of Afghanistan, of the East India
Company and of the Sepoy War.

Kazan (ka-zăn'), a city of European
Russia, capital of the gov. of the
Volga, strongly fortified, with large wool-com-
bing, weaving and dyeing establishments, tanneries and soapworks, and a govern-
ment dockyard in its vicinity. The timber,
flour and hemp fairs of Kazan are
of the largest in the Russian Empire.

The university is a great seat for oriental
learning, with nearly 1000 students. Pop.
188,100.—The government is surrounded
by the governments of Vyata, Orenburg,
Nijn-Novgorod and Simbirsk; area, 246,
600; pop. 2,504,400. It is well watered
by the Volga, the Kama, the Sura, the
Vyata, the Kasanka; the climate is tem-
perate; agriculture, cattle-raising and
fishing are the chief occupations.

Kazanlik (ka-san-līk), a town of
Eastern Roumelia, at the
foot of the Balkans. It is noted for its
manufacture of attar of roses. The val-
ley of the river Quinja, near by, is a vast
garden of roses. Pop. 10,765.

Kazvin (kāz’vĕn), a town of Persia,
prov. Irak-Ajemi, 90 miles
northwest of Teheran. It has been greatly
devastated by earthquakes, but has still
a considerable trade. Pop. about 50,000.

Kee (kē), a genus of parrots (Nas-
tor) of New Zealand, of which only three species are known. N. nota-
bulis, formerly a vegetable and insect
eater, began to feed on offal after the introduction of sheep, and later developed
the habit of attacking live sheep, worry-
ing weak ones to death, after which they
devour the kidney fat.

Kean (kēn), Charles John, actor,
son of the celebrated Edmund
Kean, born at Waterford in 1811; died at London in 1868. He was educated at
Eton, but being thrown on his own re-
sources in 1827 he took to the stage, and made his debut at Drury Lane as
Young Norval. In 1830 he visited America, established his reputation, and reap-
peared as a leading actor in London in
1838, among his parts being Hamlet and
Richard III. He married the accom-
plished actress Ellen Tree in 1842, re-
visited the United States in 1845, and in
1851 became sole lessee of the Princess
Theater, London, where he put some of
Shakespeare's plays on the stage with a splendor never before attempted.
In 1863 he made a tour of Australia, Cal-
ifornia, Jamaica, the United States, Can-
da, etc., which proved a great financial
success. On his return he continued to
play in London and the provinces until a short time before his death. He inher-
ited little of his father's genius, and his
success was largely due to effective
staging.

Kean, Edmudu, the most brilliant
tragic actor of his age, born at
London in 1787 or 1789; died at Rich-
mond, in 1833. His parents were poor
and connected in a low capacity with the
theatrical profession. At two years of
age he was placed in a pantomime, at
seven he went to school, but ran away,
and for a short time he was a cabin boy
in a vessel. Returning to the boards, he
ultimately obtained an engagement at one
of the minor London theaters. But not
yet thirteen years of age he managed to
please his country audiences as Hamlet,
Cato, etc., and in Windsor he gained the
applause of the royal family in Richard
III. In 1814 he appeared at Drury Lane
as Shylock and Richard III. His suc-
cess was sudden and unexampled, and
was equally great in other parts, includ-
ing Othello, Hamlet, Macbeth, Iago,
Lear, etc.
Kearney (kär'ni), a city, county seat of Buffalo Co., Nebraska, 196 miles w. pf Omaha. It has water power and various manufactures; and grain, sugar-beet and stock-raising interests. Home of Kearney State Normal School (1200 students). Pop. 7702.

Kearny, a residential town of Hudson Co., New Jersey, on Passaic River, a suburb of Newark, with manufactures of chemicals, linoleum, metal goods, etc. Pop. (1910) 18,659; (1920) 26,724.

Kearny, PHILIP, soldier, was born at New York City in 1815. In 1839 he served in the French army with distinguishing gallantry, as also through the Mexican war; afterward participating in the war in Italy in 1859. In the Civil War his daring courage manifested itself. He was killed in the engagement at Chantilly, September 1, 1862. Kearny, STEPHEN WATTS, an uncle of the preceding, was born at Newark, New Jersey, in 1794; died in 1848. Entering the army as lieutenant in 1812, he distinguished himself at Queenstown. In 1846, during the Mexican war, he led an army to New Mexico and conquered that province. In 1847 he was for a time governor of California.

Kearsarge (kér'sárj), the name of two mountains, of New Hampshire, one in Carroll County, 3250 feet high, the other in Merrimack County, 2950 feet high. The name was given to one of the warships of the Civil war, the only one that took part on the Union side in an ocean battle, its opponent being the Confederate privateer Alabama. The fight took place on the coast of Cherbourg, France, June 10, 1864, and ended in the sinking of the Alabama, its officers and crew being rescued. The Kearsarge was wrecked on a reef in the Caribbean Sea in 1864, and its name was transferred to a steel-clad battleship of the United States navy, launched in 1898. This is the only American battleship which does not bear the name of one of the States.

Keats (kêts), JOHN, an English poet, was the son of a lively-stable proprietor, and was born at London in 1795; died at Rome in 1821. In 1803-09 he was at a school at Enfield, after which he was apprenticed to a surgeon. This profession was congenial, and he got his indentures canceled, but continued his medical training at Guy’s Hospital till about 1817. He now devoted himself entirely to literature, having as friends or acquaintances Leigh Hunt, Shelley, and other distinguished authors. His first volume of poems came out in 1817. Endymion, a Poetic Romance, appeared in 1818; his last volume of poetry, containing Lamia, Isabella, The Eve of St. Agnes, Hyperion, and other poems in 1820. By this time he had become so ill of consumption (which had also afflicted his mother) that he was advised to seek a warmer climate; but it was too late, and though he reached Rome he only survived a short time. Shelley honored his memory by his elegy Adonais. Keats charms by his love of nature, his keen, sensuous perception, and his sweet harmony; but his beautiful thoughts are often hidden by wild fancies, while errors of taste and faults of diction abound in his poetry. But his later works are free of many of the faults of the earlier productions, and place him in the front rank of the poets of his age.

Kebla. See Kaaba.

Keble (ké’bl), JOHN, an English divine and poet, born in 1792; died in 1866. He gained his bachelor’s degree at Oxford University, 1810, where he became afterwards public examiner and professor of poetry. In 1836 he obtained the living of Hursley, near Winchester, which he held until his death. As a zealous high churchman he was associated with Newman and Pusey in getting up the famous Tracts for the Times (1833). His reputation is chiefly due to his well-known volume of hymns, The Christian Year. He also wrote Lyra Innocentium, a series of poems on children, Sermons, etc. Keble College, Oxford, was established in honor of his memory.

Kecskemét (keh’sk-em’et), one of the largest market towns of Hungary, 50 miles southeast of Budapest. It has an extensive trade in horses and cattle, and much-frequented fairs. Pop. (1910) 66,834.

Kedge (kéj), a small anchor used to keep a ship steady and clear from her bower anchor, while she rides in a harbor or river, also in removing her from one part of a harbor to another. See Anchor.

Keel (kêl), the bottom timber in a wooden vessel which forms the main support and connection of the whole fabric. It is generally composed of several thick pieces of timber placed lengthways, scarfed and bolted together. A piece bolted to the bottom of the keel is called the false keel, and an internal piece, also bolted to the keel, is called the keelson. In iron vessels the arrangement of parts is altogether different.

Keelhauling, a mode of punishment in the British navy in the seventeenth and eighteenth centuries.
Keeling Islands (kē'ling), or Cocos Islands, a small group of coral islands in the Indian Ocean, south of Sumatra, discovered by William Keeling in 1800, belonging to Britain, and since 1885 a dependency of the Straits Settlements; area about 9 square miles, pop. about 500, partly consisting of members of a family of the name of Ross, who manage all the affairs of the islands, but chiefly of Malays born on the islands, and a smaller number of imported Java coolies. The islands form a sort of horseshoe, enclosing a lagoon. They are all thickly planted with coconuts, which form the principal product. Rice is the chief import. The sea teems with fish, which are largely caught. Poultry, sheep, and rabbits have been introduced.

Keen, William W., an eminent surgeon, born at Philadelphia, Pennsylvania, in 1837. He was graduated at Jefferson Medical College, was assistant surgeon to a Massachusetts regiment in 1861, and afterwards acting assistant surgeon in the U. S. army. His studies were devoted to the surgery of the nervous system and he was a pioneer in cerebellar surgery. In 1891 he proposed relieving spasmodic wryneck by the excision of the nerves concerned. He also experimented in the injection of opiated air to determine rupture of the bladder.

Keene, Laura, actress, born in Eng- land in 1830, came to the United States in 1852, and made this country her home until her death in 1873. She became popular as an actress and manager, being manager of the Varieties Theater in New York and afterwards of the Olympic Theater, also as 'Laura Keene's Theater.' Here Our American Cousin was first produced. It was during the production of this play at Ford's Theater, Washington, that President Lincoln was assassinated. Mrs. Keene, one of the actors, being among the first to reach his side.

Keene, county seat of Cheshire Co., New Hampshire, 43 miles s.w. of Concord, on 3 branches of the Boston & Maine R. R. It has railroad shops and 35 other industries of a greatly diversified nature. It is in the heart of a lake and mountainous region. Pop. (1920) 11,210.

Keep (kēp), in castles of the old type, a kind of strong tower, to which the besieged retreated and made their last efforts of defense.

Keeper of the Great Seal, in England, so called because the sovereign's great seal is delivered into his custody. See Chancellor. The Keeper of the Privy Seal is an official through whose hands pass all charters signed by the king, before they come to the great seal.

Keewatin. See Keewatin.

Kehl (kāl), a town of Baden, at the confluence of the Kinzig and Schulter with the Rhine, opposite Strasbourg, once an important fortress, but its fortifications have been dismantled. Pop. 4000.

Keighley (kē'la), or Keithley (kēth'la), a municipal borough of England, West Riding of York; the headquarters of the worsted spinning trade. There are also several paper and corn mills, machine and tool factories. Pop. 43,487.

Kei River (kā), great, in Southeast Africa, formerly the boundary between British Kaffraria and Kaffraria Proper, rises with its branches, the Black and White Kei, in the Stormbergen Mountains, and flows southeast into the Indian Ocean.

Keiskama (kēs-ka'ma), a river in South Africa, formerly the boundary between Cape Colony and British Kaffraria.

Keith (kēth), a town of Scotland, partly in Banff, partly in Elginshire, on the Isla, 15 miles s. e. of Elgin. It has flour-mills, some spinning and weaving of wool, and other industries. Pop. 4153.

Keith (kēth), James, a distinguished soldier, born in Scotland in 1696; died in the battle of Hochkirch in 1758. He was the son of William Keith, earl-mariscal of the kingdom, and when 19 fought in the battle of Sheriffmuir for the Pretender. Outlawed and his property confiscated, he fled to France, saw military duty in Spain and Russia, and in 1747 transferred his services to Prussia, where he became field marshal and confidential adviser of Frederick the Great. In 1749 he was governor of Berlin. He was esteemed by Frederick, who made him his companion.

Kelat (ke-lat'), or Khelat', a town of Beluchistan, capital of the territories of the Khan of Kelat, occupies the side of a hill at a height of nearly 7000 feet above the sea. It is surrounded by a mud wall flanked with bastions, and the streets are narrow and filthy. The manufactures consist chiefly
of muskets and sword cutlery; and there is a small trade with Sind, Bombay and Cudahar. Kelat was stormed by the British in 1839, recaptured by insurgents from a weak garrison of Sepoys, and again taken by the British. Pop. estimated at 12,000.

Keller, Gottfried, a Swiss novelist, born in 1819; died in 1890. The success of a volume of poems was followed in 1834 with the publication of the novel, Der grüne Heinrich. His collected works appeared in eleven volumes, 1889-1904.

Keller, Helen Adams, an American author, born at Tuscumbia, Alabama in 1880. After an attack of scarlet fever at the age of two she lost the senses of sight, hearing and smell. She was instructed by Miss Anne M. Sullivan; studied at the Perkins Institution, Boston, at the Horace Mann School, New York, and under Miss Sarah Fuller at the Wright Humason School. She was graduated from Radcliffe College in 1904 and is the most remarkable success ever attained in the education of a deaf mute. Her published works include The Story of My Life (1902), and The World I Live In (1908).

Kellermann (kel'er-mon), François Christophe, Duke of Orléans, marshal and peer of France, born in 1735; died in 1820. In 1792 he received the command of the army of the Moselle, and sustained the cannonade of Valmy, which caused the allies to retreat. In the following wars Kellermann received various commands, and Napoleon loaded him with honors. After the restoration of the Bourbons he was appointed a member of the chamber of peers.

Kellogg (kel'og), Clara Louise, born at Sumterville, South Carolina, in 1842, appeared in opera in New York in 1861, and afterwards sang with great success in the principal cities of Europe and America. For years she conducted an English opera company of her own. In 1887 she married Carl Strakosch and retired. Died, May 12, 1916.

Kells (kels; originally Kentis), a town of Ireland, County Meath, picturesquely situated on a small hill near the Blackwater, 36 miles northwest of Dublin. It is a very ancient town, and contains many interesting antiquities.

Kelp, in commerce, the crude alkaline substance obtained by burning sea-weeds, chiefly of the species Fucus serratus, F. vesiculosus, F. nodosus, Laminaria bulbosa, L. digitata. The sea-weed is gathered during the summer, dried on the shore, then stacked under shelter for some weeks until it becomes covered with a white, saline efflorescence, when it is ready for burning, which is effected in a round, brick-lined pit, or oblong kiln. As the weed softens, it is well stirred with a heated iron until it becomes a semifluid mass; it is then cooled and broken into pieces ready for the market. When salt was dear, the bulk of soda used in soapmaking was obtained from kelp and barilla, and the kelp manufacture was a source of large profit in Ireland, Scotland and the Hebrides; but since soda can be manufactured from salt much cheaper, it has ceased to be a flourishing industry. Kelp is now chiefly used for the production of iodine and chloride of potassium; a ton of kelp yields about 8 lbs. of iodine.

Kelso (kel'so), a Scottish town, Roxburghshire, situated at the confluence of the Teviot and Tweed, on the left bank of the latter, 38 miles S. E. of Edinburgh. In the outskirts of the town are the magnificent ruins of Kelso Abbey, founded and endowed by David I in 1128. It is in the form of a Latin cross, and is a fine specimen of the Norman style of architecture. In the immediate vicinity is Floors Castle, the seat of the ducal family of Roxburgh. Pop. 4065.

Kelts. See Celts.

Kelung (kel'ung'), a town and seaport of Japan, in the northern part of the island of Formosa. Coal fields are worked by the Chinese in the neighborhood, and large quantities of coal are exported. There is also an extensive export trade in rice, sugar and camphor. Pop. about 5000.

Kelvin, Lord. See Thompson, Sir William.

Kemble (kim'bel), Charles, an English actor, born in 1775; died in 1854, a younger brother of John Philip Kemble. He was educated at Douay (France), returned to England 1792, obtained a situation in the post-office, but relinquished it in favor of the stage in 1794, when he made his first appearance at Drury Lane. His success was largely due to his representations of such characters as Edgar, Romeo, Charles Surface, Antony, etc.; and to his fine voice, handsome face and figure. He was appointed censor of plays in 1810, when he retired from the stage, and only gave occasional Shakespearean readings. He had married the favorite actress Miss de Camp in 1806, by whom he was the father of John Mitchell Kemble, Frances Anne Kemble and Adelaide Kemble.
Kemble, Frances ANNE, popularly known as Fanny Kemble, writer and actress, eldest daughter of Charles Kemble, and niece of Mrs. Siddons, was born at London in 1811. Her father being in financial difficulties, she was induced to appear on the stage, which she did in 1829 at Covent Garden as Juliet, and her success was so great that in the course of three years she managed to relieve the fallen fortunes of the family. Her trip to America in company with her father was also a splendid triumph, and while there she contracted an unfortunate marriage (1834), which was annulled by divorce 15 years afterwards. She retired for many years to Lenox (Mass.), where she was busy with her pen. She returned in 1847, and from that time she resided alternately in America, England, and the Continent, appearing at intervals as a public reader. Of her most successful writings are the tragedy Francis I (in which she herself acted the part of Louis of Savoy): Journal of a Residence in the United States; Journal of a Residence on a Georgia Plantation; Records of a Girlhood; Records of Later Life; and her Notes on some of Shakespeare’s plays. As an actress she excelled in the characters of Portia, Beatrice, Lady Macbeth, Lady Teazle and of Julia in the Hunchback. She died in 1893. Her sister Adelaide, born in 1820, greatly distinguished herself on the operatic stage, but retired on her marriage in 1843.

Kemble, John MITCHELL, an eminent Anglo-Saxon scholar, son of Charles Kemble, born in 1807; died in 1857. He was graduated at Cambridge, and, having taken up the study of Anglo-Saxon, spent a considerable time in studying the ancient MSS. in the libraries there. He edited Buowulf and other Anglo-Saxon works, including an incomplete edition of the Anglo-Saxon Gospels, and a collection of all the known charters of the Anglo-Saxon period, under the title of Codex Diplomaticus Evii Saxonici. Perhaps his most valuable work is the Saxons in England (London, 1849, 2 vols.). For a number of years he edited the British and Foreign Review, and later was censor of plays.

Kemble, John PHILIP, one of the eminent tragedians of the British stage, eldest son of Roger Kemble (manager of a provincial theatrical company), was born at Preston in 1757; died at Lausanne in 1823. Being intended for the church, he was sent to the Roman Catholic college of Douay (France), where he distinguished himself by his fine eloquence; but, in spite of his parents’ opposition, he selected the stage as a profession, made his first appearance at Drury Lane in 1783, and became at once popular. He was afterwards manager of this theater in 1788-1802. From 1801 to 1803 he made a most successful tour in France and Spain, and on his return to London purchased a share in the Covent Garden Theater, and made himself a splendid reputation in the characters of Julius Caesar, Hamlet, Macbeth, Coriolanus, etc. His theater having been burned down, he opened the new edifice in 1809 with an increase of prices, which, together with certain other obnoxious arrangements, created for a series of nights the notable disturbances known by the name of the O. P. (old price) riots. He abandoned the stage in 1817, and received many tokens of esteem from his numerous admirers on that occasion. His statue was placed in Westminster Abbey in 1833. His acting was distinguished for dignity, precision and studious preparation, but was wanting in fire and pathos. His sister, Sarah, was the celebrated Mrs. Siddons.

Kempen (kem'pen), a manufacturing town in Rhenish Prussia, 20 miles N. W. of Düsseldorf, celebrated as the birthplace of Thomas à Kempis (1380). Pop. 6319. There is another town of the same name in the Prussian province of Posen. Pop. 5787.

Kempis, Thomas A. See Thomas à Kempis.

Kemten (kem'ten), a fortified Bavarian town on the Iller, which is here navigable, 65 miles s. w. of Munich. It has large cotton mills, woolen and linen factories, and much frequented fairs. Pop. 20,683.

Ken, Thomas, an English prelate of great learning and moral worth, born in 1637; died in 1711. After studying at Oxford he became successively chaplain to the Princess of Orange, to the Earl of Dartmouth, and in 1684 to Charles II, who made him Bishop of Bath and Wells. In 1688 he was sent to the tower for resisting the dispensing power claimed by James II, and yet some months later he refused to take the oath of allegiance to William of Orange, and was dispossessed of his see; but Queen Anne granted him a pension. His sermons and moral treatises have long been forgotten, but his morning and evening hymns are still cherished in many a household.

Kendal (ken'ddal), or Kirkby-Kendal, an English manufacturing town, County Westmoreland, agreeably situated on the Kent. The Flemings settled here in 1337 and the town became famous for its woollens and ‘Kendal-
Kendallville

Kendallville, a city of Noble Co., Indiana, 27 miles N. of Fort Wayne. It has iron works, lumber mills, glove factories, brick and tile plants, flour mills, etc. Pop. (1910) 14,136; (1920) 5273.

Kenuilworth (ken'il-worth), a town in Warwickshire, England. Kenilworth Castle, the scene of Scott's Kenilworth, now an ivy-covered ruin, was founded in the reign of Henry I.

Kenmore, a suburb of Akron, Ohio, in Summit Co. Pop. (1910) 1561; (1920) 12,883.

Kennebec (ken-e-bek'), a river of Maine, rises in Moosehead Lake, and after a course of 150 miles, mostly E. S. E., empties itself into the Atlantic 12 miles below Bath. It is navigable for ships as far as Bath and for steamers to Hallowell, 40 miles.

Kennedy, a Presbyterian, statesman, man and author, was born at Baltimore, Maryland, in 1795; died in 1870. He served in the war of 1812, was elected in 1820 to the Maryland legislature, and was subsequently three times elected to the United States House of Representatives, where he actively supported the Whig policies. In 1852 he was made Secretary of the Navy. He published several popular novels, the best known being Swallow Barn and Horse-Shoe Robinson, also a Life of William Wirt and other works.

Kensett, John Frederick, landscape painter, born in Cheshire, Connecticut, in 1815; died in 1872. He studied in London and Rome, among his best works being Sunset in the Adiron-dacks, Franconia Mountains and Hudson River from Fort Putnam.

Kenne (ken'e), or KENNEH, a town of Upper Egypt, on the right bank of the Nile, well known for its pottery manufacture.

Kennicott (ken-i-kot'), Benjamin, an English divine, professor of theology at Oxford, born in 1718; died at Oxford in 1783. He is best known by his edition of the Hebrew text of the Bible, the finest edition extant.

Kenora, a town, a province of Ontario, Canada. Pop. (1911) 6158.

Kenosha (ke-no'sha), county seat of Kenosha County, Wisconsin, on Lake Michigan, 51 miles north of Chicago, on the Chicago and Northwestern Railroad. It has a good harbor, a large shipping business, extensive fisheries, and manufactures of brass goods, automobiles, leather, beds and springs, underwear, etc. Pop. (1910) 21,371; (1920) 40,472.

Kenrick (ken'rik), Francis Patrick, Catholic archbishop, was born in Dublin, Ireland, in 1797. In 1830 he was nominated coadjutor Bishop of Philadelphia. In 1831 he was translated to the see of Baltimore. He was a profound Hebrew scholar, and was considered the ablest theologian the Roman Catholic Church has produced in the United States. His theological works have been largely used. He died in 1863.—His brother, Peter Richard, born in 1806; died in 1806; became bishop of St. Louis in 1843 and archbishop in 1847.

Kensington (ken-sing-ton), a western and fashionable suburb of London, it contains the famous Kensington Palace, around which are the beautiful Kensington Gardens. Also the South Kensington Museum, Natural History Museum, etc. Pop. 176,623. Also the name of a great carpet manufacturing section of Philadelphia, Pennsylvania, in the northeastern part of the city, of note as the site of Penn Treaty Park, the place where William Penn made a treaty with the Indians in 1682.

Kensington Museum, or South Kensington Museum, a museum in London, originated by Prince Albert in 1852. It is a red brick and terra-cotta structure in the Renaissance style, and was first opened in 1857. It contains probably the most beautiful and generally interesting collection in Europe, comprising objects of industrial art, both ancient and modern, products and materials used in manufactures, building, engineering, etc.; reproductions of ancient sculpture and architecture, modern paintings in oil and water-color, and sculpture by British artists, besides occasional loan collections. South Kensington Museum is under the direction of the Council of Education and receives large government grants. It forms the center of industrial art education in Great Britain, and a school of science and cookery is also connected with it.

Kent, a maritime county of England, forming the southeast extremity of the kingdom; area, 1170 square miles, nearly all arable, most of the seaside area. Off the east coast lies the well-known Goodwin Sands, between which and the mainland is the roadstead called the Downs. The county is traversed from east to west by the North Downs, a range of chalk hills rising to 550 feet, and terminating in lofty chalk cliffs at Dover, Folkestone, and Hythe. The district south of this range, or between it and
Sussex, is called the Weald, and was anciently an immense forest. Its southeastern portion comprises Romney Marsh. The chief river is the Medway, which enters the estuary of the Thames. The soil is generally fertile, and agriculture is in a most advanced state. Kent is the principal hop county, but large crops of wheat, barley, beans and peas are also raised, and the cultivation of fruit, flowers, and vegetables is carried on extensively. London offering a near and ready market for this kind of produce. Kent has justly been termed the 'Garden of England.' Its chief manufactures are paper, chemicals, and gunpowder, and there are also some calico-printing and bleaching works. The county town is Maidstone. Pop. (1911) 1,019,870.

Kent, JAMES, an eminent American jurist, born in 1747; died in 1847. He was educated at Yale College, studied law, and was admitted an attorney in 1765. After practicing at Poughkeepsie he settled in New York, and became professor of law at Columbia College (1794-98). He was successively appointed master in chancery, recorder, judge of the Supreme Court, chief justice (1804-14), and chancellor of New York (1814-23). He a second time accepted the law professorship at Columbia College in 1824-25. His Commentaries on American Law (1826-30) at once became a standard work, while his decisions were quoted in the courts as of the highest authority.

Kent, WILLIAM (1685-1748), the founder of modern landscape gardening; born in Yorkshire, England. He was also a painter.

Kent, a village of Portage Co., Ohio, 10 miles N.E. of Akron. The State Normal College is here. It has manufactories of locks, rubber, flour, etc., also railroad machine shops. There is water power. Pop. (1920) 7070.

Kenton, SIMON (1755-1836), an American pioneer and soldier, born in Virginia. With Boone and Clark he served in the frontier wars and was captured and tortured by the Indians. He escaped and served in Wayne's campaign and in the War of 1812.

Kenton, a city, county seat of Hardin Co., Ohio, 59 miles N.W. of Columbus. It has a fine court house and armory. Its manufactories include electrical machines, machine tools, hardware, toys, signs, candy, etc. Pop. (1900) 7600.

Kentucky (ken-tuk'i), a South Central State of the American Union, in the Mississippi Valley, bounded N. by Ohio and Indiana, N. w. by Illinois, w. by Missouri, s. by Tennessee, and E. by Virginia and West Virginia; area, 40,598 square miles. The surface of the State is gently undulating, excepting the southeast, which is somewhat mountainous. Few States are better provided with water communication. The Ohio forms the boundary on the north, and receives from within the State numerous tributaries, of which the most important are the Cumberland, Kentucky and Tennessee: the Mississippi, after receiving the Ohio, forms the boundary on the west. The climate is salubrious, the soil fertile, the principal crops being wheat, Indian corn and tobacco; but oats, barley, hemp and fruit are extensively raised, and stock breeding is another important feature, the Kentucky cattle and horses especially being celebrated. Not less important is the breeding of mules, of which many thousands are yearly exported, and of swine and sheep. The wool product is large and of fine quality. The 'blue-grass' region furnishes admirable pasture. Coal and iron ores of various descriptions abound in many parts of the State, Kentucky having iron ores of great richness and extensive coal beds, though this mineral wealth has not been largely exploited. Limestone occupies a large area, and in this formation is the famous Mammoth Cave, one of the world's wonders. The chief manufacturing industries comprise tobacco and cigars, cotton and woolen factories, ironworks and tanneries. The central position of the State, and the abundant water and railway communication, have secured it a rapid commercial development. Kentucky originally formed part of Virginia, but was separated from it in 1790, and admitted into the Union in 1792. The collegiate institutions include the State University, at Lexington; Berea College, University of Louisville, Georgetown College, etc. Frankfort is the capital; Louisville the largest city. Pop. (1900) 214,174; (1910) 228,905.

Kentucky River, a river of the United States, rises in the Cumberland Mountains, traverses the State of Kentucky, and after a course of 260 miles flows into the Ohio at Carrollton. By a series of improvements the lower portion has been rendered continuously navigable for steamers.

Kenyon College (ken'yün), an educational institution founded at Gambier, Ohio, in 1824, by Philerand Chase, a bishop of the Protestant Episcopal Church. It has an endowment of about $600,000.

Keokuk (kē-o-kuk), a city and one of the capitals of Lee Coun-
Kepler, a North American Indian, (1780-1848), chief of the Sacs and Foxes, born on Rock River, Ill. He was by birth a Sac, and by his bravery and ability became chief of the united nations of the Sacs and Foxes. Black Hawk (q. v.) whom he succeeded as chief, joined the British in the war of 1812 and repudiated the treaty giving up to the United States certain lands east of the Mississippi. In 1833 Keokuk, who had supplanted Black Hawk as chief of the Sacs and Foxes, moved with his tribe across the Mississippi and a new treaty was signed in 1832, Keokuk being officially recognized as chief. He visited New York, Boston and other cities. In 1848, in Kansas, he was poisoned by one of the Black Hawks, which tribe had a feud with his own band.

Kepler (kè'pèr), Johann, a great German mathematician and astronomer, born in 1571, near Weil (Württemberg) ; died at Ratisbon in 1630. He studied at the University of Tübingen, and in 1593 he was appointed a teacher of mathematics at Gratz (Styria). Here he devoted himself with much ardor to the study of astronomy; but in 1599 the religious persecutions commenced in Styria, and Kepler, being a Protestant, gladly accepted Tycho Brahe's invitation to Prague, to assist in the preparation of the new astronomical tables, called the Rudolphine Tables. Tycho died in 1601, and Kepler continued the work alone, being appointed imperial mathematician and astronomer. After twenty-five years' incessant labor the tables were published in 1627 at Ulm. Kepler had become the happy possessor of all Tycho's papers, and the mass of observations made by that astronomer during twenty years, with a precision till then unsurpassed, enabled Kepler to establish his three laws (see next article). Kepler enjoyed the patronage of the Emperors Rodolph and Ferdinand, the Dukes of Württemberg and Wallenstein, but his life was a continued struggle, and his domestic relations were equally unfortunate. The latter part of his life was chiefly passed at Linz as professor of mathematics. He wrote much, but the work that has rendered him immortal is his *Astronomia Nova*, seu *Physica Coelestis tradita Commentario de Motibus Stella Maris* (= New Astronomy, or Celestial Physics delivered in Commentaries on the Motions of Mars; Prague, 1609, folio).

Kepler's Laws, in astronomy, three laws discovered by Kepler (see preceding article) on which were founded Newton's discoveries as well as the whole modern theory of the planets:—1. Every planet describes an ellipse, the sun occupying its focus. 2. The radius vector (line joining the center of the sun with the center of the planet) of each planet sweeps over equal areas in equal times. 3. The squares of the periodic times (the periods of complete revolution round the sun) of two planets are proportional to the cubes of their mean distances from the sun. These laws enabled Newton to determine the law of the attraction of gravitation.

Keppel (kè'pel), Augustus, a British admiral, born in 1725; died in 1786; was the second son of the Earl of Albermarle. He entered the sea service at an early age, and accompanied Admiral Anson round the world (1740-45).

Kerensky, Alexander, a Russian lawyer and statesman, born at Simbirsk, near Tashin, Siberia, 1880. He was minister of justice in the cabinet of Prince Lvoff, formed after the Czar's abdication in 1917. He became Minister of War and succeeded Lvoff as Prime Minister. He proclaimed Russia a republic and set about the reorganization of the army. He was a Socialist, but of the moderate type. His policies were not radical enough to suit the Maximalists (see Bolsheviks), who took forcible control of the government, and Kerensky was compelled to flee from the capital in disguise.

Keratin (kèr'a-tìn; Gr. kerás, a horn), a substance obtained from claws, feathers, hair, horn, nails, wool, and other epidermal appendages.

Kerbelä, or Meshhed-Hassein, a town of an Asiatic Turkey, vilayet of Bagdad, about 60 miles s. w. from Bagdad and 20 miles w. of the Euphrates. It is a very ancient city and holy to Mohammedans, especially to the Shites, who make pilgrimages there in thousands, creating a brisk trade. Some of these pilgrims carry the bones of relatives for burial there, and the fees exacted form an important revenue. Pop. est. at 65,000.
Kerguelen's Land, K E R G U E L E N  I S L A N D
(kerglen), an uninhabited mountainous island lying in the Indian Ocean about midway between the Cape of Good Hope and Australia, discovered by the French navigator Kerguelen in 1772. Its outline is very irregular, the island being much cut up by fjords and inlets; greatest length, 204 miles; greatest breadth, 79; highest summit over 6000 feet. The scenery is picturesque and often magnificent; glaciers and snow fields occupy a considerable area. The climate is wet and stormy, the temperature never very high nor very low. The fauna and flora are somewhat limited. The former includes the fur seal, sea elephant and numerous penguins, petrels, the albatross, etc.; the latter is most abundant in mosses and lichens, but the most peculiar form is the Kerguelen cabbage (Pringlea antarctica), a perennial cruciferous plant. Trees are wanting. The island is only occasionally visited by whalers and sealers. Cook visited it in 1777, Ross in 1840, the Challenger expedition in 1874, and in 1874-75 parties from Britain, Germany, and the United States were stationed here to observe the transit of Venus.

Kerkuk (ker'kuk'), officially called S H A R Z U L , a town of Asiatic Turkey, vilyet of Bagdad, about 140 miles N. of Bagdad, and the residence of the pasha. There are a number of petroleum and naphtha springs in its neighborhood, and it has considerable trade. Pop. chiefly Kurds and Jews, about 15,000.

Kermadec Islands (ker-mad'ek), since 1840 a British dependency under the jurisdiction of a New Zealand magistrate, but formally annexed in August, 1857. They consist of four principal islands, surrounded by a number of small islets and rocks. The most northerly and the largest is Sunday Island, 674 miles north-east of Auckland, area 7200 acres. They are of volcanic origin, and earthquakes and other disturbances have taken place in recent years. The surface is mostly rugged, but tracts occur not too steep for cultivation, with a rich soil. The highest peak is 1723 feet above sea-level. Vegetation is luxuriant, the flora being similar to that of Northern New Zealand; fish and birds are plentiful. There is no good harbor. The first settlers were two Englishmen married to Samoan girls, who landed on Sunday Island in 1837, but left in 1848. Others have been there for shorter periods, and a family from Samoa took possession in 1878.

Kermân (ker'mân'), K I R M Â N, or Sîrân, a town in Persia, capital of a province of the same name. It has numerous mosques, baths, caravanserais, and a well-furnished bazaar. Its manufactures consist of silks, shawls, woolens, etc. Pop. estimated at 45,000 to 70,000. The province of Kerman, in the southeast of Persia, has an area of 50,000 square miles and a pop. estimated at 600,000. In the east and south the soil is very fertile, the date, the grape, and the silkworm being largely cultivated.

Kermanshah (ker'mân-shâ'), or K I R M â N S H A H Â N , a town in Persia, province of Ardilân. The manufactures consist chiefly of carpets or rugs; the trade, chiefly transit by the routes from Bagdad, Shusser and Isphahan, is very considerable. Pop. about 30,000.

Kermes (ker'mez), the dried female insects of the species Coccus ilicis, found in many parts of Asia and South Europe on the leaves of a species of oak shrub (Quercus coccifera), and supplying a durable red and scarlet dye. They have been utilized for dyeing purposes in the East from very ancient times, and in Germany and Spain since the middle ages; but since the introduction of cochineal their use has been confined to the Eastern countries and Spain, where the collection of these insects still gives employment to a large number of people.

Kermes Mineral, amorphous antimony trisulphide, a brown-red powder used in the preparation of artists' colors.

Kerosene (ker-o'sên), an illuminating oil obtained by refining crude petroleum. The bulk of kerosene is supplied by the United States and Russia. America controlled the kerosene market for many years, but Baku, on the Caspian, has now become a formidable rival, not only driving American kerosene out of the Russian market, but also supplying it in some other countries. See Petroleum.

Kerowlee. See Karauli.

Kerry (ker'ri), a maritime county of Ireland, on the southwest coast, in the province of Munster; area, 1852 square miles, of which about one-tenth is under tillage. Great part of it is mountainous, Carran Tual, the highest peak in Ireland, attaining a height of 3414 feet above sea-level; other parts are very fertile, producing excellent pasture and good crops of oats, barley and potatoes, but agriculture is much neglected.
Kersey

The climate is mild and moist. The coast is much indented by bays and inlets (Dingle Bay, Kenmare River, etc.); the interior presents much fine scenery, including the picturesque lakes of Killarney. Iron ore, copper and lead exist, and a superior kind of slate and flagstone is obtained in great quantities in the island of Valentia. The chief exports are oats and dairy produce. Principal towns, Tralee and Killarney. Pop. 165,726. It has fallen off greatly during the last half century.

Kersey (ker'zi), a strong coarse woolen cloth, generally ribbed, and formerly largely manufactured in Germany, France and the North of England, for making riding and hunting suits, but now chiefly used in liveries for the parts exposed to extra strain and wear.

Kerseymere (ker'si-mér), or CASIMERE (from the town Cashmere), the name given to a light fabric woven from the finest wool, principally in the west of England, and at Elbeuf, France. It is chiefly used for ladies' jackets and gentlemen's gaiters.

Kartch, or KERCH (ancient Pantica-pam), a fortified seaport town of Russia, in the Crimean peninsula, on the Strait of Yenikale, connecting the Sea of Azof with the Black Sea. The modern town is of quite recent existence; it is well built, advantageously situated for commerce, and has a rapidly growing trade. Pop. 28,000.

Kesho. See Hanoi.

Kestrel (kes'trel), or WINDHOWER (Falco tinnunculus), a species of the falcon tribe, widely distributed in Europe. It is remarkable for its habit of remaining suspended in the air by means of rapid wing motion, being at this time on the lookout for mice, which are its chief food. At times it will also eat small birds, and insects frequently. It varies from 12 to 15 inches in length; it nests in trees, also in old towers and buildings, and often utilizes an old crow's nest. In winter it migrates to North Africa and India.

Keswick (kes'ik), a town of England, in the county of Cumberland, 22 miles southwest of Carlisle, finely situated on the Greta, near Lake Derwentwater. Coarse woolens are manufactured, but the inhabitants depend chiefly upon trade with the visitors to the romantic scenery in the neighborhood. Pop. (1911) 4403.

Ketch (kech), a two-masted vessel of the galliot type, usually from 100 to 250 tons burden. Ketches were formerly often used as yachts, also as bomb-vessels.

Ketcho. See Hanoi.

Ketchup (kech'up), or CATSUP, said to be derived from the Japanese kitajp, a pungent sauce first introduced from the East, and employed as a seasoning for gravies, meat and fish. It was formerly prepared from mushrooms only, but numerous other products are now used for the same purpose. The best ketchup is obtained from mushrooms, walnuts and tomatoes; instructions for its preparation may be found in almost every cookery book.

Kettering (ke'ter-ing), a market town of England, in the county of Northampton. Boot and shoe making is the staple trade, besides which tanning, currying, and the manufacture of agricultural implements are carried on. Kettering is the center of the ironstone district of the county, and daily sends thousands of tons of ore into Wales, Derbyshire and Yorkshire, besides having several smelting furnaces in the neighborhood. Pop. (1911) 29,976.

Kettle-drum. See Drum.

Kew (kū), a small village in the county of Surrey, England, situated on the right bank of the Thames, 1½ miles from Richmond. The royal botanic gardens and the connected pleasure-grounds (belonging to the nation), the former covering about 75 acres, the latter 250, are the chief attraction of visitors to Kew. They contain the finest collection of plants in the world, and are open to the public on Sundays as well as week days. Connected with the gardens is a museum and a herbarium, including some fine collections of preserved plants.

Kewanee (ke-wa'nē), a city of Henry Co., Illinois, 50 miles n. w. of Peoria, on C., B. & Q. R. R. It has manufactures of boilers, radiators, cotton gloves, valves, pumps, etc. Pop. (1910) 9307; (1920) 16,026.
Kewatin (kə-watˈɪn), or Kewatin, a large Canadian territory under the jurisdiction of Manitoba, and stretching from Manitoba and Ontario to Hudson Bay, and northward to the Arctic Seas. The country is not much opened as yet; it is mostly densely wooded, and in many parts swampy, but rich in minerals and game. Area about 470,000 square miles. Pop. about 9000.

Kew-Kiang (kē’-iān) or Ku-Keang (kú-kī’-əng), a town and seaport of China, province Kiangsu, on the south bank of the Yang-tse-kiang. Its situation is not favorable for an extensive commercial port, but derives importance from its connection with the green-tea districts. Pop. over 60,000.

Key (ké), Ellen, prominent Swedish educator and author, born in 1850. She is known to the American public chiefly through her education, a work which she proclaimed anew the dignity of woman's work and the inadequacy of present methods of education. Other books of hers published in English translations are Love and Marriage and The Woman Movement.

Key, Francis Scott, poet, was born in Maryland Aug. 8, 1796; died in 1843. He studied law and practised at Frederick, Maryland, and in the District of Columbia for several terms. Detained against his will, he was a British man-of-war when the attack was made on Fort McHenry, September 13, 1814. From this came the inspiration to the favorite American national song, The Star Spangled Banner.

Keys, or Keynote, in music, the principal or fundamental note or tone, to which the whole of a movement has a certain relation. See Music.

Kielder, the name given to islets and sunken rocks, from Spanish cayo (an islet rock). It is especially applied to the group of small islands south of Florida.

Keyser (kī’sər), county seat of Mineral Co., W. Va., on Potomac River. It is a summer resort and has some manufactures. Pop. 6003.

Key West, a city, county seat of Monroe Co., Florida, on Key West Island, or Bone Reef, a small, low-lying coral island south of Florida, 60 miles s. w. of Cape Sable, and commanding the entrance to the Florida Passage and the Gulf of Mexico. It is a port of entry and military station of the United States and has a safe and accessible harbor defended by a fort. It has extensive docks, repair yards, marine railway, etc., and its mild climate has made it a popular health and winter resort. Cigars are very largely manufactured. There are sponge factories, and an enormous fishing industry. The Key West Extension of the Florida-East Coast Railway was opened to the Island City in 1912. Pop. (1920) 18,749.

Kharkoff (här-kōff), or Charkov, a government of the south of Russia; area, 21,035 square miles; pop. 2,507,277. The country is open, the climate mild, the soil usually fertile, and agriculture is the chief pursuit of its inhabitants. The capital, Kharkoff, situated at the confluence of the Kharkoff and Lopan, has a considerable trade in cattle, grain, etc., and manufactures beet-sugar, soap, candles and leather. A bed of coal of immense extent in its vicinity is doing much to foster industries. The University of Kharkoff is an important educational center. Pop. (1911) 241,000.

Khargh (här’jah), El, a town in Upper Egypt, about 100 miles s. of Girgeh, the capital of the oasis of the same name, and an important station for caravans on the way to Darfur and Central Africa. It contains numerous ruins, and an acropolis of great interest. Pop. 5000 to 6000.

Khurpur (khir-pōr), or Khayerpur. See Khyerpur.

Khaki (kā’ki), the name given to the yellowish, earth-colored uniform now worn by United States soldiers, chosen for its inconspicuousness. Its name comes from a dye used to color the uniform of Indian soldiers and sepoys.

Khamgaon (khām-gā’ən), a town of India, in Akola district, Berar, with a trade in cotton, grain and opium. Pop. 18,341.

Khan (kān), a title given by Tartars, Persians and other Eastern nations to princes, chieftains, commanders and governors, but now generally reserved for governors of cities and provinces, these provinces being called khanates. Khan is also another term for caravansary, of which there are two kinds: one for pilgrims and travelers with gratuitous entry; another, more commodious and with locked apartments, for traders, subject to a nominal charge.

Khandesh (kān-dāsh’), a district of British India, in Bombay Presidency, forming the most northerly portion of the Deccan tableland, and intersected by the Tapti River; area, 9944 square miles; pop. 1,460,000.

Khandwa (kund’wā), a flourishing town of India, Central Provinces. Pop. 19,401.

Khanpur (kān’pōr), a commercial town of India, in the Punjab, on a navigable canal. Pop. 7189.

Khosro, or Khosrow, name of a Persian hero.
Kharpur (kahr'pur), a town of Turkish Armenia, 60 miles n. of Diarbekir, on the route to Siwas, picturesquely situated on a rocky eminence in a plain watered by the Euphrates. It is noted for its castle and other ruins. Pop. 20,000 to 30,000.

Khartoum (kahr-toom'), a town in the Eastern Soudan, on the left bank of the Blue Nile, near its junction with the White Nile. It has sprung up since 1830, and is the capital of and largest town in the Egyptian Soudan, and the emporium of a large trade, ivory, gums, ostrich feathers, sennas, etc., being exchanged for European goods, and slaves also formerly dealt in. It was the scene of Gordon's heroic defense against the insurgent Soudanese, and of his death in January, 1885. (See Gordon.) It was reduced to ruins by the Dervishes, who in 1885 built the town of Omdurman on the other side of the Nile, but was retaken and restored in 1898. Pop. 69,349.

Khasi and Jaintia Hills, an administrative district of Assam; area, 6157 square miles. In these hills occurs the heaviest rainfall in the world. The Khasis are a peculiar race, speaking a monosyllabic agglutinative language that has no analogy elsewhere in India.

Khat (khat). See Catha.

Khatmandu (khát-mán-dú'), capital of the Kingdom of Nepal, in Northern India, on the left bank of the Baghmati, on an elevated plateau, 150 miles north by west of Patna, with which it is connected by an important trade route. It is well built, and has many picturesque temples and pagodas. Pop. about 50,000.

Khayyam, Omar. See Omar.

Khédive (ke-dev'), a word signifying lord, the title of the rulers of Egypt, originally granted by a firman from the sultan in 1806 to Ismail Pasha, then Vah or viceroy of Egypt.

Kherson (ker'són), or Cherson, a maritime government of Southern Russia; area, 27,523 square miles; pop. 3,257,600. Almost the whole surface is one uninterrupted steppe, covered with long grass, and in many parts strongly impregnated with salt peter. It is watered by the Dnieper, the Dniester, and the Bug. Agriculture is in a defective state, but considerable attention is paid to the cultivation of vegetables and fruit. The bulk of the trade is carried on by its port of Odessa.—Kherson, the capital, an extensive town on the right bank of the Dnieper, about 15 miles above its estuary, was formerly a very important town; but its trade is rapidly declining, being absorbed by Odessa, and Nicolschef, with its growing dockyards, 40 miles distant. Tallow melting, ropemaking, and wool washing are still extensively carried on. Kherson is the resting place of Howard, the philanthropist, and has a monument in its vicinity erected to his memory by the late Emperor Alexander. Pop. (1912) 91,858.

Khiva (kē'va), or Chiya, a semi-independent khanate of Central Asia, forming part of Turkestan. It formerly occupied a large extent of surface on both sides of the Amu-Darya or Oxus, but since the cession to Russia, in 1873, of its territory on the east of the Amu, it is now confined to the west side of this river. It is of a triangular shape, one of its three sides forming with the Amu forms one—being about 300 miles in length. One of its angles rests on the Sea of Aral. A great part of the surface consists of deserts, thinly inhabited or uninhabited; but along the Amu the land is rich alluvial loam of the greatest natural fertility. Assisted by irrigation it yields luxuriant crops of grain, cotton, madder, fruit, including the vine and vegetables. The winter is neither severe nor prolonged, but the summer is very hot. Manufactures are lacking in importance. Trade is now being rapidly developed by Russian influence, especially by their Transcaspian Railway from the Caspian to Samarkand. The total population is about 800,000. The capital, Khiva, lies on an alluvial flat at the junction of two canals, 50 miles west of the left bank of the Amu. It forms an irregular circuit of about 4 miles, and is enclosed by a dry ditch and an earthen wall about 20 feet in height and thickness, and entered by twelve gates, the masonry of which is of brick. Among the principal buildings are two palaces of the khan, a number of mosques, and the castles of the principal state officers. Pop. about 10,000.

Khoi (koi), a town of Persia, province of Azerbaijan, 65 miles n. w. of Tabriz. Pop. about 35,000.

Khojend, or Khojent (kō-jent'), a town in Russian Turkestan, but formerly in the Khanate of Khokand on the Bokhara frontier. It stands on elevated ground, and has been fortified by the Russians. It was formerly of much commercial importance, but trade has declined in recent years; a considerable trade in Russian goods is still carried on. Pop. (1912) 33,977.

Khokand, or KOKAND (kō-kand'), formerly an independent khanate of Central Asia, but since 1876
Khorasan

forming the province of FERGANA in Russian Turkestan. Its present area is 29,050 square miles, generally mountainous. It is traversed from east to west by the Sir, which receives all its drainage. The summer is excessively hot, the winter cold, but dry. Cattle raising is the chief source of wealth, but heavy crops of grain and fruit are also produced. The manufactures consist chiefly of silk and cotton goods. The capital, KHOKAND, is situated on both sides of the Sir. It manufactures silk and cotton fabrics, and is the center of a large trade, ranking next in importance and size to Tashkent and Bokhara. Pop. 113,704.

Khorasan, bordering on Afghanistan; area, 140,000 square miles; pop. 860,000. Much of the surface consists of deserts, but there are also fertile districts producing crops of cotton, hemp, and medicinal herbs. The most valuable mineral is the turquoise from the ancient mines of Nishapur. The principal manufactures are silk and woolen stuffs, carpets, muskets and sword-blades. About two-thirds of the inhabitants are Persians proper; the remainder are chiefly Turcomans and Kurds.

Khosru I. See Chosroes I.

Khotin (kō'tin), or CHOCZIM, a fortified town of Russia, province Bessarabia, on the Dniester near the Austrian frontier. It figured much in the wars of the Poles, Austrians, Turks, and Russians. Pop. 18,126.

Khurja (kūr'ja), a town of India, N.W. Provinces, with a fine Jain temple and other good buildings, and a flourishing trade, especially in cotton. Pop. 29,277.

Khushâb (kūsh-āb), a town of India, in the Punjab, on the river Jhelum. Pop. 10,000.

Khužistan (ku-zis-tān'), or ARABIAN PROVINCIAL TURKESTAN, province of Persia, bounded on the south by the Persian Gulf, and on the west by Asiatic Turkey; area, 38,600 square miles, watered by the Karun and other streams; pop. estimated at half a million. In the south there are some extremely fertile plains, producing crops of rice, cotton, tobacco, indigo, silk and grain. The interior and north are mountainous, and flocks and herds maintain their inhabitants. Trade is chiefly carried on with Bagdad and Bussorah. Dieful and Shuster are the chief towns.

Khyber (kēbŏr), or Khairan, a famous pass in the northeast corner of Afghanistan, the chief gate to that country from Peshawur, by means of which India has been invaded from time to time, and the scene of severe conflicts in the recent Afghan war. Its position renders it of the greatest importance to British India, and it is now fortified and under the jurisdiction of the next governor of the Punjab. It is 33 miles long, and enclosed by cliffs from 600 to 1000 feet high.

Khyerpur, or KYRPUR (kēr-pūr'), a town of Sindh, 15 miles east of the Indus and 150 miles n. of Hyderabad. Pop. (1901) 14,014.

Khyrabad (kēr-rā-bād'), a town of India, in Oudh, with numerous mosques and Hindu temples, and large fairs. Pop. 14,217.

Kiahka (ki-na'tā), a town of Siberia, in the province of Transbaikalia. It formerly monopolized the overland trade between Russia and China, and the importation of tea still forms its chief commerce. Pop. (including Ust-Kiahtka and Troitskossavsk) about 20,000.

Kiang-si (kiäng-sē’), one of the central provinces of China; area, 72,176 sq. miles; pop. 22,000,000. It is profusely watered by numerous streams, and the greatest portion of the soil is highly productive, especially in rice and sugar. The province manufactures paper, cotton and silk goods, and is celebrated for its porcelain. Its capital is Nan-chang-ch’u.

Kiang-su (kiäng-sū’), the richest of the central provinces of China; area, 45,000 square miles; pop. about 21,000,000. Its products of nature and art excel those of almost any other province, while the inhabitants are of the most intelligent in the whole empire. The cities contain the finest specimens of Chinese architecture and decoration; the rice, wheat, cotton, silk and green tea produced are of the best, and the satins, cotton cloths, ink and paper manufactured are unsurpassed. The capital is Nanking; chief port, Shang-hai.

Kiao-chau (ki-ā'ō-chou), a German protectorate in Shantung, China. In January, 1898, the bay and surrounding coast (193 square miles) were leased for ninety-nine years to Germany, as compensation for the murder of two missionaries. It was surrendered to Japan Nov. 7, 1914, by the German garrison after a defense of four months. By the peace of 1919 (see Treaty) the German rights in Kiao-chau were transferred to Japan. Pop. 70,000. Kiao-chau Bay is 15 m. long and 15 m. wide.

Kibitka (ki-bit’ka), a tent of the nomad tribes of the Kirghiz Tartars. The frame consists of collapsible of folding lattice work, set up in a
wheel-shaped roof-frame, consisting also of twelve stakes, united at one extremity but free at the other, so that the stakes radiate like spokes. The whole is covered with thick cloth made of sheep’s wool, with the exception of an aperture in the center for the escape of smoke. The door is formed by the removal of a stake.

Kidd, Benjamin, an English sociologist, born in 1858. He was distinguished by his first work on Social Evolution (1894), advancing the theory that society should be interpreted in terms of biology. It was followed by The Control of the Tropics (1899), The Principles of Western Civilization (1902), and Individualism and After (1908).

Kidd, William, a celebrated pirate, known as Captain Kidd, born about the year 1645, was a privateer in the seventeenth century, and originally a shipmaster of New York. In 1696 he was appointed captain of the ship Adventure Galley of thirty guns by William III, for the suppression of piracy. In America he collected some 150 recruits, sailed for the East Indies; took to pirating in the Indian Ocean, and returned with his booty to New York in 1699. He was arrested and arraigned in England for piracy; but the charge could not be brought home to him; he was then tried for the murder of one of his crew, sentenced and hanged. The myth that he buried immense treasure on the shores of Long Island Sound, and the banks of the Hudson River, gave rise to one of Edzar Allan Poe’s tales.

Kidderminster (kid’er-min-stér), a parliamentary and municipal borough and market town of England, County Worcester, on the banks of the Stour. Kidderminster is famed for the manufacture of carpets, rugs, and tapestry. Various other woollen fabrics are also made; and there are worsted mills and dye-works, iron-foundries, tinplate works, flour mills, tanneries and breweries. Pop. (1911) 24,333.

Kidnapping (kid’nap-ing), the act of getting forcible and illegal possession of any person, an offense of varied degree, but always punishable by fine or imprisonment. In its more modern and limited sense, it is applied to the obtaining of slaves or native labor by force, as practised by the Arabs in Africa. This barbarous traffic existed in very recent years in the South Seas, carried on by Europeans, but now happily suppressed by the appointment of government labor agents. In Great Britain this term was formerly also applied to the illegitimate recruiting for the army and navy. There have been various notable instances of the kidnap-

Kidneys (kid’nz), two of the abdominal viscera, in the form of two glands, the function of which is to secrete the urine from the blood. They are situated one on each side of the vertebral column at the back part of the abdominal cavity on a level with the last dorsal and two upper lumbar vertebrae. The right kidney lies at a slightly lower level than the left. They are of the well-known ‘kidney-bean’ shape. The concave side of each kidney is turned inwards and towards the spine. The depression on the inner side is termed the hilum, and from this notch the excretory ducts or ureters leaves, whilst the blood-vessels of the kidney enter and leave the gland at this point. The weight of each kidney of a male is about 5 oz., those of the female weigh each somewhat less. Each kidney is covered by a thin sheath of fibrous tissue, which has no extension into the substance of the organ. The internal substance is divided into an outer deeper-colored cortical portion or cortex, and an inner lighter-colored or medullary portion.

Both portions consist of tubes (tubuli uriniferi), which run a very tortuous course in the cortex, but continue as straight tubes in the medulla. The latter is formed into a series of conical fleshy masses, about twelve in number, called pyramids of Malpighi. These project into a cavity formed at the hilum by the expansion of the excretory duct, and called the pelvis of the kidney. Projections of the expanded ureter, called the calyces, invest the spines of the pyramids and dip into them like funnel-shapes. Now in the cortex the end of a tube is dilated into a sac or capsule; into this a small branch of the renal artery enters, and then breaks up into a tuft of capillary blood-vessels. This tuft is called the glomerulus, and it and its capsules form a Malpighian corpuscle, about 1/10 of an inch in diameter. So that a tube,
Kidney Vetch, beginning at its dilated end, runs a tortuous course in the cortex, reaching the medulla becomes straight, and finally opens into the pelvis on the apex of a pyramid. The blood-vessels of the kidney consist of the renal artery, derived from the aorta, and the renal vein. The branches of the artery enter the gland at the hilum, and pass into the substance of the gland between the papillae. Finally they reach the cortical portion, and therein subdivide into the minute vessels, which form the glomeruli of the Malpighian bodies. The renal veins leave the kidney also at the hilum, and pour their contents into the great main vein of the lower parts of the body (cava inferior). The nervous supply of the kidney is derived from the renal plexus, and from the solar plexus or large sympathetic mass of the abdomen. The separation from the blood of the constituents of the urine is accomplished in the glomeruli, and by the uniferent tubules, the former straining off the watery parts of the blood, whilst the latter remove the more solid matters. Gradually, the secreted urine passes through the tubules, into the pelvis of the kidney, thence into the ureters, which in turn open into the bladder behind its orifice or neck. The urine is constantly entering the bladder drop by drop.

Inflammation of the kidneys is known as nephritis. Occasionally concretions of mineral substances accumulate in the kidney, and cause, in their passage from the gland and through the ureter, most excruciating pain. The most dangerous disease of the kidneys is that known as Bright's disease (which see).

Kidney Vetch, Anthyllis, a genus of plants, nat. order Leguminosae. There are many species both shrubby and herbaceous. The variety found in Great Britain, chiefly on very dry soils, is the Anthyllis vulneraria, commonly called Lady's Fingers, with pinnate, unequal leaves, and heads of flowers generally yellow, sometimes graduating towards scarlet.

Kidia. See Aivali.

Kieft (kēft), WILLIAM (?-1647), Dutch colonial administrator; director-general of New Netherlands (q.v.), 1637-47 (see Dutch West India). He was incompetent, tyrannical, and brutal in his treatment of the Indians. Peter Stuyvesant (q.v.) succeeded him.

Kiel (kēl), a town of Prussia, in Schleswig-Holstein, beautifully situated on a deep bay of the Baltic, 54 miles north by east from Hamburg. The most notable buildings are the university and university library. Prior to the European war, Kiel rose rapidly in importance, owing to the fact that it was the principal station of the greater part of the imperial fleet. It is the eastern terminus of the

Kieserite, (kēz'er-it), MgSO\(_4\)·H\(_2\)O, a sulphate of magnesia obtained at Stassfurt and elsewhere, and

Kiel Canal, connecting the Baltic and North Seas. The original Baltic and North Sea Canal was completed in 1895. It was 61.3 miles long and 190 feet wide. Improvements completed in 1914 increased the width to 140 feet and the depth to 36 feet, enabling the passage of the largest warships. By the peace of 1919 (see Treaty), the canal was opened to free passage of war and merchant ships of all nations.

Kielce, (kyl'tsē), a city of Poland about 100 miles south of Warsaw. It is an ancient town and contains a Bishop's palace, with a notable series of portraits of the bishops of Kielce dating back to 1292. Its industries include the manufacture of paint, cement, sugar, etc. Prior to the European war (1914-18) it was the capital of a department in Russian Poland and was the scene of many battles during the war. By the peace of Versailles (1919) it became part of reconstructed Poland. Pop. 32,581.
Kiev

employed as a source of Epsom salt and in the manufacture of manures. Mixed with quicklime and water it hardens into a mass which, after heating, pulverizing, and again mixing with water, becomes of a marble-like consistency, and may be made into ornamental articles, etc.

Kiev (ki-ev') or KIEFF (ki-ef'), a government of s. w. Russia; area, 19,691 sq. miles; pop. 4,206,100. The surface is in general flat, intersected occasionally by hills of moderate elevation along the course of the Dnieper and other streams. The Dnieper is the only stream navigable to any extent. The climate is mild, the summer very hot and dry. The manufacture of beet-sugar has made rapid strides in recent years, and the province is now the largest producer of that article in the empire.—Kiev, the capital, is picturesquely situated on the right bank of the Dnieper, which is here navigable, and crossed by a suspension bridge. It is an ancient place, and has been called ‘the mother of Russian cities.’ It was the capital of the kingdom in the ninth century. Kiev really consists of three towns, all more or less strongly fortified, and is the seat of the governor-general of the provinces Kiev, Podolask and Volhynia. Its university is one of the most important of the empire. The connection by rail with Odessa and Kurak has done much to stimulate the trade of the town. Pop. (1911) 505,000.

Kiev Case, a famous Russian ‘ritual murder’ case, ending in the acquittal of Mendel Bellis, November 10, 1913. The beginning was the murder on March 25, 1911, of the boy Andrew Yushchiniski, by a gang of criminals. The body was carried to a cave in the suburbs of the city, and the mother notified that it was a case of Jewish ritual murder. The Jew-haters and pogrom inciters immediately raised the cry of vengeance. Mendel Bellis was fixed upon as the criminal, irrespective of evidence, and a case worked up. The real offenders, however, were found, and justice, though tardy, rendered.

Kilauea (ke-lou-a’), an active volcano in Hawaii, one of the Sandwich Islands. It is round, crater, 12 miles in circumference, with a lake of red and boiling lava at the bottom.

Kilda (ki’lda’), Sr., a small and rocky island in the Atlantic Ocean, belonging to Scotland, 40 miles northwest from the northwest extremity of the island of N. Uist.

Kildare (ki-där’), an inland county of Ireland, in the province of Leinster; length, 40 miles; breadth, 27 miles; area, 560 sq. miles. The surface is flat, or undulating, the soil a rich loam. Oats, potatoes, barley and turnips are raised. The chief occupations are agricultural. Principal rivers—Barrow, Liffey and Boyne. Chief towns—Naas (the county town), Athy and Newbridge. Pop. 63,596.—The town of Kildare stands on an eminence 30 miles s. w. from Dublin. Near it is the common known as the ‘Curragh of Kildare,’ 4508 acres, owned by the British government. Pop. 1576.

Killarney (ki-lär’ni), a liquid measure of 18 gallons, a term now almost exclusively used by brewers to denote a half-barrel.

Kilia (kë’li-a), a seaport of Roumania on the Kilia arm of the Danube. It is fortified, and has a good trade. Pop. 11,703.

Kilimanjaro (ki-lë-män-jär’ä, the Great Mountain), a double-peaked, snow-clad mountain of Africa, in the territory of German East Africa, about 100 miles inland from the port of Mombasa, on the Suaheli coast. The highest peak, estimated at 18,881 feet, is the highest known in the African continent.

Kilkee (ki-kë’), a bathing place on the west coast of Ireland, County Clare. Pop. 1661.

Kilkenny (ki-kë’në), a city of Ireland, in Kilkenny County, of which it is the capital, 73 miles s. w. from Dublin, delightfully situated on both sides of the Nore. The city contains several interesting ancient edifices, which give it a venerable and picturesque appearance. The manufacture of coarse woolens, brewing, and the working of Kilkenny black and foreign marbles into chimney-pieces, monuments, etc., form the chief industries of the town. Pop. 10,699.

The county, which is in the province of Leinster, has an area of 796 sq. miles. The surface is generally level. The principal rivers are the Barrow, Nore and Suir. The soil is for the most part light and dry, some valleys being extremely fertile, and dairying is carried on extensively. The chief crops are wheat, oats, barley, potatoes and turnips. Beds of fine black marble are quarried near the town of Tullamore, and in the same coal is raised chiefly for local consumption. Pop. 79,159.

Killarney (ki-lär’ni), a market town of Ireland, in the county of Kerry, in the midst of beautiful scenery, within a mile of the celebrated lakes to which it gives its name. These lakes are three in number, the largest being about 5 miles long. They are interspersed with wooded islands, and the lofty banks are also richly wooded. In summer Kil-
Killdee, a North American plover (Egretta vociferus), so called from its plaintive cry.

Killiecrankie (kil-i-kran'ki), a pass in Perthshire, Scotland, in the valley of the Garry. Here Claverhouse, Viscount Dundee, defeated the forces of Mackay, in 1689.

Killingly (kil'-ing-li), a town of Windham Co., Conn., on the Quinebaug and Five Mile rivers, 25 miles N. of Norwich. Textiles, shoes, harness, etc., are produced. Pop. (1920) 8178.

Kilmarnock (kil-mär'nek), a town of Ayrshire, Scotland, 12 miles N.E. of Ayr, and 125 miles N.W. of Glasgow. It has carpets, leather, and other factories. Among its notable features are the Burns monument and the Dick Institute. Pop. 34,729.

Kimberley, Western Australia, brought into notice by the discovery of gold-fields in 1886. It contains immense tracts of splendid pasture, and much land suitable for the cultivation of wheat, sugar, tobacco, etc. The chief port for the district is Derby, on the Fitzroy River.

Kimchi (kim'chë), DAVID, one of the most famous Jewish rabbis of the middle ages, born towards the end of the twelfth century at Narbonne; died in 1240. He wrote commentaries on almost all the books of the Old Testament, and rendered essential service to Hebrew literature by the composition of his Grammar and Dictionary of Hebrew Roots. His father Joseph and his brother Moses also distinguished themselves as Hebrew scholars and theologians.

Kimmeridge Clay (kim'-er-li), a clay, containing some carbonate and sulphate of lime, found in thick deposits in the south of England (Kimmeridge in Dorsetshire) and the north of France. It is a member of the Upper Oolite.

King. See Descent.

Kincardineshire, or The Mearns, a maritime county on the east coast of Scotland; area, 383 sq. miles. The Grampian Mountains, by which it is traversed northeast to southwest, occupy a large portion of its surface; their highest summit within the county being Buttock, 2555 feet above sea-level. The principal crops are oats, barley, wheat, turnips and potatoes. Stonehaven is the county town. Pop. 40,923.

Kindergarten (kin'-der-gar-t'n), a German word signifying 'children's garden,' and the name given to a system of infant education.
Kinemacolor

introduced by Friedrich Froebel, who was largely assisted in its propagation by the Baroness Marenholz-Billow. The system is intended to bring out the moral and intellectual capabilities of very young children chiefly by observation; pictures, toys, tools, etc., suitable for the purpose, being introduced, so as to convert schooling into play, which according to Froebel is the child’s most serious business. The first kindergarten was opened in 1840 at Blankenburg (Prussia). The system has spread widely and is very common, especially in the United States.

Kinemacolor (ki-ne-ma-kul’ér), the name applied to moving pictures in colors based upon the three-color process of color photography.

Kinematics (ki-né-mat’ikz), a branch of mathematics which treats of the motions of bodies independently of the forces which produce them.

Kinematograph. See Kinetoscope.

Kinesthesia (ki-nés-thé’si-a), the sixth or muscular sense, by which man is conscious of the motions of the body and its parts. Deficient kinesthesia, carried to an extreme, may result in feebleness of mind, lack of control, and inability to live a sane and normal life.

Kinetics (ki-nét’iks), that branch of the science of dynamics which treats of forces causing motion in bodies. See Dynamics.

Kinetograph (ki-net’o-graf), an apparatus invented by Edison for taking pictures of moving objects. See Vitascope.

Kinetophone (ki-net’o-fon), a machine synchronizing motion pictures and the phonograph, perfected by Thomas A. Edison in 1873. In taking the picture, the phonograph recorder is attached to the picture machine, and it is only left for the actors to perform in the usual way.

Kinetoscope (ki-net’o-skóp), an elaboration of a well-known toy by which a succession of snapshot portraits of objects in motion are enclosed in a cylinder with vertical slits and rapidly revolved. The retina of the eye retains each view a sufficient time to appear as one picture of objects in motion as viewed in the apparatus. The KINEMATOGRAPH is another device for the display of moving pictures, in which the pictures are thrown on a screen and are visible to an audience.

King (A.nglo-Saxon, cyning, cynig, cning), a person invested with supreme power over a state, nation, or people, whether this power be acquired by inheritance, election, or otherwise.

King, William Rufus, vice-president, born in Sampson County, North Carolina, in 1786; died in 1853. He was elected to Congress in 1810, and was senator from Alabama, 1819-40. President Tyler appointed him minister to France in 1844, he was elected president of the Senate in 1850, and vice-president of the United States in 1852.

King-bird. See Tyrannus.

King-crab (Límúlús), a peculiar genus of crabs included in the order Xiphosura (sword-tailed), of the class Crustacea. They are found on the coasts of northern and tropical America and the Antilles, in the Eastern Archipelago and Japan. The head resembles a broad horseshoe shaped shield, with two pairs of eyes upon the upper surface, the second pair being the larger and forming the true visual organs. The mouth opens on the lower surface, and around it are six pairs of limbs with spinous joints attached. The second shield somewhat hexagonal in shape covers the abdominal part, and beneath it are the gills, or branchiae, borne upon five pairs of appendages which represent the abdominal feet of the crab. The average length is about 2 feet. These crabs are destitute of swimming powers, and if placed on their backs they appear, like turtle, unable to recover their natural position. The commonest species is the Limulus polyphemus, found chiefly on the North American coasts. The upper surface of the tail, as in other species, bears numerous spines. The Limulus moluccanus, of the Moluccas, possesses a strongly serrated tail. This latter species is largely eaten.

Kingfisher (Kingfisher), the name of a family of Insectorial birds distinguished by the elongated, stoutly formed, tetragonal bill, broad at the base, and terminating in a finely acute point; tarsi short, feet strong, toes somewhat elongated. The common kingfisher (Alcedo is lipda) frequents the banks of rivers, and, perched on the bough of a tree, watches for fish. When the prey is perceived it dives into the water, secures the fish with its feet, and carries it to land, where it kills the prey, and swallows it entire. It is about 7 inches in length. This bird has been greatly celebrated in ancient poetic and legen-
KINGLAKE

dary lore, and is the subject of many superstitions. The American kingfisher (Alcedo or Ceryle alcyon) is of a bluish-slate color, with an iron-colored band on the breast, while the head bears a crest of feathers. The spotted kingfisher (Ceryle guttata) is a native of the Himalayas, where it is called the fish-tiger. A large Australian species is known as the laughing jackass (which see).

**Kinglake (kîŋˈlak), Alexander William, an English historian, born in 1811, and educated at Eton and Cambridge. He was called to the bar in 1837, but abandoned law in 1856. He first made his mark in 1844 by the publication of *Eothen*, a narrative of eastern travel. In 1857 he entered the House of Commons as a member for Bridgewater, and took an active part in opposing several important bills of that period. The first volume of his *Invasion of the Crimea* appeared in 1863, and at once established his reputation as a brilliant historian; seven volumes followed at intervals, the eighth and completing volume in 1887, and they form together a magnificent record of this war. Died in 1891.

**King of (or at) Arms, in England, an officer whose business is to direct the heralds, preside at their chapters, and have the jurisdiction of arms. There are three kings of arms in England—Garter, Clarenceux, Norroy, and an officer styled Bath King of Arms, attached to the order of the Bath. There are also Lion King at Arms for Scotland and Ulster King of Arms for Ireland.

**King of the Herrings, the popular lar name of the *Chimæra monstrosa*, or Arctic chimaera, a fish also known in certain localities by the name of 'Sea-cat.' See *Chimæra."

**Kings**, Books or, form two books in the English and one book in the Hebrew canon of the Old Testament. Besides their own unity the books of Kings are closely connected with first and second of Samuel, and, following these, form the third and fourth in what is known as the four books of the kingdom. From internal evidence it would seem that these were written by a series of contemporary authorities, with additions and glosses made by a later writer. The history, as related in the books of Kings, begins with the close of David’s reign, and carries the events onward to the capture of Jerusalem and the destruction of the temple. This embraces, according to the received chronology, a period of upwards of 400 years (B.C. 1015-688), and includes the history of both the kingdoms of Judah and Israel. This chronology, however, is unsatisfactory, and has been much disputed. In comparing these books with the Chronicles it is found that while the former describes the divided kingdom of Israel and Judah, the latter is occupied almost exclusively with Judah; and further, that the books of Kings seem to have been compiled under prophetic and the Chronicles under priestly influence.

**King’s Advocate.** See Advocate.

**King’s-clover**, an English name of the *Melilotus officinalis*; called also the Common or Yellow Melilot.

**King’s College, original name of Columbia University (which see).**

**King’s College, Canada, an institution maintained by the Anglican Church, situated at Windsor, Nova Scotia. It confers degrees in arts, science, engineering, law and theology. The Engineering School is situated in Sydney and Glace Bay, and the Law School in St. John, N. B.**

**King’s College, London, a proprietary institution incorporated in 1829, and reincorporated in 1882. It was established for the purpose of providing education in accordance with the principles of the Church of England, and gives instruction in theology, general literature, science, engineering and medicine.**

**King’s County, Ireland, province of Leinster; area, 772 sq. miles. A large portion of the N. and N.E. part is covered with the Bog of Allen, and of the S., with the Slieve Bloom Mountains. Limestone occurs in the N. w., and has been quarried. The principal produce is oats, wheat and potatoes, with no manufactures. The county town is Tullamore. Pop. 60,187.**

**King’s Evidence.** See Apposers.
King's-evil. See Scrofula.

Kingsley, Charles, an English clergyman, novelist and poet, born in 1819; died in 1875. He was educated at King's College, London, and afterwards at Magdalen College, Cambridge, where he took his degree in 1842. He was subsequently appointed curate of Eversley, in Hampshire, and published a volume of twenty-five Village Sermons, which became popular. In 1848 he published a poem, The Saints' Tragedy. This was followed in 1849 by the novel Alton Locke, in which his opinions of the social and economic questions of the time are powerfully expressed. Upon the same lines, but dealing with the subject from the agricultural side, followed his novel of Yeast in 1851. In 1853 was published Hypatia, and in 1855 Westward Ho, both brilliant historical novels, the former dealing with the early Christian church, the latter with the South American adventurers of the Elizabethan era. Among his other well-known works are Two Years Ago; Hereward, the Last of the English; Glauces and The Water Babies. He was appointed professor of modern history at Cambridge in 1859, and canon of Chester in 1869. His Letters and Memories of his Life, edited by his wife, was published in 1877.

Kingsley (k'ingz'li), Henry, novelist and brother of Charles Kingsley, was born in 1830, and died in 1876. Educated at King's College, London, and Worcester College, Oxford, he left England to become an Australian colonist in 1858. On his return he published Geoffery Hamlyn, Ravenshoe and Austin Elliott.

King's Lynn. See Lynn.

Kingsport, a city of Sullivan Co., Tennessee, 8 miles s. of the Virginia line. It has chemical and cement plants, tanneries, pulp works, hosiery mills, glass plant, etc. Pop. (1920) 5692.

Kingston (kingz'tun), a city of Ontario, Canada, founded in 1783 on former site of Fort Frontenac, halfway between Montreal and Toronto, at the junction of Lake Ontario, St. Lawrence and Rideau rivers. Has a good harbor and large shipping trade; also locomotive works, shipbuilding yards, dry docks, etc. It is an important educational and military station. Here are Queen's University, Royal Military College, Ontario Penitentiary and Rockwood Asylum. It was the capital of Canada 1841-44. Pop. 23,737.

Kingston, a borough of Luzerne Co., Pennsylvania, on the north branch of the Susquehanna, opposite Wilkes-Barre. It is in a coal-mining region, and has manufactures of hosiery, machinery, etc. Pop. 8052.

Kingston, a city, county seat of Ulster Co., New York, on the Hudson River, 88 miles north of New York City; a railroad and shipping center, and the gateway to the Catskills. Its manufactured products include cigars, shirts, metal wares, lace curtains, hardware, road machinery, boats, automobiles, cement. It came into the possession of the English in 1664, and was the first capital of New York State. It became a city in 1872. It is served by six railroads and has abundant and excellent facilities for water transportation. Pop. 26,688.

Kingston, the capital of the island of Jamaica, on the south coast, with straight and regular streets and houses, generally of brick. The principal public buildings are the English and Scotch churches, hospitals, court house, theater, penitentiary, barracks and jail. The harbor, which is 6 miles long by 2 miles wide, is separated from the sea by a narrow strip of low land, on which is situated Port Royal, and which forms an excellent anchorage for vessels of any size. It was ruined by an earthquake in 1907. Pop. 57,379.
RUDYARD KIPLING

From a recent photograph taken while he was on a speaking tour.
Kingston-on-Hull. See Hull.

Kingston-upon-Thames, a town of England, county of Surrey, on the right bank of the Thames, 12 miles from Hyde Park Corner. Its antiquity is proved by numerous Roman remains found in its vicinity, and the Saxon kings were crowned here from Edward the Elder to Ethelred II. The stone on which the kings were crowned is preserved within an iron enclosure near the marketplace. In the neighborhood are Bushy and Richmond parks, and Hampton Court Palace. It is a suburban residence place and summer resort for Londoners. Pop. 37,977.

Kingstown (kingz'town), a seaport of Ireland, on the south shore of Dublin Bay, 6 miles s. e. of Dublin. Its most interesting object is its magnificent harbor, commenced in 1819 and finished in 1859 at a cost of $4,125,000. There are two piers, enclosing an area of 250 acres, with a depth varying from 15 to 27 feet. Kingstown has regular steam communication with Liverpool and Dublin, and is visited annually by 1600 to 1800 vessels. It is much frequented for sea-bathing. Pop. 17,377.

King's-yellow, or tersulphide of arsenic.

King-vulture, the Sarcorhampus, of the inter-tropical regions of America. It is about 2 1/2 feet in length, and upwards of 5 feet across the expanded wings. The other vultures are said to stand quietly by until this, their monarch, has finished his repast.

Kingwood, a Brazilian wood believed to be derived from a leguminous tree, a species of Triptolemus, but by some referred to Bysaes. It is beautifully streaked with violet tints or white. Indian ebony and is used in turning and small cabinet-work. Called also Violet-wood.

Kinkajou (kin'ka-jou; Cercopites cuadivinalis), a plant-eating, carnivorous mammal of northern South America, allied to the bear family. In habits it is omnivorous, nocturnal and docile when captured. In shape it resembles the lemur, the legs are short, fur close and woolly, tall and long and prehensile. Being fond of honey, they make frequent forays upon the nest of bees. Kino (ké'nó, kí'nó), an astringent extract, resembling catechu, obtained from various trees. The original procured from Pterococarpus Marsupium, a handsome East Indian tree, nat. order Leguminoseae, which yields a valuable timber. Kino is the juice of the tree dried without artificial heat. African or Gambia kino is obtained from another species (P. erinaceus), a native of tropical Western Africa. Dharak-tree, or Bengal kino is the product of Butea frondosa; while Botany Bay kino is got from various species of Eucalyptus. Kino consists of tannin, gum and extractive, and is a powerful astringent.

Kinsale, Ireland, in the county and 14 miles south of Cork, near the mouth of the Bandon, which here forms a magnificent harbor. The exports consist chiefly of farm produce, and its fishery is good. Pop. 4020.

Kinston, Co., North Carolina, on Neuse River, in s. e. part of the State, on three railroads, in a cotton and tobacco region. It has six immense tobacco warehouses, also cotton and lumber mills, etc. Pop. (1920) 9771.

Kintyre. See Kanti.

Kiosk (ki-ok's), a Turkish word signifying a kind of open pavilion or summer house, generally constructed of wood, straw or other light materials, and supported by pillars. It has been introduced into other countries.

Kioto (ki'o-to), or Saiiyo, a large city of Japan, in the island of Honjo, in an extensive plain 250 miles southwest of Oyodo, connected by railway with its port, Osaka, and some 6 miles from Lake Biwa. It was formerly the special residence of the mikado, and the seat of his dairi or court, and hence the ecclesiastical capital of the empire. It is about 4 miles long and 3 miles broad, and abounds in exquisitely laid-out gardens, palaces and temples. It is the seat of a university, founded in 1857, and the center of learning, and of artistic manufactures, such as carved ivory ornaments, lacquered ware, bronze ornaments, brocaded and embroidered silks, etc. Pop. 530,153.

Kipling, RUDYARD (1865- ), an English novelist and poet, born in Bombay, India. He was educated in England, returning to India in 1882, where he began to contribute verses and stories to local periodicals. Soon his tales of the life of the British soldier in India began to find their way to England and America, and he sprang into the front rank among popular favorites. Departmental Ditties was first published in 1886 at Calcutta, and was followed by Plain Tales from the Hills and Soldiers Three. During 1888 and 1889 he wrote The Story of the Godbys. In Black and White, Under the Deodars, The Phantom Rick-
Kiptchaks (kip-chacks' or Kap-tchaks), or KAP-tchaks, the name given to a Tartar or Mongolian race. They were known as the Golden Horde, and founded a khanate in the thirteenth century, and their territory comprised the region watered by the Don, Volga and Ural.

Kiratpur (khat-poor' or khat-poo''), a town of India, Bijnor district, N.W. Provinces. Pop. 12,728.

Kirby (ki'bi), William, a distinguished English entomologist, born in Suffolk in 1759; died in 1850. He was educated at Ipswich, and at Caius College, Cambridge, and was appointed rector of Barham in 1796. Here his early love of natural history was developed, and on the establishment of the Linnean Society in 1788 he was one of its first members. In 1802 appeared his work on English bees, entitled Monographia Apum Anglica, which established for him a European reputation. A few years afterwards he formed a literary copartnership with Mr. Spence, and the result was the publication, in 1815, of the first volume of Kirby and Spence's Introduction to Entomology, of which the second volume appeared in 1817, and the third and fourth in 1826. It gives in the form of letters a familiar description of insects in all their phases as regards species, food, habits and qualities, beneficial or destructive. In 1830 Mr. Kirby was appointed to write one of the Bridge-water Treatises (which see), and he accordingly produced his Habits and Instincts of Animals with reference to Natural Theology. He wrote a description of the Arctic insects for Captain Parry's Voyage, and also for Sir John Richardson's Fauna Boreali-Americana.

Kircher (ki'rcher), Athanasius, a learned German Jesuit, born in 1602; died in 1680. He was professor of mathematics, philosophy and the oriental languages at Würzburg, but the pope called him to Rome, where he at first taught mathematics in the Collegium Romanum.

Kirchhoff (ki'r-hof), Gustav Robert, a German physicist, born in 1824. He was appointed professor of physics in the University of Heidelberg in 1854. He gave his attention to the subjects of heat, electricity and magnetism. Conjointly with Bunsen he discovered the spectroscope. He died in 1887.

Kirghiz, Kirghiz (ki'rgiz), a nomadic Mongol-Tartar race, numbering in its various branches about 3,000,000, and inhabiting the steppes that extend from the lower Volga and the Caspian Sea in the west to the Altai and Tien-Shan Mountains in the east, and from the Sea of Aral and the Sir-Daria in the south to Tobol and Irtysh on the north. The Kirghiz are a slow, sullen people, small in stature, bad walkers, but born riders. Their food is chiefly mutton and horseflesh, and their drink the nourishing fermented mare's milk called koumiss. They dwell in a yurt or semi-circular tent, the wooden framework of which is covered with cloth or felt. Agriculture is almost unknown; their possessions are in sheep, horses and camels, and their manufactures consist of cloth, felt, carpets, leather, et cetera, the priest possessing Mohammedanism. Most of the varied Kirghiz tribes are, at least nominally, under Russian government.

Kirin (ki'rin), a division or province and town of the Chinese territory of Manchuria, on the navigable Sungari River. Boats and junks are built here and it has a mint. The town, also called Kirinooal or Girin, has a pop. of 120,000. See Manchuria.

Kirkcaldy (ki-rk'al-di), known as the 'Lang Toon,' a seaport of Scotland, county of Fifeshire, on the north shore of the Firth of Forth. It consists principally of one long, irregular street, which, including suburbs, extends for about 3 miles west to east. It has numerous flax-spinning mills, linen and damask factories, sailcloth and navymilleries, roperies, machine factories, etc., and
the largest linoleum and floor-cloth works in the world. The harbor is obstructed by a sandbank at its mouth, and is dry at ebb tide. The foreign trade is with the Baltic and the north of Russia. Adam Smith, author of the Wealth of Nations, was born here. Pop. (1911) 29,810.

Kirk, John Foster, historian, born at Fredericton, New Brunswick, in 1824. He was secretary to the historian Prescott 1847-58, and wrote History of Charles the Bold. He edited a supplement to Allibone's Dictionary of Authors, and edited Lippincott's Magazine 1871-86, and was lecturer in history at the University of Pennsylvania. He died in 1904.

Kirkcudbright (kîr-kû'bri), a maritime county in the south of Scotland; area, 808 square miles. There are extensive mountainous districts; the rivers include the Dee and the Urr; and there are numerous lakes, the largest of which is Loch Ken. Granite is quarried in several districts, while lead, copper, and iron have been found. The soil and climate are most suitable for green crops, and great attention is given to the rearing of cattle for the English markets. Pop. 39,382. The county town of the same name is a port on the Dee, 25 miles southwest of Dumfries. Pop. 2363.

Kirkintilloch (kîr-kîn-tî'lôch), a burgh of Scotland, county of Dumbarton, on the Forth and Clyde canal. 6 miles by rail north by east of Glasgow. It has iron foundries, cotton factories, chemical works and coal mines. Pop. 10,680.

Kirkville (kîr'svil), a city, county seat of Adair Co., Missouri, 70 miles S.W. of Quincy, Ill. It is the seat of the American School of Osteopathy and the North Missouri State Normal School. Has foundry, flour mills, shoe factories, etc. Pop. (1920) 7213.

Kirkwall (kîr'wol), a seaport of Scotland, capital of the county of Orkney, on a bay on the east side of the island of Pomona or Mainland. Here are the old cathedral of St. Magnus (founded in 1137), the old castle of the earls of Orkney, and the ruins of the bishop's palace, in which King Hakon died. The harbor is secure and commodious. Pop. 8711.

Kirman. See Kerman.

Kirmanshah. See Kerman.

Kirman. See Kerman.

Kirmanshah. See Kerman.

Kirschwasser (kîr'shô-vâs-ér), a liqueur distilled in Germany and Switzerland from the fermented juice of the small black cherry.

Kisfaludy (kîz-fâl'o-di), ALEXANDER, a Hungarian poet, was born in 1772; died in 1844. In 1793 he entered the Austrian army as a cadet, and made campaigns in Germany and Italy. During a residence in Vienna, as a member of the royal Hungarian body-guard, he devoted himself to the translating of Tasso into Hungarian. In 1801 he left the army, and employed himself almost exclusively in agriculture and literary pursuits. His principal lyrical work, Himly Szereteme ('Hymn to My Love Songs'), gave him a first place among his native poets. He afterwards wrote the historical dramas John Hunniades and Ladislaus the Cumanian. His brother Charles, who almost equaled him in literature, died in 1830.

Kishinev (kî'she-nyef), a city of Bessarabia, on the Byk, a tributary of the Dniester. In 1812 it was annexed to Russia, became the capital of Bessarabia and grew to be a flourishing city with fine schools, churches and business houses. Massacres of Jews occurred here in 1903-05. It was annexed to Roumania in 1919. Pop. 128,700.

Kismayu (kîs-mâ'yûl), a seaport on the coast of East Africa, south of the mouth of the Juba, the administration of which was conceded by the Sultan of Zanzibar to the Imperial British East Africa Company in 1889. Pop. 6000.

Kisoriganj (kîs-o-rê-gun'z), a town of Hindustan, in Bengal, 13 miles east of the Brahmaputra. Pop. about 13,000.

Kiss, the mutual touching of the lips. With some nations, as the Germans and French, men often kiss each other after a long absence, etc. Kissing the hand of the sovereign forms part of the ceremonial of all European courts. Kissing the foot is a common oriental sign of respect, and the popes have required it as a sign of respect from the secular power since the eighth century. When this ceremony takes place the pope wears a slipper with a cross, which is kissed.

Kissingen (kîs'în'gan), a watering place of Bavaria, on the Saale, 30 miles north of Wurzburg. The springs, five in number, and all saline, contain a large quantity of carbonic acid gas, and are used both internally and as baths. Besides 20,000 visitors annually
Kistna (kist'na), or Krishna, a river of India, which rises among the Western Ghats, about 40 miles from the Malabar coast, and flows in a general easterly direction, partly along the frontier of Hyderabad and the Madras Presidency, and falls into the Bay of Bengal 200 miles north of Madras; length, including windings, 800 miles. It is almost useless for inland navigation.

Kit-Cat Club, an English club formed about 1668, of a political character.

Kitchener (kich'en-er), Horatio Herbert, Baron, an English soldier, born in 1850. He entered the army in 1871, was in civil life 1874-82, took part in the Nile expedition of 1884, and commanded a brigade in the Suakim campaign of 1888. He was governor of Suakim 1886-88, adjutant-general of the Egyptian army 1888-92, and sirdar of this army, 1890-98. Promoted major-general in 1896, he commanded the Khartoum expedition of 1898 in which he completely defeated the Arabs and recovered the Soudan for Egypt. This brought him the title of Baron Kitchener of Khartoum. He took an important part in the Boer war, was promoted lieutenant-general and field marshal, was made Earl Kitchener and became war minister in the European war in 1914, and in June, 1916, was drowned in a torpedoed vessel.

Kitchener, a city of Ontario, 60 miles w. of Toronto. It has many factories with an output of over $20,000,000. Articles manufactured include furniture, rubber goods, and various foundry products. Pop. 19,767. Formerly known as Berlin.

Kitchen-Middens (kich'en-mid'nz), the name given to shell mounds in which are embedded the refuse of prehistoric peoples, consisting of stone and horn implements, pottery, etc. These heaps are found in Denmark and along the coasts of N. and S. America.

Kite (kit), a raptoorial bird of the falcon family, differing from the true falcons in having a somewhat long forked tail, long wings, short legs and weak bill and talons. This last peculiarity renders it the least formidable of the birds of prey. The common kite, gleed, or glede (Milvus indicus, regalis, vulgaris), preys chiefly on the smaller quadrupeds, birds, young chickens, etc. It usually builds in 1907 Lifted Lieut. Selfridge 108 feet into the fork of a tree in a thick wood. The common kite of America is the Ictinia Mississippinensis.

Kite, Man-lifting. The familiar kite has for many centuries been used as a toy, its first scientific use being when Dr. Franklin employed it to bring down electricity from the clouds. Of late years, in its new form of the box or cellular kite, it has come into use in observations of the atmosphere, the conditions of which at great heights have thus been discovered. Among the well-known types are the aerocurve kite invented by C. H. Lamson. It is of cellular construction, the forward supporting surfaces are curved like the wings of a bird, while the rear cell is flat and smaller in size, forming a tail-like rudder. (See Fig. 1.) The Malay kite (Fig. 2) is a form used in the Malay Peninsula. The frame consists of two sticks crossing each other at right angles, one of which is made so elastic that it bends in the wind and forms a bow. This bow balances the kite so that it flies without a tail. In the tetrahedral kite (Fig. 3), the frame is in the form of a tetrahedron, or is built up...
Kittanning (kit-tan'ing), a borough, county seat of Armstrong Co., Pennsylvania, on Allegheny River, 44 miles by rail N. E. of Pittsburgh, in a coal, iron ore and natural gas region. It has extensive iron and steel plants, and manufactures of pottery, glass, china, lumber, typewriters, etc. Pop. (1920) 7133.

Kittiwake (kit'i-wä'k), a species of gull (Larus tridactylus), found in great abundance in all the northern parts of the world wherever the coast is high and rocky.

Kitto (kit'tō), John, was born at Plymouth, England, in 1804; died at Cannstadt, in Germany, in 1854. Losing his hearing, he engaged in literature, producing the Pictorial Bible, Cyclopaedia of Biblical Literature, etc. Engaged in missionary work at Malta and Bagdad. Pensioned by the crown.

Kittingen (kit'ing-en), a walled town of Bavaria, 10 miles east-southeast from Würzburg, partly on the right and partly on the left bank of the Main. Pop. 8489.

Kiu-kiang. See Kiu-kiang.

Kiung-chow (kē-ing'chou'), a seaport of Japan in the island of Formosa, open to foreign trade. Pop. 40,000.

Kiushiu (kyō'shyō'), one of the three principal islands of Japan, separated from Corea by the Strait of Korea, and from Hondo by the Strait of Sikoku. Its surface is mountainsous and there are a number of active volcanoes. It produces coal, copper, tobacco, etc. Nagasaki is situated here.

Kiwi-Kiwi. See Apteryx.

Kizil-Irmak (ki'zil-ir-mäk; the Turkish for 'Red River'), a river known to the ancients as the Halys, the principal river of Asia Minor. Rising in the east of the peninsula, it flows in a circuitous route for about 500 miles, and enters the Black Sea near Sinope.

Kizil-Kum (ki'zil-köm), an extensive sandy desert in Asia, to the southeast of Lake Aral, occupying a great part of the space between the Amu Daria or Oxus and the Sir-Daria, in what is now Russian territory.

Kladno (klad'nô), a town of Bohemia, 13 miles N. W. of Prague, with coal and iron mines, iron and steel works. Pop. 18,600.

Klagenfurt (klä'gen-fört), a town of Austria, capital of Carinthia, 40 miles north-northeast of Laibach, on the Glan. Among its public edifices are the cathedral, the town church, the bishop's palace, provincial house of assembly, town house, etc. The manufactures consist of woollens, leather, white lead, etc. Pop. (1911) 28,011.

Klapka (klo'p'kô), George, Hungarian general, born in 1823; educated in the artillery school in Vienna, and appointed to a command in 1847. In the Hungarian rebellion of 1848 Klapka joined the revolt as chief of the staff, and in 1849 he took command of an army corps. For the ability which he displayed he was made minister of war by Kossuth. When the Hungarians were defeated, Klapka refused to capitulate, and shut himself up in the fortress of Komorn, where he made a brilliant defense. Ultimately he surrendered under honorable conditions. He was compelled to leave the country, and so passed many of his years in exile. He wrote Memoirs of the War of Independence (1850), and The National War in Hungary and Transylvania. Died in 1892.

Klaproth (klâprôt), Julius Heinrich, a German orientalist and traveler, born in 1753; died in 1835. He traveled through Asia to the Chinese frontier, and also in the Caucasus. Having taken up his permanent residence in Paris in 1815, he was appointed professor of Asiatic languages, and retained this situation till his death. Among his numerous writings may be mentioned his Description of the Eastern Caucasus, Description of the Russian Provinces between the Caspian and the Black Seas, Catalogue of the Chinese and Manchu Books and MSS. in the Royal Library of Berlin, Asia Polyglotta and Collections of Egyptian Antiquities.

Kloattau (kla'tä'ou), a town of Bohemia, on a steep height in the beautiful and fertile valley of the Rasenbach, 73 miles S. W. of Prague. It is an ancient place, and has six times been almost burned down. Pop. 12,792.

Klausenburg (klou'zen-bürk; Hungarian Kolosszár), an Austrian town, the capital of Transylvania, on the Little Szamos. It has a noble cathedral, and the house where Corvines, Hungary's great king, was born. There are various manufactures. Pop. 42,295.

Klausenthal (klaus'tä'l), a town of Prussia, in Hanover, 48 miles S. S. E. of Hanover, the principal mining town of the Hartz. Pop. 8955.

Kléber (klä-bär), Jean Baptiste, a French general, born at Strasbourg in 1754, and assassinated in Cairo by a Mohammedan fanatic in 1800. He was one of the ablest of the revolutionary generals, accompanied Napoleon to
Klephs Egypt and was left by him as commander-in-chief of the French forces.

Klephs (klef'ts), properly robbers, the name formerly given to those Greeks who kept themselves free from the Turkish yoke in the mountains, and carried on a perpetual war against the oppressors of their country.

Kleptomania (klep'to-mā'ni-ā; I steal), a supposed species of insanity manifesting itself in a desire to pilfer. In admitting the plea of kleptomania great caution is needed. The best way to arrive at a judgment is to consider the previous character and personal interests of the person charged; to determine the value and usefulness of the article appropriated; the methods of the appropriation and its probable motive. Thus when a baronet steals a ducat from a gentleman he is an ordinary lawbreaker; when a clergyman purloins innumerable cheap Bibles, the ordinary motives for theft are inapplicable, and when the article is taken ostentatiously there is then a strong case in favor of kleptomania.

Klondike (klo'n'dīk), the region drained by the Klondike River, Canada, in the Arctic Zone. In shape it represents an inverted triangle, the lower point jutting into Alaska. The temperature resembles that of Alaska, but the atmosphere is much drier than the western portion. The summer lasts only from July until the middle of October; during this season the hills are clothed with verdures and trees of spruce, cottonwood, pine, etc., are numerous. The levels are carpeted with a luxuriant growth of Arctic moss. In winter the streams and soil become solidly frozen, being seldom thawed, except the upper strata, even in summer. Under these adverse conditions it brings forth an exquisite flora: the Linnaea, violets, cornel and other wild flowers. Wheat, barley, oats, rye and many vegetables are successfully raised. Mosquitoes, midges and flies infest the country during summer. Alaska and British Columbia have long been known to contain rich deposits of gold. In 1896 gold was discovered in abundance along the Klondike River, and since then this region has yielded profusely, the amount taken being valued at many millions of dollars. It has been estimated that from twelve to twenty millions of dollars have been taken annually from the mines. The severe frosts make the working of the auriferous gravel exceedingly difficult, as it must first be thawed by artificial heat; and water, the great desideratum of the placer-miner, is, from the same cause, very meager in supply. Dawson is the only town in the district, and is the distributing point for the mining region.

Klootz, AnaCharias. See Cloutz.

Klostock (klopt'ok), FRIEDRICH GOTTLIEB, a celebrated German poet, was born in 1724; died in 1803. He studied theology, and commenced in solitude the first canto of his sacred epic, The Messiah. The three first cantos of this grand and interesting work appeared in 1748, and excited universal attention.

Knapp (nap), MARTIN AUGUSTINE, justice, was born at Suffield, New York, in 1843. Admitted to the New York bar in 1869, he was corporation counsel at Syracuse 1877-83, and was appointed on the Interstate Commerce Commission in 1891, becoming its chairman in 1893-1901, was appointed presiding justice of the Court of Commerce, created by Congress in that year.

Knapsack (nap'sak), a bag of leather or strong cloth for carrying a soldier's necessaries, and closely strapped to the back between the shoulders.

Knapweed (nap'wéd), the popular name given to some species of Centaurea. C. nigra, black knapweed; and C. scabiosa, greater knapweed, are common weeds, being rough, hardy, herbaceous plants growing by waysides, etc.

Knabesborough (nər'əs'bər-o), a town of England, county of York (West Riding), on the left bank of the Nidd. 17 miles west by north of York. The environs of the town abound with objects of interest, including the ruins of the castle, founded in 1170; the dropping well possessed of powerful petrifying properties; and several curious excavations. Pop. 5315.

Knaus (knōs), Ludwig, a German painter, born in 1829. He studied at Düsseldorf under Karl Sohn and Schadow, but struck out a path for himself, painting subjects from everyday rustic life. In 1852-60 he lived mostly in Paris, and painted the chief pictures of his first period, The Golden Wedding, The Baptism and The Setting-out for the Dance. In 1861-66 he resided in Berlin, and from 1866 to 1874 he lived in Düsseldorf, and to this period belong some of the pictures on which his fame as a genre painter is most securely founded: The Children's Feast, The Funeral, The Goose-Girl, Brothers and Sisters, etc. In 1874 he received an appointment in the Art Academy of Berlin.

Knee (nē), or Knee-Joint, that joint in the lower limbs of man which
corresponds to the elbow in the upper, and is formed by the articulation of the femur or thigh-bone with the tibia, or large bone of the leg. The lower end of the femur terminates in two oblong rounded masses, called the condyles of the femur, which rest in two cavities in the upper part of the tibia; inserted between the two bones are the semilunar cartilages, which diminish the pressure of the femur on the tibia, and prevent the

praised by Dryden, Pope, Addison and Steele, but his works have more value historically than as works of art.

**Knighthood**

*Knight* (n.t.), in feudal times, a man admitted to a certain military rank, with special ceremonies. See Chivalry. In modern usage one who holds a certain dignity conferred by the sovereign of Great Britain, and entitled the possessor to have the title of *Sir* prefixed to his Christian name, but not hereditarily, like the dignity of baronet. The wives of knights have the legal designation *Dame* for which *Lady* is usually substituted. See Knighthood, Orders of.

**Knight**, CHARLES, English editor and publisher, born in 1791; died in 1873. He succeeded his father as a bookseller in Windsor, and for a number of years he edited a Windsor newspaper. Having removed to London in 1823 he commenced *Knight's Quarterly Magazine*, which contained the earliest contributions to literature of Macaulay, Proud and others. In 1827 he undertook the superintendence of the publications of the Useful Knowledge Society, for which he did a great deal of valuable work, superintending and publishing the *Library of Entertaining Knowledge*, the *Penny Magazine* and the *Penny Cyclopaedia*, afterwards remodeled as the *English Cyclopaedia*, etc. Among the many works edited by him the edition of Shakespeare is the most esteemed. His *Half Hours with the Best Authors* is very popular. The most important of his own writings, the *Popular History of England*, occupied him seven years, 1854-61. An autobiography, *Passages of a Working Life During Half a Century*, appeared in 1863-66.

**Knighthood**, Orders of, the name given to organized and duly constituted bodies of knights. The orders of knighthood are of two classes—either they are associations or fraternities, possessing property and rights of their own as independent bodies, or they are merely honorary associations established by sovereigns within their respective dominions. To the former class belonged the three celebrated religious orders founded during the Crusades—Templars, Hospitallers and Teutonic Knights. The other class, consisting of orders merely titular, embraces most of the existing European orders, such as the order of the Golden Fleece, the order of the Holy Ghost, the order of St. Michael. The British orders are the order of the Garter, the Thistle, St. Patrick, the Bath, St. Michael and St. George, the Star of India, and the order of the Indian Empire. The various orders have each their

**Human Knee-Joints.**

Knight Service

appropriate insignia, which generally include a badge or jewel, a collar, a ribbon of a certain color, and a star.

Knight Service, the original and most honorable species of feudal land tenure. The holder of a knight's fee, the extent of which is now doubtful, was bound to render military service to his lord for forty days in every year if required.

Knights of Columbus, an American benevolent society, founded in 1882, of Roman Catholic membership. The society did similar service to that of the Y. M. C. A. during the European war, and by March, 1918, had raised a war fund of nearly three and a quarter million dollars to support the welfare work which the society conducted among the troops.

Knights of Honor, a fraternal benevolent society, founded in the United States in 1873; membership 22,000. Knights and Ladies of Honor, founded in 1877 in the United States, membership 90,000.

Knights of Labor, a labor organization founded at Philadelphia in 1869. Its operations were secret, but its professed object was the amelioration and protection of the laboring classes. Its membership is now much reduced, labor unions and the American Federation of Labor, etc., taking its place. See Labor Organizations.

Knights of Pythias, a fraternal society founded in the United States in 1864, to disseminate the principles of friendship, charity and benevolence, apart from sectarianism and politics. Its cardinal principles are obedience in religion, obedience to law and loyalty to government. There are three degrees, called ranks—page, esquire, knight. The endowment rank has for its object the furnishing of a reliable and economical life insurance.

Knights of St. John. (Knights of St.).

Knights of the Golden Eagle. An association founded in 1873 in the United States, for social and benevolent purposes. It has 86,000 members.

Knights of the Maccabees. An association of benevolent character, founded in 1881. It has in the United States about 300,000 members.

Knights Templars. See Templars.

Knitting, an industrial and ornamental art allied to weaving, but of much later origin. It consists in forming a series of loops with a single thread, through which another row of loops is passed, and so on successively; differing from crochet in so far as the series of loops are not thrown off and finished successively. In hand-knitting steel wires are used to form the loops on. For manufacturing purposes hand-knitting has been entirely superseded by machinery.

Knolles (nôlz), or Knowles, Richard, an English historian, born about 1543; died in 1610. He was educated at Oxford, and became master of the free school of Sandwich, in Kent. He wrote a General History of the Turks (published in 1603 and 1610), the style of which is highly commended by Johnson, Hallam and other critics, and Lives and Conquests of the Ottoman Kings and Emperors, continued to and printed in 1621.

Knot (not), a complication of a thread, cord, rope, or of two or more threads, cords, or ropes by tying, knitting, or entangling. Knots expressly made as means of fastening differ as to form, size and name according to their uses, as overhand-knot, reef-knot, half-hitch, close-hitch, timber-hitch, fisherman's-bend, carrick-bend, sheet-bend, single-wall knot, double-wall knot, etc. The term knot is also applied on shipboard to a division of the log-line which is the same fraction of a mile as half a minute is of an hour; that is, it is the hundred and twentieth part of a nautical mile; hence, the number of knots run off the reel in half a minute shows the vessel's speed per hour in miles, so that when a ship goes 8 miles an hour, she is said to go 8 knots. Hence, the word knot is also nautical mile or 6088.7 feet. Knot, a grallatorial bird of the family Scolopacidae and genus Tringa (T. candiis), closely allied to the snipe. Knotgrass, a very common weed of the genus Polygonum (P. aviculare), remarkable for its wide distribution. It is of low growth, with branched, trailing stems, and knotted joints (whence the name).

Knout (nout), a kind of whip or scourge serving as an instrument of punishment in Russia. It was formerly in use in the army, but a few strokes only are now inflicted, as a disgrace, in case of dismissal. It is still sometimes used for criminals. The nobles were exempted from the knout, but the exemption was not always observed.

Knowles (nôlz), James Sheridan, dramatist, born at Cork in 1784; died at Torquay in 1882. He took to the stage in 1798, but meeting with
indifferent success, he devoted himself to teaching, first in Belfast, and afterwards in Glasgow. His tragedy of Caius Gracchus was performed in 1815 with success, and from this time he had a prosperous career as author, actor and lecturer. About 1845 he retired from the stage. He became afterwards a Baptist preacher, and published several theological works. In 1849 he received a pension of £200 a year from the government. The following are among his principal works:—Caius Gracchus, Virginibus, William Tell, The Hunchback, The Wife of Mantua, The Love-chase, and in 1847 and 1849 he published two novels, Fortescue and George Lovel.

Knox (Nook), John, the chief promoter of the reformation in Scotland, was born at Gifford, in East Lothian, in 1505; died at Edinburgh in 1572. He was educated at the grammar school of Haddington, and at either Glasgow or St. Andrews, and Dr. John Mair or Major as his philosophical and theological teacher, but did not take the degree of master of arts. He became a secular priest about 1530, and spent about 10 years in a religious establishment in East Lothian. He became an avowed advocate of the reformed faith about 1542, and entered the family of Douglas of Longniddrie as tutor to his sons and those of the laird of Arriston. In 1546-47 he preached to the beleaguered Protestants in the castle of St. Andrews, and when it was taken by the French, Knox was sent to France with the other prisoners, and put to the galleys, from which he was released in 1549. He passed over to England, and, arriving in London, was licensed either by Cranmer or the Protector Somerset, and appointed preacher, first at Berwick, and afterwards at Newcastle. In 1551 he was appointed chaplain to Edward VI, and preached before the king at Westminster, who recommended Cranmer to give him the living of Allhallows, in London, which Knox declined, not choosing to conform to the English liturgy. It is said that he also refused a bishopric. On the accession of Mary, in 1554, he quitted England, and sought refuge at Geneva, where he had not long resided before he was invited by the English congregation of refugees at Frankfort-on-the-Main to become their minister. A dispute concerning the use of a church service sent him back to Geneva, whence after a residence of a few months, he ventured, in 1556, to pay a short visit to his native country. He again returned to Geneva, where he wrote several controversial and other works, including the First Blast of the Trumpet against the Monstrous Regimen of Women, chiefly aimed at the cruel government of Queen Mary of England, and at the attempt of the queen regent of Scotland to rule without a Parliament. A Second Blast was to have followed; but the accession of Queen Elizabeth to the throne of England, who was expected to be friendly to the Protestant cause, prevented it. In May, 1559, he returned to Scotland, and immediately joined the Lords of the Congregation. He preached at Perth on the occasion when the inflamed multitude made a general attack on the churches of the city, the altars being overturned, the pictures destroyed, the images broken, and the monasteries almost leveled to the ground. Similar vandalism took place in many other places, but these proceedings were censured by the reformed preachers and by the leaders of the party. Being appointed minister of Edinburgh, he took a prominent part in the proceedings of the Protestant leaders from this time onward, and had the principal share of the work in drawing up the Confession of Faith, which was accepted in 1560 by the parliament. In 1561 the unfortunate Mary arrived in Scotland. She immediately began the regular celebration of mass in the royal chapel, which, being much frequented, excited the zeal of Knox, who openly declared from the pulpit, ‘that one mass was more frightful to him than 10,000 armed enemies landed in any part of the realm.’ This freedom gave great offense, and the queen had long and angry conferences with him on that and other occasions. He preached with equal openness against the marriage of Mary and Darnley, giving so much offense that he was called before the council and inhibited from preaching. In the year 1567 he preached a sermon at the coronation of James VI, when Mary had been deposed and Murray appointed regent. After the death of Murray, in 1569, Knox retired for a time to St. Andrews. In 1572 he was greatly offended with a convention of ministers at Leith for permitting the titles of archbishop and bishop to remain during the king’s minority. At this time his constitution was quite broken, and he received an additional shock by the news of the massacre of St. Bartholomew. He had, however, strength enough to preach against it, but soon after took to his bed and died. He was twice married, first to Marjory Bowes in 1566, and secondly, in 1564, to Margaret Stewart, daughter of Lord Ochiltree. In addition to numerous polemical tracts, letters and sermons, Knox wrote a Historie of the Reformation of Religion.
Knox

**Knox** Philemon Chase, an American lawyer and statesman, born at Brownsville, Pennsylvania, in 1853, was admitted to the bar in 1875, and in 1876–77 was made assistant U.S. district attorney for the western district of Pennsylvania. Resigning this position he continued in law practice until 1901, when he was appointed attorney general of the United States. In 1904 he was elected U.S. senator from Pennsylvania and in 1909 became secretary of state in President Taft's cabinet.

**Knoxville** (nok's vil), a city, capital of Knox County, Tennessee, an important commercial and manufacturing center on the Tennessee River, 356 miles east of Nashville. It contains the State University, the Knox College (colored), the State D'af and Dumb School and the Medical Department of the Lincoln Memorial University. It is in a coal, iron, zinc and marble mining region and has extensive industries, including iron and zinc works, cotton and flour mills, and many other industries. There are over 200 manufacturing plants. Pop. (1910) 36,346; (1920) 77,818.

**Koala** (ko-ā'la), the native name for a marsupial animal of Australia, commonly referred to the family Phalangistide or phalangers. It somewhat resembles a small bear, hence its scientific name, Phascolarctos cinereus (Gr. phaskos, a pouch, and arktos, a bear). It is a very gentle animal and will often suffer itself to be captured without offering much resistance and manifests little concern about its captivity. It is, however, subject to unexpected gusts of passion and when it is excited by rage it assumes a very fierce look and gives vent to yells that are sharp and shrill. It has been recognized as the link between the phalangers and the kangaroos. It is nocturnal in its habits and is not easily found, even in the localities which it most affects. It is not known to exist in a wild state outside of the south-eastern regions of Australia. On account of its tree-climbing habits it is sometimes called the Australian monkey as well as Australian bear. Its fur is of fine grey. Its fore feet have five toes, two of them opposed to the other three. The peculiarity does not extend to the hind limbs. The koala lives much on trees, feeding on the leaves, and often burrowing for roots. It is known by the names of ‘native sloth’ and ‘native bear.’

**Kobé** (kō'be), a chief, trading town of Darfur, Central Africa, situated on the main caravan route. Pop. 6000.

**Kobé**, a seaport of Japan, adjoining Hiogo so closely as to form one town with it. It is of more recent origin than Hiogo, and is strictly the port opened by treaty to foreign commerce. Combined pop. 378,197.

**Kobold** (kō'bol'd), a species of elf in the popular superstition of Germany, corresponding to the English goblin, and the Scottish brownie. The kobold is connected with a house or a family, and appears in bodily shape. Though inclined to mischievous teasing, they do on the whole more good than evil to men, except when irritated. They frequent mines as well as houses, and the metal cobalt has its name from this spirit.

**Kobrin** (kō'brin), a Russian town, government of Grodno, formerly the capital of a principality of the same name. Pop. 10,355.

**Koch** (kōk), Robert, an eminent bacteriologist, born at Klausthal, Germany, in 1843. His reputation rests chiefly on his discovery of the bacterial germs of cholera and tuberculosis and his production of tuberculin, a remedy for the latter disease the efficiency of which has not been fully established. He was professor at Berlin in 1885, director of the institute for infectious diseases in 1891, and in 1896 went to South Africa to study the cattle disease. He died in 1910.

**Kock**, Charles Paul de, a French novelist, born in 1794; died in 1871. His novels dealt with scenes of low life in Paris and were long very popular.

**Kodak** (kō'dak), a form of camera adapted to take instantaneous photographs by the 'snap-shot' method. It has the shape of a small box, with a lens and shutter on one side and a reflector on top. When the operator sees the view he wishes in the reflector, he presses a button and an instantaneous negative is taken automatically.

**Ko'diak**. See Kadiak.

**Koel**. See Aligark.

**Kohat** (kō'hät'), a town of India, headquarters of district of the same name in the lieutenant-governorship of the Punjab. Pop. including...
suburbs and cantonments, 30,762. The district has an area of 2838 square miles. There are rich deposits of rock salt, some petroleum springs and sulphur mines. Pop. 217,565.

Kohelen, Kohelen. See Ecclesiastes.

Kohler (ko'ler), KAUFMANN, a German-American theologian, born at Furth, Germany, 1843; came to the United States to accept the post of rabbi of the Beth El congregation, Detroit, Mich., 1863. He was minister of the Sinai Temple, Chicago, Ill., 1870-79, and of Temple El, New York (1879-1883). In 1883 he was made honorable minister for life to enable him to accept the presidency of the Hebrew Union College, Cincinnati. He was one of the editors of the Jewish Encyclopedia. His publications include On Capital Punishment according to Jewish Law (1880), Jewish Ethics, Church and Synagogue in their Mutual Relations, Lectures on Reform Judaism (1885), and Principles of Jewish Theology upon a Historical Basis (1913).

Kothrabi (kō’thā-bi), a cultivated variety of the cabbage, distinguished by a swelling at the neck of the root, which is valuable as food.

Kokomo (kō'kō-mō), a city, county seat of Howard Co., Indiana, on Wildcat River, 54 miles N. of Indianapolis. It has numerous manufactures of glass, automobiles, steel and brass goods, stellite, chemicals, toys, skates, pottery, stoves, chisels, wire fencing, nails, trunks, rubber goods, and many other products. Pop. (1910) 17,010; (1920) 30,067.

Kokra Wood (kō'kra), the wood of Aporosa or Lepidos-tachys Roxburghii, a tree of the Spurge-wort family (Euphorbiaceae), a native of India, used for musical instruments.

Kola (kō’la), a seaport of Russia, in the government of Archangel, on the Kola, near its mouth in the Bay of Kola; the most northern town in European Russia. Pop. 600.

Kola, COLA (kō’la), a genus of plants belonging to the natural order Sterculiaceae, native of western tropical Africa. The Kola or Sterculia acuminata produces a fruit which consists of two, sometimes more, separate pods containing several seeds about the size of horse chestnuts. The seeds have been found to contain caffeine, the active principle of coffee, as also the same active principle as cocoa, with less fatty matter. A drink prepared from them is largely used in tropical Africa, and is said to have digestive, refreshing and invigorating properties. The tree has been introduced into the West Indies and Brazil. The negroes of Jamaica are said to get rid quickly of the effects of intoxication by using the kola nut. It has been introduced into Britain, manufactured into a paste, or into tablets, and is used as a tonic, but has only an effect like that of coffee or caffeine.

Kolaba (kō-lā’ba), a British Indian district in the southern division of the Bombay Presidency, stretching along the coast southward from Bombay harbor for 75 miles; area, 1872 square miles; pop. 606,566.

Kolapoora. See Kolahpur.

Kolar (kō-lār’), a district of the native state of Mysore, Southern India; area, 3059 square miles; pop. 723,600. The chief town, also called Kolar, is situated 43 miles E. N. E. of Bangalore. Pop. 12,210.

Kolding (kōld’ing), a seaport of Denmark, east coast of Jutland, on the Koldingfjord, an inlet of the Little Belt. Pop. 12,516.

Kolahpur (kō-lā-pōr’), a native Indian state, Bombay Presidency; area, 2816 sq. miles; pop. 910,011. —KOLAPUR, the chief town, is a picturesque, thriving place, held in high esteem for the antiquity of its sacred shrines. Pop. 54,373.

Kolima. See Kolyma.

Kollin, or Kolin (kōl’ōn), a town of Bohemia, on the Elbe, 35 miles east by south of Prague. It has manufactures of sugar, chemicals, etc. Frederick the Great was defeated here by Marshal Daun, June 18, 1757. Pop. 15,025.

Köln. See Cologne.

Kolomea (kō-lō-mā’ə), a town of Austria, in Galicia, 108 miles S. S. E. of Lemberg, on the right bank of the Pruth. Petroleum refining, pottery, etc., occupy the inhabitants. Pop. 34,188.

Kolomna (kal-ō-m’na), a town of Russia, in the government of and 60 miles southeast of Moscow. It has manufactures of woolen, linen, soap, etc., and an important trade. Pop. 20,970.

Kolyma (ka-li-m’ə), a river of Eastern Siberia, which rises in the Stanovoi Mountains, and after a course of nearly 1000 miles falls into the Polar Sea.

Komorn (kō-morn’), the capital of the county of Komorn, in
Hungary, at the confluence of the Danube and Waag, with some manufactures and a considerable trade. There is here a very strong fortress which has been repeatedly besieged. During the Hungarian insurrection of 1849-49 it was besieged by the Austrians in vain, but was surrendered by capitulation. Pop. 20,264.

Komura, Jutaro, Baron, a Japanese statesman, was born in 1858. He studied at Harvard Law School and became a judge in Japan. In 1902, as Foreign Minister, he effected the Anglo-Japanese alliance. In 1905 he was the chief Japanese plenipotentiary in the Russo-Japanese Peace Convention at Portsmouth, New Hampshire. Died in 1911.

Kong, a district of W. Africa, stretching from 8° 30' to 12° N. lat. Trade in cloth and gold. This district was declared a protectorate of France in 1886, and now constitutes a part of the French Ivory Coast, in the 'territory' of French West Africa. Pop. about 15,000.

Kongju, a town, Korea, 35 miles E. by s. of Chemulpo. Pop. 36,000.

Kongmun, a town, China, in Kwangtung province, 40 miles s. s. w. of Canton. Pop. 82,000.

Konia (kō'nē-ä), or Konier (ancient Iconium), a town of Asiatic Turkey, capital of vilayet of same name. The inhabitants are chiefly employed in making stockings and gloves. Pop. about 60,000.

Königgrätz (kœn'gihr-græts), a town of Bohemia, on the left bank of the Elbe, at the confluence of the Adler, 94 miles E. N. E. of Prague. It is the see of a bishop, and contains an ancient cathedral. The battle of Sadowa was fought in the vicinity on July 3, 1866. Pop. 9773.

Königinhof (kœn'gihn-hof), a town of Bohemia, 14 miles N. N. W. of Königgrätz, on the Elbe. Pop. 11,000.

Königsberg (kœn'gih-s berk), a fortified seaport town of Prussia, capital of the province of East Prussia, on the Pregel, about 4 miles above where it enters the Frisches-Haff. It consists of three main parts—the Altstadt, or Old Town, situated on the west; Lübech at the east (both north of the Pregel), and Kneiphof, situated on an island formed by the Pregel, besides extensive suburbs south of the Pregel. Between the Altstadt and Lübenich is the Schlesseiche, a fine sheet of water. The principal buildings are the cathedral, a Gothic structure, begun in 1333, restored in 1878, situated in the Kneiphof; the schloss, or palace, begun in 1255, formerly the residence of the grand-masters of the Teutonic order, and now containing apartments for the royal family, government offices, etc.; the Schlosskirche, or palace church, occupying a wing of the palace; the new university, completed in 1862; the old university; the exchange, a fine modern building; the city museum, theater, etc. The university, founded in 1544 by the Margrave Alber, is attended by 800 to 900 students, and has connected with it a library of 220,000 vols., a zoological museum, and other valuable collections. The manufactures of Königsberg are various. The chief trade is in grain, flax and hemp, timber, tea, etc. Owing to shallow water the larger vessels bound for Königsberg land at Pillau, which is accordingly considered its port. The fortifications surround the city on all sides, and are now very strong. Königsberg entered the Hanse League in 1365. It suffered much during the Seven Years' war by the occupations of the Russians from 1758 to 1764, and much more severely from the French, who entered it in 1807, after the battle of Friedland, and laid it under heavy contribution. Pop. 246,863.

Königsberg-on-the-Elbe, a town of Prussia, province of Silesia, 49 miles E. S. E. of Oppeln. The inhabitants are chiefly employed in ironworking and mining, coal and iron being raised in large quantities, and also zinc. Pop. (1910) 72,640.

Königsmark (kœn'gih-s-mark), MARIA AURORA, COUNTESS, born at Bremen in 1670; died in 1728. She was celebrated for her beauty and mental accomplishments; became the mistress of Frederick Augustus, elector of Saxony and king of Poland, and mother of Maurice of Saxony (Marshall Saxe), the celebrated French general. She was extravagantly esteemed by Voltaire.

Konrad. See Conrad.

Koodoo (kœdō; native name), the striped antelope (Antilope strepsiceros, or Strepsiceros koodoo), a native of South Africa, the male of which is distinguished by its fine horns, which are nearly 4 feet long, and beautifully twisted in a wide spiral. The koodoo is of a grayish-brown color, with a narrow white stripe along the back, and eight or ten similar stripes proceeding from it down either side. It is about 4 feet in height, and fully 8 in length.
Kookas

Kookas (hk`kas), a nigratic tribe of the central Soudan, east of Lake Chad. See Kwa.

Koom. See Kurn.

Koordistan. See Kurdistann.

Kooria Mooria Islands, a group of five islands on the southeastern coast of Arabia, belonging to Great Britain. There was formerly a considerable deposit of guano on the largest island, but it was not of very good quality. It is now exhausted.

Kopek. See Copeck.

Koran (kó-ran; Al-Kórd, that is the Koran, which means originally "the reading, or that which is to be read"), the book containing the religious and moral code of the Mohammedans, and by which, indeed, all their transactions, civil, legal, military, etc., are regulated. According to the Mohammedan belief, it was written from the beginning in golden rays on a gigantic tablet in the highest heavens, and portions were communicated by the angel Gabriel to Mohammed at intervals during twenty-three years. These were dictated by Mohammed to a scribe and kept for the use of his followers. After Mohammed's death they were collected into a volume, at the command of Mohammed's father-in-law and successor, Abu Bekr. This form of the Koran, however, was considered to contain erroneous readings, and in order to remove these Caliph Othman caused a new copy to be made from the original fragments in the thirteenth year of the Hejra (625 A.D.), and then ordered all the old copies to be destroyed. The leading doctrine of the Koran is the Oneness of God, clearly laid down in the symbol of the Moslem—"God is God, and Mohammed is his prophet." To Christ it assigns a place in the seventh or highest heaven, in the immediate presence of God, but he is simply regarded as one of the prophets—Adam, Noah, Abraham, Moses, Jesus, and Mohammed. The doctrines of good and bad angels, and of the resurrection and final judgment, are fully set forth, as is also God's mercy, which secures entrance into heaven and not the merits or good works of a man. The joys of heaven range from music and women to the supreme joy of beholding God's face, while the pains of hell are depicted in vivid colors. Idolatry and the defilement of created beings are severely condemned. Another dogma is set forth in the Koran, yet not explicitly, that of the unchangeable decrees of God. Mohammed used the doctrine of predesti-

Kornegallé

Kornegallé (kor-nä-gall'e), a town of Ceylon, 55 miles N. E. of Colombo. It was formerly a capital and has an ancient temple, a great resort for Buddhist pilgrims, on account of a footprint of Buddha being hollowed in the rock. Pop. 4000.
Körner (kör-nèr), Karl Theodor, a German poet, born at Dresden in 1791; killed in 1813. He wrote the tragedies of Rosenkranz and Zriny, and a large number of dramas for the Theater Royal at Vienna, but owes his fame to his celebrated patriotic lyrics, which are all national in Germany. In 1813, when Germany took up arms against Napoleon, Körner joined the famous Lützow corps of black hussars, and was fatally wounded in a skirmish fought in the neighborhood of Gadebusch, in Mecklenburg-Schwerin. The collection of songs published soon after his death as Lyer und Schwert ("Lyre and Sword") contains some of the finest war-songs in any language.

Körös (kör-rose), Nagy (nády), a town in Hungary, 47 miles southeast of Budapest. It contains a number of handsome buildings, and has a considerable trade in wool and cattle. Pop. 26,512.

Körül. See Corvey.

Korolenko (kör-ö-len’kó), Vladimir, a Russian novelist and publicist, born in 1853. He began his career at the age of thirty, while in exile as a political criminal at Yakutsk, Siberia; and on his return soon gained the admiration and respect of the Russian people. His works include The Dream of Makar, Bad Company, etc.

Kosciusko (kos-i-us’kó), T. H. Addieuus, Polish patriot, was born in Lithuania of an ancient and noble family in 1764, and died at Soleure in 1817. He was educated in the military school at Warsaw, and was afterwards sent at the expense of the state to complete his studies in France. On his return to Poland he became tutor to the daughter of Gasnovski, marshal of Lithuania, but left his native country and betook himself to America (1770), where he purchased the notice of Washington, was appointed by him engineer, with the rank of colonel, and afterwards general of brigade. He did not return to Europe till three years after the conclusion of the Peace of 1783. In 1794 he was appointed general-in-chief of the insurgent forces. He defeated the Russians at Racławice, near Cracow, but at the battle of Maciejowice his army was defeated and he himself wounded and taken prisoner. He was liberated on the accession of Paul I of Russia in 1796. After visiting England and America, he ultimately settled at Soleure in Switzerland. In 1817 he issued from here a letter of emancipation to the serfs on his estate in Poland. In 1818 his body was removed at the expense of the Emperor Alexander of Russia to Cracow, where it was buried in the cathedral, and where a monument was erected to him. A mound 150 feet in height, formed of earth from all the principal battlefields of Poland, was also raised to his memory in the vicinity of Cracow.

Kosciusko, Mount, one of the highest mountain peaks in Australia, in the Munising Alps, in New South Wales, near the frontier of Victoria; 7308 feet high.

Kosel (kō’zel), a fortified town of Prussia, province of Silesia, on the Oder. Pop. 7087.

Kosher (ko’sher; Hebrew, clean, right or fit), the Jewish term for any food that is made ritually fit for use, in contradistinction to pasul, unfit and terefah, forbidden. The special application of the term, however, is to meat slaughtered in accordance with the law of Moses. The schochet or butcher must be a devout Jew, of high moral character, duly licensed by the chief rabbi. The main object is to insure the complete bleeding of the body, since the Jews are forbidden to eat blood.

Kösln (kozlın), a town in Prussia, province of Pomerania, 4 miles from the Baltic, and 85 miles northeast of Stettin. It has manufactures of paper, soap, etc. Pop. 21,474.

Koslov (kaz-lof’), or Kozlov, a town in Russia, in the government of Tambov, and 52 miles w. s. w. of the town of Tambov. It has a considerable trade in cattle, and manufactures of woollens, linens. Pop. (1912) 35,225.

Kossuth (kos’shút), Lajos (Louis), Hungarian patriot, born at Monok in the county of Zemplin, Hungary, in 1802. He studied law, and in 1832 entered the Pressburg Parliament. For persisting in publishing the debates of the diet, he was condemned to four years' imprisonment. In 1841 he became editor of the Pesth Journal, and in 1844 he founded a national league in opposition to the Viennese government. In 1847 he was elected to the diet by the national party, and secured the appointment of a responsible Hungarian ministry, in which he became minister of finance. During the Hungarian war for liberty he was chosen governor or dictator, but the intervention of Russia rendered all the efforts of the Hungarians unavailing. Kossuth resigned, was succeeded by Görgey whom he accused of treachery, and was interned in Turkey. He was released through the intervention of Britain and the United States; visited these countries and met with an enthusiastic reception. He was long regarded as the leader of the Irreconcilable party, but in 1884 he became
Kostroma (kaf-trov-ma'), an inland region of Russia, 32,480 square miles. The surface consists of wide level plains, occasionally varied by general activity. Hemp and flax are largely grown, and the industries include the manufacture of silver and copper wares, leather, chemicals, etc. The forests are extensive. Pop. 1,593,700.

Kostroma, the capital, stands on a height near the confines of the Kostroma with the left bank of the Volga, 50 miles east of Jaroslavl. It is an ancient place, and has a fine old cathedral situated in the Kremlin or former citadel. Pop. 41,288.

Kotah (ko'tah), an Indian native state in Rajputana, under the political superintendence of a British agent. Area, 3777 square miles; pop. 544,879.—Kouta, the chief town, is situated on the river Chambal, and has a pop. of 33,679.

Köthen. See Cothen.

Koti, a river and Dutch settlement on the east coast of Borneo.

Kottbus (ko'tbüs), a town in Prussia, province of Brandenburg, and government of Frankfurt, on the Spree, 65 miles s. e. of Berlin. It is a busy manufacturing town. The chief manufactures are woolen cloth and yarns, linen, hosies, tobacco, toys and carpets. There are also distilleries and breweries. Pop. 46,269.

Kotow (ko'tou), the ceremony of prostration and striking the forehead nine times on the ground, performed before the Emperor of China. Lord Amherst, in 1815, was the first envoy who refused to perform this ceremony, and the point then made was conceded by the Chinese in the treaty of 1856.

Kotzebue (ko'tez-boo), August Friedrich von, a prolific German dramatist and miscellaneous writer, born at Weimar in 1761; assassinated at Mannheim in 1819. In 1781 he went to St. Petersburg, where, obtaining the patronage of the empress, he was made governor of Estonia and ennobled. About 1815 he returned to Germany, and attacked Gethsemane and other great German authors who had refused to associate with him. In 1806 he went again to Russia, and lived from 1807 on his estate Schwartzla, in Estonia. In 1813, as counselor of state, he followed the Russian headquarters, constantly writing to excite the nations against Napoleon. In 1817 he received a salary of 15,000 roubles, with directions to reside in Germany, and to report upon literature and public opinion. Kotzebue, who during the whole campaign had written in favor of the Russians, even at the expense of his native country, and had expressed the utmost contempt for liberal ideas and institutions, was now odious in the eyes of most of his countrymen, and regarded as a spy. This feeling was so strong in the case of a young enthusiast named Sand that he assassinated him as a traitor to liberty. He wrote more than 100 plays, a history of Germany and other works, most of which are now forgotten. Two of his plays, The Stranger and Pizarro, are well known on the recent stage. His son, Otto, born in 1787; died in 1846, made three voyages round the world, and discovered several islands in the Pacific.

Kouba. See Kubu.

Koumiss (koomis), or Kumiss, a preparation of milk, whether cow's, mare's, ass's, goat's, which is said to possess wonderful nutritious and assimilable properties. It consists essentially of milk in which alcoholic fermentation has been developed. On the Asiatic steppes, where it has been long used as a beverage, it is made of mare's milk; but koumiss of mare's milk or goat's milk has a somewhat unpleasant smell.

Koursk. See Kursk.

Koussia, Kosso. See Cusso.

Kovno (kovan), a town in Russian Poland, in the government of the same name, of which it is the capital, 52 miles w. n. w. Vilna, on the left bank of the Niemen or Memel. The population, a great part of which consists of Jews, is 87,186. The government has an area of 15,602 square miles, and its population is 1,683,090.

Kowloon. See Cowloon.

Kraal (krail), a South African native village or town, usually a collection of huts surrounded by a palisade. Sometimes the term is applied to a single hut.

Kraguyevatz (krug-yuva'tats), a town of Servia, on the Lepentiza, with a cannon and small arms factory, powder-mill and arsenal. Pop. 14,160.

Krakatoa (krak-ak-to'a), a small uninhabited volcanic island situated in the Sunda Straits, about equally distant from Java and Sumatra. Previous to the eruption of 1883 it measured 5 miles in length and 3 in breadth, and culminated in two elevations, the highest of which was known as the Peak
of Krakatoa, and rose to a height of some 2750 feet above the sea-level. Krakatoa was the scene of an eruption in 1883, but since that time its history was uneventful till the disastrous eruption of 1883. In May of that year intimations of volcanic activity were observed, and on August 27th a gigantic explosion took place which actually blew away a large part of the mountain, and entirely altered the physical features of the island and the neighboring coasts. An immense wave swept over the shores of the neighboring islands occasioning a loss of life variously estimated at from 15,000 to 50,000. To the north two new islands appeared where the morning previous there had been from 30 to 40 fathoms of water. An interesting result was the fact that for several years afterwards remarkably red sunsets were common in the United States, ascribed to volcanic dust from Krakatoa, which had spread in the upper atmosphere around the earth.

Kraken (krā′kpn), the term of Norwegian origin, applied to a fabulous sea-monster, generally assumed to be a gigantic Cephalopod or cuttle-fish. It was first described by Pontopiddan, bishop of Bergen in Norway, but other old writers have accounts of substantially the same kind of monster. It is described as of enormous size; rising from the sea like an island about 1½ miles in circumference, with enormous mast-like arms with which it wrecked ships, created whirlpools, and realized all that was prodigious and strange in size, habits and appearance. The kraken stories are much akin to the modern accounts of the great sea-serpent. Naturalists are chary of accepting any but trustworthy evidence, yet recent researches and discoveries would seem to indicate that very large members of the cuttle-fish group do certainly exist, and that, from analogy, largely-developed forms of other marine classes may occasionally be found.

Kranach, Lucas. See Cranach.

Krapotkine. See Kropotkine.

Krasnoiarsk (krás-ná-yársk'), the Town on the Red Cliff), a town in Siberia, capital of the government of Yenisseisk, at the junction of the Yenissel and Katcha. Manufactures of leather, etc., are carried on by artisan convicts, and there are also some gold-washings in the neighborhood. Pop. 27,300.

Krasnovodsk (krás-ná-váďez'), Russian fortress on the eastern shore of the Caspian Sea, lat. 40° N. It has been the starting-point of many important scientific and military expeditions to Central Asia.

Krause (krou′ze), Karl, Christian Friedrich, a German philosopher, born at Eisenberg in 1781; died in 1832. He lectured at Berlin and Göttingen. Krause is deservedly ranked with Fichte, Schelling, Hegel, Herbart, and Schopenhauer, as one of the masters of the German philosophical movement which was inaugurated by the Krayova (kra-yo′va), a town in Roumania, situated near the Schyl, capital of the administrative district of Doloshi. It has an active trade, particularly in salt from mines in the vicinity. Pop. 40,000.

Kreasote. See Creasote.

Krefeld (kra-felt), a town in Rhenish Prussia, 12 miles northwest of Düsseldorf. It is the principal locality in Prussia for the manufacture of silks and velvets. There are also manufactories of soap, chemicals, sugar, etc. Pop. (1910) 129,412.

Kreisler (kraisl′ar), Fritz, an Austrian violinist, born at Vienna, Feb. 2, 1875. He entered the Vienna Conservatory at seven years of age, winning the first prize three years later, and that at the Paris Conservatory in 1887. He toured in America with Rosenthal, 1880-90, and on returning to Europe studied medicine and art, and entered the army. Resuming his musical studies, he appeared in Berlin in 1889 with success. He has since revisited this country.

Krementschug (krem-en-chuk′), a town in Russia, government of Poltava, 67 miles southwest of the town of Poltava, on the Dnieper. It has a considerable trade in wool, tobacco, candles, and timber. Pop. 63,000.

Kremlin (krem′lin; Russian, kreml) a fortress in Russia the citadel of a town or city; specifically applied to the ancient citadel of Moscow. See Moscow.

Kremnitz (krem′nitz), a town in northwestern Hungary, with silver mines in the vicinity. Pop. 10,000.

Kremsier (krem′sir), an Austrian town, province of Moravia, on the March, 25 miles S. by E. of Olmutz. Pop. (1911) 16,523.

Kreuzauc (kroitsná̆), a town in Rhenish Prussia, on the Nahe, 28 miles southwest of Mayence, with valuable mineral springs. Pop. (1910) 23,188.
Kriegspiel (krē'gspiel; wār-game), a game of German origin, played with maps on a large scale, and colored metal blocks, on the same scale as the map, representing bodies of troops of various strength (brigades of infantry, battalions of rifles, regiments of cavalry, besides artillery, engineers, pontoon troops, telegraph troops, etc.). The players are usually two on each side, and the game forms an exact miniature of tactical operations. It is played by alternate moves. Each move represents the lapse of two minutes, and rules are given to determine the distance that each branch of the service may move over in that time. When two bodies of men on opposite sides come into contact, the weaker in numbers and position is held to be defeated; but when they are equal in these respects victory is determined to one side or the other by the use of a die. The game is a favorite one in the German army, and has been adopted to a certain extent in that of Britain.

Kriloff (krē-loff'), or Keylow, Ivan Andreyevitch, a Russian fabulist, born at Moscow in 1768; died at St. Petersburg in 1844. His first compositions were dramas, which were not successful. In 1809 his first collection of fables was published, which, meeting with instant favor, have continued to be the delight of all ages and classes in Russia, many sentences in them having become popular proverbs. They have been translated into German, French, Italian and English. From 1812 to 1841 Kriloff held a post in the St. Petersburg Imperial Public Library.

Krimmitschau (krim'mit-shou), a busy manufacturing town in Saxony, 37 miles south of Leipzig, on the Pleisse, with woolen spinning and weaving, etc. Pop. 22,840.

Kris (krēs), or Krees, the dagger or poniard forming the universal weapon of the inhabitants of the Malay Archipelago. There are many forms of it, short and long, with straight or serpentine blade, and with every variety in the shape and ornamentation of the hilt and scabbard.

Krishna (krish'na), in Hindu mythology, the eighth avatar of Vishnu and the most popular deity in the Hindu pantheon. He was ostensibly the son of Vasudeva and Devaki of the royal family of the Bhoja reigning at Mathura. The reigning prince at the time of his birth was Kansa, who, to prevent the fulfillment of a prophecy, sought to destroy the young child, but his parents, assisted by divine power, succeeded in baffling all his efforts. Every year of his life furnishes the subject of some legend, his
story showing a remarkable resemblance to those of the Greek Heracles and Apollo. After a series of amorous and heroic exploits, detailed at length in the Puranas, he slew Kansa, mounted the throne, and was at last killed by the arrow of a hunter, being unawares in a thicket.

Krishnagar (krish-nag'ar), a town of Hindustan, administrative headquarters of Nadia district, Bengal, on the left bank of the Jalangi River. It has a college affiliated with the Calcutta University, a collegiate school, a considerable trade, and manufactures of colored clay figures. Pop. 24,547.

Kriss-Kringle, man Christ kindlein (Christ child). It is another name for Santa Claus, or St. Nicholas, the good genius of Christmas, who has the credit of filling the children's stockings in that happy season.

Kronos. See Cronus.

Kronstadt. See Cronstadt.

Kroo, Kru, a native race of the w. coast of Africa, much employed in doing rough work on vessels trading on the Liberian coast. Their territory extends about 70 miles along the coast; they are a stout, brawny race and very industrious.

Kropotkine (kr o-pot'kên), Prince Peter Alexeieitch, a Russian anarchist, born at Moscow, in 1842. As attache for Cossack affairs to the governor of Eastern Siberia he made numerous journeys in Siberia and Manchuria; was made secretary of the St. Petersburg Geographical Society, and wrote several esteemed scientific books. In 1871 he joined the International Society, and began working his revolutionary ideas in Russia. He was condemned to three years' imprisonment, but made his escape and took up residence in Switzerland. Here he founded his anarchist newspaper La Révolûté. Expelled from Switzerland, he took refuge in France, and was, in 1883, condemned to five years' imprisonment for complicity in outrages at Lyons, but was pardoned in 1886, when he went to England. There he started a monthly magazine called Freedom, and wrote a number of articles for the Nineteenth Century and other magazines. He went to Russia in 1917 on the overthrow of the Czar, aided in the establishment of the Soviet republic, and counseled moderation to the Bolshevik leaders.

Krossen (krösen); a town in Prus sia, on the Oder, in the province of Brandenburg. Pop. 7367.
Krushite (krush'it), an abrasing material consisting of chilled cast-metal shot, made in very small sizes, down to a fine powder. Being very hard and tough, it is used as a substitute for sand in the sand-blast and in tumbling barrels, also for sawing and polishing stone and in making diamond drills.

Krypton (krip'tun), a chemical element discovered in 1898 by Professors Ramsay and Travers, as a gas that rises from liquid air. It is of the helium series, density 22.5, and monatomic. It is one of the recently discovered rare atmospheric gases.

Kahatriya (ka-ha-trë-ya), the second or military caste in the social system of the Brahmanical Hindus, the Brahmans being first and the Vaisyas and Sudras the third and fourth. The natural duties of the Kahatriyas are bravery, generosity, rectitude and noble conduct generally.

Kuba (kù'ba), a town in Russia, in the Caucasian government of Baku, district of Kuba, 47 miles s. e. Derbend. Pop. 15,546.

Kuban (kù-ban'), a Russian territory in the Caucasus, bordering on the sea of Azov and the Black Sea. Area, 33,370 sq. miles; pop. 2,275,400. The chief river is the Kuban, which rises in Circassia and falls, after a total course of about 400 miles, into the Black Sea at the bay of Kaban.

Kubelik (kù-bel'ik), Jan, Bohemian violinist, born near Prague, of humble parentage in 1880. From 1892 to 1895 he studied at the Conservatorium in Prague, and a successful appearance in Vienna in 1898 led to a tour in Italy. While in Rome he received the order of St. Gregory the Great and his first tour in the United States (1901-02) did much to establish his fame.

Kublai Khan (kù-blë-khan), a Mongol emperor and founder of the 20th Chinese dynasty, that of Yuen; was born in 1214; died in 1294. In 1259 he succeeded his brother as Grand Khan of the Mongols, and in 1260 he conquered the whole of Northern China, driving out the Chin dynasty. Nineteen years later he added to his empire Southern China. Kublai thus became sole ruler of an empire extending over a large part of Asia, as well as over those parts of Europe that had belonged to the dominions of Alexander. Marco Polo describes the splendor of his court and entertainments, his palaces and hunting expeditions, his revenues, his extraordinary paper currency, his posts, etc.

Ku-Klux Klan is the subject of a poetical fragment by Coleridge.

Kuch Behar. See Coolch Behar.

Kuching (ku-ching'), the capital of Sarawak, on Sarawak River, Borneo, and now known as Sarawak, contains the residence of the rajah and those of several European merchants. It has forts, barracks, a courthouse, prison, etc.; a considerable trade, and a pop. of about 30,000.

Kuenen (kù'nen), Abraham, a Dutch Biblical scholar, was born at Haarlem in 1628. He became professor of Greek at the University of Leyden in 1855. He published in 1861-62 An Historical Inquiry into the Origin and Collection of the Books of the Old Testament, which has exerted a decisive influence on Biblical scholars. He was also the author of The Religion of Israel, The Prophets and Prophecy in Israel, Natural Religion and Universal Religions (Hibbert Lecture), etc. He was one of the leaders of the reconstructive school of modern Biblical criticism. He died in 1891.

Kuen Lun (kwen-lun'), a mountain range of Central Asia, stretching over a space of about 1500 miles, and forming in its whole length the north frontier of Tibet, as the Himalaya does that of the south. Several of the summits reach an altitude of over 28,000 feet, and the numerous elevated branches which stretch towards the Indus form valleys which immense glaciers descend.

Kufic Writing. See Cufic.

Kuhhorn (kùh-horn), same as Alpenhorn.

Kuhn (kùn), Adalbert, a German philologist, born in 1812; died in 1881. He made important contributions to comparative philology, and is regarded as the founder of the science of comparative Indo-Germanic mythology. He edited for a number of years the valuable Zeitschrift für Vergleichende Sprachforschung ("Journal of Comparative Philology").

Kuka (kù'kà), or Kukawa, a town in Western Africa, the capital of Bornon, about 20 miles west from the southwest shores of Lake Chad. Pop. (estimate), 60,000.

Ku-Klux Klan (kù-kluks-klan), a secret society of a sociopolitical nature, which arose after the American Civil War and was bitterly opposed to the reconstruction measures which the government enacted and to the position then occupied by the late slaves. Its membership at one time spread over...
Kulbarga

nearly all the States of the South, and committed many acts of violence, even murder and arson. Strong measures were taken for the suppression of the society in 1871, and it soon after died away.

Kulbarga. See Gulbarga.

Kuldja, or KULJÁ (köl'jé), a city of Central Asia, in the Chinese territory Dzungaria, on the right bank of the Ili River, an important caravan center. The district was taken possession of by the Russians in 1871, but proceeded to China in 1881. Pop. 12,500.

Kulm (kylm).—1. A town of Prussia, province of West Prussia, 33 miles southwest of Marienwerder, on the Vistula. It has manufactures of woolen cloth and a trade in cattle. Pop. 11,665.

2. A village in Bohemia, about 9 miles northeast of Teplitz, where, on the 29th and 30th of August, 1813, a great battle was fought, in which the allies under Barclay de Tolly totally destroyed the French army under Vandamme.

Kum, or Koom (küm), a town of Persia, 78 miles s. w. of Teheran, formerly a place of great magnificence, but destroyed by the Afghans in 1722. Pop. about 30,000.

Kumaon, or KUMAUN (küm'm à-n), a British district of Northern India, in the Northwest Provinces, belonging to the Himalayas. Area, 6000 sq. miles; pop. 495,641. The district is generally mountainous, but has important and valuable tea plantations. The capital is Almora, and there are two hill stations, Naini-Tal and Ranikhet. It forms with the districts of Garhwal and Tarai the division or commissionership of Kumaon, which has an area of 13,703 sq. miles, and a pop. of 1,207,030. See Coompta.

Kumquat. See Kumquat.

Kumquat (küm'kwät), a very small variety of orange-tree (Citrus japonica) growing not above 6 feet high, and whose fruit, of a large gooseberry, is delicious and refreshing, having a sweet and an acid taste. It is a native of China and Japan, but has been introduced into America and Australia. In China it is preserved with sugar in jars, and forms an important export.

Künch (künkch), a town of India, in Jalaun district, N. W. Province. Pop. 13,139.

Kunduz (kün'duz), a portion of northeastern Afghanistan, between the Amu Daria and the Hindu Kush.

Kunersdorf (kün'erz-dorf), a village in Prussia, in the province of Brandenburg, near Frankfurt-on-the-Oder, celebrated for the defeat of Frederick the Great by the combined Russian and Austrian forces in August, 1759.

Kungur (kön'zóor'), a town of Russia, in government of Perm. Pop. 14,324.

Kunigundé (kön-je-zohn'dé), SAIN'T, daughter of Siegfried of Luxembourg, married Henry of Bavaria, afterwards Henry II of Germany; died as a nun in 1031. Accused of adultery, she is said to have vindicated herself by walking over red-hot plowshares barefooted. She was canonized in 1200, her feast being March 3.

Kur, or Kūra (kör'a; ancient Cyrus), a river of Western Asia, rises in the mountains w. of Kara, flows through the Russian governments of Tiflis, Elisabethpol and Baku, and falls into the Caspian Sea, after a course of 500 and 900 miles. It has numerous tributaries, the principal of which is the Aras or Araxes.

Kurdistan (kör-di-stän; 'Land of the Kurds'), an extensive territory of Western Asia. As it does not form a separate political division, its exact limits are not ascertained; but the eastern part of it forms the Persian provinces of Ardilán and Kermanshah, and the remainder, constituting the far larger portion, is in Turkey, where it forms the principal part of the pashalic of Van and a considerable part of that of Bagdad. It is a mountainous region, containing considerable forests of oak and other hard timber, and also numerous pastures, on which horned cattle, sheep and fine-haired goats are reared, and in the valleys many fertile districts yielding rice, cotton, flax, fruits and gallnuts. It is drained by the Tigris and the Euphrates and their tributaries. The Kurds, to whom the territory owes its name, are not confined within its limits, but are found in considerable numbers eastward in Khorasan and over the hilly region of Mesopotamia, as far west as Aleppo and the Taurus. They are a stout, dark race, well formed, with dark hair, small eyes, wide mouth and a fierce look. On their own mountains they live as shepherds, cultivators of the soil, and bandits. Their language is a dialect of Persian, now much mixed with Arabic and Syriac; their religion Sunnite Mohammedanism. The Kurds owe but slight allegiance to either Turkey or Persia, living in tribes under their own chiefs, who commonly exact duties on the merchandise which passes over their territory. Their numbers have been estimated at 1,800,000.
Kuriles, a chain of islands in the North Pacific, extending southwest to northeast, from Japan to Kamchatka, and belonging to Japan; area, about 5,000 sq. miles. The whole chain is of volcanic origin, and there are many active volcanoes, one of which is from 12,000 to 15,000 feet high. Kuralnul. See Kurnul. Kuruk. See Kuruk. Kursk (kursk), a government of Southern Russia, area 18,801 square miles. The surface is undulating, and there are numerous streams, but none of them serviceable as waterways. The climate is mild and dry, and the rich soil produces abundant crops. Pop. 2,381,001. Kurk, the chief town, on the Tuskora near its junction with the Sem, forms a railway junction from Moscow, Kieve, and Kharkoff. The principal public buildings are the Cathedral of the Resurrection, the Cathedral of St. Sergius, and a monastery. Pop. (1912) 83,320.

Kurpatkin, Alexei Nikolaiевич, a Russian general, born in 1848. After a long service in Asia and Turkey, he was made commander-in-chief of the Russian army in 1897 and minister of war in 1898. He commanded in Manchuria in the war with Japan, but was dismissed from his command in March, 1905, as a result of the Russian disasters, from which, however, he was not responsible. He patriotically accepted a subordinate command under his successor.

Kuro Siwo, or Japan Current, the Gulf Stream of the Pacific, is the offspring of the great equatorial current, flows past Formosa, Japan, the Kuriles, the Aleutian Islands, and thence bends southwards to California. It is much inferior to the Gulf Stream both in volume and high temperature. Kurraheche, or Karamche, an important seaport of India, on the coast of Sind, Bombay Presidency, at the northern (or western) angle of the Indus delta, situated on a large and commodious creek or inlet, forming a good haven, perfectly safe in all winds, and out of the track of cyclones. The harbor is formed by a long narrow strip of sand on the west, ending with a rocky promontory called Manora Head, on which is a lighthouse, and by the island of Kiamari on the east. The town, which is well built and has a good reputation for healthiness, came into British possession in 1842, and its extensive commerce, fine harbor works, and numerous flourishing institutions have all sprung up since that time. Pop. 153,908.

Kusnez (kus-nesk'), a town in Russia, government of Saratov. Pop. 17,003.

Kustendji (ku-stend'dji), a Roumanian seaport of the Dobrudja, on the Black Sea, 140 miles E. of Bukarest. It is the chief outlet for the produce of the Dobrudja. Pop. about 3000.

Kustenland (ku-s'ten-lant; ‘Coastland’), an administrative division of the Austrian Empire, at the head of the Adriatic, consisting of the county of Görz and Gradiska and the margraviate of Istrija, with the town of Trieste; area, 3084 square miles. The majority of the inhabitants are of Slavonic origin, but there is also a large proportion of Italians and a considerable number of Germans. Pop. 755,183.

Kustrin (ku-strin'), or Cœstrin, a fortified town in Prussia, in the province of Brandenburg, 15 miles north of Frankfurt-on-the-Oder, at the
Kutais

Kyanizing

junction of the Wartha with the Oder. It contains a castle in which Frederick the Great was confined by his father, and has manufactures of woolens, machinery, brass and copper wares, etc. Pop. 18,643.

Kutais (ku-tai's), a Russian town, in Transcaucasia, capital of a government of the same name, 60 miles east from the Black Sea, on the railway between Poti and Tiflis. Pop. 32,492. The government has an area of 14,100 square miles, and pop. of 933,773.

Kutaya, or KUT'IAH (kűt'-tä'yä), a town in Asiatic Turkey, 180 miles northeast of Smyrna, on the route between Constantinople and Konia. It is the center of the tract where the famous Turkey carpets are manufactured. Estimated pop. 25,000.

Kutch. See Cutch.

Kut-el-Amara (köt'-el-a-ma'ra), a small town in Mesopotamia on the Tigris at the junction of the Shatt-el-Hai. It is a coaling station for the Bagdad-to-Basra steamers. It acquired importance during the European war when a British force under General Townshend was surrounded by the Turks and forced to surrender. In February, 1917, the town was taken by Indo-British troops under Sir Stanley Maude.

Kuttenberg (köt'en-běrg), a mining and manufacturing town of Bohemia, 58 miles E.S.E. of Prague. Pop. 14,709.

Kutusoff (kō-tū'sof), MIKHAIL, a Russian field-marshals, born in 1745; died in 1813. He served against Poland, Turkey, and France. For his victories over Ney and Davoust he received the title of Prince Smolensky.

Kuvera (kŏvér'a), in Hindu mythology, the god of wealth. He resides in the splendid palace of Alaka, on Mount Meru, and is borne through the sky by four attendants on a radiant car given to him by Brahma. He has no temples dedicated to him, and no altars. On his head is a richly ornamented crown, and two of his four hands hold closed flowers of the lotus.

Kuyt (koel), or CUYT, ALBERT, Dutch painter, born at Dort in 1605; died in 1691. He studied under his father, Jacob Gerritz Kuyt, a painter of some fame. He painted with great success landscapes, cattle, river scenes, portraits and pictures of still life. He particularly excelled in the purity and brilliancy of light; and he was not surpassed, even by Claude, in accurate representation of the atmosphere, and of the effects of sunshine. The best of his pictures are his landscapes, with meadows, herds and horsemen, and often with boats and barges.

Kwango, or KUANGO (kwäng'o), a great river of Central South Africa, belonging to the Congo system, flowing almost due north, and joining the Kasai.

Kwangs (kwäng's'z), a province of China, lying between lat. 22° and 26° N., and long. 105° and 112° 30' E. It is watered by the numerous branches of the Tao or Sikiang. Rice is largely grown, and gold, silver and mercury are mined. Area, 78,250 square miles; pop. about 5,000,000.

Kwang-seu, a Chinese emperor, born in 1871. He was chosen to succeed the Emperor Tung-Che in 1875, being the infant grandson of the Emperor Tao Kwang, who died in 1850. His aunt, Tsz-re Hái, the empress dowager, who had long been practically empress, continued to rule as regent during his minority. After he came of age he, under the influence of reformers, set in train a series of radical changes in the government. To prevent this the empress, supported by the conservative party, seized the reins of power, holding him under strict palace surveillance. In later years, however, she consented, under the pressure of events, to still greater reforms than those proposed by him. He died in November, 1908, and was succeeded by another infant emperor, Tu Yî. The empress dowager died the day after him.

Kwangtung (kwäng'tōong), the most southerly province of China, bordering on the Gulf of Tonquin and the China Sea. The northern part is montaneous, but the southern region is about the most fertile in China. It includes Hainan and a number of smaller islands along the coast. The capital is Canton; other ports are Swatow and Pakhoi. Area, 79,466 square miles; pop. about 30,000,000.

Kweichow (kwe-chó), a province of S. W. China, bounded by Sechuen, Yunnan, Hunan and Kwangsi. It is rough and montaneous, produces rice, tobacco and timber, and has mines of copper, iron, lead and mercury. Area, 64,564 square miles; pop. above 8,000,000.

Kyanite. See Cynite.

Kyanizing (kt'an-iz'ing), a process for preserving timber, cordage, etc., from the effects of dry-rot, named from the inventor, a Mr. Kyan. It consists in immersing the material to be preserved in a solution of corrosive sublimate. This process is now almost entirely disused, as wood is much better.
preserved by being saturated with creasote or coal-tar.

Kyd (kid), Thomas, an English dramatist, who flourished about 1580, a short time before Shakespeare. His extant works are *Cornelia*, or *Pompey the Great* his *Fair Cornelia's Tragedy*; *The First Part of Geronimo*; and *The Spanish Tragedy*. The last named displays much power and is thought to have suggested to Shakespeare some parts of *Hamlet*.

Kyllhäuser (kil'hol-zer), an ancient palace (now in ruins), of the emperors of the Hohenstaufen dynasty, on an eminence near the village of Ttilida, Germany. There is a popular tradition that the Emperor Frederick Barbarossa still exists at this place in a magnificent subterranean palace, in a state of enchantment, seated with his knights around a stone table, through which his beard has grown. Every hundred years he partly wakes and sends someone to inquire how the time is going. After a certain time he will awake and bring better times to his empire.

Kyle (k'il), the middle district of

Kyoto (ki'-tō), or MIKADO, for over a thousand years the capital of Japan, is on a plain about 26 miles inland from Osaka. Here remain the plain wooden buildings in which the emperors of Japan dwelt for so long in seclusion, retaining only their spiritual supremacy. It is an active industrial city, its porcelain, brocades, enamels, bronzes and embroideries being highly esteemed. Pop. (1914) 508,068.

Kyrie Eleison (ki'ri-ē a-li-son; from the Greek *Kyrie eleison*, 'Lord, have mercy'), a kind of invocation used in parts of the Roman Church service, and the name given to the responses after the commandments in the Anglican Church. It is almost the only part of the liturgy in which the Roman Catholic Church has retained Greek words.

Kyrle (kērl), John, surnamed by Pope the *Man of Ross*, was born in Gloucestershire in 1637; died at Ross, Hereford, in 1724. He was distinguished by his active benevolence and also for enlisting the sympathies of his wealthy neighbors in his plans for making life more pleasant to his townsfolk.
Japan. Taking her place among the three great naval powers of the world, the other two being the United States and Great Britain, Japan was ably represented at the Armaments Limitation Conference (q.v.) at Washington in November, 1921. Agreements were arrived at, not only with regard to the naval holiday and the 5-5-3 ratio of battleships, but amicable arrangements were made looking to the protection of the rights of other powers in the island of Yap and the other islands of the Pacific over which Japan had been given a mandate. Relations between China and Japan with regard to Shantung were also discussed. On the eve of the conference at Washington Premier Hayashi's great political career was dramatically ended by the dagger of a lustful youth at Tokio, November 4, 1921. Viscount Korekiyo Takahashi, minister of finance, succeeded him as Premier. On November 25th Crown Prince Hirohito (born 1901) was named Regent of Japan.

Jugo-Slavia. King Peter died August 16, 1921. He was driven from his country by the German-Austrian onslaught which smote down Serbs during the European War, but had the satisfaction of seeing the complete defeat of his enemies and the erection of the new Serb-Croat-Slovene State (Jugo-Slavia), of which he was the ruler. Alexander, who succeeded him, had long been ill in Paris; he returned to Jugo-Slavia in November and assumed the throne.

Kansas City, Missouri, was the scene of an impressive military spectacle on November 1, 1921, when the American Legion paid honor to Marion and bunker stations by dedication of the site of a $2,500,000 memorial to the war dead, and then, 25,000 strong, marched through the streets behind Generals Pershing, Díaz and Jacques, Marshal Foch and Admiral Beatty.

Kiel. The former imperial war port of Kiel, Germany, has been completely changed into a trade port. Only a single gunboat patrolling the harbor brings memories of the great naval station that loomed so large in the German mind when the war began in 1914. The quays and bunker stations have been enlarged and many warehouses erected.

King, William Lyon Mackenzie, Premier of Canada, born at Berlin (now Kitchener), Ontario, in 1874. He gained his M.A. at Toronto University, and studied at universities in the United States. He was deputy minister of labor and editor of the Labor Gazette, 1900-08, during which time he served as chairman of several royal commissions on labor and immigration problems. In the Laurier administration he was minister of labor, 1900-11, and in the latter year was a candidate of the Liberal party in the reciprocity campaign. During the great war, 1914-18, he rendered extensive service in furthering continuous and maximum production of essential war supplies through the adjustment of relations between workers and employers in several of the most important war industries in America. He was selected as the late Sir Wilfrid Laurier's successor as leader of the Liberal party of Canada at the National Liberal Convention, Ottawa, August, 1919. At the parliamentary elections in December, 1921, the Liberal party swept the Conservatives out of power by huge majorities, and Mr. King became Premier, succeeding Arthur Meighen.

Kiwani (ki-wa'nis), an international organization of business and professional men, with clubs in over 600 cities throughout the United States and Canada. The membership at the end of 1921 was 54,353. The first Kiwanis club—the Detroit club—was organized in January, 1915; the second club built was that of Cleveland; Pittsburgh was the third. Membership is allotted according to classification of business. Two representatives of a classification are eligible to membership. The requirements are that the applicant must either own the business or a partnership or be an executive in the corporation. The motto of Kiwanis is the practice of the Golden Rule in business.

Knox, Philander Chase. United States Senator from Pennsylvania, former Secretary of State under President Taft, Attorney General under Presidents McKinley and Roosevelt, and a noted authority on international affairs, died at his Washington home October 12, 1921. He maintained a residence at Pittsburgh and a beautiful estate at Valley Forge. When former President Wilson brought back the treaty of Versailles, Senator Knox was among the first of the senators to declare his opposition. After the long battle which defeated the treaty in the senate and caused rejection of the League of Nations scheme by the voters of the country, Senator Knox proposed the termination of the state of war by means of a legislative resolution, and this was effected eventually.

Korea, or Chosen, formerly a kingdom, now a part of Japan, annexed in 1910. A Korean appeal for independence to the Conference on the
Limitation of Armaments at Washington was made public on January 1, 1922, but no action was taken on it. The estimated area of Korea is about 54,000 square miles; population (1918) 17,412,571; census population, 1920, 17,284,207. The vast majority of the foreign residents are Chinese, numbering some 18,972. The latest returns give the number of Americans as 597; British, 257; French, 107; Germans, 37. The urban prefecture of Seoul, the largest city, has 302,636 inhabitants (50,291 Japanese), and that of Ping-Yang 173,273. There has been a large immigration of Japanese into the peninsula of recent years. In Seoul there is one daily Korean newspaper, and two Japanese, besides others published at Chemulpo and other parts of the country. There is a government-owned daily newspaper in English, published at Seoul. The press is entirely in the hands of the Japanese, and a strict censorship is exercised. Korea is entirely an agricultural country; the cultivated area is about 7,770,000 acres. The chief crops are rice, wheat, beans, and grain of all kinds, besides tobacco and cotton. Whale fishing is carried on on the coast. Live stock is raised as a by-product of agriculture. The cattle are well known for their size and quality. Gold mining is carried on; there are four foreign-owned gold mines in active operation, and others in process of development. Copper, iron, and coal are abundant in Korea, but the development of these resources is impeded by defective means of communication. An anthracite coal mine in the north of Korea is in operation, and considerable extension of the workings are in contemplation. Graphite and mica are also found in large quantities. Education, formerly at a low ebb, is gradually improving. The knowledge of Chinese classics and of Confucian doctrine, hitherto essential to the education of the upper classes, is giving way under Japanese influence to a more practical system of instruction. There are about 1000 public schools of all sorts, with 141,000 pupils; other schools, 726, with 45,000 pupils. There is a large number of Christian converts. There are about 1100 miles of railroad; transport in the interior is by porters, pack-horses, and ozen, and by river. Official correspondence, except with Korean provincial officials, is conducted in Japanese. The written language of the people is a mixture of Chinese characters and native script. The open ports are Chemulpo, Fusan, Wonsan, Chinnampo, Mokpo, Kunsan, Songchin, Ping-Yang (inland city), Wiju, Yong-Am-Po, Chung-jin, and Shin-wi-ju. By an Imperial Rescript of 1919, Korea is to be treated as in all respects an integral part of Japan. Koreans to be on the same footing as Japanese. Members of the Korean Imperial House and the late Korean cabinet have had Japanese patents of nobility conferred upon them.

Korfanty, Adalbert, a Polish politician, born in 1873 at Sadzwaska, Upper Silesia. After graduating from the University of Breslau he served in Berlin as correspondant for Polish newspapers, and was very active in the Polish cause. He became the owner of several newspapers published in the Polish language and of a printing establishment. As a deputy to the Reichstag and the Prussian Landtag, his influence grew gradually till he became recognized as a political leader. Following the defeat of Germany in the great war of 1914-18, and the establishment of the Republic of Poland, he became a member of the cabinet, but later returned to Posen and stirred up the people of this province. He became the driving force of the Polish nationalistic movement in Upper Silesia, and had much to do with the insurrection in 1921. The decision of the League of Nations to award part of Upper Silesia to Poland quieted the disturbances. See Silesia.

Kropotkine, Prince Peter Alexeievitch, Russian anarchist and author, died at Moscow February 8, 1921.

Kuropatkin, Alexei Nikolavitch, Russian general, died at Moscow February 12, 1921.

© 1922, The J. C. W. Co.
L, the twelfth letter of the English alphabet, is usually denominated a semivowel or a liquid. L has only one sound in English. The nearest ally of l is r, the pronunciation of which differs from that of l only in being accompanied by a vibration-tongue of the tongue. There is no letter, accordingly, with which l is more frequently interchanged, instances of the change of l into r and of r into l being both very common in various languages. In fact, in the history of the Indo-European alphabet l is considered to be a later modification of r.

La, in music, the sixth of the seven syllables—ut or do, re, mi, fa, sol, la, si (or ti)—representing the seven sounds in the diatonic scale.

Laager (lē'gär; D. 'a camp'), in South Africa, an encampment more or less fortified. The original Boer laager is an enclosure made of the wagons of a traveling party for defense against enemies.

Laaland (lōl'ān), or Lolland, an island in Denmark, s. of Zealand, and separated from Falster on the E. by the narrow Guldgund; greatest length, s. E. to N. W., 36 miles; breadth, varying from 9 miles to 17 miles; area, 462 square miles. The surface is low and level; the soil very fertile, yielding crops of corn, beans, hops, hemp, and excellent timber. Pop. 70,506.

Laar, or Laer (lār), Pieter van, named Il Bargoccio, a Dutch painter, born in 1613; died at Haarlem in 1674 or 1675. He made a long residence at Rome, returning to Holland about 1639. He painted generally lively scenes from peasant life, fairs, children's games, hunting scenes, landscapes, etc.

Labarum (lā'bār-əm), the imperial standard adopted by Constantine the Great after his miraculous vision of the cross and conversion to Christianity, differently described and figured, but generally represented as a pole having a crossbar with the banner depending from it and bearing the Greek letters XP (that is, Chr), conjoined so as to form a monogram of the name of Christ.

Labat (lā'bhāt), Jean Baptiste, a French missionary and traveler, born in 1663; died in 1738. He spent about twelve years in the West Indies, and is best known by his Nouveau Voyage aux Iles de l'Amérique. He also published a Nouveau Rélatif de l'Arbre Occidentale; Voyages en Espagne et Italie; Relation Historique de l'Ethiopie Occidentale, and Mémoires du Chevalier d'Arvieu.

Labédoyère (lā-bā-dwa'yār), Charles Amélie Huchet, Comte de, French general, was born in 1786; shot in 1815. He entered the army in his 20th year, served with much distinction in Spain, Germany, etc., and was several times severely wounded. Napoleon raised him to the rank of general of division in 1815, and he fought with great courage at Waterloo. After the battle he hurried to Paris, and there distinguished himself by his hostility to the Bourbons. On the capitulation of Paris he followed the army behind the Loire, but returning to Paris, he was taken, tried by court-martial, and sentenced to death.

Label (lābel), in Gothic architecture, a projecting tablet or molding over doors, windows, etc., called a hood-molding, and a drip, dripstone, or weather-molding when it is turned square.

Labials (lāb'i-als), letters or characters representing a sound or articulation formed or uttered chiefly by the lips, as b, f, m, p, v.

Labiatæ (lā-bi'-ə-tē), the mint tribe, a very important and extensive natural order of exogenous plants, with a gamopetalous corolla presenting a prominent upper and lower lip, and a four-lobed ovary, changing to four seed-like monospermous fruits. This order contains about 2600 species, mostly herbs, undershrubs, or shrubs with opposite or whorled leaves, usually square stems, and a thyrsoid or whorled inflorescence. They are spread throughout the world, and abound in all temperate latitudes. Many are valued for their fragrance, as lavender and thyme: others for their stimulating qualities, as mint
and peppermint; others as aromatics, as savory, basil and marjoram; several are used as febrifuges. Betony, ground ivy, horehound and others possess bitter tonic qualities. Numerous species are objects of great beauty.

Labiche (lə-besh), Eugène Marin, a French dramatist, born in Paris in 1815. He, chiefly in collaboration with other authors, brought out upwards of 100 plays, many of them very successful. They are mostly distinguished by extravagant plots, and are full of droll situations. In 1860 he was elected to the Academy. Died in 1888.

Labor, in political economy, one of the three leading factors in production, the other two being land and capital. It is more fundamental than capital, which originally is the result of labor. A doctrine, contested in by many economists, is that into productive and unproductive labor. The former consists of those kinds of exertion which produce utilities embodied in natural objects. Unproductive labor, like that of the man who does both useful and worthy, merely adds to the material wealth of the community. Towards the close of the 19th century the effect of the industrial revolution was to organize labor in large factories and similar undertakings; and in the early decades of the 19th century the growing ideas of freedom had begun to make other great changes in the condition of the workers. The formation of trades-unions and co-operative societies has greatly strengthened the position of labor, and laws for the regulation of labor are now intended not to fix wages as formerly, but to protect the workers.

Labor Day, the first Monday in September, is set apart to be celebrated by the organizations of labor in the United States. It originated in 1882, and is now a legal holiday in all the States.

Labor Organizations. The various countries of the world have been very active within recent years in the organization of workers, either in minor with unions, or unions of trades and general organizations, embracing nearly all the artisans of a country. Some of these, indeed, have expanded to international dimensions. In the United States, for instance, in addition to the very numerous trades unions, there are several great organizations including many of these minor bodies. The oldest of these is the Knights of Labor, organized in Philadelphia in December, 1869. It grew rapidly in numbers until in 1886, its membership was over 500,000. It spread into Canada, Great Britain and Belgium, but since then its membership has much decreased, through the activity of other organizations. Of these the American Federation of Labor has made much the greatest progress. Its principal objects are to promote the interests and influences of trades unions, to aid in creating new unions, and to advance the general cause of organized labor. It does not undertake, however, to exercise any absolute authority over affiliated societies. It has been especially active in agitating for the eight-hour legislation and in combating what it considers the unjust use of the principle of exacted time. It has also striven to extend the use of the union label by its affiliated bodies, also of the union button and store cards. It has been under the able presidency of Samuel Gompers, with an intermission of one year, since 1886, during which time he embodied 113 national and international unions, representing approximately 77,000 local unions, and had a paid membership of about 2,000,000. One result of the activity of organized labor has been legislation of an important character, including enactments providing for the insurance of workmen against accident and making employers responsible for accidents due to negligence on their part; also for the regulation of woman and child labor. The Industrial Workers of the World is another powerful labor organization, with headquarters in Chicago. It refuses to all alliances, direct or indirect, with existing political parties or anti-political sects, and believes that the mission of the working class is to do away with capitalism, take possession of the earth and the machinery of production, and abolish the wage system. They differ from the labor unions in organizing by industries rather than by trades, and from syndicalism in that great stress is laid upon having a form of organization to correspond with capitalist industry itself. The I. W. W. is particularly strong in the lumber industry of Washington and Oregon. The organization came into disfavor in the Great War, many of its members being charged with treason. Labor organizations in Great Britain have long been prominent and exhibited their power during the war. Germany, France, Italy and some other countries have similar organizations. More recently Japan has come to the fore in the matter of labor unions. Its leading organization is the...
Yusi-kai (Friendship Association). See also Syndicalism.

Laboratory (lab'or-a-to-ri), a building or workshop designed for investigation and experiment in chemistry, physics, etc. It may be for special research and analyses or for quite general work. To the former class belong the laboratories which are attached to dye-works, color works, chemical and similar works. Laboratories are also attached to mining and metallurgical schools, to mints, to arsenals, etc. A general laboratory, such as might be attached to a school or university, has to include a variety of specialties, partly because the whole science and its applications have to be taken into account and exhibited, partly because students who have different aims frequent such places.

Labouchère (lab'y-shahr), Henry, an English politician and writer, was born in 1831, and educated at Eton. He was in the diplomatic service from 1865 to 1884; became a member of Parliament in the Radical interest for Windsor (1865-67), Middlesex (1867-68), and Northampton after 1880. He has gained a certain renown for his vivacious and satirical style, both in speaking and writing. He contributed Letters of a Besieged President in Paris to the Daily News—of which he was part proprietor—during the Franco-German war. In 1877 he started Truth, a weekly society paper. He died January 10, 1912.

Laboulaye (lab'o-lay), Edward René de Lépèvre, a French publicist, born in 1811; died in 1883. He attained a high position as a writer of historical, social and playfully satirical works. Among his best-known writings are History of Landed Property in Europe; History of the United States; Germany and the Slavic States; Paris in America; The New Bluebeard; The Poolie Prince; Prince Caniche, etc., etc.

Labrador (lab'ra-dor), a country on the east coast of North America, between Canada and the Atlantic Ocean. The interior consists mostly of a tableland 2000 or more feet high. There are a number of lakes drained partly by rivers flowing towards Hudson Strait, partly by others (such as Grand River) reaching the Atlantic in the southeast. The wild animals include the caribou or reindeer, bears, wolves, foxes, martens, and other fur-bearing animals. The climate is rigorous, there being about nine months of winter. No ordinary crops can ripen in the climate, though barley cut green is used as fodder, and potatoes and some culinary vegetables can be grown. The population (not over 15,000) consists of Indians, Eskimos and half-breeds, with a few whites on the coast. In summer it is increased by some 30,000 persons, chiefly from Newfoundland and connected with the fisheries. The Moravians have a number of missions along the coast, the Church of England one or two. The Hudson Bay Company has several posts. Labrador is also the name given to the whole peninsula between the Atlantic, Hudson Strait and Hudson Bay and the St. Lawrence. See Canada, Northeast Territory, Quebec.

Labradorite (lab'ra-dor-it), Labrador Felspar, a mineral found on the coast of Labrador, and formerly called Labrador hornblende, though that is the designation of hypersthene. It is a lime-soda felspar, and is distinguished by its splendid changeability of color. Blue and green are the most common colors, but occasionally these are intermingled with rich flame-colored tints. It is sawed into slabs by the lapidaries, and employed in inlaid work.

Labrador Pine. Same as Banksian Pine.

Labrador Tea, a name given to two species of the genus Ledum (L. latifolium and L. palustre). They grow in the north of Europe, and in America north of Pennsylvania. They are species of heath, and are low shrubs with alternate entire leaves clothed underneath with rusty wool. The fragrant crushed leaves are used by the natives of Labrador as a substitute for tea. They possess narcotic properties, render beer heady, and are used in Russia in the manufacture of leather.

Labret (lab'ret), an ornament worn in a hole in the lip by certain tribes of savages. This custom is found among various Indian tribes and through parts of Central Africa, in some instances only by women, in others, as the Eskimos of Alaska, by men as well. Labrets may be oval pieces of wood, bone or ivory two inches wide, or may take other shapes. In Central Africa the labrets worn by women are so large and the lower lip so distended as at times to hide the whole face when lifted.

Labridae (lab'ri-de), the wrasse tribe, a family of scatophagous fishes, having the genus Labrus as the type. The ventral fins are under the pectorals, and the scales are cycloid.

Labrum. See Labium.

Labruyère, Jean De. See Brueyère.

Labuan (lil-bó-an'), a small British colony consisting of au
Laburnum

island on the N. w. of Borneo. Area, 31 square miles; pop. 6296, mostly Malays from Borneo. It is well supplied with water, and has a good harbor at the settlement of Victoria, on its southeast side. Coal of excellent quality is plentiful, but has been mined hitherto with indifferent success. Other products are timber, caoutchouc, gutta-percha, wax and sago. Its chief trade is between Borneo and Singapore. This island was taken possession of by the British in 1846, and is administered by a governor and a legislative council.

Laburnum (la-bur'nam), a tree of the genus *Cytisus*, the C. Laburnum, nat. order Leguminosae, a native of the Alps, much cultivated by way of ornament. It is well and widely known for the beauty of its pendulous racemes of yellow, pea-shaped flowers. The seeds contain a poisonous substance called cytisine, and are violently emetic. The wood is much prized by cabinetmakers and turners, being wrought into a variety of articles which require strength and smoothness.

Labyrinth (lab'i-rinth), a structure having numerous intricate winding passages, which render it difficult to find the way through it. The legendary labyrinth of Crete, out of which no one could find his way, but became the prey of the Minotaur, was said to have been constructed by Daedalus. The hint of this legend was probably given by the fact that the rocks of Crete are full of winding caves. The Egyptian labyrinth was a building situated in Central Egypt, above Lake Moeris, not far from Crocodilopolis (Arsinoe), in the district now called the Fayoum. The building, half above and half below the ground, contained 3000 rooms. It was probably a place of burial. The labyrinth at Clusium, in Italy, was erected by the Etruscans, according to Varro, for the sepulcher of King Porsena. There were other labyrinths at Lemnos and Samos, but their sites are unknown. Imitations of labyrinths, called mazes, were once fashionable in gardening. They were made of hedges or privet, or some similar shrub. The best known is that of Hampton Court.

Labyrinth, the name given, during the European war, to a section of the battle line held by the Germans behind the village of Neuvy-Saint-Vaast, near Arras, in the department of Pas de Calais. It was a maze of blockhouses, shelters, saps, caverned chambers, and armored concrete defenses and tunnels, on which the German engineers had exhausted all their science. It was built around two sunken country lanes, from which spread, for a mile and a half on either side, works of every kind, amply furnished with machine guns and bomb-throwers. It was taken by the French in June, 1915.

Labyrinthodon (lab-i-rinth'o-don), a genus of fossil amphibians, whose remains are found in the carboniferous, permian and trias formations, those of the trias being found in England, India and Africa. They were allied to the crocodile and to the frog, and were 10 to 12 feet long. The name is derived from the labyrinthine structure of a section of the tooth, when seen under the microscope. The hypothetical chelicerata has been identified with the Labyrinthodon.

Lac, or Lax, from the Sanskrit laksā, that is, 100,000. In the East Indies it is applied to the computation of money. Thus, a lac of rupees is 100,000.

Lac, a resinous substance produced upon numerous Indian trees by the exudations from the buds of the female of the Coccus ficus or Coccus lacca. The finest is found on the pangs or dhak (Butāa frondōsa), the peepul (*Ficus religiosa*), and the koosum (Schleichera trijuga). It is composed of five different varieties of resin, with a small quantity of several other substances, particularly a red coloring matter. It is formed chiefly by the female insects, each of which inhabits a cell, the encrustation of which seems intended to serve as a protection for the young. When the covering is complete the eggs are laid and the mother dies. The young break their way out, swarm on to the bark, and immediately commence the secreting of lac. In India the cultivation of the lac insect has received much attention. Stick-lac is the substance in its natural state, encrusting small twigs. When broken off and washed with water it is almost entirely color, and is called seed-lac, from its granular form. When melted and reduced to a thin crust, it is called shell-lac. Mixed with turpentine, coloring matters, and other substances, lac is used to make differently colored sealing wax. Dissolved in alcohol or other menstrua, by different methods of preparation, it constitutes various kinds of varnishes and lacquers.—Lac-dye and lac-lake are coloring matters used in dyeing cloth scarlet, obtained by different processes from stick-lac. In the state in which they are found in commerce they have the form of little cakes. They were formerly obtained only from the East, but a superior kind of lac-dye is now manufactured in England from
stick-lac. The coloring matter of lac-dye is analogous to cochineal.

La cacille (là-kä-yê'), NICHOLAS LOUIS, a French mathematician and astronomer, was born in 1713; and died in 1762. He was educated for the church, but soon renounced theology for astronomy. He took an important part in the work of measuring an arc of the meridian, and in 1746 he was appointed professor of mathematics in Mazarin College. In 1751 he went to the Cape of Good Hope at the expense of the government, where he determined the position of about 10,000 stars with wonderful accuracy. As his departure from the Cape was delayed he employed the interval in measuring a degree of the southern hemisphere. His works on geometry, mechanics, astronomy and optics were numerous. Among them are Leçons d'As-

tronomie et Astronomia Fundamenta.

Lacée (lak-sè'), a group of four-
teen small coral islands including three
rocks in the Indian Ocean, about 150
miles off the coast of Malabar, belonging
to British India. The islands are well
supplied with fish, and export quantities
of corals, jaggery, plantains, poultry, etc.,
only other exports, and are of little
importance. The natives are a race
of Moham-

medans called Moplas (of mixed
Hindu and Arab descent). They are bold
sea men and expert boat-builders. Pop.
10,274.

Lace (lak), a delicate kind of net-
work, formed of silk, flax, or cot-
tton thread, and used for the ornamenting
of women's dresses. It is made either by
hand or machine, the former being made
by the needle, or made on the
machine.

Lacedaemon (lak-sè'dè'mon). See Sparta.

Lace-leaf. See Lattice-leaf.

Lacépède (là-sä-päd'), BERNARD GER-
MAIN ETIENNE DE LA VIL-
SUB-ILLON, COUNT DE, a French natural-
ist, born in 1756; died in 1825. He
abandoned the military profession, for
which he was educated, and devoted him-
self to the study of natural history. His
teachers and friends, Buffon and Dauben-
ton, procured him the important situation
of keeper of the collections belonging to
the department of natural history in the
Jardin des Plantes. In 1791 he was

originally a lace made in silk, thread, etc.,
on little strips of parchment or vellum.
At Rotterdam and elsewhere limitations
of lace are produced by machines, called
point net and warp net, from the names
of the machines in which they are made.
They are both a species of chain work,
and the machines are varieties of the
stock-frame. The manufacture of lace
appears to have existed from a consid-
erably remote antiquity, as in the repres-
sentations of Grecian female costume
which have come down to us the dresses
are frequently ornamented with lace of
beautiful patterns. In modern times
point lace originated in Italy, from which
the manufacture spread to Spain and
Flanders. Pillow lace was first made in
the Low Countries. See Battenberg.

Lace-bark Tree (Lagetta lintea-
alia), a tree of the natural order Thymelaeacae or Daphnif-

family, is a native of the West Indies. It
receives its common name from the fact
that when its inner bark is cut into thin
pieces, after maceration it assumes a
beautiful net-like appearance. It is used
by females of way of ornament, and the
negroes manufacture matting from it.

Battenberg Lace.
Lacerta

employed member of the legislative assembly, and belonged to the moderate party. During the reign of terror he found refuge in the country. Napoleon made Lacépède a member of the conservative senate, and conferred on him the dignity of grand-chancellor of the Legion of Honor. After the restoration he was made a peer of France. In 1817 he published a new edition of Buffon's works. His History of Fishes is considered his principal work. He published likewise the Natural History of Oviparous Quadrupeds and of Reptiles.

Lacerta, LACERTIDÆ. See Lizard.

Lace-winged Flies, insects of the genus Hemerobius, order Neuroptera, so called from their delicate wings having many netted spaces like lace. The larvae are exceedingly voracious, and feed upon aphides.

Lachaise (la-sha̱z), FRANÇOIS D'AIL DE, confessor of Louis XIV, member of the congregation of Jesuits, was born in the Château d'Aix in 1624; died in 1709. Lachaise commenced his course of studies in the Jesuit College at Rohan, and finished it at Lyons. He was the provincial of his order when Louis, on the death of his former confessor, Father Ferrier, appointed Lachaise his successor in 1675. He had much influence with the king, and, acting with prudence and moderation, he kept the state till his death. He left philosophical, theological and archaeological works. Louis XIV had a country house built for him to the west of Paris, the extensive garden of which now forms the cemetery of Père Lachaise, the largest in Paris.

Lachesis (la-kē-sis), the name of one of the three Fates, whose duty it was to spin the thread of life.

Lachine (la-shen), a town of Canada, the capital of the province of Quebec, on Montreal Island; essentially a manufacturing town. There are here rapids on the St. Lawrence which are avoided by means of a canal 9 miles long from Montreal harbor. Pop. (1911) 11,519.

Lachlan (lo̱k-lan), a river of Eastern Australia, rising in New South Wales, to the west of the Blue Mountains. It is joined by the Murrumbidgee, the united stream afterwards falling into the Murray. It has a total length of about 700 miles.

Lachmann (la̱m-ən), KARL, a German critic and philologist, born at Brunswick in 1793; died at Berlin in 1851. He studied at Leipzig and Göttingen, and became a professor at Königsberg in 1818, and afterwards at Berlin in 1827. His critical sagacity was very great, and he published valuable editions of the Latin and old German classics.

Lachrymæ Christi (la̱k'-ri-mē kris'tē; literally 'tears of Christ'), a sweet but piquant muscatel wine of agreeable flavor produced from grapes grown on Mount Etna, the second summit of Vesuvius. There are two kinds, the white and the red, of which the former is generally preferred.

Lachrymal Organs. See Eye.

Lachrymatory (la-kō'-ma-tō-ri), a small glass vessel found in ancient sepulchers, in which it has been supposed the tears of a deceased person's friends were collected and preserved with the ashes and urn. Later discoveries have proven this to be an erroneous belief. It was vessels contained, not tears, but perfume.

Lakawanna (la-kō'-wōnə), a city of Erie Co., New York, 5 miles s. of Buffalo, on several railroads. It has the extensive plant of the Lakawanna Steel Co., also steel works, brake beam works, etc. The South Park Conservatory here is noted for its rare flowers. Pop. (1910) 14,549; (1920) 17,018.

La Condamine (la kon-dam-n), CHARLES MARIE DE (1701-74), a French mathematician, born in Paris. In 1736 he was chosen, with Godin and Bouguer, to determine the figure of the earth, by measurements to be made in Peru. His principal works are his Travels, The Figure of the Earth, Inoculation, etc.

Laconia (la-kō'nē-ə), a city, county seat of Belknap Co., New Hampshire, 100 miles N. of Boston, in the lake region of the State. It has car shops, boatyard, mills, and manufactures of machinery, etc. Pop. (1910) 10,183; (1920) 10,897.

Lacordaire (la-kor-dar), JEAN BAPTISTE HENRI DOMINIQUE, a French pupil orator, born in 1802; died in 1861. He was educated for the law, which he renounced for the church, and received holy orders in 1827. In 1830 he was associated with Lamennais and Montalembert, in conducting L'Accueil, in which the highest church principles and extreme radicalism were advocated with great eloquence and ability. Their paper was condemned by the pope in 1832, whereupon Lacordaire devoted himself to the duties of the pulpit, and the freedom and eloquence with which he treated social affairs in his discourses attracted admiring and spell-bound audiences. He became a Dominican friar in
1840, and his fame as an orator being now fully established, his advocacy of
charities was eagerly sought, not only
in Paris, but in the provinces. In the
first election after the revolution of 1848
he was chosen the representative in the
Constituent Assembly for the department
of Bouches-du-Rhône, but resigned his
seat after a few weeks. In 1850 the
pope conferred on him the office of pro-
vincial of the Dominicans in France,
which he held for four years. In 1860
he was elected into the Académie Fran-
caise. His chief works are Considerations
on the Philosophsy System of Lamennais,
Sermons at Notre Dame, Letter on the
Holy See, Letters on the Christian Life,
etc.
Lacquer (lak’tr), a varnish usually
consisting of a solution of
shell-lac (sometimes sandarach, mastic,
etc.) in alcohol, colored by arnottro, gamb
rice, saffron, and other coloring matters,
for coating brass and some other metals,
to give them a golden color, to preserve
their luster, and to secure them against
rust. Lacquered brass appears as if gilt,
and tin is made yellow. Lacquering is
also applied to the coating with varnish
of goods in wood and papier-mâché. The
Japanese and Chinese excel in works of
this kind.
Lacrosse, a game at ball, originating
with the Indians of Canada,
played somewhat on the principle of Asso-
ciation football, except that the ball is
carried on a hooked stick fitted with
a loose net (the crosse), the player in pos-
session running with it toward the enemy's
goal, passing it by tossing to one of his
own side, or throwing it over his head
forward toward the goal. There are 12 men on
each side; the field 125 feet long.
La Crosse, a city, county seat of La
Crosse Co., Wisconsin, at
the confluence of the La Crosse, Black
and Mississippi rivers, 198 miles by rail
W. N. W. of Milwaukee, on several rail-
routes. It has a number of fine public
buildings, notably the high school and
municipal building. It is a notable
manufacturing city, with rubber and flour
mills, tractor and plow factories, an ex-
tensive plant manufacturing automobile
accessories, also foundries, machine shops
and many other industries. Pop. (1920)
30,383.
Lactantius (lak-tan’shi-us), Lucius
Calvus Frimianus, or
Lucius Cæcilius Firmianus, a cele-
brated father of the Latin Church, prob-
ably a native of Italy, and born about
the middle of the third century. He lived
for a long time at Nicomedia as a
teacher of rhetoric, until Constantine the
Great invited him to Gaul, and committed
to his care the education of his eldest
son Crispus. He died at Treves about
325. His writings are characterized by
a clear and agreeable style. His seven
books, Institutiones Divinae, are particu-
larly celebrated, and worthy of notice.
Lacteals (lak’te-als), numerous mi-
nute tubes which absorb or
take up the chyle or milk-fluid from the
alimentary canal, and convey it to the
thoracic duct. See Chyle, Lymph.
Lactic Acid (lak’tik) (CaH4O4), an
acid found in several
animal liquids, and particularly in human
urine. It is not only formed in milk when
it becomes sour, but also in the fermenta-
tion of several vegetable juices, and in
the putrefaction of some animal matters.
It is a colorless, inodorous, very sour
liquid, of a syrupy consistence. It coagu-
lates milk.
Lactine, LACTOSE (lak’tos), sugar of
milk (CaH12O11), a substance
obtained by evaporating whey, filtering
through animal charcoal, and crystalliz-
ing. It forms hard, white, semitranspar-
tant triclinic crystals, which have a
slightly sweet taste, and grate between
the teeth. It is convertible like starch
into glucose by boiling with very dilute
sulphuric acid.
Lactometer (lak-tom’er-ter), or Ga-
lactometer, an instru-
ment for ascertaining the different quali-
ties of milk. Several instruments of this
sort have been invented. One consists of
a glass tube 1 foot long, graduated into
100 parts. New milk is filled into it and
allowed to stand until the cream has
fully separated, when its relative quanti-
ty is shown by the number of parts in the
100 which it occupies.
Lactose. See Lactine.
Lactuca (lak-tū'ka), the lettuce genus of plants. See Lettuce.

Ladakh (lādāk'), a governorship under the Maharajah of Cashmere, of irregular outline, comprising part of the valley of the Upper Indus and its tributaries, and lying at the back of the central range of the Himalayas; area, about 30,000 square miles; capital, Leh. The climate is characterized by cold and excessive aridity. The wool of the goat is the well-known shawl-wool of Cashmere. There is a considerable transit trade. Ladakh being naturally the great thoroughfare between Chinese Tartary and Tibet, on the one hand, and the Punjab, on the other. The trade is supervised by two commissioners, one native and one British. The language is Tibetan, and the government a despotism controlled by the priesthood. The inhabitants are of Mongolian cast and Buddhist religion. Polandry prevails.

Ladanum (lad'a-num), a delicately scented, resinous gum which exudes from certain plants of the Cistus family growing in Crete, Cyprus and Asia Minor. In Cyprus the gum is collected from the beards of goats.

Ladrones (la-drōn'z or la-drō'nēz), or MARIANA ISLANDS, a group of fifteen islands in the Pacific Ocean, north of the Caroline Islands; total area about 420 square miles. Guam is the southernmost and largest; next in importance is Rota. The islands are mostly of volcanic origin, and are very rugged. Five are of coral formation. They were discovered by Magellan in 1521, and were settled by the Spaniards. June 21, 1898, during the war with Spain, the United States cruiser Charleston took possession of Guam, hoisting the American flag over Fort Santa Cruz. The United States retains Guam. The other islands were sold by Spain to Germany in 1898.

Ladd, George Taussig, an American psychologist, born at Painesville, Ohio, January 19, 1843; was graduated (1864) at Western Reserve College. He finished his course at Andover Theological Seminary, 1869, and became pastor of the church at Edinburg, Ohio. From 1869 to 1879 he was in charge of a church at Milwaukee, Wis. During the succeeding two years he held the professorship of philosophy at Bowdoin College and at the same time lectured on theological subjects at Andover. In 1881 Dr. Ladd accepted the professorship of philosophy at Yale. He became emeritus professor in 1906. He published among other books, Introduction to Philosophy (1886), Psychology Descriptive and Explanatory (1894), Philosophy of Mind (1891), Phyl-

Lady-slippers (Cyprigladium), a beautiful genus of orchidaceous plants, conspicuous for its large inflated flowers. The species are confined to the northern regions of the globe. Three species are natives of the United States. C. Arlefinum, found in the north, remarkable for the form of the lips, readily suggests the name.

Ladoga (lādō'ga) Lake, the largest lake in Europe, situated N. of Petrograd and crossed by the frontier-line between that country and Finland. It is 120 miles in length, 75 in breadth, and 3008 square miles in area. There are numerous islands. It receives the waters of Lake Onega and Lake Ilmen in Russia, and of Lake Saima and other lakes in Finland; and its own waters are carried off to the Gulf of Finland by the Neva. The average depth of Lake Ladoga does not exceed 300 feet.

Lady (lā'di), as a title, is borne in Britain by the wives of knights, and of all degrees above them, except the wives of bishops. The legal designation of the wife of a knight or baronet is Dame, though it is customary to designate her by Lady prefixed to her husband's surname. In the United States it is a term of general application. See Adresses (Forms of).

Lady-bird, the name of a number of insects or beetles, common on trees and plants in gardens. They form the genus Coccinella of Linnaeus. They are usually ornamented with scarlet spots. They are of great service to cultivators on account of their destruction of aphides or plant-lice.

Lady Chapel, a chapel dedicated to the Virgin Mary, frequently attached to large churches. It was variously placed, but generally to the eastward of the high altar, and in churches of earlier date than the thirteenth century the lady chapel is frequently an additional building. See under Cathedral.

Lady-day, the 25th of March, the day commemorating the Annunciation of the Virgin Mary, one of the regular quarters-days in England and Ireland. It is one of the immovable festivals of the Roman Catholic and Anglican churches.

Lady-fern, a species of polypanclae-

Lady's-slipper (Cyprigladium), a
Laennec (læ-en-nék), René Théophile Hyacinthe, a French physician, born at Quimper, in 1781; died in 1826. His fame rests on the splendid discovery of mediastinal auscultation; that is, of the use of the stethoscope. The original discovery, however, is claimed for Avenbruger. In 1821 he was appointed professor of medicine in the College of France. The following year he was appointed professor of clinical medicine, and regularly performed the duties of his office till his death.

La Farge, John, artist, was born in New York in 1835, studied architectural decoration and painting, began painting with religious subjects and decorative work, then became a flower and landscape painter, and during his later years occupied himself with the making of stained glass windows, inventing the new methods known as American and completely changing the art of the glass stainer. Among his noted works are Paradise at Newport, Christ and Nicodemus, and the frescoes of Trinity Church, Boston. He died in 1910.

La Farina (lā-fär-nä), Giuseppe, an Italian patriot, journalist and historical writer, born at Messina in 1815; died in 1863. He took part in the revolution of 1848, and subsequently cooperated with Cavour and Garibaldi. He wrote Souvenirs of Rome and Tuscany, the Revolution of Sicily, etc.

La Fayette (lā-fa-yet), Marie Magdelaine de la Vergne, Countess de, a French novelist, born in 1632; died in 1693. In 1655 she married Count Francis de La Fayette, and her house became a place of meeting for the most distinguished men of her time, including Rochebrune, Huet, Ménage, Lafontaine, etc. The most distinguished of her novels are Zaida, La Princesse de Clèves and La Princesse de Montpensier.

Lafayette, Yves Gilbert Motier, Marquis de, was born in Auvergne in 1757; died in 1834. He commenced his career at the court of Louis XV, at the period when hostilities were commencing between Britain and her American colonies. In 1777 he left France for America, having fitted out a vessel for himself, and was received by Washington and his army with acclamations. He joined their ranks as a volunteer, was wounded near Philadelphia, and commanded the vanguard of the American army at the capture of Cornwallis. He returned to France on the close of the campaign; was called to the Assembly of the Notables in 1787, and was elected a member of the States-General, which took the name of National Assembly (1789). In the assembly he proposed a declaration of rights, and the decree providing for the responsibility of the officers of the crown. Two days after the attack on the Bastille he was appointed (July 15) commander-in-chief of the National Guards of Paris. It was through his means that the lives of the king and queen were saved from the mob that had taken possession of the palace at Versailles. After the adoption of the constitution of 1790 he resigned all command, and retired to his estate of La Grange. In 1792 he was appointed one of the three major-generals in the command of the French armies, and directed some small operations on the frontier of Flanders, at the same time striving unsuccessfully to defeat the Jacobins at Paris. Commissioners were sent to arrest him, on which he determined to leave the country, and take refuge in some neutral ground. Having been captured by an Austrian patrol, he was confined at Olmitz till 1797. After his return to his estate, he lived for many years without taking part in public affairs, and declining the dignity of senator offered him by Bonaparte, he gave his vote against the consulate for life. In 1818 he was chosen member of the Chamber of Deputies, and was a constant advocate of liberal measures. In 1824 he visited the United States, and was received with great enthusiasm. Congress voted him $200,000 and a township of land. During the revolution of July, 1830, he was appointed general of the National Guards of Paris and it was chiefly to Lafayette that Louis Philippe owed his elevation to the throne. Lafayette, a city, capital of Tippecanoe County, Indiana, on
the Wabash River and Wabash and Erie Canal, and at the intersection of several railroads, 33 miles northwest of Indianapolis. It is the seat of Purdue University, the State technical college. It has lumber mills, foundries, and extensive packing, livestock, grain and manufacturing interests. Pop. (1910) 20,081; (1920) 22,486.

Lafayette, Louisiana, on Vermilion River, 50 miles N. of Gulf of Mexico, in the cotton, cane and rice belt. It has lumber mills, sugar refineries, sash and door factory, compress, gins, machine shops, etc. Oil fields are nearby. Pop. 7295.

Lafayette College, at Easton, Pa., 1826. Besides courses in the liberal arts and sciences, there is a course in biblical instruction. It is under Presbyterian auspices. Student body, about 600.

Lafitte (la-fít), Jacques, a French financier and statesman, born at Bayonne in 1767; died in 1844. He acquired a fortune by banking and was entrusted with the private property of both Napoleon and Louis XVI. He took an active part in the revolution of July, 1830, was made minister of finance and president of the council, in which situation he remained until March 14, 1831. He lost his fortune in the crisis which followed, but a national subscription in 1833 relieved him from embarrassment.

Lafitte, Jean, a French privateer, born about 1780, who about 1813 became the leader of a band of pirates established at Grande Terre, in Batavia Bay, on the coast of Louisiana, and plied his art in the Gulf of Mexico. In 1814, when the British fleet entered the Gulf for an attack on New Orleans, Lafitte was offered a large sum and a commission in the navy if he would aid in the attack. He refused and gave his aid to General Jackson in the defense. He was in the condition of pardon to himself and followers. He subsequently regained in piracy, but nothing is known of the time or cause of his death. His exploits have given rise to several tales and romances.

La Follette, man, born at Primrose, Wisconsin, in 1855. He studied at the University of Wisconsin, was admitted to the bar in 1880, and was a Republican member of Congress from 1885 to 1891. He took a prominent part in framing the McKinley tariff bill. He was elected governor of Wisconsin in 1900, and was re-elected in 1902 and 1904, resigning in 1906 to become United States Senator. He became active in reform measures, and rose to be the leading spirit in the "Insurgent" movement in Congress. His action was strongly sustained by the popular vote reflecting him to the Senate in November, 1910. He vigorously opposed the bill for reciprocity in trade with Canada in 1911. In 1908 he received 25 votes for the presidential nomination, and in 1912 was prominent as a candidate of the "progressive" Republicans.

Lafontaine (laf-o-tân), Jean de, a French writer, born at Château-Thierry in 1621; died in 1695. He was invited to Paris by the Duchesse de Bouillon, and after being patronized by several persons of distinction Madame Sablière took him into her house, and freed him from domestic cares. He was in habits of intimacy with Molière, Boileau, Racine, and all the first wits of Paris, by whom he was much beloved for the candor and simplicity of his character. But he was no favorite with Louis XIV, who even resented it. It is time to confirm his nomination to the French Academy. The first volume of his Contes or Tales appeared in 1664, a second in 1671. They are full of fine touches of genius, but are grossly indecent. Of his Fables (in which animals are represented speaking and acting) innumerable editions have been printed, and it is through them that he is universally known. Lafontaine is also the author of Les Amours de Psyché, a romance; La Florentine and L'Enamoureuse, comedies; Anacreontiques, etc.

Lager Beer (lä'gär), a light beer, not so intoxicating as the English pale ales, largely brewed in Germany and Austria. It was also made in America prior to 1919 (see Brewing).

Lagerlöf (läg’er-löf), Selma, a Swedish author, born at Marbäckaford in 1858. She became a teacher and in 1891 published a collection of tales, Gæsta Beringes Saga, followed in 1897 by her great seven-volume narrative of Antichrist. These were so brilliant in style and character as to win her a foremost place among recent Scandinavian writers. She has since published various other works, and in 1909 was awarded the Nobel prize for literature.

Lagerstæmia. See Bloodwood.

Lago Maggiore (mäjô’re; anciently Verbano), a lake partly in Northern Italy, partly in Switzerland, about 56 miles long and 7 broad, traversed by the Ticino. It is 621 feet above the level of the sea, and at the northern end in some places as deep as 2500 feet. Its banks abound in every Alpine beauty, and are adorned with a number of picturesquely situated villages and towns. On all sides it is
surrounded by hills, and it contains several islands. See Borromean Islands.

Lagos (lä-gōs), a seaport city of Nigeria, British West Africa, on an island of the same name. It is the seat of government and is one of the most progressive cities of West Africa. There is a good harbor. The chief exports are palm oil and kernels. Pop. 60,000. The former colony of Lagos (29,000 sq. miles; pop. 2,250,000) was united with Southern Nigeria in 1906; and in 1914 these were amalgamated to form the colony and protectorate of Nigeria.

Lagos (lä-gōsh), a city of Jalisco, Mexico, 6000 feet above the sea, in the southern part of the State. Pop. 12,243.

Lagos (lä-gōsh), a seaport of Algarve, Portugal, on the south coast. Pop. 8291.

La Grande (lä gränd), a city, county seat of Union Co., Oregon, 50 miles s. of Walla Walla, Washington, in a rich wheat country. There are railroad shops, flour and lumber mills, beet sugar factory, etc. Pop. (1920) 6913.

La Grange, a city, county seat of Troup Co., Georgia, 71 miles s.w. of Atlanta, on 3 railroads. It has 9 cotton mills, lumber plants, cotton warehouse, etc. Home of La Grange Female College (Methodist). Pop. (1910) 5587; (1920) 17,038.

La Grange, a residential village of Cook Co., Illinois, 14 miles w. of Chicago. Pop. 6525.

Lagrange (lä-grāz), Joseph Louis, a celebrated mathematician, was born at Turin in 1736; died at Paris in 1813. He was of French origin, and his great-grandfather was a cavalry officer in the French army, who afterwards passed into the service of Sardinia, where he early displayed a natural taste for mathematics. When scarcely nineteen years of age Lagrange was made mathematical professor in the artilliery school at Turin. In 1764 he obtained the prize of the Academy of Sciences in Paris for a treatise on the libration of the moon, and in 1768 for another on the theory of the satellites of Jupiter. About this time he made a visit to Paris, where he became personally acquainted with D'Alembert, Clairaut, Condorcet and other savants. Soon after his return he received an invitation from Frederick the Great, to whom he had been recommended by D'Alembert, to go to Berlin, with the title of Director of the Academy. Here he lived for twenty years, and wrote his great work La Mécanique Analytique. After Frederick's death (1786) the persuasion of Mirabeau and the offer of a pension induced him to settle in Paris. He took no active part in the revolution, and the law for the banishment of foreigners was not put in force against him. In 1794 he was appointed professor in the newly-established Normal School (Ecole Normale Supérieure) at Paris, as well as in the Ecole Polytechnique. The most important of his works are his Mécanique Analytique, Théorie des Fonctions Analytiques, Leçons sur le Calcul des Fonctions.

Laguna (lä-gô'nah), a province in the center of Luzon I., Philippines, on Laguna Bay. It is mountainous in the n. but more level in the s., where much rice, tobacco, indigo, coffee, cocoa, and sugar are raised. The capital is Santa Cruz, at the mouth of the Santa Cruz River. The inhabitants (Tagalogs) are civilized. The area is 752 square miles, and the population about 177,000. Laguna, the former capital of Tenerife I., Canaries, is situated 4 miles n. by w. of Santa Cruz. Oranges, raisins, wheat, and tobacco are produced. Pop. 13,000.

La Guayra. See Guayra.

La Harpe (lä ärp), Jean François de, a French dramatic poet, critic and philosopher, born at Paris in 1739; died in 1803. He formed a close friendship with Voltaire, whose style he imitated in his numerous dramas, eulogies, etc. About 1786 he began to lecture at the Lycée on literature. On the breaking out of the revolution, La Harpe embraced the principles of republicanism; but during the reign of terror, his moderation rendering him an object of suspicion, he was in 1793 thrown into prison, where his ideas underwent a complete change. After being restored to liberty he continued his lectures and collected them into a separate work (Lycée au Cours de Littérature Ancienne et Moderne), which constitutes his most durable title to fame.

Laharpur (lä-härp-oö'), a town of India, in Oudh, 17 miles n. of Sitapur. Pop. about 12,000.

La Hogue (lä og'), a cape of northern France, forming the point of the peninsula on which is Cherbourg, department of La Manche. A naval battle was fought here, May 13th, between the French under Tournon and the British and Dutch under Admirals Russell and Rooke, in which the latter were victorious.

Lahore (lä-hôr'), a city of Hindustan, capital of the Punjab, and administrative headquarters of Lahore division and district, on the left bank of the Ravi, 265 miles northwest of Delhi.
It covers an area of 640 acres, and is surrounded by a brick wall 16 feet high, flanked by bastions. The streets are extremely narrow, unpaved and dirty; and the houses have in general a mean appearance. The most remarkable buildings are the mosques of Aurengzebe, of Vizier Khan and of Sonara; the mausoleum of Runjeet Singh, etc. The European quarter lies outside the walls on the south, and dates from 1849. Among the public buildings and institutions are the Punjab University, the Oriental College, Medical School, Law School, Mayo Hospital, etc. In 1824 Lahore became the seat of the Mogul empire, under which it reached its greatest splendor. Before passing into the hands of the British it was the capital of the Sikhs. Pop. (1911) 228,687.

Lahr (lär), a town of Baden, 53 miles s. s. w. of Carlsruhe; manufactures textile fabrics, leather, etc. Pop. 13,577.

Lahsa. See El hasa.

Laibach, or LATRACH (litˈbäk), a town of Austria, duchy of Carniola, of which it is the capital. It is situated 35 miles northeast of Trieste, on both sides of the river of the same name. Its principal buildings are the Cathedral of St. Nicholas, with fine pictures, frescoes, and carvings; the old Gothic town house; the old castle; the lyceum and other educational institutions. It manufactures woolen and cotton goods, paper, etc. Pop. (1910) 47,127.

Laing (lönɡ), ALEXANDER GORDON, an African traveler, born at Edinburgh in 1793; murdered in 1826. After serving in the army and attaining the rank of major, he entered in 1819 on his career as an African traveler. The results of his early journeys in West Africa were published in 1825. He explored the upper course of the Niger River, and while doing so, was assassinated by his guide near Timbuctoo.

Laing, DAVID, a Scottish antiquary, born in Edinburgh in 1792; died in 1878. He became secretary of the Bannatyne Club, a position which he retained during the 38 years of the society's existence. All the publications of the club came under his superintendence, and in not a few cases he was the actual editor. In 1837 he was appointed librarian to the Society of Writers to the Signet, an office which he held till his death. He was in turn treasurer, secretary, vice-president, and foreign secretary to the Scottish Society of Antiquaries. He published the works of John Knox, with valuable notes; Select Remains of the Early Popular Poetry of Scotland; editions of Dunbar's, Henryson's and Sir David Lyndsay's poems; Wytoun's Urnykill, etc., besides editing several of the publications of the Abbotsford and Spelling clubs, and of the Shakespeare and Woodrow societies.

Laing, MALCOLM, a Scottish historian, born in 1762; died in 1818. He was called to the Edinburgh bar in 1785. His best known work is the History of Scotland from the Accession of James VI to the Reign of Queen Anne, with a dissertation proving the participation of Mary Queen of Scots in the murder of Darnley.

Laissez-faire (li-'sä-fär), in economics, a term applied to the theory that a public authority should interfere in the concerns of a community as little as possible; that wealth tends to be produced most amply and economically where a government leaves individuals free to produce and transfer on mutually arranged terms, confining itself to the protection of property and person and the enforcement of contracts. This rule in practice is limited by various exceptions, as in government interference in the matters of education and the employment of children; in the promotion of health or morality; and in the private economic interests of certain industrial classes.

Laius. See Ædipus.

Lake (lāk), a large sheet or body of water, wholly surrounded by land, and having no direct or immediate communication with the ocean, or with any seas, or having so only by means of rivers. It differs from a pond in being larger. Lakes are divided into four classes: (1) Those which have no outlet, and receive no running water, usually very small. (2) Those which have an outlet, but receive no superficial running waters and are consequently fed by springs. (3) Those which receive and discharge streams of water (by far the most numerous class). (4) Those which receive streams, and which have no visible outlet, being generally salt, as the Caspian Sea and Lake Aral.

Lake, GEORGE, VISCOUNT, a British general, born in 1744; died in 1808. He entered the army in 1758, and served in the Seven Years' war, in America in 1751, and in Holland 1759-94. He attained the rank of general, and was commander-in-chief in Ireland during the trouble of 1797-98, and in India during the Mahratta war (1803), which he brought to a brilliant conclusion. He defeated Holkar in 1805, returned to England in 1807, was made viscount, and ap-
Lake

pointed governor of Plymouth, where he died.

Lake, Simon (1806- ), an American inventor, born at Pleasantville, New Jersey. He invented the Argonaut, the first sea-going submarine, and other underwater devices.

Lake Charles, a city, parish seat of Calcasieu Parish, Louisiana, on the Calcasieu River, 219 miles w. of New Orleans. It is situated on Lake Charles and has many fine buildings, including the city hall, court house, high school, etc. It is the gateway of the Calcasieu long leaf yellow pine lumber industry; center of the Gulf Coast rice industry; other resources are sulphur, petroleum, fish, game, general agriculture, berries and livestock. It is served by three trunk line and two branch line railroads. It has car shops, refinery, naval stores, barges and ship yards, rice and planing mills, etc. Pop. (1920) 13,068.

Lake City, a city, county seat of Columbia Co., Florida, 60 miles w. of Jacksonville, in a cotton-growing section, with truck farming and other industries, including lumber and turpentine. It is the seat of Columbia College (Baptist). Pop. (1920) 7002.

Lake Dwellings, the name given to habitations built on small artificial or partly artificial islands in lakes, or on platforms supported by piles near the shores of lakes. The use of habitations of this nature is a subject which has engaged the attention of archeologists and others very largely since the discovery of the remains of a lake-dwelling in Ireland in 1839, of similar ones in Switzerland in 1864, and subsequently of others elsewhere. The archeological interest thus attaching to these lacustrine remains has drawn attention to the fact of similar dwellings being still used in various parts of the world, in Russia, the Malay Archipelago (Borneo and Celebes), along the River Paravy in Corea, and Lake Marasculo in Venezuela, New Zealand, and in a modified form in some parts of Central Africa. The first who is known to have described lake dwellings is Herodotus, who mentions certain dwellings of this kind on Lake Braccia in Thrace as being approached by a narrow bridge, each habitation having a trapdoor in the floor, giving access to the water beneath, through which fish were caught. A great number of these Pfahlbauten (pile structures) have been discovered in the Swiss lakes, some belonging to the iron age, some few even to Roman times, but the greater number appearing to be divided in about equal proportions between the stone and bronze ages. The Celtic lake dwellings, called crannogs, are more or less artificial islands composed of earth and stones strengthened by piles. Those of Ireland are of a much later date than those of Switzerland, and are frequently noticed in early history as strongholds of petty chiefs. Similar structures are not infrequent in Scotland. The relics found in these buildings have thrown much light on prehistoric man, large populations having occupied these pile-buildings during extended periods of time. Consult Zeller's "Lake Dwellings of Switzerland," etc.

Lakeland, a city of Polk Co., Florida, center of the phosphate industry. Has railroad and machine shops, lumber plants, fruit-packing plants, etc. It is the metropolis of the Polk Co. lake region and is a health and pleasure resort. Pop. (1920) 7062.

Lake of the Thousand Islands, an expansion of the river St. Lawrence, soon after it leaves Lake Ontario, between Canada and the State of New York. It contains in all about 1700 small islands.

Lake of the Woods, a lake on the northern frontier of British America, and partly within the United States territory, 220 miles west of Lake Superior. It is upwards of 70 miles in length, has an extremely irregular form, and a coastline of about 250 miles. It is studded with numerous wooded islands. Rainy River, the principal feeder of the lake, enters it at its southeastern extremity; its discharge is at the north by the River Winnipeg.

Lakes, pigments consisting of a coloring matter combined with a metallic oxide. They are obtained by mixing with a solution of the coloring matter a solution of alum or of a salt of tin, tungsten, zinc, lead, or other metal, and then adding an alkali or alkaline carbonate. Among the pigments prepared in this way may be mentioned blue lake, consisting of cobalt blue, indigo, or ultramarine and alumina; madder lake, of madder and alumina; orange lake, of turmeric and alumina; carmine lake, of cochineal and alumina; purple lake, of logwood and alumina; and so on. Lake pigments are used in painting, calico-printing, and in the manufacture of wallpaper.

Lake School, or Lake Poets, a group of Edinburgh Review to Wordsworth, Southey, Coleridge, Wilson, etc. They had little in common except their non-classicism, and received the name from residing in
Lakewood, a residential city of Cuyahoga Co., Ohio, adjoining Cleveland, of which it is a suburb. Pop. (1920) 41,732.

Lakewood, township of Ocean Co., New Jersey, 50 miles s.w. of New York, in the pine district; a well-known health resort. Pop. 6,110.

Lakhimpur (lak-him-por'), a British district of India, occupying the extreme eastern portion of Assam; area, 3,724 sq. miles; a great tea-growing district. Pop. 375,000.

Lakshmi (luk-š Müslë), in Hindu mythology, the wife of Vishnu. She sprang in full perfection from the froth of the ocean. She is the Hindu Venus, the Ceres or goddess of abundance, and the goddess of prosperity. Flowers and grain are the offerings most commonly given to her.

Lalande (là-lând'), Joseph Jérôme Le Français de, a French astronomer, born at Bourg-en-Bresse, dep. of Ain, in 1752; died at Paris in 1807. He devoted himself to mathematics and astronomy, and was sent by the academy in 1751 to Berlin to determine the parallax of the moon, while Lacaille went with the same object to the Cape of Good Hope. After having finished his operations at Berlin, he was chosen member of the Academy of Sciences in Paris in the year 1753. Thenceforward no volume of their Transactions appeared which did not contain some important communications from him. In 1762 he was appointed professor of astronomy in the Collège de France, where he lectured with immense success to the end of his life. His chief works are his Treatise on Astronomy; History, Theory and Practice of Navigation; and Astronomical Bibliography. He wrote all the astronomical articles for the great Encyclopédie, and rewrote those for the Encyclopédie Méthodique, and contributed to various scientific periodicals, besides editing the Connaissance des Temps from 1760 to 1775, and from 1794 till his death.

Lalita-Patan (lə-lə-tə-pətən), a town in Northern Hindustan, in Nepal, near the south bank of the Bagmati, and two miles s.w. from Katmandu, with which it is connected by a bridged road. It is an old place, and contains many Buddhist temples. Pop. 24,000.

Lally-Tollendal (lə-lə'-tol-en-dal), Thomas Arthur, Comte, born in Dauphiné in 1702, of Irish parents, his father having followed the fortunes of James II. Trained to arms, he was made brigadier on the field of Fontenoy for distinguished bravery. He accompanied the Pretender to Scotland in 1745, and in 1750 he was selected to restore the French influence in India, for which purpose he was made governor of Pondicherry. He utterly failed in this, surrendered Pondicherry in 1761, and was brought prisoner to England. The following month he was allowed to return to France, where, after a long imprisonment, he was condemned and executed (1763) for treachery, etc. His son, supported by Voltaire, obtained in 1778 a complete authoritative vindication of his father's conduct.

Lalo. See Baobab.

Lama, in zoology. See Llama.

Lamaism (lə-ˈma-iz-əm), a variety of Buddhism, dating from the seventh century after Christ, and chiefly prevailing in Tibet and Mongolia; so called from the lamas or priests belonging to it. The highest object of worship is Buddha, who is regarded as the founder of the religion, and the first in rank among the saints. The other saints comprise all those recognized in Buddhism, besides hosts of religious teachers and pious men canonized after their death. The clergy are the representatives or reincarnations of these saints on earth, and receive the homage due to them. Besides these saints a number of inferior gods or spirits are recognized by Lamaism and receive a certain worship. The Lamas have a hierarchy in some respects resembling that of the Roman Catholic Church, and they have also monasteries and nunneries, auricular confession, litanies, etc., and believe in the intercession of the saints and in the saying of masses for the dead. In the hierarchy there are two supreme heads, the Dalai-lama and the Tesho-lama, in whom Buddha is supposed to be incarnate. Next in rank to these two grand-lamas are the incarnations of saints, after which follow those of patrons or founders of lamaseries, or Buddhist monasteries, and then the
lower ranks, distinguished merely by talents or learning. The Dalai-lama and Tesho-lama are nominally co-equal in rank and authority; but the former from possessing a much larger territory is in reality much the more powerful. The former, whose residence is at Potala, near Lassa, is the acknowledged head of the Buddhists not only in Tibet, but throughout Mongolia and China. When either of the two lamas dies, his place may be filled according to directions given by himself before his death, stating into what family he purposed transmigrating. The present lama, infected by political ambition, sought to usurp the sovereignty of Tibet. In consequence, early in 1910, a force of Chinese troops was sent to arrest him and he was forced to flee, taking refuge in British India, where he now holds his court.

**Lamar (lamar’), LUCIUS QUINTUS CINCIUS NITUS, jurist, was born in Putnam County, Georgia, in 1825. Admitted to the bar in 1847, he served two terms as congressman from Mississippi (1856-1860). In 1861, after taking part in the secession convention of Mississippi, he was sent to represent the Confederate cause in Europe. After the war he was professor of political economy and law professor in the University of Mississippi, and afterwards served in both Houses of Congress, manifesting a fraternal feeling towards the North that attracted general attention. In 1885 he was appointed Secretary of the Interior and in 1887 was made a justice of the Supreme Court. He died in 1893.**

**Lamarc (lámär’), JEAN BAPTISTE PIERRE ANTOINE DE MONET, CHEVALIER DE, a French naturalist, born in Picardy in 1744; died at Paris in 1829. He devoted himself to the study of medicine and physical science. Among his chief works are Philosophie Zoologique, in which the famous theory forshadowing what is now known as the law of evolution; Histoire Naturelle des Animaux sans Vertebres, Tableau Encyclopédique de la Botanique, etc. His religious beliefs have been described as a curious mixture of pantheism and deism.**

**Lamarmora (lə-mär-mo-ra’), ALFONSO, MARQUISS, an Italian soldier and statesman, born in 1804; died in 1878. He left the military academy at Turin in 1823, and thenceforward devoted himself to army reform. He was engaged in checking the revolutionary movements of 1848, and soon after became minister of war. In 1854 he commanded the Sardinian troops in the Crimea. He accompanied Victor Emmanuel to the field in 1859 against Aus-}

...
On leaving the hospital he was employed for a short time in the South Sea House, from which he removed in 1782 to an appointment in the accountant's office of the East India Company. Here he remained till 1825, when he was permitted to retire on a pension of £450. The whole course of his domestic life was devoted to the safekeeping and care of his sister Mary, who in a fit of acute mania had stabbed her mother to the heart in 1796. His first appearance as an author was in 1798, when he published a volume of poems in conjunction with his friend Coleridge and Lloyd. His love for seventeenth century literature bore fruit in the 'Tales from Shakespeare' (1807) and 'Specimens of English Dramatic Poets' who lived about the time of Shakespeare (1808). He made two attempts at the drama: 'John Wrotet', written in imitation of the early English dramatists; and a farce entitled 'Mr. H.', which was performed at Drury Lane in 1806, and proved a failure.

On the other hand, his tale of 'Rosamund Gray' (London, 1798) was well received when it appeared, and is still a favorite. He owes his literary distinction to his delightful 'Essays of Elia', chiefly contributed to the 'London Magazine'. They have been frequently re-published in a collected form. Here, in a style ever happy and original, he has carried the short humorous essay to a point of excellence perhaps never before attained. His sister, Mary Anne (born in 1765; died in 1847), was joint author with her brother of Mrs. Leicester's School, 'Tales from Shakespeare' and 'Poetry for Children.'

Lamb, Isaac Wixan, inventor, born at Salem, Michigan, in 1840. His principal invention is a knitting machine capable of producing more than 30 varieties of knit goods and of making 4000 loops a minute at ordinary work. It can make both flat and tubular work.

Lamballe (lambal'), Maria Theresa Louisa de Savoie-Carignan, Princess de, was born at Turin in 1749, and married to the Prince de Lamballe, who died the next year. She was the devoted friend and companion of Marie Antoinette, whose sufferings she shared till September 8, 1792, when she was cruelly murdered.

Lambayeque (lam-bä-yä'kä), a town in Peru, capital of the department of the same name, 6 miles from the sea, on the river Lambayeque. Pop. 10,500. Area of department, 4614 square miles; pop. (1906) 93,070.

Lambert (lam'bért), Daniel, noted for his extraordinary size, was born in Leicester in 1770; died in 1809. He was exhibited in London and the principal towns of England, and at the time of his death was 6 feet 1 inch in height, weighed 750 lbs. (over 62½ stone), and measured 9 feet 4 inches round the body, and 3 feet 1 inch round the leg.

Lambert, John, parliamentary general during the English civil war; born at Kirkby Malhamdale, Yorkshire, in 1619; died at Guernsey in 1692. He joined the parliamentary army under Fairfax, was colonel at Marston Moor, and major-general in the war in Scotland. He took the lead in the council of officers who gave the protectorate to Cromwell, but he afterwards fell into disgrace, and was deprived by Cromwell of all his commissions, though a pension of £2000 was allowed him for past services. He headed the confederacy which deposed Richard Cromwell, and in 1660 set out for the north to encounter Monk, but was deserted by his troops, seized, and conducted to the Tower. At the Restoration he was excepted from the act of indemnity, brought to trial, and condemned to death, but had his sentence commuted to banishment to Guernsey.

Lambert's Pine ('Pinus Lambertiana'), a N. American pine growing in California, and sometimes reaching the height of 300 feet. It yields when burned a sugary substance known as California manna. The leaves are in fives; the cones are 14 to 18 inches long, and contain edible seeds.

Lambse (lom-bë's), a town of Algeria, department of and 62 miles s. w. of the town of Constantine. It is the site of the ancient Lambessa, and has important Roman remains.

Lambeth (lambeth), a parliamentary borough of South London, opposite to Westminster, with which it is connected by a bridge 1040 feet long. It has recently become famous for its potteries. Lambeth Palace, the official residence of the Archbishops of Canterbury, contains a library with 30,000 volumes and upwards of 14,000 manuscripts. St. Thomas' Hospital is situated on the Albert Embankment, opposite the Houses of Parliament. The borough is divided into four parliamentary divisions, North, Kennington, Brixton and Norwood. Pop. (1911) 298,120.

Lambeth Articles, a series of nine articles drawn up by Archbishop Whitgift in 1586, embracing the most pronounced doctrines of Calvinism. They were rejected by the queen and parliament, and again at the Hampton Conference, 1604.

Lamego (la-mä'gō), a city of Portugal, in Beira, in a plain near
the Douro, 42 miles east of Oporto. It has an old Gothic cathedral. Pop. 9471.

Lamellibranchiata (la - mel-i-brang-ki-ā'ta), a division of the higher mollusca, represented by the oysters, mussels, cockles, etc., which are distinguished by the possession of a bivalve shell, the absence of a distinct head, and the presence of four lamellar or plate-like gills (whence the name).

Lamellirostræ (la-mel-i-rostrēz), a family of swimming birds, distinguished by the flat form of the bill, which is invested by a soft skin, and provided at the edges with a set of transverse plates or lamellae, through which the mud, in which those birds grope for food, is sifted or strained. The family comprises the ducks, geese, swans, flamingoes, etc.

Lamennais (la-mē-nä'), HUGUES FÉLICITÉ ROBERT DE, a French writer on religion and politics, born at St. Malo in 1782; died in 1854. He was ordained priest in 1816, and first attracted attention by his apology for Roman Catholicism, the Essai sur l'Indifférence en Matière de Religion. In 1824 he declined the offer of a cardinal's hat, and the following year published a work favoring ultramontane doctrines, La Religion Considérée dans ses Rapports avec l'Ordre Civil et Politique. From this time he began to preach the separation of church and state, as he believed he could only deliver the former by freeing it from the yoke of the latter. On the outbreak of the July days of 1830 he became a convert to the dogmas of the sovereignty of the people. In September of that year he began to publish his L'Avenir, which had for its motto, 'God and Freedom.' This journal, which advocated religious and political reforms, was in 1832 condemned by the pope and suppressed. In 1834 he finally revolted from Rome in his Paroles d'un Croyant ('Words of a Believer'). This book, which produced an almost unexampled sensation, passed in a few years through more than 100 editions, was translated into almost all living languages, and reprinted in almost all foreign countries. It was condemned by the pope, and Lamennais answered by the Affaires de Rome. His subsequent works were all extremely democratic, and he gradually became both atheist and socialist. At the revolution of 1848 he became a member of the national assembly, but after the coup d'état he lived in strict retirement.

Lamentations (la-men-tä'shuns), the name given in the authorized version of the Scriptures to a pathetic poem made up of five distinct elegies. They appear in the Hebrew canon with no name attached, but ancient tradition, internal evidence, and a prefatory verse which appears in the Septuagint point to the authorship of Jeremiah. The first four of the dirges are alphabetical acrostics, successive verses, or in chap. iii, successive sets of three verses, beginning alphabetically. Chap. v is not in acrostic form. According to Josephus, Jerome, and also some modern critics, these poems were written on the death of King Josiah (see II Chron. xxxv, 25), but the contents of the book itself plainly show that a national calamity—the destruction of Jerusalem and the overthrow of the Judean state by the Chaldeans—is referred to.

Lamiaceæ (la-mi-ā'sē-ē), a synonym of Labiatae. See Labiaæ. Laminaria (la-mē-nā're-ā), a genus of dark-spored sea-weeds, having no definite leaves, but a plain ribless expansion, which is either simple or cloven. L. digitata is the well-known tangle on the shores of Great Britain.

Lamination (lam-i-nā'shun), the arrangement of rocks in thin layers or laminae. This arrangement prevails amongst all the varieties of gneiss, mica, schist, chlorite schist, hornblende schist, etc.

Lammas (lam'z), one of the four quarterly term days in Scotland, occurring on August 1. The name is from the A.-Sax. hlæf-mæsse, that is, loaf-mass, bread-feast; so called because on this day offerings were formerly made of the first-fruits of harvest.

Lämmergeier (la'm'gē-ir; Ger. Lämmergier, 'lam vult.

Lämmergeier (Gypaetus barbatus), the bearded vulture, a bird of prey of the genus Gypaetus (G. barbatus), family Vulturidae, forming a link between the vultures and the eagles. If
Lammermuir Hills, a range of Scottish hills stretching in a generally eastward direction from s. e. Midlothian to the German Ocean at St. Abb’s Head, and forming part of the boundary between Berwick and Haddington shires. Highest summit Lammer Law, 1733 feet.

Lamnidae (lam’ni-de), the porbeagles, a family of sharks.

Lamont (la’mont), Daniel Scott, cabinet official, born at Cortlandville, New York, in 1831; died in 1904. He engaged in journalism, was private secretary to President Cleveland, 1885-86, and Secretary of War 1893-97. He then became vice-president of the Northern Pacific R. R. Co.

La Motte (la-mot), Jeanne de Valois, Comtesse de, a French adventureress, a descendant of the family of Valois by an illegitimate child of Henry II, and notorious for the part she played in the ‘diamond necklace’ fraud; born in 1506; died in 1571. She married the Comte de la Motte, a penniless adventurer, and settled in Paris about 1750. In the years 1783-84 the Prince-cardinal de Rohan, who had fallen into disgrace, was persuaded by her that the Queen Marie Antoinette regarded him with much favor, which would be increased if he would assist her in purchasing a valuable diamond necklace which Louis XV had ordered for Madame du Barry, but which was still in the jeweler’s hands. The cardinal fell into the snare, he agreed to stand surety for the payment, and the necklace was delivered to him. There is here yet somewhat of mystery. Cagliostro, and probably the queen also, was in the plot; the necklace disappeared, was broken up and sold, probably by the La Mottes. The jeweler, after waiting a long time for his money, applied direct to the court, and the plot was discovered. Cagliostro, the cardinal, and others were thrown into the Bastille, but at the trial only the La Mottes were convicted. They escaped to England, where the comtesse wrote Mémoires implicating the queen in the fraud. She was killed by falling out of a window. Her husband lived a miserable wandering life till his death in 1831.

La Motte Fouqué (fō-kuh). See Fouqué.

Lamp, a contrivance for producing artificial light, whether by means of an inflammable liquid, or of gas, or electricity; but usually the term applied to a vessel for containing oil or other liquid inflammable substance, to be burned by means of a wick. Baked earth was probably the substance of which the earliest lamps were composed, but subsequently we find them of various metals—one of bronze more particularly. Modern lamps vary in form and principle widely, and of late have been constructed in a variety of materials. The requisite properties of a perfect lamp are these:—1. It must be supplied with carbonaceous matter and with oxygen. 2. It must convert the former into a gaseous state. 3. It must bring the gas so produced in contact with oxygen at such a temperature that the carbon will combine with the oxygen in the fullest degree to produce the greatest quantity of flame without any smoke. Until 1784 all the lamps in use were far from meeting all these requirements. In that year an improved scientific lamp was constructed by Aimé Argand of Geneva, and called, after him, the Argand lamp. In this lamp defective consumption is remedied by using a circular wick, the flame of which is nourished by an internal as well as an external current of air, and by placing a glass chimney above the flame so as to increase the draught. A special arrangement ensures a uniform supply of oil. In the improved lamps that have succeeded that of Argand, the Argand burner has generally been retained, and the alterations have chiefly been made in the mode of keeping up a uniform supply of oil. The moderator lamp, invented by M. Franchot in 1837, long held a favorite place. In it the oil is contained in a reservoir at the bottom of the lamp. The reservoir is cylindrical in shape, and in the interior there is a piston which is pushed down on the oil by a spiral spring, causing the oil to ascend in the tube in which the wick is inserted. Since the invention of this lamp various modifications have been made in it by different manufacturers. For petroleum, paraffin and other mineral oils, which have of late years come into very extensive use for illuminating purposes, a very simple kind of lamp is used. The oil-vessel is placed below the burner, which usually consists of a simple slit, down which a broad wick passes into the oil. The wick may be raised or depressed by a screw, and when the lamp is burning is kept a short distance below the opening of the slit.
Lampblack

oil is sucked up by the wick by the action of capillarity. A chimney is fitted on to the lamp, and creates so powerful a draft that the flame is kept perfectly steady, and the gas proceeding from the heating of the oil is completely consumed. There is an endless variety of lamps of this kind, the special features aimed at being increase of light by improved burners and immunity from explosion. Safety-lamps are used for mines (see Safety-lamp). Hydrocarbon lamps are used for magic lanterns, etc. The magnesium lamp, chiefly used by photographers, is one constructed for the combustion of magnesium wire. A lantern is a form of lamp, generally a case enclosing a light and protecting it from wind and rain, sometimes portable and sometimes fixed.

Lampblack, a fine soot formed by the condensation of the smoke of burning oil, pitch, or resins substances in a chimney terminating in a cone of cloth. It is used in the manufacture of pigments, blacking and printing inks. See Carbon.

Lampedusa (lām'pā-dō'sā), a small island of the Mediterranean, about midway between Sicily and the coast of Tunis. It is about 13 miles in circumference; produces wine and fruits; has a small harbor, and 1074 inhabitants. It belongs to Italy.

Lamprey (lām'pri), the popular name of several species of fishes forming the genus Petromyzon of the order Marsipobranchii; eel-like, scaleless fishes which inhabit both fresh and salt water. The lampreys have seven spiracles or apertures on each side of the neck, and a fistula or aperture on the top of the head; they have no pectoral or ventral fins. The mouth is in the form of a sucker, lined with strong teeth and cutting plates, and the river lampreys are often seen clinging to stones by it. The marine or sea lamprey (P. marinus) is sometimes found so large as to weigh 4 or 5 lbs. It is of a dusky brown, marbled with yellowish patches, is common round the Atlantic coast of Europe, and is also found in the Mediterranean. It ascends rivers in the spring for the purpose of spawning, and was formerly much valued as an article of food. The river lamprey or lepomis (P. fluviatilis) is a smaller species, and abounds in the fresh-water lakes and rivers of northern countries. It is colored black on its upper and of a silvery hue on its under surface. Lampreys attach themselves to other fishes and suck their blood; they also eat soft animal matter of any kind.

Lampshells, the familiar designation of certain Brachipodous Molluscs, especially those of the genus Terebratula, the bivalve shells of which when closed bear a close resemblance to the shape of the old Roman or classical lamp.

Lampyris (lām'pi-ris), the name of a genus to which the glow-worm belongs.

Lamu (lām'u), an island and town on the coast of East Africa, lat. 2° 20' s, the administration of which was granted in 1889 to the Imperial British E. Africa Co. Pop. 15,000.

Lanark (lān'ark), LANARKSHIRE, or CLYDESDALE, an inland southwestern county of Scotland, and the most populous in the country. Area, 879 square miles. The southern part is mountainous, the Lowther Hills reaching an elevation of 2400 feet. The mineral wealth consists of rich beds of coal, ironstone, limestone and sandstone, which are extensively wrought. The principal river is the Clyde, which traverses the entire county from S. S. E. to N. N. W., and for the greater part of its course nearly through its center. The county contains the large city of Glasgow. Pop. 1,339,327.

—LANARK, the county town, situated on elevated ground near the right bank of the Clyde, 31 miles southeast of Glasgow. It is a very ancient place, and was erected into a royal burgh by Alexander I. Not far from Lanark are the Falls of the Clyde, in a romantic and richly wooded part of the valley, which render the town a favorite resort for tourists. Pop. 6440.

Lancashire (lān'kā-sher), or the county palatine of Lancaster, a maritime county in the N. W. of England, bounded by Westmoreland, Cumberland, Yorkshire, Cheshire and the Irish Sea, has an area of 1880 square miles. The coast is of great extent, and is deeply indented by bays and arms of the sea, the principal of which are Morecambe Bay and the estuary of the Ribble. In the north the surface is rugged and mountainous; elsewhere it is generally level. The peat-mosses or bogs of Lancashire form one of its most remarkable physical features. The most extensive of these is Chat Moss (which see). The most important mineral product of Lancashire is coal, which
occurs abundantly in the south and southwest. Another valuable product is the hematite iron ore, the output of which has increased with extraordinary rapidity of late years. Excellent freestone is quarried near Lancaster. Limestone occurs abundantly. Lancashire is the great seat of the cotton manufacture, not only of England, but also of the world, Manchester being the principal center. Woolen goods are also largely produced, as are also machinery of all descriptions, and a vast variety of other articles. Liverpool is the great shipping port of the county and of England. Lancaster is the county town, but there are a great many others far larger, such as Liverpool, Manchester and Salford, Oldham, Bolton, Blackburn, Preston, etc. Pop. 4,768,474.

Lancaster (lan'kas-ter), a municipal borough and river-port, England, the county town of Lancashire, on the left bank of the Lune, 45 miles north by east of Liverpool. It occupies the acclivities of a hill, on the summit of which stands the castle, now used as the county jail, built in the reign of Edward III., but with a keep supposed to be Saxon, and with a tower on the southeast attributed to the Emperor Hadrian. The industries comprise furniture, cordage, sail-cloth and cotton goods, floor-cloth, oil, varnish works, railway rolling stock, etc. Pop. (1911) 41,414.

Lancaster, a city of Erie Co., New York, 10 miles e. of Buffalo. It has iron and glass works, brick works, car shops, etc. Pop. 6059.

Lancaster, a city, county seat of Fairfield Co., Ohio, on Hocking River, 32 miles s.e. of Columbus. It has iron foundries, paper and rubber mills, farm-implement factories, glass and glove factories, etc. Pop. (1920) 14,706.

Lancaster, a city, county seat of Lancaster Co., Pennsylvania, on Conestoga River, 68 miles w. of Philadelphia, in a section noted for its agricultural products. It has an immense trade in tobacco, also has silk mills, watch factories, and many other industries. It is the home of Franklin and Marshall College and a theological seminary (Reformed Church). It was the State capital 1779-1812. Pop. (1910) 47,227; (1920) 53,150.

Lancaster, DUCHY OF, a duchy annexed to the English crown in the reign of Edward IV., and which had separate courts of its own till the passing of the Judicature Act of 1873. Its revenues go directly into the privy purse of the sovereign, and are not reckoned among the hereditary revenues surrendered for the Civil List. The revenue is over £30,000. The chancellorship is a political appointment, and the chancellor is generally a member of the cabinet. The duties are nominal.

Lancaster, House of, the name given in English history to designate a line of kings. Edmund, second son of Henry III., was created Earl of Lancaster and Leicester. His son Thomas added Derby and Lincoln to his titles, became leader of the baronial opposition to Edward II., and was beheaded for treason. His grandson was advanced to the dignity of a duke, and dying without male issue, the inheritance fell to his daughter Blanche, who became the wife of John of Gaunt, who was the fourth son of Edward III. From him descended the kings, Henry IV, V and VI, of the House of Lancaster.

Lancaster, John of Gaunt, Duke of Lancaster, JOSEPH, the propagator of the educational system, which in the reign of Dr. Andrew Bell, was born in London in 1778; died at New York through a carriage accident in 1833. In 1798 he opened a school for children in Southwark, which he conducted on the Madras system, which had been previously made known by Dr. Bell. (See Bell, Andrew.) The principal features of the system were the teaching of the younger pupils by the more advanced students, called monitors, and an elaborate system of mechanical drill, by means of which these young teachers taught large numbers at the same time. He soon found powerful support, and was able to erect a schoolhouse, which in 1805 was attended by 1000 children. The number of his patrons and the amount of subscriptions continuing to increase, he founded a normal school for training teachers in his system, which he now hoped to be able to extend over the whole kingdom. He made extensive tours through Great Britain and Ireland, and in 1811 had founded 95 schools, attended by 30,000 children. He was reckless and improvident in his habits; became bankrupt, and emigrated to America in 1818, at first received some support, but ultimately fell into poverty.

Lancaster Gun, named from the inventor, a species of rifled but not grooved cannon, having an elliptical bore, of which the major axis moves round till it traverses one-fourth of the circumference of the bore. The projectiles are also elliptical, so that when the gun is fired the projectile follows the twist of the bore, acquiring a rotary motion.
Lancaster Sound, a passage leading from the northwest of Baffin Bay west to Barrow Strait. It was discovered by Baffin in 1616, is about 250 miles long, with a central breadth of about 65 miles. Lance (lans), a weapon consisting of a long shaft with a sharp point, much used before the invention of firearms, and still in use. It was common among the Greeks and Romans. The Macedonian phalanx was armed with it, and it was the chief weapon of the Roman infantry. The javelin, or pilum, was but secondary. The lance was the chief weapon in the middle ages, and was especially the arm of knighthood. The introduction of firearms gradually led to the disuse of the lance in the West of Europe, though it continued to be used by Turks, Albanians, Tartars, Cossacks, Poles and Russians, and other Slavonic tribes. Napoleon organized several regiments of Polish lancers for service in his army, and now most of the armies of Europe have regiments of Uhlan or lancers.

Lancelet (lans'let; Amphiopus lanceolatus), a singular fish, 2 or 3 inches long, with a slender, compressed, transparent, lance-shaped body, occurring in shoal water in the temperate and torrid parts of the earth. It forms the sole member and representative of the order Pharyngobranchii or Leptocardii. No true or paired fins are represented, and in the other parts of its anatomy the low organization of the creature is readily appreciable. The vertebral axis consists of a slender rod (notochord) pointed at each end, and composed of the softest of cartilage. There is no skull. The mouth is of oval shape, situated below and slightly behind the front part of the body, and there are no true jaws. It is surrounded by a ring of glistening matter, which supports small pieces of the same material; and these latter give origin to a number of delicate ciliated filaments or cilia. The mouth leads backwards into a very large dilated chamber representing the expanded pharynx, which performs the part of a breathing organ; and the walls or sides of the pharynx are perforated by transverse clefts or fissures, whilst the inner lining of the chamber is plentifully provided with vibratile filaments or cilia. Breathing takes place by the admission of water through the mouth into the dilated pharynx, the effete water passing through the slits or clefts in the sides of the sac into the cavity of the abdomen, whence it escapes outwardly by an opening known as the 'abdominal pore.' The circulation of the blood, which is destitute of color, is performed by contractile dilations situated upon the main blood vessels, the heart being a simple expansion of the principal vein. The digestive system consists of a stomach and straight intestine. This animal has been pressed into the service of recent theories regarding the origin of living beings, as tending to illustrate how the higher and vertebrate groups of animals may have become developed from lower and invertebrate forms. Six species in all are known, one from Australia being regarded by some as a distinct genus.

Lancelot of the Lake (lan'se-lot), the name of one of the paladins celebrated in the traditions and fables relating to King Arthur and the Round Table. According to tradition, Lancelot was the son of Ran- king of Brucic, was educated by the fairy Viviana (the Lady of the Lake), and became one of the chief knights of Arthur's court. His love for Guinevere, or Guin- evere, the beautiful wife of Arthur, and his disregard of Morgana, a fairy, and the sister of Arthur, placed the knight in the most dangerous and marvelous situations, from which, however, he always extricated himself by his valor and the assistance of the Lady of the Lake. Le Roman de Lancelot du Lac, a famous medieval romance, compiled by Walter Mapes (1150-96), has appeared in many forms. Lancelot is one of the chief figures in Tennyson's Idyls.

Lancerote. See Lanzarote.

Lancers. See Lance.

Lancet Window (lans'et), a high and narrow window with an acutely angled arched top. Lancet windows are a marked characteristic of the early English style of Gothic architecture, and are in a great degree peculiar to England and Scotland. They are often double or triple, and sometimes five are placed together, as in the window called the 'Five Sisters' at York. See Early English Architecture.

Lancewood (lans'wöd), the popular name of the wood of several trees of the order Anonaceae, as of the Ocandra viridis, a native of Jamaica, Duquesnia guarana, a native of Cuba and Guiana, which possesses in a high degree the qualities of toughness and elasticity, and is on this account extremely well adapted for the shafts of light carriages, and all those uses where light, strong, but elastic timber is required.

Lanciano (län-chèm'ño), a town of Southern Italy, in the
Land

province of Chieti (Abruzzo-Citeriore), the see of an archbishop. Pop. 18,316.

Land, forms an important kind of natural wealth susceptible of appropriation, and forming at the same time the principal deposit of the accumulated capital derived from the labor of preceding generations. In Britain, from various causes, among others the enormous cost of transfer, the land is in the hands of comparatively a few owners, and the properties are generally large. One-half of the land of the United Kingdom is in the hands of 7400 individuals; the other half being owned by 312,500 individuals. Barely one in a hundred of the population owns more than an acre of soil. This state of affairs does not exist to so great an extent in any other country. In France there are about 3,000,000 properties under 25 acres, only 150,000 above 100 acres; 1,750,000 of the population cultivate their own land. Small holdings cultivated by the owners are common in Germany, Belgium, Switzerland, Denmark, Norway, Sweden, Italy and other parts of Europe. The same is the case in the United States and the British colonies, the great estates being of minor importance as compared with the small farms.

Land, Tenure of. The various species of tenures and customs relating to property in land are noticed under the particular heads. See Allodium, Feudal System, Fee, Fee-farm, Copyhold, Estate, etc.

Landau (Län'dou), a town of Rhenish Bavaria, on the river Queich, 47 miles N. N. E. of Strasburg. It was formerly strongly fortified, and has been the scene of many stirring events. Pop. (1866) 17,133.

Land-crabs, crabs so called from their semiterrestrial mode of life, their habits leading them to live on land, and away from the sea, even for considerable periods of time. The true land crabs (genus Gecarcinus) occur in Asia, particularly in the Eastern Archipelago; in America, and specially in the West Indian Islands; and in Australia also. The best-known species is G. ruricola, found in the higher parts of Jamaica, which often proves very destructive to the sugar plantations. The crabs of the genus Cardioma, represented by the common species C. carinifer, and inhabiting the West Indian mangrove swamps and marshes, appears to feed upon both vegetable and animal diet. Among other species of land-crabs may be enumerated the sand-crabs (Ocypoda), the beckoning or calling crabs (Galathea) and the Thalipus, which inhabit fresh-water streams, but appear to be equally at home when on land.

Landes (länd), a term specifically applied in France to extensive level and largely barren tracts stretching from the mouth of the Garonne along the Bay of Biscay and from 60 to 90 miles inland, bordered with sand hills near the sea. They bear chiefly heath and broom, but on the seaward side are largely planted with the maritime pine, and considerable stretches have been reclaimed. The inland plains are chiefly occupied as sheep-runs. The inhabitants lead a sort of nomadic life. The landes are dry in summer and marshy in winter, and stools are much used by the inhabitants in traversing them.

Landes, a maritime department of France, bounded by the Bay of Biscay and by the departments of Gironde, Lot-et-Garonne, Gers, and Basses-Pyrénées. It has an area of 3,598 square miles. It contains three arrondissements, Mont-de-Marsan (the capital), Dax and St. Sever. Forests are extensive, and are gradually taking the place of the landes (see above article). The fertile lands consist chiefly of the alluvial valleys to the south of the Midouze and the Adour. The dunes, a sandy tract covered with pines, stretch along the coast of the department to a depth of about 3 miles. The vine is cultivated to a considerable extent in the fertile districts. Pop. (1866) 233,397.

Landeshut (län'desh-hüt), a town of Prussia, in Silesia, district of Liegnitz, in a beautiful valley at
Landgrave

the foot of the Riesengebirge. Pop. (1905) 9060.

Landgrave (land'grav; Ger. man. Landgraf), in Germany, originally, about the twelfth century, the title of district or provincial governors deputed by the emperor, and given them to distinguish them from the inferior counts under their jurisdiction. Later, it was the title of three princes of the empire, whose territories—Thuringia, Lower and Higher Alsace—were called landgravates.

Land League, an organization proposed by Mr. Parnell, the leader of the Irish national movement, in 1879, the ostensible object of which was to purchase the land of Ireland for the people of Ireland. Funds were largely subscribed, especially in America, but the landlords and tenants holding aloof from it, and the alleged complicity of its members with many terrible outrages, caused it to be suppressed in 1881.

Landlord and Tenant. The landlord in relation to a tenant is the person from whom lands or tenements are taken on lease (see Lease), or by some other contract or agreement. The tenant is the person who holds lands or tenements of another by any kind of contract or agreement, usually for a periodical rent. The laws governing tenancy vary in different countries. In the United States the statutes generally allow leases for only one year, or less, to be created by oral agreement, all others being required to be put in writing; and in some of the States they are also required to be under seal. Tenancies at will may still, as at common law, be created by oral agreement, followed by the entry or occupancy of the tenant. In cases where a tenant holds over under the landlord, the tenant is a trespasser, and he must be ejected. If he forbears to do this the trespass may be condoned and the wrongdoer acquires a certain legal status. In this case the latter becomes a tenant at will. If the landlord accepts rent and recognizes his right to enjoy possession for certain periods of time, the tenant must be treated as a tenant from year to year, or from month to month as the case may be. In such cases the terms of the new tenancy are usually determined by the terms of the expired lease. It is customary, however, to stipulate in leases that notice must be given by either party of his intention to terminate the lease at its expiration. As the statutes of the several States greatly vary, no special details bearing on this subject can be given.

Landon (laun'don), Letitia Elizabeth, an English poet, better known by her initial signature of L. E. L., was born in 1802; died at Cape Coast Castle, in 1839. She wrote much for the then fashionable annuals, and the romantic gloom and melancholy of her verses gave them a charm for many people. In 1828 she was married to a Mr. George MacLean, and sailed with him to Cape Coast Castle in Western Africa, where he was governor. She died there soon after her arrival, from an accidental overdose of prussic acid, which she had been in the habit of using medicinally. Her chief works are: The Improvisatrice; The Troubadour; The Golden Violet, etc.; The Venetian Bracelet, etc.; The Lost Pied; Ethel Churchill, a novel; and Romance and Reality, a novel.

Landor (land'or), Walter Savage, an English poet and prose writer, born at Ipsley Court, Warwickshire, in 1775; died in 1864. He was educated at Rugby and Oxford, from both of which he was expelled for unruliness. He published a small volume of poems in 1796, and a lengthy poem, Ariadne, in 1798. This latter he subsequently translated into Latin verse, being one of the most accomplished Latinists of his time. He succeeded to a large property on the death of his father, but he soon sold it off, determining to live abroad. In 1808 he raised a body of men at his own expense for the defense of Spain against France. In 1811 he married a Miss Thuillier of Bath, and settled at Florence, where many of his works were written. Having separated from his wife, he returned to England in 1835. In 1857 the publication of some ugly slanders against a lady of Bath led to a prosecution for libel, and Landor was brought in for 1000 damages. He left England, and once more found a resting place in Florence, where he died. His fame chiefly rests on his Imaginary Conversations, between celebrated persons of ancient and modern times, which is a model of a pure, vigorous, finished English style. Among his other works are: Count Julian, a tragedy; Helene, or Greek poems; Pericles and Aespasia, imaginary letters; Pentameron and Pentameron; and the dramas Andrea of Hungary and Giovanna of Naples. His biography has been written by John Forster. See Corn-crake. See Corn-crake.

Land-rail, or Corn-crake. See Corn-crake.

Landrecies (land're-sé), or Landrecy, a small French town, on the Sambre, dep. of Nord. It was formerly fortified, and played an important part in the French wars. Pop. about 3000.
Landsberg (lånts’berg), a town of Prussia, province of Brandenburg, and 37 miles northeast of Frankfurt, on the Wartha. It has manufactures of engines and boilers, carriages, woolens, tobacco, spirits, etc. Pop. (1905) 36,934.

Landscape (land’skāp), a term applied to a portion of land or territory which the eye can comprehend in a single view, and to a painting of such. See Painting.

Landscape Gardening, is the art of laying out grounds, arranging trees, shrubbery, etc., so as to bring into harmonious combination all the varied characteristics and surroundings. It proposes flowering plants, shrubs, and trees over varying levels in such a manner as to produce the most pleasing effects, it shuts out undesirable views by means of judicious planting, and introduces rock-work, water and other artistic embellishments where the local peculiarities of the ground permit.

Landseer (land’sēr), Sir Edwin, animal painter, born in London in 1802; died in 1873. He began to draw animals when a mere child; at thirteen he exhibited at the Academy, and the year following became a student. Thenceforward he exhibited regularly at the Academy and the British Institution. In 1826 he was elected A.R.A.; in 1830, R.A.; in 1850 he was knighted, and in 1865 he declined the presidency of the Academy. He takes the very highest rank among animal painters; and though he has been blamed for introducing too human a sentiment and expression into some of his animals, the humor and pathos of animal nature has had no finer exponent. Among his best-known works are: The Return from Deerstalking, Bolton Abbey in the Olden Time; The Return from Hawking; The Shepherd’s Chief Mourner; A Distinguished Member of the Humane Society; There’s Life in the Old Dog Yet; Laying Down the Law; The Stag at Bay; Monarch of the Glen; the celebrated work of sculpture, the lions at the base of Nelson’s monument, Trafalgar Square, London, etc.—CHARLES LANDSEER, brother of the above (born in 1799; died in 1879), had a good reputation as a painter of subjects from English history and poetry. He was chosen Academician in 1845, and keeper of the Academy in 1851.—THOMAS LANDSEER, also a brother (born in 1796; died in 1880), was celebrated as an engraver, and made many reproductions of his brothers’ works.—JOHN LANDSEER, engraver, father of the above (born in 1769; died in 1852). He was elected associate engraver of the Academy, 1807; lectured on and published several treatises on art.

Land’s End, a headland in Cornwall, southwestern extremity of England (lat. 50° 20’ N., lon. 5° 45’ W.). There is a lighthouse on the rocks, called Longships, about a mile to the west.

Landshut (lante’hot), a picturesque old town of Bavaria, on the Isar, 40 miles N. E. of Munich. It has many interesting buildings, among which are St. Martin’s Church, a fine Gothic structure built in 1407-77, with a steeple 462 feet high; the royal palace, the town house, and the old castle of Traunzitz. Landshut has manufactures of leather, starch, machinery, carriages, tobacco, paper, etc. It formerly had a university, transferred in 1800 from Ingolstadt, but removed to Munich in 1826. Pop. (1910) 25,137.

Landshut, Landshut.

Landslip (land’slip), the slipping or sliding of a considerable tract of land or earth from a higher to a lower level. Landslips are due to a variety of causes, chiefly the decay of supporting strata or excessive saturation of the soil by rain. Among the more disastrous occurrences of this kind are the slip of the Rossberg Mountain behind the Rigi in Switzerland in 1806, burying villages and hamlets with over 800 inhabitants; and that at Naini Tal, a hill-station in the Himalayas, in 1880, when 230 lives were lost.

Lands, Public. See Public Lands.

Landsturm (lants’turm), a local militia of Germany, which is never called from its own district but in case of actual invasion. It comprises that portion of the reserve too old for the Landwehr (which see). Other European nations have a force of the same nature.

Land Surveying. See Surveying.

Land Tax, a tax levied on land. What is known as the land tax in Britain was imposed in the reign of William III as a substitute for esquire. taille, fifteenths, and other contributions. It was imposed annually from 1693 to 1798 at a varying rate, at least 4d., per pound. In the latter year it produced about 2,000,000, when it was re-
Landwehr

placed by a perpetual rent charge on the land, with power of redemption, and a tax annually imposed on personal property, the latter tax abolished in 1833. In the land tax provision of the 1910 budget, the rates on landed property were considerably increased.

Landwehr (län'tvär), that portion of the military force of Germany and other European nations which in time of peace follow their ordinary occupations, excepting when called out for occasional training. The landwehr in some respects resembles a militia, with this important difference, that all the soldiers of the landwehr have served in the regular army. This system has received its fullest development in Germany, in which country it adds enormously, and at comparatively little cost, to the military power of the state.

Lane (län), Walter, Secretary, Secretary of the Interior in President Wilson’s cabinet, was born on Prince Edward Island, Canada, in 1864. He was taken to California in childhood and was educated at the University of California. He engaged in newspaper work and became editor of the Tacoma Daily News. He studied law and was admitted to the bar in 1890. President Roosevelt appointed him a member of the Interstate Commerce Commission in 1905, and he served till 1913, when President Wilson invited him to enter the cabinet as Secretary of the Interior. It was mainly through his efforts that the Alaska Railway Bill, providing for a government-built railroad, was passed.

Lanfranc (län'frank), Archbishop of Canterbury, son of a wealthy citizen of Pavia; born in 1005; died in 1089. He became a monk of the Benedictine abbey of Bec in 1042 and prior in 1046. In 1062 William of Normandy made him abbot of Caen, and after the Conquest he became archbishop of Canterbury (1070). He did much to purify and reform the church, at the same time preserving its insular independence. He enjoyed the confidence of William I and promoted the peaceful succession of William Rufus, under whom he exercised the chief authority till his death. His writings were printed in 1647, and again at Oxford in 1844.

Lang (lāng), Andrew, miscellaneous writer, born at Selkirk, Scotland, in 1844; educated at Edinburgh Academy, St. Andrew’s University and Balliol College, Oxford, where he took a distinguished position. A most versatile writer, he has published several volumes of ballads and other light verse; Customs and Myth, a valuable contribution to the science of comparative mythology; the article Mythology in the Encyclopædia Britannica; translations of Homer (with other collaborators) and of Theocritus, History of Scotland, 3 vols., his most valuable work, and numerous other works on varied topics. With A. E. W. Mason he wrote the humorous novel, Parson Kelly. He was a frequent contributor to the daily press and to periodical literature. Died in 1912.

Lange (läng’ā), Johann Peter, a German theologian, born in 1802; died in 1884. He studied theology at Bonn; was appointed professor of theology at Zürich in 1841, and at Bonn in 1854. His chief works, Life of Jesus, Christian Dogmatists, Apostolic Age, etc., have been translated into English, including the work well known under the title of Lange’s Commentary. —Friedrich Albert Lange, son of the above, born in 1828; died in 1875, is author of a History of Materialism and other philosophical works.

Langeland (läng’lænd), an island of Denmark between Lolland and Fünen, about 30 miles in length and from 3 to 5 in breadth; area, 103 square miles; pop. 18,801. This island is fertile in every part. Rudkjöping is the chief town.

Langensalza (läng’zen-säl-tza’), a town of Prussia, in the province of Saxony, 20 miles northwest of Erfurt, on the Saale, a busy place, with cloth and other factories. Three battles have been fought in the vicinity, in 1761, 1813 and 1866, the Hanoverians being defeated by the Prussians in the last. Pop. (1905) 12,545.

Langholm (läng’om), a market town of Scotland, Dumfries-shire, on the Esk, 30 miles east by north of Dumfries. It consists of two parts—Old Langholm on the E. bank of the Esk; and New Langholm on the w. bank—and is celebrated for its sheep fairs and its woolen manufactures. Pop. 3142.

Langhorne (läng’horn), John, an English poet and miscellaneous writer, born in 1735; died in 1779. He published numerous poems, but his chief work, done in conjunction with
Langland, his brother William (1721-72), is a translation of Pictach's Lives, which still holds a good position. He was prebend of Wells Cathedral at his death.

Langland (lang'land), or Longland, William, the supposed author of the English poem, The Vision of William concerning Piers Plowman, was born about 1322, perhaps at Cleomebury-Mortimer, Shropshire; and is traditionally reported to have been a secular priest, educated at Oxford. From internal evidence it is gathered that the poem, in its earliest form, was composed about 1362. Its rhythmical structure depends upon alliteration, which forms a substitute for rhyme. The poem is allegorical in form and satirical in spirit; the trials and troubles of life generally, but more particularly the corruptions of the church and the worldliness of the ecclesiastical order, are its theme. The Crede of Piers Plowman is an imitation of Langland's work which appeared about the end of the fourteenth century. It is written by a follower of Wickliffe. There are three chief texts of Piers Plowman, to which are assigned the respective dates of 1362, 1377 and 1383. These have all been published by the Early English Text Society (1867, 1868, and 1873) under the editorship of Mr. Skeat. Piers Plowman, besides being of value for its pictures of old English life, is of very great importance for the study of English in its earlier forms. Langland is said also to be author of a poem written in 1399, which Skeat has titled Richard the Redeless.

Langley (lang'li), Samuel Pierpont, astronomer, was born at Boston, Massachusetts, in 1834; died in 1906. He was graduated at the Boston High School, was a professor in the U. S. Naval Academy and in 1887 became Secretary of the Smithsonian Institution. He designed a system of railway time service which came into common use, discovered an extension of the invisible solar spectrum, and was one of the first to experiment in the flight of heavier-than-air machines. He wrote The New Astronomy, Researches on Solar Heat, etc.

Langobardi. See Lombards.

Langres (lan-grē), a town in France, in the department of Haute-Marne, near the left bank of the Marne, 22 miles s. w. of Chaumont. It occupies a steep hill commanding the entrance from the basin of the Saône into that of the Seine, and is a fortress of the first class. It has a cathedral, chiefly Romanesque but partly Gothic, dating from the twelfth century. Pop. (1906) 6063.

Langtoft (lang'toft), Pierre de, an English historian, canon of Bridlington, Yorkshire, in the reigns of Edward I and Edward II, author of a Norman-French, chronicle of England to the end of the reign of Edward I. It has been published in the Rolls Series, and was translated into English rhyme by Robert de Brunne.

Langton (lang'tun), Stephen, an English cardinal, and Archbishop of Canterbury in the reign of John, born about 1150. In 1206 Innocent III created Langton a cardinal and nominated him to the see of Canterbury, consecrating him archbishop next year. King John refused to accept him; it was only after England had been placed under an interdict and John excommunicated and threatened with deposition that he yielded. Langton was acknowledged in July, 1213, and in August he joined the insurgent barons, and acted with them in compelling John to sign Magna Charta. He crowned Henry III, and in 1223 he demanded of him the full execution of the charter. He was the author of a number of theological treatises. He died in 1228.

Language. See Philology.

Languedoc (lan-gédok), one of the old provinces of Southern France, now forming the departments of Aude, Tarn, Hérault, Lozère, Ardèche and Gard, as well as the arrondissements of Toulouse and Villefranche, in the departments of Haute-Garonne; and the arrondissements of Puy and Yssingeaux, in the department Haute-Loire. As to the name see next article.

Langue d'oc (do), the name given to the independent Romance dialect spoken in Provence in the middle ages, from its word for yes being oc, a form of the Latin hoc. It was thus distinguished from the language spoken by the natives of the north of France, which was called Langue d'oui or Langue d'oïl, their affirmative being oui or oïl. The langue d'oc was the language of the Troubadours, and is known also as Provençal.

Laan (lan'tür), Sidney, poet, born at Macon, Georgia, in 1842; died in 1881. He studied and practiced law, but abandoned it to devote himself to literature. He served as a private in the Confederate army and after 1879 was lecturer on English literature at Johns Hopkins University. His poems, especially his Centennial Ode, gave him a wide reputation and showed ample poetic power. He wrote also a number of works in prose, as The Science of English
Verse and The English Novel and Its Development.

Laniide (lan-"i-"de), the shrikes, a family of insectivorous or perchng birds. See Shrike.

Lankester (lan-k'ez-ter), British scientist, born in London in 1847, educated at Oxford. He was professor of zoology and comparative anatomy at University College, London, 1874-90, professor at Oxford, 1891-95, and at the Royal Institution, London, 1898-1900. He was director of the natural history department of the British Museum, 1898-1907. He has published many scientific works.

Lanner (lan'er), a species of hawk found in Mediterranean countries. Similar falcons are found in southwestern United States.

Lannes (la'n), Jean, Duke of Montebello and marshal of France, was born in 1769; mortally wounded at Aspern in 1809. Originally a drayman, he enlisted into the army in 1792, and served in Spain and Italy, where he attained the rank of brigadier-general. He accompanied Napoleon to Egypt in 1808, gained the victory at Montebello in Italy in 1809, and bore a chief part at Marengo. After Waterloo, Eylau, Jena, Friedland (1806) and Staffgangia.

Lanolin, or wool fat, chiefly consists of cholesterol and fatty acids; formula C_{35}H_{48}O. Lanolin is prepared from "suint," or the grease of sheep's wool, by separating the acids by saponification, and then purifying the residue—a pale yellow, glutinous solid, odorless and neutral, and melting at 38°C. As it is easily absorbed by the skin, it is extensively used as a basis of ointments. It does not become rancid and is capable of taking up its own weight of water.

Landsdowne (land-s'down), Henry Charles K., Fitzmaurice, 5th Marquis of, was born in 1845 and held various posts in the British government, succeeding to the marquisate in 1866. He was governor-general of Canada from 1883 to 1889; governor-general of India, 1888-93; secretary of war, 1895-1900; foreign secretary, 1900-1905. In the Asquith coalition ministry he served in the cabinet as minister without portfolio, 1915-16. While the European war was in progress he created a sensation by suggestion of a peace talks with the German government.—William Petty, first marquis, better known as Earl of Shelburne, born in 1737; died in 1805. He began political life in 1763; became prime minister in 1782, but was overthrown in 1783 war was made Marquis of Landsdowne.

Lansford (lan'sfورد), a borough of Carbon Co., Pennsylvania, 35 miles N. of Reading, in a coal-mining region, with silk mills and other industries. Pop. (1920) 9625.

Lansing (lan'sing), the capital of Michigan, in Ingham Co., on Grand River, and on four railroads, 86 miles N.W. of Detroit. The Michigan Agricultural College is here. The streets of the city are wide and well shaded; Michigan Avenue spans the Grand River with a fine bridge. It has 200 manufacturing plants producing automobiles and accessories, traction engines, gas and gasoline engines, building material, malleable castings, furniture and store fixtures, wagons, silk and woolen goods, farm implements, electrical goods, etc. Pop. (1910) 31,229; (1920) 57,327.

Lansing, John (1754-1829), an American jurist, born at Albany, N. Y. He became a justice of the New York Supreme Court; chief justice in 1798; chancellor, succeeding Robert R. Livingston (q.v.), 1801-14.

Lansing, Robert (1864- ), an American lawyer and cabinet officer, born at Watertown, N. Y., graduate of Amherst College, 1886. He was counsel for the U.S. in various international questions such as the Bering Sea Commissions, Alaskan Boundary Tribunal and the British and American Claims Arbitration. He was secretary of state in President Wilson's cabinet 1915-20, succeeding William Jennings Bryan, during the European war.

Lantern. See LAMP.

Lantern (lan'tern), in architecture (1) an erection on the top of a dome, on the roof of an apartment, or in similar situations, to give light, to promote ventilation, or to serve as a sort of ornament. (2) A tower which has the whole or a considerable portion of the interior open to view from the ground, and is lighted by an upper tier of windows, such as the towers which are commonly placed at the juncture of the cross in a cruciform church; also a light open erection occurring on the top of a tower.

Lanthanum, Lan'thanum (Lan'thanum), La, at. wt. 92), a rare metal associated with didymium in the oxide of cerium, and so named from its properties being concealed (Gr. lanthanein, to lie hid), as it were, by those of cerium. Lanthanum forms only one series of compounds, such as the oxide, chloride and sulphide.

Lanzarote (lan-sar-o'te), the most northeastern of the Canary Isles; greatest length, 36 miles; mean breadth, 15 miles. Its coast is generally
bold, and the hills in the center rise to an elevation of 2000 feet. The island is of volcanic origin, and one volcano is still active. Pop. 17,546.

Lanzi (lä‘nts‘ē), Luigi, an Italian archaeologist, born in 1732; died in 1810. He entered the order of the

Laocoön (lä‘ok‘ō-on), in ancient Greek legend, a priest of Poseidon (Neptune), among the Trojans, who, along with his two sons, was killed by two enormous serpents sent by Apollo. The story has frequently furnished a subject to the poets, but it is chiefly interesting as having served as the subject of one of the most beautiful groups of sculpture in the whole history of ancient art. This was discovered at Rome among the ruins of the palace of Titus in 1566, and is now placed in the Vatican. It is supposed to be the group described by Pliny as the work of three sculptors of Rhodes, a father and two sons, Agesander, Polydorus and Athenodorus, but doubts exist as to its date.

Laodicea (lä-o-dī‘ē-ə), the ancient name of several places in Asia Minor. One of these, now called Eski Hissar (Old Castle), 120 miles E. S. E. of Smyrna, was the site of one of the seven primitive Christian churches of Asia. Another is now known as Latakia.

Laon (lā‘ōn; a-n‘s-nt, Bibrax Suecessorum), a fortified town in France capital of the department Aisne, 74 miles northeast from Paris. It is situated on a height in the midst of a level country, and has interesting old buildings, especially the former cathedral, dating from the twelfth century. Laon was the seat of a bishopric as early as 500 A.D., and was made the capital of his kingdom by Charles the Simple of France about 900. Napoleon Bonaparte was defeated here in 1814. On September 9, 1870, it surrendered to the Germans without a blow being struck. Pop. 9787.

Laos (lā‘ōs), a territory in the Indo-China peninsula, surrounded by the Shan States, Anam, Tonquin and the Chinese province of Yun-nan. A large part of it has been a French protectorate since 1893; the remainder is included in Siam. Its extent and the number of its inhabitants are unknown, but they have been estimated at one and a half millions. The country is intersected by mountain ranges and traversed by the Me-kong or Cambodia river, the alluvial valley of which produces abundant sugar, rice, tobacco, etc. Laos exports to the neighboring states a considerable quantity of ivory, gold, silver, precious stones, silk, etc. The inhabitants are reported to be connected with the Burmese in their racial, social, and religious peculiarities. The capital is Chiang-Mai.

Lao-tze (lä‘ō-tz‘ē), or Lāo-Tṣė, sometimes also called Lāo-
Laparotomy

KIUN, a celebrated Chinese philosopher, founder or reformer of one of the most ancient and important religious sects of China, known as the Tao, or sect of reason. Born about the year 600 B.C., we learn that he was historiographer and librarian to a king of the Chow dynasty; that he traveled to the borders of India, where he may have become acquainted with Buddhism; that he met Confucius and reproached him for his pride, vanity and ostentation; that he was persuaded to record his doctrines in a book, which he did in the Tao-ti-king or The Path to Virtue; that on completing this task he disappeared into the wilderness, and there, it is said, ascended to heaven. According to him, silence and the void produced the Tao, the source of all action and being. Man is composed of two principles, the one material and perishable, the other spiritual and imperishable, from which he emanated, and to which he will return on the subjugation of all the material passions and the pleasures of the senses. Lao-tze's moral code is pure, incalculating charity, benevolence, virtue and the free will, moral agency and responsibility of man. From the insight and deep wisdom of his moral code it has been supposed that Lao-tze had been indebted to western teaching, but there is no clear proof of this. Since the second century of our era the sect has continued to extend over China, etc.

Laparotomy (lä-pär-ô-tō′mi), a surgical opening of the abdominal cavity by incision. See Ovariotomy.

La Paz (lä-pâs′), or La Paz de Ayacucho, a town of Bolivia, capital of a department of the same name, and since 1866 capital of Bolivia. The city is built in amphitheater form, is the seat of a bishopric, and has a cathedral and university. It is a place of considerable wealth and importance. Most of the inhabitants are Aymara Indians, or of mixed race. Pop. 70,856. —The department has an area of 53,777 square miles and a population estimated at 445,616.

La Pérouse (pâ-rō′z), Jean François Galaup, Comte de, a French navigator, born in 1741. He entered the naval service at an early age, and during the American war received command of an expedition sent to Hudson Bay, where he destroyed the trading stations of the British. In 1785 he left France in charge of an exploring expedition to the Pacific, and having visited parts of its western and eastern coasts and sundry of its islands, the expedition arrived in Botany Bay in 1788. Here La Pérouse left a letter, in which he declared his intention to proceed to the Isle of France, but nothing more was heard of the unfortunate explorer. It was discovered that his two vessels, the Bousole and Astrolabe, had struck on a reef at Mallicolo in the New Hebrides, and that the crews were all either drowned or murdered.

Lapis Lazuli (lā′pis lâz′n-ēl), an aluminous mineral of a rich azure-blue color; luster vitreous; fracture uneven; scratches glass; opaque; easily broken; specific gravity, 2.45. The finest specimens are brought from China, Persia and Central Asia, and it is much esteemed for ornamental purposes, especially for inlaid work. From it the pigment called ultramarine is prepared, but this is now also manufactured artificially.

Laplace (lä-plas′), Pierre Simon, marquis de, a celebrated French mathematician and astronomer, born in 1749; died in 1827. At an early age he showed wonderful aptitude in mathematical studies; became professor of mathematics in his native town; subsequently sought fortune in Paris, and there made the acquaintance of d'Alembert. Under his guidance the youth soon signalized himself by discovering the invariability of the mean distances of the planets from the sun. He was appointed examiner of the royal corps of artillery, and at the early age of twenty-four was admitted into the Academy of Sciences. Besides his mathematical work he was associated with Lavolier in chemical research. During the revolution Laplace was an extreme republican, and in 1790 he was nominated to the ministry of the interior—a position which he filled so badly that he was superseded in six weeks. Receiving the patronage of Bonaparte he was made president of the senate, and in 1806 raised to the dignity of count of the empire. Notwithstanding these favors he deserted the emperor in 1814, voted for the establishment of a provisional government, and was rewarded by the Bourbons with the title of marquis. In 1816 he was named a member of the French Academy. Almost any one of Laplace's original researches is alone sufficient to stamp him as one of the greatest of mathematicians. The discovery of the invariability of the major axes of the planetary orbits, the explanation of the great inequality in the motions of Jupiter and Saturn, the solution of the problem of the acceleration of the mean motion of the moon, the theory of Jupiter's satellites, and other important laws are due to Laplace, including his famous Nebular Theory, or attempt to explain the development of the Solar Sys-
tem. The most important of his works are the *Mécanique Céleste; Système du Monde*, a résumé of all modern astronomy; *Théorie analytique des Probabilités; Essai sur les Probabilités*.

**Lapland** (lap'land), the land of the Lapps, an extensive territory in the north of Europe, stretching between lat. 64° and 71° n., and from the shores of Norway east to those of the White Sea; area about 130,000 square miles, of which more than half belongs to Russia, and the remainder is shared, in nearly equal proportions, between Sweden and Norway. The climate for nine months of a dark winter is excessively cold; spring and autumn are short; and the summer of two months, when the sun never sets, is extremely hot. Vegetation is scanty except in the form of birch, pine, fir and the abundant mosses which supply food for the herds of reindeer. The Lapps belong to the Finnic branch of the Turanian family. They are a small, muscular, large-headed race, with high cheek-bones, wide mouth, flat nose, and scanty beard. Many of them are nomadic, owing their subsistence to their herds of reindeer; others support themselves by fishing. They are generally ignorant, simple hearted and hospitable. The Norwegian Lapps belong to the Lutheran and the Russian Lapps to the Greek Church. Their numbers do not exceed 30,000.

**La Plata** (lä plätə'), the capital of Buenos Aires province, Argentine Republic, on La Plata estuary, 32 miles n. of Buenos Aires City. It is laid out in the form of a checkerboard, the streets crossing each other at right angles, and has many fine buildings, including the Capitol, cathedral, museum, etc. Seat of a national university (founded, 1905; 2500 students), and an observatory. Pop. 90,436.

**Laporte** (la-pör't), a city, county seat of Laporte Co., Indiana, 59 miles e. of Chicago, on New York Central and other railroads, and on the Lincoln Highway, in a lake country of great picturesqueness. Besides being a summer resort it has a number of industries, including the manufacture of bicycles, farm implements, pianos, woolen goods, meat slicers and other products. Pop. (1910) 10,525; (1920) 15,158.

**Lappenberg** (lan'ep-berg), JOHANN MARTIN, a German historian, was born at Hamburg in 1794; died in 1865. Sent by his father to study medicine at Edinburgh, he gave his attention to history and political science, and spent a year in London studying the English constitution. Returning to Germany, he continued his studies in Berlin and Göttingen. He was made archivist of Hamburg in 1823, a post which he held till 1863. He became a member of the senate in 1848, and was appointed plenipotentiary to Frankfort in 1850. His most remarkable work is his *History of England under the Anglo-Saxon and Norman Kings*.

**Lapwing** (lap'wing), a bird belonging to the family of plovers and order of Grallatores. The common lapwing (*Vanellus cristatus*), a well-known European bird, is about the size of a pigeon; is often called the *peewit* from its particular cry. In the breeding season these birds disperse themselves over the interior of the country, where they lay their eggs in a small depression of the ground, in cultivated fields, moors, etc. In winter they retire to the seacoast. Their eggs are esteemed a great luxury, and great numbers are annually sent to the London markets.

**Larache** (lä-rash'), or EL ARAISH, a seaport of Morocco. Pop. about 6000.

**Laramie** (lar'ə-mé), a city, capital of Albany County, Wyoming, 57 miles n. w. of Cheyenne. It is 7146 feet above sea level, with beautiful mountain scenery. It is the seat of the University of Wyoming, has railway and machine shops, cement plaster mills, etc., and is an important supply point for the surrounding mining and agricultural lands. Pop. (1920) 6301.

**Laramie Mountains**, a range of the Western United States, which extends through Wyoming and Colorado and bounds the Laramie Plains on the east and northeast. The highest point is Laramie Peak, 10,000 feet high.

**Larboard** (lar'bird), the left side of a ship looking towards the stem, now called the *port* side.

**Larceny** (lárs'e-ni) is the fraudulent l e n t appropriation of the personal property of another person with-
Larch

out that person’s consent. To constitute this crime the removal of the goods to any distance is not necessary, but it requires to be shown that the article has completely passed, for however short a time, into possession of the criminal. Concerning the kinds of things the appropriation of which is larceny, the common law restricted them to personal property as distinguished from real estate, but this distinction has been largely abolished by recent statutes. Larceny was formerly divided into two kinds, grand and petty, which was determined by the value of the thing stolen, but the distinction is now abolished in almost all the States. The penalty varies in the different States; but, generally, in ordinary cases, a person convicted of larceny is liable to imprisonment at hard labor for not more than two years; on a second conviction not more than ten, nor less than four years.

Larch, belonging to the genus Larix, nat. order Conifera, having deciduous leaves, small, erect, ovate, blunt-pointed cones, and irregularly margined scales.

This genus is now usually united to Abies. The common larch (L. Europaea), though native of Italy, Switzerland and South Germany, is one of the most frequently cultivated trees in Britain, and is remarkable for the elegance of its conical growth and the durability of its wood, which is used for a variety of purposes. Besides the common larch, there are the Russian larch, the red larch and the black larch (L. Americana), a native of America. The last species has also the name of hackmatack or laromack.

Lard, when it is heated to boiling point and then strained. It is chiefly composed of oleine and stearine, and is now largely used in the manufacture of candles, soap, pomades, etc. The best quality is found in the fat which surrounds the kidneys, and this is employed in pharmacy for the preparation of unguents. When subjected to pressure the oleine is liberated, forming lard-oil, which is much used as a lubricant for machinery.

Lardizalaceae (lar-di-zaf-a-lâ’-se-e), a nat. order of plants, natives of South America and China, now regarded as a tribe of the Berberidaceae or barberries.

Lardner (lard’ner), Dionysius, popular writer on scientific subjects, born at Dublin in 1793; died in 1859. Educated at Trinity College, he devoted his attention to science, contributed to the leading cyclopaedias, and in 1827 was appointed to the chair of natural philosophy and astronomy in the University of London. Having been convicted in the law courts of immorality, he withdrew to America, but returned in 1845 and resided in Paris.

Laredo (la-re’dō), county seat of Webb Co., Texas, on the Rio Grande, 153 miles s.w. of San Antonio. It is one of the great gateways into Mexico, for imports and exports, and for tourist travel. It is a railroad center, and is in a gas, coal and shallow oil district. It has car shops, brick works, roller gin for Pima Egyptian cotton, large onion trade, etc. Pop. (1910) 14,855; (1920) 22,710.

Lares (lär’ës), a class of tutelary spirits or deities (domestic and public) among the ancient Romans. All the household lares were headed by the lar familiaris, who was revered as the founder of the family. In the mansions of the rich the images of the lares had their separate apartment. When the family took their meals some portion was offered to the lares, and on festive occasions they were adorned with wreaths.

Largo, an Italian word in music meaning slowly. Largo is one degree quicker than grave, and two degrees quicker than adagio. Larghetto is the diminutive of largo.

Largs (lär’giz), a seaside resort in Scotland, county of Ayr, on the Firth of Clyde. In 1263 Alexander III defeated the Norwegians under Hako in the vicinity. Pop. 3,246.

Laridae (lär’i-dë), the family of natural birds popularly known as the sea-gulls, sea-mews, or gulls, and of which the genus Larus is the type. See Gull.

Larissa (lär’i-sa), a town of Northeastern Greece, on the river Peneus (now Salambria), the capital of Thessaly. It is the seat of an archbishopric, with a population in 1907 of 18,001. It was the rendezvous place of Julius Caesar’s army before the battle of Pharsalia.

Lark, the common name of birds of the genus Alauda, family Alaudidae. They are characterized by a short, strong bill; nostrils covered with feathers; forked tongue; long, straight hind-claw; and the power to raise the feathers on the back part of the head in the form of a crest. Their distribution throughout the Old World is general, but there is no species native to America, the shore or horned lark belonging to a different genus (Otocorys). They are terrestrial in habit, feed upon worms, larvae, etc., nest upon the ground, and bring forth a brood twice in the year. The best known is the sky-lark (A. arvensis), which is celebrated for the prolonged beauty of
its song. The wood-lark (A. arbores) is less common than the sky-lark, and is known by its smaller size and less distinct colors. It perches upon trees, and is found chiefly in fields near the borders of woods. It sings during the night, and on this account has been mistaken for the nightingale.

Lark-bunting, a common fringilline bird (Calamospiza bicolor) of the Great Plains of the United States. It resembles the bobolink in its great seasonal changes of plumage. It has an entertaining song, like that of the yellow-breasted chat, which it also resembles in singing while in flight.

Lark-finch, or lark-sparrow, a family brownish-gray sparrow (Choudesta grammica), of the prairie and plain regions of the United States. It breeds on the ground and has a pleasant song.

Larkhall (lark'hål), a town of Scotland, in Lanarkshire, 3 1/2 miles southeast of Hamilton. The inhabitants are employed in coal mines, bleachworks, etc. Pop. 11,879.

Larkhana (lär-kā'nu), a town of India, in Sikarpur district, Sind, Bombay Presidency, is situated on a fertile tract of land on the south side of the Ghâr Canal. Pop. 14,543.

Larkspar (lark'spær; Delphinium), sometimes called lark's-hoe, a genus of plants of the order Ranunculaceae, distinguished by its petaloid calyx, the superior sepal of which terminates in a long spur. The Upright Larkspar (D. ajacis) and the Branching Larkspar (D. consolida) are well-known garden flowers.

Larksville, a borough in Luzerne County, Pennsylvania, 3 miles w. by N. of Wilkes-Barre. In a coal-mining region. Pop. (1920) 9,439.

Larnaca (lär'nā-kā), or Larnëca (ancient Citium), a town on the south coast of the island of Cyprus, on a marshy plain about 1 mile from the shore. It is the chief commercial center in the island. Since the British occupation in 1878 the place has become of more importance. Pop. 7,964.

Larne (lärn), a seaport of Ireland, County Antrim, 18 miles north by east of Belfast. The bleaching of linen is extensively carried on, and there are large flour-mills. The harbor, about a mile below the town, is one of the best in the east coast. Larne is much resorted to during summer as a watering-place. Pop. 4,716.

La Rochefoucauld (rōf-sōk') François, Duc de, Prince de Marsillac, a distinguished courtier and man of letters under Louis XIV, was born at Paris in 1613; died in 1680. He was a distinguished military officer attending the court of Louis XIII, but being suspected by Richelieu for favoring the party of Queen Anne of Austria he was exiled to Blois. Returning when the cardinal died, but not receiving the reward which he anticipated, he took the side of the Parliament in the Civil war, and was wounded in the Faubourg Saint-Antoine of Paris. Abandoning his military career, he began to cultivate literature and a social intercourse with Boileau, Racine, Molière, Madame de Sévigné and Madame de la Fayette. His Réflexions ou Sentences et Maximes Morales, published anonymously in 1695, were the fruits of his literary activity. The latter work, for its great brilliancy of style, is still considered a French classic.

La Rochejaquelein (rósh-zakh'lay'), Henri du Vergier, Comte de, a celebrated chief of the Vendean royalists, was born in 1772. During the French Revolution he put himself at the head of the peasants of La Vendée, and gained sixteen victories in ten months. At the age of twenty-two he was shot by a republican soldier in the battle of Nouaille, March, 1794. He was one of the most sincere and courageous of the French royalists.

La Rochelle. See Rochelle.

Larva (lar'va), the term applied in natural history to the first stage in the metamorphosis of insects, and certain other of the lower invertebrates. In insects it is equivalent to the grub or caterpillar stage. Many of the crustacea, as crabs and barnacles, and even vertebrata, as the frogs and newts, pass through larval forms. The larval crab was for long described as a distinct crustacean with the name of Zoa. See Metamorphosis.

Laryngitis (lá-rëng'jëtis), inflammation of the mucous membrane lining the larynx. It may be acute or chronic. The first usually arises from a cold.

Laryngoscope (la-ring'g-a-sköp), a contrivance for examining the larynx and commencement of the trachea. It consists of a plane mirror introduced into the mouth, and placed at such an angle that the light thrown on it from a concave reflector, in the center of which is an aperture, is made to illuminate the larynx, the image of which is again reflected through the aperture in the reflector to the eye of the observer.
Laryngoscopy (lā-rēng′gōs′kō-plē), the science and art of examining a larynx by the laryngoscope (see above) or through a tube (Kirstein’s autoscope).

Larynx (lā-rīnks), the organ by aid of which the voice is produced, situated at the upper part of the trachea or windpipe. The larynx is formed mainly of two pieces of cartilage, called the thyroid and the cricoid, one placed above the other. The thyroid is formed of two extended wings meeting at the middle line in front in a ridge; above and from the sides two horns project upwards, which are connected by bands to the hyoid bone, from which the larynx is suspended. The thyroid cartilage rests and is movable upon the cricoid, moving backwards or forwards, but not from side to side. The cricoid cartilage is shaped like a signet-ring (Greek krikos, a ring), the narrow part of the ring being in front. The cricoid carries, perched on its upper edge behind, the arytenoid cartilages, which are of great importance in the production of the voice. These various cartilages form a framework upon which muscles and mucous membranes are disposed. The mucous membrane which lines the larynx is thrown into various folds. These folds are called the true vocal cords, and by their movements the voice is produced. They are called true as distinct from the false vocal cords which are above them, but take no part in producing the voice. The true vocal cords projecting towards the middle form a chink, which is called the glottis. By the contraction of various muscles this chink can be so brought together that the air forced through it throws the edges of the membrane into vibration and so produces sound. Variations in the form of the chink will affect changes in the sound. Thus the production of voice is the same as in musical instruments, the arrangements in the larynx being such as to produce (1) the vibratory sounds, (2) to regulate the sound, (3) to vary the pitch, and (4) to determine the quality of the sound.

In the act of swallowing, the glottis is covered by a cartilaginous plate called the epiglottis. In the accompanying cut, fig. 1 shows the larynx internally, B being the epiglottis situated above the glottis or entrance to the larynx, A the trachea, and B the oesophagus or gullet. In fig. 2 J is the trachea, B the hyoid bone, N the thyro-hyoid membrane, O the thyro-hyoid ligament, G the thyroid cartilage, H the cricoid cartilage, P the crico-thyroid ligament.

La Salle (lā-säl′), a city of La Salle Co., Illinois, on the Illinois River, at the head of navigation, on the Illinois and Michigan Canal, and on the Rock Island, C., B. & Q., and Illinois Central railroads. Bituminous coal is mined extensively and it has numerous manufacturing plants including zinc smelting and rolling mills, clock factories, cement plants, sheet metal and nickel-oxide works, pressed brick plants, etc. Pop. (1910) 11,537; (1920) 13,653.

La Salle, Robert Cavalier de, a famous French explorer, born at Rouen in 1643, emigrated to America in 1667, and made long fur-trading excursions among the native tribes. In 1675, appointed governor of Fort Frontenac, he built a vessel on Lake Erie, sailed through Lakes Huron and Michigan, and in 1682 descended the Mississippi in canoes to its mouth. In 1684 he attempted to found a French colony at the mouth of the Mississippi, but missed the location and landed in Texas. Attempting to proceed to Canada overland he was murdered in 1687 by mutinous companions. He was one of the most adventurous and daring of the explorers of America.

Las Casas (lās kás′), Bartolomé de, a Spanish prelate, known as the ‘Apostle of the Indians,’ born in 1474; died in 1556. He accompanied Columbus to Hispaniola in 1498, and on the conquest of Cuba received charge as priest there, and distinguished himself for his humane treatment of the natives. In his zeal for the Indians he returned to Spain several times and obtained decrees in their favor, which, however, were of little avail. In the cause of religion he visited various parts of the New World, including Mexico, Guatemala, Peru, etc. In 1542 he wrote his famous Brevissema.
Las Cases

Las Cases (las 'kaz), EMMANUEL AUGUSTE DIEUDONNE MAISON JOSEPH, COMTE DE, a French writer, born in 1766; died in 1842. Employed before the revolution as a lieutenant of marines, he afterwards retired to England, where he supported himself by private teaching. Returning to France, he employed himself upon his Atlas Historique, published under the name of Le Sage. Coming under the notice of Napoleon, he was by him made baron and minister of state. After Waterloo he shared Napoleon's imprisonment in St. Helena, where the emperor dictated part of his Mémoires to Las Cases, and took lessons from him in English. Removed to the Cape of Good Hope from St. Helena for sending out a secret letter, he was permitted to return to France after Napoleon's death, where he published the Mémoires de St. Hélène in his Atlas Historique.

La Serena (la se'r-e'na), the capital of Coquimbo province, Chile, on a bay of the Pacific, connected by rail with the port of Coquimbo. Pop. 16,170.

Lasher. See Fatherlasher.

Lashkar. See Gwalior.

Las Palmas (las pal'mas), the former capital of the Canary Islands, on the N.E. coast of Grand Canary. It has a fine harbor and steamship communication with foreign ports. It is an important coal station and has exports of wine, etc. Pop. 62,270.

Lassa (las'a), or LHASA, the capital of Tibet, situated on the Kitchu, a tributary of the Brahmaputra. All the public edifices worthy of notice are connected with the Buddhist religion, Lassa being the great center of Buddhism, and being greatly resorted to from China, Turkestan, Nepal, etc., as a school of philosophy and Buddhism. About 1½ miles northwest from the city is the Bot-tala or Buddha-la, the residence of the Dalai (Grand) Lama, the ecclesiastical sovereign of Tibet, and supreme pontiff of the vast regions forming Central, East, and Southeastern Asia. A triple-peaked hill here rises abruptly out of the plain to the height of 367 feet; it is covered with convents and cells of monks, and in the center is the palace of the Dalai Lamas, a fine edifice, four stories in height, with a vast number of apartments and a large dome. It has recently been occupied by Chinese troops, and the Lama, who sought the sovereignty of Tibet, is in exile. Lassa is the principal emporium of Tibet; silk stuffs, tea, and other articles being here exchanged for Tibetan, Indian and European goods. Pop. 18,000 to 20,000.

Lassalle (las'al-le'), FERDINAND, a notable German socialist, born at Breslau in 1825, of Jewish parents; studied at Berlin University; first made himself known as a leader during the democratic troubles of 1848, and was imprisoned for a year. In 1861 he published his System of Acquired Rights. Thereafter he proceeded to organize the working classes, which caused the government to accuse him of sedition, and he was imprisoned for four months. In May, 1863, he founded a Labor Union, and began that socialist propaganda which has since become so widespread in Germany. In the summer of 1864 he sought rest in Switzerland, and was there killed in a duel occasioned by a love affair. His best-known treatise is the famous Program for the Working Classes.

Lasso (las'o), a contrivance used in Spanish America and the Western United States, consisting of a long rope of plaited raw hide, at one end of which is a small metal ring. By means of this ring a noose is readily formed, and the lasso, or lariat, is then used for catching wild cattle, the rope being cast over the animal's head or leg while the hunter is in full gallop.

Lasso, ORLANDO DI (Orlandus Lassue), one of the great musicians of the sixteenth century, born in Hainaut in 1520 or 1530; died in 1594. He traveled in England and France, and was appointed chapel-master at Munich. A collection of his works was published at Munich (1600) under the name of Magnus Opus Musicum.

Lastrea (las'tre-a), a genus of ferns containing the malefern, etc.

Lát, a name given to pillars common to all the styles of Indian architecture. With the Buddhists they bore inscriptions on their shafts, with emblems or animals on their capitals. They are among the most original and often the most elegant productions of ancient Indian architecture.

Lataokia (lat'a-koe), or LADIKI'A, Southeastern Asia. A seaport in Syria, 70 miles north
Lateen Sail

of Tripoli, on the Mediterranean. The harbor is well sheltered, though shallow, and there is a considerable trade in silk and cotton, while Latakia tobacco is famous throughout Europe. Pop. about 23,000.

Lateen Sail (lat'-en'), is a triangular sail used in xebecs, feluccas, etc., in the Mediterranean, and in the dahablihs of the Nile. It is extended by a lateen yard, which is slung across a mast so as to make an angle of about 45 degrees with it, the lower portion of the yard being about a third of the whole.

Latent Heat, that portion of heat substance without producing an effect upon another or upon the thermometer; termed also insensible as distinct from sensible heat, it becomes sensible during the conversion of vapors into liquids, and of liquids into solids; and on the other hand a portion of sensible heat disappears or becomes latent when a body changes its form from the solid to the liquid, or from the liquid to the gaseous state.

Lateran (lat'er-an), one of the historic churches at Rome, built originally by Constantine the Great, and dedicated to St. John of Lateran. It is the episcopal church of the pope, and the principal church of Rome. It has a palace and other buildings annexed to it. Every newly-elected pope takes solemn possession of the church, and from its balcony the pope bestows his blessing on the people. The site on which the buildings of the Lateran stand originally belonged to a person named Plautius Lateranus, who was put to death by Nero; hence the name.

Lateran Councils, councils of the Roman Catholic Church, so called because they were held in the Lateran Church in Rome. There were eleven such councils, five of which were ecumenical, the most important being that convened by Alexander III, March 2, 1179, which established the form under which the popes were elected, and that called by Innocent III in November, 1215, which ordered the Crusade, condemned the Waldenses, and called the mystery of the eucharist transubstantiation.

Latham (lat'ham), ROBERT GORDON, an English scholar, born in 1812; died in 1888. He was educated at Eton and Cambridge; was graduated in 1832, and resided for some time in Denmark and Norway. He adopted the profession of medicine, and became physician to Middlesex Hospital, having been previously appointed to the chair of English language and literature in University College. His name is chiefly associated with researches in philology and ethnology. His best-known works are: History of the English Language; Handbook of the English Language; Natural History of Man; The Varieties of Man; Descriptive Ethnology; The Ethnology of Europe; and a new edition of Todd's Johnson's Dictionary.

Lathe (lath), a machine for turning and polishing flat, round, cylindrical, oval, and every intermediate form of body in wood, ivory, metals, etc., the object worked on receiving a rotary motion; it is also used in glass-cutting and earthenware manufacture. It may be turned by the hand, the foot, steam-power, water, etc. A double lathe is one which works on two turning tools at once; Blanchard's lathe is one of turning objects of an irregular form, as lasts, gunstocks, etc. A throw-lathe is one in which the mechanic drives the lathe with one hand, holding the cutting tool with the other. The term is also applied to the batten or lay of a loom in which the reed is fixed, and by the movements of which the weft-threads are laid parallel to each other, shot after shot, in the process of weaving.

Lathyrus (lat'er-us), a large genus of plants, natives of the northern hemisphere and of South America, nat. order Leguminosae. Many are ornamental, such as the sweet-pea (L. odoratus) and the everlasting-pea (L. latifolius), and some useful as agricultural plants.

Latimer (lat'i-mér), HUGH, an English prelate, reformer and martyr, born about 1490. He entered Cambridge University about 1506, and became M.A. in 1514. He took holy orders, and by and by began to preach Protestant doctrine, which led to vigorous opposition. He was made chaplain to Henry VIII in 1530, and during the ascendency of Anne Boleyn in 1535 he was appointed bishop of Worcester. In 1538 he resigned his bishopric, not being able to accept the Six Articles, and was put in prison, but on the accession of Edward VI he was released and became highly popular at court. This continued until Mary ascended the throne, when Latimer was cited to appear, along with Cranmer and Ridley, before a council at Oxford, and condemned. After much delay and a second trial, Latimer and Ridley were burned at the stake, Oct. 16, 1555. His preaching was popular in his own time for its pith, simplicity and quaintness.

Latin Church, the Roman Catholic Church.
Latin Empire

Latin Empire. See Byzantine Empire.

Latin Language and Literature. See Rome.

Latinis (lat'ins; Latin), the ancient inhabitants of Latium, in Italy. In very early times the Latins formed a league of thirty cities, of which the town of Alba Longa, said to have been built by Ascanius, the son of Æneas, became the head. Rome was originally a colony of Alba, and thus the language of the Romans is known as the Latin language.

Lat'insus. See Æneas.

Latitudinarians (lat'i-tū-di-nā'ri-ans), a term applied to certain broad church English divines of Charles II’s time. They endeavored to allay the contests that prevailed between the Episcopalians on the one hand, and the Presbyterians and Independents on the other, and also between Arminians and Calvinists. At present it generally denotes one who commends or sanctions deviations from the strict principles of orthodoxy.

Latium (lā-shē-um), the ancient name applied to a district of Central Italy on the Tyrrhenian Sea, extending between Etruria and Campania, and inhabited by the Latinis, Volsci, Æqui, etc.

Latona (lā-to'na; by the Greeks called Lēto), in Greek mythology, the mother of Apollo and Artemis. Latona is represented as a mild, benevolent goddess, in a sea-green dress. She was worshipped chiefly in Lycia, Delos, Athens, and other cities of Greece.

Latour D’Auvergne (lā-tōr dō-vär-nē), Théophile Malo de, a French soldier, born in 1743. Entering the military service in 1767, he became aide-de-camp to the Duke of Crillon, and distinguished himself at the siege of Mahon. When the revolution began he was a captain of grenadiers, refused higher positions, and was named First Grenadier of France by Napoleon. He commanded a corps of 8000 men, which was known as the infernal column. In 1799 he fought under Masséna in Switzerland, and fell at Neuburg, June 24, 1800.

La Trappe (lā-trap), a Cistercian abbey of Northern France, situated in a narrow valley of Normandy, 30 miles northeast of Alençon. Founded in 1140, it had become in the seventeenth century a haunt of licentious monks known as ‘the bandits of La Trappe.’ In the seventeenth century, however, the abbot Armand Jean le Bouthelier de Rancé instituted a vigorous reform, and caused the monks to adopt a life of severe asceticism. The austere Trappists prayed eleven times daily, spoke no word to each other except the salutation of Memento mori, fed upon fruit and pulse, and every evening dug their own graves. At the revolution the Trappists were obliged to leave France, but at the restoration they returned to their old homes, though expulsions took place again in 1800. La Trappe had hitherto been head monastery of the order, and they have also establishments in various parts of Europe, and in America. The professed brothers wear a dark-colored frock, cloak and hood, which covers the whole face. A female order of Trappistines was founded by Louisa, Princess of Condé.

Latrelle (lā-trē-yē), Pierre Andrè, a French zoologist, born in 1762; died in 1833. He was professor of entomology in the Paris museum, and a member of the Academy of Sciences. His writings, which are very numerous, include among others natural histories of salamanders, apes, reptiles, etc., the Natural Families of the Animal Kingdom,

Lauban (lou'ban), a town of Prussia, province of Silesia, on the Queis, 40 miles w. s. w. Liegnitz. It has manufactures of woollen and linen cloth, yarn, etc. Pop. 14,624.

Laud (lad), WILLIAM, Archbishop of Canterbury in the reign of Charles I., was born at Reading in Berkshire in 1573. He was educated at St. John's College, Oxford; took priest's orders in 1601; was made chaplain to Neile, bishop of Rochester, in 1608; became president of his college and king's chaplain, and in 1617 accompanied James I. to Scotland, where he attempted to enforce Episcopacy, with no success. After the accession of Charles I. Laud was translated to the see of Bath and Wells, and in 1628 to that of London, while his influence seemed to increase. In 1630 he was elected chancellor of the University of Oxford, which he enriched with a valuable collection of manuscripts, establishing also a professorship of Arabic. In 1633 he was promoted to the see of Canterbury. In 1634 he instituted rigorous proceedings against all who would not conform to the Church of England. By means of spies he hunted out the Puritans, and sought to extinguish all forms of dissent by means of fines, imprisonment and exile. He prosecuted Prymne, Burton and Bastwick for libel, and to him is attributed the severe sentences which they received. When the Long Parliament met (1640) the archbishop was impeached for high treason at the bar of the House of Lords by Denzil Holles and committed to the Tower. After three years he was brought to trial, but the lords deferred giving judgment. The House of Commons, however, passed a bill of attainder (January, 1644), declared him guilty of high treason, and condemned him to death. Accordingly he met his end on the scaffold at Tower Hill with great firmness. An edition of his works was published by Parker (Oxford, 1857-60).

Landanum (la'na-num), tincture of opium, a 10 per cent. alcoholic solution.

Lauder (la'der), Sir THOMAS DICK, a Scottish writer, born in 1784; died in 1848. In early life he entered the army, but quitting it in favor of science and literature. He contributed papers to the Edinburgh Royal Society, and in 1817 wrote a tale called Simon Roy, which was attributed to the author of Waverley. He then tried historical romance in Lochandhu and the Wolf of Badenoch. In addition to these works are his Account of the Moray Firth in 1828; Highland Rambles and Long Tales

Latria

teriora of Crustacea and Insects, and a Course of Entomology.

Latria. See Dulta.

Latrobe (la-trób), a borough in Westmoreland County, Pennsylvania, 41 miles e. s. e. of Pittsburgh. It is in a coal-mining district and has numerous large collieries and coke furnaces, also steel, glass, paper and lumber mills. Pop. (1920) 9484.

Latrobe (la'troß), BENJAMIN HENRY, born in England in 1763; died in the United States in 1820. He emigrated to America in 1795, was employed as engineer by the State of Virginia, and was architect of the United States Bank in Philadelphia and the first Hall of Representatives in Washington. —His son, JOHN HIATNERB (1803-91), was active in forming the colony of Liberia, originated the park system of Baltimore, and was the author of numerous works of fiction, travel, biography, etc.

Latten (lat'en), a fine kind of brass or bronze anciently used for crosses and candlesticks, brasses of sepulchral monuments, etc. That employed by English workmen used to be imported from Germany and the Netherlands, the finest kind being known as Cologne plate. Lattenera formed one of the recognized crafts of the city of London. In some localities the term is still applied to platein.

Lattice-girder (lat'is), a girder of which the web consists of diagonal pieces arranged like lattice-work. Lattice-bridge is the name given when the cross-framing is made to resemble lattice-work.

Lattice-leaf, LATTICE-PLANT, a very remarkable aquatic plant of Madagascar (Oucirandra fenestruléa, Oucirandra fenestrulás), by some referred to the nat. order Juncaginacae, by others to the Naiadacae, and noteworthy for the structure of its leaves. The blade resembles lattice-work or open needlework, the longitudinal ribs being crossed by tendrils, and the interstices between them open.
Lauderda\textsuperscript{le} (l\textsuperscript{a}d\textsuperscript{u}r-d\textsuperscript{a}l), \textsc{joh}n \textsc{ma}ilt\textsuperscript{a}nd, \textsc{du}ke o\textsc{f}, born at \textit{Lethington}, in \textit{Scotland}, in 1616, died in 1682. He entered public life as a zealous Presbyterian, and was a party to the delivery of \textsc{Charles} I to the English army at \textit{Newcastle}. Subsequently, he secretly undertook to raise an army in favor of the king, and tried to induce the \textit{Prince of Wales} to accept the command, but without success. When in 1650 \textsc{Charles} II embarked for Scotland, he was accompanied by Launderdale, who was taken prisoner at the battle of \textit{Worcester}, and was not set at liberty till the \textit{Restoration} in 1660. He received great favor from the restored king, and the government of Scotland was almost entirely placed in his hands. This power he used with unscrupulous rigor in his efforts to force Episcopalcy upon his former Presbyterian friends. As a reward for his zeal and subserviency he was created Duke of Launderdale (1672) and raised to the English peerage as \textit{Viscount Peterham} and \textit{Earl of Guildford} (1674), being later one of the junta known as the \textit{Cabal}. As a result of his tyrannical conduct an address was presented to the House of Commons praying that he might be removed from all his offices. This was granted, and the disgraced duke died in a few months afterwards.

Laue\textsuperscript{nb}urg (l\textsuperscript{a}n-b\textsuperscript{a}rg\textsuperscript{a}), or \textsc{sa}xe-laue\textsuperscript{nb}urg, formerly a duchy of Denmark, but ceded to Prussia in 1864.

\textit{Laughing-gas} (laf\textsuperscript{\textprime}ng), nitrous oxide, or nitrogen monoxide, or protoxide of nitrogen; so called because, when inhaled, it usually produces exhilaration. See \textit{Nitrogen}.

\textit{Laughing Jackass}, or \textsc{gi}a\textsuperscript{n}t \textsc{k}ing\textit{fi}sher (\textit{Dacelo gigan}t\textsuperscript{a}), a bird allied to the kingfisher, deriving its former title from the singularly strange character of its cry. It is an inhabitant of Australia, being found chiefly in the southeastern portion of that country. It makes no nest, but deposits its eggs in the decayed hollow of a gum-tree. In length about 18 inches. It has a dark-brown crest, its back and upper surface is olive-brown, wings brown-black, and the breast and under portions white, crossed by faint bars of pale brown. The tail is lownish, with a rounded extremity, tipped with white; its color is a rich chestnut, with deep black bars.

Although it is one of the true kingfishers it is often found in the great arid plains of Australia far from any streams that are sufficiently large to harbor fish. The giant kingfisher is content with crabs or reptiles or insects and small mammals. It is the first to welcome the approach of dawn with its singular, discordant, abrupt, hysteric laugh, which is even more startling than the hyena's. From its early rising habits and its piercing summons, it has been called the \textit{Setter's Clock}. The natives call it \textit{Gogobera}, which means the chorus of demons. A naturalist says: 'The laughing jackass is the bushman's clock, and being by no means shy, of a companionable nature, a constant attendant about the bush tent, and a destroyer of snakes, is regarded as a sacred bird.'

\textit{Laughter} (laf\textsuperscript{\textprime}t\textsuperscript{a}), the outward expression of a certain emotion or excited condition of the nervous system, manifested chiefly in certain convulsive and partly involuntary actions of the muscles of respiration, by means of which the air, being expelled from the chest in a series of jerks, produces a succession of short abrupt sounds; certain movements of the muscles of the face, and often of other parts of the body also taking place. Laughter is generally excited by things which are of a ridiculous or ludicrous nature, the ultimate cause being usually attributed to the perception of some incongruity, though mere incongruity is not always sufficient. It may also be caused, especially in the young, by tickling; it also accompanies hysteria, and sometimes extreme grief.

\textit{Launce} (la\textsuperscript{n}z), a name common to two species of fishes, otherwise called sand-eel. They have their name from their lance-like form. See \textit{Sand-eel}.

Launce\textsuperscript{ston} (la\textsuperscript{\textprime}ns\textsuperscript{t}n), a \textit{town of} \textit{England}, county of Cornwall, 10 miles north by west of Plymouth. Its chief interest is in its antiquity, it having an interesting Gothic church and ruins of an old Norman castle and an Augustinian priory. Pop. (1911) 4117.

Launce\textsuperscript{ston}, the second town of Tasmania, by rail 120 miles north of Hobart, at the confluence of the North and South Esk rivers with the Tamar, which is navigable up to the town from the sea at Port Dalrymple, a distance of 40 miles. Among the buildings are a government house, town hall, military barracks, jail and courthouse. There are also public schools, banks, post-office and several newspaper establish-
Laureaceae

ments. It has an important trade with South Australia and Tasmania. Pop. (1911) 23,726.

Laureaceae (lä'ra-se-è), the laurel family, a nat. order of apetalous exogens, consisting entirely of trees and shrubs inhabiting the warmer parts of the world, and in most cases aromatic. Cinnamon, cassia, saffrafas and camphor are products of the order. The best-known species is the Laurus nobilis, laurel or sweet-bay.

Laureate (lä're-at), Poet, a designation first applied to poets who were honored by the gift of a laurel wreath. It is now the name of an official connected with the royal household of Great Britain, the patent for which appears to have been granted by Charles I, 1630, although Ben Jonson and others are said to have held the title previously. It was the chief duty of the laureate to furnish an ode on the birthday of the king or upon the occasion of a national victory, the emolument attached to the office being £100 a year with a tierce of canary. Since the reign of George III there have been no special duties connected with the office. From the time of Charles II the following poets have in succession held the office of laureate: John Dryden, Nahum Tate, Nicholas Rowe, Lawrence Eusden, Colley Cibber, William Whitehead, Thomas Warton, Henry James Pye, Robert Southey, William Wordsworth, Alfred Tennyson, Alfred Austin and Robert Bridges.

Laurel (lor'el), a plant belonging to the genus Laurus, nat. order Lauraceae, to which it gives the name. The sweet-bay or laurel (Laurus nobilis) is a native of the north of Africa and southern Europe, and is cultivated in gardens not only on account of its elegant appearance, but also for the aromatic fragrance of its evergreen leaves. The fruit, which is of a purple color, and also the leaves, have long been used in medicine as stimulants and carminatives. The common or cherry laurel is Cerasus laurocerasus, the Portugal laurel Cerasus lusitanica, the spurge-laurel Daphne laureola, but these are very different from the true laurel. (See the articles.) The name is also given to other plants, as in the United States to groups of Kalmia, the mountain laurel and common laurel. In ancient times heroes and scholars were crowned with wreaths of bay leaves, whence the terms laurels in sense of honors (and similarly bays), and laureate. From the fruit of the sweet-bay or laurel several oily substances have been extracted. Thus there is the oil of laurel, a yellowish oil with an odor of laurel and a strong bitter taste; laurel fat, a yellowish-green buttery substance, used for embrocations in rheumatism, paralysis, deafness, etc. The cherry-laurel also yields a volatile poisonous oil. From the leaves of the cherry-laurel laurel-water is produced by distillation. Laurel, county seat of Jones Co., Mississippi, 140 miles N. of New Orleans, on the Southern and other railroads. Largest shipping point for yellow pine lumber. Pop. (1920) 13,637.

Laurens (lär'enz), HENRY, revolutionary patriot, was born in Charleston, South Carolina, in 1724; died in 1792. In the Revolution he was president of the Council of Safety, and of the Continental Congress. In 1779 he was minister to Holland, but falling into the hands of the British he was a prisoner in the Tower of London for 15 months. He was Peace Commissioner in 1781, and signed the preliminary treaty in Paris, with Jay and Franklin.—JOHN, son of Henry, was confidential aide to Washington. At Yorktown he received the sword of Cornwallis. He was but 29 years of age when he died.

Laurentian (lə-ren'sh-ən), in geology, a term applied to a vast series of stratified and crystalline rocks of gneiss, mica-schist, quartzite, serpentine and limestone, about 40,000 feet in thickness, lying northward of the St. Lawrence in Canada. The Laurentian apparently lies below the fossiliferous horizon, its one supposed fossil, the Eozoon Canadense, being now regarded as a mineral concretion. (See Eozoon.) The terms Archean and Pre-Cambrian are used in Britain for rocks occupying a similar position to the Laurentian. See Geology.

Laurentian Mountains, a range in Canada extending for over 3000 miles from Labrador to the Arctic Ocean, forming the watershed between Hudson Bay, the St. Lawrence and the great lakes, and dividing the same bay from the sources of the Mackenzie River. The average elevation is about 1500 feet, while some of the peaks attain a height of 4000 feet.

Laurier (lör-ə), Sir Wilfrid, born at St. Lin, Quebec, in 1841; called to the bar in 1864; took up journalism and politics in 1867, and soon acquired a high reputation as writer and orator. He entered the Quebec legislature in 1871, the Dominion parliament three years later, and the Mackenzie cabinet in 1877. Ten years later he succeeded Edward Blake as leader of the Liberal party, which he carried to victory in 1896, and was at once asked to form
a ministry. He remained Premier of Canada until 1911, when he was defeated in the contest for reciprocity in trade with the United States. Died Feb. 17, 1919.

Laurium (lä′ri-üm), a village of Houghton County, Michigan, in the extreme N. w. of the State, and on the Mineral Range and Copper Range R. Rs. It is in one of the richest copper ore regions of the United States. Pop. (1920) 6686.

Laurium, a promontory and hill range of Attica, Greece, formerly famous for its silver and lead mines. The working of these has been recently resumed. Cadmium and manganese are also found.

Lausanne (lō-nänn), a town in Switzerland, capital of the canton of Vaud, on the slopes of Mount Jorat, about ½ mile from the Lake of Geneva and 31 miles northeast of the town of Geneva. Lausanne is built on three hills, two of which are connected by a lofty viaduct, and the most interesting building is the Gothic cathedral, founded about A.D. 1000. Lausanne has little trade or manufactures, but it is much visited by tourists, and its educational institutions attract many foreign pupils. In 1875 it became the seat of the supreme court of the republic. Pop. (1910) 63,926.

Lausitz. See Lusatia.

Lava (lā′va), the general term for all rock-matter that flows, or has flowed, in a molten state from volcanoes, and which when cooled down forms varieties of tufa, trachyte, trachytic greenstone and basalt, according to the varying proportions of felspar, horn blende, augite, etc., which enter into the composition of the mass, and according to the slowness or rapidity with which it has cooled. The more rapidly this process of cooling goes on the more compact is the rock.—Lava beds are of two kinds, namely, contemporaneous and intrusive. A contemporaneous lava bed is one which has been poured out over the surface of one deposit, and covered by subsequent deposits. Such a bed is in its natural position, and usually alters only the bed beneath it. Intrusive beds are those which have been forced up in a molten state through or between strata, altering those on both sides.

Laval (la′val), a town of France, capital of the department of Mayenne, and on an acclivity washed by the River Mayenne, 154 miles W. S. W. of Paris. It is an interesting and picturesque situated place; and among its principal edifices are Trinity Church (now the cathedral), the church of the Cordeliers, and an ancient castle, now a prison. The manufactures consist of damasks and other linen goods, flannels, etc. Pop. (1911) 28,546.

La Valliere (väl-yär), Louise Fran- COISE DE LA BAUME LE BLANC DE, was born in Touraine in 1644; died 1710. The descendant of an ancient family, she was brought to court by her mother, became mistress to Louis XIV, and bore him four children. The king raised the estate of Vanjour into a duky and a peerage in favor of her and her children. Superseded at court by Madame de Montespan, she retired to a Carmelite convent in 1674, where she died. She left a collection of letters, and a work entitled Réflexions sur la Matricorde de Dieu.

Lava Millstone, a hard and coarse, basaltic millatone, obtained from quarries near Andernach on the Rhine.

Lavandula (la-van′du-la), a genus of perennial under shrubs and herbs, nat. order Labiate, natives of dry hilly places in the Mediterranean region, the Canary Islands, Madeira, etc. See Lavender.

Lavater (lā-vät′er), Johann Caspar, celebrated as a physiognomist, was born in 1741 at Zürich, Switzerland, and died in 1801. He first appealed to the public as a poet in 1767, and then became pastor of a Zürich church in 1774. Lavater is best known, however, as the originator of a system by means of which, when applied to the lines and contours of the face, he claimed to be able to read the character of its owner. He adopted the idea in 1769, and published his great work under the title of Physiognomical Fragments (4 vols., 1775-78). This book contained many valuable engravings of distinguished people, with enthusiastic comments by the author. Later, Lavater seems to have doubted his own theories to some degree. He published several other works; was imprisoned for the boldness with which he denounced the excesses of the French revolution; was shot in the street while succoring the wounded when Zürich was captured by Masséna in 1799, and died from the effects of his wound in about a year. His work on Physiognomy was translated into English by Hunter (London, 1789).

Lavau (lā-vōr), a town of France, dep. of Tarn, 23 miles southwest of Alby. Its castle was stormed in 1211 by Simon de Montfort and the refugees Albigenses were massacred. Pop. 4069.
Lava Ware

Lava Ware, a kind of coarse ware resembling lava, made from iron slag, cast into urns, tiles, table tops, etc.

Laveleye (lāv-lē’), Emile de, a well-known Belgian economist, born in 1822; educated at Bruges and Paris; published his first work in 1847, and became professor of economics at the University of Liège in 1864. He published many works on the science of economics, of which we may mention—Études d’Economie Rurale (1864), Eléments d’Economie Politique (1882), and Le Socialisme Contemporain. He died in 1892.

Lavender (lā’ven-der; Laveránd’vər), a delightfully fragrant shrub 3-4 feet high, nat. order Labiatae, a native of the South of Europe. Under favorable conditions it contains one-fourth of its own weight in camphor. It also produces a volatile oil, which is much in demand as an excellent perfume. This oil is got by distilling the flowers. It has a pale-yellow color, aromatic odor, and a hot taste. Besides being employed as a perfume, it is used in medicine as a stimulant in hysteria, colic, and other affections. Spirits of Lavender is prepared by distilling the fresh flowers in rectified spirits and distilling. Lavender-water is a solution of oil of lavender in spirit along with otto of roses, bergamot, musk, cloves, rosemary, etc. This preparation after standing for some time is strained and mixed with a certain proportion of distilled water. Enough oil is produced annually in England to make 30,000 gallons of lavender-water.

Laver (lā’ver), a name given to two species of algae of the genus Porphyra—P. laciniosa and P. ciliariis. They are employed as food, salted, eaten with pepper, vinegar and oil; and are said to be useful in scrofulous affections and glandular tumors.—Green laver is the Ulva latissima. It also is employed as food, stewed and seasoned with lemon juice, and is ordered for scrofulous patients.

Lavoisier (lâ-vwēz’é, lā-vwē-z’é), Antoine Laurent, a celebrated French chemist, born at Paris in 1743. The son of wealthy parents, he was educated at the Collège Marin, studied mathematics and astronomy under Lacaille, worked in the laboratory of Rouelle, and received lessons on botany from Bernard de Jussieu. His first public distinction was to receive the prize for the best essay on lighting the streets of Paris (1768). About this period he published several treatises, traveled through France collecting material for a geological chart, became an associate of the Academy in 1768, and obtained the post of inspector-general of police in 1769. His wealth and position enabled him to extend his researches, and the new discoveries of Priestly, Black and Cavendish gave impetus and direction to his studies. He was the first to organize the methods of chemistry and establish its terminology. His most famous discoveries were those of oxygen and gas and the chemical theory of combustion. Accused before the Convention as an ex-inspector-general, he was guillotined in 1794.

Lawn Tennis

Lawn Tennis (lān-tēn’is), a modern game, played on grass, gravel, cinder, or asphalt courts, with balls and rackets. The face of the racket consists of a net formed of tightly-strung gut. The balls are of rubber covered with white flannel, about 2½ inches in diameter, and 2 ounces in weight. For a game between two players (a single-handed game) the court is 78 feet long by 27 wide. It is divided across the middle by a net, the ends of which are attached to two posts, which stand three feet outside the court on each side. The height of the net is 3 feet at the posts and 3 feet at the center. At each end of the court, parallel to the net and 39 feet from it, are drawn the baselines, the extremities of which are connected by the side-lines. Half-way between the side-lines, and parallel to the net, is drawn the half-court line, dividing the space on either side of the net into two equal parts called the right and left courts. On either side of the net, at a distance of 21 feet from it, and parallel to it, are drawn the service lines. The players take up their positions on opposite sides of the net, and one of them, decided by tossing, called the server, standing with one foot behind and one foot on the baseline, serves the ball from his right court into the diagonally opposite court. The non-server is called the striker-out, and it is his business to return the ball. On either player winning the first stroke the score is called 15 for
that player; on either player winning his second stroke the score is called 30 for him; on either winning his third stroke his score is called 40; and the fourth stroke won by either player is scored game for that player. However, if both players have won three strokes, the score is called deuce; and the next stroke won by either player is scored advantage for that player. If the same player win the following stroke, he wins the game. Three-handed and four-handed lawn-tennis differ in no essentials from the game as here described.

Lawrence, St., Gulf of, a large bay, in Nova Scotia, and from the opening between Newfoundland and Cape Breton, about 35 miles wide, by the Strait of Belle-Isle and the Gulf of Canazo. It contains numerous islands. Lawrence, Amos, merchant, was born in Groton, Massachusetts, in 1768. In partnership with his brother Abbott a very large business was established, including manufactures. In 1831 Amos retired, and engaged in acts of beneficence, expending $340,000 for charitable purposes. He died in 1852.

Lawrence, St., Roman deacon and martyr. During the Valerian persecution the saint was commanded to reveal the treasures of the church. For answer he collected the poor and sick and presented them as the treasure which secured heaven. For this he is said to have been burned in the year 258. His day in the Catholic Church is August 10.

Lawrence, St., one of the largest rivers in the world, which drains the great chain of N. American lakes. The streams connecting the lakes are known as the Niagara, Detroit, St. Clair and St. Mary's rivers, and the headwaters as the St. Louis, the name St. Lawrence being confined to the stream between Lake Ontario and the ocean. It receives the Ottawa, its principal auxiliary, at Montreal, as also the St. Maurice, the Saguenay, and numerous other large rivers from the north. The river is navigable for Atlantic steamers to the city of Montreal, 800 miles up, and from Montreal upwards by river and lake steamers. The rapids between Montreal and Lake Ontario are passed by means of canals, and Niagara Falls by the Welland Canal. The river's breadth between Montreal and Quebec is from 3/4 mile to 4 miles; the average breadth, about 2 miles. Below Quebec it gradually widens till it enters the Gulf of St. Lawrence (see next article). From the beginning of December to the middle of April the navigation is totally suspended by ice. In part of its course it forms the boundary between the United States and Canada.

Lawrence, St., of the North Atlantic in British North America, forming the continuation of the estuary of the river St. Lawrence, and separated from the Atlantic chiefly by the island of Newfoundland, Cape Breton and Nova Scotia. It communicates with the ocean by the opening betwixt Newfoundland and Cape Breton, about 35 miles wide, by the Strait of Belle-Isle and the Gulf of Canazo.

Lawrence, Sir Henry Montgomery, born at Muttura, Ceylon, in 1806. He proceeded to India in 1821 and served in the Afghan campaign of 1843. At the outbreak of the mutiny he was made commander-in-chief of the province of Oude; having retired to the residency of Lucknow, he organised the defense, but was killed by a shell, July 2, 1857.

Lawrence, James, naval officer, born at Burlington, New Jersey. In 1781, entered the navy as midshipman in 1797, and was with Decatur as first lieutenant in the engagement against Tripoli. As captain of the Hornet in 1813, he captured the Peacock in a 15-minute fight. Put in command of the frigate Chesapeake, he was challenged to fight by the Shannon while lying at Boston and partly equipped. He put to sea in this condition, with the result that his ship was taken and he mortally wounded. He won lasting fame by calling out, while being carried below, 'Don't give up the ship'.

Lawrence, John Laird Mait, Lord Governor-general of In
dia, born in Yorkshire in 1811; died in London in 1879. Educated at the college of Hallebury, he went to India in 1829, where his rare administrative ability attracted attention, and caused him to receive the appointment of chief-commissioner of the Punjab in 1853, after he had served in minor posts. The wisdom of his appointment was demonstrated during the Indian Mutiny of 1857. He was known as the savior of India, and was made governor-general in 1863.

Lawrence, Sir Thomas, English portrait painter, Royal Academy, was born at Bristol in 1769. In 1792 he was appointed painter to the king, and was knighted in 1816; and on Benjamin West's death in 1820 he succeeded him as President of the Royal Academy. He died in London in 1830. Lawrence was by far the favorite portrait painter of his time, but his work, in spite of its elegance and taste, scarcely rises above the conventional level.

Lawrence, William Beach, an American jurist, born in New York City in 1800; died in 1881. He was called to the bar in 1823. Diplomatic appointments took him abroad, 1826-30, but on his return he resumed law practice in partnership with Hamilton Fish. He attained eminence as an economist and pleader, and was one of the promoters of the Erie R. R. His later years brought him distinction in international law, a subject on which he wrote and lectured extensively. His Lectures on Political Economy (1832), The Law of Charitable Uses (1846), and Administration of Equity (1874) are among his chief works.

Lawrence Strike, one of the most notable labor events of recent years, lasting from January 11 to March 14, 1912, and ending in victory for the workers. During that time some 20,000 hands were idle. The immediate cause was the reduction in pay made when the 54-hour law went into effect. More than 200,000 textile workers throughout New England received more pay as a result.

Lawrenceville, county seat of Lawrence Co., Illinois, 141 miles E. of St. Louis, Mo., in an oil and agricultural district. Has refineries, machine shops, asphalt plant. Pop. 5680.

Lawsonia (la-so'ni-a), a genus of plants belonging to the natural order Lythraceae, containing only one species (L. alba), which is widely cultivated, especially in oriental regions. It is the plant from which henna is obtained. It is a tall, slender shrub, with a profusion of small, white, fragrant flowers; it is sometimes spiny, and in this state has been described under the name of L. spinosa; when without spines it has been called L. inermis. See Henna.

Lawson's Cypress (Cupressus Lawsoniana), a species of California cypress.

Lawton, county seat of Comanche Co., Oklahoma. 90 miles s.w. of Oklahoma City. It has an abundance of excellent water for domestic and irrigative purposes. It is an oil and gas center; in a good agricultural country. Close to Medicine Park and other pleasure resorts. Pop. (1920) 8930.

Lawton (la-ton), Henry W., soldier, was born in Ohio in 1843. He served through the Civil War and enlisted in the regular army in 1866 as second lieutenant. In the Spanish War he served at Santiago as quartermaster-general, and in 1899 was sent to Manila. Here he took an active part in the fighting and was killed in an engagement at San Mateo, December 21, 1899.

Laymon (lā-a-mon), also called Laymon, author of the Brut, a metrical chronicle of Britain from the arrival of Brutus to the death of King Cadwalader in A.D. 689, flourished soon after 1200 A.D. From his own account he was a priest, and resided at Eynley, near Radstone, or Redstone, now Lower Arley, on the Severn, in Worcestershire, where he seems to have been employed in the services of the church. Laymon's Brut is mainly an amplified translation of the French Brut d'Angleterre of Wace, itself merely a translation with additions from Geoffrey of Monmouth's Historia Brittonum, and that again a confessionally a translation from a Welsh or Breton original. Laymon's work appears to have been completed in the first years of the thirteenth century. Its value is chiefly linguistic.

Layard (lā-ard), Sir Austin Henry, an English traveler, archeologist and diplomatist, was born in 1817 of a family originally French, and was partly educated in Italy. In 1839 and following years he traveled in the East, and in 1845 began his celebrated excavations on the site of ancient Nineveh, publishing the results of his discoveries in 1849-63. He was appointed attaché to the British embassy at Constantinople in 1849. In 1852 he entered Parliament in the Liberal interest; became under-secretary for foreign affairs in 1860, commissioner of works in 1869, and ambassador to the Porte in 1877 under Lord Beaconsfield's government, when
he accomplished the annexation of Cyprus. He is best known by his books: *Nineveh and its Remains* (1849) and *Discoveries in the Ruins of Nineveh and Babylon* (1853). Died in 1894.

**Laybach**. See Laibach.

**Lay Brothers**, are an inferior class of monks employed as servants in monasteries. Though not in holy orders, they are bound by the three monastic vows of poverty, chastity, and obedience. They wear a dress somewhat different from that of the other monks. In nunneries a similar distinction prevails between the nuns proper and the lay sisters.

**Layering** (lā’ér-ing), in gardening, the propagation of plants by bending the shoot of a living stem into the soil, the shoot striking root while being fed by the parent plant. The figure shows the branch to be layered bent down and kept in the ground by a hooked peg, the young roots, and a stick supporting the extremity of the shoot in an upright position.

**Lay-figure**, a jointed human figure used by painters, made of wood or cork, which can be placed in any attitude, and serves when clothed as a model for draperies, etc.

**Laynez** (làn’-thi’), JACOBO, second general of the Jesuits, born in Castile in 1512; died in 1565. He was educated at the University of Alcala, and from that he went to Paris, where he made the acquaintance of Ignatius Loyola. Laynez was ordained priest in Venice 1537, and while there he and Loyola formed the project of establishing the Society of Jesus. After the order had been confirmed by Paul III (1540), and Loyola at the request of Laynez had been appointed the first general, he made many journeys for the purpose of extending the society of the Jesuits, and in 1558 he succeeded Loyola as general of the order.

**Lazaretto** (laz’är-ēt’ō), a public building, hospital, or pesthouse, for the reception of those afflicted with contagious diseases. It is more particularly applied to buildings in which quarantine is performed. See Quarantine.

**Lazarists** (laz’är-istz’), or Priests of the Mission, an order of priests founded at Paris by St. Vincent de Paul in 1625 for the purpose of supporting missions and of ministering to the spiritual wants of the poor. The foundation was confirmed by letters-patent of Louis XIII, May, 1627, and the missionaries were erected into a congregation by Pope Urban VII in 1631. They have houses in all quarters of the world.

**Lazulite** (läz’ō-līt’), blue-spar, a phosphate of aluminum, magnesium and iron, a mineral of a light of indigo-blue color, crystallizing in oblique, four-sided prisms.

**Lazzaroni** (laz’är-o’ne’), a class of persons in Naples without employment or home, and having no settled means of support. The name is said to be derived from that of Lazarus in the parable, though it is more directly connected with the hospital of St. Lazarus, which served as a refuge for the destitute of the city. For a long time they played an important part in all Neapolitan revolutions, and under Masaniello accomplished the revolt of July 7, 1647, against the Duke d'Arcos. They are now no longer a separate class.

**Lea** (lè), HENRY CHARLES, historian, son of Isaac Lea, was born at Philadelphia in 1825, became a publisher, and wrote *Superstition and Force*, *History of Sacerdotal Celibacy*, *Studies in Church History and History of the Inquisition in the Middle Ages*, works which gave him an international reputation. He died in 1900.

**Lea, ISAAC**, naturalist, born at Wilmington, Delaware, in 1792. He engaged in the publishing business with his father-in-law, Matthew Carey, and became an ardent student of conchology, his writings on this subject being of high value. He was made president in 1832 of the Academy of Natural Sciences of Philadelphia. Among his writings were *Contributions to Geology*, *Fossil Footmarks in the Red Sandstones of Potterville*, etc. He died in 1886.—His son, MATTHEW CAREY (1823-97), was an expert in chemistry, to which he devoted his life, making important discoveries. He was elected to the National Academy of Sciences in 1852.

**Lead** (léd’), a city of Lawrence County, South Dakota, 3 miles s.w. of Deadwood; situated on Homestake gold mine. Gold jewelry is manufactured. Pop. (1920) 5013.

**Lead**, a metal of a bluish-gray color.

**Lead**, when recently cut it has a strong metallic luster, but soon tarnishes by exposure to the air owing to the formation of a coating of carbonate of lead. Its symbol is Pb, atomic weight 207, specific gravity about 11.36. It is soft, flexible and malleable.
Lead and ductile, possessing the former quality to a considerable extent, but in tenacity it is inferior to all ductile metals. It fuses at about 612°F, and when slowly cooled forms octahedral crystals. It is an abundant and widely distributed metal. It is a constituent of a very large number of minerals, all of which could be used as sources of it if they could be obtained in sufficient quantity. In practice the metal is got from only a few of these minerals, especially from the sulphide, carbonate and one or two others. The most important of all the ores of lead is the sulphide or lead glance, which has been described under the term Galena. The carbonate, also called cerussite, or lead spar, like all the salts of lead, is perfectly unmetallic in its appearance, and is not infrequently rejected from among common lead ore as an earthly mineral. It occurs in veins in primitive and secondary rocks, accompanying galena and other ores of lead, is abundant in European countries, and at different localities in the United States. The sulphate of lead, anglesite, or lead vitriol, was found originally at Anglesey. Chromate of lead, crocoite, or crocoite was originally found in Siberia; it has since been met with in the Philippine Islands, in Brazil and in Hungary. It was in this mineral that chromium was first discovered. Phosphate of lead is found accompanying the common ores of lead, though rarely in any considerable quantity. Finely crystallized varieties are found at Leadhills in Scotland, and in Cornwall. In the ores of lead silver is a very common constituent. There are four oxides of lead: (1) The suboxide (PbO), of a grayish-blue color. (2) The prot oxide or yellow oxide (PbO), called also massicot. Litharge is this oxide in the form of small spangles, from having undergone fusion. (3) The red oxide (Pb2O3), the well-known pigment called red lead or minium. (4) The dioxide or brown oxide (PbO2), obtained by putting red lead in chloroform water or in dilute nitric acid. Of the salts formed by the action of acids on lead or on the protoxide, the carbonate, or white lead, and the acetate, or sugar, of lead are the most important. The protoxide is also employed for glazing earthenware and porcelain. Carbonate of lead is the basis of white oil paint and a number of other colors. The salts of lead are poisonous, but the carbonate is by far the most virulent poison. Lead is one of the most easily reducible metals, and from the native carbonate can be got by simply heating with coal or charcoal. The sulphide, however, which is the most abundant of its ores, is not so readily acted on by coal, and a reverberatory furnace, or a special variety of blast furnace, is employed. Lead obtained in this way is usually too hard for use, and it has to be subjected to a process of purification. This is effected by roasting the lead, sometimes for several weeks, in a reverberatory furnace. By this process the antimony, which is the chief impurity, is burned off, and the dross, which consists of the oxide of that metal with oxide of lead, is afterwards reduced and utilized as a source of antimony. The lead, when judged sufficiently pure, is then cast into ingots or pigs of lead. Prepared in this way the lead retains all the silver present in the original ore, and as that is always of value it used to be extracted whenever the quantity of silver present amounted to above 10 oz. per ton. 1 part of tin and 2 of lead form an alloy fusible at 350° Fahr., which is used by tinned under the name of soft solder. Lead also forms an imperfect alloy with copper. With antimony lead forms the important alloy called type-metal. Pewter is a hard alloy of four parts of tin and 1 of lead. In these proportions the lead is not attacked by organic acids, such as acetic. For the poisonous effects of lead see Lead Poisoning.

Lead, an instrument used on shipboard for discovering the depth of water. It is composed of a large piece of lead shaped like an elongated clockweight, from 7 to 11 lbs. in weight, and is attached to a line, generally of 20 fathoms length, called the lead-line, which is marked at certain distances to denote the depth in fathoms. When the depth is great the deep-sea lead, weighing from 25 to 30 lbs., is used. The line, which is much longer than the former, and called the deep-sea line, is marked by knots every 10 fathoms, and by a smaller knot every 5.

Lead Plaster. See Diaclyallon.

Lead Poisoning, a disease caused by the presence of lead in some quantity in the system. It may be due to lead which has been taken up by water or other beverage from lead pipes or vessels in which it has been contained. The use of lead in the arts is also a frequent cause of painfull, and sometimes of fatal effects, from the metal finding its way into the system. The glazing of culinary vessels with lead; the coloring of confectionery with the chromate, chloride, or carbonate of lead; the sweetening of sour wine by litharge or oxide of lead, may all produce more or less serious lead poisoning. But the
most frequent and virulent cases occur among painters and persons engaged in white-lead factories; and four forms of disease, either simple or complicated, are apt to manifest themselves—1. Lead or painters' colic, or dry belly-ache. 2. Lead rheumatism or arthralgia. 3. Lead palsy or paralysis, more particularly of the muscles of the forearm. 4. Disease of the brain, manifested by delirium, coma, or convulsions—a form, however, of rare occurrence. Opium and cathartics are the chief medicines administered.

Leadville (led'vil), county seat of Lake Co., Colorado, 78 miles s.w. of Denver, picturesquely situated in a lake region 10,000 feet above sea level. Once a center of gold-mining, rich argentiferous lead mines were discovered in 1877, creating new prosperity for the town. The production of the lead mines has amounted to over $400,000,000. It has great smelters, zinc-oxide plant, etc. Pop. (1920) 4959.

Leadwort (led'wurt), a name for the plants typical of the order Plumbaginaceae.

Leaf (lef), the green, deciduous part of a plant, usually shotting from the sides of the stem and branches, but sometimes from the root, by which the sap is supposed to be elaborated or fitted for the nourishment of the plant by being exposed to air and light on its extensive surface. When fully developed the leaf generally consists of two parts, an expanded part, called the blade or limb, and a stalk supporting that part, called the petiole or leaf-stalk. Frequently, however, the petiole is wanting, in which case the leaf is said to be sessile. Leaves are produced by an expansion of the bark at a node of the stem, and generally consist of vascular tissue in the veins or ribs, with cellular tissue or parenchyma filling up the interstices, and an epidermis over all. Some leaves, however, as those of the mooses, are entirely cellular. See Botany.

Leaf-Cutting Insects, a name given to certain species of solitary bees, from their lining their nests with fragments of leaves and petals of plants cut out by their mandibles. There are also leaf-cutting ants, which carry the fragments to their nests, where they form a soil for the growth of certain foliage of which these species of ants are fond.

Leaf-insects, the name given to orthopterous insects belonging to the family Phasmidae, and popularly known also by the name of walking-leaves. Some of them have wing-covers so closely resembling the leaves of plants that they are easily mistaken for the vegetable productions around them. The eggs too have a curious resemblance to the seeds of plants. They are for the most part natives of the East Indies, Australia and South America. The males have long antennæ and wings, and can fly; the females have short antennæ, and are incapable of flight.

League (lej), a measure of length varying in different countries. The English land league is 3 statute miles, and the nautical league 3 equatorial miles, or 3.457875 statute miles. The French metric league is reckoned as equal to 4 kilometers, or 4374 yards.

League, an alliance or confederacy between princes or states for their mutual aid or defense. What in French history is known distinctively as The League was headed by Henry, Duke of Guise, in 1576, against Henry III of France. Its ostensible object was the support of the Catholic religion, but the Duke of Guise used it as a political machine; it was dissolved in 1595. For certain other leagues see League of Nations, Corn Laws, Covenant.

League of Nations, also called Society of Nations, a pact agreed to by the United States, the British Empire, France, Italy, Japan and the other nations associated with them in the European war (q. v.), 1914-18. It became an essential part of the treaty of peace with Germany (see Treaty), and the treaties with the other belligerents, and was signed first at Versailles, June 28, 1919. Its object was to promote international co-operation and to achieve international peace and security by the acceptance of obligations not to resort to war; by the prescription of open, just and honorabie relations between nations; by the firm establishment of the understandings of international law as the actual rule of conduct among governments; and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organized peoples with one another. President Wilson undertook to sign the covenant of the League of Nations on behalf of the United States, but the Senate refused to ratify the pact. The League Assembly held its first session in November, 1920.

Leake (lek), William Martin, an English officer and author of works on the topography and antiquities of Greece, born in 1777; died in 1869. He entered the Turkish service, and was sent on several missions to Syria, Egypt and Greece. Among his principal works are Researches in Greece, etc. (1841); Topography of Athens (1821); Travels
in the Morea (1830); Travels in Northern Greece (1835); Numismatica Helenica (1854).

Leamington (lēm'ing-tun), a municipal borough and watering-place of England, in Warwickshire, 2 miles east of Warwick, with which it is united in parliamentary representation. Its sheltered position and the beauty of its scenery, together with the excellence of its medicinal springs, have gained it much favor and the name of 'Leafy Leamington.' The springs, which include the three varieties of sulphurous, saline and chalkybeate, attract numerous visitors. Pop. (1911) 26,717.

Leander. See Hero.

Leap-year (lēp'-yər), one of the years which contain 366 days, being every fourth year, which leap-ackets a day more than a common year. Thus in common years, if the first day of March is on Monday the present year, it will the next year fall on Tuesday, but in leap-year it will leap to Wednesday, for leap-year contains a day more than a common year, a day being added to the month of February. Every year is a leap-year which is divisible by 4 without remainder, except the concluding years of centuries, every fourth only of which is a leap-year; thus the years 1800 and 1900 were not leap-years, but 2000 and 2400 will be.

Lease (lēz), a permission to occupy lands or tenements for life or a certain number of years, or during the pleasure of the parties making the contract. The party letting the lands or tenements is called the lessor, the party to whom they are let the lessee, and the compensation or consideration for the lease the rent. A lease for a period not exceeding three years may be by verbal contract. If, however, the term be longer than three years, the lease must be by deed. A breach of any of the covenants contained in a lease was formerly sufficient to render it void, but now any breach may be compensated by a money payment. The power to lease necessarily depends upon the extent of the lessor's estate in the land or tenement to be leased. A proprietor who has only a life estate can of course lease his property only during his life. This is the case with a great part of the landed estates of Europe, the very object of such tenures and other limitations being to secure the property against alienation, and against incumbrances to the prejudice of the heir or successor to the inheritance; and yet if the incumbent could not make a lease for a certain time it would be a great abridgment of the value of the estate to himself, as well as to his successor. The laws therefore provide that certain proprietors of estates for life may lease, on certain terms, for any time not exceeding a certain period, as twenty-one or forty years. The English common law makes a distinction as to the dignity of leasehold estates, which in many cases does not correspond to their comparative value and importance, the maxim being that a life-estate, being that of a freeholder, is greater or of more dignity than a lease for ever so many years, as a hundred or a thousand. A freehold is real estate; whereas a lease is but a chattel interest, though the term may be longer than the longest life.

Leather (lēth'ər), the skins of animals dressed and prepared for use by tanning, tawing, or other processes, which preserve them from putrefaction and render them pliable and tough. The skins employed are chiefly those of cattle, though the skins of horses, asses, sheep, pigs and goats are also converted into leather. Hides are received by the leather-maker in various states, those from a distance being usually cured by salting or sun-drying, sometimes by both processes. Before subjecting to the process of tanning, the cured hides require to be brought back as far as possible to the condition of fresh hides by soaking and softening in water, to which sometimes salt or carbolic acid or sulphide of sodium is added. The softening is now generally assisted by machines, which subject the skins to a kneading process. They are then unhauled by the agency of lime, the customary method of liming being to spread out the hides flat in milk of lime in large pits, the hides being 'hauled' or drawn out once or twice a day, and the liquor stirred up; but there are several variations upon this method of liming. In America and on the European continent the hair is loosened by 'sweating,' which induces a partial putrefaction, attacking the root-sheaths without injuring the hide substance proper. In the old method of warm sweating, the hides were simply laid in a pile and covered, if necessary, with fermenting tan; the preferable cold method consists in hanging the hides in a moist chamber at a uniform temperature of 60° or 70° F. When the hair is sufficiently loosened the hides are usually thrown into the 'stocks,' where the slime and most of the hair is worked out of them. Other unhairing processes consist in treatment with alkaline sulphides, especially sulphide of sodium or sulphide of arsenic. To remove the loosened hair, the hide is generally thrown over a beam
Leather and scraped with a blunt two-handed knife, but several unhauling machines have been invented. After unhauling, the legs, feet, and fat are scraped, brushed, or pared from the inner side, and the hides intended for sole leather are rounded or separated into 'butts' and 'offal'—the latter the thinner parts, including the cheeks, shanks and belly pieces. The butts are then suspended for from twelve to twenty-four hours in soft fresh water, and frequently shaken in it to remove lime or dirt prior to undergoing the process of tanning (see Tanning) and currying (see Currying). The brilliant smooth surface of patent, enameled, lacquered, varnished, or japanned leather is due to the mode of finishing by stretching the tanned hides on wooden frames and applying successive coats of varnish, each coat being dried and rubbed smooth with paper or stone. Other special kinds of leather are seal leather, Russia and Morocco leathers (which see). Tawed leathers (see Tawing) consist chiefly of the skins of sheep, lambs, kids and goats treated with alum, or some of the simple aluminous salts, the principal tawing industries being the manufacture of calf kid for boots and glove kid. Shamoy, or oil-leather, is prepared by impregnating hides and skins with oil (see Shamoy).

Artificial, the general name of certain fabrics possessing some of the qualities and often the appearance of leather. One of the earliest methods of fabrication consisted in applying oily pigments to cloth which was subsequently rolled and coated with a sort of enamel paint. An article of this sort, known under the name of leather-cloth, was first produced in the United States about 1849. Another kind consists of leather parings and shavings reduced to a pulp, and then molded into buckets, machinery-hands, picture-frames, and other useful and ornamental objects. A so-called vegetable leather consists of caoutchouc dissolved in naphtha, spread upon a backing of linen. It is of considerable strength and durability, and is used for table-covers, carriage-aprons, soldiers' belts, harness, bookbinding, etc. Various other substitutes for leather have been recently introduced, one consisting of cloth with a thin facing of leather; but the commonest material is still obtained by varnishing textile fabrics with coatings of some resinous substance, and then painting or embossing them.

Leatherhead, an Australian bird, the *Tropidonotus corniculatus*, a species of honey-eater. So called from its head being devoid of feathers and presenting a leathery appearance. Called also friar bird.

Leatherwood (*Dicraea palmata*), a plant of the Thymelaeaceae, a bush of the United States, with small, yellow flowers, flexible jointed branches, and a tough, leathery, fibrous bark, which is used by the Indians for thongs. The twigs are used for baskets, etc. Called also moose-wood and scicopy.

Leaven (lev'n), dough in which fermentation has commenced, employed to ferment and render light the fresh dough with which it is mingled. Its use dates from remotest antiquity; the addition of yeast is more recent.

Leavenworth, a city, county seat of Leavenworth Co., Kansas, on the Missouri River, 30 miles N. of Kansas City, in a region noted for its wheat, apples, and pure-bred dairy cattle. It has over 30 industrial plants, with annual pay rolls of $2,500,000. Products include mill machinery, furniture, wagons, farm implements, steam engines, bridge and structural iron, stoves and ranges, soap, flour, etc. It was named for Fort Leavenworth, adjoining the city; here are the Army Service Schools and Staff College; also the Disciplinary Barracks of the army. The U. S. Federal prison is north of the city; the State penitentiary and industrial farm for women is 3 miles south. Pop. (1910) 18,912.

Lebanon (leb'a-non), county seat of Lebanon Co., Pa., 28 miles W. of Reading. It has extensive iron and steel manufactures; also textiles. Pop. (1910) 19,240; (1920) 24,643.

Lebanon, a city, county seat of Boone Co., Indiana, 23 miles N. W. of Indianapolis. It has flour, saw and planing mills, etc. Pop. (1920) 6257.

Lebanon, a town in Grafton Co., New Hampshire, on the Connecticut River. Has manufactures of woolens, clothing, etc. Pop. (1920) 6162.

Lebanon, Mountains of, two nearly parallel mountain ranges in the north of Palestine, stretching from southwest to northeast, and enclosing between them a valley about 70 miles long by 15 miles wide, known anciently as Câfic-Syria. The range on the west is called Lebanon, and that on the east Anti-Lebanon; the Arabs, however, call the former Jebel-Ibrahim, and the latter Jebel-esb-Shurky. Lebanon, which runs almost parallel to the Mediterranean coast, is the far loffier range of the two, and presents almost a continuous tidge, its loftiest summit—Jebel Sunnin, near Beyrut—being about 10,000 feet above the sea. Though under the snow limit, snow and ice remain throughout the year
in the higher ravines. Anti-Lebanon claims the culminating point of the whole chain, Jebel-es-Sheikh (about 11,000 feet). In the south part of the chain the Upper Jordan has its source. The habitable districts are occupied towards the north by the Maronite Christians, and towards the south by the Druses. The forests of cedar for which Lebanon was famed have to a large extent disappeared.

Lebedin (lye-be-dyên'), a town of Russia in the government of Kharkov, and 75 miles west northwest of the city of that name. Pop. 14,206.

Lebria (le-bré'há), a town of Spain, Andalusia, province of Seville, and 28 miles from the city of that name. Pop. 10,997.

Lecanora (le-ka-nö'ra), a genus of lichens, a species of which yields cudbear.

Leece (le-ché), a town in Southern Italy, capital of the province of its own name, 56 miles E. of Taranto. It has noteworthy ancient buildings, and a large tobacco factory, textile manufactures, etc., and is noted for its olive oil. Pop. 35,179.

Lecco (le-kö'), a town of Northern Italy, on an arm of Lake Como, called from it Lago di Lecco. Pop. 10,352.

Le Conte, Joseph, scientist, born in Liberty County, Georgia, in 1823. He practiced medicine for several years at Macon, Georgia, but in 1850 went to Cambridge, Massachusetts, where he studied natural history under Agassiz. He subsequently held several professorships, and after 1869 occupied the chair of geology and natural history in the University of California. Died in 1901.

Leconte de Lisle (le sön' de lë-lë), Charles Marie (1818-94). French poet, born at St. Paul, Isle of Bourbon, 1818; died in 1894. After extensive travels he returned to Paris and assisted in the foundation of a paper, Le Sifflet. Leconte de Lisle's first poem, Venus de Milo (afterwards incorporated in his Poèmes Antiques), was published in 1848, and showed a keen interest in politics with a strong republican bent. His Poèmes Antiques, which appeared in 1852, contained some of his best work.

In 1872 Leconte de Lisle was made librarian to the Senate.

Leda (le'da), in Greek mythology, the wife of the Spartan king Tyndarus. By Zeus, in the form of a swan, she was mother of Castor and Pollux.

Lee, Arthur, American diplomatist and statesman, brother of R. H. Lee, born in Westmoreland County, Va., December 20, 1740; died December 12, 1792. He became American agent in England, 1770; was appointed commissioner to France, 1776; conducted negotiations with France, Spain, Prussia and Holland; member of Congress, 1782-83.

Lee, Charles, a general in the American Revolution, born at Dernhall, Cheshire, England, 1731; died at Philadelphia October 2, 1782. He was appointed major-general by the Continental Congress in 1775. He disobeyed orders at the battle of Monmouth, and was sentenced to one year's suspension from military service. He was afterwards dismissed altogether.

Lee, Fitzhugh, general, a grandson of Henry ('Light-Horse Harry') Lee, of Revolutionary fame, was born in Virginia in 1835. He was graduated at West Point in 1856, and at the outbreak of the Civil war became a general of cavalry in the Confederate army. In 1885 he was elected Governor of Virginia and reflected for the succeeding term. In 1896 he was reelected by President Cleveland as Special Consul to Havana, where he remained until the rupture with Spain in 1898. He carried out his duties with much circumspection and received a great ovation on his return to America. He died in 1905.

Lee, Francis Lightfoot, signer of the Declaration of Independence, was born at Stratford, Virginia, in 1734; died in 1797. He was a member of the Continental Congress, 1775-1779, often presiding in committee of the whole; and was a framor of the articles of confederation.

Lee, Henry, an American Revolution-

ary general, born in Westmoreland County, Virginia, in 1756; educated at Princeton College, and in 1776 appointed captain of a company of cavalry in Colonel Bland's Virginia regiment, and served in Washington's army until 1780, where he joined General Greene in the South. In the memorable retreat of Greene before Lord Cornwallis, Lee's legion acquired fame as the rear-guard of the American army, the post of the greatest danger. At the battles of Guilford Courthouse and Eutaw, and in other affairs, Lee specially distinguished himself. He was known in the army as 'Light Horse Harry.' On the conclusion of the
war he was sent to Congress as a delegate from Virginia, and in 1782 was chosen governor of that State. In 1783, on the death of Washington, he was selected to pronounce an eulogy on him, and characterized him as 'first in war, first in peace, and first in the hearts of his countrymen.' In 1801 he retired from public life. He died in 1818.

Lee, Nathaniel, an English dramatic poet, born about 1657, and educated at Cambridge, whither he went in 1668. He afterwards went to London, and in 1675 produced his tragedy of *Nero*, from that time to 1681 producing a tragedy yearly, the best known being the *Rival Queens* (1677). He also tried his abilities as an actor, but failed in the attempt. In 1684 he became insane and was confined in Bedlam until 1688, when he was discharged and wrote two more tragedies, the *Princess of Clèves* and the *Massacre of Paris*, which appeared in 1689 and 1690. He died in 1691 or 1692.

Lee, Richard Henry, a distinguished American of the Independence era, born Jan. 29, 1732, at Stratford, Westmoreland County, Virginia. He received a part of his education in England, and after his return to his native country was chosen a delegate to the House of Burgesses from Westmoreland County. In the opposition to unjust British claims he played throughout a most important part, and on being sent as delegate from Virginia to the first American Congress at Philadelphia (1774) was at once recognized as a leader in that assembly. He drew up most of those addresses to the king and the English people which were admitted by his political opponents to be unsurpassed by any of the state papers of the time. When war became inevitable Lee was placed on the various committees appointed to organize resistance. On the 7th of June 1776, he introduced the motion finally breaking political connection with Britain. In consequence of weak health he was unable to serve in the field, but his activity as a politician was as unceasing as valuable. In 1784 he was unanimously elected president of the Congress, and when the federal constitution was established he entered the Senate for his native State. In 1792 he retired into private life, and died in Virginia in 1794.

Lee, Robert Edward, general, commander-in-chief of the Confederate army, one of the most skilful tacticians who took part in the great Civil war, was born in Virginia in 1807, the son of General Harry Lee, of Revolutionary fame. In 1829 he left the military academy of West Point with the rank of second lieutenant of engineers. After making a tour in Europe he obtained a captaincy in 1838, and in 1847 was appointed engineer-in-chief of the army for the Mexican campaign, in which his brilliant services at Cerro Gordo, Contreras, Cherubusco and Chapultepec (at the latter he was wounded) speedily gained for him the rank of colonel. From 1852 to 1855 he was superintendent of military studies at West Point. In 1861 he became colonel of his regiment, but on the secession of Virginia from the Union he threw up his commission, in 1862 was given the command of the Virginia army, and subsequently was selected by President Davis as commander-in-chief. In June, 1862, he defeated the Federal army under McClellan, and aided by Stonewall Jackson, defeated Pope at Manassas Junction on the 30th. Lee now crossed the Potomac into Maryland and fought an indecisive battle with McClellan at Antietam, subsequently crossing the Potomac and withdrawing behind the Rappahannock. On the 13th of December he defeated the Federalists under Burnside at Fredericksburg, and on the 2d and 3d May, 1863, defeated Hooker at Chancellorsville. This victory was followed by an invasion of Pennsylvania, where he was beaten by Meade at Gettysburg, July 1st and 3d, and forced to retreat into Virginia. The campaign of 1864 was begun by the advance of General Grant on May 4. A succession of stubbornly contested battles followed from the Wilderness by way of Spottsylvania and Cold Harbor to Petersburg. The siege of Petersburg was protracted until April 2, 1865, when Grant broke through Lee's defenses, and forced him to abandon Richmond. The Union forces with their great superiority of men gradually
hemmed in the Confederate forces, and on April 9, Lee and his army surrendered to Grant at Appomattox Court House. General Lee retired into private life; was elected president of Washington College, Lexington, Va., in 1866. He died October 12, 1870.

Leech (Leech), a name for those Annelida or Worms that form the type of the order Hirudinea (synonyms, Suctoria, Discophora) of that class. The distinctive feature of the leeches consists in the presence of one or two sucking discs. The rings or segments of the body are very numerous and closely set. Usually leeches breathe either by the general surface of the body or by little sac-like pouches known as the respiratory succuli. They chiefly inhabit fresh-water pools, though some live among moist grass, and some are marine. The familiar horse leeches (Hannopsis sangiustiga) of fresh-water ponds and ditches are included in this group. The land leeches of Ceylon are terrestrial in habits, living among damp foliage and in lime situations. They fasten on man and beast, and are a serious pest to travelers. The species generally employed for medical purposes belong to the genus Sanguisuga, and are usually either S. officinalis (the Hungarian or green leech), used in the south of Europe, or S. medicinalis (the brown-speckled or English leech), used in the north of Europe. The latter variety, however, is now rare in England, owing to the drainage of bogs and ponds. The mouth, situated in the middle of the anterior sucker, is provided with three small white teeth, serrated along the edges, and capable of inflicting a peculiar V-shaped wound, which, like that produced by the soldier’s bayonet, is difficult to close, and permits a large and continuous flow of blood. From 4 drachms to 1 oz. may be stated to be the average quantity of blood that can be drawn by a leech. After detaching themselves, leeches are made to disgorge the blood they have drawn by being placed in a weak solution of soda or by having a little salt sprinkled over them. Leeches appear to hibernate in winter, burying themselves in the mud at the bottom of the pools, and coming forth in the spring.

Leech, the border or edge of a sail

Leech, John, an English artist and humorist, born in London in 1817; educated at the Charterhouse School. He studied at St. Bartholomew’s Hospital for a time, but forsook medicine, and commenced drawing on wood for publications. His first important work was illustrations to the Ingoldsby Legends. In 1841 he joined the staff of Punch, his first drawing appearing in August of that year. For that periodical he worked with preeminent success, supplying weekly political satires and pictures of all phases of English life, showing no less artistic power than versatile humor. He died suddenly in 1864. His designs for Punch have nearly all been republished as Pictures of Life and Character, and as Pen- cilings from Punch. He also executed the illustrations for Mr. Sponge’s Sporting Tour, The Comic History of England, and other books. No artist has excelled John Leech in his particular line of artistic production.

Leechee. See Litchi.

Leeds (lēd), a borough and manufacturing city of England, in the West Riding of Yorkshire, on the river Aire, which here becomes navigable, and is crossed by eight bridges; 185 miles by railway N. N. W. from London. Among the most conspicuous of the public buildings are the town hall, considered one of the finest municipal buildings in the kingdom; the infirmary, a building in the Gothic style; the municipal offices and free library and the royal exchange. The University of Leeds has handsome build- ings and about 1200 students. In the vicinity is Kirkstall Abbey, a noble ruin which belongs to the borough, and in the environs is a beautiful park of 300 acres. Leeds has been for generations the chief seat of the woollen manufacture of York- shire. In the wholesale clothing trade several thousand hands are employed, as also in steel works, iron foundries, rolling-mills, tool and machine factories. The boot and shoe factories, the leather trade, and the cloth-cap trade also employ large numbers of men and women, and there are extensive color-printing works, tobacco manufactories, chemical and glass works, works for making drain- age pipes, fire-bricks, terra cotta, pottery, etc. Nearly a hundred collieries are worked in the district. The history of Leeds extends over more than 1200 years, the town being mentioned under the name of Loid or Loidia by the Venerable Bede as the capital of a small British kingdom about 616. Leeds was not made a parliamentary borough till 1832, when it was allotted two members; in 1867 it got a third, and in 1885 two more. In the neighborhood is the fine ruin of Kirkstall Abbey. Pop. (1911) 445,088.

Leek (lek; Allium Porrium), a mild kind of onion much cultivated for culinary purposes. The stem is rather tall, and the flowers are disposed in large
Leek, a market town of Staffordshire, England, picturesquely situated in the valley of the Churnet, 28 miles from Manchester. The staple industry is the manufacture of sewing silks and silk trimmings, silk dyeing, etc. Pop. 16,665.

Leeuwarden (lā'y-wārd-ən), a town of Holland, capital of the province of Friesland, on the Ee, 70 miles northeast of Amsterdam, intersected by numerous canals. The principal edifices are the palace of the former stadholders of Friesland, several churches, town house and provincial courthouse. The industrial establishments are various. Pop. 32,203.

Leeuwenhoek (lā'y-vən-hōk), Antony van, a Dutch microscopist, born in 1632; died in 1723. He completed Harvey's discovery of the circulation of the blood by showing that it passes from the arteries to the veins through the capillaries. He also discovered the red corpuscles of the blood, the spermatozoa, the infusorial animalcules, etc. He contributed papers to the Philosophical Transactions of the Royal Society, London.

Leeward (lē'wārd, lē'ərd), in nautical phraseology, a term that refers to the quarter towards which the wind blows. See Lea.

Leeward Islands. See West Indies.

Lefkosia. See Nicosia.

Leg, any limb of an animal that is used in supporting the body, and in walking and running; in a narrower sense, that part of the human limb from the knee to the foot. The human leg has two bones, the inner called the tibia or shin-bone, the outer called the fibula or clasp-bone. The tibia is much the larger
is by suit in equity for the administration of the testator’s assets; courts of common law have not, in general, any jurisdiction. Executors cannot be compelled to pay a legacy until the expiration of a year after the testator’s death; and even after that legatees must refund money if necessary for the payment of creditors.

Le Gallienne (lé-gal-i-nen), Richard, author, born at Liverpool, England, in 1806. Since 1838 he has resided in New York. His books include The Book-Hills of Narcissus, The Religion of a Literary Man, Retrospective Reviews, Rudyard Kipling, Prose Fancies, several volumes of poetry, etc.

Legal Tender, money which a creditor is bound to accept in payment. See Money.

Legates (lä-gätz), persons sent by the pope as ambassadors to foreign courts. Legates a latere, highest in rank, were sent on particularly important missions, and were always cardinals.

Legation (lä-gäsh’n), the body of official persons attached to an embassy. Formerly in Italy legation signified a division of the States of the Church.

Legend (lä-jend), ordinarily the title of a book containing the lessons that were to be read daily in the service of the early church. The term legend was afterwards applied to collections of biographies of saints and martyrs, or of remarkable stories relating to them, because they were read at matins and in the refectories of cloisters, and were earnestly recommended to the perusal of the laity. The Roman breviaries contain histories of the lives of saints and martyrs, which were read on the days of the saints’ names when they were commemorated. They originated in the twelfth or thirteenth century, and they contributed much to the extinction of the old German (heathen) heroic traditions. Among the best-known collections were the Legenda Aurea or Historia Lombardica and the Golden Legend (q. v.). The term is used in a general sense for any remarkable story handed down from early times, and is also applied to the motto or words engraved in a circular manner round the head or other figure upon a medal or coin and to descriptive texts beneath illustrations in books, etc.

Legendre (lë-shön-dr), Adrien Marie, mathematician, born at Paris in 1752, early a professor of mathematics in the military school there, and in 1783 a member of the Academy. In 1787 he was employed along with Cassini and Méchain to measure a degree of latitude between Dunkirk and Boulogne, while English mathematicians did the same on the other side of the Channel. He died in 1833. He particularly distinguished himself by profound investigations as to the attraction of elliptical spheroids, and his method of calculating the course of the comets. His best-known work is his excellent Eléments de Géométrie (1794), translated into English by Thomas Carlyle, and edited by Sir David Brewster.

Legerdemain (lé-ar-de-mân’), or Conjuring, a popular amusement or exhibition, consisting of tricks performed with such art and adroitness that the manner or art eludes observation. All the phenomena of legerdemain are referable to sleight of hand, mechanical contrivances, confederacy, or some combination of these. In the more elaborate phases of the art the aid of optical, chemical, and other sciences is utilized.

Leghorn (leg’horn; Italian, Livorno), a seaport of Northern Italy, in the province of Leghorn or Livorno, on the Mediterranean, 12 miles s. s. w. of Pisa and 30 miles w. s. w. of Florence. Leghorn is for the most part modern, and well and regularly built. It is intersected by canals, and a navigable canal connects it with the river Arno. Among objects of interest are the duomo or cathedral; the Church of the Madonna; a synagogue richly ornamented with marbles; the English chapel and cemetery (containing Smollett’s tomb); the lazaarretto, particularly San Leopoldo, one of the most magnificent works of the kind in Europe; etc. The manufactures are varied. Shipbuilding is carried on, and within recent years several ironclads have been constructed in the dockyards. Trade is principally carried on with the ports of the Levant and the Black Sea, and with the United Kingdom. Leghorn was a mere fishing village when it came into the possession of the Florentines in 1421, and it continued to be a place of no importance till the sixteenth century. It now ranks among the chief ports after Genoa and Naples. Pop. (1911) 165,315.

Leghorn, a kind of plait for bonnets, made of straw of bearded wheat cut green and bleached; so named from being imported from Leghorn.

Legio Fulminatrix. See Aurelius Antoninus.

Legion (lä’jun), in ancient Roman armies a body of infantry consisting of different numbers of men at different periods, from 3000 to above 6000, often with a complement of cavalry.
Legion, American

Legion, American, an organization of American veterans of the European war, formed in Paris, March 19, 1918, formally recognized in St. Louis, May, 1919. Lieut.-Col. Franklin D'Olier, of Philadelphia, was elected the first national commander.

Legion of Honor (Légion d'Honneur), a French order for the recognition of military and civil merit, instituted by Napoleon while consul, May 18, 1802, and inaugurated July 14, 1804. The decoration originally consisted of a star containing the portrait of Napoleon surrounded by a wreath of oak and laurel, with the legend, 'Napoléon empereur des Français'; on the reverse was the French eagle with a thunderbolt in his talons, and the legend, 'Honneur et Patrie.' The order has been remodelled several times, the last occurring being subsequent to the downfall of the second empire. There are now five ranks or classes: ordinary chevaliers or knights, officers, commanders, grand-officers, grand-crosses. The profuse granting of the decoration of the order latterly brought the institution into discredit, and the number of chevaliers is now restricted to 25,000, the officers to 4000, the commanders to 1000, the grand-officers to 200 and the grand-crosses to 70. The star now bears a figure emblematic of the republic, with the inscription 'République Française, 1870,' on the reverse two flags, with the inscription 'Honneur et Patrie.'

Legros (lë-grô), Alphonse, a French artist whose work has been for the most part done in England; born near Dijon in 1837, and largely self-instructed. He went to Paris in 1851, and in 1857 exhibited for the first time in the Salon. He subsequently settled in London and in 1876 became professor at the Slade School in University College. His more important pictures are the Anglers, the Pilgrimage, the Spanish Cloister, the Benediction of the Sea, the Baptism and the Coppersmith. His etchings are of higher value, among the most noteworthy being his Death and the Woodman and Le Repas des Pauvres, both marked by a fine breadth in conception and handling.

Leguminosæ (lë-gû'mô-sé), one of the largest and most important natural orders of plants, including about seven thousand species, which are dispersed throughout the world. They are trees, shrubs, or herbs, differing widely in habit, with stipulate, alternate (rarely opposite), pinnate, digitately compound or simple leaves, and axillary or terminal one or many flowered peduncles of often showy flowers, which are succeeded by a leguminous fruit. Four suborders are recognized: Papilionaceæ, Swartzieæ, Cassieæ, and Mimoseæ. It contains a great variety of useful and beautiful species, as peas, beans, lentils, clover, lucern, sainfoin, vetches, indigo, logwood, and many other dyeing plants, acacias, senna, tamarinds, etc.

Leh (lë), or Le, the chief town of Ladakh province, in Cashmere, in a fine open valley about 11,000 feet above sea-level, and 2 miles from the right bank of the Indus, 2100 miles north of Simla. The rajah's palace and several temples here are of very rich architecture. Leh is the great entrepôt for the traffic be-
tween the Punjab and Chinese Tartary, a principal article of trade being shawl wool from the latter. Population variously estimated from 4,000 to 12,000.

Lehigh River (lē'hē), a river of Pennsylvania, rising in Pike County and joining the Delaware at Easton, after a course of 100 miles, of which 70 are navigable. It is noted for beautiful, picturesque, wild scenery.

Leighton, a borough in Carbon County, Pennsylvania, on the w. bank of the Lehigh, 4 miles s. of Mauch Chunk. It is in a coal-mining district, and has railroad shops, silk factories, an automatic press company, etc. Pop. (1920) 6,102.

Lehigh University, an institution of learning at South Bethlehem, Pennsylvania, founded and liberally endowed by Asa Packer for the instruction (without charge) of young men from any part of the country or of the world. It has fine buildings, a library of over 60,000 vols., etc. It gives instruction in the various branches of general literature and technology, and is especially noted for the latter.

Leibnitz (lē'bîn'ts), Gottfried Wilhelm, Baron von, a German scholar and philosopher, born in 1646 at Leipzig. He studied law, mathematics and philosophy at the university of his native town, where he published a philosophical dissertation, De Principio Individuali, as early as 1663. This was followed by several legal treatises, for example, De Conditionibus (1665), and by a remarkable philosophico-mathematical treatise, De Arca Combinatoria (1666). After holding political appointments under the Elector of Mainz he went to Paris in 1672, and there applied himself particularly to mathematics. He also went to England, where he was elected a member of the Royal Society, and made the acquaintance of Boyle and Newton. About this time he made his discovery of the differential calculus, which he published in 1684. He was made privy-counselor by Emperor Peter the Great. In 1710 he published his celebrated Essai de Théodicée, on the goodness of God, human liberty and the origin of evil, in which he maintained the doctrines of pre-established harmony and optimism, and which was followed by his Nouveaux Essais sur l'Entendement Humain. A sketch of his philosophy was given by him in his Monadologie, 1714. His controversy with Newton concerning the discovery of the differential calculus, with the pains of the gout, embittered the close of his active life. He died in 1716. The principal metaphysical speculations of Leibnitz are contained in his Théodicée, Nouveaux Essais, Système nouveau de la Nature, De Ipsa Natura, Monadologie, and in portions of his correspondence. He controverted Locke's rejection of innate ideas, holding that there are necessary truths which cannot be learned from experience, but are innate in the soul, not, indeed, actually forming objects of knowledge, but capable of being called forth by circumstances. Authorities seem generally agreed that Leibnitz discovered the differential calculus independently of any knowledge of Newton's method of fluxions, so that each of these great men in reality attained the same result for himself.

Leicester (lés'tér), a municipal and parliamentary borough of England, county town and near the center of Leicestershire, on the right bank of the Soar. The more important public buildings are the Church of All Saints; St. Margaret's, a large and beautiful structure of the fifteenth century on the site of the old Saxon cathedral, and adjoining the abbey at which Cardinal Wolsey died in 1530; St. Martin's; St. Mary's, dating from twelfth century; St. Nicholas', a very ancient Gothic church; the municipal buildings, with lofty clock-tower, and fine public square with fountain; the guild hall, the public library, etc. The staple manufactures are cotton and worsted hosiery, elastic webs, ironware, boots and shoes, shawls, lace, thread, etc. Leicester is a place of considerable antiquity, and was known to the Romans under the name of Ratte. Its walls and strong castle were demolished in the reign of Henry II. It suffered severely during the wars of Lancaster and York, and also during the Parlia-
mentary war, having in the latter been first taken by storm by the royalists, and then retaken by the republicans. Pop. 227,242.—LEICESTERSHIRE is bounded by Nottingham, Derby, Warwick, Northampton, Rutland and Lincoln; area, 813 sq. miles, almost all arable land, meadow and pasture. The surface is varied and uneven, but possesses no bold features. The county is nearly equally divided geologically by the lias and sandstone formations; the former on the east, the latter on the west side. The coal formation exists to the extent of about 15 square miles on the west, and the clay-slate in Charnwood Forest. Dairy farms are numerous, and the cheese known as Stilton is chiefly made in Leicestershire. The Leicestershire sheep are much valued for their wool. Principal towns besides Leicester—Loughborough, Market-Harborough, Melton-Mowbray and Hinckley. Pop. (1911) 476,603.

LEICESTER, ROBERT DUDLEY, EARL OF, fifth son of John Dudley, Duke of Northumberland, born in 1532; died in 1588. In 1549 he was married to Amy Robsart, daughter of a Devonshire gentleman, and is said to have been accessory to her murder in 1560. Elizabeth created him Earl of Leicester and privy-councillor, and bestowed titles and estates on him lavishly. His fondness for him caused his marriage with her to be regarded as certain. His marriage with the Countess of Essex in 1578 mortally offended her. He successfully commanded in the Low Countries, and when England was threatened by the Spanish Armada, in 1588, was appointed lieutenant-general.

Leidy (l'de), Joseph, an eminent naturalist, was born in Philadelphia in 1823. In 1845 became professor to the chair of anatomy in University of Pennsylvania, in 1853 professor, and in 1884, director of the department of biology. He was elected president of the Academy of Natural Sciences in the same year. An ardent zoologist and palaeontologist, his published papers in biological subjects number over 500. Many of these had to do with microscopic forms, which he studied diligently, describing his researches in the Fresh Water Rhizopods of North America. Another work of value was The Mammalian Fauna of Dakota and Nebraska. He died in 1891.

Leigh (l'é), a town of England, county of Lancaster. 7½ miles from Bolton. There are coal mines in its vicinity, and it has glassworks, textile factories, etc. Pop. (1911) 44,400.

Leighton, Sir Frederick, painter, president of the Royal Academy, born at Scarborough in 1830. At fourteen he entered the Academy of Berlin, but a year later went to Frankfort-on-Main to continue his general education. His subsequent art studies were made at Florence (1845-49), the academy at Frankfort-on-Main (1848-49), Brussels (1848-49), Paris (1851), and Frankfort again (1851-53). From Rome, where he spent some three winters, he sent to the academy of 1855 his picture of Cimabue's Madonna carried in procession through the streets of Florence, which called forth general admiration, and was purchased by the queen. For four subsequent years he resided at Paris, availing himself of the friendly counsel of Ary Scheffer, Robert Fleury, and other painters, and then finally took up residence in London. In 1854 he was elected an associate of the Royal Academy, and in 1859 an academician. In 1878 he succeeded Sir Francis Grant as president of the Academy, was knighted, and was named an officer of the Legion of Honor. Seven years later he was made a baronet, and he received various honors and honorary degrees. From the long list of his works special mention may be made of his Hercules Wrestling with Death (1871), the Daphnephoria (1878), the Music Lesson (1877), Sister's Kiss (1880), Phryne (1882), Cymon and Iphigenia (1884), Captive Andromache (1888), and Ball Players (1889); and the large frescoes at the South Kensington Museum, representing the Industrial Arts applied to War, and the Arts of Peace. In addition to his pictures he achieved a high place as a sculptor by his Athlete Strangling a Python (1876),
and his Stuggard (1886). The special merit of his work lies in the perfection of his draftsmanship and design, his coloring, though possessing unfailing charm of harmonious arrangement, being only thoroughly satisfactory from the decorative point of view. He had fine poetic quality, conjoined with elegance in drawing and great refinement in execution. He died in 1896.

Leighton, Robert, a Scotch prelate, born in Edinburgh or London in 1611. He was educated at Edinburgh University, and then spent about ten years on the continent, chiefly at Douay. On his return to Scotland in 1641 he became pastor of the parish church of Newbattle, but resigned his living in 1652, and in the following year was chosen principal of Edinburgh University. On the attempt at the accession of Charles II to establish Episcopacy in Scotland, Leighton accepted reluctantly the bishopric of Dunblane, in the hope of modifying the violent dissensions of the time. He twice visited London (1655 and 1660) to implore the king to moderate the zeal of Sharpe and Lauderdale, and accepted the archbishopric of Glasgow in 1670 only after a promise of court assistance in the attempt to carry out a liberal measure for the comprehension of the Presbyterians. The promise being broken, he resigned his see, and subsequently resided for the most part at Broadhurst, his sister's estate in Sussex. He died in London in 1694. He was celebrated for his learning, gentleness and disinterestedness. He founded exhibitions in the colleges of Edinburgh and Glasgow.

Leiningen (l’ining-un), a former prince and duchy of Germany, erected in 1779, and divided between Baden, Bavaria and Hesse at the Peace of Lunéville in 1801.

Leinster (lin'ster), a province of Ireland, divided into twelve counties—Wexford, Kilkenny, Carlow, Wicklow, Dublin, Kildare, Queen's County, King's County, Westmeath, Longford, Meath and Louth; area, 7620 sq. miles. Leinster which is in the southeastern part is the most favored of the four provinces of Ireland in the extent of its tillage and pasture lands and its wealth in minerals. Pop. 1,150,480.

Leipa, or Leipza (Bormisch), (boor'-misht'-l'ip'a), a town of Bohemia, in the circle of Leitmeritz, 43 miles N. N. E. of Prague. Pop. 10,674.

Leipoa (Il-pou-a), a genus of gallinaceous birds of the family Megapodidae, of which the only species is the Leipoa occidentalis of the naturalists, the ngoyi-ngoy of the aboriginal Australian, and the 'native pheasant' of the colonists. The bird is a native of Australia, is of the size of a very small turkey, and, like the Australian jungle-fowl, constructs mounds in which to lay its eggs.

Leipzig (lp'zih), or Leipzig, a historic university city of Saxony, and one of the chief seats of commerce in Germany, 64 miles w. n. w. from Dresden. It lies in an extensive and fertile plain on the Elster, here joined by the Pleisse and Parthe, and consists of an old central or inner town and more modern and much more extensive suburbs. The marketplace in the old town has a picturesque appearance, having about it the town hall (Rathhaus), built in 1556, and other buildings in the renaissance style. It contains a fine war monument erected in 1888. The Augustus-Platz is one of the finest squares in Germany, overlooked by the university, museum, new theater, etc. The Pleissenburg or castle, now partly used as a barrack, withstood the attacks of Tilly, and is memorable as the scene of the famous Leipzig disputation between Luther and Dr. Eck in 1519. The suburbs contain the post-office buildings, the Church of St. John, the fine new Church of St. Peter and the Roman Catholic church; the Rosenthal (Valley of Roses), with pleasant wooded walks; and numerous places of recreation. The university, founded in 1409, is the second in importance in Germany (that of Berlin being larger), and has over 3000 students, and a library of 350,000 vols. Schools are numerous and good, the conservatory of music being of some celebrity. Besides being the center of the book and publishing trade of Germany, Leipzig possesses considerable manufactures, and has important general commerce carried on especially through its three noted fairs at the New Year, Easter and Michaelmas. Leipzig is of Wendish origin, and dates from the eleventh century. It early received the Reformation. In 1631 Gustavus Adolphus defeated Tilly near it at Breitenfeld. It suffered much from the Seven Years' war. On October 10-19, 1813, the great battle of the nations' (Völkerschlacht) was fought around and in Leipzig, in which Napoleon received his first defeat. Pop. 585,743.

Leinsig (lu'nig), a town of Saxony, in the circle of Leipzig and
Leistenwein

28 miles from that city, on the left bank of the Mulde. Pop. 8147.

Leistenwein. See Fränkoman Wines.

Leitch (lēch), WILLIAM LEIGHTON, landscape painter, born at Glasgow in 1804; died in London in 1883. Commencing his career as a house painter in his native city, he removed to London early in life and practised scene painting successfully. After five years of study in Italy he settled in London, and gained celebrity as an art teacher. Among his pupils were Queen Victoria and all the members of the royal family. At the request of a deputation of influential artists he became a member of the New Society of Painters in Water-colors in 1861, and from that time was a regular contributor to the society's exhibitions, and to those of its successor, the Royal Institute of Water-color Painters. Many of his subjects are Venetian and Sicilian scenery, but scenes in Scotland and elsewhere are not of infrequent occurrence. His productions (the majority of which are done in water-colors) are not numerous, but of great merit. They are distinguished by graceful composition, perfect balance of the several parts, and much power in rendering atmospheric effects. A number of them have been engraved as book illustrations and also as separate prints.

Leith (lēth), a seaport in the county of Midlothian, Scotland, about 1½ miles from the center of Edinburgh, on the south shore of the Firth of Forth, on both sides of the Water of Leith. It is connected with Edinburgh (of which it is the port) by Leith Walk and other lines of streets, and by branch lines of the railways centering in Edinburgh. Among the principal public buildings are the custom house, exchange buildings, courthouse, Trinity House, corn-exchange, etc. The chief manufactures are ropes, sailcloth, cotton, worsted, artificial manures, and there are breweries, distilleries, shipbuilding yards, sugar refiners, iron foundries, engine works, etc. The foreign trade is chiefly with the continent, particularly with the ports in the Baltic and the principal French and German ports; there is also some colonial and an important coasting trade. There are extensive wet docks, and three public graving docks, capable of receiving the largest vessels. Leith is mentioned for the first time, under the name of Inverleith, in a charter of David I granted in 1128; and in 1239 a charter of Robert I made a grant of the port and mills of Leith to the city of Edinburgh. It did not obtain a separate and independent magistracy till 1832. Pop. (1911) 50,488.

Leitha, or LETHA (lě'thə), a river rising in Lower Austria and forming for some distance the boundary between the two divisions of the Austro-Hungarian Empire (the Cisleithan or Austrian and the Transleithan or Hungarian); afterwards passing into Hungary and joining the Danube at Altenburg, Leitmeritz (lit'mer-itz), a town of Bohemia, beautifully situated on a height above the right bank of the Elbe, 34 miles northwest of Prague. It is the seat of a bishop, and contains a fine old cathedral. Pop. 13,075.

Leitrim (lī'trēm), a county of Ireland, in Connaught, touching Donegal Bay on the north. Area, 613 sq. miles. A considerable portion of its western boundary is formed by the Shannon, which first flows through Lough Allen, a lake situated near the center of the county, and almost cutting it in two. The surface in the north is somewhat rugged and mountainous, but elsewhere generally flat and in part moorish. In the valleys the soil, resting generally on limestone, is fertile. The principal crops are oats and potatoes. The minerals include iron, lead and copper, all at one time worked, and coal, still raised to some extent. County town, Carrick-on-Shannon. Pop. 69,343.

Leland (lĕl'and), CHARLES GODFREY, author, born at Philadelphia in 1824; studied law, but abandoned it for a literary life. He is best known through his quaint Hans Breitmann's Ballads in Pennsylvania Dutch dialect, and his works on the language and poetry of the Gypsies. He died in 1903.

Leland, or LAYLONDE, JOHN, an English antiquary, born in London about 1500, educated at St. Paul's School, and Christ's College, Cambridge, afterwards studying at Oxford and at Paris. On his return Henry VIII made him his chaplain and librarian, and gave him the title of royal antiquary. In 1533 he was empowered, by a commission under the great seal, to search for objects of antiquity in the archives and libraries of all cathedrals, abbeys, priories, etc., and having spent six years in traveling for this purpose, he retired to his house in London to arrange and systematize the mass of historical material acquired. He died insane, however, in 1552, without having completed his task. The great bulk of his collections was ultimately placed in the Bodleian Library in an indigested state. Hearne printed a considerable part, forming the Itinerary of John Leland and Lelandi Antiquarum de
Leland Stanford, Jr., University, a co-educational, non-sectarian institution at Palo Alto, California. It was founded in 1885 by Leland Stanford and his wife in memory of their son, who died in 1884, in his seventeenth year. The endowments amount to over $30,000,000. Its site covers 900 acres. The buildings are notable for their architecture, which reproduces the style of the old Spanish missions. The curriculum includes the usual courses, but considerable liberty is allowed in the matter of electives. The attendance in 1914 was 1879, and the number of instructors, 229. The library contains 240,000 volumes.

Lely (le’li), Sir Peter, painter, born at Soest, in Westphalia, in 1617 or 1618. Lely or Le Lyse was properly a nickname borne by his father, whose family name was Van der Vaes. He was first instructed by Peter Ghebber at Haarlem, but went to England in 1641, and commenced portrait painting. He finished portraits both of Charles I and of Cromwell; but it was not until the Restoration that he rose to the height of his fame. He fell in with the voluptuous taste of the new court, and was in great favor with Charles II, who knighted him. He died in 1680. The Hampton Court Collection of portraits of the ladies of the court of Charles II contains some of his best work; the finest of his few historical works being the Susannah and the Elders, at Burleigh House.

Lemaître (le-ma’tr’), Jules, a French writer and poet, born at Vennecey in 1853; died in 1914; held a professorship at Grenoble, but resigned it in 1884 to devote himself to literature; he was made a member of the French Academy in 1896. He wrote La Comédie après Moïsé, Les Contemporains, des Contes de Louis, Jean Jacques Rousseau, etc., and a number of plays.

Leman (le-man’), Lake, a name sometimes given to the Lake of Geneva. See Geneva, Lake of.

Lemberg (lem’berg; Polish Łućow), a city of Poland, capital of the province of Galicia, on the Peltew, 212 miles E. E. of Cracow. Though founded in the thirteenth century, it has all the appearance of a modern town from its rapid increase in recent times. Besides being the seat of the government, and the important courts and public offices necessarily connected with it, it possesses three metropolitan sees—Greek, Armenian and Roman Catholic. It has a university (library 86,000 volumes), attended by about 1400 students; and the Osolininsk Literary Institute (library 78,000 volumes). The manufactures are extensive and varied, and there is a large trade. In the European war (q. v.) it was taken by the Russians in 1914; retaken by Austrians and Germans in 1915. Pop. 212,000.

Lemming (le’ming’), a rodent mammal very nearly allied to the mouse and rat. There are several species, found in Norway, Lapland, Siberia, and the northern parts of America. The most noted species is the common or European lemming (Myôdes Lemmus), of which the body color is brownish variegated with black; the sides of the head and belly white, or of a grayish tint. The legs and tail are of a gray color. The head is large and shortened, the body thick-set, and the limbs stout. It feeds on plants, and is exceedingly destructive to vegetables and crops. It burrows under the ground at a limited depth. It is very prolific, and vast hordes sometimes migrate towards the Atlantic and the Gulf of Bothnia, destroying all vegetation in their path. Great numbers of wild animals—bears, wolves, foxes—hang upon them in their masses, making them their prey, thus tending to keep their numbers in some degree in check. Many of them are drowned in the sea.

Lemna. See Duckweed.

Lemnian Earth (le-mn’i-an’), a kind of astringent medicinal earth, of a fatty consistence and reddish color, used in the same cases as bole. It removes impurities like soap. It was originally found in Lemnos, but occurs also in Bohemia, Russia and India, resulting from decay of telepathic rocks.

Common Lemming (Myôdes Lemmus).
Lemniscata

like kaolin, to which it is related. Called also Sphragide.

Lemmiscata (lem-nis-ka'ta), or Lemniscate, in geometry, the name given to a curve having the form of the figure 8, with both parts symmetrical.

Lemnos (lem’nos; Italian Stalismen), the most northerly island of the Grecian Archipelaigo, between the Hellespont and Mount Athos. It has an area of 147 square miles, and abounds in vines, wheat, etc. The principal town on the island is Limno, or Kastro. Lemnos, formerly contained a volcano, Mosychius, which was regarded as the workshop of Hephaistos (Vulcan). Pop. about 30,000.

Lemoine (le-mwán), FRANÇOYS, a French historical painter, born in 1688. In 1718 he became a member of the Academy, and on his return from a visit to Italy in 1723 was appointed professor at the Academy. He painted the chapel of the Holy Virgin in the Church of St. Sulpice, and subsequently the ceiling in the Hall of Hercules at Versailles, a painting 64 feet long and 54 broad, which occupied him seven years. In a fit of insanity he put an end to his life in 1737.

Lemon (lem’ón), the fruit of the lemon tree (Citrus Limonum), originally brought from the tropical parts of Asia, but now cultivated very extensively in the south of Europe, especially in Sicily. It is congeneric with the orange and citron, and belongs to the natural order Aurantiaceae. It is a knotty-wooded tree of rather irregular growth, about 8 feet high; the leaves are oval, and contain scattered glands which are filled with a volatile oil. The shape of the fruit is oblong, and its internal structure is similar to that of the orange. The juice is acid and agreeable; and in addition to its use in beverages is employed by calico-printers to discharge colors. As expressed from the ripe fruit it has a specific gravity of 1.04, and contains about 1.5 per cent. of citric acid. It also contains sugar, albuminous and vegetable matters, and some mineral matter, nearly half of which consists of potash. The oil of lemon is a volatile oil of yellow or greenish color got from the fresh rind of the lemon. It is used in perfumery, and in medicine as a stimulant and rubefacient. It also forms an ingredient of syrup of lemon and tincture of lemon.

Lemon, MARK, humorist and dramatic writer, born in London in 1809. He made his first literary essays in the lighter drama, supplying the London stage with more than sixty pieces, farces, melodramas and comedies. On the establishment of Punch in 1841 he became joint-editor with Henry Mayhew, and two years later sole editor. He was also the literary editor of the Illustrated London News, and an occasional writer for Dickens' Household Words, Once-a-Week, and other periodicals. Among his later productions are some novels of average merit. He died in 1870.

Lemonade (lem’ón-ád), a drink made of water, sugar and the juice of lemons. A good recipe is: two sliced lemons, 2 1/2 oz. of sugar, boiling water, 1 1/2 pints; mix, cover up the vessel, let it stand, with occasional stirring, till cold, then strain off the liquid. Aerated bottled lemonade may be prepared by putting lemon syrup into a bottle, and filling up with aerated water at a bottling machine.

Lemon-kali, a name sometimes given to the effervescing beverage formed by mixing lemon-juice with dissolved bicarbonate of potash.

Lemons, SALT OF, a term sometimes called also salt of sorrel.

Lemprile (lem’pri-ár), JOHN, a native of the island of Jersey, born about 1750, was graduated at Oxford as A.M. in 1792, in which year he became head-master of Abingdon grammar school. He was afterwards master of the free grammar school at Exeter. In 1811 he was presented to the rectory of Meeth, Devonshire, which living, together with that of Newton Petrock, in the same county, he held till his death. His Classical Dictionary, published in 1792, was of great value in its day. Among his other works was a Universal Biography, published in 1806. He died in 1824.

Lemur (le’múr), a name popularly given to any member of the Lemuridae, a suborder of the Quadruman or Monkeys, but more strictly confined to members of the family Lemuridae. Their zoological position has been a matter of considerable debate, as they possess characteristics which distinguish them from the monkeys, and ally them with the insect-eating rodents. The simplest classification places them, however, with the lower Quadruman. The Lemuridae or True Lemurs are specially distinguished by the naturally four-footed or quadrupedal mode of progression. The tail (except in the short-tailed Indris) is elongated and furry, but is never prehensile. The hind limbs are longer than the forelimbs; the second toe in the hind foot being long and claw-like, and the nails of all the other toes being flat. The fourth digit of the hand, and especially of the foot, is longer than the others. The thumb can always be
opposed to the other fingers, and has a broad, flattened nail. The ears are small and the eyes large. The incisor teeth are generally four, the canines two, and the molars twelve in each jaw. The true lemurs are exclusively confined to Madagascar and neighboring islands, but other members of the family are found in Africa and as far east as the Philippines.

Lemures (lem′ū-rës), among the ancient Romans, the name given to the ghosts or souls of the dead. In order to appease them a ceremony called lemuria was observed on the nights of May 9th, 11th and 13th.

Lemuria (le-mū′ri-a), a hypothetical continent supposed by some to have at one time extended from Madagascar and S. Africa across what is now the Indian Ocean to the Asiatic Archipelago; named from its corresponding with the habitat of the lemur.

Lemuroida. See Lemur.

Lena (lē′nà), a river of Siberia, one of the largest in the world, rising on the northwestern side of the mountains which skirt the western shore of Lake Baikal, about 70 miles E. N. E. of Irkutsk. It flows in a winding course, and discharges itself through several branches into the Arctic Ocean in lat. 73° N., and lon. about 128° E. Its course, windings included, is about 2770 miles.

Lenine, NIKOLAI, leader of the Bolshevik government in Russia, which supplanted the Kerensky régime, was born at Simbirsk, Volga, in 1870; son of a Russian nobleman. He received a university education, studied law and was called to the bar. To combat Czarism he founded the first Social-Democratic organization in Russia, the Petersburg Union for the Emancipation of the Working Classes, and published an exhaustive History of Capitalism in Russia under his real name, Ulianoff. He was exiled to Siberia and later lived in Munich, London, and Geneva, where he started The Iskra (The Spark), a Social-Democrat paper, and preached orthodox Marxism as opposed to the moderate Socialism then prevalent in Russia and Germany. Leon Trotsky (q. v.), who had also been exiled to Siberia, made his escape and joined the staff of The Iskra. It was these two men who took the government of Russia into their hands in 1917 and concluded a separate peace with the Central Powers. During the first revolution of 1905 Lenine was chief editor of New Life, the first Socialist daily in Petrograd. When the revolution was quashed Lenine went to Finland, but being pursued by the Russian police he went to Geneva and then to Cracow. He was in Cracow when the war broke out in 1914 and was arrested by the Austrians, but subsequently released. He removed to Switzerland and remained there till the early months of the revolution of 1917 which resulted in the overthrow of Nicholas II. He gained permission to pass through Germany to Russia and at once placed himself at the head of the Maximalists, or Bolsheviki. See under Russia for text of treaty which he negotiated.

Lenkoran (len′kô-rân′), a Russian town and harbor on the Caspian Sea near Baku. Pop. 8768.

Lennep (len′ep), a town of Prussia, province of Rheinland, 21 miles e. s. e. of Düsseldorf, with worsted and woolen manufactures. Pop. 10,323.

Lennep, Jacob van, a Dutch novelist, historian and dramatist, born in 1802; died in 1838. He was a successful advocate, and was attorney-general for North Holland. In literature he was representative of the romantic movement in Holland. He left upwards of thirty plays, a collection of poems, and several historical works, but is perhaps best known by his historical romances, De Roos van Dekama, Klaasje Zeevenster, etc.

Lenni-Lenape (len′i len′a-pé), the name by which the Delaware Indians called themselves. See Delaware.

Lennox (len′oks), Charlotte Ramsay, novelist, was born in New York in 1720, but lived from the age of fifteen in London, where she died in 1804. She was friendly with Richardson and Johnson, who is said to have written the last chapter of the Female Quixote (1752), the best known of her works. Her other works included Shakespeare Illustrated (1753-54), a collection of the tales used by Shakespeare for his dramas, a translation of Sully's Memoirs, Henrietta (1758), Philander (1758), and Sophia (1763).

Lenormant (le-nor′mâ), Charles, a French archaeologist, born in 1802; in 1825 made inspector of fine arts. He accompanied Champollion to Egypt in 1828, and afterwards became chief of the section of fine arts at the ministry of the interior, professor at the Sorbonne, and professor of Egyptian archaeology at the College of France. He left a considerable number of treatises in various departments of archaeological research. He died in 1859.

Lenormant, François, a French archaeologist, born in 1837; son of Charles Lenormant. After traveling in the East he became, in 1874,
professor of archaeology at the Bibliothèque Nationale. He died in 1883. He was an authority on the Cuneiform inscriptions and the Accadian language.

Lenox (len'oks), JAMES, philanthropist, born in New York city, in 1800. From his father he inherited several millions of dollars. For half a century his time was devoted to the forming of a library and gallery of paintings, which he conveyed to New York city in 1870, the total value being over $2,000,000. He was a liberal donor to many churches and charities. He died in 1890.

Lenôtre (le-nôtr'), ANDRÉ, a French architect and ornamental gardener, born in 1613. His plans for the decoration of the park of Versailles contributed principally to establish his reputation. He afterwards embellished the gardens of Trianon, Chantilly, St. Cloud, Sceaux, the Tuileries, etc. Louis XIV in 1675 bestowed on him letters of nobility. He died in 1700. His style of ornamental planting was fashionable in Britain, till it was superseded by the designs of Kent, Brown, and the modern landscape gardeners.

Lens, a transparent substance, usually glass, so formed that rays of light passing through it are made to change their direction, and to magnify or diminish objects at a certain distance.

Lenses are double convex, or convex on both sides; double concave, or concave on both sides; plano-convex, or plano-concave, that is, with one side plane and the other convex or concave, or convex on one side and concave on the other. If the convexity be greater than the concavity, or if the two surfaces would meet if produced, the lens is called a meniscus; and if the concavity be greater than the convexity, the lens is termed concavo-convex. See Optics, Microscope, Telescope.

Lens (lens), a town in the Department of Pas-de-Calais, France, on the Deule, ten miles northeast of Arras. It is located in the midst of extensive coal fields and in 1914 had a number of large engineering works, iron and steel foundries and sugar and soap factories. The population numbered 31,740 in 1911. During the European war the town was reduced to a mass of roofless houses and rubbish heaps. It was in the center of the fiercest fighting, and it was here that the Canadian forces played havoc with the German armies. The Germans held the town, but their casualties were enormous. They had provided underground tunnels reinforced by concrete, but the Canadians blew up the tunnels with heavy shells that pierced deep and exploded with fearful effect. Thousands died in these underground passages, which became death traps. Many times the Canadians filled the town of Lens with poison gas (first introduced in warfare by the Germans), which soaked down into the dugouts and stifled the Teutons before they had time to put on their gas masks.

Lent, the forty days' fast in spring, beginning with Ash Wednesday and ending with Easter Sunday. In the Latin Church Lent formerly lasted but thirty-six days; in the fifth century four days were added, in imitation of the forty days' fast of the Saviour, and this usage became general in the Western Church. The close of Lent is celebrated in Roman Catholic countries with great rejoicings, and the carnival is held just before it begins. The English Church has retained Lent and many other fasts, but gives no directions respecting abstinence from food.

Lentibulariaceae (len-tib-yu-la-ri-a-se-e), a small natural order of monopetalous exogens, growing in water or in marshy places, sometimes cipiphytes. The flowers (often large and handsome) are usually yellow, violet, or blue. There are four genera, of which Utricularia (bladderwort) and Pinguicula (butterwort) are the best known.

Lentil (len'til; Ervum lens), a plant belonging to the papilionaceous division of the nat. order Leguminoseae, cultivated in Southern and Central Europe. It is an annual, rising with weak stalks about 18 inches, and with British flowers hanging from the axils of the leaves. Two varieties are cultivated—the large garden lentil and the common field lentil—the former distinguished by its size and the greater quantity of mealy substance which it will afford. The straw of lentils makes good fodder. As food for man the seeds are very nutritious, and in Egypt, Syria, etc., are a chief article of diet. In Great Britain their use for food has increased of late years, and it is to them that the foods advertised as ervalenta or ervofa owe their name. They are also coming into use in United States.
Lentini (lèn-te'nè), a town of Sicily, province of Syracuse. It has interesting ruins, and enjoys a considerable trade. Pop. 11,184.

Lentiscus (lèn-tis'kús), or Lentinus, the mastich tree Pistacia lentiscus), a tree of the nat. order Anacardiaceae, a native of Arabia, Persiam, Syria, and the south of Europe. The wood is of a pale brown, and resinous and fragrant. See Mastic.

Lento (lèn'tò; Italian, slow), a term used in music; rather faster than adagio.

Leo (lè'o), the Lion, the fifth sign of the zodiac, between Cancer and Virgo. The sun enters it about July 22, and leaves it about August 23. The constellation contains 95 stars, and is noteworthy for its remarkable nebulae. There is also a constellation of the northern hemisphere known as Leo Minor, and containing 53 stars.

Leo I, St. Leo, called the Great, pope, born about 360. The Popes Celestine I and Sixtus III employed him in important ecclesiastical affairs, and on the death of Sixtus III in 440 he was elevated to the papal chair. The beginning of his pontificate was marked by condemnation of all holding the Manichean, Pelagian, Priscillian and Eutychian heresies. He was employed by Valentinian to intercede peace with Attila, who, at his request, evacuated Italy. From the Vandal Genseric, however, he was unable to obtain more than the promise to forbid the murder of the citizens, the burning of the city, and the plunder of the three principal churches in Rome. His death took place in 461. He is the first pope whose writings—sermons, letters, etc.—have been preserved. In his earnest effort to keep the Archbishop of Constantinople from having himself declared primate of the East at the Council of Chalcedon in 451, he was defeated by the ambition of that prelate and the emperor.

Leo III., a Roman by birth, elected pope on the death of Adrian I in 796. He commenced his rule by making submission to Charlemagne, and that when driven from Rome in 799 by his rival Paschel, Charlemagne reestablished him on his throne, receiving from him in 800 the imperial crown. Leo died in 816.

Leo X, Giovanni de Medici, second son of Lorenzo the Magnificent, born at Florence in 1475, received the tonsure in his seventh year, and was loaded with benefices. In 1498, when only thirteen years old, he was made a cardinal, and in 1492 took his seat as a member of the Holy College at Rome. Pope Julius II made him governor of Perugia, and in 1511 placed him, with the title of Legate of Bologna, at the head of his forces in the holy league against France. He was made prisoner by the French at the battle of Ravenna in 1512, but soon after regained his freedom and returned to Bologna, where he conducted the government as legate. After contributing to the reestablishment of the Medici he remained at Florence until the death of Julius II recalled him to Rome. Although only a deacon, he was chosen to succeed Julius in 1513. He made a favorable peace with Louis XII, who was compelled to abandon Italy, and public tranquility being thus restored in the first year of his government, he gave all his attention to the promotion of literature and the arts. The university at Rome was restored and endowed in a society established for the publication of Greek authors, and great encouragement given to scholars. In 1515 he had an interview with Francis I at Bologna, and formed with him a concordat, which remained in force nearly three hundred years, and gave to the king the right to nominate bishops in his own dominions. To procure money, particularly for the completion of St. Peter's, he encouraged the sale of indulgences, an abuse which incidentally promoted the Reformation, in calling forth the attacks of Luther. Leo died suddenly in 1521.

Leo XIII, born Joachim Pecci, in 1810, at Carpino, Italy. He became a chaplain of Gregory XVI in 1837, bishop of Danireta in 1843, archbishop, and bishop of Perugia in 1846, and was made a cardinal priest in 1853 by Pius IX, whom he succeeded as pope in 1878. As such he was opposed to radical measures and extreme views, though he strongly held for the temporal dominion of the papacy. He died in 1903.

Leoben (1a-'o-be'n), a town of Austria, in Styria, 44 miles N. N. W. of Graz, on the right bank of the Mur. Pop. 10,204.

Leominster (lèm'as tér or lem'min-stèr), an old municipal borough and market town of England, county of Hereford, 12 miles north of Hereford, in a fertile valley on the right bank of the Lugg. The spacious priory church (restored and enlarged in 1868 and 1879) exhibits fine specimens of Norman and early English architecture. Leather glovemaking is the chief industry. Pop. (1911) 5737.

Leominster (lem'min-stèr), a town of Worcester County, Mas
Leon (lā-on'), one of the old divisions of Spain, formerly a kingdom, is bounded north by Asturias, east by Old Castile, south by Estremadura, and west by Portugal and Galicia. It is now divided into the provinces of Leon, Zamora, and Salamanca.

Leon, a city of Spain, capital of the province and ancient kingdom of the same name, 176 miles northwest of Madrid. It is for the most part in a somewhat decayed condition. The principal edifices are the cathedral, a beautiful specimen of the purest Gothic; the Church of San Isidoro, an ancient massive structure; and the fine old palace, called La Casa de los Guzmanes. Pop. 15,580.

—The province has the Asturias as its northern boundary, a branch of which mountains divides it into two portions. The western portion is adapted rather for pasture than tillage, but the eastern has wide and undulating plains, on which the vine and various grain crops are successfully cultivated. Area, 5986 square miles. Pop. 386,083.

Leon, a town of Central America, capital of the department of Leon, state of Nicaragua, on a large and fertile plain near the Pacific coast. It is regularly built, and the public buildings, which are considered among the finest in Central America, include a massive cathedral, an old episcopal palace, a new episcopal palace, and several churches. A railway connects it with the coast at Corinto. The town has suffered a good deal from the civil wars. Pop. about 60,000.

Leon, a city of Mexico. State of Guanajuato, on a fertile plain more than 6000 feet above sea-level, a well-built place, with flourishing industries of various kinds, which its railway connections are helping to develop. It is one of the most thriving towns of Mexico. Pop. (1910) 57,722.

Leon, a province of Central Ecuador, area 2590 square miles. In its N. E. portion is the volcano of Cotopaxi. Pop. about 125,000.

Leonard's St. See Hastings.

Leonforte (lā-on-för'tā), a town of Sicily, in the province of Catania, and 37 miles W. N. W. of Catania. It carries on a considerable trade in corn, wine and silk. Pop. 19,751.

Leonidas (le-ōn'ī-das), in Greek history, a king of Sparta, who ascended the throne 491 B.C. When Xerxes invaded Greece, the Greek congress assigned to Leonidas the command of the force destined to defend the pass of Thermopylae. His force, according to Herodotus, amounted to over 3000 men, of whom 300 were Spartans. After the Persians had made several vain attempts to force the pass, a Greek named Ephialtes betrayed to them a mountain path by which Leonidas was assailed from the rear, and he and his followers fell after a desperate resistance (B.C. 480).

Leonine Verse (lē'nīn), a kind of Latin verse, in vogue in the middle ages, consisting of hexameters and pentameters, of which the final and middle syllables rhyme; so called from Leo or Leonius, a poet of the twelfth century, who made use of it. The following distich may serve as an example, being the Latin version of "The devil was sick;" etc.:

'Demon languebat, monachus tune esse vult.
Aest ubi convallavit, mansit ut ante fult.'

Leontodon (lē-on'to-don). See Dan\[...\]. But dandelion is often put in a separate genus, Taraxacum (being called T. officinalis or T. dentatus), certain allied plants being assigned to Leontodon.

Leopard (lep'ard; Felis leopardus), a carnivorous mammal inhabiting Africa, Persia, India, China, etc., by some regarded as identical with the panther. The ground or general body-color of both is a yellowish fawn, which is slightly paler on the sides, and becomes white under the body. Both are also marked with black spots of various sizes, irregularly dispersed, a number of these being ring-shaped. The African animal seems to have these ring-spots chiefly on the back, and to this form some would specially assign the name of leopard. It
Leopardi

Leopardi (lā-op′ār-dē), GIACOMO, Count, an Italian poet and scholar, born in 1798. He conducted his own education, and at an early age, he had written a History of Astronomy, and translated, with learned notes, Porphyry’s Life of Plotinus. He also translated into Italian verse the Battle of the Frogs and Mice, some fragments of the Odyssey, etc. A commentary on Petrarch, and an essay on the errors of the ancients, appeared in 1815; and in 1818-20 an ode to Italy and other poems raised him to the first rank of lyric poets. He lived at various times in Rome, Milan, Bologna, Florence, almost constantly a victim of ill health; in 1833 he removed to Naples, where he died in 1837.

Leopard’s-bane, Doronicum pardalianches, nat. order Composite, a robust plant, with large, roughish leaves and conspicuous, yellow flower-heads.

Leopard-wood, the wood of Brosimum Aubletii, a tree of Trinidad and Guiana, allied to the cow tree.

Leopold I (lē’u-pōld), King of the Belgians, son of a Duke of Saxo-Coburg, was born in 1790. In 1816 he married the Princess Charlotte, heir-apparent of Great Britain, who died in 1817. In 1831 he accepted the crown of Belgium. He married a daughter of King Louis Philippe of France. He was popular among his subjects, being liberal and attentive to their constitutional rights. He died in 1865.

Leopold II, King of the Belgians, was born in 1835, and succeeded his father, Leopold I, in 1865. As Duke of Brabant, he had been an active legislator before his accession. Queen Charlotte, his wife, was a niece of Francis Joseph of Austria. During his reign Belgium became the administrator of the Congo Free State, and Leopold its sovereign. He was accused of working the natives cruelly in his own interests and of growing wealthy from the fruits of their enforced labor. He surrendered his sovereignty over this state to the government of Belgium in 1907, and died in December, 1909, being succeeded by his son Albert.

Lepidodendron

Lepold I. See Germany.

Lepadidae (lep′a-di-dē), the barnacles or goose-mussels, a family of cirriped crustaceans, free-swimming when in the larval state, but when adult attached by the antenna to submarine bodies. See Barnacle.

Lepanto (lep′an-tō), or Epaktos (ancient Naupactus), a seaport town of Greece, in the nome of Phokis, on the Gulf of Corinth or Lepanto, near the Strait of Lepanto. Its harbor is now silted up, but it was ancient of considerable importance. It is memorable for the naval battle, from which dated the decline of the Turkish power in Europe, fought within the Gulf on October 7, 1571, between the Ottoman fleet and the combined fleets of the Christian states of the Mediterranean, under Don John of Austria, when the former, consisting of 200 galleys and 60 other vessels, was destroyed.—The strait connects the Gulf of Corinth with the Gulf of Patras, and is about 1 mile wide at its narrowest part.

Lepas, the generic name of barnacles. See Lepidodendron and Lepas.

Leper. See Leprosy.

Leper-houses (lep′er), houses for the treatment of lepers; once very numerous in England, nearly every important town having one or more of these houses. The house of Burton Lazars in Leicestershire, built by a general subscription raised over England in the time of King Stephen, was the head of all lazars-houses in England. It was dependent on the leper-house at Jerusalem. From the Crusades until the Reformation these houses flourished and multiplied. Gradually, however, as better habits and treatment began to diminish diseases of the class for which they were used, these houses declined, and were abandoned or appropriated to other objects.

Lepidium (lep′i-dī-um), an extensive genus of herbs or undershrubs of the nat. order Cruciferae. L. sativum is the common garden-cress.

Lepidodendron (lep′i-dō-den′drŏn; Gr. Lepidodendron, lepis, scale, and dendron, tree), a genus of fossil plants, crypto-gamic and acrogenous. The stalks are dichotomous, the leaves simple, linear, or
Lepidoganoidei

Lanceolate, but only towards the extremity. Their internal structure is intermediate between that of the Conifera and Lycopodiaceae. They are found only in the coal-measures. Some of the species were of immense size, fragments of stems being found upwards of 40 feet in length.

Lepidoganoidei (lep-id-o-ga-noi-de-i), a suborder of ganoid fishes, distinguished from the placoganoïd fishes by their external covering consisting of scales, and not, as in the latter, of plates. The best-known living fishes belonging to the Lepidoganoidei are the bony pike and the polypterus.

Lepidolite (lep-i-dol-it), or Lithia Mica, a species of mica occurring in oblique rhombic or hexagonal prisms, or in masses composed of small, crystalline scales. Its color is pink or peach-blossom, passing into gray; luster pearly; easily split into thin, translucent, flexible scales or plates. The mineral is one of the principal sources of the metal lithium.

Lepidoptera (lep-i-dop-ter-a; Greek, lepis, a scale; pteron, a wing), the scientific name of the order of insects which includes the butterflies and moths (which see), and which is so named from the presence of immumerable small, membranous scales, which come off like fine dust or powder when the wings (four in number) are touched by the finger. The scales are merely modifications of the hairs with which the wings of most other insects are covered; and from the presence of these scales the beautiful tints and colors of the lepidopterous insects are derived. The Butterflies form the diurnal Lepidoptera; while the Moths, flying about ciuety at twilight or during the night, are termed crepuscular or nocturnal Lepidoptera.

Lepidosiren (lep-i-dos-i-ren), the scientific appellation of the mud-fishes. See Dipnoi.

Lepidosteus (lep-i-do-ste-us), the generic name of the bony pike of the North American lakes. See Bony Pike.

Lepidus (lep-i-dus), M. Amilius, a Roman triumvir, prætor b. c. 49, consul with Julius Cæsar in 48, and in 44 appointed by Cæsar to the government of Narbonese Gaul and Nearer Spain. He was in Rome at the time of Cæsar’s death, and joined Mark Antony. In 43 he united with Antony and Octavius to form the triumvirate, obtaining Spain and Narbonese Gaul as his share in their division of the empire. After the battle of Philippi (42) a redivision took place, in which Lepidus received Africa, where he remained till 36, when he was summoned by Augustus to assist him against Sextus Pompey. He then tried to seize Sicily, but was overcome by Augustus, who removed him from the triumvirate, and banished him to Circeii, where he lived under strict surveillance. He died in B.C. 13.

Lepismidae (lep-is’mi-de), a family of minute wingless insects belonging to the order Thysanura, having the abdomen furnished at its extremity with three caudal bristles, which are used in leaping. The common species (Lepisma saccharina) is found under wet planks or in similar damp situations.

Leporidae (lep-or-i-de), the bare tribe, or the family of rodents of which the genus Lepus is the type.

Leprosy (lep’ro-si; Greek, lepros, rough), a name applied at one time to several different skin diseases characterized by roughness or scaliness. True leprosy is the elephantiasis of the Greeks, the lepra of the Arabs, whose old English name was the myackle ail or great disease. It is to be distinguished from the elephantiasis of the Arabs, which is a local overgrowth of skin and subcutaneous tissue. There are several well-marked types. The first is characterized by the formation of nodules or tubercles in the skin, common about the eyebrows, where they destroy the hair, and produce a frowning or leonine aspect. After a time the nodules break down, forming ulcers, which discharge for a time, and may cause extensive destruction and de-
formity. The tubercles may form in the nostrils; in the throat, altering the voice; on the face, extending into and destroy the eyeball. In the second type, the chief features are insensibility and numbness of parts of the skin, accompanied by deep-seated pains, causing sleeplessness and restlessness. In a third variety much mutilation occurs owing to the loss of bones, chiefly of the limbs, a portion of a limb being frequently lopped off painlessly at a joint. All these varieties begin with the appearance on the skin of blotsches of a dull coppery or purplish tint, the affected part being thickened, puffy and coarse looking. When the redness disappears a stain is left, or a white blotch. Leprosy is now believed to be caused by a minute organism—a bacillus (see Gern Theory of Disease), and to be contagious. Though the disease is not so widespread as at one time it was, it still prevails in Norway and Iceland, the coasts of the Black Sea and Mediterranean, in Madagascar, Mauritius, Madeira, the Greek Archipelago, East and West Indies, Palestine, the Pacific Islands, etc. In Hawaii an island is set aside expressly for the residence of lepers, they being removed thither as soon as the disease appears.

Lepus (lep’us), the genus of rodents which comprises the hares and the rabbits.

Lepus (lep’sis), KARL RICHARD, a distinguished German Egyptologist, born in 1810; died in 1884. After studying at Leipzig, Gottingen and Berlin, he carried on studies and researches at Paris, Rome and London, and he also made two visits to Egypt. He was professor in the Berlin University, director of the Egyptian section of the royal museum, director of the royal institute, head of the royal library, etc. He was author of a large number of important works on Egyptian subjects.

Lepomedusa (lep’to-kar’da-sa), Müller's name for the lowest order of fishes, represented by the lancetfish, now called Pharyngobranchii.

Lepus (lep’us), the genus of rodents which comprises the hares and the rabbits.

Lerida (li’re-tha; ancient Liresa), a seaport of northeastern Italy, in the province of Genoa, on the eastern shore of the Gulf of Spezia, 57 miles E.S.E. of Genoa. Pop. 9326.

Lerida, Catalonia, on the right bank of the Segre, here crossed by a handsome bridge of seven arches, 94 miles W. N. W. of Barcelona. As the key of Aragon and Catalonia it was early fortified, and still continues to be one of the most important and military points in Spain. It was the seat of a university; has manufactures of textiles, glass, etc. Pop. 24,531.—The province, bounded north by France, has an area of 4690 square miles traversed by ramifications of the Pyrenees. Pop. 274,590.

Lerins (li-ran), THE, several small islands off the south coast of France. The largest, St. Marguerite, is occupied by a prison, especially famous as the residence for twelve years of the Man in the Iron Mask. The second, St. Honorat, contains the ruins of a once celebrated monastery.

Lerma (ler’ma), FRANCISCO GOMEZ DE SANDOVAL Y ROJAS, DUKE of, born about 1550, Spanish minister under Philip III from 1598 to 1618. His career was chiefly marked by the unfavorable terms on which he concluded peace with England (1604) and the United Provinces (1608); and by the decree of proscription issued in 1609, which drove thousands of Moorish families from Spain and confiscated much of their property. Under Philip IV his administration of the treasury was challenged, and he was compelled to refund considerable sums. He died in 1625.

Lermontoff (ler-mon-tof), MIKHAIL, a Russian poet, born in 1814; killed in a duel in 1841. He was for a time an imperial page, and then an officer of the guard. His first important poem, on the death of Pushkin, caused his temporary banishment to the Caucasus. His poems, which include The Novice, The Demon, Ismail Bey, etc., belong to the Byronic school.

Lernæae (ler-na’se-a), a group of parasitic scutatorial crus-taceans, of the order Ichthyophthiria or fishlice, having the mouth armed with piercing mandibles, and found attached to fishes. The young lernæan as it first comes from the egg is provided with eyes, antennæ and locomotive limbs, but the limbs, eyes and other organs of sense disappear when it assumes the parasitic condition.

Lerou (ler’ro; ancient, Lerus), a Turkish island in the Ægean, off the coast of Asia Minor, 35 miles south of Samos; length 6 miles, width 4 miles; pop. 3000.

Leroux (ler-ro), PIERRE, a writer on social and economic questions, born at Paris in 1798. For some time his Journal, the Globe, was an important Saint-Simonian organ, but he afterwards withdrew from that body. He was editor of the Revue Encyclopédique (1832), and part editor of the New Encyclopedia (1838). He was afterwards associated with Blaude and George Sand.
in founding the Revue Indépendante (1841), and sat in the National Assembly (1848) as an extreme radical. From 1831 to 1869 he lived in Jersey and Switzerland, but returned to Paris after the amnesty, and died there in 1871. His chief work was De l'Humanité (1839).

Lerwick (ler'wik), a seaport town of Scotland, capital of Shetland, in Bressay Sound, on the southeastern shore of Mainland. There are no manufactures of consequence; but the trade, favored by the fine anchorage in the bay, is considerable. Many of the inhabitants are employed in the fisheries.

Le Sage, or LESAGE (lé-szah), ALAIN RENE, a French novelist and dramatic writer, born in 1668 at Sarzeau, Brittany. He studied at the college of the Jesuits at Vannes, in 1682 went to Paris to study law, and in 1694 he married. To procure a livelihood he abandoned law for literature, his first attempts being in imitation of the Spanish drama. He subsequently translated Avellar's continuation of the Adventures of Don Quixote, and adapted a play from Calderon; but his first success was with his Crispin Rival de son Maitre (1707). This was followed by Turcaret, his theatrical masterpiece, and one of the best comedies in French literature. Le Diabio Boiteux, imitated from a Spanish romance, El Diabio Cojuelo, appeared the same year. In 1715 he published the first two volumes of Gil Blas, one of the best romances in the French language, the third volume appearing in 1724, the fourth in 1735. In 1732 he published Les Aventures de Guzman d'Alfarache (based on Aleman's work). In 1734 appeared L'Histoire d'Estevanille Gonzales. The last of his novels was Le Bachelier de Salamanque (1738). He died in 1747.

Lesbos (les'bos), a Greek island situated off the northwest coast of Asia Minor, now called Mitylene, from its capital. In shape it is nearly triangular; has an area of 276 square miles, and a population of about 25,000. Acquired by Greece from Turkey on June 13, 1912. It is mountainous, but is exceedingly fertile, its principal products being figs, grapes, olive-oil and pine timber. The island formerly contained nine cities, the chief being Mitylene. It was a flourishing ancient time, till conquered by Athens, and was the birthplace of the poets Alceus and Sappho.

Leskovats (les'ko-vats), LESCOVAC, a town in Servia, between Nish and Vranja, the headquarters of the Servian hemp industry. Pop. 13,707.

Lesghians (les'g'ians), a Tartar people of the Mohammedan religion, inhabiting the eastern Caucasus, and forming the chief portion of the inhabitants of Daghestan. They were among the most stubborn of the Caucasian peoples in their resistance to the Russians.

Lesina (les'i-nah), or LEZ'ISINA, an island in the Adriatic, on the coast of Dalmatia, consisting of a long and narrow strip, stretching east to west for 40 miles, with a breadth of 2 to 6 miles, and presenting a continuous chain of hills, which, on the coast, form lofty and precipitous cliffs. Wine, olive-oil and fruit are produced. The principal town, bearing same name, is on the south-west coast, and has a good natural harbor. Pop. 18,091.

Lesley, JOHN, Scottish prelate and historian, born 1527. He was devoted to the cause of Mary Queen of Scots, and was her chief legal adviser in the negotiations with Queen Elizabeth. For his intrigues he was imprisoned for a time in the Tower of London, being liberated in 1573. He wrote A Defence of the Honour of Marie, Queen of Scotland, De origine moribus et rebus gestis Scotorum, etc. He died in 1596.

Lesley, J. PETE, geologist, born at Philadelphia in 1819; died in 1903. He was engaged for several years on the geological survey of Pennsylvania, in 1873 was appointed professor of geology at the University of Pennsylvania, and in 1874 was put in charge of the State Geological Survey, which he conducted with much ability. He wrote A Manual of Coal, Man's Origin and Destiny, etc.

Leslie, ALEXANDER, Earl of Leven, a Scottish general, born about the end of the 16th century. He went abroad, and rose to be field-marshall in the service of Gustavus Adolphus. Returning home in 1639 he was chosen general-in-chief of the Covenanters' army, and defeated the king's army at Newburn. In 1644 he went to the assistance of the English Parliament, and led a division at Marston Moor. In 1646 Charles I gave himself up to Leslie's army, then encamped at Newark. At the battle of Dunbar he served as a volunteer, and was soon afterwards thrown into the Tower by Cromwell, but soon liberated at the intercession of Christina of Sweden. He died at an advanced age in 1661.

Leslie, CHARLES ROBERT, painter, born in London in 1794, was when very young taken by his parents to the United States, where he was apprenticed to a bookseller in Philadelphia. Having
shown artistic ability, he was sent to England, and became a pupil at the Royal Academy about 1813. Among his most successful early pictures were *Anne Page and Slender* (1819); *Sir Roger de Coverley going to Church* (1820); and *Mayday in the reign of Queen Elizabeth*. In 1824 he produced *Sancho Panza and the Duchess*, the first of his pictures from *Don Quixote*—a work which furnished him with some of his happiest subjects. He painted other scenes from the Spectator, from *Tristram Shandy*, and from other popular novels, and a number of historical incidents. He was elected an associate of the Academy in 1821, an academician in 1826. From 1848 to 1851 he was professor of painting at the Academy. He died in 1859. Leslie is distinguished for the delineation of character and expression, and for excellence in composition rather than for his coloring.

**Leslie, David, Lord Newark**, a Scottish general and Presbyterian leader, born in Fifeshire in the early part of the seventeenth century. He served for some time under Gustavus Adolphus, king of Sweden, but returned to Scotland about the commencement of the civil wars, and in 1644 accompanied the Earl of Leven with the Scottish force sent to assist the parliament. His Scottish horse supported Cromwell's decisive charge at Marston Moor. Leslie was then recalled to check the successes of Montrose in the north, and routed him at Philiaphaugh, near Selkirk. With the change in Scottish politics the Scottish army returned home, and Leslie was employed for some time in putting down insurrection, chiefly in the north and west among the Highlanders. When, however, the Scottish Parliament took up arms on behalf of Charles II, Leslie was appointed commander-in-chief, and proved himself no unworthy opponent of Cromwell, but was finally defeated at Dunbar in 1650. He afterwards retreated to Stirling, where he was joined by Charles II, who assumed the command of the army. After the battle of Worcester Leslie was captured in Yorkshire, and imprisoned in the Tower till the restoration. In 1661 he was rewarded for his services to the royal cause with the title of Lord Newark, and a pension of £500. He died in 1682.

**Leslie, Elizabeth**, an American prose writer, sister of Charles Robert mentioned above, was born at Philadelphia in 1787; died in 1858. She wrote sketches, the humor and satire of which gave them great popularity. Her novels include *Atlantic Tales*, *Rival Sketches*, etc.

**Leslie, John**, Bishop of Ross, prelate and diplomatist, born in Scotland in 1526 or 1527, studied at Aberdeen, Toulouse, Poitiers and Paris. He escorted Queen Mary from France in 1561, and was always one of her most active friends. For his intrigues on her behalf he was imprisoned in the Tower, and on his liberation went to France, where in 1573 he was made Bishop of Coutances. He died in a monastery near Brussels in 1593. His works include a work *De origine, Moribus, et Rebus Gesta Scotia*um (1578); and a *History of Scotland* from 1436 to 1561.

**Leslie, Sir John**, a Scottish physician and mathematician, born at Largo, Fife, in 1706. He studied at the University of St. Andrews, and then at Edinburgh. After a short stay in America he returned to London, where he commenced his translation of Buffon's *Natural History of Birds*, published in 1733. He invented the differential thermometer about the year 1800, and four years later published his *Essay on the Nature and Propagation of Heat*. In 1805 he was elected to the chair of mathematics in the University of Edinburgh, a post which in 1819 he exchanged for the professorship of natural philosophy. Through one of his contrivances, his hygrometer, he arrived in 1810 at the discovery of a process of artificial congelation, which enabled him to freeze mercury. In 1809 he published his *Elements of Geometry*; in 1813 an *Account of Experiments and Instruments depending on the Relation of Air to Heat and Moisture*; in 1817 his *Philosophy of Arithmetic*; in 1821 his *Geometrical Analysis and Geometry of Curve Lines*; in 1822 a volume of *Elements of Natural Philosophy*; and in 1828 his *Rudiments of Geometry*. Besides these works he contributed largely to the Edinburgh Review, the Encyclopedia Britannica, etc. He died in 1832, having been knighted not long before.

**Lesseps** (lā-sep'), Ferdinand, Vicomte de, a French diplomatist and engineer, born in 1805. After holding several consular and diplomatic posts he retired from the government service, and in 1854 went to Egypt, and proposed to the viceroy the cutting of a canal across the Isthmus of Suez. This great work was successfully completed in 1859-69, and under his supervision, and brought him high honors. Another grand scheme undertaken by him was the unfortunate Panama canal (which see), in the management of the construction of which his reputation suffered sadly. He was accused of breach of trust and sentenced to a fine and five years' imprison-
ment, but was too ill to be taken from his house, where he died in 1894.

Lessing (less'ing), GOTTHOLD EPHRAIM, a German critic, dramatist and scholar, born in 1729 at Kamenz, in Upper Lusatia. He entered the University of Leipzig in 1740 to study theology, but his love of the drama and his intimacy with Schlageel, Mylius, Weisse, and other young men of literary tastes led him to abandon this intention. He undertook, with Mylius, in 1750, a publication entitled *Beiträge zur Historie und Aufnahme des Theaters* ("Contributions to the History and Improvement of the Theater"); published some poems under the title of *Kleinigkeiten* ("Trifles"); translated a work of the Spanish philosopher Huarte; and wrote some articles in *Lehr's Gazette*. He exerted at this time into friendly relations with Moses Mendelssohn and the bookseller Nicolai, in conjunction with whom he established the critical journal, *Briefe die neueste Literatur betreffend* ("Letters on the New Literature"). In 1755 appeared *Miss Sara Sampson*, a tragedy dealing with English life. In 1760 Lessing became secretary to General Tauenzien in Breslau for five years, when he returned to Berlin and published the *Lacoon oder über die Grenzen der Malerei und Poesie* ("Laocoon, or on the Limits of Painting and Poetry"), and his comedy *Minna von Barnhelm*. About 1767 he became director of the National Theater at Hamburg. While here he wrote his *Dramaturgie*. His criticisms made him enemies, and having been compelled to quit Hamburg, the Duke of Brunswick appointed him his librarian at Wolfenbüttel. In 1775 he went to Vienna and accompanied Prince Leopold of Brunswick to Italy. He married in 1776, but his wife died in little more than a year. At this period he was involved in fierce theological disputes, which his philosophical drama *Nathan der Weise* (1779) did nothing to allay. Besides those mentioned, he wrote another drama, *Emilia Galotti* (1773). He died at Brunswick in 1781.

Lestrange (les-tranj'), SIR ROGER, political controversialist, journalist and translator, born at Huntingdon Hall, Norfolk, in 1616. In 1629 he attended Charles I into his expedition into Scotland. In 1644 he formed a plan for surprising Lynn, but was seized and condemned as a spy. He was, however, respited from time to time until he had lain in prison four years, when he made his escape to the continent. In 1683 he returned to England. He was licensor of the press from the restoration until the close of the reign of James II, and himself edited the *Public Intelligence* in 1663, the *London Gazette* in 1665, and the *Observer* in 1679, the latter existing till 1687. He died in 1704. He was the author of a great number of coarse and virulent political tracts, and translated Josephus, Cicero's *Offices*, Seneca's *Moralia*, Quevedo's *Visions*, etc.

Lestris (les'tris), the genus of birds to which belong the Arctic gull and the skua gull, the most formidable of all the gull kind.

Lesueur (le-soo'or), EUSTACHE, a French painter, born in 1617; studied under Simon Vouet. He married in 1644, and was compelled for a living to execute vignettes and frontispieces for books. His first works are in the style of his master, and quite distinct from his subsequent ones. His great work was the series of paintings which he executed for the Carthusian monastery in Paris in 1645-48, delineating in twenty-two pictures the principal scenes in the life of St. Bruno. In 1650 he painted for the corporation of goldsmiths the *Preaching of the Apostle Paul at Ephesus*. All of these are large paintings, and are now in the Louvre. Among the most distinguished of his later works are some mythological scenes. He died in 1665. His works are distinguished for grace rather than power, and are inferior in respect of color.

Lesueur, JEAN FRANÇOIS, a French musical composer, a descendant of the painter Lesueur: born in 1760. In 1786 he was appointed chapel-master at Notre Dame, but his first opera proving successful, he resigned this post, and for some time devoted himself to operatic work. His chief operas were *La Coraune* (1792), *Paul et Virginie* (1794), *Télémaque* (1796), *Les Bérardes* (1804), and *La Mort d'Adam* (1809). He was made professor of music in the National Institute, and though afterwards disowned by intrigue, was again restored by Bonaparte. In 1814 he was appointed composer to the king; and in 1817 professor of composition to the Conservatoire. His sacred music consists of thirty-three masses, oratorios and motets. He died in 1837.

Lethargy (leth-ar'ji), an unnatural tendency to sleep closely connected with languor and debility, and much resembling apoplexy in character. It may arise from a plethoric habit, from deficient circulation in the brain, from nervous exhaustion of that organ, from a poisoned state of the blood, or from a suppression of urine. When it is the consequence of alcoholic intoxication or of
the action of narcotics it should be treated by stimulants, the application of heat, etc.

Lethbridge, a town of Alberta, Canada, about 120 miles south of Calgary, in a farming and coal-mining region. Pop. 11,000.

Lethe (let'he; Greek, lethé, forgetfulness), the River of Oblivion, one of the streams of the lower regions celebrated in ancient mythology, whose water had the power of making those who drank of it forget the whole of their former existence. Souls before passing into Elysium drank to forget their earthly sorrows; souls returning to the upper world drank to forget the pleasures of Elysium.

Lethington. See Mainland, William.

Leto. See Latona.

Letter of Attorney. See Attorney.

Letter of Credit. See Credit.

Letter of Marque. See Marque.

Letters. See Alphabet, Consonant, Vowel, Writing, etc.

Letters-patent, the name of an instrument, not sealed, granted by the government, conferring on a person or a public company certain privileges or peculiar privilege. Letters-patent are issued to protect new inventions, and from this is derived what is called patent-right. See Patent.

Letts (let's), a Slavonic people closely akin to the Lithuanians inhabiting Courland, Livonia, Vitebsk and Kovno. Their language, along with the Lithuanian and Old Prussian (extinct), forms the Lettic or Lithuanian branch of the Indo-European family of tongues. The Letts number about 1,500,000.

Lettuce (let's; Lactuca sativa), a smooth, herbaceous, annual plant, containing a milky juice, and in general use as a salad. The stem grows to the height of about 2 feet, and bears small, pale-yellow flowers; the inferior leaves are sessile, and undulate on the margin. The young plant only is eaten, as the lettuce is narcotic and poisonous when in flower. A number of species are known from various parts of the globe. Lactucaviolacea, or lettuce opium, the insipidized juice of the lettuce, is used medicinally as an anodyne.

Lettuce-bird, the American gold-finch (Spinus tristis). It is a bird of the gardens and orchards and one of the most widely distributed of the smaller seed-eating American birds. It nests in the village shrubbery and has a short but very sweet song, uttered while in flight.

Leucadria (lé-ká'dri-a), or SANTA MAURA, one of the Ionian islands, on the west coast of Greece, 18 to 20 miles long, and 7½ to 10 miles wide. Its surface is mountainous and rugged. The eastern side is waste and barren, but the western and northern parts are very productive, yielding vines, olives, citrons, etc. The southwestern extremity, now Cape Ducato (also known as the Leucadian Rock, or the Lover’s Leap), is a white cliff rising to the height of at least 2000 feet. On its summit was a temple of Apollo, in whose honor a criminal was annually thrown from the rock into the sea as a sin-offering. Sappho, Artemisia, and other despairing lovers are said to have thrown themselves from it. Amazuchi is the chief town. Pop. of the island, 31,769.

Leuchtenberg (look'ten-berk), in the middle ages an independent landgraviate of Germany, which, by the extinction of the male line, fell to Bavaria in 1646. From it Eugene Beauharnais took the title of Duke of Leuchtenberg.

Leucippus (lú-sip'ús), a Greek philosopher, founder of the atomic school, lived 500 years B.C., and is said by some to have been a native of Abderea; by others, of Elis or the island of Melos. His instructor was Zeno the Eleatic, or, according to others, Parmenides, and he himself was the teacher of Democritus.

Leuciscus (lú-sis'kus), the genus of fishes which contains the roach, dace and bleak.

Leucocythemia (lú-ko-si-thé-mi-á), in medicine, a disease in which the blood presents a great increase of the white corpuscles, the spleen and lymphatic glands being at the same time enlarged.

Leucojum (lú-ko'jum), Leucojum, a genus of bulbous plants, nat. order Amaryllidaceae. They are very like snowdrops, but the six perianth segments are nearly equal. No varieties have been developed from this favorite plant by cultivation.

Leucoma (lú-ko'ma), a white opacity of the cornea of the eye, the result of acute inflammation. Called also Albigo.

Leucopathy. See Albino.

Leucorrhœa (lú-ko-ré'á), in medicine, a pathological discharge of a catarrhal, white, yellowish, or greenish mucus from the female genital
organs, due to acute or chronic inflammation, which may be infectious in character. It is treated by antiseptic and astringent douches, paying particular attention to any local condition found present and to the general health of the afflicted person.

**Lenatra** (lîk'trâ), a village in Boeotia, on the road from Thebes to Platea, famous for the victory of the Theban Epaminondas over the Spartan king Cleombrotus, which put an end to Spartan domination in Greece (371 B.C.).

**Leuk** (lîik), a town of Switzerland, canton of Vaalás, on the right bank of the Rhone, 15 miles E. N. E. of Sion. About 5 miles to the north the celebrated thermal saline baths of Leuk (Leukerbad).

**Leutze** (lîit'zeh), **Emanuel** artist, was born in 1816 in Würtemberg, Germany; died in Washington, D. C., in 1868. He was a pupil of Leslie. Among his best known paintings are: *Columbus Before the Council of Salamanca*, *Columbus Before the Queen*, *The Landing of the Norsemen in America*, * Cromwell and his Daughter*, *Washington Crossing the Delaware*, * News From Lexington and Westward the Star of Empire Takes Its Way*; the latter in the Washington capitol.

**Levailant** (lîvâ-yân), **François**, a French traveler, born in 1753. He made two expeditions into the interior of Africa, his accounts of which were published in 1790 and 1796. He died in 1824.

**Levant** (lê-vânt'), a term applied in the widest sense to all the regions eastward from Italy as far as the Euphrates and the Nile, and in a more contracted sense to the Asiatic coasts of the Mediterranean and the adjacent countries from Constantineople to Alexandria in Egypt.

**Leva'ri-facias** (le-vâ'ri-fâ'shi-as), a writ of execution issued at common law.

**Levee** (lev'ē), a morning reception held by a prince or great personage. The term is chiefly applied in Britain to the stated public occasions on which the sovereign receives visits from such persons as are entitled by rank or fortune to the honor. In the United States the term *levee* is applied to an official reception, at any hour of the day or evening.

**Levee** (Fr. levee), in America, an embankment on the margin of a river, to confine it within its natural channel, such as may be seen extending for long distances along the banks of the lower Mississippi.

**Level** (lev'el), an instrument by which to find or draw a straight line parallel to the plane of the horizon, and by this means to determine the true level or the difference of ascent or descent between several places, for various purposes in architecture, agriculture, engineering, hydraulics, surveying, etc. There is a great variety of instruments for this purpose, differently constructed and of different materials, according to the particular purposes to which they are applied, as the carpenter's level, mason's level, gunner's level, balance level, water level, mercurial level, spirit level, surveying level, etc. All such instruments, however, may be reduced to three classes:

1. Those in which the vertical line is determined by a suspended plumb line or balance weight, and the horizontal indicated by a level line perpendicular to it, such as are the carpenter's and mason's levels.
2. Those which determine a horizontal line by the surface of a fluid at rest, as water and mercurial levels.
3. Those which point out the direction of a horizontal line by a bubble of air at the bottom of a fluid contained in a glass tube. Such are spirit-levels, which are by far the most convenient and accurate. All levels depend on the same principle, namely, the action of terrestrial gravity.

**Levelers** (lev'el-ers), a name more particularly given to a party which arose in the army of the Long Parliament about the year 1647, and was put down by Fairfax. They aimed at the establishment of an equality in titles and estates throughout the kingdom.

**Leveling** (lev'el-ing), the art or operation of ascertaining the different elevations of objects on the surface of the earth, or of finding how much any assigned point included in a survey is higher or lower than another assigned point. It is a branch of surveying of great importance in making roads, determining the proper lines for railways, conducting water, draining low grounds, rendering rivers navigable, forming canals, and the like. In ordinary cases of leveling (for example, for canals, railways, etc.) the instruments commonly employed are a spirit-level with a telescope attached to it, and a stand for mounting them on, and a pair of leveling staves. A *sight* or *staff* is an instrument in connection with a spirit-level and telescope. It is variously constructed, but consists essentially of a graduated pole with a case sliding upon it so as to mark the height at any particular distance above the ground. In leveling two of them are used together, and being set up...
at any required distance the surveyor, by means of a telopea placed between them perfectly horizontally, is enabled to compare the relative heights of the two places.

Leven (lē'ven), Loch, a lake of Scotland, about 10 miles in circumference, in the county of Kinross. It contains four islands, on one of which was formerly a priory, and on another stand the remains of the castle of Loch Leven, once a royal residence, granted by Robert III to a Douglas. Mary Queen of Scots was confined in this castle after her capture by the confederate lords in 1567, but succeeded in escaping by the aid of George Douglas, her keeper's brother, on May 2, 1568.

Lever (lē'ver), a bar of metal, wood, or other substance turning on a support called the fulcrum or prop, and used to overcome a certain resistance (called the weight) encountered at one part of the bar by means of a force (called the power) applied at another part. It is one of the mechanical powers, and is of three kinds, viz.: (1) When the fulcrum is between the weight and the power, as in the handspike, crowbar, etc. In this case the parts of the lever on each side of the fulcrum are called the arms, and these arms may either be equal, as in the balance, or unequal as in the steelyard. (2) When the weight is between the power and the fulcrum, as in rowing a boat, where the fulcrum is the water. (3) When the power is between the weight and the fulcrum, as in raising a ladder from the ground by applying the hands to one of the lower rounds, the fulcrum in this case being the foot of the ladder. The law which holds in the lever is: the power multiplied by its arm is equal to the weight multiplied by its arm. It is evident that when the power has a very large arm, and the weight a very small one, a very small power will overcome a great resistance. In the lever, as in all machines when a small force overcomes a great one, the small force acts through a much greater distance than that through which the great force is overcome, or as is sometimes said, 'What is gained in power is lost in time.'

Bever, Charles James, an Irish novelist, born at Dublin in 1806. He was graduated in arts at Trinity College, Dublin, in 1827, and in medicine in 1831, also taking a doctor's degree a little latter at Göttingen. He then returned to Ireland to practise. In March, 1854, he contributed his first paper to the newly-started Dublin University Magazine, of which he became editor in 1842. The first chapter of Harry Lorrequer appeared in that magazine in 1847. Meanwhile he was attached as physician to the British legation at Brussels, where he practised for three years. During his three years' editorship of the Dublin University Magazine he resided in the neighborhood of the Irish capital, but after his resignation he took up residence on the continent, mainly occupying himself with fiction. His Charles O'Malley, Tom Burke, Jack Hinton, etc., constituted a literature entirely sui generis. His later novels were more thoughtful and artistic. He obtained a diplomatic post at Florence about 1845, was appointed vice-consul at Spezia in 1858, and in 1867 at Trieste, where he died in 1872.

Leverrier (lē-vā'-ri-a), Urbain Jean Joseph, a French astronomer, born at Saint-Lo (Manche) in 1811; died at Paris in 1877. He devoted himself at first to chemical research, but some memoirs on the stability of the solar system drew on him the attention of Arago, who induced him to persevere with astronomical studies. His observations on the transit of Mercury in 1845 procured him admission into the Academy of Sciences. His great work was his investigation of the irregularities in the movements of the planet Uranus, carried on simultaneously but independently with those in the same line by John Couch Adams, which led to the discovery of the planet Neptune. He entered political life in 1849, and was made a senator by Napoleon III. He succeeded Arago as director of the observatory, but his arrogance and violence of temper made his tenure of the office a failure. His tables of suns and planets are in general use among astronomers.

Levi (lē'vi), the third son of Jacob and Leah. The chief incident recorded of him, as apart from his brethren, is the part which he played in the massacre of the Shechemites. Three sons went down with him to Egypt—Gershon, Kohath and Merari (Gen. xxi, 2). Moses and Aaron were of this tribe.

Leviathan (lē-vi'a-than), a form of the Hebrew word Hayathan, meaning a long-jointed monster, applied in Job, xii, and elsewhere in Scripture to an aquatic animal, variously held to be the crocodile, the whale, or some species of serpent.

Levirate (lē'vē-rāt), Leviration (Lat. levir, a husband's brother), the custom among the Jews of a man's marrying the widow of a brother who died without issue. The same custom or law prevails in some parts of India.
Levis (lev'is), a town of Canada, on the south bank of the St. Lawrence opposite Quebec with which there is ferry communication. It carries on a large trade by river and rail. Pop. 7452.

Levites (lev'iz), the name generally employed to designate the whole Jewish tribe that traced its descent from Levi, but a division within the tribe itself, in contradistinction to the priests, who are otherwise called the sons of Aaron. They were the ministers of worship, specially singled out for the service of the sanctuary. Together with the priests they formed the sacerdotal tribe. A permanent organization was made for their maintenance. In place of territorial possessions they were to receive tithes of the produce of the land, and in their turn to offer a tithe to the priests. After the settlement in Canaan, to the tribe of Levi were assigned forty-eight cities, six of which were cities of refuge, thirteen of the total number being set apart for the priests. To the Levites was to belong the office of preserving, transcribing and interpreting the law, and they were to read it every seventh year at the feast of tabernacles. Their position was much changed by the revolt of the ten tribes, and they are seldom mentioned in the New Testament, where they appear as the types of formal, heartless worship.

Leviticus (lev'i-tikus), the name of the third book of the Pentateuch, so called from the first word of its contents. By the later Jews it was called the 'Law of the Priests,' and sometimes the 'Law of Offerings.' It consists of seven principal sections, but it may be generally described as containing the laws and ordinances relating to Levites, priests and sacrifices. The integrity of the book is very generally admitted, the Elohist, or author of the original document (see Elohim), being credited with having written nearly the whole of it, and the rest being considered originally Elohist.

Levkosi'â. See Nicosia.

Levoglucose (lev-o-glû'kös), LÉVOGLUCOSE, a sugar isomeric with dextroglucose, but distinguished from it by turning the plane of polarization to the left, and always occurring along with it in honey, in many fruits, and in other sacchariferous vegetable organs.

Levy (lev'), the compulsory raising of a body of troops for purposes of general defense or offense when the existing troops are insufficient to meet the exigencies of the situation. When a country is in danger of instant invasion a

levée en masse is sometimes made, every man capable of bearing arms being called out. If the occasion be less urgent the levy may be restricted to men of a fixed class, as between 18 and 40 years of age.

Lewes (lew'ez), a municipal borough of England, in Sussex, on the Ouse, 7 miles northeast by east of Brighton. It is built on an acclivity, and is a place of great antiquity, containing the ruins of many ecclesiastical buildings. The chief manufacture is agricultural implements. In its vicinity, in 1264, the barons, under Simon de Montfort, defeated the royal army under Henry III. Pop. (1911) 10,972.

Lewes (lew'ës), GEORGE HENRY, philosophical writer and contributor to most departments of literature, born in London in 1817. He was in turn a clerk, a medical student, and a student of philosophy in Germany, from which he returned in 1840 to devote himself to general literature. His first important work was his Biographical History of Philosophy from Thales to Comte, originally published in 1845, and subsequently much extended and altered—a work written more or less from a Positivist point of view, and sufficiently proving his ability as a thinker and writer. From 1849 to 1854 he was literary editor of the Leader, during that time publishing his Life of Robespierre (1850) and a compendium of Comte’s Philosophy of the Sciences (1853). His Life of Goethe, which won him a European reputation, was published in 1855. From 1854 he was largely engaged in physiological investigations with special reference to philosophical problems. To this period belong his Seaside Studies (1858), Physiology of Common Life (1860), and Studies in Animal Life (1801), besides papers contributed to the British Association on the spinal cord and on the nervous system. In 1864 he published a study on Aristotle, and in 1865 founded the Fortnightly Review, but was compelled by ill health to retire a year later. The chief work of his life, aiming at the systematic development of his philosophical views, is entitled Problems of Life and Mind (1873-77). He died in 1878. Besides the works already mentioned he wrote the Spanish drama, Lope de Vega and Calderon (1846); two novels, Ranthorne (1847) and Rose, Blanche and Violet (1848); and prepared various plays for the stage under the pseudonym of slingby Laurence. See Eliot, George.

Lewis and Clark Expedition. When he had completed the Louisiana
Lewis Purchase in 1803, adding a vast western region to the territory of the United States, President Jefferson resolved to carry out a project he had proposed while yet in Washington's cabinet, namely, to have the far northwest explored. For leader of this expedition he chose Meriwether Lewis, one of his secretaries, and the latter selected Captain William Clark, brother of the celebrated Revolutionary soldier, George Rogers Clark, as his associate. Taking with them about forty men, they began their journey from the mouth of the Missouri in the spring of 1804. They followed that river until October, and wintered near the site of Bismarck, North Dakota. In May, 1805, they had a first view of the Rockies. After a journey full of hardship they reached the Columbia River, discovered by Captain Grey fourteen years before and named after his vessel, and floated down its stream. On the morning of November 7, 1806, they caught their first glimpse of the Pacific Ocean. They spent the winter on the coast, and then returned, reaching St. Louis in September, 1807. They were the first to discover various Indian tribes and the great expanse of the western territory. Their exploit was commemorated by a grand exhibition at Portland, Oregon, in 1905.

Lewis Lewis (Luke's), Sir George Cornwallis, an English statesman and historian, born in 1730; died in 1803. After serving in government positions, and sitting in parliament 1847–52, he became in 1852 editor of the Edinburgh Review. In 1855 he succeeded his father in the representation of Radnorshire, and was immediately appointed chancellor of the exchequer by Lord Palmerston. In 1859 he became secretary of state for the home department, and secretary of state for war in 1861. His chief works were: Remarks on the Use and Abuse of Some Political Terms (1832); Essay on the Origin and Formation of the Romance Languages (1835); Essay on the Influence of Authority in Matters of Opinion (1850); Inquiry into the Credibility of Early Roman History (1855); Astronomy of the Ancients (1861), and A Treatise on the Methods of Observation and Reasoning in Politics.

Lewis, Matthew Gregory, an English romance writer and dramatic author, born in 1775. He was educated at Westminster, and then traveled for some time in Germany, the romantic literature of which gave him that passion for the marvelous and terrific which chiefly marks his writings. His earliest and most celebrated work was Ambrosio, or The Monk (1794), a romance, the first edition of which was suppressed. His other works include Feudal Tyrants, Romantic Tales, Tales of Wonder, etc.

Lewis, Meriwether (1774–1809), famous American explorer with Captain William Clark. (See Lewis and Clark Expedition). He was born near Charlottesville, Va.

Lewis River or Snake River, a river of North America, which rises in the Rocky Mountains, and runs northwest into the Columbia, 413 miles from its mouth; length, about 900 miles. Its course lies partly in Idaho, partly between Idaho and Oregon, and partly in Washington.

Lewiston (le'is-ton), a city, county seat of Nez Perce Co., Idaho, on Snake River, at head of navigation. There is steamer connection with various ports. It is a mining center, and ships wheat, fruit, etc. Pop. 6374.

Lewiston, a city of Androscoggin Co., Maine, on Androscoggin River, 35 miles n. of Portland. It has abundance of water power from the falls here, and has great manufacturing plants producing cotton and woolen goods, boots and shoes, etc. It is the seat of Bates College. Pop. (1910) 26,247; (1920) 31,781.

Lewistown (le'is-toun), county seat of Fergus Co., Montana, 90 miles s.e. of Great Falls, on Great Northern and Chicago, Milwaukee & St. Paul railroads. It has extensive livestock, farming and mining interests. Pop. (1920) 9849.

Lewistown, a borough, county seat of Mifflin Co., Pa., on Juniata River, 45 miles n.w. of Harrisburg, in a glass sand and iron and fine farming district. Has flour mills, foundries, steel works and various other industries. Pop. (1920) 9849.

Lexicon. See Dictionary.

Lexington (leks'ing-tun), a city of Kentucky, county seat of Fayette Co. It was settled in 1775, and was the capital 1782–93. It is in the famous 'Blue Grass' country, center of the greatest horse-breeding district in the world; center of the Eastern Kentucky oil development; and a leading loose leaf tobacco market. Seat of University of Kentucky and Transylvania, Hamilton, and Sayre colleges. Henry Clay lived here from 1797. Pop. (1910) 35,009; (1920) 41,534.

Lexington, a town of Middlesex Co., Massachusetts, 12 miles n.w. of Boston. Here the first American blood was shed in the Revolutionary war. On April 19, 1775, British troops sent
Lexington

from Boston to seize military stores at Concord, were opposed by the Lexington militia (70 men), who were dispersed with a loss of four killed and nine wounded. The town has many memorials and places of historic interest. Pop. 6350.

Lexington, county seat of Lafayette Co., Missouri, on Missouri River, 42 miles E. of Kansas City, in a corn and coal region. Pop. (1920) 4695.

Lexington, county seat of Davidson Co., N. Carolina, 88 miles W. of Raleigh, in a wheat, cotton and tobacco region, with cotton mills, furniture factories, livery mill, etc. Pop. 5254.

Ley. See Ley.

Leyden (L'den; Lat. Lugudunum Batavorum), a town of Holland, 22 miles southwest of Amsterdam, on both sides of the Old Rhine. Leyden is encompassed by windmills, and surrounded by country seats, pleasure grounds, gardens and fertile meadows. The streets are straight and broad, the Bredestraat (Bredesstraat) being esteemed one of the finest in Europe. In it is situated the town hall (Stadhuis), a picturesque old building, with some important paintings. None of the churches are very remarkable. The most important educational institution is the university, formerly one of the most famed in Europe. It is attended on the average by about 700 students, nearly one-half studying law. Leyden has cloth and other manufactures. A memorable event in its history was its siege by the Spaniards in 1573-74, and its relief by the Prince of Orange, who opened a dike and flooded the Spanish camp. The pop. about 100,000 in the seventeenth century, is now 59,207.

Leyden, JAN, or JOHN OF. See article Anabaptists.

Leyden, JOHN, a Scottish poet and orientalist, born at Denholm, Roxburghshire, in 1775; died at Batavia in 1811. Being intended for the Scottish church, he was sent to the University of Edinburgh in 1790. Here his studies included not only theology and the learned languages, but also French, Spanish, Italian, German, Icelandic, Arabic and Persian. He published translations and original poems in the Edinburgh Magazine; contributed to Lewis’ Tales of Wonder; assisted Sir Walter Scott in procuring materials for his Minstrelsy of the Scottish Border, and wrote a History of African Discoveries. In 1798 he was ordained a Presbyterian minister, but the ministry not being to his taste, he accepted service as assistant-surgeon under the East India Company; a post demanding a surgical degree, which he obtained after six months’ study. In India he continued his favorite philological studies, became professor of Hindustani at Bengal College, and shortly after a judge at Calcutta; but fell a victim to climate and overstudy, and died of fever during an expedition to Java with Lord Minto.

Leyden Jar, an early form of electric accumulator, introduced to the scientific world by Muschenbroek of Leyden in 1746; hence its name. It consists of a glass vial or jar coated inside and outside, usually with tin-foil, to within a third of the top. A metallic rod, having a knob at the top, is fixed into the mouth of the jar, and is made to communicate with the inside coating, and when the jar is to be charged the knob of this rod is applied to the prime conductor of an electric machine. As the electric fluid passes to the inside of the jar an equal quantity passes from the outside, so that the two coatings are brought into opposite states, the inside being positive and the outside negative. The jar is discharged by establishing a communication between the outside coating and the knob. When a number of jars are placed in a box lined with tin-foil connected with the earth, their knobs being joined together, they form a battery; a quantity of electricity equal to the sum of the charges which would be received by each jar can be collected in such a battery, capable of melting fine metallic wires, puncturing plates of glass or cardboard, killing animals, rupturing bad conductors, etc.

Lhassa. See Lassa.

L'Hôpital (lò-pi-tál). MICHEL DE, an eminent French chancel-elor and author; born about 1504; died in 1576. Admitted to the bar in Paris, he rapidly rose in his profession until he became superintendent of the royal finances in 1554, a position in which his services were of the highest value. In 1556 he was appointed to the chancello-ship of France. The country suffered severely at this time from the struggles be-tween Catholics and Protestants. L'Hôpital rendered great service in mediating between the rival factions, and was the principal author of the Edict of Toler-
ance of 1562. When violence was re-

solved on for the extermination of the

reformed religion, he found it necessary to

resign. The atrocities of St. Bartholo-

mew's day in 1572 were a great shock to

him, and he only survived that event by a

few months.

Li, LE. or Cash, the only copper coin

of China, with a square hole in the

middle, and an inscription on one side.

Ten li make one candareen, 100 a mace,

1000 a liang or tael, the only Chinese

silver coin, of varying value, averaging a

little over a dollar. Li is also a Chinese

measure of length equal to about 1/5 of

an English mile.

Liability, LIMITED. See Joint-stock

Companies.

Li-fail, or STONE OF DESTINY, a

brass, gay stone on which the kings of

Scotland were crowned in the Abbey Church of Scone. In 1296 Ed-

ward I carried it to England, and it still

remains under the coronation chair in

Westminster Abbey. Tradition has it that it is the very stone upon which

the patriarch Jacob laid his head in the

plains of Luz.

Lianas (li-an'az), a term applied to

those climbing and twining plants

found in profusion in tropical cli-

mates, where in many instances they

overtop the heads of the tallest trees, and

intertwine the entire forest by their cable-

like shoots, forming an impenetrable net-

work, which it is necessary to break

through with the hatchet. Vanilla, sa-

saparilla, and other medicinal plants are
the lianas.

Liatung (le-on-ting), a region of

Manchuria, stretching into the Yellow Sea between the gulfs

Liatung and Corea. Port Arthur is sit-

uated at the extremity of the peninsula

thus formed. It forms the greater part

of the province of Shing-King. It was

an important seat of the Russo-Japanese

war.

Lias (li'as), in geology, the name

given to that series of strata, con-
sisting principally of thin layers of lime-

stone embedded in thick masses of blue,

argillaceous clay, lying at the base of the

Oolitic or Jurassic series, and above the

Triassic or New Red Sandstone. The

formation is highly fossiliferous, am-
nunites being found in such quantities

and varieties as to be called into use in the

classification of the different beds. Gryphites and belemnites are also very

common molluscs. Fish remains are fre-
quent; but of all its fossil remains by far

the most important are those of the great

reptiles, of which the ichthyosaurus,

plesiosaurus and eocallousaurus are repre-

sentatives. Numerous remains of plants

occur in the lias. See Geology.

Libanius (li-ba'ni-us), a distinguished

Greek sophist and rhetori-

cian, born at Antioch about A.D. 314;
died at the same place about 395. He

studied at Athens, and taught with great

success at Constantinople and at Nicome-

dia. He used his eloquence in obstructing

the spread of Christian ideas, and in the

defense of pag: ism. St. Basil and St.

Chrysostom were warmly attached to

him. His letters have, besides great lit-

erary merit, much historical value, as

they were addressed to the most eminent

men of his time.

Lib'anus, MOUNT. See Lebanon.

Libau (le'bo), an important seaport

of Russia, government of Cour-

land, at the mouth of the lake of the same

name, on the Baltic. It has an artificial

harbor, which has been recently much

improved, and has gained importance as a

seaport. Its trade in corn, flax, hemp,

etc. is considerable. Pop. (1911) 99,000.

Libel (li-bel), in law, the act of pub-

lishing malicious statements

with intent to expose persons or institu-
tions to public hatred, contempt, or ridi-
cule, and thereby provoking them to an-
ger, causing a breach of the peace, injury
to reputation, business, etc. The differ-
ence between libel and slander is, that in

the former case the defamation must have

been effected in writing, printing, or some

other visible manner, while in the latter

the offense is committed verbally. Pub-

lication is held to have taken place if the

libel is seen but by one person other than

the person libeled. The law distinguishes

defamatory, seditious and obscene libel.

A defamatory libel may result in civil

and criminal proceedings against both the

publisher and the writer, but to come

under this category it is essential that the

libel be false, malicious (the law presum-
ing malice in every injury done inten-

tionally and without justification), have a
tendency to provoke hatred or contempt,

and that it be non-privileged. In criminal

law it is a misdemeanor to publish or

threaten to publish a libel; or as a means

of extortion, to offer to abstain from or
to prevent others from publishing a libel.

In the United States the punishment for

this offense is imprisonment fixed by

statute in the different States. A sedi-
tious libel is one directed against the head

of the state, the legislature, the courts of

justice, etc., and its publication consti-
tutes also a misdemeanor. The term

obscene libel comprises any obscene pub-

lication, and the publisher thereof is liable

to imprisonment with hard labor. If
the charges contained in the libel are true a civil action cannot be maintained, but the truth of the libelous matter is no defense at common law; at the same time it generally secures the defendant the merciful consideration of the court. In a civil action the plaintiff recovers damages, the amount of which is settled by the jury; upon an indictment, the jury has merely to acquit the defendant or to find him guilty, after which the court passes judgment, and awards punishment, generally fine or imprisonment, or both. Recent legislation and decisions in this branch of law in Great Britain and the United States (the American laws differ but little from those of Great Britain) have a tendency to limit liability for actions purely false, scandalous and malicious libels. Truth, if published with good motives and for justifiable ends, is now admitted as a good defense, and even motive alone, though the statements may prove untrue.

Libel, admiralty courts, is the name given to the formal written statement of the complainant's ground of complaint, in the civil litigation, against the defendant. In Scotch law, an indictment on which either a civil action or criminal prosecution takes place.

Libel'ula. See Dragon-fly.

Liber. See Bark.

Liberal Arts. See Arts.

Liberal Party (lib'er-al), in modern politics, the party which claims to be distinctively that of reform and progress. The main objects of liberal agitation and legislation are to vest increased power in the people, and to extend privileges to the masses which were formerly monopolized by the favored classes. Most European countries have a powerful liberal party, and liberalism is rapidly spreading in Europe, particularly in Great Britain, Germany, Italy, Spain, Holland, Norway and Sweden. In Great Britain Liberal and Conservative ministries follow each other at irregular intervals, and on the whole the system works well. In the United States the party of progress, that standing between conservatism and radicalism, has adopted various titles in different states.

Libéria, a negro republic on the west coast of Africa, founded in 1820 by liberated American slaves under the auspices of the American Colonization Society, and recognized as an independent state in 1847. It lies between the rivers San Pedro and Manna, has 500 miles of seashore, and extends some 100 miles inland; area 14,000 to 15,000 square miles. The soil is fertile, well watered, and highly adapted to the cultivation of all tropical products. The chief crop is coffee, increasing quantities of which are grown from year to year and exported, other exports being palm-oil, groundnuts, caoutchouc and ivory. The climate is very unhealthy for Europeans. British weights, measures and moneys are mostly in use. The English language predominates among the governing class, Protestant churches and schools are amply provided, and civilization is making rapid strides among the natives. The population consists of some 60,000 immigrants from the United States and their descendants, and about 2,000,000 natives; Monrovia is the capital. The government of the republic is on the model of the United States. Recently, its territory has been trenched upon by adjoining British and French settlements, and protection has been asked from the United States. In response this country undertook the full charge of the finances, military organization, agricultural methods and boundary questions of Liberia, and made arrangements for a loan to pay off the existing debt and obligations of the country.

Libertines (lib'er-tinz), or Liberali, a sect of fanatics in the sixteenth century in Holland and Brabant, who maintained that nothing is sinful but to those who think it sinful, and that perfect innocence is to live without doubt. They advocated community of goods, etc. The name was also applied in England to the early Anabaptists about the middle of the sixteenth century.

Liberty Bell, a famous bell which has been given the credit of announcing to the people of Philadelphia the signing of the Declaration of Independence on July 4, 1776, and which is now regarded by the people of the United States as the sacred historical emblem of their liberty. It is in the dome of the old State House, later known as Independence Hall, in Philadelphia, for which location it was cast in England and brought to that city in 1752. Its purpose was to call the members of the Colonial Assembly of that date to its meetings. While being taken from the ship it met with an accident that spoiled its tone, and it was recast in Philadelphia in 1755. On it was inscribed the Scriptural passage, 'Proclaim liberty throughout all the land unto all the inhabitants thereof,' a phrase highly significant in relation to its later history. The story
that it was rung on the date of the signing of the Declaration of Independence. There is no historical evidence to sustain this claim, but there seems no doubt that it was rung on the occasion of reading the Declaration to the people in Independence Square, a few days later. When the British occupied Philadelphia in 1777, the bell was taken down and sunk in the Delaware River near Trenton, but was returned to the State House after their departure. It was subsequently rung on every Fourth of July and on other memorable occasions, until 1833, when it was cracked while being tolled for the burial of Chief Justice Marshall. In 1854 it was placed in the entrance hall of the State House on a pedestal with 13 sides, representing the number of original states. In 1893, it was taken to Chicago for the World’s Fair of that year and was greeted with patriotic enthusiasm in all the cities and states through which it passed. Since then it has been exhibited in other cities holding World Fairs, and it is now looked upon by American citizens as their most important and significant historical memorial. Few visitors to Philadelphia fail to see and revere the old bell.

Liberty Cap, or Cap of Liberty, is a cap used in ancient times as a symbol of liberty. Roman slaves, when given freedom, were accustomed to put on what was called the Phrygian cap as a token of their liberty. In modern times the name of Cap of Liberty has been given to the red cap worn by the French and other revolutionists.

Liberty Loan, a popular loan instituted by the United States government by Act of Congress, approved April 24, 1917, after the entrance of the great American republic into the European war.

The First Liberty Loan was for $2,000,000,000, bearing interest at 3 1/2 per cent, and was offered to the public in May, 1917. The bonds were guaranteed, one being coupon bonds in denominations of $50, $100, $500, and $1,000; the other, registered bonds of $100, $500, $1,000, $5,000, 10,000, $50,000, and $100,000. These were to be free from all taxation except the Federal inheritance taxes, their date of maturing being June 15, 1947. They were made convertible into the bonds of any subsequent issue. Subscriptions amounted to $3,055,220,850.

A Second Liberty Loan, for $3,000,000,000, was offered to the public in October, 1917, the interest rate on which was increased to 4 per cent. These bonds also were exempt from all taxes except State inheritance taxes and supertaxes. Total allotment, $3,808,000,000, redeemable after 1927; subscribers, 10,020,000.

Third Liberty Loan: Total allotment, $4,176,000,000, bearing interest at 4 1/2 per cent, redeemable in 1928; number of subscribers, 17,000,000.

Fourth Liberty Loan: Total allotment, $6,089,047,000, bearing interest at 4 1/2 per cent, redeemable after 1933; number of subscribers, 21,000,000.

Liberty Party, the title assumed by the first political organization of the Abolitionists of the United States. This title was taken by a national convention of Abolitionists held on April 1, 1840. James G. Birney and Francis I. Lemoyne were its candidates for President and Vice-President, they receiving 7659 votes. Four years later a second convention was held, Birney being again named for President and Thomas Morris, of Ohio, for Vice-President. They received 62,300 votes, a seemingly negligible number, but it had an important effect on the result of the contest of that year between Clay and Polk. It turned the scale in New York and Michigan against Clay, the Whig candidate, and aided in electing Polk, the Southern Democrat. This result was not satisfactory to the Abolitionists, and in the two succeeding Presidential elections they made no nominations, but cast their vote for the Free Soil Party. In 1860 they formed the advance guard of the new Republican party, though not fully endorsing its platform.

Liberty, Statue of, the name given a bronze statue of colossal dimensions, the tallest in the world, which stands on Bedloe’s Liberty Island, in New York Harbor. The French sculptor Bartholdi designed and executed it, the citizens of France presenting it to the people of the United States in 1876, the hundredth anniversary of American independence. It was not until 1886, however, that it was completed and placed in its present position, the pedestal on which it stands being built by popular subscription of American citizens. It represents a female figure holding an uplifted torch, indicating “The Goddess of Liberty enlightening the world.” The pedestal stands 150 feet above the water level, the statue being 111 1/4 feet high and 151 feet including the height of the torch. Forty persons can stand within the head and the interior of the torch holds 12 persons. A permanent lighting system has been installed in the torch, bathing the statue in a soft white light.
Libra (li'brä), the seventh sign of the zodiac.

Library (li'brä-ri), the name given to a collection of books, and to the building in which it is located. Libraries existed in ancient Egypt and Assyria, and Pisistratus is credited with the honor of introducing a public library at Athens about B.C. 537. Cicero and various wealthy Romans made collections of books, and several Roman emperors established libraries, partly with books obtained as spoils of war. By far the most celebrated library of antiquity was the Alexandrian. (See Alexandrian Library.) In the West libraries of some note were founded in the second half of the eighth century by the encouragement of Charlemagne. In France one of the most celebrated was that in the abbey St. Germain des Prés, near Paris. In Germany the libraries of Fulda, Corvey, and in the eleventh century that of Hirschat, were valuable. In Spain, in the twelfth century, the Moors had seventy public libraries, of which that of Cordova contained 250,000 volumes. In Britain and Italy libraries were also founded with great zeal; in the former country by Richard Augerville; in the latter by Petrarch, Boccaccio, and others. After the invention of the art of printing this was done more easily and at less expense. The principal European libraries of modern times are the national library at Paris, with about 2,500,000 of books and 10,000 MSS., and the British Museum library, London, with 2,000,000 books and 100,000 MSS. The central court library at Munich, the imperial library at St. Petersburg, and the royal library at Berlin have each over a million volumes and thousands of MSS. Other large and valuable libraries are the imperial library at Vienna; the royal libraries at Stuttgart, Dresden and Copenhagen; the university libraries of Genoa, Prague, Göttingen, Upsala, Oxford, Cambridge and Dublin; also the libraries of Moscow, Venice, Florence, Milan, Bologna, Naples and the Advocates', Edinburgh. The Vatican library, Rome, and the Bodleian, Oxford, are particularly valuable in rare books and MSS. In the United States the era of libraries began with that of Harvard College, founded in 1638, and now possessing over 250,000 books. A public library was founded in New York in 1700, and the Yale College library began the same year. Franklin in 1731 founded the first library in Philadelphia, which he spoke of as "the mother of all North American subscription libraries." A national library was founded at Washington in 1800. It is now the Library of Congress, and occupies the most magnificent and well-equipped library building in the world, on the shelves of which are about 1,750,000 books, with large numbers of manuscripts, maps, prints, etc. At present all our principal cities have large and rapidly growing libraries, those of Boston, New York, Philadelphia and Chicago being especially notable. The spread of education and the consequent growing taste for knowledge have called into existence innumerable smaller libraries, ready of access, and providing such literature as the special class of readers demand. This public library system has naturally been most developed in highly-educated countries, such as the United States, Germany, France and Great Britain. Public libraries, the books of which are loaned free to readers, have had an especially active development in the United States, the recent movement in this direction having been greatly stimulated by the liberal donations of Andrew Carnegie, who has provided funds for the founding of libraries in many of our smaller cities, and for large numbers of branch libraries in the principal cities. The American Library Association was founded in 1876.

Libration (lib-rä'shun), a term denoting certain movements of the moon, chiefly apparent, by which its globe seems to turn slightly round to each side alternately, so that we see a little farther round her globe on all sides in turn than we would if she kept absolutely the same face towards us. This motion, as it refers to the N. and S. edges of the moon's disc, is called libration in latitude; as it refers to the E. and W. edges, libration in longitude.

Libretto (li-bret'to; It. little book), the book containing the story of an opera. In very many cases this is destitute of any literary quality, taste, or consistency. The Italian librettos are especially poor, and the German and English little better. Many poets and author playwrights have attempted libretto writing and subjects for operas have been taken from the works of Shakespeare, Goldsmith, Goethe, Scott, Hugo, etc. Wagner stands alone in having written the librettos of his own music-dramas.

License (li'zens), in law, the grant of permission to do some lawful act; also the document conferring such authority. All civilized countries require that persons should not carry on certain trades or professions, or do certain acts, without previous grant of license, and such licenses may be imposed for the sake of regulating traffic or raising revenue. Most numerous are licenses imposed on power persons to sell certain articles. In
Great Britain the articles not to be dealt in without a license include: beer, cider, wines and spirits, tobacco and snuff, patent medicines, gold and silver, game, sweets; besides these there are licenses for auctioneers, appraisers, armorial bearings, carriages, dogs, guns, hawkers and peddlers, male servants, pawnbrokers, etc. The license laws of America vary in the different States. A number of the States have adopted Local Option, in the question of liquor sale; others have prohibited the sale of intoxicants as a beverage, and some have imposed an almost restrictive license duty. The States that have adopted prohibition embrace Maine, Alabama, Arizona, Arkansas, Colorado, Georgia, Idaho, Iowa, Kansas, Mississippi, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, Washington and West Virginia. Alabama in 1911 voted to repeal prohibition and Maine, the original prohibition State, narrowly defeated repeal. Local option has brought about the prohibition of liquor sale in great parts of many other States. In Canada an act for the licensing of places for the sale of liquor came into operation in 1884. By it boards of licensing commissioners are established all over the country.

Licentiate (li-sen’shë-at), literally a person licensed. It may express that a person possesses certain medical or other qualifications. Thus there are licentiates of the Royal College of Surgeons, licentiates in dental surgery, etc. Among Presbyterians it is applied to a person authorized by a presbytery to preach, and who thus becomes eligible to a pastoral charge.

Lichen (lik’en, or lich-en), in medicine, a skin disease affecting adults. It consists of a number of pimples, red or white in color, either clustered or disseminated over the surface of the skin, with or without fever, or derangement of the digestive organs, usually terminating in slight desquamation, and very liable to recur, though not contagious. There are several varieties of this eruption, but in the milder forms all that is necessary is to avoid excess, especially in rich food and the use of stimulants, and to take a light diet, with diluent drinks, and a gentle laxative occasionally. Strong external applications should not be employed, but lotions of lime-water or weak solutions of the bicarbonate of ammonia, afford relief. The prickly heat so well known to dwellers in tropical climates, is a species of lichen.

Lichens, a very extensive order of cryptogamic or flowerless plants. According to a modern theory, lichens are not simple plants, but are fungi parasitic on algae, the two being mutually dependent. They have neither stem nor leaves, but consist mainly of a thallus deriving its nourishment from the air. They are reproduced by spores contained in fruits called apothecia, which are regarded as the fungi of the particular lichen. They are common everywhere, usually in the form of flat crusts, sometimes of foliaceous expansions, adhering to rocks, the trunks of trees, barren soil, etc. They are found flourishing to the very verge of perpetual snow, and one species, the reindeer-moss (Cladonia rangiferina), grows in the greatest profusion in the Arctic regions, where it forms the reindeer’s chief sustenance. The Iceland moss (Cetraria islandica) is also abundant in the Arctic regions, and often affords aliment to the inhabitants. (See Iceland Moss.) Several other lichens afford dyes of various colors, these being chiefly obtained from rocks in the Azores and Canaries. Litmus is also obtained from a lichen. See Archi, Litmus.

Lichfield (lich’feld), an episcopal city of Staffordshire, England, 17 miles south-southwest of Stafford. The principal edifice is the cathedral, a large and handsome structure, partly in the early English and partly in a more recent style, with a richly decorated west front, and three spires—two on the west, each 150, and one in the center 250 feet high. The most distinguished native is Dr. Johnson, to whom a monument has been erected facing the house where he was born. The see of Lichfield was founded in 636. For parliamentary representation the city is now included in the Lichfield division of Staffordshire. Pop. 8917.

Lick, James, philanthropist, was born in Fredericksburg, Pennsylvania, in 1796. In 1847 he settled in California, accumulating a large fortune. He died in 1876, leaving by will about $5,000,000 to various public uses, chiefly educational. These include a school of mechanical arts and the Lick Observatory.

Lick Observatory, situated on Mt. Hamilton (4227 ft.), 50 miles south of San Francisco. It belongs to the University of California and was built with money left by James Lick. The telescope has an object glass 36 inches in aperture, and is one of the largest in the world.

Licorice. See Liquorice.

Lictors (lik’turz), in Rome, were the public servants who attended upon the chief magistrates, consuls, pra-
tors, etc., to clear the way for them, and cause due respect to be paid to them. They carried axes tied up in bundles of rods, called faeces, as ensigns of office, and were selected from the lower class of free men. The number of lictors preceding the state dignitaries depended upon the rank of the latter.

Lie (lē), Jonas Lavrents Ideml, poet and novelist, born at Ecker, Norway, in 1833; died in 1908. He studied and practised law, but devoted his life to literature and became one of the most popular of recent Norwegian writers. His books include The Pilot and His Wife, The Clairvoyant, and other novels; Grabow's Cat and Lysethe Knur, comedies; Digest, poems, etc.

Lieber (lē'ber), Francis, a German-American writer, born at Berlin in 1800; died at New York in 1872. In youth he served as a volunteer, and fought at Ligny and Waterloo. On the termination of the war he again took up his literary studies, and in 1821 obtained his degree at Jena. Getting into trouble with government on account of his liberal opinions, he went to London in 1826, and the following year to America, where he edited the Encyclopaedia Americana, based on the German Conversations-Lexikon. The South Carolina College, Columbia, elected him in 1835 professor of history and political economy, a post he held until 1856, when he accepted a similar appointment in Columbia College, New York. He wrote many books and pamphlets on morals, education, and political economy.

Liebig (lē'bi), Justus, Baron von, one of the most eminent of modern chemists, born at Darmstadt in 1803; died at Munich in 1873. At the age of sixteen he entered the University of Göttingen, and afterwards that of Erlangen, where, in 1822, he gained the degree of Doctor of Philosophy (Physical and Mathematical Sciences). At the expense of the Grand Duke of Hesse he repaired to Paris to complete his studies. He first secured the attention of the chemical world in 1824 by reading a paper before the French Academy of Sciences on fulminic acid and the fulminates, the true composition of which were until then unknown. This also gained him the favor of Humboldt, and through the latter's influence he was appointed extraordinary, and in 1825 ordinary professor of chemistry at the University of Giessen, a chair he held for 25 years. In 1850 he replaced Professor Gmelin at Hèidelberg, and in 1852 he accepted the chemistry chair at Munich, with charge of the laboratory. The Munich Academy of Sciences elected him president in 1860. The results of Liebig's labors were generally given in the scientific reviews of the times, but chiefly in his own organ, The Annalen der Pharmacie, in the Transactions of the Royal Society of London, and the Mémoires de l'Académie des Sciences.

Liebig is regarded as the founder of organic chemistry, owing to the many discoveries he made in this department. He did much to improve the methods of analysis; his Chemistry of Food has brought about a more rational mode of cooking and use of food; while agriculture owes much to his application of chemistry to soils and manures. The Grand Duke of Hesse created him an hereditary baron, and he received many honors from universities and learned societies of Europe and America.

Liechtenstein (līk'ten-sten), a small principality, practically a portion of the Austro-Hungarian monarchy, between Vorarlberg, Tyrol and Switzerland; area, 68 square miles. Pop. 9477. The surface has a fertile soil, yielding abundance of pasture, corn, wine, fruit and flax. The chief place, Vaduz, has about 1000 inhabitants.

Lüge (liž; Flem. Luik; Germ. Lüttich), a town of Belgium, capital of the province of same name, 64 miles east by south of Brussels. It is picturesquely situated on both sides of the Meuse, the larger part rising on heights above the river on the left bank, opposite the influx of the Ourthe. It is the principal manufacturing town of Belgium, its foundries, firearm, metal and tool manufactures being very extensive; besides these there are important woolen mills, tanneries, and printing offices. Pop. 168,332.—The province has an area of 1117 square miles, with a population of 563,254. Until 1795 it was an independent state, governed by the prince-bishops of the German Empire; in that year France included it in the department of the Ourthe, but it was restored to Belgium in 1815, excepting certain portions annexed to Prussia. When the German armies invaded Belgium in 1914 the gallant defenders stayed the onslaught of Prussian hordes at Lüge for three all-important days, side by side in the disruption of the German plans which had included the occupation of Paris. The hold-up of the Teutonic forces at Lüge enabled the French to make preparations to meet the Germans. The Lüge forts were finally destroyed by huge mortars and the town fell into German hands, See European War.

Liegnitz (lē'nits), a town of Prussia, in the province of S-
Lien, 40 miles W. N. W. of Breslau. It is an old but well-built town, defended by a castle, and surrounded by a boulevard planted with fine trees. It contains interesting churches, schools, and other public buildings. Its manufactures include machinery and hardware, pianos, gloves, woolens, cottons and linens, hos- lery, etc. Pop. (1910) 66,620.

Lien (lėn, or lèn), in law, in its most usual acceptation, signifies ‘the right which one person, in certain cases, possesses of detaining property placed in his possession belonging to another, until some demand which the former has is satisfied.’ In the United States liens are of two kinds: (1) _specific_, liens, that is, where the person in possession of goods may detain them until a claim, which accrues to him from those identical goods, is satisfied. (2) _general_, liens, that is, where the person in possession may detain the goods, not only for his claim accruing from them, but also for the general balance of his account with the owners. An important class of liens has also been created by statute. They are called mechanics’ liens, and give to men who labor, or who furnish labor or material for the erection or repair of buildings, a lien upon such buildings. This class of liens is irrespective of possession.

Lieu-Kieou. See Loo-Choo.

Lieutenant (lėf-ten’ánt, 1oth-ten’ánt; French _lieu_, place, _tenant_, holding), in military language, the officer next below a captain. First and second lieutenants exist in the American and British armies. A lieutenant in the navy is the officer next in command to the captain of a ship. He takes rank both in the United States and British services with a captain in the army.

Lieutenant, Great Britain, an officer appointed by the crown, the permanent and chief local representative of the sovereign. The office is supposed to have been instituted about the reign of Henry VIII. He appoints a certain number of duly qualified deputy-lieutenants, these appointments being subject to his majesty’s approval; he also nominates to the lord chancellor persons to serve as justices of the peace for the county, the latter being also deputy lieutenants. He may also recommend for first commissions in the reserve forces. He is _ex officio_ a member of the County Council.

Lieutenant-colonel, in the regular army, is the officer next in rank to a colonel, and the senior of a major. He has actual command of a regiment, and is responsible for the discipline and comfort of the troops under his command, and for the various details of their organization.

Lieutenant-general, a general officer in the army, ranking above a major-general and below a general.

Life (līf). To give an unobjectionable definition of life is impossible, as whatever the definition may be it will probably err either from redundancy or defect. Life has been defined as: ‘the sum total of the forces that resist death,’ ‘the constant uniformity of internal phenomena with diversity of external influences,’ ‘the special activity of organized bodies,’ ‘organization in action,’ ‘a collection of phenomena that succeed each other during a limited time in an organized body,’ ‘the twofold internal movement of composition and decomposition, at once general and continuous.’ Herbert Spencer’s conception of life is: ‘The definite combination of heterogeneous changes, both simultaneous and successive, in correspondence with external co-existences and sequences.’ Mr. G. H. Lewes suggests the definition: ‘Life is a series of definite and successive changes, both of structure and composition, which take place within an individual without destroying its identity.’

Life-assurance. See Insurance.

Life Boat. A boat for saving persons from shipwreck. The first life boat was patented in Great Britain by Lukin in 1785, but Henry Greathead introduced an improved form in 1789 which proved very successful, and till 1851 was almost the only one in use. It is recognised that a life boat, to be effective, should possess the following characteristics: 1. Great lateral stability, or resistance to upsetting. 2. Speed against a heavy sea. 3. Facility for launching and taking the shore. 4. Immediate self-discharge of any water breaking into her. 5. The power of self-righting if upset. 6. Strength. 7. Stowage-room for a large number of passengers. The life boat transporting carriage is an important auxiliary to the boat. The life boat is kept on this carriage in the boat house ready for immediate transportation to the spot most favorable for launching to the wreck. In this way a greater extent of coast can secure the benefits of the life boat than could otherwise be the case; besides, a boat can be readily launched from a carriage through a high surf, when without a carriage she could not be got off the beach. The machine is admirably contrived, and the boat may be launched.
from it in an upright position with her crew on board. The Lifesaving Service of the United States is supported by government funds, and the Atlantic and some of the lake coasts are now studded with lifesaving stations, provided with suitable boats, appliances and houses of refuge for the saved.

**Lifebuoys, Liferafts, Lifebelts.**

Various kinds of buoys or other apparatus for the preservation of human life in cases of shipwreck or danger from drowning in other circumstances have been introduced from time to time, constructed in all sorts of shapes and materials. India rubber has been largely used in the construction of lifebuoys, generally in the form of belts which can be easily inflated by the wearer in the course of a few seconds. They are very buoyant and portable, but easily punctured or torn, and soon decay if put aside while damp. Hence the interior has come to be divided into cells, so that the rupture of one effects only a partial damage. Another sort is in the form of a waistcoat; and inflated pillows and mattresses made on the same principle have been found very effective. Naval officers have also strongly recommended mattresses stuffed with cork. The lifebuoy most favored by seamen of late years is composed of slices of cork so neatly arranged that they form a buoyant zone about 32 inches in diameter, 6 inches wide, and 4 inches thick. It contains about 12 lbs. of cork, is compactly covered with painted canvas to protect it from being injured by the water, and furnished with looped lifelines, that several, if necessary, may at once have a convenient hold.

**Life Estate,** in common law, an estate or interest in real property for life.

**Lifeguards.** See Guards.

**Life Insurance.** See Insurance.

**Life-rockets,** projectiles by means of which a rope is thrown either from a ship in distress to the shore, or from the shore to the ship, generally the latter. The most reliable missiles are those that are discharged from a mortar or gun by gunpowder, having a line attached to them. The life-mortar of Captain Manby, invented in 1807, is practically still that in use, though variations in details have been made on it from time to time. His missile was a shot with curved barbs, resembling the flukes of an anchor, to grapple the rigging or the bulwarks of a ship. An ingenious rocket-apparatus now in use is Roger's life-anchor. It consists of a three-flanked anchor, 12 lbs. in weight, having the flukes so hinged that they pack closely together. When the anchor has been shot out from a mortar 100 or 200 yards, the flukes open and fasten to the beach or to a ship, and thus establish a communication between the two for dragging boats or men ashore. The best lines are those made of loosely-spun Italian hemp. There are several ways of arranging or faking the line so that it may run out quickly without kinking or entangling. The sling lifebuoy, or breeches buoy, is employed in conjunction with the rocket apparatus, after communication has been established by a rope from the shore to the vessel. It consists of a circular cork lifebuoy, having a pair of canvas breeches attached to it. The legs of the occupant protrude below the breeches, while his arms rest on the buoy. The shipwrecked are by this means brought to the shore one by one, the buoy being drawn backwards and forwards by means of a traveling block. Or the life-car, a sort of covered boat, may be used to convey the men ashore. In the United States the management of the life-rocket apparatus is under the control of the Lifesaving Service. The stations surround all parts of the Atlantic and lake coasts, presided over by a general superintendent, with headquarters at Washington. They are supported by appropriations made by Congress. On the Atlantic beaches the stations are located five miles apart.

**Lifesaving Service,** a branch of the United States Treasury Department, organized in 1871 and exceedingly useful in saving the crews and passengers of vessels wrecked on the coast. In 1910 there were 280 lifesaving stations on the ocean, and gulf coasts, and one at the falls of the Ohio, Louisville, Kentucky. Since the introduction of the system more than 22,000 persons and $225,000,000 in value in property have been saved. Life boats, life lines and buoys, etc., are the chief appliances used.

**Liffey** (lif'ě), a river of Ireland, which rises in County Wicklow, runs w. into Kildare, then turns n. e. and passes through the county and city of Dublin into the Irish Sea; length, 50 miles. See Dublin.

**Lifts.** The term employed in Britain for the lifting apparatus known in the United States as elevators. See Elevators.

**Ligament** (lig'a-ment), in anatomy, a strong, tendinous, inelastic white body which surround the
Ligan. See Flotsam.

Light (Lit.), the agent which enables us through the organ of sight to take cognizance of objects; it has a heating and chemical action which is all-important to animals and plants; without it there would probably be neither animal nor plant life. The sun, the fixed stars, nebulae, certain meteors and terrestrial bodies in a state of incandescence or phosphorescence are self-luminous. The origin of light has been explained by two main theories, the emission or corpuscular theory adopted and developed by Newton and the undulatory or wave theory, the fundamental principles of which were laid down by Huygens and Euler. Newton held that the sun and other light-giving bodies threw off, with immense velocity, vast numbers of exceedingly minute particles of matter, which passed into space, and by their mechanical action upon the eye brought about the sensation of light. Numbers of distinguished men accepted this theory, and many of the phenomena of light were plausibly explained by it. Huygens suggested that light was due to some sort of wave motion transmitted through a medium. His theory, offered towards the end of the seventeenth century, made little progress until the beginning of the nineteenth century, when its truth was amply established by the labors of Young, Fresnel and others; and it is now universally accepted. Though we are warranted in recognizing the existence of the transmitting medium called ether, of its nature we are as yet largely in ignorance. Rays of light proceed in straight lines, and when a screen is removed to twice or three times its distance from a luminous point it receives only one-fourth or one-ninth of the light per unit of area which it received formerly. This is the law of inverse squares, viz., the intensity of the light received from a luminous point is inversely proportional to the square of the distance from the point. Advantage is taken of this fact in determining the relative illuminating powers of two sources of light by means of the photometer. In 1676 Roemer discovered that light is not instantaneously propagated from luminous bodies to the eye; and he calculated its velocity. Bradley, Foucault, Fizeau, Cornu, etc., made similar measurements, and it has been determined that light travels at the rate of about 186,000 miles per second.

When light falls upon the surface of a body part of it is reflected. When the surface is smooth and regular an eye placed to receive the reflected rays generally observes an image of the source of light, and the surface may be called a mirror. When it is not smooth the light which falls upon it is scattered in all directions, so that the surface itself becomes visible; planets and nearly all terrestrial objects become visible in this way by means of reflected solar light. While part of the light which falls upon the surface of a body is reflected, part enters into the body, which absorbs or destroys a certain amount of it and may allow the rest to pass through. When light falls nearly vertically on a glass surface very little of it is reflected, but as the incidence becomes more and more oblique a steadily increasing proportion of the light is reflected. Polished metals, particularly silver, are good reflectors of light at all incidences, and hence metallic surfaces are most commonly used as mirrors. The law of reflection was known to Archimedes; it is—the incident and reflected rays make equal angles with a perpendicular to the surface, and lie in the same plane with it. When a ray passed obliquely from air into water, although in the water as in the air it is a straight line, this is not a mere continuation of its old path; it is bent to some extent at the point where it enters the new medium, the bending of the ray being called refraction. This bending of a ray when it passes from one medium, such as air, into another homogeneous medium, such as glass or water, or from air into denser air, is subject to a particular law. The law of refraction was discovered in the seventeenth century; it is—whatever be the obliquity of a ray passing from one medium to another, the sines of the angles made by the incident and refracted rays with the perpendicular to the refracting surface are in a constant ratio, which has been called the index of refraction. When a ray of light passes through a medium, such as the atmosphere, which continuously varies in density from place to place, its direction continuously changes, so that it is a curved line, a fact to which the phenomenon of the mirage is due. The application of mathematics to the two laws of reflection and refraction is called optics: this science includes the formation of images by mirrors and lenses, the eye, microscopes, telescopes, etc. See Optics.

Newton found that red light is not so
much refracted as blue light when it passes from one medium to another. When a ray of solar light is refracted in passing through a glass prism he found that a great number of rays of different colors left the prism, the blue ray being most bent from its former path and the red ray least. (See Prism, Rainbow.) Letting these rays fall upon a screen he obtained a band of colors which he called a spectrum. Thus he had decomposed solar light and found it to consist of a mixture of lights of every gradation of refrangibility. On permitting all the colored rays to pass through a lens before falling on the screen they combined and became white light again. Newton failed to observe one peculiar feature of the spectrum which has since been studied, and has led to important results—namely, that it was not really continuous, but was crossed by a number of dark lines. From this has arisen the instrument called the spectroscope and the branch of physics called spectrum analysis. These words.

In Newton’s experiment with solar light and the prism we find that the blue and green rays very slightly affect a thermometer, the yellow rays affect it slightly, and the extreme red rays possess great heating properties; moreover, when the thermometer is passed beyond the red into a space in which there are no luminous rays a maximum heating effect is produced. Again, the red and yellow rays are all but incapable of blackening photographic paper, whereas the blue and violet rays exert a rapid chemical action, and this is even exceeded by the invisible rays beyond the violet. It is evident then that (1) some of the solar rays which pass through the prism do not affect the retina; these rays are either less refrangible than red light, or are more refrangible than violet; (2) the least refrangible solar rays possess most heating power; (3) the most refrangible rays are capable of exerting the most powerful chemical action. As glass prisms absorb many of the heat rays it is convenient to use prisms of rock salt in examining the heat (red) end of the spectrum.

Young showed that two rays of light may destroy each other’s effects and produce darkness. He applied this discovery to the explanation of many natural phenomena, such as the colors in mother-of-pearl, on soap-bubbles, etc. It has also been shown that rays of light may bend round obstacles. When a ray of light enters Iceland spar it divides into two rays, which travel in different directions; these two rays possess peculiar properties which are not exhibited by ordinary rays of light, and are said to be polarized. These polarized rays cannot be made to interfere or destroy each other’s effects, but either of them may be divided into two interfering rays. These and other allied phenomena are accepted by physicists as proofs that (1) there exists throughout all space a very elastic medium of small density, known as the ether; (2) the particles of all bodies are in a state of vibration; a rise in temperature of a body indicates an increase in the rapidity of vibration of its particles; (3) radiation of heat consists in the transmission of these vibrations from the particles of a body through the ether to all parts of space; (4) when these vibrations communicated by the ether become rapid enough they are able to affect the retina of the eye and are then called light; (5) lights differ in color when their vibrations are not executed in equal times; (6) the vibrations of particles of the ether are all executed at right angles to the direction of propagation of the light; (7) in a ray of polarized light the vibrations are all executed at right angles to a certain plane called the plane of polarization; (8) the planes of polarization of the two rays in Iceland spar mentioned above are at right angles to one another.

Light, **Aberration of.** See Aberration.

Light, **Artificial,** any kind of illumination, used for supplementing the light of the sun. Some form of artificial light must have been in use for domestic purposes from the very earliest times, but though large cities and a high state of civilization existed among the Egyptians, Greeks and Romans, the systematic lighting of streets was unknown to them. From the writings of Libanius, however, who lived in the beginning of the fourth century after Christ, we may conclude that the streets of his native city, Antioch, were lighted by lamps, and Edessa, in Syria, was similarly illuminated about A.D. 500. Of modern cities Paris was the first to light its streets. In the beginning of the sixteenth century it was much infested with robbers and incendiaries, so that the inhabitants were ordered, in 1524, to keep lights burning after nine in the evening, before all houses fronting a street. In 1558 *falotes* (a large vase filled with pitch, rosin, and other combustibles) were erected at the corners of the streets. In London in 1668 the inhabitants were instructed to hang out candles. A more definite order was issued in 1690. Every housekeeper was required to hang a light or lamp, every night, as soon as it was dark, between Michaelmas and Ladyday, and to keep it burning till the hour of twelve at night. Successive acts of
Light Cavalry

Parliament and orders of the common council provided from time to time for the better lighting of London. The Hague commenced street lighting in 1562, Hamburg in 1678, Berlin in 1739, Copenhagen in 1681, Vienna in 1684, Hanover in 1696, Leipzig in 1702 and Dresden in 1705. The application of coal gas to economical purposes by Murdoch in 1805 opened a new era in artificial lighting. The United States cities came later into the field of efficient lighting, gas not being used for street lighting for years after it had been introduced in England. The development of electric lighting, however, has proceeded more actively here than elsewhere, and within recent years the brilliancy of street, store and house lighting has made phenomenal progress. The illuminating power of coal gas has been greatly increased by use of the Weishach mantle, and acetylene gas has been found to yield a brilliant light. See Electric Light, Gas, Paraffin, Petroleum.

Light Cavalry, or Horse See Cavalry.

Light, Electric. See Electric Light.

Lighter (lit'ær), a large, open, flat-bottomed vessel, employed to carry goods to or from a ship.

Lightfoot (lit'fut), John, an English divine and Hebrew scholar, born at Stoke-upon-Trent in 1602; died at Elly in 1675. He was educated at Cambridge. He held various livings, and in 1655 became vice-chancellor of Cambridge; but his claim to notice rests chiefly on his great knowledge of rabbinical literature and Hebrew antiquities, and his able Biblical criticism. Of his writings the Horae Hebraicae et Talmudicae, etc., are the most important.

Lighthouse (lit'hous), a tower or other lofty structure with a powerful light at top, erected at the entrance of a port or on some rock or headland, and serving as a guide or warning of danger to navigators at night. The Pharaoh of Alexandria, founded about 300 B.C., is the earliest building erected expressly as a lighthouse of which we have any authentic record. It is stated to have been 550 feet high. Lighthouses are supposed to have been erected by the Romans at Flamborough Head, Dover and Boulogne. In modern times the first important lighthouse erected was the Tour de Cordouan, at the mouth of the Garonne in France, founded in 1584 and completed in 1610, altered and improved in 1727. It is 107 feet in height, and in architecture surpasses all other lighthouses in the world. The first sealing on the British coasts, for which a toll was leviable, was that of Dungeness, for which letters patent were granted by James I shortly after his accession. Until about 1676 nearly all the lighthouses were provided by private persons; subsequently they began to be built by the corporation known as Trinity House, and an act passed in 1836 empowered the corporation to purchase all private lights. In the United States the lighthouses are under the Lighthouse Board, which has charge of all buoys, beacons, etc., on the coasts and waters of the States. The earlier lights were simply of wood, and later fires of coal exposed in open chafers upon the top of a tower. When oil was first introduced as an illuminant it was not known. An immense improvement in lighting was made a few years previous to the French Revolution by the introduction of parabolic reflectors, which concentrate and throw forward in a horizontal direction the rays of light proceeding from lamps placed in their focus. At the same time the revolving frame carrying the lamps and reflectors was introduced, and has proved of the greatest utility in establishing a distinction between lights. The reflectors are composed of sheet-copper plated with silver, and formed into a parabolic curve by a laborious and delicate process. This mode of lighting is termed the catodntric or reflecting system. It is so called in opposition to the dioptic or refracting system, in which the illumination is produced by a central lamp, the rays from which are transmitted through a combination of lenses by which it is surrounded. The adoption of lenses in lighthouses, though suggested as far back as the middle of the last century, was first carried into practical effect in 1788 by M. Augustin Fresnel, a distinguished French savant. The superior advantages which this system has been found to possess over that of reflectors has led to its general adoption in most lighthouses. Fresnel likewise contrived a combination of the two systems, the apparatus in which consists of thirteen rings of glass of various diameters, arranged one above another in an oval form. The five middle rings form a cylindrical lens through which the rays from the central lamp are transmitted by refraction, while the other rings or prisms, five of which are upper and three lower, are constructed in such a manner as to project by reflection the light from the focus in a direction parallel with the refracted rays. The light thus obtained is termed the catadntric light. A modification of the dioptic and catadntric systems, so as still further to prevent the loss of the rays of light, and thereby increase the in-
tensity of their resultant beam, was in-
troduced by Mr. Thomas Stevenson under
the designation of the holophotal system,
its object being to effect the useful appli-
cation of the whole of the light. The
catoptric, dioptric and catadioptric sys-
tems are illustrated in the accompanying
figures. In the first the reflectors o o are
shown as arranged on the revolving
frame, p p being the oil-lights, r r copper
tubes conveying away the smoke. In the
dioptric apparatus f is the light, l l l’ l’
are lenses, m m plane mirrors reflecting
the rays falling on them in a horizontal
direction, z z zones or belts of glass
prisms. In the other figure a b’ c’
are respectively upper and lower zones
of prisms, d e f the cylindric refracting belt.
Various means of exhibiting the light have
been adopted, so as to make a distinction
between different lighthouses. Thus the
flashing light shows five or more flashes
and eclipses alternately in a minute; the
fixed light has a white or red flash in addi-
tion, at intervals of several minutes; in the revolving light the light gradually
increases to its full effect, then decreases
till it is eclipsed. Other methods add to
the diversity of lights, as the intermittent,
the alternate, etc.
Oil, particularly paraffin, has long been
employed, and it is likely to remain in use
in isolated lighthouses. Gas was the first
substitute for oil. With it an eclipse
can be simply produced by a partial stop-
age in the supply pipes, and there is no
such waste of light as when oil is em-
ployed. A burner for gas invented by Mr.
J. R. Wigham presents a total of 108 jets
arranged in concentric circles. Gas has
been successfully employed in illuminat-
ing buoys for the guidance of vessels. The
buoys (which, of course, are gas and
water-tight) are charged to a pressure of
perhaps ten atmospheres, giving a con-
tinuous light for three of four months; a
luminous paint has also recently been
applied with advantage to buoys. The
electric light has been more recently
adopted, and experiment proves it to be
the most powerful and penetrative of all
lights, too much so in some cases, as its
Lightning

intensity is apt to be blinding when vessels are near at hand. It has not yet been demonstrated that oil as an illuminant has been especially improved upon.

In the United States the reliability of oil has been fully demonstrated and the conclusion reached that vaporizing the oil and using it to heat incandescent mantles of refractory materials is the most efficient and economical method. Buoy's have been placed in the Ambrose channel to New York harbor in which acetylene is the illuminant used. It has proved very satisfactory. The Eddystone and Bell Rock are the two most celebrated British lighthouses. Among lighthouses, built under peculiar difficulties of construction is the Tillamook Rock light station, opposite Tillamook Head, Oregon. Opposite Crescent City, Cal., at Northwest Seal Rock, the difficulties were even greater. In Delaware Bay, on a shoal known as Fourteen-foot Bank, an extremely difficult foundation was overcome. The most powerful light in the world is that of the great lighthouse on Heligoland Island, Germany, in the German Ocean, opposite the mouth of the Elbe. It has an electric installation with three search-lights, its 40,000,000 candlepower being without a rival.

**Lightning** (light'ning), a flash of light resulting from a sudden discharge of atmospheric electricity. It may be a diffused reddish white or violet flash, seemingly spread over a considerable extent of the sky, or a zigzag or rather sinuous line of very brilliant light, resulting from a discharge between two clouds or between a cloud and the earth. Heat or sheet lightning is unaccompanied by thunder; it is now generally held to be the reflection from aqueous vapor and clouds of a discharge occurring beyond the horizon. Sometimes during a thunderstorm fireballs are seen, but no exact observations of them have yet been made. Experiments show that the duration of a flash of lightning is inconceivably small, in some instances not more than a millionth part of a second. The spectrum of lightning shows the presence of incandescent nitrogen, oxygen, hydrogen and sodium. Certain electroscopic experiments seem to show that previous to a discharge between two clouds internal discharges are taking place in both. Lightning in passing through air and non-conductors, metallic rods, etc., exhibits all the phenomena of the passage of a very great quantity of electricity; it kills animals, splits trees and stones, and melts thin wires. Sometimes on entering the earth the lightning melts the silicious substances in its way, producing the tubes called *fulgurites*. After a lightning discharge the peculiar odor of ozone may be observed, as in the neighborhood of an electric machine. Objects at a distance from a place of discharge may have previously been charged with electricity by the induction of the clouds; the distant discharge suddenly sets free this electricity so that it passes through the objects to the ground, producing a return shock; men and animals have often been killed in this way. A large number of photographs of lightning flashes from all parts of the world have been collected, and it is hoped that by their means many obscurities connected with the phenomenon will soon be cleared up. Thunder is due to the sudden disturbance of the air produced by a lightning discharge; the long, rolling effect is perhaps due to echoes from the clouds, perhaps partly to there being a number of discharges at different distances from the observer. Sound travels at ordinary temperatures about 1100 feet per second, so that a thunder-clap from a distance of one mile would reach us in about five seconds. See Conductor, Electricity.

**Lightning-rod.** See Conductor.

**Lightship,** or **lightboat,** a vessel, usually single-masted, serving as a lighthouse in positions where a fixed structure is impracticable. Octagonal lanterns, fitted with Argand lamps placed in the foci of parabolic reflectors, are usually hoisted on the mast; but they are less efficient and more expensive in maintenance than land lights. See Aloe-wood.

**Lignite** (lig'nit), or **Brown Coal.** Compressed and altered vegetable matter intermediate in its qualities between peat and coal. It occurs in the tertiary strata in many European countries, occasionally in thick beds, as in Germany and France, and vast deposits of it exist in the Western United States, especially in North Dakota and Montana. Texas and New Mexico also are abundantly supplied with lignite and other grades of subbituminous coal, the total supply in the United States, exclusive of Alaska, being estimated at 740 billions of tons. Alaska has also a large supply. This coal was long deemed useless for steam-making purposes, but it has recently been found that, by converting it into producer gas, it is capable of yielding more power per ton than the higher grades of coal. This gives immense value to the American deposits. See Coal.

**Lignina** (lig'nin), a modification of cellulose (which see).

**Lignite** (lig'nit), or Brown Coal. Compressed and altered vegetable matter intermediate in its qualities between peat and coal. It occurs in the tertiary strata in many European countries, occasionally in thick beds, as in Germany and France, and vast deposits of it exist in the Western United States, especially in North Dakota and Montana. Texas and New Mexico also are abundantly supplied with lignite and other grades of subbituminous coal, the total supply in the United States, exclusive of Alaska, being estimated at 740 billions of tons. Alaska has also a large supply. This coal was long deemed useless for steam-making purposes, but it has recently been found that, by converting it into producer gas, it is capable of yielding more power per ton than the higher grades of coal. This gives immense value to the American deposits. See Coal.
Lignum Vitaë. See Guiacum.

Ligny (li'n-yë), Battle of, June 16, 1815. See Quatre-Bras and Waterloo.

Ligula (lig'u-la), Lig'ule, in botany, a strap-shaped petal of flowers of the order Composite; also the membrane which occurs at the base of the lamina of a grass leaf, as that of millet.

Liguria (li-gô'ri-a), one of the larger divisions (compartmenti) of Italy; area, 2057 square miles. It includes the towns of Genoa, Spezia and St. Reino, and is the most important maritime division. The Roman Liguria was much more extensive. The Republic of Genoa existed as the Ligurian Republic, under a democratic constitution granted by Bonaparte, from 1797 to 1805, when it was annexed to France. From 1814 to 1860 it formed part of the Kingdom of Sardinia.

Ligurite (lig'or-rit), a variety of sphenite, a mineral occurring in oblique rhombic prisms, of an apple-green color, occasionally speckled externally; so called on account of its being chiefly found in Liguria. Its color, hardness and transparency have caused it to be classed as a gem.

Ligustrum. See Privet.

Li-Hung-Chang, a Chinese statesman, was born in 1823. He was viceroy of China when, with Gen. Gordon, he suppressed the T'ang-ping rebellion, 1860. He held other high posts, made the treaty of peace with Japan after the 1895 war, and in 1898 was deposed from his post of grand chancellor. Twice he visited Europe and was once in the United States, where he attracted much notice. In 1899 he was restored to his former dignity, and died in 1901. He was most frequently looked upon as one of the leading diplomats of his time.

Lilac (lîl'ak; Syringa vulgaris, nat. order Oleaceæ), a familiar fragrant-flowered shrub, 8-10 feet high, is a native of Southeastern Europe and Asia, and is widely planted in the United States, being one of the most familiar and most beautiful of our spring-flowering ornamental shrubs. There are several varieties, the most common color of the flowers being lilac, but there are also some white ones.

Lilburne (lîl'burn). John, a celebrated English squire, born in 1618; died in 1657. For tracts against the Anglican hierarchy he was whipped and imprisoned in 1637, but the Long Parliament released him in 1640. His friends got the conviction declared illegal and tyrannical, and Lilburne received £3000 as indemnity. He then joined the army, and rose to the rank of lieutenant-colonel. He was one of the party known as the Levellers, and for his attacks on Cromwell and others was oftener than once sent to the Tower. Having been condemned to exile, and having returned without leave, he was put in prison and tried for his life, when he was acquitted, but not liberated for some time. Subsequently he became a member of the Society of Friends. Hume describes him as 'the most turbulent, but also the most upright and courageous of men.'

Liliaceæ (li-lî'a-se-i), the lilies, a large nat. order of endogenous plants. They are stemless herbs, or shrubs with a simple or branched trunk, with bulbous or fascicled roots. They have six hypogynous or perigynous stamens, with usually introrse anthers; a three-celled ovary, each cell being usually many ovuled, an entire style, and a capsular fruit. They are much more abundant in temperate than in tropical regions, where they chiefly exist in an arboreal state. The lily, fritillary, hyacinth, star of Bethlehem, tulip, dragon-tree, squash, aloes, garlic, etc., belong to this order.

Lilith (li'lith), according to rabbinical legends, Adam's first wife, mother of giants and demons.

Lilium (li-lî'um), a genus of bulbous plants. See Lily.

Liliuokalani (li-li'î-o-ka-la'ni), Lydia Kamehameha, ex-queen of Hawaii, born at Honolulu in 1838. She succeeded King Kalakaua in 1891 and at once sought to abolish the constitution and rule as an absolute monarch. This led to a revolt on the part of the many Hawaiian inhabitants and she was deposed in 1892 and a provisional government was organized. Following the annexation of Hawaii by the United States she retired to private life. Died November 11, 1917. See Hawaii.

Lille (lîl), a town of France, capital of the department Nord, and chief fortress of the northeast of France, near the Belgian frontier. It is remarkably well built; has spacious, regular streets, lined with large, massive houses of brick or stone, with the usual public buildings and institutions found in a town. Haute and Basse Deule, sluggish streams, traverse the town, and are connected by a canal, while the country around is so flat that for about 114 miles it can be laid under water. Lille is the center of an extensive commerce. The manufacture of linen and cotton thread and fabrics is
the most important, but fine woolen cloth, velvets and carpets are also largely produced; in fact, the factories of Lille cover almost the whole range of textile goods. Chemicals, leather, machinery, paper, beet-sugar, etc., are also turned out in ever-increasing quantities. Lille originally belonged to the counts of Flanders. In 1667 it was taken by Louis XIV, and fortified by Vauban. It was taken after a siege of several months by Eugene of Savoy in 1708, but was restored to France by the Peace of Utrecht in 1713. In 1792 it was ineffectually bombarded by the Austrians. Pop. (1911) 217,807.

Lillibullero (li-lɪ-bʊlˈlɛrə), the name of an Irish ballad, whose refrain was lillibullero bullen a la, popular among the army and supporters of William III in the war in Ireland during the revolution of 1688. The verses were written by Thomas Wharton, who claimed that he had sung a king (James II) out of three kingdoms.

Lillo (liˈloʊ), GEORGE, an English dramatic writer, born in London in 1693; died in 1739. Although carrying on the trade of a jeweler, he found time to write a number of well-received pieces for the stage. The most successful of these was his domestic drama entitled The London Merchant, or the History of George Barnwell, 1751.

Lilly, LILY, or LILLY, JOHN, an English dramatic and miscellaneous writer, born about 1563, studied at Oxford and Cambridge. He wrote nine dramatic pieces which are now forgotten. He attempted to reform and purify the English language in two fantastic romances entitled Euphues and his Anatomy of Wit (1580), and Euphues and his England (1581), which met with great success.

Lilly, or LILY (liˈli), WILLIAM, an English astrologer, born in 1602; died in 1681. He assumed the role of prophet and seer, and the credulity of the age was satisfied and deceived by his prophecies. In 1644 he first published his Merinus Anglicus, which he continued annually until his death. He wrote a number of mystical books, which generally met with a ready sale. His autobiography is very entertaining. He not only acquired fame, but also a large fortune.

Lily (liˈli), a genus of plants, nat. ord. Liliaceae. The root is a scaly bulb; the leaves simple, scattered, or verticillate; the stem herbaceous, simple, and bearing at the summit very large and elegantly-formed flowers. The flower consists of six petaloid sepals, the calyx and corolla being alike in form and color.

There are many species, those best known in Europe being the white, orange and scarlet lilies, the tiger lily, etc. The common white lily (Lilium candidum) is a native of Syria, Persia, and other eastern countries. The finest American species is the L. superbum, which grows in marshes to the height of 6 or 8 feet, bearing reflexed orange flowers spotted with black. A well-known Japanese lily (L. auratum) is one of the noblest flowering plants in existence, and highly fragrant. L. giganteum grows to the height of 12 feet. In the middle ages and in modern times the white lily has been the emblem of chastity, hence the Virgin Mary is often represented with a lily in her hand or by her side.

Lilbæum (liˈbæəm), the name given by the ancients to Cape Boo, the most western promontory of Sicily. The Carthaginians, about B.C. 350, founded here a town of the same name, which became their principal naval station in Sicily. See Marina.

Lily-of-the-valley (Convallaria majalis), a plant of the nat. order Liliaceae, distinguished for its small and beautiful bell-shaped flowers of an agreeable odor. It is found in Europe, Asia and North America. It is used as a heart stimulant.

Lima (liˈma), a city, county seat of Allen Co., Ohio, 100 miles S.W. of Cleveland, on 5 railroad oil, agricultural and manufacturing interests; great motor-truck factories, railroad shops, locomotive works, cigar and candy factories, etc. It has 317 acres of parks, library, auditorium and State Hospital. Pop. (1910) 30,508; (1920) 41,508.

Lima (liˈma), the capital of Peru, is situated at the foot of granitic hills, 7 miles from Callao, its port on the Pacific, on the small river Rimac. It is regularly built, and many of the streets have a stream of water running down the center. The numerous domes and spires give Lima a fine appearance from a distance, but the houses are mostly of unburnt brick. Among the public buildings and institutions the cathedral, the convent of San Francisco, the exhibition palace, and the university with its national library and museum, deserve special mention. The city has botanical gardens and a very large bull-ring. The manufactures are unimportant, but there is a considerable import and export trade through the port of Callao. The climate is very agreeable, but the locality is subject to earthquakes, the most destructive being that of 1746. Lima was founded in 1535 by Pizarro, and called Ciudad de los Reyes (City of the Kings). In January, 1881, during the war with Chile, Lima
Limasol

capitulated to the Chilenos, who occupied it thereafter for more than two years. Pop. (1913) 143,500.
Limasol (lim-a-sol'), or Limist'sgo, a seaport of Cyprus, on the south coast, with a considerable trade. Pop. 8209.
Lima-wood, a name sometimes given to the wood of Casalpinia echinata. See Brazil-wood.
Limax. See Slugs.
Limber. See Gun-carriage.

Limbourg, or LIMBURG (lim'burg), a province of Belgium, separated by the Meuse from Dutch Limburg; area 942 square miles; pop. (1904) 298,359. Hasselt is the capital.
Limburg, a province of Holland, partly intersected by the Meuse; area, 850 square miles; pop. 283,534. Agriculture and cattle-rearing are the chief occupations, and there is a large export trade in butter and cheese. The capital is Maastricht.
Limburg, a town of Prussia in the district of Wiesbaden, on the Lahn, with a fine old cathedral in the Romanesque style, recently restored. Pop. (1905) 9017.

Lime (lim), the oxide of the metal calcium. This oxide, which in a state of combination is one of the most abundant bodies in nature, has been known and used from the remotest antiquity. The forms in which it occurs native are very numerous, but it does not exist in a pure state in nature, its affinity for carbonic acid being such that it absorbs it from the atmosphere, when it becomes converted into carbonate of lime. Combined with carbonic, sulphuric, phosphoric and other acids it constitutes large rock masses, and even mountains; it is present in sea and other waters; it is a constituent of most soils and of a great number of minerals; and is essential to plants and animals.

Ordinary lime is obtained with most facility from the carbonate (see Lime-stone), from which by a strong heat the carbonic acid may be expelled. This process is conducted on a large scale with the different varieties of limestone, which are calcined or burned in order to obtain the caustic earth, or quicklime, as it is called. The lime thus obtained, however, is rarely pure enough for chemical purposes. Pure lime is a soft, white substance, of the specific gravity of 2.3. It is quite infusible, but when heated in the oxyhydrogen blowpipe it emits one of the intensest of artificial lights, and it has accordingly been employed for a signal light and for facilitating the observation of distant stations in geodetical operations. It is soluble in about 700 parts of cold water. The solubility is diminished by heat. If a little water be sprinkled on new burned lime it is rapidly absorbed, with the evolution of much heat and vapor. This constitutes what is known as slaking. The heat proceeds from the combination of the water with the lime, forming a hydrate, as the slaked lime is called. This is a compound of 56 parts of lime with 18 of water, or rather more than 3 to 1. The water may be expelled by a red heat. Lime-water is astringent, and somewhat acrid to the taste. It renders vegetable blues green, and yellows brown; and restores to reddened litmus its usual purple color. Lime, subjected to the action of galvanism in high intensity, afforded Sir H. Davy satisfactory evidence that, in common with the other earths, it consists of a metal, which he denominated calcium, and oxygen, the proportions being 72 of calcium and 28 of oxygen. (See Calcium.) Chlorine combines directly with lime, forming the very important substance used in bleaching, called chloride of lime or bleaching-powder. It is formed by passing chlorine gas over slaked lime. Chloride of lime is also used as a disinfectant.

The uses of lime are almost too numerous to mention, for there is hardly any operation in the arts for which lime is not at some part indispensable. In the manufacture of basic Bessemer steel (see Steel) it forms about one-half of what is called 'Thomas slag,' which, when ground, makes a cheap and efficient fertilizer; it is employed in the early stages of leather dressing to remove hair, fat, etc., from the hides; it is used in metal-lurgy as a flux; in soap-boiling to causticize the alkaline liquors; in the manufacture of washing soda; for neutralizing acids; for making mortars and cements; in agriculture to destroy inert or noxious vegetable matter, and to decompose heavy clay soils; and in the materia medica, chiefly as an antacid.

Lime, or LINDEN (Tilia, nat. order, TIlaceae), a large tree, with alternately, simple, and cordate leaves, and sweet-scented flowers, disposed on a common peduncle. The common linden (T. europaea) is a well-known tree. The inner bark of all the species is very tenacious; it is called bast, and mats are made of it in Russia in large quantities. The wood is rather soft, close-grained, and much used by turners. The American lime, or bass-wood (T. americana), is a large and beautiful tree, resembling the European species.
Lime (Citrus limetta), a small globular-shaped lemon, the fruit of a shrub about 8 feet high. It is a native of India and China, but was introduced into Europe long before the orange, and is now extensively cultivated in the south of Europe, the West Indies, and some parts of Southern America. The fruit is agreeably acid, and its juice is employed in the production of citric acid, in beverages, etc.

Lime Light. See Oxyhydrogen Light.

Limerick (lim'èr-ik), a city of Ireland, capital of Limerick county, and a county of itself, is situated at the interior extremity of the estuary of the Shannon. It consists of three parts, connected by five bridges, one of which, the Wellesee Bridge, a magnificent structure crossing the harbor, cost £85,000. The principal buildings are the Episcopal and Roman Catholic cathedrals, savings bank, chamber of commerce, exchange, assembly house, linen hall and corn and butter markets. The industries include the curing of bacon, the preparation of butter, flax scanning and weaving and lace making. There are distilleries, breweries, tanneries, corn mills, a large military clothing establishment, and shipbuilding slips. Limerick is the leading port on the west coast for the shipment of produce. Pop. 38,151.—The county belongs to the province of Munster; area, 1064 square miles. The surface is in general flat, or an undulating plain, excepting in the northeast, south and southwest, where it rises into mountains. The principal river is the Shannon, the estuary of which forms great part of the northern boundary. The occupations are chiefly agricultural; pasturage and dairy farming are most general. Large quantities of farm produce are exported. Pop. 140,088.

Limestone (lim'stón), a species of mineral comprising numerous varieties of carbonate of lime, differing considerably in external appearance, structure and composition. It is, if pure, essentially composed of 57 parts of lime and 43 of carbo-dic acid; but in some rocks the limestone is intermixed with magnesia, alumina, silica, iron, etc. All limestones give readily to the knife. They are insensible; but when impure, by an admixture with a portion of other earths, they vitrify in burning. All limestones effervesce when a drop of strong acid is applied on the surface, and they dissolve entirely in nitric or hydrochloric acid. Limestone is found both in primary and in secondary rocks, but most abundantly in the last. It is also not uncommon in alluvial deposits, when it is called calcareous silt. Limestone has frequently a granular structure; and the size of the grains is variable, in some degree corresponding with the relative age of the mineral. Thus limestone which occurs in beds in gneiss, has usually a coarse texture and large granular concretions; but when its beds exist in mica slate, or argillite, its texture becomes more finely grained, and its color less uniform. Silurian and Devonian limestones have a texture more or less compact; the colors are often variegated; and they often contain fossils. Secondary limestone has a compact texture, a dull fracture, and usually contains shells, and sometimes other organic remains. It is always stratified. The specific gravity of limestone varies from 2.50 to 2.90. Calcareaous spar is the purest variety of carbonate of lime. It is frequently very transparent, and is then strongly double-refractive; this peculiarity being best seen in the variety known as Iceland spar. Among the varieties of limestone are: calcareaous spar, granular limestone, foliated limestone, compact limestone, oolite, or roostone, peastone or pisolite, etc. Compact limestone passes into chalk when the particles are somewhat loosely connected with each other, so that the whole assumes an earthy character. A variety of very fine-grained compact limestone is used in lithography, the best being that obtained near Pappenheim and Solenhofen in Bavaria. When sufficiently close in texture to admit of being polished limestone takes the name of marble. As such it is an important building material. The origin of limestone is very largely organic, immense quantities of lime, dissolved in sea-water, being abstracted to form the shells or hard portions of the numerous animals that inhabit it, crustacea, mollusca, zoophites, and foraminifera. Chalk is mainly composed of the skeleton of microscopic creatures, and corals build limestone reefs of immense magnitude, many oceanic islands being built upon a thick basis of this material.

Limit (lim'it), in mathematics, is a determinate quantity to which a variable one continually approaches in value. Thus if a polygon be inscribed in a circle, its area is of course less than that of the circle; but as the inscribed polygon is made to have more and smaller sides its area gets more nearly equal to that of the circle, though it can never quite equal it.

Limited Liability. See Joint-stock Companies.
Limnea (lim-ne'a), a genus of freshwater, univalve, gastropodous molluscs, having a lung sac instead of gills. They have the power of floating on their back, the foot forming a kind of boat. They are found in all parts of the world, and occur fossil, especially in the Wealden.

Limoges (li-möz'z), a town of Western France, capital of the department of Haute-Vienne, and former capital of Limousin. The most remarkable edifices are the cathedral; the bishop's palace, the finest modern edifice of the town; the town hall; and the public library. The principal industry is the manufacture of artistic porcelain, known as Limoges ware, and employing over 5000 hands. It is exported to all parts of the world. There are also wool and cotton spinning mills, cloth factories, foundries, paper mills and extensive shoe and clog-making establishments. In 1790, and again in 1860, whole quarters of the city were destroyed by fire. Pop. 92,152.

Limonite (lim-on'it), a very important ore of iron, varieties of which are bog iron ore and brown hematite. It is a hydrated oxide of a brownish color, occurring in marmillated or botryoidal masses, and is found abundantly in Europe and America.

Limousin (li-möz'zan), an ancient province near the center of France, forming at present the chief part of the departments of Haute-Vienne and of Corrèze. Limoges was the capital.

Limpet (lim'pet), a gastropodous mollusc which adheres to rocks partly by the suckorial powers of its broad disc-like foot and partly by a glutinous secretion. The common limpet (Patella vulgaria) is often found ensconced in a shallow pit excavated out of the rock, and which it has made or rapped out by the siliceous particles embedded in its foot. From this pit the limpet, when covered by the tide, makes short journeys in quest of its food, which consists of algae, and which it eats by means of a long ribbon-like tongue covered with numerous rows of hard teeth. The limpet is used as bait, and is eaten by the poorer classes of Scotland and Ireland. In tropical seas limpets attain an immense size, one species having a shell about a foot wide.

Limpopo (lim-pö'po), or Crocodile River, a river of Southern Africa, which rises in the Transvaal not far from Pretoria, flows northwest, then northeast, forming for a considerable distance the boundary of the Transvaal, then southeast into the Indian Ocean north of Delagoa Bay; length about 1100 miles.

Limulus. See King-crab.

Linaceae (lin-á'se-é), the flax family, a small nat. order of exogenous plants, scattered more or less over most parts of the globe, those in temperate and southern regions being herbs, while the tropical representatives are trees or shrubs. They are principally characterized by their regular flowers, with imbricate glandular sepals having a disc of five glands outside the staminal tube; the ovary is three to five celled, with two ovaules in each cell; the albumen is fleshy; the leaves are simple, usually stipulate, rarely opposite. The tenacity of the fiber and the mucilage of the diuretic seeds of certain species of Linum, such as the common flax (L. usitatissimum), are well known widely, and utilized. See Flax.

Linacre (lin'ák-rér), or LINACER, THOMAS, an eminent physician, born at Canterbury about 1460; died in 1524. After receiving his first education in his native town he entered Oxford University, afterwards proceeded to Italy, and on his return was intrusted by Henry VII with the education of Prince Arthur. He ultimately abandoned his medical practice for the church. In 1518 he founded the College of Physicians, of which he continued president till 1524. He made a Latin translation of the works of Galen.

Linaloe-wood (li-nál'lo), a wood obtained from tropical America (probably from a species of Amyris), yielding a fragrant oil used in perfumery.

Linares (li-när'rás), a town of Spain, province of Jaen, the chief town in a district rich in lead and copper mines. It has large smelting works and foundries and manufactories of explosives. Pop. 38,245.

Linares, a city of Mexico, State of Nuevo Leon, 65 miles N. of Monterey. Pop. 20,600.

Linares, an inland province of Chile, area 3942 square miles. It is fertile in the north but arid in the centre and has several volcanic peaks. Pop. 101,358. Linares, its capital city, has about 9000.

Linaria (lin'när'ē-a), a genus of monotypous, dioecyous plants, of the nat. order Scrophulariaceae.

Lincoln (lin'k'on), a city of England and a county in itself, capital of Lincolnshire, 120 miles north
ABRAHAM LINCOLN

From the famous statue in Lincoln Park, Chicago, by Augustus St. Gaudens.
of London, situated on the Witham, and at the junction of several railways. It has been identified with the Roman Lin- dum Colonia, and at the time of William the Conqueror was a place of considerable strength and importance. The principal edifice is the cathedral, situated on a height (dating from the eleventh century, and restored since 1862), chiefly in the early English, but partly also in later styles, with a tower over 250 feet high, in which is the famous bell known as 'Great Tom of Lincoln,' cast in 1410, cracked in 1827, and since recast into a new bell. The other most conspicuous buildings are the Guild-hall or Stonebow (of the time of Richard III), the remains of the castle which was founded by William the Conqueror, the old episcopal palace, and the fine old Roman arch spanning Hermin street, a theological college, and school of art, etc. The manufacture of agricultural implements and machinery forms the chief branch of industry. Pop. 57,294.—LINCOLNSHIRE is a large maritime county on the east coast, extending from the Wash to the Humber, which separates it from Yorkshire. Area, 2,640 square miles. The surface is generally an uninterrupted plain, the greater portion of which lies below the level of the sea, being protected by embankments. In a few places the fens and marshes continue nearly in their natural state, but round the Wash a great deal of very fine land has been gained from the sea since the commencement of the nineteenth century and the embankments are gradually extending. In consequence of the richness of its pastures Lincolnshire has been long celebrated for its breed of horses, cattle and sheep. In the best parts of the fens and marsh under tillage the crops chiefly cultivated are oats and wheat. Principal rivers, Trent, Witham, Welland. Pop. 563,960.

Lincoln, a county, city, county seat of Logan Co., Illinois, 29 miles N. E. of Springfield. It was named in honor of Abraham Lincoln before he attained national fame. He practised law in the old court house here in the early days of the country. The industries of the city are many and varied. It is the seat of Lincoln University, Lincoln State School and Colony for Feeble-minded Children and Lincoln Chautauqua. Pop. (1910) 10,892; (1920) 11,882.

Lincoln, the capital of Nebraska, county seat of Lancaster Co., 50 miles from the Missouri River, 55 miles s. w. of Omaha. It is the seat of the University of Nebraska, Nebraska Wesleyan University, Cotner University, Union College, Whitney-Carlisle Academy, and other institutions for higher learning (students, 11,000). It is the hub of a network of railroads and has developed into a great grain and milling city; has elevators and flour mills. Manufactures include locomotives, gasoline engines, farm implements, washing machines, aircraft, cigars, brooms, motor trucks, furniture, tile, harness, paints, grain products, etc. Pop. (1910) 43,973; (1920) 54,034.

Lincoln, a town of Providence Co., Rhode Island, on Blackstone River, 6 miles N. of Providence. The manufacture of cotton fabrics is the chief industry. Pop. (1920) 5543.

Lincoln, Abraham, the sixteenth president of the United States; born in Kentucky, February 12, 1809. He removed with his family in 1816 to Spencer county, Indiana, and for the next ten years was engaged in laborious work of various kinds, having only about a year's schooling at intervals. His own mother (born Nancy Hanks) taught him to read, and his stepmother urged him forward in his studies. He read and re-read in early boyhood the Bible, Aesop's Fables, Pilgrim's Progress, Robinson Crusoe, Weems's Life of Washington, and a history of the United States; and after this early course of reading, he read eagerly every book he could lay hands on, often borrowing from his neighbors. The poems of Burns and the plays of Shakespeare became his favorites. He also wrote, at first rude, course satires, crude verses and compositions on government, on temperance and other subjects of a kindred sort. At the age of nineteen he took a cargo down the river to New Orleans, where he got his first impressions of slavery, which he never forgot. On the breaking out of the Black Hawk war, in 1832, he joined a volunteer company, and as captain he served five weeks in the campaign. He next opened a country store, was appointed postmaster of New Salem, Illinois, began to study law, and at the same time turned amateur land surveyor. In 1834 he was elected a member of the Illinois legislature, to which he was again returned at the three following biennial elections, and in 1836 he was licensed to practice law. In 1846 he was elected a representative in Congress for the central district of Illinois, and voted steadily in Congress with the antislavery party. In 1854, he was unsuccessful in an attempt to enter the United States Senate. In 1858 he engaged in a famous controversy with Stephen A. Douglas in the Democratic candidate, in which he fixed his position regarding the institution of slavery and gained a national reputation. In the Republican national convention
Lincoln held at Chicago in May, 1860, he was nominated as a candidate for the presidency, and after several ballots he gained a majority, and was eventually chosen unanimously. In the election of the following November he gained a majority over his several opponents and was elected President of the United States. The Southern States, exasperated at the defeat of their candidates, and alarmed at the aggressive anti-slavery policy which many of the leading Republicans had proclaimed their determination to follow, refused to acquiesce in Lincoln’s election, and began one after another to announce their secession, and to organize the means of resisting the enforcement of the authority of the central government. Between the election of Lincoln in November, 1860, and his assumption of office on March 4, 1861, the secession movement made a rapid growth. Lincoln’s intention was to use every means of conciliation consistent with the policy he deemed essential to the national interest to pursue, but on one point his resolution was steadfast, to maintain the union of the States. Before his assumption of office the secession leaders were as resolutely determined on the other side. On the 4th of February the Southern Confederacy had been constituted, and on the 13th of April the first blow in the Civil war was struck by the capture of Fort Sumter, in Charleston harbor, by the Confederates. The events of the Civil war during the next four years in Lincoln’s career belong to the history of the United States. Lincoln’s persistence in raising and pouring in fresh troops after every disaster finally enabled the Federal government to subdue the secession. The toleration of slavery was always in Lincoln’s opinion an unhappy necessity and when the Southern States had by their rebellion forfeited all claim to the protection of their peculiar institution, it was an easy transition from this view to its withdrawal. The successive stages by which this was effected—the emancipation of the slaves of rebels, and the offer of compensation for voluntary emancipation, followed by the constitutional amendment and unconditional emancipation without compensation—were only the natural steps by which a change involving the conception of such vast extent was reached. The determination of the Northern States to pursue the war to its conclusion on the original issue led to the reflection of Lincoln as president in 1864. The decisive victory of Grant over Lee on April 2, 1865, speedily followed by the surrender of the latter, had just afforded the prospect of an immediate termination of this long struggle, when, on the 14th of the same month, President Lincoln was shot in Ford’s Theater, Washington, by an assassin named John Wilkes Booth, and expired on the following day.

Lincoln, Benjamin, soldier born at Hingham, Massachusetts, in 1733; died in 1810. He joined the patriot army in the Revolution, and in 1776 was made a major-general of militia. He was given the chief command of the Southern department in 1778, and defended Charleston against General Prevost in the spring of 1779. In October he, with Count D’Estaing, made an attack on Savannah, which proved unsuccessful. He was subsequently besieged by Sir Henry Clinton in Charleston, and forced to surrender in 1780. He was elected Lieut.-Governor and then Governor of the State of South Carolina in 1796. He was Governor of South Carolina from 1796 to 1800, and from 1810 to 1814. He was married to Miss Lucy Williams.

Lincoln Highway, a great national road across the United States, from Atlantic to Pacific, with a length of about 3,500 miles. It was projected in 1913, to be surfaced with concrete where practical, and progress has been made in every state where it is to traverse. The projectors, the Lincoln Highway Association, with headquarters at Detroit, Michigan, estimate that the cost will be $10,000,000. The highway is named after Abraham Lincoln.

Lincoln Memorial, a handsome edifice erected in memory of Abraham Lincoln in Potomac Park, Washington, D. C., at the river-side extremity of the axis passing through the Capitol and the Washington Monument. It is to contain a colossal statue of Lincoln, flanked by panels bearing his Gettysburg and Second Inaugural Addresses.

Lind, Jenny (Madame Otto Goldschmidt), singer, born in Stockholm in 1821; died in 1887. She received part of her musical training under Garcia at Paris; achieved her first success in Berlin in 1845, and subsequently was received with a great ovation in her native city of Stockholm. She made her first appearance in London in 1847, and later came to the United States. Here she married Herr Goldschmidt in 1851, and subsequently returned to Europe.

Linden (lin’den), a handsome forest tree. See Lime.

Lindisfarne. See Holy Island.

Lindley (lin’dI), John, botanist born at Catto, Norfolkshire.
in 1799; died in 1865. His father was the owner of a nursery garden, and he received his education at the grammar school of Norwich. He began at an early age to write on botanical subjects; received the appointment of assistant secretary to the Horticultural Society in 1822, and became professor of botany in London University in 1829. He was editor of the Gardeners' Chronicle from 1841 until his death.

Lindsay (lin'zè), a city in the province of Ontario, Canada, on the Grand Trunk Railway, 70 miles N. of Toronto. It has an extensive trade in lumber and grain and various manufactures. Pop. 1911) 6964.

Lindsay, or Lyndsay (lin'dzè), Sir Henry, an ardent Scottish poet, usually described as 'of the Mount,' an estate near Cupar, in Fife, was born about the year 1490; died in 1555. He studied in the University of St. Andrews, and in 1509 became page of honor to James V., then an infant. In 1528 he produced his Drame, and in the following year presented his Complaynt to the King. In 1530 he was inaugurated Lyon king-at-arms, and knighted, and in 1531 sent on a mission to Charles V. on his return from which he married. He soon afterwards published a drama entitled a Satyre of the Three Estates, followed in 1536 by his Answer to the King's Flying; and by the History and Testament of Squire Meldrum, in 1538. His last work, The Monarchie, was finished in 1553. For more than two centuries Lindsay was the most popular poet in Scotland. His satirical attacks on the clergy in some degree paved the way for the Reformation.

Lindsay (lin'dzè), Benjamin Barse, reformer and judge, born at Jackson, Tennessee, in 1809; studied law and was admitted to the bar in 1844. He removed to Denver, Colorado, and since 1901 has been judge of the County Court and the Juvenile Court. He took a warm interest in the condition of youthful delinquents, endeavored to improve the method of confining them, and won an international reputation as the originator of improved and humanitarian methods of dealing with the criminal and law-defying young. He is the author of the Colorado Juvenile Court Law, and established a system of putting delinquents of this class upon their honor and sentencing them to the Industrial School at Golden, Colorado. Out of the hundreds thus dealt with only five broke their trust. He succeeded in having a contributory delinquency law passed, holding parents, employers, etc., accountable for neglect. He was candidate for governor of Colorado in 1906. He wrote Problems of the Children, The Beast and the Jungle and The Rule of Plutocracy in Colorado.

Linen (lin'en), in military language, the infantry of an army as distinguished from cavalry, artillery, militia, volunteer corps, etc., but in some cases it is also applied to the ordinary cavalry regiments. A ship of the line, in naval nomenclature, is a ship of war large enough to have a place in the line of battle, and was formerly a ship with not less than two decks or two tiers of guns.

Linen (lin'en), cloth made of flax, had a very ancient origin and extensive use. On the early monuments of Egypt artistic representations of the various processes of linen manufacture have been found, and the fine linen fabric in which the Egyptians wrapped their embalmed dead still gives evidence of the skill which they possessed. The Jews took with them into Canaan a knowledge of the manufacture; Tyre, Sidon and Carthage seem also to have acquired the industry; while at an early period the manufacture of linen appears to have been common in Greece and Rome. In the middle ages linen and woolen were the chief articles of dress in all European countries, and among the Flemings in particular the flax manufacture rose to great importance. The linen manufacture was known in England, Ireland and Scotland from an early period. As early as the seventh century the Anglo-Saxon women were skilled in the weaving of this fabric, and fine linen was made in Wilts and Sussex in the thirteenth century. Since the extensive introduction of cotton, however, the linen industry has decreased in relative importance. The chief center of the manufacture in England is Leeds and neighborhood. In Ireland the manufacture of linen was well established in the seventeenth century; subsequently it declined; but lately it has again obtained a flourishing position, Belfast being the center of the manufacture. Dundee is the chief center in Scotland for linen (especially coarse fabrics) as well as the allied jute manufacture. Dunfermline is celebrated for its table linens. For the Continent, France, Belgium and Germany are the chief centers of linen manufacture. Little has been done in linen weaving in the United States, though some recent progress is being made. The machinery used both in spinning and weaving linen is in general, with the exception of some special adaptations, the same as that used for cotton. (See Cotton Spinning and Weaving, also Flax.) The chief varieties of linen now manufactured are: lawn, which is of fine qual-
Line of Beauty

ity and mostly produced in Ireland; plain

cloths for skirtings, bedding, etc.; dam-

asks, tablecloths, and other ornamental

fabrics; and cambric, which is the finest

of all linen fabrics.

Line of Beauty, a term used by

some artists for an

ideal line, frequently represented in the

form of a very slender elongated letter S.

Ling (Lota molva), a species of sea-

fish allied to the cod family (Gad-

idae), and measuring from 3 to 4 feet in

length. It abounds around the British

coasts, and is caught with hook and line,

and preserved in immense quantities in a

dried state. From the beginning of Feb-

ruary to May the ling is in highest per-

fection; the spawning season commencing

in June.

Lingam (ling'am), among the Hin-

dus, the emblem of the male

generative power of nature. It is wor-

shiped either alone or in conjunction

with the yoni or female generative power.

Lingard (ling'gard), John, an English

historian, born at Winches-

ter in 1771; died at Hornby in 1851. He

was educated at the English College,

Douai; established a new college at Crook

Hall, near Durham, himself being vice-

president, in 1794; became a priest in

1800 at Newcastle-on-Tyne; opened

Ushaw Roman Catholic College in 1808,

and in 1811 retired as priest to Hornby

in Lancashire, where he died. He was

offered a cardinal’s hat by Leo XII; in

1835 he accepted a pension of £300 from

the queen. His Antiquities of the Anglo-

Saxon Church appeared in 1808, and his

great work on The History of England

from the Invasion of the Romans to the

year 1688 was first printed in 1819-25,

and reached a fifth edition in 1850. Lin-

gard’s History is considered a standard

work from the Roman Catholic stand-

point.

Linguaglossa (lin'gwā-glos-ā), a

town of Sicily, on the

northeast slope of Etna. Pop. 13,121.

Lingula (ling'gū-lə), a genus of

molluscs of the class Brach-

iopoda and family Lingulidae, a family

that has survived with but little change

since the early Silurian period. These

molluscs are one of the few examples of

pedunculated bivalve shells. The mem-

bers of the genus inhabit the Indian

Archipelago and the Australasian seas.

Liniment (lin'm-ent), in medicine,

a species of soft ointment

of a consistence somewhat thinner than

an unguent, but thicker than oil. The

term is also applied to spirituous and

other stimulating applications for exter-

nal use.

Link, in land-measuring, a division of

a Gunter’s chain, having a length of

7.92 inches. The chain is divided into

100 links, and is 66 feet in length. 100-

000 square links constitute an imperial

acre.

Linköping (lin-choop'ing), a town of

Sweden, capital of the

län of East Gotland, in a fertile district

on the Stang, near Lake Roxen. The

town has a handsome cathedral, a library

rich in rare editions of the Bible, epis-

copal castle, etc. Pop. 14,552.

Linlithgow (lin-li-thō), a borough

of Scotland, capital of

Linlithgowshire, 17 miles west of Edin-

burgh, in a hollow along the southern

bank of Linlithgow Loch. It consists

principally of one irregular street, about

one mile long, lying east and west. The

principal buildings of interest are the

palace, now a ruin, where James V and

Mary Queen of Scots were born; and the

church of St. Michael, an ancient Gothic

difice. It was in the High street of Lin-

lithgow that Hamilton of Bothwellhaugh

assassinated the Regent Murray in 1670.

Pop. 4279.—The County of Linlithgow,

or West Lothian, is bounded by the

Firth of Forth, Edinburghshire, Stirling

and Lanark; area, 120 square miles. This

county is one of the richest in Scotland

in minerals, including coal, shales, iron-

stone, freestone, limestone. The soils are

generally strong and well drained, but in

the southwest part of the county there

is a considerable extent of thin, boggy

ground. The principal manufacture is

that of paraffin-oil, which is carried on at

Bathgate, Uphall, and other places. Prin-

cipal rivers, Almond and Avon. Principal

towns, Linlithgow, Bathgate, Borrow-

stouness and Queensferry. Pop. 65,708.

Linnea (lin-nē'a), a genus of plants

of the nat. order Caprif-

oliaceae (honesuckles). It contains but

one species (L. borealis), a creeping
evergreen plant found in woods and in

mountainous places in Scotland and other

northern countries, including North Amer-

ica as far south as Maryland, bearing

two beautiful drooping fragrant bell-

shaped pink flowers on each flower-stalk.

The plant was an especial favorite with
Linnæan Society

Linnaeus, and was named in honor of him by Gronovius.

Linnaean Society, a society instituted in London in 1788 by Dr. J. E. Smith, and incorporated in 1802, for the promotion of the study of all departments of botany and zoology. It has an excellent library, a museum, and herbarium, the nucleus of which were formed by the collections of Linnaeus himself. Fellows take the initials F. L. S.

Linnaeus. See next article.

Linné (lin'né), Karl von, commonly called Linneaus, the greatest botanist of his age, was born at Rashult, Sweden, in 1707, and died at Upsala in 1778. He was the son of a clergyman, who had him educated at the grammar school and the gymnasium of Wexis. He showed an early interest in botany; entered the University of Lund, where his botanical tastes were encouraged; and removed to Upsala in 1728, where he undertook the supervision of the botanic garden. Here he made the acquaintance of the botanist Rudbeck, whose assistant he became. Aided by the Academy of Sciences at Upsala, Linne made a journey through Lapland, the result of which was shown in his Flora Lapponica, published 1735. In this year he went to the University of Harderwyk, in Holland, and took an M.D. degree; afterwards visited Leyden, where he published the first sketch of his Systema Naturae and Fundamenta Botanica. In 1736 he visited England, went to Paris in 1738, and afterwards settled in Stockholm as a physician. He became professor of medicine at Upsala in 1741, and then of botany and natural history; was made a knight of the Polar Star with the rank of nobility; and died on his estate near Upsala from apoplexy. The great merit of Linne as a botanist was that he arranged plants on a simple system of sexual relationship and prepared the way for the more natural and satisfactory classification which has superseded the Linnaean system. The system of naming genera and species devised by him is still in common use. Nor must it be forgotten that he was eminent not only in botany, but in all the sciences of his time. His chief works besides those already mentioned were: Genera Plantarum 1737, Classes Plantarum (1738), Flora Suecica (1745), Fauna Suecica (1746) Philosophia Botanica (1751), and the Species Plantarum (1753).

Linell (lin'él), John, artist, born at London in 1792; died in 1882. He was a student at the Royal Academy; a pupil of Benjamin West and the friend of William Blake, whose portrait he painted. His earlier reputation is associated with portraiture, but in his later period his fame became identified with landscape, and more especially the scenery of Surrey. His sons, James Thomas Linnell and William Linnell, are also well-known artists.

Linnet (lin'et), a small singing bird of the finch family, Fringilla linotis or canadina. Its general plumage is brownish, the top of the head and breast being reddish in the breeding season. It is one of the commonest of British birds, everywhere frequenting open heaths and commons, and breeding in the furze and other bushes. They are cheerful and lively birds, and very sweet and pleasing songsters. Called also provincially Lintie and Linchite.

Linoleum (lin'ól-e-um), a preparation of linseed-oil with chlorine of sulphur, by which it is rendered solid and useful in many ways. When rolled into sheets it is used as a substitute for India-rubber or gutta-percha; dissolved it is used as a varnish for waterproof textile fabrics, tablecloths, felt carpets, and the like; as a paint it is useful both for iron and wood, and for ships' bottoms; as a cement it possesses some of the qualities of glue; vulcanized or rendered hard by heat it may be carved and polished like wood for mouldings, knife-handles, etc.; and mixed with ground cork and pressed upon canvas it forms floor-cloth.

Linotype (lin'ót-tip), a recently invented printing machine, in which types are discarded, and matrices used instead, these being brought to the proper places by touching corresponding keys on a keyboard similar to that of a typewriter, the rows of matrices being then automatically filled with molten metal so as to produce solid bars or lines of type, and then automatically returned to their places. It has very largely superseded the hand-setting of type, enabled the voluminous newspapers of to-day to be issued and considerably cheapened the price of books.

Linseed-oil (lin'séd), the oil got from the seeds of flax either by pressure in the cold or by heating to about 200° Fahr. It is of a pale to dark yellow color; may or may not have a smell; has specific gravity from 0.928 to 0.94; and remains liquid even at zero Fahr. Linseed-oil is largely used in the arts, for painting, for printers' ink, etc.; and in medicine, especially for burns. Linseed-cake is the solid mass, or cake, which remains when oil is expressed
Linstock

from flaxseed. It is much used as food for cattle and sheep, and is called also Oil-cake.

Linstock (lin'stok), a pointed staff with a crotch or fork at one end to hold a lighted match, formerly used in firing cannon.

Lint, in surgery, is the scrapings of fine linen, used by surgeons in dressing wounds. Lint made up in oval or orbicular form is called a pledget; if in a cylindrical form, or in shape of a date or olive stone, it is called a doscol.

Lintel (lin'tel), in architecture, a horizontal piece of timber or stone over a door, window, or other opening, to discharge the superincumbent weight.

Linton (lin'ton), a city of Greene Co., Indiana, 33 miles s.e. of Terre Haute, in a coal-mining and farming region. Pop. (1920) 5845.

Linum (lin'num), the flax genus of plants, which gives its name to the nat. order Linaceae. There are about eighty species, herbs or rarely small shrubs, chiefly found in the temperate and warmer extra-tropical regions of both hemispheres. Few are of any importance, except the flax plant (L. usitatissimum), from which linen fabrics are made. When scraped, linen forms lint (q.v.), from which surgical dressings are made. Tow is the term given in textile manufacture to the short fibers of flax which are separated in the course of preparation. The seeds of the linum are called linseed; these contain much mucilage, and by compression in the cold or by heating to about 200° Fahr. a valuable oil is produced, much used in the arts as well as for medicinal purposes (see Linseed-oil). After the oil is expressed, the cake which remains, known as oil-cake (q.v.), is much used as food for cattle. When powdered it is termed linseed meal and forms the basis of poultices.

Linz (linz), the capital of Upper Austria, situated on the right bank of the Danube, 117 miles w. of Vienna. It is defended by a circle of detached forts extending over a circuit of 9 miles. It has an old cathedral, a new cathedral, provincial parliament house, castle, town house, bishop’s palace, etc. The manufactures consist chiefly of woolen, linen, silk and cotton goods, machinery, hardware, etc. There is an extensive trade on the Danube. Pop. (1910) 67,810.

Lion (l’un; Felis leo), a quadruped of the cat genus, the most majestic of all carnivorous animals, distinguished by its tawny or yellow color, a full flowing mane in the male, and a tufted tail with a sort of sharp nail at the end of it. The largest lions are from 8 to 9 feet in length. The period of gestation is five months; one brood is produced annually, with from two to four at a birth, and the mother nourishes the whelps for about a year. The mane of the male lion begins to grow when it is three years old; the adult age is reached about six or seven; and the extreme age is about twenty-two, although authorities differ from this estimate. The lion is a native of Africa and parts of Western and Central Asia. It preys chiefly in the night and on live animals, avoiding carrion, unless impelled by intense hunger. It approaches his prey with a stealthy pace, crouching when at a proper distance, when it springs upon it with fearful velocity and force. The whole frame is extremely muscular, the foreparts being particularly so, giving with the large head, flashing eye and copious mane, a noble appearance to the animal, which has led to its being called the ‘king of beasts,’ and to fancies of its noble and generous nature which have no real foundation. Of the African lion there are several varieties, as the Barbary lion, Gambian lion, Cape lion. The Asiatic varieties are generally smaller and may want the mane, as the maneless lion of Gujarat.

Lipari Islands (lip’a-re, or l’es-pa-re), a cluster of volcanic islands in the Mediterranean, which take their name from the principal one of the group, about 24 miles from the N. coast of Sicily. Lipari, the largest, is well cultivated, producing figs, grapes and raisins, sulphur, etc. It is about 15 miles in circumference, and has a population of 13,000. On the eastern coast is situated a town of the same name, containing a cathedral; pop. 5000. The other islands are Stromboli, Panarea, Vulcano, Salina, Alicudi and Filicudi, with two or three smaller ones. Stromboli is mainly composed of an incessantly active volcano. Pop. of the group, 20,224.
Lipetzk (ly'petək), a town of Russia, in the government of Tambov. Pop. 16,353.

Lippe (lip'ə), or incorrectly Lippe-Detmold, a principality of north Germany, bounded chiefly by Rhinish Prussia and Hanover; area, 469 square miles. It lies on the Teutoburger Wald, and drains into the Weser, the Elbe and the Rhine. Over half of the surface is arable, more than a fourth under wood. There are some valuable saline springs. The principal towns are Detmold, Lemgo and Horn. Lippe is a member of the German Empire, and sends one member to the Bundesrat and one to the Reichstag. A very large majority of the inhabitants are Protestants. Pop. (1910) 150,479.

Lippi, FRA Filippo, an Italian painter, born in Florence about 1412; died at Spoleto in 1490. He was placed in a monastery at Florence, where he studied and acquired a great capacity for drawing, and where he painted, it is said, a fresco in one of the cloisters. He left the monastery about 1432, was for some time a slave in Barbary, on being set at liberty returned to Italy and painted at Florence, Prato, and finally, Spoleto. His most famous paintings are a Coronation of the Virgin, Florence; frescoes on the stories of St. Stephen and John the Baptist in the Duomo of Prato; and the Death of St. Bernard, in the National Gallery, London.—FILIPINO LIPPI, an Italian painter, and the reputed son of the former, was born at Florence about 1457, and died there 1504. Most of his paintings are to be seen in Florence.

Lippia (lep'ə), a genus of plants, nat. order Verbenaceae. They are shrubs or herbs numbering about 100 species, found in all warm regions; especially abundant in America.

Lippincott (lip'ən-kət), SARAH J., author, born at Pomper, N.Y., about 1825; died in 1904. Wrote under pen name of 'Grace Greenwood.'

Lipsett (lip'sēt), LOUIS JAMES (1874-1918), a Canadian general who commanded the 3d Canadian division in the European war, 1914-18.

Lipton (lip'tən), SIR THOMAS JOHNSTONE, a British merchant, born in Glasgow of Irish parentage in 1850; knighted in 1898 and created a baronet in 1902. He has made three unsuccessful attempts to win the America Cup from the New York Yachting Club and was defeated from a fourth trial in 1914 by the outbreak of war in Europe. See America Cup.

Liquid Gases, gases that have been brought into a liquid state by the combined effect of lowering their temperature and expanding them sufficiently. Liquid air at a temperature of 192° C. has a density of 0.91. It is a non-conductor of electricity. When properly protected from mechanical strain and subjected to high exhaustion, liquid air becomes a stiff, transparent, jelly-like mass, a magma of solid nitrogen containing liquid oxygen, which may be extracted from it by means of a magnet or by rapid rotation of the vacuum vessel. The temperature of this solid under a vacuum of about 14 mm. is -216° C. At the still lower temperature attainable by the aid of liquid hydrogen, it becomes a white solid with a faint blue tint, in this respect resembling liquid oxygen. Liquid hydrogen is the lightest liquid known, its density being 0.07. Liquid oxygen has a density of 1.14, has a slight bluish color, and is strongly magnetic. Liquid Nitrogen forms a colorless liquid at -310° Fahrenheit, when its density is 0.80. Helium forms likewise a colorless liquid, boiling at -452° Fahrenheit, with a density of 0.154. Liquid Fluorine is a yellow liquid, of density 1.14. Liquid gases are used in laboratories for drying and purifying gases, creating high vacua, etc.; but they are too expensive to be used as refrigerants, motive forces, etc.

Liquation (li-kwa'shən), or Eliquation, the process of separating by a regulated heat an easily fusible metal from an alloy in which it is a metal difficult of fusion. Thus in the refining of tin to remove slag, iron, copper and other metals, the ingots are heated in a reverberatory furnace to a temperature just sufficient to melt the tin, while the impurities are left behind on the hearth.

Liqueur (li'kwir); the French name, a palatable spirituous drink composed of water, alcohol, sugar, and an aromatic infusion extracted from fruits, seeds, etc. The best-known liqueurs are absinthe, anisette, chartreuse, curaçoa, maraschino, kümmel and noyau.

Liquidation (li-kwə-ləd a'shən) indicates the winding up of any business, more especially a joint-stock company. It may apply to insolvent firms that voluntarily wish to close up their business.

Liquorice (lik'u-ris), a name for herbs of the genus Glycyrrhiza, belonging to the nat. order Leguminosae, and growing in S. Europe, Asia and Africa. G. glabra is a perennial plant with herbaceous stalks and bluish papilionaceous flowers. The well-known liquorice juice, used as a demulcent and expectorant, is extracted from the root as well as from that of others. Indian
liquorice is *Abrus precatorius*. See *Abrus*.

Lira (lèrˈə) is the name given to an Italian silver coin of the value of about 10 cents. It corresponds to the French franc, and is equal to 100 centesimi.

Liria (lèˈre-ə) is a town in Spain, in the province and 17 miles northwest by west of Valencia, on the left bank of the Guadalquivir. Pop. 8830.

Liriodendron (lir-i-o-denˈdrən), a genus of North America trees belonging to the nat. order Magnoliaceae, and containing only one species, the tulip-tree (*L. tulipifera*). See Tu-lip tree.

Lisbon (lisˈbən; Portuguese, Lisˈbɔ) is the capital and principal seaport of Portugal, about 9 miles above its mouth. It is built on and at the foot of a succession of hills, in the form of an amphitheater, and the churches, convents and houses, of a dazzling whiteness, have an imposing effect when viewed from the river. The streets of the older parts in general are steep, narrow, crooked, badly paved and filthy; but the more modern parts of the town are regular and well built. The chief open space is the Praça do Comércio, a large and handsome square, surrounded by public buildings. The western quarter of the city, called Buenas Ayres, is airy and pleasant, and chiefly occupied by foreigners. The town of Belem, still farther to the west, forms a sort of suburb to Lisbon. Above it stands the royal palace of Ajuda, a conspicuous edifice of white marble. Among the chief buildings are the castle of St. George or citadel, the cathedral, the church of the Coração de Jesus, the custom-house and other government buildings on the Praça do Comércio, the town hall, etc. But the most remarkable specimen of architecture of which Lisbon can boast is the aqueduct which conveys water to the city from springs about 10½ miles distant. The scientific and literary institutions comprise the Royal Academy of Sciences, Polytechnic School, National Museum and Picture Gallery, and Public Library, containing about 400,000 volumes. The harbor is one of the finest in the world, and the quays extend 2 and 3 miles along the bank of the river. The exports consist chiefly of wine, oil and fruit; and the principal imports are cotton, cotton tissues, sugar, grain, coal, tobacco, coffee, etc. The manufactures are tobacco, cotton, wool, silk, paper, chemicals, soap, etc. Lisbon is a place of remote antiquity, its earliest name being Olisipo. In 1755 it was visited by an earthquake, which threw down a considerable portion of the city, and destroyed above 30,000 of its inhabitants. It was taken by the French in 1807, but resisted an attack by Massena in 1809. It was the center of the revolution of 1910, by which Portugal was converted from a monarchy into a republic. Pop. (1910) 435,359.

Lisburn (lisˈburn), a town of Ireland, in the Counties of Antrim and Down, 8 miles northwest from Belfast. It has a cathedral church of the united dioceses of Down, Connor and Dromore, which contain a monument to Jeremy Taylor, who died here in 1667. Flax spinning and weaving, and the manufacture of thread and muslin, employ the greater number of the inhabitants. Pop. 11,460.

Lisieux (lizˈyɔ̃), a town of France, department of Calvados, on the Touques, 27 miles E.S.E. of Caen. Its principal edifices are a fine Gothic church of the twelfth century, and a former episcopal palace. The manufactures consist of muslin, broadcloth, flannel, etc. Pop. (1906) 15,194.

Liskeard (lisˈkɔrd), a municipal borough of England, county of Cornwall, 18 miles northwest of Plymouth. There are tin, lead and copper mines in the vicinity. Pop. 4371.

Lismore (lisˈmor), an island of Scotland, off the west coast of Argyle, and forming part of that county at the entrance of Loch Linnie; area, 25
Lissa

square miles. In ancient times Lismore was the residence of the bishops of Argyle and the Isles, and the remains of their palace are still seen.

Lissa (lis′a), an island belonging to Austria, in the Adriatic, off the coast of Dalmatia; length, 10 miles; breadth, 5 miles. From 1810 to 1815 it was held by the British, who built some fortifications and defeated all the attempts of the French to dislodge them. Pop. 9018. The town of Lissa, or San Giorgio, on a bay on the northerm part of the island, was attacked by the Italian fleet on August 18 and 19, 1866, and on the 20th an engagement took place between the Italian and Austrian fleets, in which the Italians were defeated. Pop. 9018.

Lissa, a town of Prussia, province of Posen, and 44 miles s. s. w. of Posen. It has a castle and manufactures woolens, leather and tobacco. Pop. (1899) 16,021.

Lister (lis′ter), Joseph, Lord, an English surgeon, was born at Upton, Essex, in 1827. From 1860 to 1869 he was professor of surgery in Glasgow University; from 1869 to 1877 professor of clinical surgery in the University of Edinburgh; subsequently in King's College, London. His name is more especially connected with the successful application of the antisepctic treatment in surgery, which inaugurated a new era in this branch of medical science. He received in consequence the baronetcy in 1883 and a peer in 1897. He published various papers on Surgical Pathology, etc. He died February 11, 1912.

Liston (lis′ton), John, comedian, the son of a London watchmaker, born in 1776; died in 1846. He made his first appearance at the Haymarket in 1806, transferring his services to Drury Lane in 1823, and attaching himself to Madame Vestris' company at the Olympic from 1831 to 1837. Among his most famous characters were Macswen in the Hypocrites and Paul Pry.

Liston, Robert, a Scottish surgeon, born in 1794; died in 1847. He studied at Edinburgh College, became one of the house surgeons at the Royal Infirmary there in 1815; delivered lectures on anatomy and surgery, and in 1833 published his Principles of Surgery. The following year he removed to London as surgeon to the North London Hospital, and became professor of clinical surgery in University College, an office which he retained till his death. He was one of the most eminent surgeons of his time.

Liszt (lis′t), Arthé Franz, distinguished pianist and composer; was born in Hungary in 1811, and died in 1886. He made his first public appearance in his ninth year; studied in Vienna and Paris; produced an opera in 1825, and became director of the Court Theatre at Weimar in 1848. This gave him the opportunity to introduce the music of Wagner, Berlioz, Schumann, and the writers of what is known as 'the music of the future.' In 1861 he took up his residence in Rome, where he joined the priesthood. In 1870 he became director of the Conservatory of Music at Pest. His chief works are the Faust and Dante symphonies, and the oratorios St. Elizabeth and Christus.

Litany (lit′a-ni; from the Greek litanie, supplication), a term generally applied to a series of short prayers or supplications together forming one whole. The term was used by the early church to denote any form of prayer, and it was not until the fifth century that litanies came specifically into use. Litanies became afterwards very common, and every saint of the Roman calendar had his litany. The best-known litany at the present day is that of the Anglican Church.

Litchfield. See Lichfield.

Litchfield (lich′fild), a city of Montgomery Co., Illinois, 45 miles s. of Springfield. It has oiling and oil industries, flour mills and manufactures of windmills, tonnage engines, lamps, etc. Pop. (1920) 6215.

Litchi, or Lee-Chee (Dimocarpus or Nephelium Litchi), the fruit of a tree belonging to the natural order Sapindaceæ, a native of the south of China. The tree is of a moderate size, with brown bark, the leaves large, and the fruit is produced in bunches, which are pendant from the extremities of the twigs. The litchi is a red or green berry, about 1½ or 2 inches in diameter, with a tough, thin, leathery coat, and a colorless half-transparent pulp, in the center of which is a single brown seed. The pulp is slightly sweet, and grateful to the taste.

Lit de Justice (lē de jō̄s-ta; literally 'bed of justice'), was formerly a solemn proceeding in France, in which the king, with the princes of the blood royal, the peers, and the officers of the crown, state, and court, proceeded to the parliament, and there, sitting upon the throne (which in the old French language was called lit), caused those commands and orders which the parliament did not approve to be registered in his presence. The last lits de justice were held by Louis XVI in 1787 and 1788.
Literature. See various countries, Drama, Novel, etc.

Litharge (lit'arj), the yellow or reddish protoxide of lead partially fused (PbO). It is extensively used in the manufacture of glass, of enamels, of artificial gems, of lead plaster and lead soap, of sugar of lead, white and red lead, and other compounds. See Lead.

Lithia (lit'le-a; LiO), the only known oxide of the metal lithium, which was at first found in a mineral called petalite. It is of a white color, very soluble in water, acrid, caustic, and acts on colors like other alkali.

Lithic Acid. See Uric Acid.

Lithium (lit'l'urn), symbol Li, atomic weight 7, the metallic base of lithia, which base was obtained by Sir H. Davy in the electrolysis of fused lithium chloride. It is of a silver-white luster but quickly tarnishes in the air. Lithium may be cut with a knife, but it is scarcely so soft as potassium or sodium; it fuses at 180° C., and takes fire at a somewhat higher temperature. Lithium floats upon rock oil; it is the lightest of all known solid bodies; sp. gr. 0.5836. It forms salts analogous to those of potassium and sodium. Compounds of lithium are used in pyrotechny on account of the splendid red color they impart to flame. In medicine the carbonate is employed especially as a solvent for uric acid, to prevent the formation of calculi and to remove it from the system in gout. Effervescing lithia water is sometimes used in place of soda or potash water. Citrare of lithia is also employed. Its therapeutic properties are similar to those of the carbonate.

Lithography (lit-tho'gra-fi), the art of drawing upon and printing from stone. The facility with which this is accomplished arises from the antagonistic qualities of grease and water. The processes of the art depend on the adhesion to a grained or polished stone of a certain greasy composition which forms the lines of the drawing, etc.; on the power acquired by those parts penetrated by the greasy composition of attracting and becoming covered with a specially prepared ink; on the interposition of water, which prevents the ink adhering to the parts not impregnated with the grease; and on pressure, which transfers to paper the greasy tracings or drawings. It is the invention of Alois Senefelder, a native of Prague (1771-1834). At first the progress of the art was slow; but latterly its developments have been rapid, so that Germany, France and Great Britain vie with each other in the artistic beauty of their lithographic productions. The materials, instruments and methods of this art are as follows:

The lithographic stone, first used by Senefelder, have proved to be the most suitable for the purposes of lithography. This stone, which is found in the district of Kellheim, Bavaria, is a species of slaty limestone; its color in the best quality is pale-yellowish drab, and for printing purposes its thickness must be from 1 1/2 to 4 inches. In preparing stones for the printer they are squared, leved, ground and polished.

Lithographic ink is made of wax, white soap, tallow, shellac, mastic and lampblack. What are called chalks are made from much the same materials; these ingredients being subjected to heat until they are fused, poured out on a slab to cool, and then cut into the required sizes. There are various styles in which drawings on the stone are executed. Drawing in the stone at the first stage is executed with steel pens and sable-hair brushes. The design, etc., is drawn on the stone in reverse, after which it is slightly etched with dilute acid. In chalk drawing the surface of the stone is rouged or grained, after which the drawing is traced upon the stone. The tinting or shading follows. When completed the drawing is etched, after which it is put into the hands of the printer for printing. In engraving on stone the stone is first prepared with a solution of acid and gum. It is then washed with water, and a dry red or black powder rubbed over it. The drawing is produced by lines scratched through this ground into the stone. These lines are then spread with linseed-oil, and afterwards charged with printing ink from which impressions are taken. Etching on stone is in most respects similar to etching on copper. The stone is prepared in the same manner, the biting-in is effected with dilute acetic acid, and the lines filled in with printing ink. The method of drawing directly on the stone has been largely superseded by the use of prepared paper, both grained and smooth, on which the drawing is executed, and afterwards transferred to the stone. Tinting and chromo-lithography is much practiced in the reproduction of works of an artistic character. See Color-printing and also Photo-Lithography, under Photography.

In the year 1850 steam-power began to supersede manual labor in driving the lithographic press, and afterwards a cylinder machine was introduced, which from time to time has been greatly improved.
Lithophagi

This machine, running at 500 revolutions in 1 hour, can produce good work, but for printing fine chalk drawings of large size the hand-press is still preferred. The number of good impressions that can be taken from one drawing or transfer ranges from 500 to 5000; chalk drawings producing few and ink drawings many copies. The drawing or writing can also be preserved good on the stone for any length of time by rolling it with a special kind of ink and covering it with gum waxed with sugar-candy. For similar purposes zinc has been treated in much the same manner as stone. See Zincoigraphy.

Lithophagi (li-thof'a-gli), or Lithophagidae, a name applied to species of bivalve and univalve mollusca, etc., that penetrate stones and masses of corals.

Lithosperrnum. See Gromwell.

Lithotomy (lith-ot'o-mi), in surgery, the technical name for the operation popularly called cutting for the stone. As usually performed it consists in cutting through the perineum in front and to the left of the anus, so as to reach and divide the urethra and neck of the bladder where it is surrounded by the prostate gland. A grooved and curved staff is introduced into the bladder first, and then the incision is made in the perineum to reach the bladder, the groove in the staff serving as a guide to the knife. When thus performed, the operation requires seldom more than three minutes, and in favorable cases the wound heals in the course of a month.

Lithotritry (lith-ot'ri-ti), in surgery, the operation of crushing a stone in the bladder into fragments of such a size that they may be expelled by the urethra. The instrument by which the stone is broken up is introduced in the same manner as a catheter or sound into the bladder, and after catching the stone either crushes, bores, or hammers it to pieces. The instrument, which is called a lithotrite, has two movable blades at the extremity, which are brought together to crush the stone by means of a power screw.

Lithuania (lith-u'ni-a), a region in Eastern Europe which formed a grand-duchy in the eleventh century; became united to Poland in the fourteenth century; and at the dismemberment of that kingdom, in 1773-95, was nearly all appropriated by Russia, now forming the governments of Mohiliev, Vitebsk, Minsk, Vilna and Grodno, area about 100,000 square miles, of which 8700 are in Prussia. The Lithuanians are a race of people closely akin to the Latte. They are fair-haired, blue-eyed and light-skinned; of mild disposition, and chiefly occupied in agriculture. Their language is akin to the Lettish and Old Prussian, and forms with these the Lithuanian or Lettic branch of the Aryan family of tongues. Their literature consists chiefly of popular songs and hymns, religious works, tales, etc.

Litmus (lit'mus), or LACMUS, a peculiar coloring matter procured from Roccella tinctoria and some other lichens. Paper tinged blue by litmus is reddened by the feeblest acids, and hence is used as a test for the presence of acids; and litmus paper which has been reddened by an acid has its blue color restored by an alkali.

Litre (li-tér), LITER, the French standard measure of capacity in the decimal system. The litre is a cubic decimetre; that is, a cube, each of the sides of which is 3.337 English inches; it contains 61.028 English cubic inches; the English imperial gallon is equal to 4.543457176 litres.

Littleborough (lit'l-bur-ò), a large and populous village of Lancashire, England, 9½ miles N. E. of Rochdale. The inhabitants are chiefly employed in cotton and woolen manufactories, fire-brick works and collieries. Pop. (1911) 11,706.

Little Christians, a sect of Russian dissenters claiming to be the possessors of a special revelation.

Little Falls, a city, county seat of Morrison Co., Minnesota, on the Mississippi River, 108 miles N. W. of St. Paul. It has extensive saw mills, pulp, paper and flour mills, etc. Pop. 5900.

Little Falls, a city of Herkimer Co., New York, on the Mohawk River and Erie Canal, 21 miles from Utica. The river here passes through a narrow gorge and falls 44 feet, yielding abundant water power. It has large knitting mills, woolen and paper mills, etc., and has an important trade in cheese and other dairy products. Pop. (1910) 12,273; (1920) 13,029.

Littlehampton (li'tl-hamp-tun), a maritime town of England, county of Sussex, 18 miles west of Brighton, at the influx of the Arun into the English Channel. It has become a fashionable sea-bathing resort. Pop. (1911) 8351.

Little Rock, a city, capital of Arkansas, on the right bank of the Arkansas, here navigable, 250
Littleton

miles from its mouth. It stands on a rocky bluff, rising about 50 feet above the river. It has a fine Capitol and various State and educational institutions, including the Arkansas Law and Medical colleges, State schools for the deaf and blind, Little Rock College, Catholic Seminary, and many others. The State penitentiary is near the town, and Camp Pike (a U. S. military training camp) are here. It is an important shipping point for cotton; has cottonseed-oil mills, railroad shops, wood-alcohol distillery, chemical works, furniture factories, and other industries. Pop. (1910) 45,941; (1920) 65,030.

Littleton, or Lyttleton (lit-tl-ton), Sir Thomas (1402-81), an English jurist. He wrote Tenures, a noted treatise on real property.

Littorina. See Ferrickenkle.

Littré (lē-tr), Maximilien Paul Emile, a French philologist, was born at Paris in 1801 and died there in 1881. He originally studied medicine, then took up philosophy and philology, adopted the positive philosophy of M. Comte, and published works connected with this subject, as well as works connected with medicine, including a translation of Hippocrates. In 1862 he brought out his Histoire de la Langue Française. His chief work, a dictionary of the French language, was begun in the following year, and completed with supplements in 1877. It is a monument of erudition and industry, and its success was prompt and complete. In 1871 he became a representative in the National Assembly, in 1876 was named senator for life, and next year was admitted a member of the French Academy.

Littrow (lit’trō), Joseph Johann von, an Austrian astronomer, born in 1781; died in 1840. He became joint-director of the observatory of Buda, and in 1818 director of the observatory of Vienna. He published numerous books on astronomy, the best known of which are Die Wunder des Himmels (1834), and Theoretische und praktische Astronomie (1822-26).

Liturgy (lit’ur-gi), a special series of prayers, hymns, pieces of Scripture, or other devotional matter, arranged and prescribed for use in worship; or in a narrower sense a prescribed service for the celebration of the eucharist; hence in the Roman Catholic Church equivalent to the mass or service contained in the Missal. There are a number of ancient liturgies connected with various places or names of various persons, but there seems to have been no written liturgy earlier than the fifth century. The chief liturgical books in the Roman Catholic Church are the Missal and the Breviary (which see), both in Latin. In 1523 Luther drew up a liturgy, or form of prayer and administration of the sacraments, which in many points differed but little from the mass of the Church of Rome. He did not, however, confine his followers to this form, and hence every country in which Lutheranism prevails has its own liturgy. Calvin prepared no liturgy; but his followers in Geneva, Holland, France, and other places drew up forms of prayer, of which the Genevese and the French are the most important. In England before the Reformation the public service of the church was performed in Latin, and different liturgies were used in different parts of the kingdom. The most celebrated of these were the Breviary and Missal secundum usum Sarum (that is, as used at Salisbury), compiled by the Bishop of Salisbury about 1060. The English Book of Common Prayer dates from the reign of Edward VI. (See Common Prayer.) It was based on the Roman Breviary. In the portions of Scripture contained in the Prayer Book the authorized version was later adopted, except in the Psalms, which are according to Coverdale's Bible. The liturgy of the Episcopal Church in Scotland is the same as that of the Church of England, except that there is a different communion office, which, however, is used only in some of the Scotch churches. The Kirk of Scotland, or the Scotch Presbyterian Church, has no liturgy; the Directory for the Public Worship of God being only certain general rules for the conduct of public worship. The Book of Common Prayer of the Protestant Episcopal Church in the United States was adopted in 1789 with some minor deviations from the English.

Liutprand, or Liutprand (liit’prand), historian, prelate and diplomatist, was born at Pavia about 920, and died at Cremona about 972. From being page of King Hugh of Italy he rose to be chancellor under his successor, Berengarius. He was then patronized by the Emperor Otto of Germany and appointed Bishop of Cremona. He was employed as an ambassador on several important missions, and had in this way an excellent opportunity of studying the events of the period. Besides an interesting narrative of a mission to Constantinople, he has left us a History of Otto; and his Antapodosis, a history of Europe in six books, from 886 to 950. These works are the chief historical authority for that period.
Livadia (liv-ah-da’-e-a), the name given under the Turkish rule to Northern Greece.

Livadia, (G. Lebadea), a town of Greece, 52 miles northwest of Athens. It was of note in ancient times and flourished in the middle ages and under Turkish rule, but has declined. It is poorly built, and consists of narrow, ill-paved streets. Pop. 6494.

Live Oak. See Oak.

Liver (liv’er), the glandular structure, which secretes the bile. This gland is not confined to the Vertebrate animals, all of which—save the Amphioxus or lancelet—possess a well-developed liver, but is found in many Invertebrata. In man the liver is part of the alimentary apparatus, and is situated just below the diaphragm on the right side, extending across the middle line of the body towards the left side. Its front border reaches just below the border of the chest when the posture is sitting or standing; but when the person lies down the liver passes slightly up so as to be completely under cover of the ribs, except a small portion which extends beyond the lower end of the breastbone. From its position it is extremely liable to compression and injury. It is the largest gland in the body, and weighs from 50 to 60 ounces avoirdupois. In its general form the liver is flat, broad and thick towards the right side, becoming narrow and thin towards the left side. Its upper surface is convex or arched and fits into the concave surface of the diaphragm while its lower surface is irregularly divided into certain ‘lobes,’ five in number, and separated by clefts or fissures. These lobes are known as the right, left, caudatus, quadrate and quadrate lobes.

When microscopically examined the entire mass of the liver is found to consist mainly of large many-sided cells containing granular protoplasm. They are arranged in groups or masses, each little mass being called a lobule, and each lobule slightly, matted off by connective tissue and containing a meshwork of blood-vessels and ducts. These blood-vessels are branches of the portal vein. This vein receives the blood which has circulated in the stomach and intestines and carries it throughout the entire liver by a network of finely subdivided veins. It is from this supply of blood that the bile is secreted. The blood passes off from the liver by the hepatic vein, formed by the union of small vessels which begin in the center of the lobules. The connective tissue of the liver is supplied with arterial blood by the hepatic artery. This blood, like that which has entered through the portal vein, is drained off into the hepatic vein. There is, however, another set of vessels which ramify through the liver, namely the bile ducts, whose business it is to carry off the bile produced in the gland. These ducts intersect and unite until in the end two channels are formed, one from the right and the other from the left of the liver, which ultimately form one common exit into the small intestine called the common bile duct. Thus, when the bile has been secreted by the liver cells, it is transferred by way of this hepatic duct into the small intestine, where it mingles with the food. When this flow of bile ceases, as it does when intestinal digestion is interrupted, the supply which still continues is stored in the gall blader, which forms a kind of reservoir situated under the liver.

The functions of the liver would seem to be, at least, threefold. It serves (1) to secrete from the blood received from the stomach and intestines that amount of bile which is necessary for the purposes of digestion. The bile, however, contains waste matter, which has been separated from the blood. The liver, therefore, (2) has a direct function in separating and casting forth the waste impurities of the blood. Further, it appears from recent investigation that (3) the liver secretes a substance which is called glycogen or animal starch. The use of this substance, which is readily converted into sugar, would seem to be to supply the tissues with material for their energy and heat. The functions of the liver, however, still form the subject of dispute and investigation among physiologists. See Bile and Gall-bladder.

There are many diseases connected with this important gland. There is congestion of the liver, which indicates that the structure is surcharged and choked with blood. This arises from various causes; heart disease, disease of the lungs, or even excess in food or drink will produce congestion. The symptoms are excessive weight, fulness, and a tenderness in the organ, which may be proved by a slight push in the region beyond the breastbone. Inflammation of the liver is frequent in hot countries; is closely connected with dysentery, and its symptoms are similar to those connected with congestion. Cirrhosis of the liver or giant’s liver is frequently caused by excessive spirit-drinking—but not necessarily so, as it has been known to occur in children. The symptoms are many and not easily recognized; and the disease may remain for years before a fatal issue.

Liver
Liver-fluke

Fatty degeneration of the liver occurs when the cells become crowded with globules of oil, and it becomes large and pale. This result usually arises from overfeeding or drinking and want of exercise. See Jaundice.

Liver-fluke. See Distoma.

Liverpool (liv’er-po1), a seaport of England, County of Lancaster, on the right bank of the Mersey, particularly during the nineteenth century, its increase in wealth and influence has been immense. It stands partly on flat ground along the margin of the river, but chiefly on the slopes of a series of moderate eminences. The general appearance of the town has been greatly altered in recent years by the formation of new streets and by the widening of many old ones. In the central districts in particular the densely-peopled courts and narrow un-
museum—erected at the sole expense of the late Sir William Brown, a Liverpool merchant, and now maintained out of the public rates—is a handsome building of the Corinthian order. The exchange is an edifice of great magnitude, consisting of a center and two wings, with a frontage of 1500 feet. The provision markets are spacious, airy, covered buildings, and are five in number. The charitable and benevolent institutions, such as hospitals and infirmaries, etc., are numerous. The educational institutions include University College (affiliated to the Victoria University, Manchester), Liverpool College, the Royal Institution, the Liverpool Institute, School of Art and Gallery of Art, etc. The squares and open spaces of the city are not numerous, but in exceptionally well provided with public parks, and around these many elegant private residences. Sefton Park (400 acres) is the largest. Next to London this city is the chief seaport in the United Kingdom. Immense docks lie along both sides of the Mersey, with a length of 8 miles, a quay space of 30 miles, and a total water area of over 500 acres (including those of Birkenhead). In connection with the river one of the principal features is the famous floating landing stage, its length of 2003 feet resting upon pontoons, which rise and fall with the tide. Among the imports cotton holds the chief place, followed by provisions and live-stock, cereals, fruits, hides, palm and olive oil, wine and spirits, tobacco, etc. Cotton goods form by far the principal export; other exports are machinery, woolens, etc. Manufacturing industries are varied, and include engineering, iron and brass-founding, chemicals, sugar-refining, brewing, rope-making, etc. Liverpool is the chief port in Britain for the departure of emigrants. There are five approaches to the town by railway, and by the opening of the tunnel under the Mersey, the railway facilities have been materially increased. Liverpool is, next to London, the largest town in England, and the third in Great Britain, Glasgow being the second. The city is divided into sixteen wards, each of which returns three councilors. Since 1885 the representatives sent to Parliament have been increased from three to nine, the divisions within the city being—Kirkdale, Walton, Everton, West Derby, Scotland, Exchange, Abercromby, East Toxteth and West Toxteth. Pop. 741,596.

Liverpool, Robert Banks Jenkinson, Earl of, born in 1770; died in 1828. He entered Parliament under Pitt's auspices in 1790, and on his father's death became Earl of Liverpool in 1796; he became Lord Hawkesbury. As foreign secretary in the Addington ministry he negotiated the treaty of Amiens, and he became home secretary in 1804. On the assassination of Percival, in 1812, he became premier, and held that position till 1827. His opposition to all liberal measures, the severity with which he repressed internal disturbances, and his prosecution of Queen Caroline rendered him extremely unpopular. His father, Charles Jenkinson, first Earl of Liverpool (1729-1808), held several subordinate offices in the government, and was the author of several political pamphlets, a collection of treaties, etc.

Livingstone, Edward (1764-1838), an American jurist and statesman, brother of Robert and Edward Livingstone, born at Clermont, N. Y. He was a member of Congress from New York 1795-1801. He removed to Louisiana in 1803, and won fame by his preparation of a civil code for the State. He was Congressman from Louisiana 1822-29, when he became Senator. In 1831 President Jackson appointed him Secretary of State.

Livingston, Robert R. (1747-1813), an American statesman and jurist, born in New York and educated at King's (Columbia) College. He was elected a member of the Continental Congress and served on the committee appointed to draw up the Declaration of Independence. He was a member of the committee which drafted the first constitution of the State of New York in 1777, and upon its adoption became Chancellor of the State of New York, an office which he held for 32 years. He was made secretary of foreign affairs under the Confederation, 1781-83. He was president of the New York Convention of 1788 and used his great influence to secure the ratification of the Federal Constitution. In 1801 he was appointed resident Minister at the court of Napoleon and successfully negotiated the Louisiana purchase in 1803.

Livingstone (living-stun), David, missionary and one of the greatest of modern travelers, was born at Blantyre, Lanarkshire, in 1813, and died at Bangweelo, Africa, 1873. Under the auspices of the London Missionary Society he proceeded in 1840 to South Africa, where he joined Robert Moffat...
the missionary field. His first station was in the Bechuana territory, and here his labors for nine years were associated with Mr. Moffat, whose daughter he married. Having heard from the natives that there was a large lake north of the Kalahari desert, he proceeded to explore that region, and discovered the valley of the Zouga and Lake Ngami. Subsequently he penetrated further northwest until he reached Linyanti, the capital of the Makololo territory, situated on the Chobe, a tributary of the Zambezi, which river he also visited. In 1853–55 he made a great exploring journey, or series of journeys. Starting from Linyanti he ascended the Lecambe (Upper Zambezi), journeyed overland to Lake Dilolo, and thence to St. Paul de Loanda on the west coast. Reverting to Linyanti, he struck eastwards from there in 1855, tracing the Zambezi to the Indian Ocean, and reaching Quelimane on the east coast in 1856, having thus crossed the entire continent. The record of this journey is found in his Missionary Travels and Researches in South Africa (Lond. 1857). After making various journeys and exploring the Lake Nyassa and Zambezi region, Livingstone set forth in 1865 to set at rest the question of the sources of the Nile. From this time till his death he was engaged in laborious explorations in the lake region of South Africa, especially to the westward of Nyassa and Tanganyika, where he discovered Lakes Bangweolo and Moero, the Upper Congo, etc. For about three years no communication had come from him, and the doubts regarding the traveler's safety were only set at rest when it was known that H. M. Stanley, the special correspondent of the New York Herald, had seen and assisted Livingstone at Ujiji, on Lake Tanganyika. They parted in March, 1872, Livingstone going to explore the southern end of Tanganyika, and Stanley proceeding to Zanzibar. After another year's wanderings he was attacked with dysentery near Lake Bangweolo, and there died. His body was buried in Westminster Abbey, having been conveyed to the coast, rudely preserved in salt, by his faithful followers.

Livingstone (liv'ing-stö'n-i-a), a mission settlement of the Free Church of Scotland, established in 1875 on Cape MacClear, at the south end of Lake Nyassa, in Southern Africa.

Livius (liv'i-us), Titus Patavius, often called Livy, a celebrated Roman historian, born at Patavium (Padua) in the year 59 B.C. Nothing is known of his life except that he came to Rome, secured the favor of Augustus, and became a person of some consequence at court, that he was married, and had at least two children, and that he died in his native town, according to some authorities, in A.D. 11, and to others, in A.D. 16 or 17. His Roman history begins at the landing of Aeneas in Italy, and comes down to the year of the city 744 (B.C. 9). His whole work consisted of 140 or 142 books, of which we have remaining only the first ten, and those from the twenty-first to the forty-fifth, or the first, third and fourth decades, and half of the fifth. Of all the books, however, except two, we possess short epitomes or tables of contents. In the first ten books the history extends from the foundation of Rome in B.C. 753 to the year 224 B.C.; the portion between the twenty-first and forty-fifth books contains the account of the second Punic war and the history of the city between B.C. 219 and 201. The fourth and the half of the fifth decade bring down the history to the year B.C. 167. Livy makes no pretensions to the character of a critical historian; his grand purpose was to glorify his country, and he adopted all the legends of the early history without troubling his mind about their authenticity.

Livius Andronicus (liv'i-us an-dro-n'i-kus), the father of Roman poetry, by birth a Greek of Tarentum, and resident in Rome at the beginning of the third century B.C. He introduced upon the Roman stage dramas after the Greek model, and, besides several epic poems, wrote a translation of the Odyssey in the old Saturnine verse. We have only a few fragments of his writings.

Livia (li-vó'ni-a), or Riga, a government of Russia, including the island of Oesel, bounded west by the Baltic; area, 18,160 square miles. For the most part the country is flat and swampy, yet a great part is under cultivation and yields good crops of oats. The forests are extensive. The governing classes and landed proprietors are chiefly Germans and Russians, while the peasantry are mostly of Finnish and Lettish origin. The inhabitants are almost all Protestants. The capital is Riga. Pop. 1,206,231.

Livre (livr'), an old French money of account, not now in use, having been superseded by the franc. The livre tournois was worth 20 sous, about twenty cents; the livre parisie, 25 sous, about twenty-four cents.

Livy. See Livius.

Lixuri (lik's-ú're), a seaport in Cephalonia, one of the Ionian Isl-
Li Yuan Hung

ands, a principal depot for wines and currants. Pop. 5494.

Li Yuan Hung, President of China, was born in 1856, entered the naval service, and afterwards the military, aided in organizing the army, commanded the revolutionary force at Wuchang in 1911, and was elected Vice-President of the new republic under Yuan Shih-Kai. He opposed the restoration of the empire by the president and after the death of the latter in 1916 succeeded to the presidency.

Lizard (lizard), the popular name of numerous reptiles forming the order Lacertilia or Sauria, and having usually two pair of limbs and an elongated body terminating in a tail. The lizards number more than a thousand species, accommodating themselves to all conditions except cold, and increasing in size and number in tropical regions. In some the tongue is thick and fleshy and in others it is divided, while in most cases it is protrusible. Some lizards are vegetable feeders, but for the most part they are carnivorous and live upon small birds, insects, etc. The eggs are deposited and left to be hatched without care from the parents. The chief families of lizards are the Scincidae, or Skinks; the Gekkota, or Geckos; the Iguanidae, or Iguanas, and the Chamaeleonidae or Chameleons. Poison glands are wanting in the lizards, the only exception being the Heloderma of Arizona and Mexico, which is capable of inflicting a poisonous bite.

Lizard Point, a headland of England in Cornwall forming the most southern point of Great Britain, 24 miles E. S. E. of Land's End, and having two lighthouses with fixed lights 224 feet above sea-level; lat. 49° 57' 42" N.; lon. 5° 12' W. Used as a reporting station for transatlantic vessels.

Llama (Lama glama) an ungulate ruminating quadruped found in South America, closely allied to the camel, and included in the family Tylopoda. They differ from the camel in having no hump upon the back, in having a deeper cleft between the toes, the hollow pad of the foot is less developed, and the interval between the canine and the back teeth is greater. The tail being short and the hair long and thick, the llama has the general appearance of a long-necked sheep, standing about 3 feet at the shoulder. Of the four known species the guanaco and the vicuña are found in a wild condition, while the llama and the alpaca have long been domesticated. The llama is used by the inhabitants of Chile and Peru to carry burdens after the manner of a camel.

When loaded with about a hundredweight it can travel some 14 miles a day across the mountain passes. They are gentle and docile creatures.

Llandaff (lan-da'f); Llan Taf, Church of the Taf, an ancient city of South Wales, Glamorganshire; now a mere village, situated on the right bank of the Taf, 2 miles northwest of Cardiff. It is the seat of a bishop, its cathedral dating from the twelfth century.

Llandeilo-beds (lan-di'lo), in geology, the name of one of the lower Silurian rock groups. See Geology.

Llandudno (lan-dud'nó), coast town and fashionable watering place in Carnarvon, Wales, on a peninsula between Orme's Bay and the estuary of the Conway. Pop. 9270.

Llanelly (la-neth'li), a parliamentary borough of South Wales, in Carmarthenshire, situated on the Bury, 14 miles south by east of Carmarthen. It is the outlet for the products of extensive collieries, iron-foundries, copper, tin, lead, and silver works, in which a large number of the inhabitants are employed. The trade is facilitated by four commodious docks, from which great quantities of coal are exported. Pop. (1911) 32,077.

Llangollen (Welsh pron. lan-go-th'len), a town of North Wales, county of Denbigh, 21 miles southeast of Denbigh, picturesquely situated in a narrow valley on the right bank of the Dee. Pop. (1911) 3250.

Llanos (ly'nóz), the Spanish name given to the vast plains situated in the north part of South America, particularly in Colombia and the basin of the Orinoco. During the dry season the vegetation is burned up by the sun, while in the rainy period they are flooded with water. Between these two seasons the llanos are covered with thick grass and ranged by vast herds of cattle and horses. Farther south such plains are called pampas, and in North America savannas.

Llanquihue (lyan-kwi'wá), a southern province of Chile, situated between the Andes and the Pacific Ocean. Its area of nearly 8000 square miles is extremely fertile, yielding abundant harvests to its inhabitants, who are mostly Germans; capital, Puerto Mont. Pop. 7,315.

Llerena (lu-re'ná), a city of Spain, in the province and 62 miles southeast of Banda. Pop. 7049.

Llorente (loy-ren'tá), JUAN ANTÓNIO, a Spanish historian, born in 1756; died in 1823. He received
his education at Tarragona, entered the clerical order in 1776, was made a priest in 1779, became vicar-general of Calahorra in 1781, and chief-secretary to the Inquisition in 1791. When the Inquisition was suppressed by order of Napoleon and the Cortes Lloro, de Lloro received many documents connected with it, and published his *Critical History of the Inquisition in Spain* in 1817.

**Lloyd George, David (1863- ),** a British statesman, born in Manchester, of Welsh parentage, educated at Llanystymdw Church School and privately. He studied law and became a solicitor in 1884, was elected to Parliament from Carnarvon in 1890. He opposed the Boer war, championed the cause of labor, and early showed his ability as a conciliator by settling a great cotton strike and averting a railway strike. He was president of the Board of Trade 1905-08, and was chancellor of the exchequer in the Asquith cabinet 1908-15. He was Minister of Munitions 1915-16, following the outbreak of the European war. He succeeded the late Earl Kitchener as Secretary of War in 1916, and in the same year became Prime Minister and First Lord of the Treasury, with practically unlimited war powers. His skill and energy were everywhere apparent in the trying days of the great conflict; and bringing the war to a triumphant conclusion he was returned to power at the election following the war (1918). Lloyd George's name is associated with old-age pensions, workmen's compensation, increased education grants, and a scheme looking to the nationalization of land. He met the Irish problem with a plan for two provinces, one for Ulster and one for the rest of Ireland. This plan became a law early in 1921.

**Loach** (lōch), a small fish (* Cobitis barbatula*) inhabiting small clear streams in England, and esteemed dainty food. A smaller species, the spined loach or groundling (*C. timia*), also occurs in England. The name is also given to the sel-pont (*Lotia vulgaria*) and the three-bearded rockling (*Motella vulgaria*).

**Load-line** (lōd-līn), is a line drawn on the side of a ship to indicate that if she is loaded so as to sink deeper she is overloaded.

**Loadstone**, *lodestone* (*FesO₄*), an ore of iron, consisting of the protoxide and peroxide in a state of combination, and frequently called the magnetic oxide of iron. It was known to the ancients, and they were acquainted with the singular property which it possesses of attracting iron to itself. See *Iron Magnet*.

**Loam** (lōm), a soil compounded of various earths, of which the chief are sand, clay and carbonate of lime or chalk, the clay predominating. Decayed vegetable and animal matter, in the form of humus, is often found in loams in considerable quantities, and the soil is fertile in proportion.

**Loan** (lōn), anything lent or given to another on condition of return or payment. In law loans are considered to be of two kinds—*mutuum* and *commodate*; the former term being applied to the loan of such articles as are consumed in the use, as provisions or money; the latter to the loan of such articles as must be individually returned to the lender. The acknowledgment of a loan of money may be made by giving a bond, a promissory note, or an *I. O. U.*

**Loanda** (lōn′də), St. Paul de, a seaport town and island in Southwestern Africa. The town is a bishop's see, and the chief settlement of the Portuguese in this part of Africa. Principal exports, ivory and bees' wax. Pop. 20,106. The island, opposite the town, and separated from the mainland by a narrow channel, is about 18 miles in length and 2 miles in breadth. It contains seven or eight villages.

**Loango** (lō-äng′ō), a maritime country in Africa, stretching northward from the Congo along the Atlantic. The chief products are palm-oil, gum, caoutchouc, coffee, cotton, etc. Neither horses, cows, sheep nor asses thrive. The population is dense, but barbarous and superstitious. The country now belongs chiefly to France.—**Loango**, the chief town, is a collection of huts and factories.
THE RIGHT HON. DAVID LLOYD GEORGE

Who became Prime Minister of England, December 6, 1916. His work during the war was of great importance, first as Chancellor of the Exchequer, and then Minister of Munitions, and after the death of Kitchener as Minister of War.
Lobbyists, a term applied to men who make a business of corruptly influencing legislators, by means of money paid to the members, or by any other method that is considered feasible. Many women engage in this work as well as men. The term lobby, which literally means the ante-rooms of legislative halls, has come to be applied to these people who frequent them, and they are sometimes styled the Third House.

Löbau (loh'bo), a town of Prussia, province of West Prussia. It has considerable manufactures and an active trade. Pop. 10,683. There is a town of the same name in Saxony, 12 miles s. e. of Bautzen, with woolen and linen mills and a pop. of 4451.

Lobelia (lo-bel'ia; named after Matthew Lobel, physician and botanist to James I), a very extensive genus of beautiful herbs, natives of almost all parts of the world, especially of the warmer parts of America, tribe Lobeliaceae, nat. order Campanulaceae. L. inflata is the Indian tobacco, which is cultivated in North America, and is employed in medicine. The small blue lobelia so popular in gardens is L. Brinns, a Cape species. A brilliantly scarlet-flowered species, L. cardinalis, is the cardinal-flower. L. siphilitica, an American species, possesses emetic, cathartic and diuretic properties. Two species are found wild in Britain.

Lobeliaceae (lo-bel'i-ae), a tribe of Campanulaceae, differing from Campanulaceae proper in having irregular flowers, and like the Composite syngeynethous anthers, but otherwise resembling them very nearly.

Lobipeda (lo-bi-ped'de), a family of aquatic grallatorial birds, including the coots and phalaropes.

Lobolly-bay (lob'ol-l), the popular name of Gordonia Lasianthus, nat. order Linaceae, an elegant ornamental evergreen tree of the maritime parts of the Southern United States, having large and showy white flowers. It grows to the height of 50 or 60 feet.

Lobolly-pine (Pīnus tādā), an American pine, next to the white pine the loftiest in North America. Its leaves are 6 inches long, united by threes or fours. Its timber is of little value.

Lob-Nor (loh'-nor), a salt lake in Central Asia, in Eastern Turkestan, which receives the river Tarim.

Lobos (lo'bo), or SEAL ISLANDS, three islands in the Pacific Ocean, off the coast of Peru, lat. 6° 29' s., lon. 80° 53' w. The largest, called Lobos de Tierra, is 10 miles distant from the mainland, and is about 5 miles long, and 2 miles broad at the widest part. Large quantities of guano have been obtained from these islands.

Lobster (lob'ster), the common name of the macruorous (long-tailed), decapodous (two-footed), stalk-eyed crustaceans, belonging to the genus Homarūs. The first pair of ambulatory limbs bear the well-known and formidable lobster-claws. The abdomen has rudimentary limbs on its under side, among which are lodged the newly excluded spawn. The tail consists of several flat shell-like plates capable of being spread like a fan, and used as a swim-arch; s, Ventral arch of the membrane segment; p, Prosopodite; c, Exopodite in-sipodial; e, Endopodite.

The third abdominal segment of the Lobster. a, Dorsal used as a swim-arch; s, Ventral arch of the tail, b, membrane segment; c, Prosopodite; d, Exopodite in-sipodial; e, Endopodite.

Lobsters are esteemed a very rich and nourishing aliment, but dangerous unless fresh and in good condition. They are generally in their best season from the middle of October till the beginning of May. The common lobster (H. vulgāris) is found in great abundance on many of the European shores. H. Americanus is found on the coasts of North America, and is largely taken for sale, so largely that its numbers are rapidly diminishing. It is closely allied to H. vulgāris. The fresh-water lobster is the crawfish or crayfish.

Lobworm (Arionidōla piscatorum), a genus of Annelida or Worms. It has a round, obtuse head, a body about the size of a large earthworm, and respires through thirteen pairs of gill-tufts. Traces of the lobworm may be found on every sea-beach in the little coils of sand which it leaves when burrowing after the tide has ebbed. It is used for bait in deep-sea fishing. It is called also Lugworm.

Local Option, a term applied to the principle by which a certain majority of the inhabitants of a certain locality may decide as to whether any, or how many, places for the sale of intoxicating liquors shall exist in the
Locarno

Locality. Many of the States of this country have such laws, which differ in specific details, and through their operation the sale of liquor has been forbidden in a large part of certain States in which no general prohibition law has been passed. Within late years there has been a very active movement in this direction, and while a number of States had adopted complete prohibition, various others have achieved almost state-wide prohibition through the exercise of local option laws. In Illinois, for instance, there are 1500 prohibition towns, and full license exists in only a few counties. Kentucky has 96 prohibition counties, the area open to liquor sale being very small. Other States in which local option prohibition is widespread are Minnesota and Ohio, and it has made much progress in Massachusetts and several other States. Local option and prohibition have made little progress in foreign countries. An effort to pass a licensing bill that dealt severely with liquor interests was made in England in 1908, but was defeated in the House of Lords, party leaders assuming that public opinion was not ready for such a measure. See *License* and *Prohibition Party*.

Locarno (lo-kihr"nō), a small town of Switzerland, formerly one of the three capitals of the Canton Ticino, in a charming but unhealthy locality on Lago Maggiore. Pop. 3603.

Locative Case (lok"ə-tiv), in grammar, is the case expressive of locality. Such a case existed originally in all the Aryan languages; in Sanskrit all nouns and pronouns have a locative case.

Lochaber-axe (loch-ə-bər-aks; from Lochaber, a district in Inverness-shire), a weapon, consisting of a pole bearing an axe at its upper end, formerly used by the Highlanders of Scotland.

Loches (losh), a town of France, dep., of Indre-et-Loire, on the left bank of the Indre, 29 miles southeast of Tours. In its castle several kings of France resided, and Louis XI used it as a State prison. Pop. (1906) 3751.

Loch Katrine. See Katrine, Loch.

Loch Leven. See Leven.

Loch Lomond. See Lomond, Loch.

Lock (of firearms). See *Musket*, *Revolver*, *Rifle*, etc.

Lock, an inclosure in a canal, with gates at each end, used in raising or lowering boats as they pass from one level to another. When a vessel is descending, water is let into the lock till it is on a level with the higher water, and thus permits the vessel to enter; the upper gates of the lock are then closed, and by the lower gates being gradually opened, the water in the lock falls to the level of the lower water, and the vessel passes out. In ascending the operation is reversed, that is, the vessel enters the lock, the lower gates are closed, and water is admitted by the upper gates, which, as it fills the lock, raises the vessel to the height of the higher water.

Lock, an appliance used for fastening doors, chests, drawers, etc. A good lock is the masterpiece in smithery, and requires much art and delicacy in contriving and varying the wards, springs, bolts, and other parts of which it is composed, so as to adjust them to places where they are serviceable, and to the various occasions of their use. The principle upon which all locks depend is the application of a lever to an interior bolt, by means of a communication from without, so that by means of the latter the lever acts upon the bolt, and moves it in such a manner as to secure the door or lid from being opened by any pull or push from without. The security of locks in general, therefore, depends on the number of impediments that can be interposed between the lever (the key), and the bolt which secures the door, and these impediments are known by the name of *swords* (which slip into corresponding grooves of the key), the number and intricacy of which are supposed to distinguish a reliable lock from one that may be easily picked. The Yale Lock, invented by Linus Yale, now in very common use, is a distinct step in advance of the tumblers lock, and does away with the idea that a big key is necessary for a safe fastening. It contains pins held down by a spring, and which can be lifted only by a key "tied in contour to meet them. As the combinations of the pins can be greatly varied, the keys may be similarly diversified. The time-lock is one in which clock-work operates the combinations so that it can be opened only at a particular hour. See also *Chubb-lock*.

Locke (lok), John, eminent English philosopher, was born at Wrinton, in Somersetshire, in 1632, and died in 1704 at Oates in Essex. He was sent to Westminster School; from there he went to Christ Church, Oxford, and applied himself to the study of medicine. In 1666 Locke made the acquaintance of Lord Ashley, afterwards Earl of Shaftesbury, and held various offices in the patronage of that nobleman. When, in
1682, his patron was obliged to retire, for political reasons, to Holland, Locke accompanied him in his exile. Owing to the troubled condition of his country, and the continued triumph of the party which he had opposed, Locke continued to reside abroad. He returned to England at the Revolution, and was appointed commissioner of appeals under the new government. So early as 1670 Locke had formed the plan of his famous Essay on the Human Understanding, a plan which he had carefully elaborated in his exile, and which he published in its completed form in 1690. It was received with much opposition, notably by the University of Oxford, who resolved to discourage it; but despite this it acquired a great reputation throughout Europe, and was translated into French and Latin. Locke was made a commissioner of trade and plantations in 1695, but retired when unable to perform its duties, and lived with his friend, Sir F. Masham, until his death. Briefly, it may be stated that the chief purpose of Locke's celebrated Essay was to find the original source of the scope of human knowledge. The conclusions he arrived at were that there is no such thing as an 'innate idea'; that the human mind is a sheet of white paper prepared to be written upon; that the knowledge thereon written is supplied by experience; and that 'sensation' and 'reflection' are the two sources of all our ideas. Among other works of Locke are three Letters on Toleration; Thoughts Concerning Education; Reasonableness of Christianity; two Treatises on Government; Notes upon St. Paul's Epistles to the Galatians, Corinthians, Romans and Ephesians; and a Treatise on the Conduct of the Understanding.

Lockhart (lok'hart), John Gibson, author, and editor of the Quarterly Review, was born at Cambuskenneth in 1784, and died at Abbotsford in 1854. He was educated at Glasgow University; gained an exhibition at Balliol College, Oxford; studied for the Scottish bar, but never practised; and began his literary career in 1817 as a contributor to the newly-established Blackwood's Magazine. In 1820 he married the daughter of Sir Walter Scott, and in 1822 succeeded Mr. Gifford as editor of the Quarterly Review, a position which he occupied for twenty-seven years. His Life of Sir Walter Scott is highly esteemed.

Lock Haven (lok-hä'ven), a city, county seat of Clinton county, Pennsylvania, on the west branch of the Susquehanna River, 25 miles s.w. of Williamsport. It contains a State normal and other academic schools, paper mill, tannery, planing mills, furniture factory, silk mill and other industries. Pop. (1920) 8557.

Lockport (lok'port), a city, county seat of Niagara Co., New York, on the State Barge Canal, and on the New York Central and Erie railroads, 25 miles E.N.E. of Buffalo. It has cheap Niagara electric power; abundant power developed locally by surplus canal waters (fall of 65 feet). The National American Musical Festival is held here each September. It has 125 diversified industries, including auto radiator and gear plants, paper mills, steel plant, iron works, fibre plants, glass bottle works, block plant, cotton and textile plants, etc. Pop. (1910) 17,970; (1920) 21,308.

Lockwood (lok'wudd), Belva Ann, Mrs. lawyer, born at Royaltown, New York, in 1830. She was instrumental in inducing Congress to pass a law giving equal pay for equal services in government offices to women and men. She was admitted to the bar in Washington in 1873, and took part in important law cases. Was nominee of the Equal Rights party for President in 1884 and 1888. Was a delegate to the Arbitration Convention, New York, and the International Peace Congress, London, 1907. She died in 1917.

Lockyer (lok'yer), Sir (Joseph) Norman (1836-1920), an English astronomer and physicist, born at Rugby. He entered the War Office in 1857; became astronomical lecturer at South Kensington, and directed the eclipse expedition to Sicily in 1870, and to India in 1871. His reputation rests upon his discoveries in spectrum analysis and his theory of astronomical evolution. His contributions to literature include Elementary Lessons in Physics (1838), Studies in Spectrum Analysis.
Locle (1872), Solar Physics (1874), Star-gazing (1877), the Chemistry of the Sun (1887), and Meteoric Hypothesis (1890), the latter his most notable contribution to science.

Locle (lok'l), a town of Switzerland, in the canton and 10 miles W. N. W. of Neuchâtel. It has important manufactures of clocks and watches, and a school of watchmaking. Pop. 12,626.

Locomotive Engine. See Steam Engine Locomotive; also Oil.

Locomotor Ataxy (lo-ků-mů'tor), is a peculiar disease of the nervous system, deriving its name from the fact that the sufferer from it cannot order the movements of his limbs for definite purposes. The patient requires to guide his feet and legs by means of his sight, and even then the feet are jerked out and brought down in a violent way. This difficulty of movement is called 'want of coordination of movement.' The causes of this disease are obscure, its progress usually extends over a number of years, and recovery is rare. Also called locomotor ataxia.

Locris (lo'kris), the name of two portions of ancient Greece, the one on the east opposite the island of Eubea; the other on the west, on the north side of the Corinthian Gulf. The Locrians played an unimportant part in Greek history, but a city established by them in Southern Italy, in the Bruttian peninsula (or toe of Italy), attained a very flourishing condition.

Locus (lo'kus), in geometry, the line traced out or generated by a point which is constrained to move in accordance with certain determinate conditions; thus, the locus of a point moving in a plane, and which must preserve the same uniform distance from a fixed point, is a circle.

Locust (lo'kust), the name of several insects of the order Orthoptera, of which the genus Locusta is a type, allied to the grasshoppers and crick-
through the Spanish-American war, and afterward was private secretary for his father till his death in 1909. He published *Angels in the Wave* (1898), *Poems* (1902), *Casablanca* (1904), and *The Great Adventure* (1905). His poetic work was highly regarded.

**Lodge, Henry Cabot**, statesman and author, was born in Boston, Massachusetts, in 1850. He was graduated from Harvard Law School in 1874. Distinguished as a writer on economic, financial, and commercial subjects; he served as Representative in Congress from Massachusetts from 1887 to 1893, and was transferred to the Senate in the latter year. He has since been prominent in the Senate.

**Lodge, Sir Oliver Joseph**, scientist, was born at Penkhill, England, in 1851. In 1880 he was appointed professor of physics at the new University College, Liverpool, and in 1887 was elected a fellow of the Royal Society. His chief studies have been in electricity, in which he has made discoveries of importance. He is a prominent member of the Society for Psychical Research, has been its president, and is deeply interested in its work, being an advocate of the theory of spirit return. Among his works are *Modern Views of Electricity, Pioneers of Science, Life and Matter, Electrons and the Ether of Space, The War and After, Raymond*, or *Life and Death*.

**Lodge, Thomas**, dramatist, was born in Lincolnshire, England, in 1555, and died of the plague in 1625. He came up to London from Oxford University and entered Lincoln's Inn as a law student in 1554, and after becoming an actor and a soldier he studied medicine and practised in London. He published his tale of *Rosalynde, Euphues Golden Legacie* (1590), which was the source of Shakespeare's *As You Like It*; the drama of *Marius and Mylia* (1593); and in conjunction with Greene he wrote *A Looking Glass for London and England* (1594).

**Lodi** (lô'dè), a city of Milan province, Italy, on the Adda. 20 miles S.E. of Milan. Noted for its Parmesan cheese; other products are majolica, silk, linen, pottery, etc. Here Napoleon effected the famous passage of the Bridge at Lodi against the Austrians, May 10, 1796. Pop. (commune) 28,032.

**Lodi**, a borough of Bergen Co., New Jersey, on Saddle River, 2 miles N.E. of Passaic. It has dyeing and bleaching works, rubber factories, etc. Pop. (1920) 8175.

**Łódz** (lôz), a city of Poland, formerly in Russian Poland, government of Piotrkow, 76 miles southwest of Warsaw, and next to it the most populous town in Poland. It has extensive trade and manufactures, especially in woollens and cottons. Pop. (1910) 418,650.

**Loeb** (lôb), Jacques, a German-American biologist, born in Germany, April 7, 1859, is considered the pioneer in experimental study of the physiology of protoplasm. Since 1910 he has been head of the department of experimental biology in the Rockefeller Institute for Medical Research. Among his works are *Studies in General Physiology* (1905); *Chemical Fertilization of the Animal Egg* (1909); and *The Mechanistic Conception of Life* (1912).

**Loess** (léz or lôz'; German loß), a (German term applied in geology to a finely comminuted sand or pulverulent loam of a yellowish color which occurs in a pleistocene alluvial deposit chiefly in the valleys of the Rhine, the Danube, and the Missouri, and some other rivers. In China it reaches a depth of 1500 or 2000 feet.

**Lofoden** (lo-fô'den'), or *Lopp' ten*, a group of islands off the northwest coast of Norway, and stretching southwest to northeast about 175 miles. The chief value of the group is derived from the immense shoals of cod and herring which frequent them. The principal cod-fishery ends in April, when the herring-fishery begins and continues during the summer. Pop. 42,818.

**Log**, a contrivance used to measure the rate of a ship's velocity through the water. In its simplest form it is a piece of thin board, forming the quadrant of a circle of about 6 inches radius and balanced by a small plate of lead nailed on the circular part, so as to float perpendicularly in the water. One end of a line, called the log-line, is fastened to the log, while the other is wound round a reel. When the log is thrown out of the ship while sailing, as soon as it touches the water it ceases to partake of the ship's motion, so that the ship goes on and leaves it behind, while the line is unwound from the reel, so that the length of line unwound in a given time gives the rate of the ship's sailing. This is calculated by knots made on the line at certain distances, while the time is measured by a sand-glass running a certain number of seconds. The length...
Logan

between the knots is so proportioned to the time of the glass that the number of knots unwound while the glass runs down shows the number of nautical miles the ship is sailing per hour. The need for a less cumbersome device having arisen, about 1834 Edward Massey, an Englishman, patented a screw or rotary log, whose recordings were read from a set of indicating dials. This with certain modifications was in use until 1801, when again a demand was made for a patent log which could be readily consulted from the deck. In response to this demand Walker, in 1873, introduced the Cherub log, a taffrail type, in which the varying speeds are read from a dial attached to the taffrail. Walker's Neptune log is an amplification of the Cherub form. Two principal American taffrail logs are the Negus and Bliss. The former bears a resemblance to the Cherub log, but the dial plate is horizontal, and the log is fitted with a governor.

Logan, John A., statesman and soldier, was born in Jackson county, Illinois, in 1826. In the Mexican war he did good service, and in 1858 and 1860 was elected to Congress. In the Civil war his services were very important, he being engaged in many battles, and being promoted from colonel to commander of a corps. In 1866 he was re-elected to Congress, and was one of the seven members chosen to manage the impeachment of President Johnson. He served until 1871, when he became Senator. He died in 1886. — His son, Major John A. Logan, took part in the Cuban war of 1898 and was slain in the Philippines in 1899.

Logan, Sir William Edmond, a Canadian geologist, born in 1798 at Montreal, educated chiefly in Europe. He devoted himself to the study of the geology of Canada, and was the chief of the Geological Survey of Canada from 1843 to 1871. He assisted also in the geological survey of Britain. He died in 1876 in Wales.

Loganville, a village, county seat of Hocking Co., Ohio, on Hocking River, 50 miles s.e. of Columbus, in a natural gas and oil region. It has foundries, machine shops, furniture and shoe factories, flour mills, etc. Pop. 5493.

Logan, a city, county seat of Cache Co., Utah, 60 miles N. of Ogden. Here are the State Agricultural and Brigham Young colleges. It has saw, flour and knitting mills. Pop 6439.

Loganiidae (lo-gan-i-dee'-e), a nat. order of tropical dicotyledonous plants.

Logansport, a city, county seat of Cass Co., Indiana, at the junction of the Eel with the Wabash River, 80 miles N. of Indianapolis. It is the second railroad distributing point in the State, and has great railroad shops and numerous manufactures of automobiles, fire apparatus, radiators, etc. Pop. 21,226.

Logarithms (log'-a-rithmz). The common logarithm of a number is the index of the power to which 10 must be raised to be equal to the number. Thus $10^1=1000$, so that the logarithm of 1000 (usually written log. 1000) is 3. Now $10^1=10$, $10^2=100$, $10^3=1000$, $10^4=10,000$, and it is well known that $10^3=1$, $10^4=0.1$, $10^5=0.01$, etc., thus:

\[
\begin{array}{c|c|c}
\text{Log.} & \text{Log.} & \text{Log.} \\
0.001 & 3 & 10 \\
0.01 & 2 & 100 \\
0.1 & 1 & 1000 \\
1 & 0 & 10,000 \\
\end{array}
\]

It is evident that the logarithm of any number greater than 1 and less than 10 is fractional; the logarithm of any number greater than 10 and less than 100 is greater than 1 and less than 2. Again, the logarithm of any number less than 1 is negative. Suppose we wish to know the logarithm of the number 18.1. In a table of books we only find the fractional part of the logarithm, it is .257679. Now 18.1 is greater than 10 and less than 100, so that its logarithm is greater than 1 and less than 2; hence log. $18.1=1.257679$. The integral part of a logarithm is called its characteristic; the fractional part its mantissa. Logarithms make arithmetical computations more easy, for by means of a table of them the operations of multiplication, division, involution or the finding of powers, and evolvement or the finding of roots, are changed to those of addition, subtraction, multiplication and division respectively. For instance, if $x$ and $y$ are the logarithms of any two numbers, the numbers are $10^x$ and $10^y$; now the product of these numbers is $10^{x+y}$, so that the logarithm of the product of two numbers is the sum of the logarithms of the numbers. Again, the quotient of the numbers is $10^{x-y}$, so that the logarithm of the quotient of two numbers is the difference of the logarithms of the numbers. Again, $10^x$ raised to the nth power is $10^x^n$, so that the logarithm of the nth power of a number is $n$ times the logarithm of the number. Logarithms of this kind are common logarithms, and were invented by Briggs; their base, as it is called, is 10. Logarithms were first used by Napier of Merchiston (see Napier, John), and he employed a base which is smaller than 10, namely, the number 2.7182818...
the sum of the infinite series $2 + \frac{1}{2} + \frac{1}{4} + \cdots$, etc. This base is denoted by $e$ in mathematical treatises, and the Napierian logarithm of any number, say $2$, is $\log_e 2$, to distinguish it from $\log_2$, which is the common logarithm, whose base is 10. The common logarithm of a number is found from the Napierian by multiplying by $0.43429448$. Napierian logarithms are of great importance in the higher mathematics.

**Log-book**, a book kept in ships and into which the direction of the wind, course of the ship, state of the weather at all hours of the day, are daily transcribed at noon, together with every circumstance deserving notice that may happen to the ship or within her cognizance, either at sea or in a harbor, etc.

**Loggia** (loj'ga), a word used in Italian architecture with several significations. First, it is applied to a hall open on two or three sides, where there are pillars to support the roof, such as the Loggia de' Lanzi in Florence. It is also applied to an open colonnade or arcade surrounding a court, or to an open gallery at the height of one or more stories in a building. The name loggia is also given to the large ornamental window, consisting of several parts, which is often seen in old Venetian palaces, and lastly, it is used to designate a small airy hall, usually open on all sides, constructed on the roof of an edifice.

**Logic** (loj'ik), a department or division of mental science which has been differently defined by authorities. The older school of logicians agreed on the whole in considering it as mainly treating of reasoning and the operations of mind subsidiary to reasoning; and this definition sufficiently indicates the view of the science held by such logicians as Whately and Hamilton. According to them logic dealt only with the form of thought, that is, with what is common to all reasonings, judgments, and concepts respectively, and had nothing to do with the matter, that is, the subject or context of reasonings, judgments, etc. In this view the science of logic was merely *deductive*, and the syllogistic process, or the intellectual act performed in deducing particular truths from general truths, already given, was the main subject of the science. It is evident, however, that in practical research there is another movement or process of the mind of at least equal importance,—viz., the process by which the mind reaches general truths from the observation of particulars. This latter is the *inductive* process, and on it, regarded as the more important element in inference and the ascertainment of truth, John Stuart Mill founded his new system of *inductive logic*. The nature of scientific evidence, the methods and principles involved in scientific research, are the chief subjects of study in this system of logic. Very different from both of these are the conceptions of logic given by the chief German philosophers. Kant, in declaring that only the matter (not the form) of experience was given to the mind, had recognized thought as the essential factor of cognition, and had initiated a new so-called *transcendental logic*, which was an analysis of the general conditions under which the objective world became cognizable. Thus the foundation was laid for a view of reality as in its very nature constituted by thought. Thought or the *ego* is itself the real, and there being no separate reality logic becomes the system of the forms in and through which thought or intelligence is realized. Logic thus appears, as in Hegel, a complete theory of knowledge and a metaphysic. The earliest work on logic is the Organon of Aristotle, who practically gave the science the shape it possesses. See *Deduction*, *Induction*, *Fallacy*, *Syllogism*, etc.

**Logomania** (loj-u-ma'ni-ə), a disease of the faculty of language generally associated with organic disease of the nervous structure, as in paralysis. In this disease, while conceptions and ideas remain clear, the power of associating these with the words by which they are expressed is lost, and the patient can either not give any names to his conceptions at all or expresses them erroneously. Sometimes one class of words is lost, and others retained. Thus a patient may forget his own name, or nouns only, and remember all other words. Sometimes he forgets only parts of the word, as terminations, and not unfrequently in another form he inverts his phrases.

**Logos** (loj'os; Greek, word, thought, reason), in Christian theology, a word used in certain passages of the
Loire

Loire (loîr), a river of N. W. France, rising in dep. Eure-et-Loir, traversing Loir-et-Cher and Sarthe, and falling into the Sarthe a few miles above its junction with the Loire; length, 450 miles, partly navigable.

Scriptures, which has been the source of continual disputes ever since the third century of our era. The passage in the Bible which gives rise to this discussion is the opening of the Gospel of St. John: 'In the beginning was the Word, and the Word was God, and the Word was with God.' The same was in the beginning with God. All things were made by him, and without him was not anything made that was made,' etc. In the Greek text the expression here translated Word is logos, and the question is, what are we here to understand by logos, whether a person of the Deity, the creative intellect of God, or the Son, through whom he created, or the divine truth which was to be revealed, or something else?

Logroño (log-ron-yoh), a town of Spain, capital of the province of same name in Old Castile, on the right bank of the Ebro, which is crossed by a new stone and a new iron bridge. It is well built and has several interesting churches. Pop. 19,237.—The province, in the north, where it borders the Ebro, is level and fertile, but in the south is generally mountainous and barren. It is rich in minerals, but is quite undeveloped in this respect. Area, 1,446 square miles; pop. 180,036.

Logwood (log-wud), a popular name for the Hämatoxylon Campechianum, a tree belonging to the nat. order Leguminosae, which grows in moist and swampy places in Central America, and particularly round the Bay of Campechy; but is now naturalized in Jamaica and many of the West Indian islands. The tree is usually from 40 to 50 feet high, with pinnate leaves and small yellowish flowers. The wood is red in color, tinged with orange and black, so heavy as to sink in water, and susceptible of receiving a good polish. It is used chiefly as a dyewood, the trees being cut down, the bark and albumen removed, and the hard center cut into 3-foot-long logs. To obtain the coloring matter it is hewn into much smaller pieces, and ground or rasped to small chips, or to a coarse powder. The aqueous extract is muddy and of a reddish-brown color. By acids the red color is made paler; by alkalies it is converted to purple. By mordanting the fabric with iron, black is produced; with alumina, violet and lilac; with copper, blue; and with chromium, a black or green. The coloring power of logwood depends chiefly on a crystalline ingredient called hæmatoxylin. It is employed in calico printing to give a black or brown color, and also in the preparation of some lakes. An extract of logwood is used in medicine as an astringent.

Loheia (lo-hi'ya), a seaport town of Arabia, Yemen, on the Red Sea, 130 miles w. N. W. of Sana. It has a trade in coffee, and a pop. of about 8000.

Lohengrin (lo'en-grin), the hero of a German poem of the end of the thirteenth century, represented as the son of Parvical and one of the guardians of the Holy Grail. Sent by King Arthur to help the Princess Elsa of Brabant, he arrives in a vehicle drawn by a swan, delivers the princess from captivity, and marries her; accompanies the emperor in a campaign against the Hungarians, and fights against the Saracens. He then returns to his bride at Cologne, but being pressed by her to state his origin he is prevailed upon to tell it, after which he must, in terms of his vow, return home to the Grail. The legend has been made the subject of a well-known opera by Wagner.

Loir (loir), a river of N. W. France, rising in dep. Eure-et-Loir, traversing Loir-et-Cher and Sarthe, and falling into the Sarthe a few miles above its junction with the Loire; length, 450 miles, partly navigable.

Loire (loir; anc. Lâge), the largest river of France, which it divides into two nearly equal portions. It rises on the western slope of the Cevennes, in the department of Ardèche, and flows generally N. N. W. and W. till it falls into the Bay of Biscay below Nantes. Its principal affluents on the right are the Arroux, Nièvre, Maine, etc.; on the left the Allier, Vienne, Cher, Indre, etc. Below Nantes, where it first feels the influence of the tide, it is more an estuary than a river, and is studded with islets. Above Nantes navigation is much impeded by shallows. Its whole course is about 645 miles, of which about 450 miles are navigable. The river is much subject to disastrous inundations, and dikes (levées) have been constructed along its course. It is connected by canals with the Saône, Seine and Vilaine. Its name
Loire

appears in those of a number of departments.

Loire, a central department of France; area, 1853 square miles. The department occupies the upper part of the Loire basin, and consists of the fertile plains which extend on both sides of the river, forming its valley, and long ridges of the Cevennes, which hem the valley in on every side. More than one-half the surface is arable. A good deal of wine is produced, but ranks only as a vin ordinaire of good quality. Coals are raised to a large extent, part of the department being in the coal-field of the Loire, the most important in France. Iron is smelted, and extensively manufactured into steel and articles of hardware, etc., employing 25,000 hands; silk, ribbons, velvet, etc., are also made, the silk manufacture alone employing about 12,000 workers. The capital and great center of industry is St. Etienne; other towns are Roanne and Montbrison. Pop. (1906) 645,943.

Loire, Haute- (ôt-lwar; Upper Loire), a department of southeastern France; area, 1931 square miles. It is traversed by the Loire, is surrounded on all sides by lofty mountains, which belong to the Cevennes, and has the character of a plateau intersected by deep river valleys. The mountains are generally covered with forests, in which wild boars, wolves, foxes, deer, etc., abound, or with verdant pastures, on which herds of cattle are reared. Some wine is produced; but the chief industry is the manufacture of various sorts of lace, largely a home industry. Le Puy is the capital. Pop. (1906) 314,770.

Loire-Inférieure (lwar-ahn-fry-ray; Lower Loire), a western maritime department of France, intersected by the lower Loire and its estuary; area, 2694 square miles. The surface is flat. The coast is much indented, and is covered with salt marshes which yield a considerable quantity of salt. Lagoons and lakes are very numerous. The largest is Grandlieu, which has an area of 24 square miles. The soil is generally productive, yielding grain, sugar-beet and grapes, from which large quantities of wine are produced. The oak forests pasture great numbers of swine, and bee-keeping is a considerable industry. The fisheries are extensive. Shipbuilding and the allied trades are carried on to a considerable extent. Smelting furnaces, machine-works, sugar refineries, are also in operation. To these may be added tanneries, glassworks, potteries, paper-mills, etc. Wine, salt, corn, cattle, etc., are exported. The principal ports are Nantes and St. Nazaire. Nantes is the capital. Pop. (1906) 666,748.

Loiret (lwär-rä), a central department of France; area, 2629 square miles. The surface is partly flat, partly undulating, with scarcely any hills, and is traversed by the Loire, which divides it into two unequal portions, the northern of which is the larger, and is fertile and well cultivated, while the southern is bleak and sterile. The Loiret is an unimportant tributary of the Loire. The chief products are grain and wine. Pottery and porcelain are the chief manufactures. Orleans is the chief town. Pop. 364,990.

Loir-et-Cher (lwär-eh-shär), a central department of France; area, 2479 square miles. It consists almost entirely of extensive plains traversed by the Loire, Loir and Cher, all navigable rivers. The soil is generally fertile. More than one-half of the whole is arable, and less than one-eighth is waste. Cereals of all kinds, hemp, beetroot for sugar, wine, fruits, are produced, and horses, cattle, and sheep are reared on excellent pastures. The capital is Blois. Pop. (1906) 276,019.

Loja (lo'ha), a city of Ecuador, in the valley of Casambo, 230 miles s. of Quito, is well built, has a college, some manufactures, and a trade in cinchona bark. Pop. 10,000.

Loja, or Loxa (lo'ha), a town in Spain, Andalusia, in the valley of the Genil, 23 miles w. s. w. of Granada. The streets are steep and very irregular, and the houses mostly of mean appearance. The town with its castle was an important military post during the Moorish wars. Pop. 16,143.

Lok, or Lokr, in Scandinavian mythology, the evil deity, father of Hel or Hela, goddess of the infernal regions. He is a personification of the principle of evil, described as of handsome appearance, but perpetually engaged in works of wickedness, partly directed against the other gods.

Lokeren (lo-ke-ren), a town of East Flanders, on the Durme, has manufactures of cottons, lace, soap, tobacco, etc. Pop. (1904) 21,869.

Lokman (lok-man'), a name that figures in the traditions of the Arabsians as that of a sage or prophet. In the Koran there is an account of a Lokman the Wise who lived at a time anterior to that of King David. He is represented as the author of a collection of fables, which, however, are of a later date than the first century of the Hejra.

Loli'go. See Calamary.
Lolium (lo'li-um), a genus of grasses of the tribe Hordeæ. See Darnel and Ryegrass. Lolland. See Lolland.

Lollards (lo'lardz), a name which arose in the Netherlands about the beginning of the fourteenth century, and was applied as a term of contempt to various sects or fraternities deemed heretical, being probably derived from the Low German lollen, to sing in a low tone. The name became well known in England about the end of the fourteenth century, when it was applied to the followers of Wickliffe, and to others more or less influenced by his teaching. The Wat Tyler revolt of 1381 was directly connected with Lollardism, and latterly the Lollards drew upon themselves the enmity of the civil powers, and numbers of them were put to death, especially during the reign of Henry V, when apparently another revolt was intended.

Lomami (lo-mi'mi), a river of Southern Africa, an important navigable tributary of the Congo, which it enters a little below Stanley Falls, after flowing nearly parallel to its upper course.

Lombard (lo'mbard), Petrus Lombardus, one of the most celebrated of the schoolmen, born near Novara, in Lombardy, about the year 1100. He was a scholar of Abelard in the University of Paris, became a teacher of theology, and at last, in 1150, bishop of Paris, where he seems to have died in 1164. His work Sententiarum Libri Quatuor is a classified collection of the opinions of the fathers on points of doctrine, with a statement of the objections made to them, and the answers given by church authorities. Hence he is known as the 'Master of Sentences.'

Lombard Architecture, the form of the Romanesque style of architecture assumed under the hands of the Gothic invaders and colonists of the north of Italy, comprising the buildings erected from about the beginning of the ninth to the beginning of the thirteenth centuries. It forms a connecting link between the Romanized architecture of Italy and the Gothic of more northern countries. The most characteristic feature of the churches built in this style is the general introduction and artistic development of the vault, that feature which afterwards became the formative principle of the whole Gothic style. In the Lombard architecture also pillars consisting of several shafts arranged round a central mass, and buttresses of small projection, appear to have been first employed. The tendency to the prevalence of vertical lines throughout the design, instead of the horizontal lines of the classic architecture, is also characteristic, as well as the use of the

Lombards, Longobardi, or Lan- goardi (so called either from the long bart or spear which they carried, or from the long beards), a Germanic or Teutonic people who at the beginning of the Christian era were dwelling on the Lower Elbe. They make little appearance in history till the sixth century, when, under their king, Alboin, they entered Italy in April 568, and, with the help of Saxons and others, conquered the northern portion, which hence received the name of Lombardy. Alboin was assassinated in 573 (see Alboin), and after some years of great confusion Autharius was recognized in 585 as king. He was a warlike and politic ruler, who gained the good-will of the subject Roman population, and instituted a better system of government than had hitherto existed. He married Theodelinde, a Frankish princess, who began the process of converting the Lombards from Arianism to the orthodox faith. The only king of
Lombardy

Note among the successors of her family was Rothari, who in 643 promulgated a system of laws, which, with subsequent additions, became among German jurists the basis of the study of law during the middle ages. From 713 to 744 the Lombards had a powerful king in the person of Liutprand, who extended his sway, at least temporarily, over the whole of Italy. From that time the power of the Lombards gradually declined, and finally Charlemagne captured Pavia after a six months' siege, and put an end to the Lombard Kingdom (773 or 774), the last monarch being Desiderius.

Lombardy (lomˈbär-di), the part of Upper Italy which took its name from the Lombards (see Lombard) and which at first extended from the Adriatic to the Savoyan Alps. After the overthrow of the Lombard Empire a number of independent duchies and republics, Mantua, Milan, Venice, Genoa, etc., were gradually formed, originally as feuds of the Holy Roman Empire, but soon practically independent. On the west side the growth of the house of Savoy ultimately absorbed all minor principalities to the line of the Ticino, while the extension of the Venetian authority during the sixteenth century over the districts to the east restricted the use of the name of Lombardy to the country west of the Lago di Garda and the Mincio, a district which passed under the dominion of Austria in 1706, and was ceded by that power to Italy in 1866. Lombardy is now the name of an Italian department (compartimento), embracing eight provinces (Bergamo, Brescia, Como, Cremona, Mantua, Milan, Pavia, and Sondrio), containing an area of 8,356 square miles and a pop. of 3,344,000.

Lombok (lomˈbok), an island belonging to the Dutch, in the Indian Archipelago. It lies between Bali on the west and Sumbawa on the east, and has an area of about 3,106 square miles. Between the two ranges which traverse the island, one of them rising to the height of 11,500 feet, there is a plain fertile in rice, cotton, maize, coffee and tobacco. There are several active volcanoes. The fauna and flora have strong Australasian affinities. Lombok being east of Wallace's Line. The ruling class are Brahmans, but the mass of the population is Mohammedan. The capital is Mataram on the west coast. Pop. 370,000.

Lombroso (lomˈbro-sō), Cesare, an anthropologist, born at Venice in 1836; died in 1909. He held professorships at Pavia, Padua and Turin, and became a noted authority on insanity and on crime in its relation to the physical organization. Of his works L'Homme Criminel is the most important and unfolds his theory, a congenital tendency to crime. In addition to his works on criminology, he wrote two on pellagra, a disease long prevalent in Italy.

Loménie (loˌmānē), ÉTIENNE CHARLES DE, COUNT OF BRIENNE, cardinal, archbishop and minister of state in France, born in 1727; died in 1794. At the first breaking out of the revolutionary discontents in France, Brienne, then archbishop of Toulouse, was among the most active of the reform agitators, and was ultimately entrusted with the finances, in which he failed ignominiously, and was dismissed in 1788. He was arrested by the revolutionary party, and died in prison. His brother, ATIANASE LOUIS MARIE, born in 1730, entered the army, became a general, and was made war minister at the same time as his brother was finance minister, retired from office with him, and was guillotined May 10, 1794.

Lomond (lomˈmund), Loch, a beautiful lake of Scotland, renowned for its scenery, lying within the counties of Stirling and Dumfriesshire. Its length is about 24 miles; the breadth at the lower or southern end 7 miles, at the upper end considerably under half a mile. The lake is almost entirely surrounded with hills, one of which, Ben Lomond, is 3,192 feet high; and its surface is studded with numerous islands. The greatest depth is in the narrower part of the lake, where in some parts it reaches 600 feet. Fish, including salmon, trout, pike, etc., are abundant.

Lomza (lomˈsha), a town of Russian Poland, capital of the government of the same name, on the Narew, 60 miles N. E. of Warsaw. Pop. 22,428. The government of Lomza covers an area of 4686 square miles, mostly of a flat and fertile soil. Pop. 683,100.

London (lomˈdun), the capital of the British Empire and the largest city in the world, is situated in the southeast of England on both sides of the River Thames, which winds through it from west to east. The river is crossed by numerous bridges, and is deep enough to allow large vessels to come up to London Bridge (the lowest of them except the movable Tower Bridge), the stream here being 266 yards wide. It is difficult to assign any exact limits to London on account of its straggling form and numerous suburban extensions; but it may be said to stretch from east to west about 14 miles, from north to south about 10. Its area may be stated at 117 square miles.
London

The population within this area was 3,816,483 in 1881, 4,536,541 in 1901, and 4,522,961 in 1911. If we consider what is known as Greater London, embracing the City of London Police District, the area is 663 square miles and the population in 1911 was 7,352,963.

General Features.—The greater portion of London lies on the north side of the Thames, in the counties of Middlesex and Essex, mainly the former, on a site gradually rising from the river, and marked by several inequalities of no great height; on the opposite bank, in the County of Surrey and partly in Kent, the more densely built parts cover an extensive and nearly uniform flat. The city proper, or City of London aside from its surrounding boroughs, is a separate municipality, having a civic corporation of its own, at its head being the Lord-mayor of London. It occupies little over one square mile, and has a resident population of 26,923. Westminster, associated with the sovereigns and parliaments for over 800 years, borders with the city on the west; while across the river from the city lies the ancient quarter of Southwark, or "The Borough." Besides these, London consists of a great number of quarters or districts, the most important of which now form separate Parliamentary constituencies, though there are many other minor districts, the names of which are also perfectly familiar to the outside world, such as Whitechapel, Spitalfields, Clerkenwell, Pimlico, Bloomsbury, Bermondsey, etc. Another rough division of London is into the West End or fashionable quarter, the residence of the wealthy, and the East End, the great seat of trade and manufactures.

London, on the whole, may be called a well-built city, brick being the material generally employed, though many public and other edifices are built of stone. In some streets the brick fronts are made to imitate stone by being coated with cement. The streets are generally well kept and well paved and lighted, but, except in some of the more recent quarters, the general appearance of London is not attractive, much of the effect of the fine buildings being lost by overcrowding and the want offitting sites. What generally most strikes a stranger to London is its immense size, which can only be grasped by actually traveling about, or by obtaining a view from some elevation, as Primrose Hill in the northwest, or the dome of St. Paul's Cathedral near the center, the most conspicuous building in the metropolis. Other striking and also attractive features of London are the parks, especially Hyde Park and Regent's Park, so valuable as breathing spaces; and the handsome and massive stone embankments along the Thames, forming wide roadways and promenades bordered by trees for long distances. As the capital of the British Empire London is from time to time the residence of the sovereign and court. It contains the buildings for the accommodation of Parliament and all the great government departments. It is the chief intellectual center of Britain, if not of the world, and is equally great as a center of commerce, banking and finance generally. Many of the institutions and objects of interest noticed in the following paragraphs are also treated in separate articles.

Main Streets, Bridges, etc.—Although in the different districts of London, with the exception of the parts most recently built, there are numerous narrow and crooked streets, yet the whole extent of the metropolis is well united by trunk lines of streets in the principal directions, which render it comparatively easy for a stranger to find his way from one district to another. Piccadilly and Pall Mall; the Strand and its continuation, Fleet street; Oxford street and its continuations, Holborn, Holborn Viaduct and Cheapside, are among noteworthy streets running east and west; while of those running north and south, Regent Street, with its fine shops; and the newer Kingsway and Aldwych (opened in 1905) are the chief. The Thames embankment on the north or Middlesex side, known as the Victoria Embankment, also forms a magnificent thoroughfare, adorned by important buildings, and at different points with ornamental grounds and statues. A number of magnificent bridges cross the Thames. The lowest is the Tower Bridge, a "bascule" bridge opening by machinery so as to let ships pass through. The others most remarkable in upward order (exclusive of railway bridges) are London Bridge, 900 feet long, and built of Aberdeen granite; Southwark Bridge, and Blackfriars' Bridge, all connecting the city with Southwark; Waterloo Bridge, 1380 feet long, consisting of nine elliptical arches of Aberdeen granite; Westminster Bridge, an elegant structure of iron, 1200 feet long, crossing the river from Westminster to Lambeth; the Lambeth and Vauxhall bridges, the Chelsea Suspension Bridge, and the Albert Bridge. The two banks of the river are also united by the Thames Tunnel, a tunnel under the river 2 miles below London Bridge, opened in 1843, and intended for pedestrians, but now traversed by a railway. Of later date are the Blackwall and several other tunnels.
Parks and Squares.—The chief parks are in the western portion of the metropolis, the largest being Hyde Park and Regent's Park, which, together, with St. James' Park and the Green Park, are royal parks. The most fashionable is Hyde Park, containing about 400 acres. It is surrounded by a carriage-drive 2½ miles long, has some fine old trees, large stretches of grass, and contains a handsome sheet of water sadly misnamed the Serpentine River. Kensington Gardens (360 acres), with which Hyde Park communicates at several points, are well wooded and finely laid out. St. James' Park, 83 acres, and the Green Park, 71 acres in extent, adjoin Hyde Park on the southeast. Regent's Park, in the northwest of London, north of Hyde Park, containing the gardens of the Zoological Society and those of the Royal Botanic Society, covers an area of 470 acres. The Zoological Gardens contain the largest collection in the world. There are, besides, Victoria Park in the northeast of London, which occupies an area of 12 acres on the banks of the Thames. The most ancient part is the White Tower, erected about 1078 for William the Conqueror. One of the most important of modern public buildings is the Law Courts, a Gothic building at the junction of the Strand and Fleet street. Other noteworthy buildings are the Bank of England; the Royal Exchange; the Mansion House, the official residence of the Lord-mayor; the Guildhall, the seat of the municipal government of the city; the four Inns of Court (Inner and Middle Temple, Lincoln's Inn, Gray's Inn); etc.

Monuments.—Among the public monuments are 'The Monument' on Fish Street Hill, London Bridge, a fluted Doric column 202 feet high, erected in 1677 in commemoration of the great fire of London; the York Column, in Waterloo Place, 124 feet high; the Guards' Memorial (those who fell in the Crimea), same place; the Nelson Column, in Trafalgar Square, 176½ feet high, with four colossal lions by Sir E. Landseer at its base; the national memorial to Prince Albert in Hyde Park, probably one of the finest monuments in Europe, being a Gothic structure 178 feet high, with a colossal statue of the prince seated under a lofty canopy; Cleopatra's Needle on the Thames Embankment; the 1820 Centotaph war memorial; and numerous statues of public men.

Public Buildings.—Among the royal palaces are St. James', a brick building erected by Henry VIII; Buckingham Palace, the King's London residence, built by George IV; Marlborough House, the residence of the Prince and Princess of Wales; Kensington Palace, a plain brick building, the birthplace of Queen Victoria. These are all in the west of London. Lambeth Palace, the residence of the Archbishops of Canterbury, is situated on the Surrey side of the river. On the north bank of the Thames stand the Houses of Parliament, a magnificent structure in the Tudor Gothic style, with two lofty towers. The buildings cover about eight acres, and cost £3,000,000. Westminster Hall, adjacent to the Houses of Parliament, a noble old pile built by William Rufus, was formerly the place in which the Supreme Courts of Justice sat, but is now merely a promenade for members of Parliament. In and near Whitehall in the same quarter are the government offices, comprising the Foreign, Home, Colonial and India Offices, the Horse Guards and Admiralty. Somerset House, which contains some of the public offices, is in the Strand. The post-office in the city occupies two spacious and handsome buildings. Adjoining the city on the east is the Tower, the ancient citadel of London, which occupies an area of 12 acres on the banks of the Thames. The most ancient part is the White Tower, erected about 1078 for William the Conqueror. One of the most important of modern public buildings is the Law Courts, a Gothic building at the junction of the Strand and Fleet street. Other noteworthy buildings are the Bank of England; the Royal Exchange; the Mansion House, the official residence of the Lord-mayor; the Guildhall, the seat of the municipal government of the city; the four Inns of Court (Inner and Middle Temple, Lincoln's Inn, Gray's Inn); etc.

Churches.—Among the churches the chief is St. Paul's Cathedral, completed in 1710 by Sir Christopher Wren. It is situated in the city, occupies the summit of Ludgate Hill, and is a classic building, 510 feet in length, with a dome 400 feet in height. Westminster Abbey, one of the finest specimens of the pointed style in Great Britain, dates from the reign of Henry III and Edward I. Near the Houses of Parliament, is 551 feet long, including Henry VII's chapel, and 267 feet wide at the transepts. Here the kings and queens of England have been crowned, from Edward the Confessor to George V. In the south transept are the tombs and monuments of great poets from Chaucer downwards, whence it is called 'Poets' Corner'; and in other parts are numerous sculptured monuments to sovereigns, statesmen, warriors, philosophers, divines, patriots and eminent individuals generally, many of whom are interred within its walls. Among others of the old churches are St. Bartholomew's in West Smithfield; the Chapel Royal, Savoy; St. Andrew's, Undershaft; St. Giles's, Cripplegate; St. Margaret's, Westminster; St. Stephen's, Walbrook; the Temple Church, Bow
London

Church, St. Bride's in Fleet street. The Roman Catholic Cathedral in Westminster and Southwark may also be mentioned.

Places of Amusement.—These are naturally exceedingly numerous. The principal theaters are: Covent Garden and Her Majesty's Theater, the homes of opera; Drury Lane and the Lyceum, identified with the higher drama; the Strand, Criterion, Gaiety and Toole's, well known for farce and burlesque; the Haymarket, Vaudeville, St. James' and Court for comedy; the Adelphi, Princess', and Olympic for melodrama; the Savoy, Avenue, and Comedy for opera-bouffe. The chief musical entertainments are given in St. James' Hall and the Concert Hall at the Sydney Crystal Palace (see Crystal Palace). The Albert Hall, Kensington, capable of holding an audience of 9000 persons, is also used for concerts, etc.

Museums, etc.—Among museums and galleries the principal is the British Museum, the great national collection, in a very central position as regards the rest of the metropolis. It contains an immense collection of books, manuscripts, engravings, drawings, sculptures, coins, etc. (See British Museum.) The South Kensington Museum is a capacious series of buildings containing valuable collections in science and the fine and decorative arts, and there is a branch museum from it in Bethnal Green, in the East End. (See Kensington Museum.) The natural history department of the British Museum occupies a fine Romanesque building at South Kensington. The India and the Patent Museums are also at South Kensington, and here also are the buildings of the Imperial Institute, where the products of the Empire are displayed. The Sloane Museum contains many valuable objects of art, etc. The chief picture-galleries are the National Gallery, in Trafalgar Square, one of the great galleries of the world (see National Gallery), the collection in South Kensington Museum, and the National Portrait Gallery. Other museums are the United Service, the Geological, the College of Surgeons, etc. The chief libraries are the British Museum, Lambeth Palace library, the Guildhall library, Sion College library, the London Library, London Institution library, besides large circulating libraries. Many free libraries have recently been established.

Educational and Scientific Institutions.—The chief educational institutions are the University of London, an examining and degree-conferring body only (see London, University of); and University College and King's College, the students of which take their degrees at London University, since London has no university that both teaches and confers degrees. Other institutions are denominational colleges for theology (in some combined with general education); institutions for professional education, as the Royal Naval College, Greenwich; the Royal Military Academy, Woolwich; the Royal School of Mines; the Royal College of Physicians and the Royal College of Surgeons, which grant medical diplomas after examination; the medical schools attached to the various hospitals (see below); Royal Academy of Painting, etc.; Royal Academy of Music; Royal College of Music; Trinity College, chiefly for music; several colleges for women; City and Guilds Institute for Technical Education; the Art Training School, South Kensington. An institution of a unique kind is the People's Palace for East London, opened in 1887, and designed partly for educational and partly for recreative purposes. Of the numerous societies for the promotion of science, art, learning, etc., we need only mention the Royal Society, the oldest, incorporated by Charles II in 1663.

Hospitals, etc.—Among hospitals and charitable institutions the chief are the three great endowed hospitals, St. Bartholomew's Hospital, in West Smithfield; Guy's Hospital, Southwark; and St. Thomas' Hospital, Lambeth, on the Thames Embankment opposite the Houses of Parliament. Other hospitals are St. George's Hospital, Middlesex Hospital, Westminster Hospital, Charing Cross Hospital, King's College Hospital, University College Hospital, St. Mary's Hospital. There are medical schools attached to all the above institutions. Bethlehem Hospital (Bedlam), in St. George's Fields, south of the river, is the chief hospital or asylum for lunatics. The Foundling Hospital, Chelsea Hospital, and Greenwich Hospital are institutions by themselves.

Communications, Trade, etc.—London is supplied with a vast network of surface railways, in addition to a host of cabs and omnibuses, and with underground railways, known as the Metropolitan and Metropolitan District railways, with several lines of electric trackage. Numerous small steamers ply on the Thames, touching at all important points on both sides of the river. All the great railways have termini in London, and their stations correspond with the magnitude of the traffic. The principal markets are Billingsgate for fish; Covent Garden for vegetables, flowers, etc.; Leadenhall for poultry,
London

game, etc.; Smithfield for dead meat, poultry and fish; the Borough market, Southwark, where manufacturing industries of London, though not to be compared with its commercial importance, are extensive. It contains the largest breweries and distilleries in the kingdom; and sugar refining, manufactures in metal, including plate, jewelry, watches, etc., the making of clothes and of boots and shoes, are extensively carried on. There are large engineering and chemical works. Printing, publishing and Journalism have their chief seat here. London has long been the greatest center of commerce in the world, though some other cities, as New York, Liverpool and Hamburg, have come into close competition with it. A most extensive trade by sea is carried on between Britain and the Continent, the East Indies and China, Africa, America and Australia, and there is an immense coasting trade. The docks are very extensive, comprising numerous basins and their accompanying accommodation on both sides of the river below London Bridge, and having a total water area of over 600 acres. London is inferior to Liverpool in the value of its exports, but otherwise considerably surpasses it in trade.

Sanitary Condition, etc.—London is one of the healthiest of the large cities of the world, the annual death rate per 1000 being in recent years about 20.5. The sewerage system is necessarily gigantic, there being altogether about 250 miles of sewers. There is no single system of water supply, the water being furnished by several companies from the Thames, the Lea, and other sources. The chief supply is that brought by the New River Company, established in the time of James I, and obtaining its supplies partly from springs and artesian wells, but mainly from springs and wells. The New River and its companies have a total capital of about £14,000,000. The water supply at present is barely sufficient, and the quality of the Lea and Thames water is defective. The gas is also supplied by several companies, their capital amounting to about £13,000,000.

Civil Administration.—The City of London proper is governed by a lord-mayor, chosen annually, and by twenty-five aldermen, four sheriffs and two hundred and thirty-two common councilmen. The lord-mayor is elected by the members of the city guilds or companies, known as the livymen, and numbering about 7000. He receives an allowance of £10,000 a year, which does not usually, however, meet the expenses he incurs. The other districts of London are variously governed. A body known as the Metropolitan Board of Works, created in 1855, took charge of all general Improvements, and had the management of all public works in which the taxpayers of the metropolis had a common interest up to 1889, when it was superseded by the London County Council under the Local Government Act of 1888. The administrative County of London comprehends the whole of the metropolitan Parliamentary boroughs, which elect 118 county councillors; there being also 10 aldermen (or a number not to exceed one-sixth of the councillors). The City of London is unaffected by this change, except that its sheriffs are no longer sheriffs of Middlesex, and the right of appointing certain judicial officers is transferred from the corporation to the crown.

History.—In the reign of Claudius (41-54 A.D.) the southern part of Britain was made a Roman province, and London became a Roman station. In the time of Constantine, about 306, the Romans fortified and walled it, and it eventually became a great commercial city. After the withdrawal of the Roman legions, London remained for a considerable time in possession of the Britons, but was at length taken by the Saxon invaders, became the capital of the East Saxons, and under Ecgbert of Wessex (823-857) had the position of capital for all England south of the Firth. In 851 it was taken by the Danes, but was regained by Alfred in 884. Under Cnut and his son Harold many Danish colonists settled in London, contributed largely to the development of its commerce, and practically made it the capital of England. At the Conquest London submitted to William, and received from him a charter, which is still preserved. It also obtained charters from Henry I, Stephen, Richard I and John. The first mayor was fitz Alwyn, 1180-1212. In 1218 the forest of Middlesex was cleared, and that portion of London north of the city began to be built. In 1285, London having outgrown its water supply, leaden pipes were laid to convey water from Tyburn Brook. In 1349 and 1361 London was visited by the plague. In 1381 much damage was done during Wat Tyler's insurrection. In the fifteenth century some of the principal streets were paved; the plague or sweating sickness raged in several years of this century. In the sixteenth century Westminster was connected with the city by a row of noblemen's mansions along the river, the last of which, Northumberland House, recently made way for the Grand Hotel. St. Bartholomew's Hospital and St. Thomas' Hospital were now founded.
and theaters began to be an important feature. In the seventeenth century the metropolis was greatly extended. The Neck River was completed, and many houses were supplied with water; sewers were dug; pavements were laid down for passengers; and hackney-coaches came into general use. But the streets were so narrow and dirty, and the houses in so filthy a state, that the city was scarcely ever exempt from the plague, which sometimes committed great ravages, the great plague, which lasted from December, 1664, to January, 1668, carrying off about 69,000 persons. In 1866 the great fire broke out, and spread over 336 acres, destroying 13,200 houses, ninety churches, and many public buildings. Population and trade now rapidly increased, partly from the immigration of French Protestants driven from their country by the revocation of the Edict of Nantes. In the eighteenth century the metropolis steadily advanced in extent, prosperity and splendor. After the accession of George II in 1727 two new bridges, Blackfriars' and Westminster, were added to the single bridge which at that time spanned the Thames in the metropolis. In the middle of the century the population was about 600,000. In 1759 the British Museum, founded on Sir Hans Sloane's collections purchased by the government, was opened. About this time the houses began to be numbered and the names of streets marked at the corners. In 1781 the Gordon riots took place, when the mob was in possession of London for two days, and committed great havoc. In 1807 gaslight was introduced in the streets. In 1812 the extension of the metropolis about Regent's Park commenced, and an act for the formation of Regent street was obtained in 1813. In 1817 Waterloo Bridge was opened; in 1819 Southwark Bridge. In 1831 new London Bridge was opened. In 1834 the old Houses of Parliament were burned down; the present buildings were begun in 1840. In 1851 the great international exhibition was held in Hyde Park, and led to numerous exhibitions of a similar kind. Since then the history of London has been a story of continued growth and progress, the most notable improvements being the formation of the Thames Embankments, and the Holborn Viaduct.

TREATY OF LONDON. See Balkan War.

London, a town of Canada, the capital of Middlesex county, Ontario, on the Thames and the Grand Trunk and Canada Pacific railways, 121 miles west of Toronto. It was first laid out in 1825, and is well and regularly built, with some handsome public buildings, among which are the city hall, courthouses, Western University, Normal School, and other colleges. There are manufactures of stoneware, brick works, iron foundries, chemical works, and other industries. It is the center of a rich agricultural region with an active trade in agricultural produce. Pop. (1913) 55,026.

London, Jack, novelist, was born at San Francisco in 1876. He went to sea as a common sailor in 1892; tramped through the United States and Canada for sociological study in 1894; served as journalist and lecturer, and was a war correspondent in the Russo-Japanese war. His books and stories have been numerous and are strikingly original in style, dealing with the primitive passions and conditions. Among them are The Son of the Wolf, The People of the Abyss, The Call of Wild, White Fang, Before Adam and The Iron Heel. He died Sept. 1, 1916, at Glen Ellen, Calif.

London, University of, was originally established as a joint-stock undertaking in 1822. In 1836 two charters were granted, one to a university retaining the name of London University, and having power to examine and grant degrees, another to a teaching body occupying the original premises at Gower street, which took the name of University College, and now prepares students for obtaining the degrees conferred by the university. New and supplementary charters were granted in 1858, 1863 and 1878, the last admitting women to all degrees and prizes granted by the university. The university admits as candidates for examination any person who is above sixteen years of age, and confers degrees in all departments of knowledge except theology. Provincial examinations are held in a number of different towns.

London Clay, the most important of the Eocene tertiary formations of Great Britain, largely developed in the valley of the Thames under and around the metropolis. This formation consists of a bluish or brownish clay containing layers of argillaceous nodular limestone. The shells, fruits, etc., found in the London clay mostly belong to genera now inhabiting warmer seas than those of Britain.

Londonderry (lun'dun-de-r'), a city and seaport in the north of Ireland, capital of the county of the same name, on the river Foyle, which is here crossed by an iron bridge 1200 feet long. The city stands partly on a hill crowned with the Protestant cathedral, and still retains its old walls, though the buildings now stretch far be-
yond them. There is also a handsome Roman Catholic cathedral. The chief educational institution is Magee College, which gives courses in arts and theology, the latter specially adapted for Presbyterian students. The harbor is commodious, and vessels of large tonnage can discharge at the town. An extensive trade is carried on, linen is manufactured, and there are shirt factories, timber mills, grain mills, foundries, distilleries, etc. Derry took origin in a monastic establishment erected by Columba in 546. The corporation of London, which obtained a grant of the town from James I., fortified it, and gave it the name of Londonderry. Here the Protestants of Ulster took refuge at the Revolution, and made a famous defense against the forces of James II. The corporation meeting was held 21st till August 1, 1689. Pop. 40,799. —The County is bounded on the north by Lough Foyle and the Atlantic Ocean, elsewhere by Tyrone, Lough Neagh and Antrim; area, 810 square miles. It is very hilly and mountainous, consisting partly of wild and bleak tracts of mountain and moor, partly of flat alluvial lands. The fisheries are important. The staple manufacture is linen. A great part of the county belongs to several London livery companies, having been granted to them by James I. in 1609, after the flight of the Earls of Tyrone and O'Donnell. Pop. 144,404.

Londonderry, Robert Stewart, Second Marquis of, a British statesman, born in County Down in 1769. In 1796 he became Lord Castlereagh, and, being a member of the Irish Parliament, next year he was made keeper of the privy-seal for that kingdom, and the year after chief secretary to the lord-lieutenant. After the Union he sat in Parliament as member for Down, and in 1802 was made president of the Board of Control. In 1805 he was appointed secretary of war and the colonies; but on the death of Pitt he retired until the dissolution of the brief administration of 1806 restored him to the same situation in 1807; and he held his office until the failure of the expedition to Walcheren, advocated by him, and his duel with his colleague, Canning, produced his resignation. In 1812 he became foreign secretary, and played in the surface of the Congress of Vienna in 1814. He became very unpopular through his conduct on this occasion and his support of the Holy Alliance; and the responsibilities which he had to assume as virtual prime minister in connection with repressive measures for the protection of order, and the fatigues of an arduous session, seem to have unhinged his mind, leading him to commit suicide in 1822. He had succeeded his father the year before as Marquis of Londonderry.

London Pride (Sasifraga umbrosa), a perennial evergreen plant of the saxifrage order common in Britain. It has flower-stems 6 to 12 inches high, with small spotted pink flowers.

London Purple, an arsenical powder used as an insecticide in plant life.

Long, Charles Chaille, soldier, born at Princess Anne, Maryland, in 1842. He served in the Civil war, attaining the rank of captain. In 1869 he was made a lieutenant-colonel in the Egyptian army; chief of staff to General Gordon in 1874; a团员 of the United States in 1877 and was admitted to the bar; was appointed consul-general in Corea in 1887; special commissioner to the Paris Exposition in 1900. He is the author of various works of travel, in Africa and other works of fiction.

Long, Crawford W. (1815-78), an American physician, born at Danesville, Georgia, educated at Franklin College (now the University of Georgia), and after practicing for a time in Jefferson, Ga., he removed to Athens, Ga. He was probably the first to use ether anesthesia in surgery, in March, 1842; but he failed to publicly announce the results at the time, and Dr. W. T. G. Morton (q. v.), in Boston, meanwhile publicly demonstrated the efficacy of vaporized ether as an anesthetic.

Long, George, an English scholar, born in 1800; died in 1879. He was educated at Cambridge, became professor of ancient languages in the University of Virginia in 1824; professor of Greek in the Universit of London in 1828, but resigned in 1831; professor of Latin at University College in 1842-46; classical lecturer at Brighton College 1849-71. He was one of the founders of the Royal Geographical Society, and did much work in connection with the Society for the Diffusion of Useful Knowledge, including the editing of the Penny Cyclopedia. He contributed largely to Smith's Dictionaries of Greek and Roman Antiquities, Biography and Geography. Among his works were a translation of Select Lives from Plutarch (1844), a Classical Atlas (1854), The Decline of the Roman Republic (1864-74). He was also general editor of the Bibliothèque Classique, to which he contributed a valuable edition of Cicero's Orations.

Long, William Joseph, clergyman, born at North Attleboro, Mas
sachusetts, in 1867. He was ordained to the Congregational ministry in 1889, and is a lecturer and writer on nature and animal life. His books include Ways of Wood Folk, Secrets of the Woods, A Little Brother to the Bear, etc. His descriptions of animal life have been severely criticised by John Burroughs and others.

**Long**, Loch, a narrow, picturesque arm of the sea, in Scotland, stretching with a slight curve north and northeast from the Firth of Clyde for about 16 miles within the counties of Argyll and Dumbarton.

**Longan** (long'gan), an evergreen Eastern tree (*Nephelium Longanum*), a native of the south of China, yielding a delicious fruit. It is of the same genus with the litchi, but its fruit is brown and smaller, being about 1½ inches in diameter. It is grown to some extent in European hoop-houses.

**Long Beach**, a city, port, and resort of Los Angeles Co., California, 20 miles s. of Los Angeles. There is here the largest drydock south of San Francisco. Its industries include shipbuilding, canning (fish, olives, fruits and vegetables), and woolen mills. Pop. (1910) 17,508; (1920) 55,583.

**Longboat**, formerly the largest boat carried by a merchant vessel.

**Long Branch**, a fashionable watering place on the coast of New Jersey, 32 miles south of New York. It has wide avenues with numerous hotels, boarding houses and cottages. The permanent population is 13,521, but during summer is sometimes increased by 60,000 or more.

**Longevity** (long'jev'i-ty), a term which is used both for average or probable duration of life in a community, or for great length of life reached by particular individuals. Statistics gathered by life insurance companies indicate that a person at the age of 10 years has an average expectation of living 48.36 years longer; at 20 years 41.40 years longer; at 30 years 34.43 years longer; at 40 years 27.28 years longer; at 50 years 20.18 years longer; at 60 years 13.77 years longer; at 70 years 9.54 years longer; at 80 years 4.78 years longer; at 90 years 2.11 years longer. When the sexes are considered separately the average duration of life is somewhat higher in women than in men. The question of the extreme limit to which human life may possibly attain is also of great interest. Ordinary observation leads to the conclusion that a comparatively small number of men reach the age of 70, a very much diminished number attain to 80, while 90 is rare. There are, however, well-authenticated cases of persons who have reached 100 years, and even a few years more; but such cases as that of Thomas Parry, said to have been 152 years old, and Henry Jenkins, said to have been 180, rest on mere unreliable assertion.

**Longfellow** (long'fel'o), HENRY WADSWORTH, an American poet, was born at Portland, Maine, in 1807; died in 1882. He entered Bowdoin College at fourteen years of age (1821) and was graduated in 1825. While at college he distinguished himself in the study of modern languages, and published some short poems, among which was the Hymn to the Moravian Nuns. In 1826 he accepted the professorship of modern languages at Bowdoin, being allowed three years to prepare himself for the post by study and travel in Europe. In 1833 he published a volume of translations from Coplas de Manrique, with an essay on the Moral and Devotional Poetry of Spain; in 1835 appeared Outre Mer, a volume of prose sketches, and in the same year he was elected to the chair of modern languages and literature in Harvard University. After spending another year in Europe, studying Scandinavian languages and literature, he entered on his professorship in 1836. In 1839 he published Hyperion, a Romance, and Voices of the Night, a series of poems. Ballads and other Poems and a small volume of Poems on Slavery appeared in 1842; the Spanish Student, a drama in three acts, in 1843; the Belrfry of Bruges in 1845; Evangeline in 1847. In 1845 he published a volume—The Poets and Poetry of Europe, containing translations by himself and others, with much valuable information respecting the writers among the best-known of his later works are The Golden Legend, Hiawatha, Courtship of Miles Standish and Tales of a Wayside Inn. He resigned his chair at Harvard in 1854, and subsequently received the degrees of L.L.D. and D.C.L. from the Universities of Cambridge and Oxford. His poems are equally popular on both sides of the Atlantic.

**Longford**, an inland county of Ireland, in the province of Leinster, bounded on the west by the Shannon and Lough Ree, area 421 square miles. The surface is mostly flat, and bogs are numerous and extensive, especially around Lough Ree and in the west, but a great portion of the south and west consists of rich soil suitable for growing all kinds of grain and green crops. Grazing and dairy farming are the principal pursuits. By means of the Royal Canal and the Shannon the county has water...
Longicorn Beetles

Longicorn Beetles, a family of Coleoptera, including a vast number of large and beautiful beetles, all remarkable for the length of their antennae, which, in the males of some of the species, are several times longer than their bodies. The females deposit their eggs beneath the bark of trees by means of a long, tubular, horny ovipositor and the larvae are very destructive to wood.

Longinus (lon'jin-us), Dionysius, or Cassius, a Greek writer, born about a.d. 213, according to some at Athens, according to others at Emea or Palmyra. He taught rhetoric, rhetoric and grammar at Athens, visited the East, and became counselor to Zenobia, queen of Palmyra, whom he encouraged to throw off the Roman yoke, for which, after the reconquest of Palmyra, he was put to death by the Emperor Aurelian a.d. 273. Of the many writings of Longinus the treatise On the Sublime is the only one extant.

Longirostrises (lon'i-ri-os-tri-ses; l. longus, long, and rostrum, a beak), a group of wading birds (Grallatores), characterized by the possession of long, slender, soft bills, mostly frequenting marshy districts, moors, fens, etc. This group comprises the snipes, woodcocks, sandpipers, curlews, ruff, godwit, turnstone, avocet, etc.

Long Island, an island belonging to the State of New York, extending 118 miles in length, and varying from 12 to 26 miles in breadth; area, 1682 square miles. A considerable section of the eastern portion of it, including the large city of Brooklyn, is now included in New York city, while it is connected with Manhattan Island by several large suspension bridges across East River and by tunnels under this river. Long Island Sound separates it from Connecticut. The most fertile portions of the island are carefully cultivated and much produce raised for the New York market. There are many seaside resorts along the coast, including the popular Coney Island.

Longitude

Longitude (lon'jit-úd) in geography, the distance of a place due east or west from a meridian taken as a starting point, this distance being measured along the equator or a parallel of latitude; in other words, it is the angle between the meridian plane of one place and some fixed meridian plane. Longitudes are generally reckoned from the meridian of Greenwich; the meridians of Paris, Ferro and Washington have been also employed. That of Paris was abandoned in 1911 in favor of the Greenwich meridian. (See Meridian) Since the
Longstreet

parallels of latitude get smaller towards the poles, at which all the meridians converge, it is evident that degrees of longitude which are 69°, statute miles long at the equator, get shorter towards the poles, at which they finally cease to exist. As the earth makes one revolution on its axis, that is, turns through 360° of longitude from west to east, in twenty-four hours, if the sun or a star is on the meridian of any place at a particular time it will be on the meridian of another place 15° west of the first in one hour. Thus 15° of longitude represent one hour of difference in time, and hence longitude may be easily determined by the use of the chronometer set to Greenwich time, which is the method commonly employed at sea. Longitude is reckoned to 180° eastward or westward of the fixed meridian.

Longmont, a city of Boulder Co., Colo., 42 miles N. of Denver. Has flour mills, sugar refineries, etc. Pop. 5848.

Longstreet (long'strét), General James, an American soldier, born in South Carolina in 1821. He was graduated at the Military Academy in 1842; saw much service on the Mexican frontier, and took a prominent part on the Confederate side during the Civil war, chiefly in connection with General Lee's army. Promoted lieutenant-general, he commanded a corps at the battle of Gettysburg. He was severely wounded in the battle of the Wilderness. After the war he occupied several important positions, including those of Minister to Turkey and U. S. Marshal for Georgia. In 1897 he was made a commissioner of railroads, and died in 1904.

Longton (long'tun), a municipal borough of England, in Staffordshire, 5 miles S.E. of Stoke-upon-Trent. It is a seat of china and earthenware manufacture, and has breweries, malt kilns, brickworks, and in the vicinity coal mines and iron mines. Pop. 37,481.

Longus (lon'gus), a Greek novelist, probably of the third century after Christ. He is the author of the pastoral romance of Daphnis and Chloe.

Longview, a city, capital of Gregg county, Texas, 24 miles w. of Marshall. It has saw and planing mills, plow and bottling works, cottonseed oil mills, etc. Pop. (1920) 5848.

Longworth (long wurth), Nicholas, horticulturist, was born in Newark, New Jersey, in 1782. In 1803 he removed to Cincinnati. He devoted himself to the cultivation of the grape and strawberry. Kindly but eccentric, he gave much money to those called by him the 'devil's poor.' His property was estimated at from ten to fifteen million dollars. He died in 1863.

Lonicer'a. See Honeysuckle.

Lons-le-Saunier (lon-lé-so-nyá), a town of France, capital of the department of the Jura, 45 miles s. w. of Besançon. It has manufactures of spectacles, textiles, etc. Pop. (1906) 10,648.

Loo-Choo, Leu-Chew, Liu-Kiu (Japanese, Riu-Kiu), a chain of islands between the Pacific, and Formosa, and between lat. 24° 10' and 28° 40' N.; but the name is sometimes extended also to the group further north, properly known as the Linschoten Islands. The largest island is Okinaw, or Great Loo-Choo (area about 500 sq. miles). Oshima, the island next in size, has an area of 300 sq. miles. The climate is healthy, temperate and favorable for agriculture. The chief products are rice, wheat, maize and bananas; the sugar-cane, cotton, sago, tobacco, indigo, the fig and the banana are also grown. The inhabitants are mainly of race akin to the Japanese, but their manners and civilization are chiefly those of the Chinese. Since 1874 the archipelago has belonged to the Japanese empire. Confucianism is the prevailing religion, but Buddhism has a considerable number of adherents. Pop. 453,550.

Loomis (lo'mis), Charles Battell, author, born at Brooklyn, New York, in 1861. He became a prolific writer for periodicals, and is the author of numerous sketches, many of them humorous. Of them may be mentioned The Four-masted Catboat, I've Been Thinking, Poe's Raven in an Elevator, A Holiday Touch, Little Maude, etc. He died in 1911.

Loomis, Elias, physicist, was born in Willington, Connecticut, in 1811. In 1833 he became Prof. of Mathematics and Natural Philosophy in Western Reserve College; in 1844 Prof. of Natural Philosophy in the University of the City of New York; in 1860 Prof. of Natural Philosophy and Astronomy in Yale College. His text-books on the subjects of mathematics, astronomy and the natural sciences have had an immense circulation. He died in 1889.

Lopez (lo'pez), Cape, a low promontory on the west coast of Africa, in the delta of the River Ogowe, territory of the French colony of Gabun. In 1883 M. de Brazza made it a station and entrepôt.

Lopez, Francisco Solano, President of Paraguay, born at Asunción
in 1827, son of Don Carlos Antonio Lopez, then president. His early education was neglected during the dictatorship of Francia. In his eighteenth year his father made him a brigadier-general in the war against Rosas, the dictator of Buenos Ayres, but he took no actual part in the struggle. He afterwards filled some of the principal offices of state, and was sent to Europe in 1853, accredited to the chief courts there. In 1855 he returned to Paraguay, became minister of war, and on the death of his father, in 1862, President for ten years. He had long been aiming at the foundation of a great inland empire, and as his military preparations were now complete, and his army superior to that of any of the South American States, he took opportunity in 1864 to commence hostilities against Brazil. The Argentine Republic and Uruguay allied themselves with Brazil, and after five years' conflict Lopez was reduced to extremities, and was finally surprised on the banks of the Aquidaban by a troop of Brazilian cavalry and slain, March 1, 1870. The latter part of his career had been stained by many cruelties and wanton murders. See Angler-Fish.

Lophius. See Angler-Fish.

Lophobranchii (lof-o-brank'hi), the suborder of Teleostean fishes, including the peculiar 'sea-horses' and the 'pipe-fishes.' See Pipe-fish and Hippocampus.

Loquat (lo'kwat; Eriobotrya Japonica) a Japanese fruit-tree of the nat. order Rosaceae, and closely allied to the medlar. The fruit is about the size of a large gooseberry, of a fine yellow color. The tree is a beautiful evergreen, whose white flowers have a fragrance like that of hawthorn blossom. It attains a height of from 20 to 30 feet, but when cultivated it is not allowed to exceed 12 feet. It thrives well in Australia.

Lorain (lo-rân'), a city of Lorain Co., Ohio, on Lake Erie, 25 miles w. of Cleveland. It has a splendid harbor; ore and coal docks handling an immense tonnage; great steel works and shipyards; automobile and rubber plants, etc. Pop. (1910) 28,883; (1920) 37,295.

Loranthaceae (lor-a-n-tha-se-ë), a nat. order of exogenous plants, of which the mistletoe is the type, the periwinkle being often brilliantly colored, all in one piece, or formed of many sepals.

Lorca (lor'kâ), a town of Eastern Spain, in the province and 42 miles southwest of Murcia, consists of an old Moorish town on the site of a castle, and a lower modern town. There are manufactures of coarse woolens, linens, leather, soap and earthenware, and an important annual fair which lasts fourteen days. In the vicinity are lead mines. Pop. 60,836.

Lorcha (lor'châ), a light Chinese sailing vessel, carrying guns, and built after the European model, but rigged like a Chinese junk.

Lord (Anglo-Saxon hlaford, for hlaf-geard, that is bread-keeper), a title of honor or dignity, used in different senses. In the feudal times a lord was the grantor or proprietor of land, who retained the dominion or ultimate property of the land or fee, the use only being granted to the tenant. A person who has the fee of a manor, and consequently the homage of his tenants, is called the lord of the manor. Loosely all who are noble by birth or creation, as the peers of Britain, may be called lords. The lords temporal, in contradistinction to the lords spiritual, are the, eers who sit together in the House of Lords, as opposed to the bishops who have seats in the house. Lord is sometimes only an official title, as lord advocate, lord mayor, etc. It is also applied, but only by courtesy, to the sons of dukes and marquises, and to the eldest sons of earls. (See Address, Forms of.) In Scotland the Judges of the Court of Session prefix the title 'lord' to their surname, or to some territorial designation assumed by themselves. Judges, when on the bench, are addressed as 'My lord' throughout the three kingdoms.

Lord Mayor. The title given to the chief magistrates of London, Dublin and York, during the year for which they hold office.

Lord-Mayor's Day, the 9th of November, on which a great procession accompanying the newly-elected Lord Mayor of London, from Westminster to Guildhall, takes place. The procession, formerly famous for its historical and allegorical shows, has now much dwindled.

Lords, House of. See Parliament; Lords, also Britain.

Lord's Prayer, a formula of prayer enunciated by Christ on two different occasions, for which see Matt. vi. 5-13; Luke xi. 1-4. Among the earliest Christians it was accepted as the standard form of prayer, and its use in the liturgy is frequently mentioned by the early fathers. The concluding clause of the prayer, known as the doxology, 'For Thine is the kingdom,' etc., is not found in St. Luke's gospel, and even in that of St. Matthew it is only found in some of the later manuscripts, in which it is generally held to be an interpolation.
Lord’s Supper

It is generally retained by Protestants, but is discarded by Roman Catholics.

Lord’s Supper, one of the sacraments of the Christian religion: so named because it was instituted by our Saviour when he took his last meal with his disciples, on the occasion of celebrating the Passover. It has also the names of eucharist and communion, and among the Catholics that of the mass or sacrifice of the mass. It has undoubtedly been celebrated, with certain differences, since its institution, and still is celebrated by all sects of Christians except the Quakers, however much their views may differ as to its nature and virtue. The chief controversies regarding the nature of the rite have been chiefly on the question of the ‘real presence’ of Christ’s body and blood and the doctrine of transubstantiation. The doctrine of transubstantiation, first started by Paschalis Radbertus in the ninth century, was soon generally received, and at last was officially approved by the Council of Rome in 1079, and solemnly confirmed in 1215 by the fourth Lateran Council. According to this doctrine the whole substance of the bread and wine is changed into the body and blood of Christ, only the appearance of bread and wine remaining; and the Roman Catholic Church further maintains that Christ is given wholly and entirely both under the form of the bread and under that of the wine. From the doctrine of transubstantiation sprang the adoration of the host (or sacred bread), as well as the custom of refusing the cup in the communion to the laity and non-officiating priests, a practice first authoritatively sanctioned at the Council of Constance, 1415. At the Reformation both the German and Swiss reformers agreed in rejecting the doctrine of transubstantiation and the mass, and maintaining that the Lord’s supper ought to be celebrated before the whole congregation, and with the administration of both bread and wine. In explaining the words by which the supper was instituted Luther and Zwingli differed, and their different opinions on this subject formed the principal subject of dissension between the Lutheran and Calvinistic churches. Luther took the words, ‘This is my body’, etc., in their literal sense, and thought that the body and blood of Jesus Christ are united, in a mysterious way, with the bread and wine, which, however, remain unaltered, so that the communicant receives, in, with, and under the bread and wine, the real body and blood of the Redeemer. Zwingli, on the other side, understood the words in a figurative sense, and maintained that the Lord’s supper was a mere commemoration of the death of Christ, and a profession of belonging to his church. This view is in essence adopted by the Socinians, Arminians and some others. The opinion advanced by Calvin, by which a spiritual presence of the body and blood of Christ is supposed in the communion, by partaking of which the faithful receiver is brought into union with Christ, through the medium of the Holy Ghost, though it came nearer to the Lutheran doctrine than that of Zuingli did, yet was essentially different. The Greek Church has not adopted the doctrine of transubstantiation in its whole extent; yet her doctrine, which was defined and sanctioned by the Synod of Jerusalem in 1672, comes nearer to this dogma than to that of the Reformed Church. The Anglican Confessions incline towards the view of Zwingle. The 28th Article of the Church of England declares that ‘the body of Christ is given, taken, and eaten in the supper only after an heavenly and spiritual manner.’ The doctrine adopted by the Presbyterian Church of Scotland in the main agrees with that propounded by Calvin.

Lorelei (lör’-lē), a precipitous cliff on the Rhine, about 450 feet high, half a mile above St. Goar. Legend gives it as the abode of a siren, who by her singing enticed boatmen thither to their destruction.

Lorenzo Marques. See Delagoa Bay.

Loretto, or Loretto (lo-rē’tō), a city of Italy, in the province of Ancona, about 8 miles from the sea. Pop. 7845. The city is a famous resort of pilgrims, who come to visit the Osa Santa or Holy House of Loretto, which is said to have been the house of the Holy Family at Nazareth, and to have been miraculously conveyed by the angels first to Ephesus in Lydia, and afterwards to Loretto. This Holy House, which is in the center of a church built by Majano and Bramante (1494-1587), is covered externally with white marble, is 30 feet long, 15 wide and 18 feet high, and richly ornamented. The number of pilgrims amounts to 50,000 yearly.

Lorient, or L’Orient (lo-ri’ān), a fortified seaport of France, in the department of Morbihan, at the mouth of the Scorn. It is well built, and has a capacious harbor and extensive docks. Pop. (1906) 40,848.

Lorikeet (lor’i-kēt), the general name of certain small Australian birds belonging to the parrot tribe and forming the genus Trichoglossus, remarkable for their extensible tongue, fur-
Loris, a genus of quadrumanous mammals allied to the lemurs. 

Loris-Melikoff (lōr’īs-mēl’ī-kof), Michail Tarkeowitch Tainoff, Count, a Russian general, born in 1826 at Tiflis; died in 1888. He entered the army in 1843; distinguished himself in the Caucasus in 1847, and at the siege of Kars in 1854; was made lieutenant-general in 1863; commander of the army in Armenia in 1876, and took Kars. In 1878 he was made a count; in 1879 governor-general of Charkow, in which post he suppressed the Nihilistic conspiracies with much vigor. In 1880 he was appointed minister of the interior, in which post he showed a tendency towards measures of a wide remedial kind, and had persuaded the czar, Alexander II, to call a kind of national representative assembly, when the assassination of the latter occurred, March, 1881. On the accession of Alexander III, Loris-Melikoff’s position became untenable, and he resigned in 1881.

Lorne (lōr’n), John George Douglas Sutherland Campbell, Marquis of, and Duke of Argyll since 1896, was born in 1845, and educated at Eton, St. Andrews University and Cambridge. He represented Argyllshire in the Liberal interest (1868-78), married the Princess Louise, a daughter of Queen Victoria, in 1871, and was governor-general of Canada from 1875 to 1883. He has written several books, tales, etc., among which we may mention The Book of Psalms, literally rendered in verse; A Trip to the Tropics; Guido and Lita, a Tale of the Riviera (in verse); Memoirs of Canada and Scotland.

Lorraine (lōr’ān; Ger. Lothringen; anc. Lotharingia), a territory of France, in the department of Moselle, was originally so named as being the kingdom of Lothaire II. It was afterwards divided into two parts, Upper and Lower Lorraine. The latter, between the Rhine, Meuse, and Scheldt became the duchy of Brabant, and ultimately a part of Belgium. Upper Lorraine, between the Rhine, Saône and Meuse, was for long an independent duchy, but was ceded to France in 1725. The inhabitants, though of German origin, speak the French language, except those of the district between Metz and the Vosges, which was on that account called German Lorraine. At the end of the war between France and Germany, in 1870-71, a considerable portion of Lorraine, including the fortresses of Metz and Toulon, was annexed to Germany (see Alsace-Lorraine). By the treaty of 1919 (see Treaty) it was restored to France.

Lorraine, Claude, see Claude Loraine.

Lory (lōr’ē), a group of scansional birds, of the family Psittacidae or parrots, having broad tails, and dense soft plumage, the colors of which are brilliant. They are found in the Eastern Archipelago, also in New Guinea, Borneo and the South Sea Islands. The collared lory is easily taught to speak.

Los Angeles (los an jel’es, or ang’ge-les), a city, port, and county seat of Los Angeles Co., California; the commercial metropolis of Southern California, first city in population on the Pacific coast, and tenth in the United States. It is situated on the Los Angeles River and with the consolidation of the harbor towns of San Pedro and Wilmington the city now embraces about 15 miles of territory from the ocean up the Los Angeles River. It is 345 miles s.e. of San Francisco; has a fine harbor; steamer communication with northern ports; and is served by 6 transcontinental lines. The principal articles of export are fruits, vegetables, wool, honey, canned goods, olives, grain, petroleum, and varied manufactures. It has over 2700 manufacturing plants, representing a value of a half billion dollars. It is the headquarters of the motion-picture film industry. The greatest aqueduct in the world, built in 1908-13, costing $23,000,000, brings mountain water a distance of 250 miles. Its delightful climate, beautiful location and splendid highways have made it popular for health and pleasure seekers. It is the seat of University of Southern California (3000 students), State Normal School and other institutions. Pop. (1890) 50,395; (1900) 102,479; (1910) 319,193; (1920) 576,673.

Lost Property, strays and waifs excepted, may be re
tained by the finder with impunity, after proper means have been taken to advertise it; and if it cannot be conveniently preserved without hazard he may dispose of it if not claimed. If, however, the loser can identify his property he has a right to restitution, and a third party purchasing lost property from the finder must restore it to the owner if called upon. There are certain cases in which a jury will construe the retention of lost property into larceny. The finder is not obliged to incur expense in advertising for the owner. In Britain cases of treasure-trove, i.e., the finding of valuables deposited in the earth, the finder must, under a penalty, give notice to the crown, in which the ownership of all treasure-trove is vested.

Lot (lō), a department in the south of France; area, 2017 sq. miles. The arable land, amounting to a half of the whole, has deep alluvial soils, adapted to wheat, maize, hemp, and tobacco; and lighter soils, more suitable for barley, rye, and root crops. Vines, the mulberry for silkworms, and plums are extensively grown. Sheep-rearing is an important industry. Corn and other agricultural products are largely exported. The capital is Cahors. Pop. (1906) 116,611.

The river Lot, which gives name to the department, is one of the largest tributaries of the Garonne. Total course, about 250 miles, of which 180 miles are navigable.

Lot-et-Garonne (lō-ē-gä-rōn), a department in the southwest of France; area, 2079 sq. miles. It is intersected by the Garonne and its tributary the Lot, hence the name. More than a half of the department is arable, producing crops of wheat, maize, rye, etc. Other important crops are tobacco and hemp. Prunes and chestnuts are largely exported, and the cork-oak is abundant. There is an active trade in wine, brandy, meal, hemp, resin. Capital, Agen. Pop. (1906) 274,010.

Lothaire (lō-thēr'), a name of old German origin, borne by kings of the Franks and early German emperors. See Louis I.

Lothian, East. See Haddington.

Lothian, Mid. See Edinburgh.

Lothian, West. See Linlithgow.

Loti (lō-tē), Pierre, pen name of Louis Marie Vial, born at Rochefort, France, in 1850. He entered the navy, but his descriptions of the conduct of the French soldiers at Hue in 1883 led to his dismissal. He became an active writer, producing vivid and charming pictures of nature, which brought him membership in the French Academy in 1891. Among his books are Le Mariage de Loti, Madame Claude, and Le Desert.

Lotophagi (lō-tōf-ā-jī), or lotus-eaters, in ancient Greek legends, the name of people and a greater north coast of Africa who lived on the fruit of the lotus tree. According to Homer they received Ulysses and his followers hospitably, and the sweetness of the fruit induced such happy languor that the Greeks forgot their native land.

Lotschberg Tunnel (loch-berk), a transalpine railway tunnel, over nine miles long, extending from Kandersteg in the Bernese Oberland to Goppenstein, 17 miles from Brigue. The work of cutting was begun in 1906 and completed in 1911. Difficulties arose because of the subterranean heat, but the tunnel was remarkable for the accuracy of its calculation, in spite of the fact that it was cut in two curves.

Lottery (lō’tér-i), a scheme for the distribution of prizes by chance, the plan being generally to have a certain number of prizes and a greater number of tickets. Lotteries on large scale originated in Italy, from whence they passed into France. In 1709 the rage for private, and, in many instances, most fraudulent lotteries, was at its height in England, and towards the close of the year an existing act of Parliament was put in force for the suppression of such lotteries as public nuisances. Government lotteries still continued, however, and large sums of money were raised by them; but in 1826 lotteries were entirely abolished in Britain, except in the case of art unions, which are permitted from their supposed good effects in encouraging art. In France the demoralizing influence of lotteries caused their suppression in 1836, with the effect of largely increasing in the following year the deposits in the savings-banks. Lotteries were early instituted in the American colonies and became very popular in the eighteenth century, being commonly resorted to for the purpose of assisting colleges or other public institutions. Efforts to abolish them were made early in the nineteenth century, and they were prohibited in a number of the States before the middle
Lotus (lot′səs), a name applied to a number of plants different from the lotus famous in Greek legend. One of these is the *Zizyphus Lotus*, a native of Northern Africa and Southern Europe, belonging to the nat. order Rhamnaceae. It is a shrub 2 or 3 feet high, bearing a fruit, the jujube, which is a drupe of the size of a wild plum. Some think this was the food of the Lotophagi (see Loto-phagi), though others consider Homer’s lotus to have been the date, or the berry of the *Rhamnus Lotus*, a North African shrub, while others again refer it to the aggregate berry of *Mirtus tridentata*. It is still greatly prized by the Berbers. The name lotus was also given to several species of water-lily, as the blue water-lily (*Nymphæa cerulea*), the Egyptian water-lily (*N. Lotus*), and to the nelmboo (*Nelumbium speciosum*), which grow in stagnant or slowly running waters. *Nymphæa cerulea* and *N. Lotus* are often found figured on Egyptian buildings, columns, etc., and the nelmboo, or, in the popular wild flowers, such as British Wild Wild Flowers (1846), and Botany for Ladies (1849). She died in 1858.

Louise (luf′bur-′), a town in the county and 10 1/2 miles N. N. W. of Leicester. It is nearly built, and has a thriving appearance. The principal manufacture consists of hosiery. There are also a famous bell foundry, dyeworks, brickworks, etc. Pop. (1911) 22,962.

Louis I (lō′is; Fr. pron. lo′-e′), or as a German name *Luwrto*., or named *Le Débonnaire*, or the *Pious*, the son of Charlemagne, born in 778, succeeded his father in 814 as King of the Franks and Emperor of the West. In 817 he divided his dominions among his three sons, Lothaire, Pepin and Louis. His nephew Bernard, king of Italy, revolted at this division, but was allured by Louis to Châtions, where he was put to death. In 829, in consequence of the urgent solicitations of his second wife, Judith of Bavaria, who had borne him a son, he made a new division of his dominions. The result was that the elder brothers revolted and commenced a war, which, with various fortune to the parties chiefly concerned, lasted till the death of the emperor in 840. He was succeeded as emperor by his son Lothaire I; by the treaty of Verdun in 843 his son Charles the Bald obtained the territories from which France as a separate nationality developed; while another son, Louis the German, obtained territories from which the distinctive German nationality developed. See France, Germany.

Louis VII of France (counting from the above Louis I), born in 1120, succeeded his father Louis VI in 1137. He joined the second crusade to Palestine in 1147, but returned two years
Louis IX

afterwards, having suffered many disasters, and lost most of his men. His divorced wife Eleanor married Henry II of England, who thus acquired Guienne and Poitou. He died in 1180, and was succeeded by his son Philip Augustus.

**Louis IX** (St. Louis), King of France, eldest son of Louis VIII, born in 1215, succeeded to the throne in 1226, but remained some time under the regency of his mother. In the year 1244, when sick of a dangerous disorder, he made a vow to undertake a crusade to Palestine; and in August, 1248, sailed with his wife, his brothers, and 80,000 men to Cyprus, and in the following year proceeded to Egypt. Landing at Damietta, in 1249, he took this city, and afterwards twice defeated the Sultan of Egypt, to whom Palestine was subject. But famine and contagious disorders soon compelled him to retreat; his army was almost entirely destroyed by the Saracens, and himself and his followers were carried into captivity. Not until the year 1254 did Louis return to France, where he employed himself in improving the condition of the people by wise laws. In 1270 he determined to undertake another crusade. He sailed to Africa, besieged Tunis, and took its citadel. But a contagious disorder broke out, to which he himself (1270), together with a great part of his army, fell a sacrifice. In 1297 he was canonized by Boniface VIII.

**Louis XI.** King of France, eldest son of Charles VII, was born in 1423, and on his father's death in 1461 he assumed the crown. His unscrupulous ambition soon gave rise to a league against him, headed by the dukes of Burgundy, Lorraine and others, but his craft and the promises of concessions which he made, brought about the dissolution of the league. After the death of Charles the Bold of Burgundy before Nancy in 1477, Louis took possession by force of a considerable part of his dominions as vacant fiefs of France, on account of which a war arose between him and Maximilian of Austria, who had married Mary, the daughter of the deceased duke. It was eventually agreed that the dauphin should marry Margaret, daughter of Maximilian, and receive the counties of Artois and Burgundy. In 1481 Louis, who had been twice affected by apoplexy, haunted by the fear of death, shut himself up in his castle of Plessis-les-Tours, and gave himself over to superstitions and ascetic practices. He died in 1483. The great object of Louis was the consolidation of France, the establishment of the royal power, and the overthrow of that of the great vassals, and in achieving this end he was very successful, although by most unscrupulous means. He encouraged manufactures and trade, and did much for the good of his kingdom. But he was cold, cruel and suspicious. Louis XI was the first French monarch, who assumed the title of Most Christian King, given him by the pope 1460.

**Louis XIV.** King of France from 1498 to 1515, called by his subjects le Père du Peuple, was born in 1462. He was the son of Charles, duke of Orleans, grandson of Charles V. He divorced his first wife Jeanne, daughter of Louis XI, and married the widow of Charles VIII, thus uniting the Duchy of Brittany with the crown. In Italy he conquered the Duchy of Milan, took possession of Genoa, and fought with Ferdinand the Catholic for the Kingdom of Naples. Louis took part in the League of Cambrai against the Venetians, whom he defeated at Agnadello in 1509. In 1510, however, he had to face the Holy League formed against him by Julius II, Venice, Spain, England and the Swiss; was beaten at Novara by the Swiss in 1513, and by the English at Guinegate, and had to retreat out of Italy. At the age of fifty-three he married a second wife, Mary, the sister of Henry VIII of England, and died about three months afterwards (1515) without male issue. He was succeeded by Francis I.

**Louis XIII.** King of France, sur- named the Just, the son of Henry IV, born in 1601. He ascended the throne (1610) after the murder of his father, his mother (Maria de' Medici) being made guardian of her son and regent of the kingdom. In 1614 Louis was declared of age, and married the year following Anne, daughter of Philip III of Spain. His mother was now exiled from court, and excited a civil war, during which the Huguenots also rose in arms. In 1622 King Richelieu gave himself up to the guidance of Cardinal Richelieu. A peace was concluded in 1623, but it was not of long continuance. Eventually Rochelle, the head-quarters of the Huguenots, was captured (1625), and the revolt, headed by the queen-mother, was broken by the defeat of the insurgents at Castelnaudary (1632). Louis was now induced by Richelieu to take part in the Thirty Years' war, and obtained frequent successes over the Austrians and Swedes, adding Roussillon, Alsace and the Duchy of Bar to France. He died in 1643.

**Louis XIV.** King of France, known as Louis the Great, son of Louis XIII and Anne of Austria, was born at St. Germain-
Laye in 1638, and succeeded his father in 1643. His minority was occupied by the continuation of the wars against Austria; by the victories of Condé—victories crowned by the Treaty of Westphalia; by the struggles of the Parliament against the regent and Mazarin; by the bloody troubles of the Fronde faction; the revolt of Condé, etc. In 1661 peace was concluded with Spain, and Louis married Maria Theresa, daughter of Philip IV of Spain. On the death of Mazarin, in 1661, Louis resolved to rule without a minister. He reformed the administration and the taxes, and made the famous Colbert superintendent, who accomplished a series of financial reforms, created the Company of the Indies, made roads, canals, and founded manufactures. In 1662 he purchased Dunkirk for 5,000,000 livres from the needy Charles II. On the death of his father-in-law he claimed Franche-Comté and Flanders, and invaded those territories, Turenne and Condé leading his armies, in 1667. In 1672 he declared war with Holland, and in a few weeks he had conquered three provinces; but the formation of the Grande Alliance between the Emperor, William of Orange, Spain, Denmark, etc., checked his ambition. Still the Treaty of Nimeguen (1678) left Louis in possession of Franche-Comté and a part of Flanders. Louis was now at the height of his glory, and the splendor of his court, adorned by whole groups of great generals, poets, philosophers and notable men, far outshone that of other European courts. Maria Theresa having died in 1683, he secretly married Madame de Maintenon about 1684 or 1685. She is said to have had a considerable part in the revocation of the Edict of Nantes, which drove so many indulgent Protestants into exile. (See Nantes.) The League of Augsburg was now formed against Louis by Spain, Holland, England, Sweden, etc. A general war continued with frequent and severe losses to the French till the Peace of Ryswick (1697), by which Louis was required to restore all his recent conquests and most of the acquisitions made since the Peace of Nimeguen. The question of the Spanish Succession once more brought Louis into conflict with a united Europe. The principal episodes of the war were the victories of Blenheim, Ramillies and Malplaquet, gained by Marlborough and Prince Eugène. Hostilities were terminated by the Peace of Utrecht in 1713, without altering the relative position of the combatants. Louis died on September 1, 1715, and was succeeded by his great-grandson Louis XV. While the reign of Louis was brilliant in many particulars, it left France impoverished and most of her industries in a languishing condition.

Louis XV, the great-grandson of Louis XIV, was born in 1710; commenced his reign in 1715, but did not actually assume the government himself till 1723. In the interval the country was under the regency of the Duke of Orleans (see Orleans), by whose folly, and by the rash financial schemes of John Law (see Law), it was brought to the verge of ruin. In 1726 Louis placed his tutor, Cardinal Fleury, at the head of the administration. In 1725 he had married Maria, daughter of Stanislaus Leszynski, the dethroned king of Poland, and in 1733 became involved in a war in support of his father-in-law's claims. After two campaigns he acquired for Stanislaus the Duchy of Lorraine. After the death of Charles VI, in 1740, the war of the Austrian Succession broke out, in which the victories of Count Maurice of Saxe gave new splendor to the French arms; and by the Peace of Aix-la-Chapelle, in 1748, France regained her lost colonies. Louis now began to sink into the grossest indolence and sensuality, abandoning the management of state affairs to Madame de Pompadour, who recklessly squandered the public money. From 1769 he was controlled by Madame du Barry, who is said to have cost the royal treasury in five years 150,000,000 livres. The Seven Years' war (1756-63), in which France was involved, brought severe losses and humiliations to the country, and transferred to Great Britain Canada, Cape Breton, and other territories. Under the auspices of the Duke de
Louis XVI

Choiseul the Jesuits were expelled from France in 1764. In 1771 a quarrel between the new prime minister, the Duke d'Aiguillon, and the Parliament induced the king to banish the members of the Parliament from Paris, and soon after to abolish parliaments entirely. Louis died in 1774 of smallpox, leaving a debt of $800,000,000 and a demoralized kingdom.

Louis XVI, King of France, grandson of Louis XV, was born in 1754, and in 1770 married Marie Antoinette of Austria. He ascended the throne in 1774. His moral character was far superior to that of the previous king; but his weaknesses and want of resolution made him very unfit for wielding the scepter of a great country, especially at such a critical period. He could not comprehend the situation of affairs indeed, and had no thought of checking his personal extravagance; while the queen also gave herself up to her love of gaiety, and the festivals of Versailles and Petit Trianon were on a scale of lavish magnificence. At last, in 1789, all the grievances and discontent which had been gathering during a long period of misrule found vent; the populace attacked and destroyed the Bastille; and the revolution was accomplished. In June, 1791, the position of the king had become so perilous that he attempted to escape, but was intercepted at Varennes and forced to return. Among the events which followed were the attack of the populace of Paris on the royal palace, June 20, 1792; the king's arrest in the National Assembly, to which he had fled for refuge; finally, his trial before the convention, where he replied to the charges with dignity and presence of mind. (See France.) On January 16, 1793, he was declared guilty of a conspiracy against the freedom of the nation, by a vote of 690 out of 719; on the 17th he was condemned to death, by a majority of only five in 721, and on the 21st he was guillotined.

Louis XVIII, titular King of France, second son of Louis XVI, was born in 1755, and died in 1824. At the accession of his brother Louis XVI in 1774 he received the title of Monsieur. He favored the Revolution in its first stages, and secured the extended representation of the Third Estate. He lost his popularity, however, fled from Paris the same night as the king, and by taking another route reached the frontier in safety. After the death of Louis XVI, Monsieur proclaimed his nephew King of France as Louis XVII, and in 1795 he was himself proclaimed by the emigrants King of France and of Navarre. For many years he led a wandering life, supported by foreign courts and by some friends of the house of Bourbon. He at last took refuge in England in 1807, and lived there till the fall of Napoleon opened the way for him to the French throne. He entered Paris in May, 1814, had to flee on Napoleon's escape from Elba, but was restored on the throne by the Allies after Waterloo. He was weak in character, but gained considerable esteem and affection.

Louisburg (10-is-burg), a seaport of Cape Breton, province of Nova Scotia, Canada, on the E. side of the island. It was strongly fortified under the French; but was taken by the British in 1763, who demolished the fortifications, after which the town fell into ruin. It has a fine harbor with a lighthouse on the east head, and is a coal shipping port. The chief industries are fishing and shipping. Pop. 1588.

Louis d'Or (10-e dor; Fr., 'a Louis of gold'), or simply Louis, a gold coin of France, first struck in 1640, in the reign of Louis XIII, and continuing to be coined till 1785. It ranged in value from about $4.00 to $4.50. In 1810 the louis d'or was replaced by the napoleon of 20 francs, and when the coin was again struck under the restoration the same value (20 francs) was retained.

Louisiana (10-e-zl-an'a), one of the Southern States of the American Union, bounded north by Arkansas, northeast and east by Mississippi, from which it is partly separated by the river of that name, southeast and south by the Gulf of Mexico, and west by Texas, from which it is separated chiefly by the Sabine. It has an area of 48,506 square miles. The surface is nearly flat and low: the delta of the Mississippi, and the land along that river, having to
be protected from inundation by levees or artificial embankments. The coast is a low swampy region producing large quantities of rice and sugar-cane; towards the north and northwest, where the highest elevation is reached, the land is less productive, but bears valuable timber. The chief rivers are the Mississippi, which runs for about 600 miles along the border of and through the State; the Red River, which crosses the State diagonally and forms an important avenue of inland commerce; the Washita, Sabine, Pearl, etc., all navigable. There are numerous 'bayous' or secondary outlets of the rivers of much importance for both navigation and drainage purposes, the chief of which are the Atchafalaya with its series of lakes, the Bayou Teche, Bayou de La Fourche and Bayou Beaufort. Numerous lakes and lagoons are scattered over the State, mostly land-locked bays and expansion of the sea. The total length of navigable waters is 3752 miles. Louisiana surpassing all other States in length of navigable streams. There are extensive areas, estimated at 16,000,000 acres, of densely wooded forest, pine being the most important lumber tree. The climate is semitropical, and the rainfall heavy along the coast. Coal, iron, petroleum, sulphur and rock salt are found. The petroleum production in 1918 was 16,042,600 barrels. Immense quantities of sulphur are produced at Sulphur, Calcasieu Parish. There are great deposits of rock sand, notably on Petit Anse and Weeks islands. The chief agricultural staples are cotton, sugar, rice and corn. Perique tobacco is grown only in this State. It has extensive cattle and other livestock interests. Its fisheries, notably oysters, are important. The institutions for higher learning include the Louisiana State University and Agricultural and Mechanical College (q. v.), Tulane University (founded 1834; students 2600), which includes the Newcomb Memorial College, the women's department of the university; Southern University, at New Orleans (for colored students); Industrial Institute at Lafayette; and other establishments. Louisiana was colonized by the French in 1699, and was ceded in 1717 to a chartered company, one of the schemes of the notorious John Law (see Mississippi Scheme). In 1720 it was resumed by the crown; in 1763 it was ceded to France, in 1800 re-ceded to France, and in 1803 was purchased with other territory from France by the United States for about $15,000,000. It was admitted into the Union in 1812. The capital is Baton Rouge; largest city, New Orleans. Shreveport, Alexandria, Lake Charles and Monroe are among the other large cities. Pop. (1900) 1,381,625; (1910) 1,056,388; (1920) 1,796,650.

Louisiana State University, and Agricultural and Mechanical College, a State coeducational institution at Baton Rouge, La. Its first home was at Alexandria, where it was founded, 1853, as the Louisiana State Seminary; removed to Baton Rouge in 1870 and the name changed to Louisiana State University. The Agricultural and Mechanical College was added in 1877. Student roll, 1919-20, 4933.

Louis Philippe (lö'-ə- fe-lap), King of the French, born at Paris in 1773; died at Claremont, England, in 1850. He was the eldest son of Duke Louis Philippe Joseph of Orleans, surnamed Egalité (see Orleans), and during his father's lifetime he was known as Duke of Chartres. He entered the army in 1791, and favoring the popular cause in the Revolution he took part in the battles of Valmy and Jemappes. In 1793 he left the army and went to England; and from 1798 to 1800 lived in the United States. In 1814 he returned to France, and was reinstated in his rank and property. At the Revolution of July, 1830, he was made 'lieutenant-general of the kingdom;' and in August became king of the French. He reigned for eighteen years (see France), when the Revolution of 1848 drove him to England.

Louis-Quatorz Style (lö'-ə-ká-torz'), the name given to a style of architecture and internal ornamentation prevalent in France in the reign of Louis XIV, specially applied to palaces and large mansions. Externally the forms are classical, freely treated, and rustication is much employed; the windows are larger and the rooms more lofty and spacious than in buildings of the period immediately preceding, and there is generally an effort at sumptuous elegance. The palace of Versailles and the east front of the Louvre are prominent examples of the style. The most characteristic features of the Louis-Quatorze style, however, are seen in the

Panel in the Louis-Quatorze Style.
Louvain, a town of Belgium, in the province of Brabant, 15 miles from Brussels.

Louvre, a palace and museum in Paris, France.

Louvain, a town of Belgium, in the province of Brabant, 15 miles from Brussels.

Louvre, a palace and museum in Paris, France.
factured, and there is also some cotton-spinning. The fisheries are important. Drogheda and Dundalk (the county towns) are the principal towns. Pop. 65,820.

Loutherbourg (lů-thər-bôrg), or more correctly, Luthebourg, Philip James, a painter and engraver, born at Strasbourg in 1740; died near London in 1812. In 1771 he settled in London, and in 1782 he was an Academician. As a landscape-painter he had deserved celebrity, and he excelled in battle pieces. His etchings were also highly esteemed.

Louvain (lů-van; Flemish, Louwen; German, Löwen), a town of Belgium, in the province of Brabant, on the Dyle, 15 miles east by north of Brussels. It forms almost a perfect circle; diameter nearly 2 miles. It lay in the path of the German advance in the early days of the European war (1914) and because of a shot or two fired presumably by some of the inhabitants, the splendid old city was destroyed with a wantonness that bestowed on the invaders the appellation 'Hun.' Over a thousand houses were utterly demolished with bomb and fire, and only the Hotel de Ville, of all the beautiful buildings in the city, was spared. The splendid Church of St. Pierre, the University buildings, the library and the scientific establishments were delivered to the flames. Louvain was the intellectual metropolis of the Low Countries. Pop. 45,000.

Louviers. See Toussaint-Louvière.

Louviers (lů-vē-ā), a town in France, in the department of Eure, 17 miles south of Rouen. The staple manufacture is wooden goods and woolen yarn. Pop. (1906) 9449.

Louviers (lů-ve-ā), François Michel Letellier, Marquis de, minister of war and chancellor of the kingdom of France, born at Paris in 1641; died in 1691. He obtained the reversion of the office of secretary of war held by his father, and became sole minister of war in 1666. He effected quite a revolution in the art of disciplining, distributing, equipping and provisioning armies, and his administration was brilliant. It was partly by his advice that the Edict of Nantes was revoked in 1685, and the Palatinate was devastated in 1689. His arrogance had long rendered him odious to Louis, and his death was regarded as a relief by his master. Louviers' organization of the army lasted till the Empire; but he also undid the work of Colbert, and destroyed the commerce of France.

Louvre (lů-vr), a dome-turret rising from the roof of a hall or other apartment, formerly open at the sides, but now generally glazed. Louvres were originally intended to allow the smoke to escape when the fire was kindled in the middle of the room. Louvre window is the name given to a window in a church tower, partially closed by slabs or sloping boards or bars called louvre boards (corrupted into luffer or lever boards), which are placed across to exclude the rain, while allowing the sound of the bell to pass.

Louvre, the old royal palace at Paris, said to have been a royal residence in the reign of Dagobert, in 628. Francis I erected that part of the palace which is now called the old Louvre, and the buildings have been enlarged and adorned by successive kings, particularly Louis XIV. The new Louvre, begun by Napoleon I, was completed by Napoleon III in 1857. The whole group of buildings is distinguished by its great extent, and by its elegant and sumptuous architecture. It contains museums of paintings, drawings, engravings, bronze antiques, sculptures, ancient and modern, together with special collections of antiquities, and an ethnographical collection. It was greatly injured by the Communists in May, 1871, the R-îleau Pavilion, containing the imperial library of 90,000 volumes and many precious MSS., having been entirely destroyed.

Lovage (lův'ij), a herbaceous, perennial, umbelliferous plant, genus Ligusticum, widely distributed throughout temperate regions. L. offici-
Lovat (lov'at), Sir MON FRASER, Lord, second son of Thomas Fraser of Beaufort, afterwards twelfth Lord Lovat; born in 1667, beheaded at Tower Hill, London, in 1747. In 1696, on the death of his father, he assumed the title of Lord Lovat, to which on the death of the eleventh Lord Lovat his father had acquired a disputed claim. To secure the estates he effected a forced marriage with the Dowager Lady Lovat, for which he was outlawed and forced to take refuge in France. After a varied life of intriguing, first on the Hanoverian side and next on the Stuart, and a long imprisonment, his title, which had been objected to in various elections, was decided in his favor by the Court of Session in 1730. On the outbreak of the rebellion of 1745, Lovat acted with his usual duplicity, sending his son to fight for the Pretender, while he himself remained at home, professing his loyalty to the Hanoverian house. This conduct brought him to trial for treason, and resulted in his execution.

Love, at Philadelphia in 1830. He became a merchant, organized the American Literary Union, was vice-president of the Pennsylvania Prison Society, and in 1850 one of the founders of the Universal Peace Union and became and long remained its president. He wrote much on reform subjects and in advocacy of international peace. For many years he was an official visitor to prisons. Died in 1913.

Love Apple. See Tomato.

Love-bird, a name given to a genus of birds (Agapornis or diminutive species, found in America, Africa, and Australia. They receive their name from the great attachment shown to each other by the male and female birds. Swindern's love-bird is barely 6 inches in length.

Love-feast. See Agape.

Lovejoy, an American abolitionist, born in Maine. He entered the Presbyterian ministry (studied at Princeton Seminary), and founded at St. Louis the Observer, a Presbyterian organ. Because of his anti-slavery views he was obliged to remove to Alton, Illinois. Here he published the Observer, with its strong anti-slavery articles. His office was burned several times. He was killed Nov. 7, 1837, while attempting to defend his plant. His brother, OVEN LOVEJOY (1811-64), was a Congregational minister and abolitionist.

Love lace, RICHARD (1618-58), a Cavalier poet and playwright, born at Woolwich, Kent. He wrote The Scholar, a comedy; and The Soldier, a tragedy.

Loveland, a city of Larimer Co., Colo., 60 miles N. of Denver, near the Rocky Mountains and beautiful Estes Park. It is in a rich agricultural district. Has cement plant, milk condensery, plaster mill, etc. Excellent climate. Pop. (1920) 5065.

Lover, SAMUEL (1797-1868), an Irish novelist, born in Dublin. His best-known works are Rory O'More, Handy Andy, Treasure Trove. He was also a painter, and wrote many ballads, notably 'Molly Bawn,' 'Rory O'More,' 'The Low-Backed Car.'

Low, Seth (1850-1916), an American educator and public official, born in Brooklyn, N. Y., graduated from Columbia College (now University) in 1870. He was mayor of Brooklyn 1882-86, became president of Columbia College in 1890 and erected there the Low Memorial Library, costing over $1,000,000. In 1901 he was elected mayor of New York on the fusion anti-Tammany ticket.

Low Church, a name given to a section of the Church of England whose opinions are opposed to those of the High Church party, and are especially hostile to ritualism and aocerotalism. See High Church.

Low Countries. See Netherlands.

Lowe (lo), Sir HUDSON, lieutenant-general in the British army; born at Galway in 1769; died in 1844. He entered the army at an early age, and served in various campaigns. In 1813 he was attached to the army of Blücher, and
he took part in the invasion of France the following year. On the fall of Napoleon he was appointed governor of St. Helena, and entrusted with the care of the ex-emperor. He incurred the aversion of Napoleon, and many charges of undue severity were brought against him. Sir Hudson was allowed to die in poverty. His Letters and Journals were published in 1852.

Lowe, Robert. See Sherbrooke, Viscount.

Lowell, a city of Middlesex county, Massachusetts, at the confluence of the Merrimac and Concord rivers, on the Boston and Maine and the New York, New Haven and Hartford railroads, 25 miles north from Boston. Lowell is known as one of the largest producers of cotton goods in the United States; and has besides its cotton mills extensive bleacheries, machine shops, foundries, shoe shops, medicine plants, and rubber works. The Lowell Textile School is located here. Lowell was founded in 1822, and chartered as a city in 1837. Pop. (1910) 106,284; (1920) 112,759.

Lowell (1915), Abbott Lawrence, college president, born at Boston, Massachusetts, in 1856. He studied law and practiced at Boston 1880-97, was a lecturer 1897-99, professor of the science of government at Harvard University 1900-03, an Eaton professor 1903-09. On the resignation of President Eliot of Harvard, in 1909, he was elected to succeed him. He is the author of various works, including Colonial Civil Service, The Government of England, Essays on Government, etc.

Lowell, James Russell, an American author, born in 1819 at Cambridge, Massachusetts, was graduated from Harvard College in 1838, and from Harvard Law School in 1840. In 1841 he published a small volume of poems entitled A Year's Life, and became a regular contributor to various journals, including the Boston Courier, in which appeared the first series of the Biglow Papers, mainly a satire on slavery and the Mexican war. In 1851 he traveled in Europe, and in 1855 succeeded Longfellow as professor of modern languages and belles-lettres at Harvard. From 1857 to 1862 he wrote many essays for the Atlantic Monthly, founded by Holmes, Longfellow, Emerson and himself, and of which he was the first editor. He was joint-editor of the North American Review from 1863 to 1872. In 1877 he was appointed American minister at Madrid, and in 1880 he was transferred to London, whence he was recalled in 1888. He was very popular in Britain, was made D.C.L. of Oxford and LL.D. of Cambridge, besides being elected rector of St. Andrew's University. Besides his poems, of which numerous editions have been published, and the Biglow Papers, his chief works are: Fable for Critics; Conversations on some of the Old Poets; Among my Books; My Study Windows; Democracy, and other Addresses, etc. He died in 1891. His first wife, Maria White Lowell (1821-1853), was a poet of considerable merit; a volume of her poems was privately printed after her death.

Lower California, a peninsula on the Pacific coast of North America, extending about 750 miles s. of California; area 58,828 square miles; pop. 42,245. It belongs to Mexico and, with the exception of a few spots, is a sterile and unproductive region. Chief towns are La Paz, the capital, Loreto and Rosario.

Lowestoft (la'stoft), a seaport, municipal borough, and watering place of England, county of Suffolk, occupying the most easterly point of the kingdom. Since the construction of a harbor, piers and docks, Lowestoft has risen to be a thriving and important town, and a chief seat of the fishing industry. The harbor is formed by two piers 1300 feet long. Lowestoft is much frequented for sea-bathing. Pop. (1911) 33,780.

Lowth (lou'th), Robert, an English prelate, born in 1710; died in 1787. Educated at Winchester School and Oxford University, he was chosen professor of poetry in the latter in 1741. In 1744 he was appointed rector of Oving-
Lowther Hills

Lowther Hills (lou’ther), a range of Scottish hills extending across the south of Lanarkshire and north of Dumfriesshire to the southern borders of Peebles and Selkirk shires, the highest summits being Green Lowther (2403 feet) and Lowther Hill (2377 feet).

Loxodromic Curve (lok-su-drom’ik), a line on the earth, path of a ship when her course is directed constantly towards the same point of the compass, in a direction oblique to the equator, so as to cut all the meridians at equal angles. Mariners usually speak of lines of this kind as rhumbs.

Loyalty Islands (loi’al-ti), a group of islands in the Pacific Ocean, immediately east of New Caledonia, of which French colony they are appendages. They consist of the islands Uvea, Lifou and Maré, with many small islands. Total area, 841 square miles. Pop. about 20,000.

Loyola (loi’o-la), Ignatius, original name INIGO LOPÉZ DE RECALDE, the founder of the order of the Jesuits, was descended of a noble Biscayan family, born at the castle of Loyola, Guipuscoa, in 1491; died in 1556. He was attached in his youth as a page to the court of Ferdinand and Isabella, and trained up in all the vices and frivalities peculiar to his position. When still a young man he entered the army, and during the defense of Pamplona in 1521 against the French he was severely wounded, and a long and tedious confinement was the result. The only books he found to relieve its tedium were books of devotion and the lives of saints. This course of reading induced a fit of mystic devotion in which he renounced the world, made a formal visit to the shrine of the Virgin at Montserrat, and vowed himself her knight (1522). After his dedication he made a pilgrimage to Rome and Jerusalem, and from 1524 to 1527 attended the schools and universities of Barcelona, Alcalá and Salamanca. In 1528 he went to Paris, where he went through a seven years' course of general and theological training. Here in 1534 he formed the first nucleus of the society which afterwards became so famous, the Franciscan Xavier, professor of philosophy, Laines, and others having in conjunction with Loyola bound themselves together to devote themselves to the care of the church and the conversion of infidels. Rome ultimately became their headquarters, when Loyola submitted the plans of his new order to Paul III, who, under certain limitations, confirmed it in 1540. (See Jesuits.) Loyola continued to reside in Rome and govern the society he had constituted till his death. He was beatified in 1607 by Paul V, and canonized in 1622 by Gregory XV.

Lozère (lo’zar), a department of Southern France, bounded by Haute-Loire, Cantal, Ardèche, Gard and Aveyron; area, 1996 square miles. The department is generally mountainous; highest peak, 6808 Lozère, rising 4934 feet. The general character of the department is pastoral, immense numbers of sheep and goats being reared. The rivers Allier, Lot and Tarn rise within the department, which belongs to the basins of the Loire and the Garonne. Neither manufactures nor trade have made much progress. The capital is Mende. Pop. (1906) 128,016.

Lualaba (lu’a-la’ba), a river in the interior of Southern Africa forming a tributary of the Upper Congo.

Lubbock (lub’ok), Sir John, scientist, was born in London in 1834; died in 1913. He joined his father's banking business in 1848. He entered parliament in 1870 as member for Maidstone; and after 1880 he represented London University. He became a recognized authority on financial and educational questions, and his name was associated with several important public measures, such as the Bank Holiday and Ancient Monuments Acts. He was also distinguished as a man of science, being author of Prehistoric Times; Origin of Civilization; Origin and Metamorphoses of Insects; Monograph on the Thysanura and CollemboIa; British Wild Flowers in their Relation to Insects. He was raised to the peerage as Baron Avebury, 1900. His father, Sir John William, born in 1803; died in 1865; was a well-known banker, and published several scientific works of considerable value in their day, chiefly relating to astronomy.

Lübeck (lut’bek), one of the free towns of Germany, and a constituent of the German Empire, stands on a low ridge at the confluence of the Wackenitz with the Trave, 89 miles northeast of Hamburg, and 12 miles from
the Gulf of Lübeck, a bay of the Baltic. It was formerly surrounded by walls and bastions, which have been leveled down and converted into pleasant walks; but it is still entered by four gates, and furnishes striking specimens of the architecture of the fifteenth and sixteenth centuries. Among the buildings are the cathedral, a structure of red brick, begun in 1173, surmounted by two spires 416 feet high, and containing a choir-screen regarded as one of the finest specimens of wood-carving in existence; the Marienkirche (St. Mary’s Church), a fine specimen of early Gothic; the Aegidenkirche (St. Giles’ Church), and the Petrikirche (St. Peter’s Church); the town or senate house, an ancient Gothic building; the Hospital of the Holy Ghost (thirteenth century); the Holstein Gate, with its two lofty towers, etc. There is a public library of about 100,000 vols. The manufactures are comparatively unimportant, but the trade is extensive, especially with Hamburg, the Baltic ports, and the interior of Germany. Lübeck possesses a territory of 116 square miles, and includes the port of Travemünde, and several isolated portions in Holstein and Lauenburg. It has a senate of 14 members and a council of burgesses of 120 members. It became an imperial free city in 1226, and about thirty years later it also became the head of the Hanseatic League. [See Name Towns.] Pop. (1910) 116,500.

Lübeck (lub’kë), Wilhelm, art historian, born at Dortmund in Westphalia in 1826; professor of architecture at Berlin in 1857; of art history at Zurich in 1861, at Stuttgart in 1866; called to a similar post at Karlsruhe in 1871. He was the author of a History of Art, History of Sculpture, etc. He died in 1893.

Lublin (lyb’lën), a town of Russian Poland, capital of the government of Lublin, 90 miles southeast of Warsaw. It is well built, has manufactures of cloth, candles, soap, etc., and a large trade. Among its notable buildings are the cathedral, dating from the thirteenth century, and the town hall. Pop. 65,870.—The government of Lublin has an area of 409 square miles. Pop. 1,382,500.

Lubricant (lub’ri-kant), any substance applied to surfaces that work against each other, to diminish friction. Lubricants may be either solid, semi-liquid, or liquid. Plumbago, grease, animal, vegetable and mineral oils, simple or variously compounded, are the substances used.

Lucan Giordano (also called Luca Fu Presto). See Giordano.
Lucena

It was occupied by the French in 1799, and together with Piombino was formed into a principality in 1806, and given by Napoleon to his sister Elise. The Congress of Vienna in 1814 erected it into a duchy, and gave it to the Infanta Maria Louisa, duchess of Parma, whose son ceded it to Tuscany. In 1860 it became part of the Kingdom of Italy. The province of Lucca is bounded N. by Massa e Carrara and Modena, E. by Firenze, S. by Pisa, W. by the Mediterranean; area, 577 square miles. It is mountainous in the north, but, on the whole, is better cultivated than most parts of Italy. Silk, oil, corn and fruits are the chief productions. Pop. 319,123.

Lucena (lú-thé'na), a city of Spain in Andalusia, in the province and 30 miles S. S. E. of Cordova. Pop. 21,284.

Lucera (lú-ché'ra; ancient Luceria), a town of South Italy, province of Foggia, 11 miles W. N. W. of Foggia. The principal edifices are a cathedral, once a mosque, the castle, an interesting example of a medieaval stronghold, etc. Pop. 17,515.

Lucernaria (lú-ser-ná'ri-a; Latin, lucerna, a lamp), the typical example of the Lucernariidae, an order of the Hydrozoa, nearly allied to the Hydroidea or jelly-fish. The most familiar member is the Lucernaria aurita, a little organism somewhat bell-shaped, and which is frequently found adhering by the smaller end to sea-weeds, etc. In the center of the bell-shaped end is an opening into the cavity of the body, which is the stomach. It can detach itself at will and swim freely about by contracting and expanding the bell-shaped disk or 'umbrella,' as it is technically called.

Lucerne, Luzern (lú-ser'n, ló-tser'n), a city of Switzerland, capital of a canton of the same name, beautifully situated on the margin of Lake Lucerne and on the Reuss, where it emerges from the lake. On the land side the town is surrounded by walls and watch towers, and the river is spanned by four bridges, two of which are roofed-in and covered with ancient paintings. The Court Church, Jesuit Church, and the town house are among the most interesting buildings, the latter containing a picture gallery and museum. The 'Lion of Lucerne,' a monument by Thorwaldsen to the Swiss guards who fell in Paris in 1792 while defending the Tuileries, and the glacier-garden, containing relics of the ice period, are objects of interest. Lucerne is one of the three seats of the Swiss Diet, has an important grain market and manufactures of silk and cotton fabrics and of carriages. Pop. 41,500. The canton is bounded by the cantons of Aargau, Zug, Schwyz, Unterwalden and Bern; area, 561 square miles. The surface is very much broken by ramifications of the Bernese Alps, but none rise above the line of perpetual snow. The Tomlishorn, the culminating point of Mount Pilatus, and of the canton, is 7116 feet above sea-level. The chief rivers are the Reuss, the Aa, Suren, Wigger, etc. Lucerne is well supplied with lakes. Within its own boundaries it has those of Sempach and Baldegg, with many more of smaller size; with Zug it shares the Lake of Zug, and with Unterwalden and Schwyz the Lake of Lucerne. The soil is generally fertile. The pastures are extensive and excellent. German is the language spoken, and the greater part of the inhabitants profess the Roman Catholic religion. Pop. 146,519.

Lucerne, Lake of, also called Lake of the Four Forest Cantons, a Swiss lake bounded by the cantons of Uri, Schwyz, Unterwalden and Lucerne, and noted for its magnificent scenery and historical associations. It is nearly cruciform in shape, the bays of Lucerne, Küsnacht, and Alpnach forming the head and arms while the foot is formed by the Bay of Buochs and lake of Uri. Length from Lucerne to Filten 27 miles, from Alpnach to Küsnacht at the extremities of the arms about 14 miles; width from 1 to 3 miles; greatest depth 510 feet.

Lucere (Médicâgo), a genus of leguminous plants containing at least ninety species. The purple medick (M. sativa) is a valuable pasture and forage plant extensively cultivated in some of the chalky districts of England and France, and also in America. It is perennial and yields two or more crops in the year. In California it is known by the Spanish name of Alga.

Lucia (lú'shú-á), St., a Christian virgin martyr of Syracuse, who lived in the reign of Diocletian. She is the patroness of the laboring poor, and is invoked for eye disease.

Lucia, St., Bay of, an almost land-locked bay on the coast of Zululand, e. South Africa, lat. 28° S.

Lucia; St., one of the British West India Islands, 21 miles north east by east of St. Vincent, and 20 miles south of Martinique; area about 245 square miles. It is of volcanic origin, and has generally an elevated, rugged, and mountainous surface. It is very fertile, and has some splendid scenery, but is very unhealthy and infested with venem-
Lucian

Our serpents and insects. The chief exports are sugar, rum, and cocoa. Car- -triers, the capital, has 7910 inhabitants. Pop. 50,034, of whom about 1000 are white.

Lucian (lú'se-án), a Greek satirist and humorist, who was born at Samosata, on the banks of the Euphrates, and lived between A.D. 120 and 200. Little is known of his life, but he is said to have made money as a rhetorician or a lawyer, to have spent much time in traveling, and to have lived for long intervals in Athens. His works are of a witty and satirical character, the most popular being those known as the Dialogues, in which he ridicules the popular mythology and the philosophical sects, particularly his Dialogues of the Gods and Dialogues of the Dead. He may be regarded as the first of the great humorists.

Lucifer (lú'si-fér; or in Greek, Phó- menon, both meaning light-bearer), a name anciently given to the planet Venus as the morning star. The term is used figuratively by Isaiah (xli. 12) and applied to the Babylonian king, but it was mistaken by the commentators for a reference to Satan.

Lucifer-match. See Matches.

Lucilus (lú'sil'ús), CÀVIS ÉN- Nius, a Roman knight, grand-uncle to Pompey the Great; born at Suevia B.C. 148; died at Naples about 103 B.C. He is considered the inventor of the Roman satire, because he first gave it the form under which this kind of poetry was carried to perfection by Horace, Juvenal and Persius. Of thirty books which he wrote only some fragments have been preserved.

Luckenwalde (lúk'én-vål-dé), a town of Prussia, 31 miles south of Berlin. It has cloth manufactories and other industrial establishments. Pop. (1905) 22,933.

Lucullus (lúk'ú-lús), more correctly LÀKHNAI, a city of Hindustan, capital of Oude, 610 miles W. N. W. of Calcutta, on both banks of the Gomti, here crossed by four bridges, two of which were built by native rulers, and two by the British since 1856. It ranks fourth in size among British Indian cities, being next after Calcutta, Madras and Bombay. It presents a picturesque view from a distance, and has some good streets and interesting edifices. Among the most notable buildings are the Kailâ-bâgh, a palace built by King Wajid Ali in 1850 at a cost of $4,000,000, now occupied as government offices; the Imâbarra or mausoleum of Asaof ud Dowlah, now an arsenal and store-houses; the great mosque called the Jamâ Masjid, now a jail; and the Hoeinâbad or Small Imâmbara, with the mausoleum of Mohammed Ali. Lucknow was one of the chief scenes of the Sepoy mutiny. At the beginning of the mutiny the Residency was fortified by Sir Henry Lawrence, and after his death (July 4, 1857) it was closely besieged by the rebels till relief was brought by Havelock and Outram. The relieving force was only a small one, however, and the British were again besieged, partly in the Residency, partly in a walled garden called the Alamâbâgh. In the middle of October Sir Colin Campbell gained possession of the place after severe fighting; but as it seemed impossible to hold it with the troops at his disposal he left Sir James Outram to defend the Alamâbâgh, and removed the civilians, women and children to Cawnpore. At last, in March, 1858, Sir Colin returned with a sufficient force, completely defeated the rebels, and permanently recovered the town. Pop. 264,049.

Lucretia (lú-kré'she-a), a Roman legendary history, a lady of distinguished virtue who was outraged by Sextus, son of Tarquinus Superbus, king of Rome. She stabbed herself, and her death was the signal for a revolution, by which the Tarquins were expelled from Rome and a republic formed.

Lucretius (lú-kré'she-us), CARES, TRITUS, a Roman philosophic poet, born about 98 B.C.; died in 55 B.C. He is said to have died by his own hand, but about his life almost nothing is known. He is admitted to be one of the greatest of Roman poets for descriptive beauty and elevated sentiment. We possess of his composition a didactic poem, in six books, De Reum Natura ("On the Nature of Things"), in which he exhibits the cosmical principles of the Epicurean philosophy. The best English edition of Lucretius is that of R. A. H. Munro, with translation.

Lucullus (lú'kul-us), LUCIUS LÀX- NIHIANUS, a distinguished Roman naval and military commander, born about B.C. 115; died in B.C. 56. He distinguished himself greatly in his various victorious campaigns against Mithridates, king of Pontus, from the time of Sulla to B.C. 68, when he was supplanted by Pompey. He thenceforward lived in luxurious retirement on the coast of Campania. His house was enriched with a valuable library and works of art, which were freely opened to the curious and learned, among whom was his friend Cicero.
Luddites (lū'dīt's), a name given to rioters in 1811-16 in Yorkshire, Lancashire, and Nottingham, who attributed the prevailing distress to the introduction of machinery. During these years the above counties were in a perpetual state of disturbance, and much damage to machinery was done by the rioters. They took their name from Ned Ludd, a half-witted lad who made himself notorious by destroying stocking frames. After the peace, with the return of prosperity, the riots ceased.

Lüdenscheid (lü'den-shid) a town of Westphalia, 21 miles southwest of Arnsberg, with extensive manufactures of metal goods and hardware. Pop. 28,921.

Ludhiana (lūd-hi'ā-na), a town of India, province of Punjab, Sutlej; a great central grain mart. Pop. 48,649.

Ludington (lūd'ing-ton), a city of Michigan, seat of Mason county, on Lake Michigan, at mouth of Pere Marquette River. It has a good harbor and a large export trade in lumber, salt works, canning industries, woodworking shops, game board and waster-case factories, etc. Pop. (1920) 8810.

Ludlow, Edmund, the eldest son of Sir Henry Ludlow, born about 1620. He served with distinction in the parliamentary army, and succeeded Ireton in the government of Ireland in 1651. He opposed Cromwell’s assumption of the protectorate, and agitated in favor of a republic. On the approach of the Restoration he retired to Switzerland, and died in exile 1693. He is the author of valuable Memoirs.

Ludlow Rocks, in geology, a portion of the upper Silurian rocks, characteristic of the Würtemberg region, developed at Ludlow in Shropshire.

Ludwig, the German form of the name Louis. See Louis.

Ludwigsburg (lūd'vı̃ts-bürk), a town of Germany, in Württemberg, 8 miles north of Stuttgart. It is the second royal residence of Württemberg, and has a large royal palace. Pop. (1905) 22,093.

Ludwigshafen (lūd'vĭsh-hā-vn), a town of Rhenish Bavaria, on the left bank of the Rhine, opposite Mannheim, with which it communicates by a railway bridge and steam ferry. It was founded in 1843 by Louis I of Bavaria, and has become a flourishing town with numerous chemical and other works. Pop. (1905) 72,168.

Lufiji. See Rufiji.

Lugano (lō-gā'na), a town of Switzerland, in the canton of Ticino, beautifully situated on the north shore of the lake of the same name, 15 miles northwest of Como. Pop. 9394.—The Lake of Lugano, partly in canton Ticino and partly in Italy, between Lakes Como and Maggiore, into the latter of which it discharges itself; is about 20 miles long by 1 1/2 miles broad. Its scenery is of a wild and romantic description.

Lugansk (lō-gansk''), a Russian town, government of Ekaternoslov, on the Lugan, a branch of the Donetz, 300 miles N. N. W. of Taganrog. It is the chief center of an important coal and iron district. Pop. 34,175.

Lugger (lug'gar), a vessel having either two or three masts and a running bowsprit, the masts carrying each one or two lug-sails. There are also two or three jibs.

Lugo (lō'go), a town of Northern Spain, capital of province of same name, on left bank of the Miño, 46 miles west by south of Santiago. It is surrounded by ancient walls, which now serve as a promenade; has a Gothic cathedral of the twelfth century, several old churches, an episcopal palace, etc. Pop. 28,953.

Lugo, a town of Italy, province of Ravenna, 30 miles s. e. of Ferrara. It has an important annual fair, and a trade in flax, wine, brandy, etc. Pop. (commune) 27,410.

Lugos (lō'gas), a Hungarian town on the Temez, 32 miles s. e. of Temesvar. It is the seat of Greek and
Latin bishops, and has an active trade. Pop. 16,128.

Lug-sail, a quadrilateral sail bent upon a yard which hangs obliquely to the mast. See Lobworm.

Lugworm. See Lobworm.

Luini (lu'è-nè), BERNARDINO, a painter of the Lombard school, and the most distinguished pupil of Leonardo da Vinci, was born at Luino, a village on Lake Maggiore, about 1455; died perhaps about 1540. His works both in oil and fresco are much admired. Of the latter, one of the most important is a Crucifixion of great size and with various supplementary scenes, on the wall of a chapel at Lugano. He has also some merit as a poet, and is said to have written a treatise on painting. Two of his sons, Evangelista and Aurelio, and a brother named Ambrogio had a reputation as painters.

Luitprand. See Liutprand.

Luke (16k), St., the evangelist, author of the Gospel which bears his name and of the Acts of the Apostles. He was probably born at Antioch in Syria; was taught the science of medicine, but the tradition that he was also a painter is doubtful. The date of his conversion is uncertain; he is supposed to have been one of the seventy disciples, and also one of the two who journeyed to Emmaus with the risen Saviour. He was for several years a companion of the apostle Paul in his travels, so that in the Acts of the Apostles he relates what he himself had seen and participated in. (See Acts of the Apostles.) Luke is apparently mentioned three times in the New Testament: Col. iv, 14; 2 Tim. iv, 11; Philem. 24. He lived to an advanced age, but whether he suffered martyrdom or died a natural death it is impossible to determine. The Gospel of St. Luke was written probably about 56-58. It is addressed to Theophilus, and records various facts connected with the early life of Jesus which were probably furnished to the writer by Mary herself. It is first quoted by the church writers Justin Martyr and the author of the Clementine Homilies, and at the time of Ireneus and Tertullian the gospel in its present form was fully accepted. See Gospel.

Luke of Leyden (Lucas van Leyden), a Dutch painter and engraver, born at Leyden in 1494; died in 1533. He was an intimate friend of Albert Dürer, and executed many paintings in oil, water-colors, and on glass: likewise a multitude of engravings, which spread his fame widely. The fullest and most beautiful collection of engravings by this master is in the library at Vienna. His paintings are to be met with in many galleries: the principal in Leyden, Vienna, Dresden, Munich and Florence.

Lully (lu-lè), JEAN BAPTISTE, musical composer, born at Florence in 1633; died at Paris in 1687. At ten years of age he became page to Mlle. de Montpensier, niece of Louis XIV. In course of time he became court musician and leader of the king's band. In 1672 he had the direction of the Royal Academy of Music, from which times dates the foundation of the grand opera. He wrote numerous operas, motets, and other compositions, but his fame now chiefly rests on his overtures, a species of composition of which he is said to have been the inventor.

Lully (1876), RAYMOND (Doctor Illuminatus), a distinguished scholastic philosopher, born in Majorca about 1235; died in Algeria in 1315. When about 30 years of age he renounced the world and devoted himself to philosophy and religion. Encouraged by visions, he undertook the task of studying the eastern languages in order to convert the Moslems. For this purpose he made several journeys into Northern Africa, during one of which he was stoned to death. He was canonized in 1419. The number of his works is usually estimated at 300. They include treatises on logic, metaphysics, grammar, theology, casuistry, geometry, astronomy, medicine, etc., and the so-called 'Lullian art.' The Ars Lulliana, once extensiely taught throughout Europe, consists mainly in categorizing ideas and combining them mechanically, by which means Lully thought to exhaust their possible combinations.

Lumbago (lum-b'a-gô; from lumbus, the loin), rheumatism or rheumatic pains affecting the lumbar region, and often disabling a person. See Rheumatism.

Lumber (lum'ber), the common term in the United States for timber sawn up for market, including laths, deals, planks, shingles, etc. The lumber industry is fourth among the great industries of the United States, and the heavy demands for timber are rapidly pushing the great lumbering centers toward the South and West, the East and center being largely worked out. In normal years about 40 billion board feet of lumber are produced, valued at about $700,000,000. As a result the great piney of the Lake States have been almost eliminated, and great inroads are being made.
Luminiferous Ether

Lump-fish, or Sucker (Cylopétrus lumpus), an acanthopterygious fish, so named from the clumsiness of its form. The back is arched and sharp, the belly flat, the body covered with numerous bony tubercles, the ventral fins modified into a sucker. Before the spawning season it is of brilliant crimson, orange, purple and blue, but afterwards changes to a dull blue or lead color.

Lunacy (lūn′a-si), in law. 'A lunatic,' says Blackstone, 'is one that hath had understanding, but by disease, grief, or other accident hath lost the use of his reason.' In the United States the legislature exercises a protective authority over idiots and lunatics. The statutes of the different States provide that such persons may be put under guardianship; and if a competent judicature have found the fact of lunacy in the prescribed mode, and have appointed a guardian, the fact of lunacy is held to be conclusively proved. Until the contrary has been shown, every person is supposed to be of sound mind. In criminal cases lunatics are not chargeable for their own acts, if committed when laboring under defect of understanding. By the common law, if a man in his lucid mentality commits a capital offense, and before arraignment for it becomes mad, he ought not to be arraigned for it, because he is not able to plead with that caution which he ought to possess. But in general, partial unsoundness will form no defense. See Lunatic Asylums.

Lunar Caustic, nitrate of silver. See Silver.

Lunar Theory, the mathematical treatment of perturbations in the moon's motion due to the attraction of the sun, the earth and the planets. See Moon.

Lunar Year. See Year.

Lunacy, houses established for the treatment of insane persons. Some are established by law, others by the endowments of charitable donors, while others are private establishments. Until near the close of the eighteenth century many lunatics were allowed to wander at large, exposed to all the arbitrary cruelty to which their defenseless condition made them liable, while those who were confined in asylums were in still worse case. Chains, whipping and confinement in dark dungeons were among the ordinary
discipline of these establishments. The reformation of this unnatural system was begun in France by Philippe Pinel, a benevolent physician; and in England a parliamentary inquiry in 1815 into the barbarities hitherto practiced in lunatic asylums led to a slow but gradual improvement. Lunatic asylums, whether public or private, are now under the control of officers appointed under special statutes, and lunatics must be visited at least once a year by medical and legal visitors. The general conduct of lunatic asylums is now brought more into harmony with humanity and common sense, and with very beneficial results. Violence and undue coercion have been generally abandoned.

**Lund** (lönd), a town of Sweden, in Malmö, about 8 miles from the Sound and 24 miles E. of Copenhagen. It is the see of an archbishop, has an ancient cathedral and a university possessed of a library of more than 120,000 volumes. Pop. 16,621.

**Lundy Island**, a granitic island belonging to England, County Devon, at the entrance of the Bristol Channel, 2 1/2 miles long and 1 broad; area, about 1000 acres, mostly in pasturage. On it is a lighthouse visible for 30 miles.

**Lüneburg** (lù-ne-burk), a town of Prussia, province of Hanover, on the Ilmenau, 28 miles southeast of Hamburg. There are various interesting buildings, including the townhouse, a structure dating in part from the thirteenth century. Near the town are extensive gypsum and lime quarries and a salt mine. Pop. (1910) 27,790.

**Lunel** (lù-nil), a town of France, department of Hérault, 15 miles E. N. E. Montpellier. Pop. 6712.

**Lunette** (lùn'ët), in the art of fortification, a detached outwork having two faces and two flanks. It is often used in field fortifications, or before the glacis of a permanent fortress to protect a weak point.

**Lunéville** (lùn-ë-nil), a town of Eastern France, department of Meurthe-et-Moselle, near the junction of the Vezouze with the Meurthe, 15 miles E. S. E. Nancy. It has generally straight streets, a palace, built by Leopold, duke of Lorraine, and now partly serving as cavalry barracks; manufactures of gloves, pottery, etc. The treaty of peace in 1801, by which, as a consequence of the battle of Marengo, the Rhine became the French frontier, was signed here. Pop. 25,587.

**Lungs**, the breathing organs of reptiles, birds, mammals, and in part of amphibians (frogs, newts, etc.), the latter forms breathing in early life by branchiae or gills, and afterwards partly or entirely by lungs. The essential idea of a lung is that of a sac communicating with the atmosphere by means of a tube, the trachea or windpipe, through which air is admitted to the organ, and through structural peculiarities to its intimate parts, the air serving to supply oxygen to the blood and to remove carbonic acid. In the mammalia, including man, the lungs are confined to and freely suspended in the cavity of the thorax or chest, which is completely separated from the abdominal cavity by the muscular diaphragm or 'midriff.' In man the lungs are made up of honeycomb-like cells which receive their supply of air through the bronchial tubes. If a bronchial tube is traced it is found to lead into a passage which divides and subdivides, leading off into air-cells. The walls of these air-cells consist of thin, elastic, connective tissue, through which run small blood-vessels in connection with the pulmonary artery and veins. By this arrangement the blood is brought into contact with, and becomes purified by means of the air. The impure blood enters at the root of the lung through the pulmonary artery at the right side of the heart, and passes out purified through the pulmonary veins towards the left side of the heart. Both lungs are enclosed in a delicate membrane called the pleura, which forms a kind of double sac that on one side lines the ribs and part of the breast-bone, and on the other side surrounds the lung. Pleurisy arises from inflammation of this membrane.
Lungs are situated one on each side of the heart, the upper part of each fits into the upper corner of the chest, about an inch above the collar-bone, while the base of each rests upon the diaphragm. The right lung is shorter and broader than the left, which extends downwards further by the breadth of a rib. Each lung exhibits a broad division into an upper and lower portion or lobe, the division being marked by a deep cleft which runs downwards obliquely to the front of the organ; and in the case of the right lung there is a further division at right angles to the main cleft. Thus the left lung has two, while the right lung has three lobes. These again are divided into lobules which measure from 1/2 to 1/4 inch in diameter, and consist of air-cells, blood-vessels, nerves, lymphatic vessels, and the tissue by which the lobules themselves are bound together. The elasticity of the lungs by which they expand and expel the air is due to the contractile tissues found in the bronchial tubes and air-cells, this elasticity being aided by a delicate, elastic surface tissue. (See Respiration.) The lungs are popularly termed 'lights,' because they are the lightest organs in the body, and float when placed in water, except when they are diseased; a characteristic this which is applied in medical jurisprudence as a test whether an infant has inhaled or not. Among the diseases which affect this organ are pleurisy, pneumonia, pleuro-pneumonia, consumption, etc. See those terms.

Lungwort (lung'wurt), Pulmonaria officinalis, nat. order Boraginaceae, a common garden flower, having red and purple tubular blossoms, and leaves speckled like diseased lungs, hence an old-fashioned remedy in pulmonary diseases. A kind of hawk-week (Hieracium pulmonarium) and a lichen (Sicta pulmonaria) receive the same name.

Lupercalia (lup'er-kal'ya), a Roman festival celebrated annually in honor of Lupercus, an ancient pastoral god, afterwards identified with the Arcadian Pan. It was celebrated on February 15, at the Lupercal, a grotto in the Palatine Hill at Rome. Goats were sacrificed, and two youths were arrayed in the skins. With thongs in their hands they ran through the streets of the city striking all persons they met, particularly women, who believed that a blow from the thong prevented sterility.

Lupercus. See Lupercalia.

Lupine (lup'ən; lup'ənus), a very extensive genus of hardy annual, perennial, and half-shrubby plants, some of which are cultivated in gardens for the sake of their gaily-colored flowers. They belong to the first-order Leguminosae.

Lupulin (loop'ə-lin), the fine yellow powder of hops, which contains the bitter principle. It consists of little round glands, which are found upon the stipules and fruit, and is obtained by drying, heating, and then sifting the hops. It is largely used in medicine.

Lupus (lup'əs), in medicine, a slow, non-contagious tubercular skin affection, occurring especially about the face, and commonly ending in ragged ulcerations of the nose, cheeks, forehead, eyelids and lips. It is also called Nosti me tangere.

Luray Cavern (lur'ai), a remarkable cavern in the State of Virginia, in the Blue Ridge Mountains, near the village of Luray. It contains many chambers, some of them of striking aspect, and is exceeding rich in stalactite formations. Pop. of Luray village, 1,147.

Lurche (lurch'), a dog that lies in wait for game, as hares, rabbits, partridges, etc., drives them into nets, runs them down, or seizes them. This species of dog is said to be descended from the shepherd's dog and the greyhound, and is more used by poachers than sportsmen.

Lurgan (lur'gan), a market town of Ireland, in the County of Armagh and province of Ulster, 20 miles southwest of Belfast. It contains a handsome Episcopal church, a Roman Catholic church, and several other places of worship; a nunnery, a town hall, courthouse, mechanics' institute, tobacco factory, breweries, linen factories, etc. Pop. 11,782.

Luristan (lur'stan'), a mountainous province of Western Persia, with an area of about 20,000 sq. miles. It is named after the Luri, a race divided into many tribes, all migratory and warlike. The only town is Khorraramabad, situated in a fruitful plain south of Hamadan.

Lurie. See Lorelei.

Lusatia (loos'a-shə-a), in German Loutsitz), an extensive region of Germany, now included partly in Prussia, partly in the kingdom of Saxony.

Luscinnia (lus-sin'ə-nə), a genus of insessorial birds of the thrush family (Turdidae), to which the nightingale (L. philomela) belongs.

Lushai Hills (lush'ə), a wild district on the northeast frontier of India, lying along the southeastern side of the Assam district of Cachar, the eastern side of the Bengal district of
Indirectly led to the entry into the world war and crystallized public opinion in the United States into a force greater in effect than a thousand lives. Caused a thrill of horror throughout all neutral nations.
Chittagong, and extending on the east into Burmah. This territory is occupied by numerous nomadic tribes called Lushais or Kukis, who, since the expedition of 1871, have been submissive to British rule. They bring down to the markets on the plains, ivory, raw cotton, bees' wax and castor-oil.

Lusiads, See Camoes.

Lusitania (lu-si-ta'ni-a), the ancient name of a large district in the Iberian peninsula, comprising part of Portugal and part of Spain. The inhabitants were named Lusitani.

Lusitania, a British trans-Atlantic liner sunk by a German U-boat off the coast of Ireland on May 7, 1915, with a loss of 1,154 lives, of whom 102 were Americans. It was this act and the refusal of the Imperial German Government to disavow it that eventually brought the United States into the European war (q.v.).

Lute (lu'te), a stringed musical instrument of the guitar kind, formerly very popular in Europe. It consists of four parts, viz., the table or belly with a large sound-hole in the middle; the body, ribbed like a melon, having nine or ten ribs or divisions; the neck, which has nine or ten stops or frets which divide the strings into semitones; and the head or cross, in which are fitted the pegs or screws for tuning the strings, of which there are five or six pairs, each pair tuned in octaves or unisons. The strings are struck by the fingers of the right hand and stopped on the frets by those of the left.

Luther (lu'cher; Ger. pron. lu'te'r), Martin, the great religious teacher of Germany, was born at Eisleben in 1483; and died there in 1546. His father, a miner in humble circumstances, soon after his birth removed with his family to Mansfeld, where young Martin was brought up, piously but with some severity. At the age of fourteen he was sent to school at Magdeburg, whence he was sent in 1499 to Eisenach. At school he made rapid progress in Latin and other studies. In 1501 he entered the University of Erfurt; and in 1505 received the degree of Master. About this time, as he afterwards alleged, he discovered in the library a Latin Bible, and found, to his delight, that it contained more than the excerpts in common use. He was destined by his father to the law, but his more intimate acquaintance with the Bible induced him to turn his attention to the study of divinity, with the view of entering monastic life. Contrary to the wishes of his father he entered the monastery of the Augustines at Erfurt in 1506. In 1507 he was consecrated priest, and in 1508, by the influence of his patron, Staupitz, who was provincial of the order, he was made professor of philosophy in the new University of Wittenberg. In 1510 he visited the court of Pope Leo X at Rome on business connected with the order. Returning to Wittenberg he was made a Doctor of Theology in 1512, and here his profound learning and powerful eloquence drew large audiences. At that time he had no controversy with the pope or the church, but the arrival in 1517 of John Tetzel in Wittenberg dispensing indulgences roused the very energy of Luther, and caused him to draw up his famous protest in ninety-five propositions, which he nailed to the church door in Wittenberg. In consequence preaching of indulgences ceased, Tetzel fled, and a great religious commotion spread rapidly through Germany. Luther was summoned to Rome to explain his heretical proceedings, but refused to go; nor were the efforts of Cardinal Cajetan able to effect a reconciliation between him and the pope. His dispute with Dr. Eck at Leipzig in 1519, in which he denounced indulgences, and questioned the authority of the pope, was followed in 1520 by a bull of anathema—a document which Luther straightway burned publicly in Wittenberg. This open defiance of Rome required him to vindicate his conduct, which he did in a pamphlet addressed to the Christian nobles of Germany, with the result that many of the mightiest rallied to his aid. When summoned to appear before the German emperor, Charles V. at the Diet of Worms (1521), Luther appeared, acknowledged his writings, made an eloquent defense, but refused to recant. When he retired in triumph from Worms he was met by a friendly troop of soldiers belonging to Frederick the Elector of Saxony, who
conveyed him to the castle of Wartburg, where he lay in concealment for nearly a year. Here he employed his time in translating the New Testament into German. But when he heard that disturbances had been excited in Wittenberg on the question of images, he could no longer bear the restraint of inaction. Returning suddenly, and at great danger to himself, Luther succeeded in quieting the people by means of a wise and patient moderation. In 1524 he laid aside his cowl as a priest of the Roman Catholic Church, and in 1525 married Catharina von Bora, one of nine nuns who had renounced their religious vows under his teaching. The wisdom of this marriage was doubted by his friends, but his home life and the birth of six children, contributed greatly to the happiness of the reformer. From the year 1521 Luther had been busy translating the Bible into German with the aid of Melanchthon and others, and the great task was completed in 1534. This important work, taken in connection with the Protestant Confession made at Augsburg in 1530, served to establish the reformer’s doctrines in Germany, and closed the important part of his public life. He continued, however, till the end his private work of teaching, preaching and writing. The massive character of the German reformer lay along simple lines, and found its full and direct expression in his work. He lacked the learning of Calvin, and the balanced judgment of Melanchthon, but a vivid practical insight enabled him to mark the path that would lead to the success of his movement for the reforms he sought. Behind all the reformer’s zeal he had much lowly human sympathy, humor, tenderness and a love of homely things. This side of his character is most clearly seen in his Letters and Table-Talk. His German writings were varied and extensive.

Lutherans (lū-thər-ənz), the adherents of Luther, a term now applied to one of the great sections into which the Protestant Church on the continent of Europe is divided, the other being known as the Reformed or Calvinists. The doctrinal system of the Lutheran Church is contained in the Augsburg Confession (which see), and other documents, including the two catechisms of Luther. The fundamental doctrine is that we are justified before God, not through any merits of our own, but through faith in His Son. The ordinances of Baptism and the Lord’s Supper are held by Lutherans to be not mere signs or memorials, but channels of grace. They believe that ‘in the Holy Supper there are present with the elements and are received sacramentally and supernaturally the body and blood of the Lord Jesus Christ,’ but reject transubstantiation and consubstantiation. They observe the various festivals of the Christian year, and have a liturgical form of worship. The Lutheran is the established religion of Sweden, Norway and Denmark. There are over 76,000,000 Lutherans in the world, and in the United States over 2,000,000 confirmed members.

Luton (lū’tən), a municipal borough of England, County of Bedford, on the river Lea. It has large manufactories of straw hats and bonnets, it being the chief seat of the straw-plaiting industry in England. Pop. (1911) 50,000.

Lüttringhausen (lū’trîng-hou-zən), a town of Rhenish Prussia, in the government of Düsseldorf, with manufactories of woollens, cottons, etc. Pop. (1905) 11,826.

Lützen (lū’tən), a small town of Prussian Silesia, in the government of Merseburg. Pop. 3881. Two important battles have been fought in its neighborhood. The first took place on November 16, 1632, between the Swedish army under Gustavus Adolphus, and the imperialists under Wallenstein, the former being victorious. The second was fought May 2, 1813, between the allied Russian and Prussian armies and the French under Napoleon, who maintained his position, though at a loss of 12,000 men, against 10,000 of the allies.

Luxation (lūk'ə-shən), in surgery, the displacement of a bone, a dislocation.

Luxembourg (lūk-sáp-bôr), Fran. Côte Henri de Montmorency-Bouteville, Duke of, Marshal of France, born in 1628; died in 1695. In the war of France against England, Holland, Spain and Germany he won the three great battles of Fleurus (July 1, 1694), Steenkerken (August 3, 1692), and Neerwinden (July 22, 1693).

Luxembourg, an independent grand-duchy of Europe, bounded north and east by Rhenish Prussia, south by France and German Lorraine, and west by Belgium; greatest length, north to south, 55 miles; greatest breadth, 34 miles; area, 938 square miles. It forms part of the plateau of the Ardennes and its drainage belongs almost entirely to the basin of the Moselle. Grain and other crops are raised; cattle and horses are exported; and grapes and other fruits are cultivated on a large scale. Luxembourg has extensive deposits of iron, copper, lead and antimony, but only the iron mines had been exploited up till the beginning of the European war in 1914.
Luxor

when the Germans occupied the country and proceeded to unearth its hidden resources. The neutrality of Luxembourg was guaranteed by the treaty of 1839, but despite this, the German armies crossed the frontier on August 2, 1914, ignoring the protest of the Grand Duchess, Marie-Adelaide. The army of the grand-duchy consisted of but 430 men, and physical resistance was out of the question. The inhabitants are mostly of German origin, but the official language is French. The speech of the Luxemburgers is a mixture of bad French and still worse German. The people are for the most part Roman Catholics. The law of the land is the Code Napoleon. Luxembourg has changed hands many times. It formed one of the principalities of the Holy Roman Empire of the Germans. In 1594 it was raised to a duchy. It fell to Burgundy in 1443 and came into the hands of Spain. Austria was given control by the Peace of Utrecht in 1713. In 1797 it was ceded to France, and in 1815 it was converted into a grand-duchy and placed under the sovereignty of the King of Holland, though included in the German Zollverein. It was garrisoned by Prussian troops till 1867, when an international conference at London established Luxembourg as a neutral independent state. Pop. 239,899. The capital is Luxembourg. Pop. 20,848.

Luxor (luks'or), a village of Upper Egypt, on the right bank of the Nile, about 2 miles south of Karnak. It contains a splendid ancient temple, and is the headquarters from which visitors set out for the extensive remains of ancient Thebes.

Lyuines (lû'ë-në'), CHARLES D'ALBERT, DUKE DE, favorite and premier of Louis XIII and Constable of France, born in 1678. He caused the exile of the king's mother, and for a short time had absolute control in the government. He died in 1621, without having experienced any visible loss of favor or influence.

Luxerne (lû-zurn'), a borough in Luzerne County, Pennsylvania, 5 miles N. of Wilkes-Barre. It has drill factories, flour and feed mills, etc. Pop. (1920) 5998.

Luxon (lû'shon'), formerly a Spanish island, the largest of the Philippines. Its greatest length is about 540 miles; its greatest breadth about 125 miles; area estimated at 57,500 square miles. Two great mountain chains, the Sierra Madre and Cordillera de Caravalllos, run north and south, and rise to a height in some cases of more than 7000 feet. They are of volcanic origin, and many disastrous eruptions have taken place. Rivers and lakes are numerous. Vegetation is luxuriant, and the vast forests contain ebony, cedar, and other valuable trees. Luzon also produces abundant crops of rice, sugar-cane, Manila hemp, tobacco, coffee, ginger and pepper. There are few wild animals except the buffalo, which is also domesticated; but oxen, sheep and swine are reared. The population consists of the aboriginal Negritos, and of Malays, Chinese, Spaniards, Americans, etc., the whole amounting to 3,708,350. The capital is Manila. Luzon, with the other Philippine Islands, was transferred to the United States by the peace with Spain of 1898. It is rapidly developing under American rule.

Lycaonia (li-ka-o'ni-a), a small district in Asia Minor, situated between Galatia, Cappadocia and Isauria, of which the capital was Iconium. It was visited by Paul and Barnabas in their earliest missionary journey, as described in Acts, xiv.

Lyceum (li-se'üm), an academy at Athens in which Aristotle explained his philosophy. In modern times the name of lyceum has been given to the schools intended to prepare young men for the universities.

Lych-gate. See Lich-gate.

Lychnis (lik'nis), a genus of usually erect, annual, biennial, and perennial herbs, belonging to the natural order Caryophyllaceae, or pinks. Some of them bear beautiful flowers. The scarlet lychnis, ragged robin, rose campion and corncockle are well known.

Lycia (lik'se-a), an ancient maritime province in the south of Asia Minor, bounded by Caria on the west, Pamphylia on the east, and Pisidia on the north. It was colonized by the Greeks at a very early period, and its historical inhabitants were the Lycians, though with a mixture of aboriginal blood.

Lycooperdon (li-ku-per'dun), a genus of fungi, commonly called puff-balls. In a young state they are edible.

Lycophon (lik'o-fron), born at Chalcis, in Euboea, a Grecian poet and grammarian, the author
Lycopodium

of several tragedies, who lived at Alexandria, 280 B.C. Of his writings there remains only a dramatic monologue called Cassandra.

Lycopodium (L’ku-pŏ’dĕ-um), a genus of plants of the nat. order Lycopodiaceae (see Lycopods). The seeds of L. clavatum, or common club-moss, are very minute and resemble an impalpable yellow powder, which burns explosively, and is used for producing theatrical lightning. L. complanatum, the ground pine is a trailing evergreen, found commonly growing in woods and shady places throughout the United States.

Lycopods (L’ku-pŏ’dĕs), Lycopodiaceae, the club-moss tribe; a nat. order of vascular aroids, chiefly inhabiting boggy heaths, moors and woods. They are intermediate in their general appearance between the mosses and the ferns, and are in some respects allied to the Conifera. The lycopods occur in all parts of the globe, but grow most luxuriantly in tropical or mild climates. In the carboniferous era they attained a very large size, rivalling trees in their height and the thickness of their stems, as in the case of the Lepidodendron.

Lycurgus (L’ku-rŏ’gŭs), the great legislator of the Lacedæmonians, was the son of Eunomus, king of Sparta. His history commences with the year 688 B.C., when he might have usurped the throne on the death of his brother, but preferring to guard the kingdom for the unborn child of the latter, he devoted himself to the study of legislation. On his nephew becoming of age, Lycurgus traveled into Crete, Egypt and Asia, and thus prepared himself to give Sparta the laws which have rendered his name immortal. His object was to regulate the manners as well as the government, and to form a warrior nation, in which no private interest should prevail over the public good. It is said that Lycurgus persuaded the Spartans to swear that they would observe these laws till his return from another journey, and that he thereafter departed, and they never heard of him more. One account states that he starved himself to death, but it is more probable that he retired to private life, and died naturally, as Lucian records, at the age of eighty-five.

Lyddite, a high explosive, its name derived from Lydd in Kent, Eng., where it was first made. It is chemically Picric acid (C₆H₃(N(O₃)₃)(OH)) obtained by the reaction of carboic and nitric acids, and forming the basis of most of the high explosives now in use. Lyddite is a crystalline solid, bright yellow in color and bitter in taste. It is a stable compound under changes in temperature, is difficult to detonate and can be melted and poured into shells. It yields suffocating fumes in bursting and is supposed to kill by shock or suffocation. It was extensively used in the Boer War.

Lydia (Ilŏ’dĭ-a), in ancient geography, a large and fertile country of Asia Minor, divided from Persia by the river Halys (now Kisil Irma). It attained its highest prosperity under the Mermnad dynasty, beginning with the half mythological Gyges (716 B.C.), and ending with Cresus (546 B.C.), who was conquered by the Persians under Cyrus. The Lydians are credited with the invention of certain musical instruments, the art of dyeing wool, also the art of smelting and working ore. Sardis was the capital.

Lye (Lĭ), water impregnated with alkaline salt imbied from the ashes of wood, or any solution of an alkali used for cleaning purposes, as for types after printing, ink-rollers, for making soap, neutralizing acids, etc.

Lyell (Lĕ’ĕl), Sir Charles, geologist, born at Kinnordy, Forfarshire,

Sir Charles Lyell.

In 1797; died in London in 1875. He was educated at Oxford, began to study law, but afterwards resolved to devote
his time and fortune to geological research. For this purpose he visited the continent of Europe and the United States. His first important work was the *Principles of Geology* (1830-33), in which he demonstrated that the geological development of the earth was the result of ordinary causes, not of phenomenal paroxysms. A portion of this book afterwards formed the basis of the *Elements of Geology*. Another important work was the *Antiquity of Man* (1863), in which he summarised the evidence in favor of the theory that the race of man was much older than was currently believed. Lyell was knighted in 1848, and made a baronet in 1864. His *Life and Letters* were published in 1881.

**Lylly, or Lilly, John.** See Lilly.

**Lyme-grass** (lim), the popular name of certain grasses. One species, *Elymus arenarius*, is a native of Britain. They are all coarse grasses.

**Lyme Regis**, a municipal borough and seaport of England, in Dorsetshire, 22 miles west of Dorchester, intersected by the Lyme. Pop. (1911) 2772.

**Lymington** (lim-ing-tun), a seaport and watering place of England, in the county of Hants, at the mouth of the Boldre. 12 miles southwest of Southampton. Pop. 4163.

**Lymph** (limf), in physiology, the fluid resulting primarily from the assimilation of food, and also obtained from the blood and tissues, and which is contained within a system of vessels called *lymphatics* and *lacteals*. The clearest and simplest view of the lymphatic system is to consider these vessels as the media through which matters are absorbed from the alimentary canal on the one hand, and from the blood and tissues on the other. The matters so absorbed are elaborated and converted in the *lymphatic glands* into *lymph*, a fluid which presents the essential features of the more highly elaborated blood, and which is ultimately poured into the blood, mainly through the *thoracic duct*. Through this system the continual loss which the blood and body suffer is made good. The lymph as it exists in the lymphatic vessels is a colorless, transparent fluid, destitute of smell. The lymphatic glands are highly important structures, for it is only after passing through them that the lymph is fully elaborated and ready to enter the blood. Their average size is that of a small almond, and they are generally arranged in groups. As distinguished from the lymphatics the *lacteals* are the vessels by which the chyle is absorbed from the small intestine and elaborated in the lymphatic glands of the mesentery to be afterwards poured into the thoracic duct. This duct pours its contents into a large vein at the root of the neck. Lymphatic vessels and glands are numerous throughout the body, especially in the subcutaneous tissue, where they form a veritable, highly elaborated, ramified network of fine channels and spaces, and are subject to special diseases.

**Lynchburg** (linch'burg), a city of Virginia, on the James River, 100 miles (direct) w. of Richmond. Aside from its beautiful residential section it is a great industrial center, with extensive bark extract and overall plants, shoe factories, and cast-iron pipe, plow, cotton and glass plants. Also noted as a great tobacco market. Seat of Randolph Meade Woman's College. Lynchburg, and Sweetbrier colleges. Pop. 29,056.

**Lynch-law**, the practice of punishing men for crimes or offences by private unauthorized persons without a legal trial. The origin of the phrase, used chiefly in America, has been variously accounted for, but it is evidently derived from some person named Lynch, who adopted a rough and ready mode of punishing offenders. The system has grown in use until it is a serious evil and one difficult to eradicate.

**Lyndhurst** (lind'hurst), John Singleton Copley, Baron, an eminent lawyer and statesman, was born of Irish parentage at Boston, United States, in 1731, and died in 1833. He was tended by his father, J. S. Copley, the artist, to be a painter; he studied for some time under Reynolds and Barry, then entered the University of Cambridge in 1751, took his M.A. degree in 1751, became a fellow of Trinity College, and was called to the bar at Lincoln's Inn in 1804. In 1817 he ably defended Watson and Thistlewood for high treason, was appointed chief-justice for Chester, and in 1818 entered Parliament. In 1819 he became solicitor-general in the Liverpool administration, in 1824 attorney-general, and in 1826 master of the rolls. He was raised to the peerage as Baron Lyndhurst, and became lord-chancellor in 1827, a post he retained till 1830. During the ministry of Earl Grey (1830-34) he held the position of chief bencher of the exchequer. He was a formidable opponent of the reform bill. He was again chancellor in 1834, and a third time when the Conservatives returned to power in 1841. His eloquence was much appreciated by the Tory party, especially in the House of Lords, where he continued to take an
Lyndsay

interest in foreign politics down to the year 1859, when he vigorously attacked the policy of Napoleon III.

Lyndsay. See Lindsay.

Lynedoch (ln'dok), THOMAS GRAHAM, LORD, a British general, was born at Balgowan, England, in 1750, and died in 1843. Until 1792 he lived as a country gentleman, but when his wife died he entered the army as a volunteer, and greatly distinguished himself at the siege of Toulon. He afterwards took part with Sir John Moore in the expedition to Sweden and the retreat to Corunna; and was engaged in the Walcheren expedition. Being sent to take command of the forces besieged by the French at Cadiz, he gained the victory of Barosa in 1811. He next joined Wellington's army and shared in the Peninsula war, taking part in the battle of Vitoria and the siege of St. Sebastian. In 1814, after the unsuccessful siege of Bergen-op-Zoom, he was created Baron Lynedoch.

Lynn (lin), a city and seaport of Essex county, Massachusetts, on an arm of the Massachusetts Bay, about 10 miles northeast from Boston. The town has some fine public buildings, including the city hall, public library, Odd Fellows' hall, etc. It has a large park, more than 2000 acres in area, known as Lynn Woods, and a famous Shore Drive. Its chief industries are the manufacture of boots and shoes, of which upwards of 15,000,000 pairs are annually made. Other industries include the manufacture of electrical appliances, leather goods, patent medicines, machinery, etc. Pop. (1910) 98,336; (1920) 99,148.

Lynn-Regis, or KING'S LYNN, a seaport town of England, County of Norfolk, on the Wash, 55 miles W. N. W. of Norwich. The principal buildings are the Market House, and All Saints' churches, St. Nicholas' chapel, the guildhall, atheneum, custom house, corn exchange, etc. The harbor is commodious, and there are two docks. Shipbuilding is carried on and the trade is considerable. Pop. (1911) 20,206.

Lynx (links), the popular name of several species of feline carnivora, resembling the common cat, but with ears longer and tufted with a pencil of hair, and tail shorter. The lynxes have been long famed for their sharp sight, which character they probably owe to their habit of prowling about at night, and their brilliant eyes. The European lynx is the Felis lynx, the Canadian lynx is the F. canadensis. In Asia lynxes are tamed for hunting.

Lyons

Lyon - king-at-(or-of)-arms, in Scotland, a heraldic officer who takes the title of Lyon from the armorial bearings of the Scottish kings, the lion rampant. The officers serving under him are heralds, pursuivants and messengers. The jurisdiction given to him empowers him to inspect the arms and ensigns, armorial of all the noblemen and gentlemen in the kingdom, to give proper arms to such as deserve them, and to fine those who use arms which are not matriculated. Called also Lord Lyon.

Lyonnais (lō-on-nā), an ancient province of France, of which Lyons was the capital. It now forms the departments of the Rhône, Loire, Haute-Loire and Puy-de-Dôme.

Lyons (lō-on, or lō'nz; Fr. ë̃̄lō-z, Lyôn; Lati. Lugdunum), the second city in France, capital of the department of the Rhône, 240 miles S. S. W. of Paris, and 170 miles north of the Mediterranean. The town is built partly on a peninsula between the Saône and the Rhône, and partly on the opposite banks of the rivers on either side. The rivers are crossed by about a score of bridges, and the city is surrounded by eighteen detached forts, which form a circuit of sixteen miles. Parts of the city are old, squalid and unhealthy, but as a whole it has a stately and imposing appearance, and is finely seen from the Fourvières, an eminence on the right bank of the Saône, crowned by the church of Nôtre Dame, where a magnificent view extending to the Alps may be had. Among the chief buildings are the cathedral, mostly of the thirteenth century; the church of St. Martin d'Ainay, with a cupola supported by ancient Roman columns and a crypt believed to be of the ninth century; the church of St. Nizier, a fine example of flamboyant Gothic; the Hôtel de Ville and the Archiepiscopal palace, situated near the cathedral, 1000 Protestants were butchered in 1572 as a sequel to St. Bartholomew. The Hôtel de Ville is considered one of the finest edifices of the kind in France. The public library has over 200,000 volumes and is rich in MSS. The Palace des Arts or museum contains a picture-gallery and other collections. The chief educational establishments are a university college, a Catholic college, a lyceum, a normal school, la Martinère, a school of industrial arts, etc. Lyons carries on various industries, but its chief glory is that of being the greatest center of the silk manufacture in the world, giving employment in the town or surrounding neighborhood to 240,000 people. A
great many of the weavers work in their own dwellings, not in factories. There is also a large trade by railway, river and canal. The origin of Lyons cannot be traced. When Caesar invaded Gaul it had become a place of some importance. Towards the end of the second century it numbered thousands of Christians among its inhabitants. It was sacked by the consisting of a body with two horn-like pieces rising from it, and a cross-piece between the horns, from which to the lower part the strings were stretched. It was used by the Egyptians, Assyrians and Greeks. It is said to have had originally only three strings, but the number was afterwards increased to seven, then to eleven, and finally to sixteen. It was

Huns and Visigoths, and in the eighth century fell for a time into the hands of an army of Saracens from Spain, but recovered its prosperity under Charlemagne, on the dissolution of whose empire it became the capital of the Kingdom of Provence. In 1312, during the reign of Philip the Fair, Lyons was annexed to the crown of France. During the revolution the city suffered severely by the paralysis of its industry, and by the murderous excesses of the emissaries of the Paris Convention, whom the citizens had defied, the chief buildings being destroyed and many of the inhabitants butchered. Pop. (1911) 523,796.

Lyons, Gulf of (in French, Golfe du Lion), a bay of the Mediterranean, on the southeastern coast of France. The principal ports on this gulf are Toulon, Marseilles and Cette.

Lyre (lîr'), one of the most ancient stringed instruments of music, played with the plectrum or lyre-stick of ivory or polished wood, also with the fingers, and was used chiefly as an accompaniment to the voice. The body of the lyre was hollow, to increase the sound. A musical instrument of similar construction is still to be met with in the hands of the shepherds of Greece and among certain tribes of Africa.

Lyre-bird (Menura superba), an insectivorous bird of New South Wales, somewhat smaller than a pheasant. The tail of the male is remarkable for the three sorts of feathers that compose it, which by their shape and arrangement resemble the form of an ancient Greek lyre. It has a pleasing song, and is said to be capable of imitating the voices of other birds.

Lyric Poetry (lî'rik'), originally, poetry sung to or suited for the lyre; in modern usage, that class of poetry in which are expressed the
Lys
den's own thoughts and feelings, or the emodins to epic or dramatic poetry, to which action is essential.

Lys (lës), a river which rises in France, runs through Belgium, and enters the Scheldt at Ghent; length, 100 miles.

Lysander (lë-san'dër), an ancient Greek general who was appointed to the command of the Spartan fleet off the coast of Asia Minor in 407 B.C., during the Peloponnesian war. In

Lysias (lís'ë-as), an Athenian orator, born about 458 B.C. He studied philosophy and eloquence at Thurii in Magna Graecia, and was there employed in the government. On the defeat of the Athenians in Sicily he returned to Athens in 412, but was banished by the thirty tyrants. When the city recovered its freedom he returned in 403, and gave instruction in eloquence, also writing speeches for others to deliver. He died in 378. Only about thirty of his numerous orations have been preserved.

Lysimachia (li-sim'a-khi-a), a genus of herbs, nat. order Primulaceae. Four species occur in the United States, known by the name of loosestrife, and one (L. longifolia) is called Prairie money-wort.

Lysimachus (li-sim'a-kus), a general in the army of Alexander the Great, was born in Macedonia 360 B.C., and at the death of the emperor and the division of the empire he became king of Thrace. During the latter years of his reign he was instigated by his wife to kill his son Agathocles. This murder caused his subjects to rebel, and in the war which followed Lysimachus was defeated and slain at the battle of Corus in B.C. 281.

Lysippus (lis-ip'ës), a Greek sculptor who flourished in Sicyon about 330 B.C., in the time of Alexander the Great.

Lytham (lit'am), a watering place in Lancashire, England, agreeably situated in a sheltered position on the north shore of the estuary of the Ribble. Pop. (1911) 9464.

Lythraceae (lit'rás-é), the loosestrife tribe, a nat. order of polypetalous exogens, containing about thirty genera of herbs, trees and shrubs, of various habit, often with square branches; the leaves usually are opposite or whorled, entire, and shortly petiolate; the flowers being often large and showy. Henna and tulipwood belong to the order.

Lythrum (lit'rum), a genus of plants, the type of the order Lythraceae (which see). L. salicaria, purple loosestrife, is a tall and handsome plant.

Lytelton (lit'el-tun), a seaport in the district of Canterbury, New Zealand, connected with Christchurch—of which it is the port—by a railway 8 miles long. There is a fairly good harbor, improved by a breakwater, etc., a graving dock, and a considerable shipping trade. Pop. (1906) 3941.

Lyttelton, historian, eldest son of Sir Thomas Lyttelton, baronet, was born in 1709, and died in 1773. He entered Parliament in 1730, and joined the opposition led by Pitt and Pulteney. In 1756 he was raised to the peerage. He was on terms of intimacy with Pope, and the patron of Fielding and Thomson. His Miscellaneous in prose and verse had once a reputation, but are now forgotten. In his latter years he wrote his Dialogues of the Dead and a History of England. His son, Thomas, Lord Lyttelton, born in 1744; died in 1779. His early years were remarkable for a promise of ability which was never fulfilled. His dissipated habits soon estranged him from his father and separated him from his wife. Such, however, was his literary reputation and political status that he was claimed at one time as the writer of the Junius Letters. It is said that from a presentment he predicted his death three days before it occurred, and some have thought he committed suicide.

Lyton (lit'ün). Edward George Earle Lytton Bulwer-Lyt-
Lytton

TON, BARON, youngest son of General Bulwer, of Woodallng, and Elizabath Barbara Lytton, of Knebworth, was born in 1806; died in 1873. He entered Trinity Hall, Cambridge, was graduated B.A. in 1826, M. A. in 1835, and gained the chancellor's prize medal for his English poem on Sculpture. He published poetry at an early age, but first gained reputation by the novels Pelham and the Disowned (1828), Deerpark (1829), and Paul Clifford (1830). These were followed with the popular romances of Eugene Aram, the Pilgrims of the Rhine, The Last Days of Pompeii, Rienzi and Ernest Maltravers, with its sequel, Alice. In connection with Macready's management at Covent Garden Bulwer-Lytton produced his Duchess de la Vallière, which proved a failure, but this was retrieved by the instant success of the Lady of Lyons, Richelieu and Money. When he had thus shown his quick adaptability of talent he returned to novel writing, and published in steady succession—Night and Morning, Zanoni, The Last of the Barons, Lucretia, Harold, The Caxtons, My Novel, and What Will He Do With It? In 1845 he published a poetical satire called The New Timon, in which he attacked Tennyson, who replied more vigorously than had probably been expected. He entered Parliament for St. Ives in 1831, and supported the Reform Bill as a Whig; but he changed his opinions and latterly supported the Conservatives. Under Lord Derby's ministry he was colonial secretary, and in 1866 entered the House of Lords as Baron Lytton. He was elected rector of Glasgow University in 1866. His later literary works were The Coming Race, published anonymously (1871), The Parisians (1872), and Kenelm Chilingly (1873). Among his poetic works were the epic King Arthur; the Last Tales of Miletus; Brutus, a drama, etc. As an author he is usually known under the name of Bulwer.

Lytton, THE RIGHT HON. EDWARD ROBERT BULWER-LYTTON, EARL OF, G.C.B., son of the novelist and politician, was born in 1831; educated at Harrow and Bonn; entered the diplomatic service in 1849 as attaché at Washington, and successively served in the embassies of Florence, Paris, The Hague, St. Petersburg, Constantinople, Copenhagen and Lisbon. He was appointed Viceroy of India by the government of Mr. Disraeli in 1876, and it was during his administration that the queen was proclaimed Empress of India. This post he resigned in 1880, being then created an earl. He early attained a certain reputation as a poet, under the pen name of Owen Meredith; and published Clytemnestra and other Poems, Lucile, Thanhauser, or the Battle of the Bards, Fables in Song and Glenaveril, besides prose works. He also published the life and letters of his father. He was appointed ambassador to Paris in 1888. He died in 1891.
Lane, FRANKLIN KNIGHT, American cabinet officer, secretary of the interior from 1913-20, died at Rochester, Minn., May 18, 1921.

Laureate, Poet. The idea of a poet laureate in England dates back to Ben Jonson, who in 1617 was appointed poet to the royal household. The first poet to receive the title of 'poet laureate' by letters patent was John Dryden, in 1670. It was not till the year 1921 that the idea of a poet laureate in the New World spread to the United States. Nebraska was the first state to give official recognition to an American poet, the honor of 'poet laureate of Nebraska' being conferred upon John G. Neihardt (q.v.) by joint resolution of the Senate and House of Representatives.

League of Nations. The second assembly of the League of Nations met at Geneva from September 5 to October 5, 1921. Forty nations being represented. The activities of the league during the year included settlement of the disputes concerning Silesia (q.v.), partitioned between Poland and Germany; and the Aland Islands (q.v.), awarded to Finland, under certain guarantees of autonomy. The Permanent Court of International Justice was officially established, September 16, 1921, through the election of eleven judges and four deputy judges by the Council and Assembly of the league. There were 81 members in the league in November, 1921. The Council consists of four permanent members (France, Great Britain, Italy and Japan) and four non-permanent members (Belgium, Brazil, China and Spain).

Lloyd George, DAVID, Premier of Great Britain, made the year 1921 memorable by his discussions with the representatives of Ireland which resulted in the establishment of the Irish Free State. (See Ireland.) Because of the crucial nature of the Irish question he was prevented from being present at the Armaments Limitation Conference in Washington.

London, the capital of Great Britain and of the British Empire, had a population of 4,453,249 in 1921, according to the preliminary report on the census taken in June. In 1911 the population was 4,521,685; in 1901 it was 4,522,567. These are the figures for London proper, i.e., the administrative county of London and the city of London. It comprises the metropolitan boroughs of Battersea, Bermondsey, Bethnal Green, Camberwell, Chelsea, Deptford, Finsbury, Fulham, Greenwich, Hackney, Hammersmith, Hampstead, Holborn, Islington, Kensington, Lambeth, Lewisham, Paddington, Poplar, St. Marylebone, St. Pancras, Shoreditch, Southwark, Stepney, Stoke Newington, Wandsworth, City of Westminster, and Woolwich, together with the small district called the City of London. Of these boroughs, Woolwich showed the largest increase. There were decreases in many of the boroughs, the total percentage of decrease being 0.9 per cent. London proper covers an area of 74,850 acres (land and inland water). Including the immediately surrounding areas conveniently designated the 'Outer Ring,' 7,476,108 persons were enumerated, a gain over 1911, when the census showed 7,213,358 persons. The area included in the 'Outer Ring' and London proper is 443,449 acres. (For population of Great Britain see England, Wales.)

Lorenz (1878-1923), ADOLF, an Austrian orthopedic surgeon, was born in a small town in North Austria in 1878; he graduated in medicine from the University of Vienna in 1890, and began to devote himself specially to the pursuit of surgery. He became clinical assistant to Professor Albert, and later was appointed to the professorship of surgery in the University of Vienna. Lorenz gave up the practice of general surgery for that of orthopedic surgery, and he is best known by his so-called 'bloodless operation' for congenital dislocation of the hip; this consists of special manipulation (without the use of the knife), followed by proper bandaging and after treatment which has to be continued for months and even for years. A similar method is used to straighten club-foot, and contracture of the limbs caused by paralysis or inflammations. His operation for congenital dislocation of the hip is only available for very young patients, and is only possible in carefully selected cases; the older the patient, the greater is the danger. The public seems to be obsessed by the term 'bloodless'; true, there is no escape of blood externally, but the operation may cause quite extensive hemorrhage, all the more dangerous because it is not seen. The operation is by no means free from risk; there may be severe lacerations of ligaments, muscles, blood vessels, and nerves; and shock, and even death may result. Dr. Lorenz visited the U. S. and England in 1902; and visited the U. S. again in 1921.
Lumber Exports. Before the war the United States annually exported, roughly, three and one-half billion board feet of lumber and saw logs, exclusive of railroad ties, staves, and other wood products. This export was made up of southern yellow pine, Douglas fir, white oak, redwood, white pine, yellow poplar, cypress, walnut, hickory, ash, basswood, and a few others of the more valuable softwoods and hardwoods. Of the total export the softwoods formed about 70 per cent and the hardwoods 21 per cent. Nearly half of the entire export of lumber was southern yellow pine. The export trade takes about ten per cent of the entire lumber cut. An important factor in the foreign trade is the export of high-grade hardwoods. In normal years more than ten per cent of the yearly cut of oak, or about 300 million board feet (mostly white oak), is exported, in addition to 41 million feet in the form of staves. Seven per cent of the annual cut of yellow poplar, or 35 million feet, is exported, and nearly 50 per cent of the yearly cut of black walnut, or about 23 million board feet. Considerable quantities of hickory, ash, and other high-grade woods for vehicle parts, agricultural implements, etc., are also exported. About 37 per cent of the lumber exports are shipped to Europe, 30 per cent to North America (chiefly Canada and Mexico), and 16 per cent to South America. The foreign lumber trade fell off to a marked degree during the war, particularly lumber exports to Europe. The total exports in 1918 and 1919 were but one-third of the quantities of lumber and logs exported in 1913. The foreign trade in hardwoods showed the least decline, and in 1919-20 was but little less than in pre-war years. It is expected that the development of Central and South America, parts of Africa, China, Australia, and New Zealand will naturally result in a gradual increase in lumber exports to those countries. Central and South America, while containing large hardwood forests, are now dependent upon imports from the United States, Canada, and Sweden for the bulk of their softwoods, the chief staple in international timber trade. Several of these regions may in time develop forest industries sufficient to supply their own needs, and new sources of international lumber supply may be developed in regions like Siberia (which has enormous timber resources, undeveloped); nevertheless, the United States, in the opinion of the Forester, U. S. Department of Agriculture, must anticipate a gradual but material increase in the demand for its lumber products from these parts of the world for some time to come. This demand will comprise mainly lumber of relatively high grade. It will, however, probably run to less specialized and high quality products than the European trade and will consist chiefly of the better grades of softwood building and construction lumber, with considerable quantities of railroad ties. It is estimated that there are about 2,767,000,000,000 feet of merchantable timber in the United States, and the annual cut totals 117 billion feet. The value of the annual lumber product ranks fifth among American industries.
M

M is the thirteenth letter and tenth consonant of the English alphabet. It represents a labial and nasal articulation, the compression of the lips being accompanied with the fall of the uvula so as to allow the voice to form a humming sound through the nose, which constitutes the difference between this letter and b.

Maartens, MAARTEN, pen name of J. M. M. VAN DER POORTIN SCHWARTZ, a Dutch author, born at Amsterdam in 1858. He spent part of his boyhood in England and writes in English. Some of his best known novels being The Sin of Joost Avelingh, God's Fool, The Greater Glory and My Lady Nobody.

Maas. See Mause.

Maastricht. See Maestricht.

Mab, a mythical personage often represented as queen of the fairies.

Mabie (mâ'bi), HAMILTON WRIGHT, American author, was born at Cold Spring, N. Y., in 1846 and graduated from Williams College in 1867, and from the Law School of Columbia University in 1869. He contributed a number of essays to current periodicals, and in 1879 joined the editorial staff of the Christian Union, afterward the Outlook, of which he became associate editor with Lyman Abbott. He acquired much fame as a lecturer on books, ethics and religion. Among his published books are: Norse Stories Retold from the Eddas, Nature in New England, My Study Fire, Short Studies in Literature, Under the Trees and Elsewhere, Essays in Literary Interpretation, Nature and Culture, etc.

Macalester College, a co-educational institution of learning in St. Paul, Minn., founded in 1884. In 1917 there were 350 students enrolled; the faculty numbered 40. The buildings and grounds are valued at $380,000. The college is non-sectarian in its teachings, but is under Presbyterian control.

Macao (ma-kî'o, or ma-kou'), a seaport town and Portuguese settlement in China, on a peninsula at the mouth of the Canton River, about 40 miles from Hong-Kong, considered the healthiest residence in Southeast Asia. The settlement has an area of about 21 sq. miles, and its principal export is tea. Its commerce has greatly declined since the rise of Hong-Kong and the Chinese treaty ports. It was in 1675 that the Portuguese first obtained permission to form a settlement and to trade at Macao, and in 1844 it was declared a free port. Pop. 78,927.

Macaroni, MACARONI (mak-a-ron'î), a preparation of wheaten flour, used as food, usually simply boiled and served up with grated cheese, or in soups, etc. Macaroni is generally made in tubular pieces resembling a long pipe-stalk, by pressing it through holes in a metal plate. Vermicelli is a similar preparation, but is more thread-like. Macaroni is a wholesome food, made best in the neighborhood of Naples, and considered a national dish of the Italians.—Macaroni was used as a term of contempt for a coxcomb or swaggerer about 1770-75.

Macaronic Poems (mak-a-ron'ik), a kind of facetious Latin poems, in which are interspersed words from other languages, with Latin inflections. They were first written (at least with the above designation) by Teofilo Folengi, 1484-1544, and were introduced into England in the reign of Henry VII. Drummond of Hawthornden is credited with a macaronic poem, Polemo-Middina, published in 1691. There is good reason, however, to believe that it is later than Drummond's time, and that it is the work of Dr. Pitcairne (1652-1713).

Macaroon (mak'a-roon), a favorite kind of biscuit, made of the meat of sweet almonds instead of ordinary flour.

Macassar (ma-kas'ar), a town on the island of Celebes, capital of the Dutch government of Celebes. It has an excellent harbor, and carries on a considerable trade in rice, spices, ebony, sandal-wood, etc. Pop. 17,925. See Celebes.
Macassar

Macassar, STRAITS OF, between Celebes and Borneo, about 350 miles long, and from 110 to 140 wide, except at the north entrance, where it is contracted to 50 miles. Navigation is difficult because of the numerous shoals and small islands.

Macaulay, (mà-kûlè), THOMAS BABINGTON, LORd, historian, essayist and politician, was born in 1800 at Rothley Temple, Leicestershire, and died at Kensington in 1859. His father, Zachary Macaulay, who had been a West Indian merchant, was a well-known philanthropist, while his mother was Selina Mills, the daughter of a Bristol Quaker. Their son Thomas was severely educated in the rigid Calvinism of what was known as the 'Clapham sect.' In 1825 he entered Trinity College, Cambridge, where he obtained the Chancellor's medal for a poem on Pompeii, and a second time for a poem on Evening; received a fellowship, and took his M.A. degree in 1825. Before this he began to contribute to Knight's Quarterly Magazine, in which appeared his poems of the Armada, Jovis, and the Battle of the League; and in 1825 he inaugurated his brilliant career in the Edinburgh Review by his article on Milton. He was called to the bar at Lincoln's Inn in 1826. He entered parliament in 1830 as member for Calne, and made his first speech in support of freedom for the Jews in England. He also spoke in favor of the anti-slavery legislation, and delivered several speeches in favor of the Reform Bill of 1832. He afterwards became member for Leeds, but resigned his seat and proceeded to Calcutta as legal member of the supreme council of India, in which position he prepared a new penal code that was not adopted because of its liberal dealing with the native races. Returning from India he was elected a member of parliament for Edinburgh, was made secretary of war in the Melbourne ministry (1839-41); and when the Whigs returned to power in 1846 he was appointed paymaster of the forces. At the election of the same year his Edinburgh constituency refused to reflect him, but their attitude was reversed in 1852, he being returned, although he had not presented himself as a candidate. During his political career Macaulay had continued his literary labors. In 1842 he published his Lays of Ancient Rome; and in 1848 appeared the first two of the five volumes of his History of England, which covers the period between the accession of James II and the death of William III. This brilliant rhetorical exposition, though touched with partisanship and with a tendency to paradox, has attained the position of an English classic. He was created a peer in 1857, and at his death he was buried in Westminster Abbey. The Life and Letters of Macaulay has been published by his nephew, Sir George Otto Trevelyan (1876).

Macaw (mâ-ko'), a genus (Macrocercus) of beautiful birds of the parrot tribe. The macaws are magnificent birds, distinguished by having their cheeks destitute of feathers, and their tail-feathers long (hence their generic name). They are all natives of the tropical regions of South America. The largest and most splendid in regard to color is the great scarlet or red and blue macaw (M. Aracanga or macao). The great green macaw (M. militaris) and the blue-and-yellow macaw (M. ararauna) are somewhat smaller.

Macaw-tree, the name given to several species of trees of the genus Acrocomia, natives of tropical America, as A. fusiformis and A. sclerocarpa, the fruit of which last yields an oil of a yellowish color of the consistence of butter, with a sweetish taste and a odor of violets, used by the natives of the West Indies as an emollient in painful
affections of the joints, and largely imported into Britain, where it is sometimes sold as palm-oll, to be used in the manufacture of toilet soaps.

Magayo. See Maccelo.

Macbeth (mak-beth'), Macbuda, or Macbethadh, son of Finnlaech, a king of Scotland who reigned from 1040 to 1057. The facts of his life, so far as they are known, are these: During the reign of Duncan he was "mormer" of Moray by inheritance, and by his marriage with Gruoch, granddaughter of Kenneth IV. This Duncan, in his attempt to subdue the independent chiefs of the north, was slain by Macbeth at "Bothgowan," which is supposed to be near Lique. By this means Macbeth became king, and, according to all accounts, his reign was fairly successful. In 1050 he is said to have gone on a pilgrimage to Rome. At the death of their father the sons of Duncan had to choose a new leader; and they chose the Earl of Northumberland, with his help invaded Scotland in 1054; a battle was fought at Dunstan, but it was not until 1057 that Macbeth was finally defeated and slain at Lumphanan in Aberdeen. The legends which gradually gathered round the name of Macbeth were collected by John of Fordun and Hector Boece, and reproduced by Holinshed in his Chronicle, and there found, as is supposed, by Shakespeare, who has made such splendid use of them.

Maccabees (mak'a-bez), a dynasty of ruling Jewish priests of whom the first who came into prominence was Mattathias. During the persecutions of Antiochus Epiphanes he slew a Jew who came to the altar to renounce his faith, and then fled to the mountains with his five sons—Johannes, Simon, Judas, Eleazar and Jonathan. Being joined by numerous patriotic Jews they were able to make successful resistance to the national foe and reestablish the ancient religion. When Mattathias died (166 B.C.) his sons Judas and Jonathan became successively leaders of the national movement. The last remaining member of the family was Simon, who now carried forward the national cause to a triumph with their "little tower" of Jerusalem, and established the power of the new state. Under his rule trade and agriculture flourished, until (in 135 B.C.) he was treacherously murdered by Ptolemy, his own son-in-law.

Maccabees, Books of, treat of the Maccabean princes; they are five in number, the first two of which are included in the English Apocrypha, and are accounted canonical by the Roman and Greek churches.

MacCarthy (ma-kar' the), Denis Florence, poet, born in Ireland about 1820; died in 1882. His ballads, poems and lyrics were published in 1850. He translated six of Calderon's dramas; wrote a volume on Shelley's Early Life in 1872, and contributed an ode to the Moore Centenary in 1879. A collected edition of his poems was published in 1884.

MacCarthy, Justin, novelist, historian and politician, was born at Cork in 1830; became connected with the Liverpool press in 1853; joined the staff of the Morning Star in 1860, and ultimately became its chief editor in 1864. He afterwards traveled for three years in the United States; contributed to various English and American magazines, and was connected with the Daily News, 1870-85. His historical writings, which are much esteemed, include History of Our Times, 1837-80, History of the Four Georges, etc. In addition he wrote a number of highly popular novels. He represented Longford in parliament from 1879 as a Home Ruler. He died in 1912. His son, Justin Huntley MacCarthy (born in 1859), is an M.P. of the same party, and is favorably known in literature, his works including England Under Gladstone, Ireland Since the Union, The French Revolution, etc.

Macchiavelli. See Macchiavelli.

MacClellan (mak-kle'lan), George Brunt, an American general, born at Philadelphia in 1826; died in 1885. He was trained at the West Point Military School; served in the Mexican war; joined the Red River expedition as engineer; and in 1855 was appointed to the commission which reported on the condition of the Spanish Armies, and watched the military operations during the Crimean war. At the outbreak of the Civil war in the States he was victorious in West Virginia, superseded McDowell after the first battle of Bull Run, and became commander-in-chief on November 1, 1861. In this capacity he organized the raw levies of the "Northern" and advanced against Richmond the following spring, but was relieved from his supreme command by President Lincoln in 1862, remaining in command of the army before Richmond. Here he was defeated in a series of battles lasting seven days, and was forced to retire from his lines in front of Richmond. During the second battle of Bull Run, he was recalled to
Macclesfield

Washington, and when Lee advanced into Maryland, MacClellan pursued and fought the battles of South Mountain and Antietam (September 14-17, 1862). The result was the withdrawal of Lee across the Potomac, MacClellan following so deliberately that the authorities at Washington grew dissatisfied with his apparent slackness in following the enemy, and he was relieved from his command and retired from the army. In 1864 he was nominated for the presidency, but was overwhelmingly defeated by Abraham Lincoln.

Macclesfield (mak'IZ-feld), a town of England, Cheshire, 17½ miles south by east of Manchester, on the Bollin. It is pleasantly situated, and the principal buildings are the church of St. Michael, an ancient structure, founded by Eleanor, queen of Edward I, in 1278; St. Peter's and St. Paul's; a spacious town hall; a subscription library; a market, etc. The staple manufacture is silk, and the cotton manufacture has also made some progress. In the vicinity are extensive coal-pits and stone and slate quarries. Pop. (1911) 34,904.

MacCIntock (mak'INTA-k), Sir FRANCIS LEOPOLD, born at Dundalk in 1819; entered the navy in 1831; became a lieutenant in 1845; and in 1848 joined the expedition sent out by the British government in search of Sir John Franklin, the Arctic explorer. In 1852 he was instrumental in rescuing MacClure and his companions. In 1857, as commander of the Fox, a vessel equipped by Lady Franklin, he discovered evidence of the death of Franklin. He was knighted in 1859 and made vice-admiral in 1877. Died in 1907.

MacCluere (mak-iur'), Sir ROBERT JOHN LE MESURIER, born in 1807; died in 1873. He entered the navy in 1824; joined an Arctic expedition in 1836; accompanied Sir John Ross into the same region in 1848; and himself took command of an Arctic expedition in 1850. He penetrated as far north as Melville Sound, and was the first to make the northwest passage between the Atlantic and Pacific, this being done partly by sledging over the ice, his ship being abandoned.

MacCosh (mak-kosh'), JAMES, was born in Ayrshire in 1811; became a minister of the Church of Scotland first at Arbroath, then at Brechin; joined the Free Church after the disruption movement; was appointed professor of logic and metaphysics in Queen's College, Belfast, 1851; was president of Princeton College, New Jersey, from 1863 to 1888, when he resigned. He wrote various works on philosophy and psychology, among them the History of Scottish Philosophy (1874); the Development Hypothesis (1870); The Emotions (1880); Psychology (1886) etc. He died in 1894.

MacCulloch (mak'ul'o), HORATIO, one of the most distinguished of Scottish landscape painters, was born in Glasgow in 1806; died near Edinburgh in 1867. His paintings are nearly all of Scotch scenery. Among them are the Cuchullin Mountains, A Dream of the Highlands, Highland Loch, and Mist on the Mountains.

MacCulloch, Hugh, financier, born in 1808; died in 1895. He was made comptroller of the currency in 1863 and secretary of the treasury in 1865, and was remarkably successful in raising funds for the expenses of the Civil War. He was secretary of the treasury again, 1884-85. He wrote Men and Measures of Half a Century.

MacCulloch, John, a British mineralogist, born in 1773; died in 1835. Educated at Edinburgh for the medical profession, he became assistant surgeon in the army, and ultimately practiced privately at Blackheath. He undertook a government mineralogical and geological survey of Scotland in 1826, a task which was completed in 1832. As the result of his labor he published A Description of the Western Islands of Scotland; A Geological Classification of Rocks, etc.

MacCulloch, John Ramsay, a political economist and statistician, born in Wigtownshire in 1789; died in London in 1864. He edited the Scotsman newspaper and contributed largely to the Edinburgh Review. In 1828 he was appointed professor of political economy in London University, became controller of the stationery office in 1838, and retired on a pension of £200 a year. Among his numerous works are The Principles of Political Economy (1825); Historical Sketch of the Bank of England (1831); Dictionary of Commerce (1832); Geographical Dictionary (1841), and The Literature of Political Economy (1845).

MacDonald (mak-don'al), FLORA, born on South Uist, one of the Hebrides, in 1720; died in 1790. She became celebrated in 1748 for the part she took in assisting Prince Edward Charles to escape the government pursuit, when she conveyed him from South Uist to Skye, disguised and in an open boat. For this cause she was imprisoned for several months in London and then
Macdonald, Sir John Alexander, was born in Scotland in 1815. Being taken to Canada, he was educated at Kingston; admitted to the bar in 1835; entered parliament for Kingston in 1844; and became successively a member of the executive council, receiver-general, commissioner of crown lands, and attorney-general. He became premier in 1869, a position which he held until 1873 when he resigned on account of the Pacific Railway charges, but resumed the office in 1878, and retained it until his death, June 6, 1891. He was an active promoter of the Canadian Pacific Railway and the Canadian confederation movement, and was a recognized leader of conservative party.

MacDonald, George, novelist and poet, was born at Huntly, Scotland, in 1824; educated at King's College, Aberdeen; became an independent minister, but soon adopted literature as a profession. Among his numerous novels are David Elpinbrok, Robert Falconer, Malcolm, Castle Warlock, etc. He died in 1905.

MacDowell, Edward Alexander, American composer and pianist, born in New York City in 1861; died in 1908. He studied at the Paris conservatory and at Frankfurt. For eight years he was professor of music at Columbia University. A complete nervous breakdown in 1906 put an end to all work. His compositions include sonatas, two orchestral suites, and a number of songs and pianoforte pieces.

Mace, a weapon of war in use in Europe as late as the sixteenth century. It consisted of a staff about 5 feet long, with a heavy metal head, which assumed a variety of forms, but was frequently in the form of a spiked ball. Another kind of mace is a sort of heavy ornamental staff used as an emblem of authority in universities, courts of law, parliament, etc.

Mace, a spice, the dried aril or covering of the seed of the nutmeg (Myristica fragrans). It is aromatic and is used in cooking and pickling.

Macedo, Joaquim Manuel, Brazilian poet and novelist, born in 1820; died in 1882. The Brazilians regard him as their best poet.

Macedonia, a territory lying to the north of Greece, which first became powerful under King Philip, the father of Alexander the Great, and conqueror of Greece. Alexander the Great added immensely to the empire of Macedonia, and made what had only been a petty province mistress of half the world. After his death the empire was divided; dominion over Greece was lost; and the result of the battles of Cynoscephale (197 B.C.) and Pydna (168 B.C.) was to reduce the ancient kingdom to a Roman province. Macedonia long formed a part of Turkey in Europe, being inhabited by peoples of varied race. It has now disappeared from the map of Europe.

Maceió, a Brazilian seaport, capital of province Alagoas, on the Atlantic, lat. 9° 39' s. Chief exports: cotton, rum, and sugar. Pop. 1908 est. 33,000.

Macedo, Antonio, a Cuban patriot, born at Santiago de Cuba in 1843. He was a prominent leader in the rebellion of 1868-78, was banished, but returned again in 1885 and took an active part in the insurrections of that year. He was killed in a skirmish in 1896. His brother, José, born in 1846, was equally prominent in both the insurrections named, and was also killed in battle in 1896.

Macerata, a town in Italy, capital of the province of the same name, on a lofty eminence midway between the Apennines and the sea, 21 miles south of Ancona. The principal buildings are the cathedral, provincial palace and theater, all situated in a large public square, various churches and convents, a college, museum, etc. Pop. 22,473. The province, bounded north by Ancona, west by Umbria, south by Ascoli, and east by the Adriatic, has an area of 1,056 square miles, produces much corn, fruit and hemp, and bears great numbers of sheep and cattle. Pop. 259,429.

Macfarren, Sir George Alexander, musical composer, born at London in 1815; died in 1887. He was educated at the Royal Academy of Music; became a member of the board of the academy, and ultimately chairman and principal; was elected professor of music, Cambridge University (1875); and was knighted by the queen in 1883. His chief operas are The Devil's Opera (1838), Don Quixote (1846), and Robin Hood (1860). He also essayed the cantata in Lenore (1852), and The Lady of the Lake (1870); while his oratorios are St. John the Baptist (1873), The Resurrection (1878), Joseph (1877), and King David (1883). He also wrote several musical treatises.

Macgillicuddy Reeks, a
picturesque mountain range of Ireland, in the county of Kerry, extending for 13½ miles from the lakes of Killarney on the east to Lough Carra on the west. It is the loftiest mountain range in Ireland; Corrntual, the highest peak, rises 3404 feet above sea-level.

**Machette** (má-chá'tá), an implement of steel with a wooden handle, originally manufactured for the cutting of sugar-cane, but adopted by the Cubans as a weapon in their encounters with the Spanish troops. The blade is about two feet in length, slightly curved, resembling a pruning-hook on a larger scale. Being exceedingly sharp and heavy in proportion to its size, it formed a terrible weapon.

**Machete**

Casciano. Here he devoted himself to literary labor, the chief results of which are found in his History of Florence, embracing the period between 1215 and 1492: Discourses on Love; The Prince, by which he is best known; a military treatise entitled Dell' Arte della Guerra; and the comedies of La Mandragola and La Clizia. The name of Machiavelli was for long synonymous with all that is tortuous and treacherous in state affairs, due to the advice he gave to sovereigns in The Prince, but he did no more than advocate the political measures common in his day.

**Machete**

**Machine Gun** (ma-shén'), the type of weapon known as the machine gun is an important and ex-

**Top and Side View of Lewis' Automatic Machine Gun.**

**Machiavelli** (mák-yā'-vel'ē), N I C O COLO, a distinguished Italian statesman and historian, born at Florence in 1469; died in 1527. He became prominent in public affairs in 1498, when he was appointed secretary to the Ten at Florence. For more than fourteen years he guided the destinies of the Florentine Republic, undertook embassies, concluded treaties, and jealously conserved the rights and liberties of his native city. When the Medici returned to power in 1512 by aid of Pope Julius II, Machiavelli was deprived of his office, and imprisoned for his supposed complicity in a plot to overthrow the new authority; he being released after a time he retired to his country house of San-

tensively used factor in modern warfare. By this term is meant a gun using small arms ammunition, the loading, firing and extraction of the empty shell being done by machinery. There are two main types, those operated by hand and the so-called automatic machine guns in which a small portion of the gas generated by the firing of each cartridge, or the recoil from the firing is used to operate the mechanism.

In the European war, which began in 1914, the Lewis air-cooled machine rifle, the improved Vickers light automatic rifle-calibered gun, the Maxim automatic, and other types of rapid-fire guns were extensively employed.

The United States, on entering the war, was handicapped by lack of machine guns.
the ordnance departments being in the midst of experiments with several different makes then on the market. Dropping these experiments, the army experts set about devising a new weapon and the Browning light and heavy machine guns are the result. In their first public tests on February 27, 1918, they were pronounced not only the simplest but the most deadly and the most serviceable of mechanism for ejecting the empty shell, inserting and firing the next cartridge, is accomplished by the gas pressure created by the explosion, a small portion of which is taken off to operate the gun. As an automatic, it will fire 20 shots in 2 1/2 seconds. It may be fired either from the shoulder like an ordinary rifle or from the hip.

The Browning heavy machine gun is of any machine gun in the world. The light Browning is practically an automatic rifle weighing but 15 pounds and shooting the regulation army rifle cartridge carried in detachable magazines containing either 20 or 40 cartridges. This weapon may be used as an automatic or semi-automatic. That is to say, it can be made to fire continuously until the magazine is emptied simply by holding back the trigger or it can be employed as a self-loading and self-cocking rifle, in which case the rifleman pulls the trigger for each shot. This change is made by moving a conveniently located lever. This gun is of the air-cooled gas operated design, in which the water-cooled, belt-feed design and is operated by means of the power created by the recoil action. This gun is mounted on a tripod which permits it to be fired at almost any angle. The cartridge belts contain 250 cartridges each and are carried in boxes on either side of the gun. The ammunition is the same as that used in the United States rifle, model of 1918, the Springfield rifle, and in the light Browning gun. It is claimed that this heavy duty machine gun, in simplicity, convenience and power, is the superior of any in the world.

Mackay John W., capitalist, was born at Dublin, Ireland, in
Mackaye

1831. In 1860, after a miner’s life in California, he went to Nevada, and in 1872 he was one of the discoverers of the Bingham mines, of which he owned two-fifths. In 1884, in partnership with James Gordon Bennett, he laid two cables across the Atlantic. He died in 1902.

Mackaye (ma-kē’), Percy, an American dramatist and poet, born in New York, March 16, 1875. He graduated at Harvard, studied further at the University of Leipzig, traveled, and taught. Since 1904 he has been engaged almost wholly in dramatic work, and his plays more than those of any other American dramatist of the time are poetic in spirit. His plays include The Canterbury Pilgrims (1903), Fenris the Wolf (1905), Sanctuary: A Bird Masque (1913), A Saint Louis: A Civic Masque (1914), A Thousand Years Ago (1914), and he has also published poems and edited the work of Chaucer.

Mackensen (mäk’-ên-sen), August von, German Field-Marshall, was born in Saxony in 1849. He entered the Hussars in 1869 and was gradually advanced in rank from lieutenant to colonel. He was aide-de-camp in attendance on the Kaiser in 1888, was raised to the nobility in 1899, made major-general in 1900, lieutenant-general in 1903 and in 1908 commanding-general of the Eleventh Army Corps. In 1914 he was commander-in-chief on the Central Eastern front, and led the drive through Poland, past Warsaw and to Dvinsk. He was made Field-Marshall in 1915, and in 1916 was chief in command in the campaign by which Rumania was overrun.

Mackenzie (mäk’-ên-ze), Sir Alexander, a Canadian explorer, born at Inverness, Scotland, in 1755; died in 1820. In the employment of the Northwest Fur Company he explored the great river named after him from the western end of Lake Superior to the Arctic Ocean (1789). He made another expedition to the western coast (1792), and was the first white man to cross the Rocky Mountains and reach the Pacific coast. He returned to Britain in 1801, and was knighted.

Mackenzie, A.G., a Canadian statesman, born in Logierait, Perthshire, Scotland, in 1822. Originally a stone mason, he emigrated to Kingston, Canada, in 1842, and began business as a builder and contractor. In 1852 he was editor of a Liberal newspaper, and he entered parliament in 1861, becoming leader of the Liberal party in 1873. On the resignation of Sir John Macdonald that same year he became premier, and retained office with much success till 1878. He more than once declined the honor of knighthood. He died in 1892.

Mackenzie, Alexander Campbell, composer, born at Edinburgh in 1847; received his musical education partly in Germany. He became principal of the Royal Academy of Music in 1888. He is the author of the oratorio, The Rose of Sharon (1834), the operas Colomba (1884), and The Troubadour (1886), the cantata of the Story of Sisayd (1886), The Dream of Juba (1889), etc.

Mackenzie, Sir Morrell, born at Leytonstone, Essex, in 1837; educated at London Medical College, Paris and Vienna; obtained the Jackson prize for diseases of the larynx; became physician to the London Hospital, and lecturer on diseases of the throat. In 1887-88 he was associated with the specialists of Berlin and Vienna in the treatment of the laryngeal disease of the Emperor Frederick of Germany. He was the author of a treatise on Diseases of the Throat and Nose and several other works. He died in 1892.

Mackenzie, Robert Shelton, writer and journalist, born in County Limerick, Ireland, in 1809; died in 1881. After doing editorial work on the Liverpool Journal and other papers, he settled in the United States in 1852, and became the literary and foreign editor of the Philadelphia Press. He wrote Lay of Palestine; Tressilian, or the Story Tellers; Life of Dickens and other works.

Mackenzie River, a large river, in the Northwest Territories of Canada, which flows out of Great Slave Lake, first west, then north, finally northwest; and after a course of about 1200 miles falls into the Arctic Ocean by numerous mouths. Its principal affluents, including the feeders of Great Slave Lake, are the Athabasca, the Peace, the Seal, and the Peel, and it is navigable throughout its course. It was discovered by Alexander Mackenzie in 1789.

Mackerel (mak’-er-ĕl; Scomber scombrus), one of the splay-finned fishes (Acanthopteri), a well-known and excellent table fish, which inhabits almost the whole of the European seas and as far south as the Canary Islands, and from Greenland to Cape Cod, on the American coast. The American mackerel is also known as S. pervulgaris. Mackerel, like herring, are caught only when they approach the shore to spawn, nets being chiefly used. The Spanish mackerel S. colias, is found from Nova Scotia to Cape Hatteras, but is not much esteemed.
Mackintosh (mak’in-tosh), Sir James, a Scottish historian and philosophical writer, born in 1765; died in 1832. He was educated at Aberdeen and Edinburgh; became a physician; published his Vindiciae Gallicae in answer to Burke’s Reflections on the French Revolution; he afterwards quitted the medical profession and was called to the English bar in 1796. By reason of his brilliant lectures on the Law of Nature and Nations, and his defense of Peltier, who was prosecuted for a libel on Napoléon Bonaparte, he acquired fame at the bar, and received the honor of knighthood, and in 1804 was appointed recorder of Bombay. After an honorable career in India he returned to England; entered parliament for Nairn, and afterwards for Naresborough; became professor of law at Haileybury College (1818-24), a member of privy council, and in 1830 was made commissioner of Indian affairs.

Macle (mak‘l), in mineralogy, a term applied to twin-crystals, which are united in various ways. Macle is also used as a name for chiastolite or cross-stone.

MacLean, or Maclean (mak’s-lan), John, statesman and jurist, was born in Morris Co., New Jersey, in 1785; died in 1861. He was admitted to the bar of Ohio in 1807; was elected to Congress in 1812 and again in 1814; was a judge of the Supreme Court of Ohio, 1816-22, and became Postmaster-General in 1823. He filled this office with much ability until 1829, when he declined a place in the cabinet of President Jackson and was appointed a Judge of the Supreme Court of the United States. In 1837 he disented from the decision of the court in the Dred Scott case. He was one of the Republican candidates for the presidential nomination in 1856, and received 196 votes.

MacLeay, Sarah Pratt, novelist, born at Sunbury, Connecticut, in 1866; married F. L. Green in 1887. Her novel of Cape Cod Folks was so strikingly realistic that suit was brought against her by some of the Cape Cod people for libel. She wrote also Some Other Folks, Touhead, etc.

Macleod (ma-kloyd), Fiona, a pen name of William Sharp, who wrote also under his own name. Fiona Macleod being regarded as the real name of an author until recently. Among the works of Sharp under this name are The Mountain Lovers, Green Fire, Phoebus, etc.

Maclise (ma-klez‘), Daniel, a celebrated painter of Scottish descent, born at Cork in 1811; died in 1870. He became a student at the Royal Academy in 1828, and began to exhibit in 1829, but it was not until the year 1833 that he established his reputation with his picture of Snap Apple Night. Three years after he was elected an associate, and in 1840 he became a full member of the Royal Academy. Maclise was commissioned to paint for the new Houses of Parliament, and produced The Spirit of Chivalry, The Spirit of Religion, and the two great paintings of The Meeting of Wellington and Blücher after Waterloo and The Death of Nelson (1858-64). Among his best-known pictures are Merry Christmas in the Baron’s Hall, The Ordeal of Touch, The Marriage of Strongbow and Eva, the Play Scene in Hamlet, the Banquet Scene in Macbeth, etc. His sketches, book illustrations, humorous drawings, and outline portraits were very numerous. He declined the presidency of the Academy in 1839. The works of Maclise show great fertility of invention, skill in composition, and excellence in drawing, but are not distinguished for color.

Macmahon (mak-ma’n), Marie Edmée Patrick Mac-
MacMonnies, RICE DE, Duke of Magenta and Marshal of France, born in 1908; educated at the military college of St. Cyr; served with distinction in Algeria; became brigadier general in 1948; received command of a division during the Crimean war, and assisted in storming the Malakoff; took part in the campaign of 1859 against Austria, and won the battle of Magenta by his prompt handling of the left wing; and after the war became governor general of Algeria. At the outbreak of war between France and Germany (1870) Macmahon was placed in command of the First Army Corps, which was defeated at Weissenburg, Würth, and finally fell back upon Châlons. Here he rallied his forces, and proceeded northeastward to relieve Bazaine, who was besieged in Metz, but he was pursued by the Germans, shut up by their encircling armies in the town of Sedan, and wounded in the battle before the final surrender. After the armistice with Germany he was employed by the Versailles government in putting down the commune, and in 1873 was president of the republic. He died in 1883.

MacMonnies (mak-mon’i-zë), FREDERICK, sculptor, born at Brooklyn, New York, in 1863. His first figure, Diana, was exhibited in the Paris Salon of 1889, and in 1896 he was given the French decoration of the Legion of Honor. He made the notable fountains for the Chicago Exposition of 1893, the bronze doors for the Library of Congress, and other highly creditable works.

Macomb (ma-köm’), a city, capital of McDonough Co., Illinois, 59 miles N. E. of Quincy. It has manufactures of earthenware, sewer pipe, drain tiles, electrical insulated, etc., and a State normal school. Pop. 6714.

Macon (ma’kon), a city, county seat of Bibb Co., Georgia, on the Ocmulgee R., 79 miles S. E. of Atlanta, on the Southern, Central of Georgia and other railroads. It is the market and mill center of the cotton belt. It has cotton mills, canneries, packing plants, foundries, railroad shops, greenhouses, etc. Seat of Mercer University (Baptist), P. O. Nono College (Catholic), Wesleyan Female School, and an academy for blind, Pop. (1910) 40,985; (1920) 52,985.

Macpherson, JAMES, a Scottish author, was born in 1738, and died in 1796. He studied at Aberdeen and Edinburgh; became a school teacher, and afterwards a tutor; and in 1760 published Fragments of Ancient Poetry, translated from the Gaelic or Erse language. The success of this venture enabled Macpherson to issue the so called poems of Ossian in the form of Fingal, an ancient epic poem in six books (1762) and other Poems (1763, 4to). The genuineness of these poetical writings was severely questioned (see Ossian), but the 'editor' maintained his position without submitting to the necessary proofs. Macpherson was afterwards agent to the Nabob of Arcot; had a seat in the House of Commons from 1780 to 1790, and was interred in Westminster Abbey. He was the author of a prose translation of Homer's Iliad, and of some other works.

MacPherson, JAMES BIRDSHEET, general, born in Sandusky Co., Ohio, in 1828. He was graduated at West Point in 1849, was engaged in the engineer corps, was chief engineer under Grant at Donelson and Shiloh, and in May, 1862, was made brigadier-general of volunteers, and major-general in October. He did splendid service at Vicksburg and under Sherman, forced General Johnston to abandon a strong position near Atlanta in July, 1864, and was killed in the battles around Atlanta, July 22, 1864.

Macready, CHARLES, English tragedian, born at London in 1793; died at Cheltenham in 1873. His father, the lessee and manager of several provincial theaters, sent him to Rugby and Oxford to be educated, but his circumstances became embarrassed, and the youth had to join his father's company at Birmingham in 1810. Afterwards he played in the provinces with considerable success, and appeared at Covent Garden in 1816. In 1826 he made his first visit to America, and in 1828 played in Paris to great success in both countries. He undertook the management of Covent Garden in 1837, and Drury Lane in 1842, but although he did much to reform the stage and the public taste for Shakespearean drama, both the companies (he himself taking the leading parts in Shakespere's plays), his pecuniary losses required him to retire from management. He revisited the United States in 1849; returned to England; gave a series of farewell performances, and finally retired from the stage in 1851. His Reminiscences appeared in 1875. While he was in the United States the rivalry between him and Edwin Forrest led to a serious riot in the streets of New York.

Macrobius (ma-kro’bi-us), AMBROSIUS AURELIUS THEODOSIUS, a Latin author in the reigns of the emperors Honorius and Theodosius (end of fourth and beginning of fifth century
Macrocytis (ma-krō-sis’tus), a genus of marine plants, belonging to the nat. order Algae. The M. pyrifer a excels all other algae in the production of the length of its fronds, some of which have been estimated on reasonable grounds to attain a length of 700 feet. It is found in the southern temperate zone, and in the Pacific as far north as the Arctic regions.

Macropiper (mak’ró-pi-per), a genus of plants. See Ara-ara.

Macropus (mak’ró-pus; Gr. makros, long, pou’s, a foot), the generic name of the kangaroos, applied to them in allusion to their elongated hind feet. See Kangaroo and Marsupials.

Macura (mak’ro-pus; Gr. makros, long, oura, a tail), a family of stalk-eyed decapod crustaceans, including the lobster, prawn, shrimp.

Mactra (mak’tra), a genus of lamellibranchiate molluscs. They live in the sand, and are universally diffused. The genus includes many rare and beautiful species.

MacVeagh (mak’vé), WAYNE, statesman, was born at Phoenixville, Pennsylvania, in 1838. He entered the legal profession, was sent to Turkey as United States minister in 1870, and in 1881 was appointed by President Garfield Attorney-General of the United States, but resigned on the accession of President Arthur. He was ambassador to Italy, 1893-97, and chief counsel for the United States in the Venezuela arbitration before The Hague tribunal in 1903—His brother, FRANKLIN MACVEAGH, was graduated in law in 1864, but ill health induced him to abandon practice in favor of a mercantile business. He was nominated for the United States Senate from Illinois in 1894, but was defeated in the legislature. He became vice-president of the American Civic Federation and a member of the executive board of the National Civic Federation, and in 1900 was appointed by President Taft Secretary of the Treasury of the United States. He died Jan. 11, 1917.

MacVickar (mak-vik’ær), WILLIAM NELSON, bishop, was born at New York in 1849. He became a pastor in the Episcopal Church, was rector of Holy Trinity, New York, 1886-75, and of Holy Trinity, Philadelphia, 1875-98, when he was appointed coadjutor bishop of Rhode Island; succeeded as bishop in 1903. He was a very popular orator and preacher, and died in 1910.

Madagascar (mə-də-ə-gəsk’ar), a large island in the Indian Ocean, 230 miles distant from the east coast of Africa, from which it is separated by Mozambique Channel; length, 975 miles; average breadth, 250 miles; area, about 228,500 square miles; population, about 3,000,000. Madagascar may be described as an elevated region, with an average height of 3000 to 5000 feet, overlooked by mountains rising in some cases to nearly 9000 feet. The coast exhibits a number of indentations, mostly small, and few of them good harbors, it being in great part rock, though in some places low and sandy. On some parts of the coast are numerous lagoons. The rivers are numerous, yet few of them offer even to a moderate extent the advantages of internal navigation. The climate is oppressively hot on the coast, but temperate on the higher plateaus of the interior. The island is unhealthy for Europeans only in the neighborhood of lagoons or marshes. The rainy season continues from December to April. The most striking feature in the vegetation is a belt of dense forest, with an average breadth of 15 to 20 miles, passing round the whole island. It is found at all levels from 6000 feet to the water's edge, and the trees include palms, ebony, mahogany, fig, cocoonut, and the ravinia or traveler's tree (Urania speciosa), which when pierced yields a refreshing liquid. The vegetable products grown for food include rice, manioc or cassava, sweet potatoes, groundnuts and yams. Ginger, pepper and indigo grow wild in the woods: cotton, sugar-cane, coffee, tobacco and hemp are cultivated. India-rubber, gum copal and dyewoods are exported. Humped cattle are found in immense herds, and form a large part of the wealth of the inhabitants, as also sheep, goats, swine, and horses. The most characteristic of the mammals are the lemurs. The birds are numerous; snakes are rare; crocodiles, lizards, chameleons abound. The inhabitants, called Malagasy, belong to the Malayo-Polynesian stock and speak a Malayan language. They appear to form a single race, though they are divided into numerous tribes, each having a distinctive name and customs. The Hovas are the ruling tribe, they having extended their sway over nearly the whole island, while the other chief tribes are the Betan马拉ka, the Betasele and the Sakalava. In the coast districts the houses of the better class are built of framed timber with lofty roofs; the dwellings of the lower classes are constructed of bamboo or rushes, or even of clay. The Malagasy show much aptitude.
Madden

as silversmiths, gunsmiths, carpenters, and with rude looms make handsome cloths. The religion of the great bulk of the people is a kind of fetishism or worship of charms. Many of their superstitious customs have been abolished and Christianity adopted, chiefly by the Hovas, but polygamy and infanticide are still practiced. The island has been held by France since 1855. Imports and exports are valued at $4,000,000 annually. The capital is Antananarivo, in the elevated central region, the town next in importance being Mojianga, a port on the west, and Tamatave, a port on the east coast.—Madagascar was known to the Greek geographers and the Arabs, and to Marco Polo at the end of the thirteenth century. It was visited by the Portuguese, who gave it the name of St. Lorenzo. Towards the end of the seventeenth and during the most of the eighteenth century the French established themselves in the island, but they were expelled after a hard struggle to retain the islands of Ste. Marie on the east coast and Nosserio on the northwest. In the year 1810 Radama I became king of the Hovas, and with his approval Christian missionaries began to teach in the capital in 1820, many converts were made, the Bible was translated into the Malagasy tongue, the language was first reduced to a systematic written form, and printing was introduced. In 1828 he was succeeded by his chief wife, Ranavalona, a woman of cruel disposition, who persecuted the Christians and closed the island to Europeans. She was succeeded in 1861 by her son, Radama II, who reopened it to the missionaries and emancipated the African slaves. He also granted extensive territories and privileges to France, an act which offended his chiefs and led to his assassination in 1863. His wife occupied the throne five years, and on Ranavalona II becoming queen in 1868, the French brought forward their claims on the Malagasy territory, which, being refused, led to war. This resulted in a treaty (1885) by which the French received Diego Suarez Bay for a naval station, an indemnity of $4,000,000, and the control of foreign relations. By the Anglo-French agreement of 3 August 1900, the protectorate of France over Madagascar was recognized by Great Britain. A rebellion led to the French conquest of the island in 1895.

Madden (mad’en). Sir Frederick, born at Portsmouth in 1801; died in London in 1873. He early gave himself up to antiquarian pursuits; in 1828 he was appointed assistant keeper of MSS. in the British Museum, and in 1837 head keeper. He was knighted by William IV. He edited a large number of early English works and MSS.

Madder (mad’er), a dye plant, Rubia tinctorum, nat. order Rubiaceae. It is a climbing perennial, with whorls of dark green leaves, and small yellowish cross-shaped flowers. The prepared root is used as a red dye-stuff. It yields colors of the greatest permanence, and is employed for dyeing both linen and cotton. In the manufacture of it are fixed upon cotton; one is simply called madder-red, and the other, which possesses a much finer and drier texture and fixes, is called Turkey or Adrianople red, because it was for a long time obtained entirely from the Levant, where it was called alizarin. The coloring principle of madder is termed alizarin, and as this can now be obtained artificially from coal tar, the use of madder in dyeing is almost entirely superseded by that of artificial alizarin (see).

Madeira (mə-ˈdār-ə), a Portuguese island in the North Atlantic, 360 miles from the coast of Africa, 530 miles from Lisbon, 1215 from Plymouth; length, 30 miles; breadth, 13 miles; area, about 313 square miles. The island is traversed by a central mountain-ridge, the highest point of which reaches 6000 feet; from this great spur descend to the coast, forming lofty precipices; and in the bays formed between these volcanic cliffs are situated the villages of Madeira. Adjacent to Madeira is Porto Santo, a small island, and the Desertas, which, with Madeira, form the group of the Madeiras. The staple products of Madeira are wine and sugar; coffee and arrow-root are also grown and a variety of tropical fruits. The wine of Madeira was formerly famous, but a disease of the vines almost ruined the trade. The mean annual temperature is 65°, the two hottest months being August and September, and the three coldest, January, February, and March. The climate is equable and the island is considered an excellent sanatorium for chest diseases. The capital and chief center of trade is Funchal. The Madeiras were known to the Romans, and were rediscovered and colonized by
the Portuguese government in 1431. Pop. 169,777.

Madeira, a large navigable river of South America, a tributary of the Amazon, about 800 miles long, formed by the united streams Beni, Mamore, and Guapore on the frontiers of Brazil and Bolivia.

Madeley (mad'e-li), a town of England in Shropshire, on the Severn. Pop. (1911) 8859.

Madero (ma-da'r-o), Francisco Idalecto, President of Mexico, born in 1873. In 1903 Madero came into public notice as a leader of the independent voters of his native state, Cuahuila. Organizing an uprising in 1910, he forced Diaz to resign. He was chosen president in October, 1911; but revolts threatened his position. He was forced to resign, and was assassinated Feb. 23, 1913.

Madison, its incorporation of Morris Co., N. J., 17 miles w. of Newark. Seat of Drew Theological Seminary. It is a residential town. Pop. (1920) 5533.

Madison, a city of Indiana, county seat of Jefferson Co., on the Ohio River, 88 miles below Cincinnati. It is a tobacco market and a manufacturing city, producing steamboats, engines, boilers, flour, cotton and woolen goods, catsup, etc. Pop. (1920) 6711.

Madison, a city, capital of the State of Wisconsin, is situated on an isthmus between lakes Mendota and Monona, 82 miles w. of Milwaukee. It contains a handsome capitol and the University of Wisconsin. Here are also the Wisconsin Academy of Science, Arts and Letters, the Washburn Observatory, the Geological and Natural History Survey, the State Historical Society, etc. Its industries include foundries, machine shops, carriage shops, agricultural implement and electrical apparatus works, and various others. The city was settled in 1837. Pop. (1910) 25,551; (1920) 38,378.

Madison, James, fourth President of the United States, 1809-17, was born in Virginia in 1751; died in 1836. He was educated at Princeton; elected to the Virginia Convention in 1776; became a member of the council of state; took his seat in the Continental Congress in 1780, and was there made chairman of the Committee of Foreign Affairs. He was especially active in the Constitutional Convention of 1787, keeping notes of its proceedings which afterwards became very valuable. He strongly advocated the acceptance of the Constitution by Virginia, and was one of the able writers of The Federalist. Under the administration of Jefferson he became Secretary of State, and in 1808 he was elected President, serving for two terms. During his administration war was declared with Great Britain, and was prosecuted for three years with alternate defeat and success, until the decisive battle of New Orleans was fought, and peace signed in 1814. Madison retired into private life in 1817.

Madisonville, county seat of Hopkins Co., Kentucky, 38 miles s. of Henderson. Has tobacco, grain and lumber interests. Pop. 5030.

Madness. See Insanity.

Madoc (ma'dok), according to a Welsh tradition, son of Owen Gwynned, a Welsh prince, who, in 1170, put to sea with ten ships, and discovered land in the west, supposed to be America. He made a second voyage, but finally was lost to the knowledge of his countrymen. Southey has made Madoc the subject of a poem.

Madonna (ma-don'a), an Italian term of address equivalent to Madam. It is given specifically to the Virgin Mary, like Our Lady in English, and hence pictures representing the Virgin are generally called madonnas.

Madoqua (mad'o-kwa), a very tiny antelope of Abyssinia (Antilope saxitana or Neotragus saxitana), about as large as a good-sized hare, and with very slender legs.

Madras (ma-dras'), a maritime city of British India, capital of the presidency of the same name, on the Coromandel coast. It is ill situated for commerce, standing on an open surf-broken shore with no proper harbor, though an area has recently been enclosed by piers so as to shelter a certain amount of shipping. Still it carries on an extensive commerce, being the terminus of railways from Bombay and the south, while it is also the headquarters of all the presidency departments. The town is disappointing in appearance, the site being flat and there being no handsome streets, though there are some good buildings. Altogether the municipality covers an area of 27 square miles, the native and business part being called the Black Town. The chief objects of interest are the citadel of Fort St. George, built in 1639, the cathedral of St. George, Scotch church, government house, senate house, revenue buildings, college, etc. There are no manufactures to speak of, but the export and import trade is large. Madras was founded in 1639 by the English, and soon became their chief settlement on the coast. Pop. 562,191.

Madras, Presidency of, includes the dependencies and the state
of Mysore the entire south of the peninsula of India. Its extreme length is 950 miles, breadth 450 miles; area, 141,728 square miles, the native states included covering 99,659 more. It is surrounded on every side except the north by the sea, on which side it is bounded by Orissa, the Central Provinces, the territory of Hyderabad and Mysore. The three chief rivers, Godavari, Krishna and Kaveri, rise in the Western Ghats and enter the Bay of Bengal. The climate is varied: in the Nilgiri Hills it is temperate, on the Malabar coast the monsoon brings an excessive rainfall, while in the central tableland the rainfall is low, and the heat almost unendurable. The soil is sandy along the coast, but there are many fertile districts; while iron, copper, lead and coal are found and a few copper quantities of the agricultural produce. There are extensive forests in the presidency, yielding teak, ebony, and other valuable timber trees. The principal vegetable products are rice, wheat, barley, maize, and other grains; sugar-cane, areca nut, the lantana, tamarind, jackfruit, mango, melons, cocoaanuts, ginger, turmeric, pepper, tobacco, oil seeds, coffee and cotton. The wild animals met with are the elephant, tiger, chetah, jackal, wild hog, etc. The Madras administrative authority is vested in a governor, with a council of three members appointed by the queen, and of whom one is the commander-in-chief. For legislative purposes the council is increased by nominations of the governor. The chief educational institution is the Madras University, an examining body granting degrees in arts, law, medicine and engineering. The population is 41,688,882, and the native protected states have in addition a population of 4,186,688. The chief languages spoken are the Dravidian family, Tamil, Telugu (which are spoken by the great majority of the inhabitants), Canarese and Malayalam, while Hindustani is the language spoken by the Mohammedans.

Madrepore (mad're-pôr), a coral-building polyp of the genus Madreporea, the type of the family Madreporide, forming coral of stony hardness and of a spreading or branching form, hence called tree-coral. Madrepore coral is of a white color wrinkled on the surface and full of air, tamarind, of which an individual polyp is lodged. These polyps raise up walls and reefs of coral rocks with astonishing rapidity in tropical climates. The term is often applied also to other branching corals.

Madrid (ma-drid'), the capital of Spain, in New Castle, in the province of Madrid, on the Manzanares, near the center of the Iberian Peninsula. Situated upon a high plateau, 2450 feet above the sea, windswept from the snowy Guadarrama, with unhealthy extremes of temperature, the city has no advantages except the fanciful geographical merit of being the center of Spain. The principal streets are broad, long and airy; but the squares are generally irregularly built and deficient in decorative monuments. The royal palace, a combination of Ionic and Doric architecture, is one of the most magnificent in the world, being 470 feet each way, and 100 feet high. It contains a small but splendid Corinthian chapel, a library of nearly 100,000 volumes, and a fine collection of ancient armor and coins. Madrid has no cathedral, being only a suffragan bishopric. In 1560 the city walls were removed, and beyond it is the park. The Royal Museum of Painting and Sculpture, in the Prado, contains more than 2000 pictures. The National Library, founded by Philip V, contains 230,000 volumes. The University has an average attendance of 5000 students, and there are numerous colleges and schools, medical, military, law, etc. The manufactures are of small importance. Madrid only began to be a place of importance under Charles V, and in 1580 Philip II declared it to be the capital. It has not increased much since the reign of Philip VI. Pop. 571,539.

Madrigal (mad'-ri-gal), a short amorous poem, consisting of not less than three or four stanzas or strophes, and containing sonnets and delicate, though simple thought, suitably expressed. The madrigal was first cultivated in Italy, and those of Tasso are among the finest specimens of Italian poetry. Several English poets of the time of Elizabeth and the Charles wrote madrigals of notable grace and elegance, the chief names being Lodge, Withers, Carew and Suckling.—The term is also applied to an elaborate vocal composition now commonly of two or more movements. The musical madrigal was at first a simple song, but afterwards was suited to an instrumental accompaniment. There are a number of famous English composers of madrigals.

Madstone (mad'stón), a stone about the shape and size of a hen's egg, which is kept by some super-
stigious people of the United States with the belief that it will absorb snake venom and cure hydrophobia.

Madura (ma-dû'ra), a district of India, forming part of the Madras presidency, mostly a plain drained by the Vaigai River; skirted on the southwest by the Travancore Hills; area, 8701 square miles; pop. 2,831,280. The capital of the same name contains the vast palace of the ancient rajah, now going to decay, and the Great Temple, one of the most remarkable monuments of Hindu architecture. The chief buildings of Madura are connected with the name of Tirumala Nayak, who reigned from 1523 to 1659. Near the town is a remarkable eminence, called, from its shape, the Elephant Rock. The town has been much improved under British rule. Pop. (1911) 184,130.

Madura, an island of the Indian Archipelago, N. E. of Java, and separated from it by the Strait of Madura; 105 miles long, and 30 miles broad; and belonging to the Dutch. The island is not very fertile. The inhabitants, mostly Mohammedan, are governed by native princes. Cattle rearing is the chief industry, while the chief products are maize, coconuts, tobacco, Jamaica pepper and tamarind. The principal town is Sumanap. Pop. 1,652,580.

Madvig (mad'vîg), Johan Nikolaj, a Danish scholar, born in 1804; died in 1858; long professor of Latin in the University of Copenhagen. He is best known by his excellent Latin grammar translated into most European tongues.

Meander (mê-and'dar), now Mein- nea, a river of Asia Minor, which enters the Egean. It was celebrated among the ancients for its winding course, and has given us the verb to meander.

Mæcænas (mæ-s'næs), Caius Cæ- nos, a distinguished Roman, born between 73 and 63 B.C.; died in 8 B.C. He was the companion of the Emperor Augustus in nearly all his campaigns, and his most trustworthy counselor in political matters. For the three years 15-16 B.C. he was invested with the government of Italy. His great glory, however, was as a patron of learning, and the friend of Virgil and Horace.

Mælar (mê'lar), a beautiful lake of Sweden, length about 75 miles, average breadth 12 miles; irregularly formed and dotted with innumerable islands. Stockholm is situated at its exit to the Baltic.

Mælstrom (mê'lstrom), a celebrated whirlpool off the coast of Norway, near the island of Møkøe, one of the Lofoden Islands. When a strong wind is blowing from the northwest the whirlpool rages violently, sufficiently so as to be heard several miles away, and to engulf small vessels which approach the eddying waters too nearly.

Maëotia. See Asof, Sea of.

Maestoso (ma-es-tô'sô), an Italian musical term meaning in a majestic or lofty style.

Maestricht, or MAESTRICHT (mâs'trišt; Latin, Trajectus ad Mosam), a town of Holland, capital of the province of Limburg, on the left bank of the Maas. It lies on the Belgian frontier, 56 miles east of Brussels, and 52 miles west by south of Cologne. Among the chief buildings are the church of St. Servaas, dating from the tenth century; another old church, and the town hall (Stadhuis). Maestricht was once one of the strongest fortresses in Europe. Pop. (1910) 38,611.

Maeterlinck (mâ ter'link), MAU- RICE, a Belgian dramatist, born at Ghent in 1864. He has been called the 'Belgian Shakespeare,' and won reputation by La Princesse Maleine, The Blue Bird, The Life of the Bee, and other essays, plays and poems.

Mafia (ma-fi-a), L.A., a secret society originating in Sicily, having for its aim the substitution of its own laws for that of the state. Branches have been formed in the United States, where their members are suspected of fomenting atrocious crimes. The chief of police of New Orleans, La., was murdered by the Maffia in 1890. On the acquittal of the accused, a mob broke into jail and lynched eleven of them, an outrage which led to a diplomatic controversy with Italy.

Mafra (mă'fra), a town of Portugal, province of Estremadura, 17 miles northwest of Lisbon, and near the coast. It is noticeable only for the magnificent building, erected here by John V in 1717, in imitation of the Escurial of Spain, which forms a quadrangle, measuring east to west 780 feet, and north to south 670 feet, and includes a church, a royal palace, a college, a library of about 50,000 volumes, and a monastery with 300 cells. Pop. 4700.

Magadoxo (mă-gā-dô'shô), MOODISH, or MOODISHU, a seaport on the east coast of Africa, lat. 29° N., with a considerable trade. Magadoxo is subject to the Sultan of Zanzibar, but its administration has been handed over to the Imperial British East African Co. Pop. 6000.
Magalhaens

*Magalhaens* (mə-gəl-ə-yəns), or *Magellan* (ma-jel-ən), Fernão de, a Portuguese navigator, who conducted the first expedition round the world. Born about 1470, he served under Albuquerque in the East Indies; distinguished himself at the taking of Malacca in 1511; in 1519 received the command of a fleet of five ships from Charles V of Spain, with which he sailed westward; entered the strait since called after his name, and discovered the Pacific Ocean. Crossing this ocean, he was killed in a skirmish with the natives on one of the Philippines, but one of his vessels was brought to Spain by Juan Sebastian del Cano, thus completing the circumnavigation.

Magazines. See *Periodicals*.

*Magazine Guns*, a term applied to that class of small arms which carry extra cartridges. These have come into general use within recent years for sportsmen and soldiers, and include various inventions for feeding the extra cartridges and ejecting the empty shells.

*Magdala* (məg'də-lə), a town and fortress of Abyssinia, nearly 9000 feet above the level of the sea, about 120 miles southeast of Gondar. Magdala acquired importance from having been stormed April 12, 1908, by the British troops. See *Abyssinia*.

*Magdalen* (məg'də-lən), or *Magdalen*, Mary, that is, Mary of Magdala, a woman mentioned in the New Testament as having had seven devils cast out of her, as watching the crucifixion, and as having come early to the sepulcher on the resurrection morning. She was erroneously identified as the woman who was a sinner (Luke, vii, 37), and hence the term Magdalen came to be equivalent to a penitent fallen woman.

*Magdalena* (məg-də-lə'nə), a large river of South America which rises in the central Cordillera of the Andes, in Ecuador; flows generally north through Colombia, and falls into the Caribbean Sea by several mouths; length 970 miles. The Magdalena is navigable as far as Honda, 435 miles from its embouchure.

*Magdalen Institutions* (see *Mag-\*d\*a-\*len*) are intended to afford a retreat to penitent prostitutes, and the first was established in London, in 1758.

*Magdeburg* (mədə-bərk), the capital of Prussian Saxony, and a fortress of the first class, on the Elbe, 76 miles w. s. w. of Berlin, chiefly on the left bank of the river, which here divides into three arms. The chief buildings are the Dom or cathedral, erected in the thirteenth and fourteenth centuries, and repaired in recent times; the town house, government buildings, exchange, central railway station, and theater. The industries are very varied, embracing machinery, castings, armor plates, chemicals, spirits, pottery, sugar, beer, cottons, ribbons, leather, etc. The trade is extensive both by rail and river; for sugar Magdeburg is the chief center in Germany. Magdeburg is a place of great antiquity, being a trading center in the ninth century. It early distinguished itself in the Reformation. During the Thirty Years' war the town was besieged, stormed, and sacked by Tilly, when 20,000 persons are said to have been murdered. Pop. (1910) 279,685.

*Magdeburg Hemispheres*. These are two hollow hemispheres of copper or brass, fitting accurately, and arranged so that the air can be withdrawn from them and a vacuum formed within. When thus exhausted they cling together with great force. If a foot in diameter, the pressure upon them amounts to nearly a ton.

*Magellan*. See *Magalhaens*.

*Magellan* (ma-jel'lan), Strait of, separates the continent of South America from Tierra del Fuego; 300 miles long; varies in breadth from 3 to 50 miles, and forms communication between the South Atlantic and South Pacific oceans. The number of obstructing islands makes the channel difficult of navigation. The strait was discovered in 1520 by Ferdinand de Magalhaens, or Magellan, during his celebrated voyage.

*Magellanic Clouds* (mə-jel-lə-nik), two oval-shaped cloud-like masses in the southern hemisphere near the pole, consisting of swarms of stars, clusters and nebulae of every description. They cover spaces in the heavens of 42 degrees in the heavens of 10 square degrees respectively.

*Magendie* (mə-zhənd-e), François, a French physiologist, born in 1783; died in 1865. Educated for the medical profession in Paris, he was made demonstrator of anatomy by Boyer; became physician to the Hôtel-Dieu; was elected a member of the Academy of Sciences in 1819; and in 1831 received the anatomy professorship in the College of France. By his extensive use of vivisection he made important discoveries in physiology, and he published important works.
Magenta (må-je’n-tà), a small town of North Italy, 14 miles east from Milan, on the high road to Novara. On June 4, 1859, Magenta was the scene of a decisive victory won by the French and Sardinians over the Austrians, and it, in consequence, gave the title of Duke of Magenta to Marshal Macmahon. Pop. 8012.

Magenta, a brilliant blue-red coloring substance derived from aniline.

Maggiore, Lake. See Lago Maggiore.

Magi (mâ’jî), the hereditary priests among the Medes and Persians, set apart to manage the sacred rites, and preserve and propagate the sacred traditions, acting also as diviners and astrologers. They possessed great influence both in public and private affairs, conducted the education of the princes, etc. Their order was reformed by Zoroaster. (See Zoroaster.) The name came also to be applied to holy men or sages in the East.

Magic (maj’ik), the art or pretended art or practice of producing wonderful effects by the aid of superhuman beings or of departed spirits or the occult powers of nature. The word is used to include a mass of beliefs and practices which bear on matters beyond the ordinary known actions of cause and effect. A large proportion of magical rites are connected with the religious beliefs of those using them, their efficacy being ascribed to supernatural beings.

There is, however, a non-spiritual element in magic which depends on certain imagined powers and correspondences in nature, that can be utilized in various ways. (See Alchemy, Astrology, Charm, Divination, Witchcraft.) In savage countries the native magician is often sorcerer and priest, and sometimes chief of the tribe. Among the ancient Egyptians magic was worked into an elaborate system and ritual, and it was regularly practiced among the Babylonians and Assyrians, as well as in Greece and Rome. Alexandria, from the second to the fourth century, became the headquarters of theurgic magic, in which invocations, sacrifices, diagrams, talismans, etc., were systematically employed. This system, influenced by Jewish magical speculation, had a strong hold in medieval Europe, and many distinguished names are found among its students and professors. The magic which holds a place still among the illiterate and ignorant classes has come down by tradition in popular folklore. The name natural magic has been given to the art of applying natural causes to produce surprising effects. It includes the art of performing tricks and exhibiting illusions by means of apparatus, the performances of automaton figures, etc. See Legerdemain.

Magic Lantern, a kind of lantern invented by Kircher, a German Jesuit (1604-80), by means of which small pictures or figures are represented on the wall of a dark room or on a white sheet, magnified to any size at pleasure. It consists of a closed lantern or box, in which are placed a lamp and a concave mirror (as at A), which reflects the light of the lamp through the small hole of a tube in the side of the lantern, which is made to draw out. At the end of this tube, next to the lamp, is fixed a plano-convex lens (b), and at the other a double-convex lens (d). Between the two lenses are successively placed (at c) various slips of glass, with transparent paintings, representing various subjects, which are thrown in a magnified form on the wall or screen opposite to the lantern and spectators. It has been vastly improved of late, and the substitution of the oxyhydrogen and electric lights for the oil lamp has added much to the effectiveness of its displays; while photography applied to the production of objects has almost indefinitely increased its resources.

Magic Square, is a term applied in arithmetical progression, arranged in equal and parallel rows and columns, in such a manner that the vertical, horizontal and diagonal columns when added shall give the same sums. The question of magic squares is in itself of no use, yet it possesses a curious interest to those interested in the properties of numbers. A specimen of these squares is here given. There are also Magic Circles, Magic Cubes, Magic Cylinders, Magic Spheres, etc., in all of which the same result is brought about by various arrangements of the terms of an arithmetical series.

Magilp (ma-gil’p), a gelatinous compound produced by mixing linseed oil and mastic varnish together, used by artists as a vehicle in oil paint.
Maginn (má-gin'), William, born at Cork in 1794; died at Walton-on-Thames in 1822. He was educated at Trinity College, Dublin, and established himself as a literary man in London. He was for long a regular contributor to Blackwood's Magazine, and was successively editor of the Standard, of Frazer's Magazine, and other publications. Notwithstanding his splendid scholarship and talent for popular writing, his irregular habits brought him to bankruptcy and a debtor's prison. His Homeric Ballads, Shakespeare Papers, etc., were collected and published after his death.

Magione (má-ji-ō'na), a town of Central Italy, 8 miles west of Perugia. Pop. 9980.

Magistrate (máj-is-trát), a public civil officer invested with the executive government or some branch of it. In this sense a king is the highest or first magistrate in a monarchy, as is the president in a republic. But the word is more particularly applied to subordinate officers, to whom the executive power of the law is committed, either wholly or in part, as governors, intendents, prefects, mayors, justices of the peace, and the like.

Magna Carta Libertatum, the Great Charter of Liberties, a document forming part of the English constitution, and regarded as one of the mainstays of English liberty, extorted from King John by the confederated barons in 1215. Its most important articles are those which provide that no Freeman shall be taken, or imprisoned, or proceeded against except by the lawful judgment of his peers or by the law of the land; and that no Scutage or Aid shall be imposed in the kingdom (except certain feudal dues from tenants of the crown), unless by the common council of the kingdom. The remaining and greater part of the charter is directed against abuses of the king's power as feudal superior. It originally contained sixty-three clauses; subsequent confirmations altered the number of these till 1225, when it took its final and accepted form with thirty-seven clauses. The most accurate and complete copy of the original charter is that preserved in Lincoln Cathedral. The board of commissioners on the public records ordered a facsimile of it to be engraved, and it has been frequently translated from its original Latin into English.

Magna Græcia (mág'na gré'shə), the collective name given to the Greek cities and settlements in Southern Italy mostly founded in the eighth century B.C. by different Greek peoples. The Chalcidians founded Rhegium about 760 B.C.; and subsequently Croton, Sybaris, Tarentum, etc., were founded. These colonies and their offshoots reached a great pitch of wealth and power in the seventh and sixth centuries B.C. Mutual discord, however, gradually weakened them, and their independent existence came to an end in the third century B.C., when they were conquered by the Romans.

Magnesia (mag-nes'ë-a), the name of two ancient cities of Asia Minor: (1) A city of Ionia on the river Letheus, a tributary of the Meander. (2) A town of Lydia on the southern bank of the Hermus. See Manisa.

Magnesia, a white tasteless earthy substance, possessing alkaline properties, and having a specific gravity of 2.3. It is absorbent, acid, mildly cathartic, and almost insoluble. It is found native in the state of hydrate and carbonate, and exists as a component part of several minerals. In commerce, pure magnesia is generally distinguished by the term calcine (magnesia), and is readily obtained by exposing its hydrated carbonate to a red heat. The hydrated carbonate goes by the name of magnesia or magnesia alba. The chief use of magnesia and its carbonate is in medicine. See Magnesium.

Magnesian Limestone (mag'-né-zhë-an), a yellowish rock composed of carbonates of lime and magnesia, the latter amounting in some cases to nearly a half. There are several varieties, more or less useful for building or ornamental purposes, which are included under the generic name dolomite. The same name is also given to the whole Permain formation, from this rock being very largely developed in it.

Magnesium, the metallic base of magnesia; chemical symbol Mg, atomic weight 24.3. It may be obtained by decomposing chloride of magnesium by means of potassium. It is of a white color like silver; its luster is metallic and brilliant; it is very malleable, and fuses at a red heat. Heated to redness in oxygen gas, it burns with brilliancy, and combining with oxygen becomes magnesia, or the oxide of magnesium (MgO). The magnesium light is rich in chemical rays, and is now employed to some extent in photography. The chief salts are the carbonate, the chlorides, the sulphate (Epsom salt), the phosphates and the silicates, among
Magnet

which are such minerals as chrysolite, meerschaum, soapstone and serpentine.

Magnet. See Magnetism.

Magnetic Lift, an arrangement now much used for lifting heavy weights by the aid of powerful artificial magnets. These are adapted to form part of a traveling crane, strong magnets, energized by powerful currents of electricity, being employed. These will lift and carry iron masses of considerable weight, consisting of detached parts, yet all lifted together by the magnetic force. They can be dropped at any desired point by breaking the current, when the magnetic power ceases. Thus work can be quickly done which would require considerable time and labor in loading and carrying in the ordinary way. A notable example was given in the case of a sunken ship at New Orleans laden with kegs of nails. These were lifted from a considerable depth of water by the use of a magnet, the nails coming up in a coherent mass in instances where the kegs had been broken.

Magnetism (magnetism), the science which treats of the phenomena exhibited by magnets—phenomena due to one of those forces which, like electricity and heat, are known only by their effects. The phenomena of magnetism were first observed in the lodestone or magnet (so named from Magnesia in Asia Minor). The lodestone is a kind of iron ore (magnetic iron ore), and is found in many parts of the world, especially in the Scandinavian peninsula and in Siberia. It has the power of attracting small pieces of iron or steel, and when suspended in such a way as to be able to move freely, always points to what are called the magnetic poles of the earth, that is, nearly north and south. A piece of lodestone forms a natural magnet, and has the further remarkable power of giving all its own properties to hard iron or steel when these bodies are rubbed by it. A bar or mass of iron or steel to which the peculiar properties of a natural magnet have been imparted by friction from other magnets or by electric power is called an artificial magnet. When freely suspended, all magnets, natural and artificial, rest with their lengths in a northerly and southerly direction, and this property is utilized in the well-known compass. They attract iron and other magnetic substances with a force increasing from the middle of the magnet to its extremities, which are called its poles. The magnetism at the two poles is different, that pole which points to the north is distinguished as the north or north-seeking or austral pole, or by the sign plus (+); that which points to the south as the south or south-seeking or boreal pole, or by the sign minus (—). The poles of the same denomination repel each other, while those of different names have mutual attraction, thus resembling the two electrifications, positive and negative. The intensity of this attraction and repulsion varies inversely as the square of the distance, a law which also governs electrified bodies. Magnetism pervades the earth as electricity does the atmosphere. It assumes a totally different form in different substances; the metals iron, nickel and cobalt being strongly attracted by the magnet; others such as bismuth, copper, silver, gold, etc., being repelled. (See Dia- or Para-magnetic.) Whither or not this is an actual repulsion, however, is in doubt, as it may be due to the superior magnetic power of oxygen, which in its response to magnetism may force these feeble substances away. The space in the neighborhood of a magnet is called the magnetic field; a piece of soft iron brought into this space becomes magnetic, but it loses its magnetism as rapidly on removal from the field. (See Induction, Magnetic.) Steel has coercive force, in virtue of which it requires time for magnetization, and retains its magnetism on removal from the field. Hard steel may be made magnetic by rubbing it several times in the same direction with a powerful magnet, and hence it is easy to multiply magnets. The most powerful permanent magnets are produced by rubbing bars of steel on electro-magnets (see Electro-magnetism), or by moving them backwards and forwards along the axis of a coil of wire in which an electric current is passing. A bar is magnetized to saturation when its magnetism is as great as it can retain without future loss or diminution. When a magnet is broken into a number of pieces each piece is found to be magnetic, and its north pole is found to have been directed towards the north pole of the unbroken magnet. When these pieces are put together again poles placed in contact nullify each other, and the original magnet is reproduced. From this fact it has been suggested that magnetism is an affection of the particles which make up the magnet. Ampère having advanced the theory that every atom is a natural magnet and that when these act in unison the whole mass displays magnetic force.

Terrestrial magnetism, which pervades the whole earth, is extremely complicated.
Magnetism

It becomes manifest by its influence on the magnetic needle, varying with time and place over the earth. One pole of the needle points towards the north, the other towards the south. There are, however, only two lines on the surface of the earth on which it points directly north and south, and where the magnetic and geographical meridians appear to coincide. Elsewhere the needle deviates more or less from the true north. This is termed the declination of the needle, and varies from place to place, and in the course of time at the same place. (See Isogonic.) When a needle is balanced on a horizontal axis so that it can turn in a vertical plane, the extremity attracted by the nearer magnetic pole of the earth points more or less downwards. (See Dipping-needle.) The angle thus made is called the dip or inclination, and the lines marking equal inclinations on a map are called isoclinal lines. They intersect the isogonic lines, and the dip increases towards the perpendicular as the magnetic poles are near. These magnetic poles do not coincide with the geographical poles, the northern in 70° 5' N. and 36° 43' W. The southern was located by the Shackleton expedition of 1908, in lat. 72° 23' S. and lon. 154° E. There are two foci of maximum force in the northern hemisphere and two in the southern. In the northern hemisphere the stronger focus is assumed to be in 52° 5' N. and 90° W., and the weaker in 70° N. and 115° E. In the southern hemisphere the stronger focus is assumed to be in 65° S. and 140° E., and the weaker probably in 50° S. and 130° E. The earth's magnetism is subject to vast unaccountable fluctuations or storms of immense extent, which occur at irregular intervals and are of short duration. They are often connected with manifestations of electrical phenomena, such as the aurora borealis, or thunder storms. These disturbances are made manifest by irregular motions of the magnetic needle. The various phenomena connected with terrestrial magnetism are now automatically recorded, and systematized in the interests of meteorology. The magnetic equator or line of no dip crosses the terrestrial equator in several places, extending alternately on each side, but never deviating more than 12° from it.

Magnetism, Animal. See Mesmerism.

Magneto-electricity (mag'net-o-të-kwël), a conductive when its position is changed relative to a magnetic field (see Induced Current), whereas electro-magnetism (which see) treats of magnetization produced by currents.

Magneto-electric Machines.

In magneto-electric machines an electromagnet of compact form called the armature is caused to rotate near the poles of a powerful fixed magnet, in such a manner that the core of the armature becomes magnetized first in one direction and then in the opposite, by the inductive action of the poles of the fixed magnet. Every change in the magnetization of the core induces a current in the coil wound upon it. Hence currents in alternately opposite directions are excited in this coil, their strength increasing with the speed of rotation. It is now usual in powerful machines of this class to employ electromagnets as the fixed magnets, and the current which feeds these fixed magnets (called the field magnets) is often the current generated by the machine itself. This case are called dynamo machines. This name was originally confined to machines which thus supply the current for their own field magnets; but it is now applied to any machine in which the field magnets are electro-magnets. Such machines, of which there is an enormous variety, driven by steam engines or other powerful motors, are now almost universally employed when electric currents are required on a large scale, as in electric lighting. See the articles Dynamo, Electric Light, Electric-magnet, Electro-magnetism, Electro-motors.

Magneto-meter (magn-e-tom'-ë-tor), an instrument employed for observing the magnetic declination, and also for other absolute magnetic measurements. They are of various forms and are usually self-recording. See Declinometer, Dipping-needle.

Magnificat (magn-i-fik'-at), the song of the Virgin Mary, Luke, i, 46-55; so called because it commences with this word in the Latin Vulgate. It is sung throughout the Western Church at vespers or evensong.

Magnifying-glass, a convex glass. See Lens.

Magnolia (magn-o-lë-ë), a genus of trees and shrubs, type of the nat. order Magnoliaceae; named from Pierre Magnol, a French botanist of the seventeenth century. The species, which chiefly inhabit North America, Northern India, China, Japan, and other parts of Asia, are trees much admired on account of the elegance of their flowers and foliage, and are in great request in gardens. In their native countries some of them attain great height, and have flow-
ers 10 inches across. The bark of the root of *M. glauca*, or the beaver tree, is an important tonic. *M. tripetâla*, or umbrella tree, has also tonic properties. The cones of *M. acuminâta* yield a spirituous liquor, employed in Virginia in rheumatic affections. *M. grandiflora*, or big-laurel, and *M. conâpica* or *Yulan*, the yulan or Chinese magnolia, grow well in the south of England, and are splendid ornamental trees, being notable from flowering in spring before the leaves expand. The great flowered magnolia, or laurel bay, is a fine evergreen tree, 70 feet high, found in America, and bearing large, fragrant and beautiful flowers.

**Magog.** See *Gog and Magog*.

**Magot.** See *Barbary Ape*.

**Magpie** (mag’pl), a bird of the genus *Pica*, belonging to the Corvidæ or crow family. There are several species, two of which belong to America. The common European magpie (*P. caudâta*) is about 18 inches in length; the plumage is black and white, the black glossed with green and purple; the bill is stout, and the tail is very long, whence its specific name caudâta. The magpies continue in pairs throughout the year, and prey on a variety of food, chiefly animal. They are determined robbers of other birds' nests, destroying the eggs and young birds. In captivity they are celebrated for their crafty instincts, their power of imitating words, and their propensity to pilfer and secrete glittering articles.

**Magyars** (ma-jârs’), the Hungarians. See *Hungary*.

**Mahaban** (ma-ha-ban’), a decayed Indian town and place of pilgrimage, in Muttra district, Northwestern provinces. Pop. 6182.

**Mahâbhrâta** (ma-hâ-bhâ’ra-ta; literally, the great history of the descendants of Bharata), an epic poem in a couplet of about 220,000 lines, divided into eight books, the leading story of which narrates the history of the war between the 100 sons of Dhritarâshtra and their cousins, the five sons of Pandu, for the possession of the ancient kingdom of Bharata, which is said to have comprised the greater part of India. With its numerous extensive digressions and episodes, it forms a cyclopædia of Hindu mythology, legendary history and philosophy. The authorship is attributed to Vyasa, 'the arranger,' but this simply means that the materials of which the poem consists were at some time or other welded together with a certain order and sequence so as to form one work, containing all that was needed to be known by an educated Hindu.

**Mahadeva** (ma-hâ-dâ’va; Skr.; literally, the great god), a name of Siva, one of the Indian deities, from which the sacred Ganges is fabled to have sprung.

**Mahaffy** (ma-hâf’i), JOHN PENTLAND, born in Switzerland in 1839; educated in Germany and latterly at Trinity College, Dublin, where he became a fellow in 1864, and was appointed professor of ancient history in 1871. He is author of *Lectures on Primitive Civilization; Social Life in Greece from Homer to Menander; History of Classical Greek Literature; Problems of Greek History*, etc.

**Mahan** (ma-han’), ALFRED THAYER, naval officer and author, was born at West Point, New York, September 27, 1840. Graduating from the Naval Academy in 1859, he served through the Civil war and until 1896, retiring with the rank of captain. From 1886-89 he was president of the Naval War College. His notable work, *The Influence of Sea Power upon History*, attracted wide attention, and was followed by other works of great importance in naval history. In 1906 he was given the rank of rear-admiral. He died December 1, 1914.

**Mahanadi River** (ma-hi’na-dë’; or MAHANUDDY), a river in Southern Hindustan which flows through the Central Provinces and Orissa, falling by several mouths into the Bay of Bengal, after a course of 520 miles. It has several large tributaries, and in connection with it is an extensive canal system. The Mahanadi itself has an estimated drainage area of 43,800 square miles and its rapid flow renders its maximum discharge in time of flood second to that of no other river in India.

**Mahanoy City** (ma-ha-nô’), a city of Schuylkill Co., Pennsylvania, 80 miles from Philadelphia, 13 miles N.N.E. of Pottsville, in the middle of a rich anthracite coal district. It has iron and other industries. Pop. (1910) 15,936; (1920) 15,599.

**Maharajah** (ma-hâ-râ’ja; literally, a great king), a title applied to an Indian rajah chief. The British have recognized these Maharajahs.

**Mahatma** (ma-hât’ma). This word signifies in *Sanskrit* ‘great-souled one.’ It is used by the Brahmins to designate a sage who has attained the highest point of spiritual enlightenment, and is in consequence possessed of magical powers.

**Mahdi** (ma-dë’; Arabic, the guided one, a name assumed by
some of the successors of Mohammed, particularly applied to the twelfth imam, the lineal descendant of Mohammed, born A.D. 868. He mysteriously disappeared, being probably murdered by a rival, and the belief was that he would remain hidden until the "last days," when he would reappear, and at the head of the faithful spread Mohammedanism over the world. Many professed Mahdis have appeared from time to time in Africa as well as Asia, the latest being Mohammed Ahmed, the leader of the Soudanese insurrection (1883-85). He was born at Dongola in 1843; died in 1885. He studied Mohammedan theology at Khartoum and Berber, and at 25 years of age he retired to the island of Aba in the White Nile, where he lived in solitude for fifteen years. At the age of forty he took up the prophetic rôle, and his short victorious career began. He was succeeded by Khalifa Abdul-Rahman, whose army was completely defeated by General Kitchener in 1898, and the Mahdist rule in the Soudan brought to an end. See Egypt, Soudan.

Mahé (mă-hĕ́), an island in the Seychelles or Mahé Archipelago, in the Indian Ocean, about 17 miles long and 4 miles broad. It contains Port Victoria, the capital and headquarters of the British East African squadron.

Mahé, a French settlement, Southern India, within the limits of Malabar district, Madras presidency, 40 miles N. N. W. of Calicut, at the mouth of a small river of the same name. Formerly a place of considerable importance and trade. Pop. 10,298.

Mahmud (mắhmūd), Sultan of Ghazna, the founder of the Mohammedan Empire in India, born at Ghazna about 970; died in 1039. His father, Sabaktagin, governor of Ghazna, owed a nominal allegiance to Persia, but was really independent. On his death M a h m u d put aside his elder brother; formed an alliance against the Persian monarch, overthrew his kingdom, and laid the foundation of an extensive empire in Central Asia (990). He then turned his attention to India, and in a series of twelve invasions secured a great amount of treasure, and vastly extended his power. He was a patron of literature, and brought many men of learning about his court, among whom was the poet Firdusi (which see). He established large educational institutions at Ghazna, and spent vast sums on public works. See Ghaznavides.

Mahmud I, Sultan of Turkey, born in 1606; reigned in 1730-50.  
—Mahmud II, Sultan of Turkey, born in 1756; died in 1838; placed on the throne by the Janizaries after the murder of his predecessor, in 1808. The chief events of his reign are the war with Russia from 1808 to 1812, which cost him Bessarabia and the provinces of Servia, Moldavia, and Wallachia, as settled by the treaty of Bucharest; the war of Greek independence, which ended in the separation of that country, and the destruction of the Turkish fleet at Navarino, 1820-28; the extermination of the Janizaries, 1826; the treaty of Adrianople with the Russians, who were on the point of entering Constantinople, 1829; the independence of Egypt under Mehmet Ali, and the new treaty of Unkiar-Skelessi with the Russians, 1832-33.

Mahogany (má-hō`gə-ná), the wood of the species Swietenia mahogoni, a lofty and beautiful tree, indigenous to Central America and the West Indies, belonging to the nat. order Cerealiae. It grows most abundantly in Surinam and attains its greatest development between 10° N. lat. and the Tropic of Cancer. It reaches maturity in about 200 years, and grows to a height of 40 to 60 feet, diameter 6 to 12 feet. The wood is hard, compact, reddish-brown, and susceptible of a brilliant polish. It is one of the best and most ornamental woods known, and is widely used in the making of furniture. It is imported chiefly from Mexico and British Honduras. That which is imported from the West Indies is called 'Spanish' mahogany, and is the most valued. African mahogany is the wood of Swietenia senegalensis, and is brought from Sierra Leone. Indian mahogany is the wood of S. febrifuga and S. chloroeylon, two large trees found in mountainous districts of India. Ceylon mahogany is the Artocarpus integrifolia, widely cultivated throughout the warm parts of Asia. Australian mahogany is the red gum (Eucalyptus marginata).

Mahomet. See Mohammed.

Mahon (má-nó̃n), Lord. See Stanhope, Philip Henry, Earl.

Mahon. See Port Mahon.

Mahony (má-hō'ni), Francis, known as 'Father Prout,' born at
Cork in 1804; died at Paris in 1866. He was educated at a Jesuit seminary at 400. He received his theological degree at Paris, and received clerical ordination, and officiated for a short time at the chapel of the Bavarian Legation, London. About 1834 he began the contribution of an amusing series of articles known as the Prose Papers to Fraser's Magazine. In 1846 he became Roman correspondent to the Daily News, his letters being afterwards republished under the title of Facts and Figures from Italy. For the last twelve or fifteen years of his life he was Paris correspondent for the Globe. Reliques of Father Prost was published in 1836 and 1860, and Final Reliques in 1876.

Maharattas (ma-rat'tas), a native Hindu race, said to have migrated from Northern India, who in the reign of Shah Jehan occupied a large tract of Central and Western India. They came into prominence about the middle of the seventeenth century, when the chief Sevaji, taking advantage of the weakness of the Moguls and the wars of Aurungzebe, extended his conquests in various directions, had himself crowned king in 1674, and established the Maharatta Empire. After his death long minorities and the incompetency of the sovereigns caused the powers of the state to fall into the hands of the Peshwas or prime minister, who became the acknowledged head of a Maharatta confederacy. This confederacy held together until 1795, but subsequent wars and disturbances reduced the Peshwas to the position of a British dependant, and Scindia, Holkar and the Rajah of Kolapore became independent princes under British protection.

Mahair, or Mahsir (ma'sur), the principal game fish of India, a barbel (Barbus mosal), notable for its large scales. It is often over 100 pounds weight. It lives in the hill streams of the north, and is valued both for its gamey qualities and its delicate flesh.

Mai (mi), Angelo, Cardinal, an Italian scholar, born in 1782; died in 1854. In 1796 he entered the novitiate of the Society of Jesus, afterwards became a priest, and in 1806 obtained the post of librarian at the Ambrosian Library of Milan. In 1819 he became chief librarian of the Vatican, held the office of secretary of the Propaganda (1835-38), was created cardinal, and held several high offices in the church. Through his labors in the decipherment of papyrus he recovered some fragments of the orations of Cicero and writings of Philo, Porphyry, and others. He rendered valuable services to the cause of scholarship.

Maias (mā'ya), in Greek mythology, one of the Pleiades, the daughter of Atlas and mother of Hermes (Mercury).

Maidenhair (mā'den-hār), the name given to the Adiantum Capillus-veneris, an elegant fern with a creeping scaly rhizome, and bipinnate fronds, the leaflets of which are between rhomboidal and wedge-shaped, margined with oblong sori, and more or less deeply lobed. It is found in the United States and throughout the Eastern hemisphere, and possesses demulcent and mucilaginous properties.

Maidenhair-tree, the Salixburia adiantifolia, a deciduous tree of the yew family, a native of Japan, so called from the likeness of its leaves to the maidenhair fern.

Maidenhead (mā-den-bed), a municipal borough, England, in the county of Berks, 12 miles N. E. from Reading, near the right bank of the Thames. Its first charter dates from the reign of Edward III. Pop. (1911) 15,218.

Maiden-plum, the name of two West Indian plants, Comocladia integrifolia and C. dentata, belonging to the nat. order Anacardiaceae. They yield a milky juice which, on exposure to air, becomes an indelible black dye.

Maid of Norway, Margaret, the daughter of Eric, king of Norway, and Margaret, the daughter of Alexander III of Scotland. On the death of Alexander she was acknowledged queen of Scotland, and was betrothed to Edward, son of Edward I of England, but died on her passage to England in 1290.

Maid of Orleans. See Joan of Are.

Maid of Orleans. See Honor, Maids of.

Maidstone (mād'stun), a municipal and parliamentary borough of England, county of Kent, 32 miles S. S. E. from London, on the banks of the Medway, here crossed by a handsome bridge completed in 1779. There is a fine old church, one of the largest parochial buildings in the kingdom, supposed to be of the fourteenth century. Paper is largely manufactured in the vicinity, and an extensive trade is carried on in fruit and hops. Pop. (1911) 35,477.
Maigre (mā-gĕr), an acanthopterygious fish of the genus 
Sciema; more particularly the S. aquila, 
much sought after as a food fish. It is 
common in the Mediterranean and the 
Eastern Atlantic, and is a strong, powerful 
fish, often measuring 6 feet in length. It 
is remarkable for making a sort of 
whirring noise as it moves through the 
water.

Mail, Coat of. See Arms and Armor.

Mail-coaches. See Coach.

Mailed Cheeks, a name given to the 
Triglida, a family of acanthopterygious 
fishes, from their having certain bones of 
the head and gill-covers enlarged to form 
a defense for the cheeks. Garnards and 
hulliards are members of this family: a 
Maimachin, MAImATCHIN (m̩-ma- 
shên'), a trading town 
of Mongolia, adjoining the Russian em-
porium of Kiachta.

Maimansingh (m̩-m̩-m̩n-s̩̄ng̩), a British 
district in the Dacca division, 
Bengal; area, 6287 
square miles. It is for the most part 
level and open, and is well cultivated. 
Rice and jute are among the chief agricul-
tural products. The Jumna and the 
Brahmaputra are the chief rivers, and the 
administrative headquarters are at 
Nasirabad.

Maimonides (m̩-m̩n-ˈid̩s̩), prop-
erly Moses Ben Maim-
mon Ben Joseph, a Jewish scholar, born 
at Cordova about 1131-39; died about 
1201-09. He received an excellent edu-
cation, studied Jewish and Arabic litera-
ture and Greek philosophy, attended the 
lectures of the Arabic philosophers, and 
made himself acquainted with the heal-
ing arts. Driven from Spain by persecu-
tion, he ultimately settled at Old Cairo, 
where he attained the highest place in 
ethe estimation of his co-religionists; be-
came physician to the Sultan of Egypt 
and superintendent of the Jewish com-
nunions. He systematized the whole 
mass of Jewish tradition, and demon-
strated the principles on which Judaism 
is based. His books were widely circu-
lated in Europe by means of Latin trans-
lations. His best writings in Arabic are 
the Guide of the Erring, an exposition of 
Judaism; a Compendium of Logic; a 
Commentary on the Mishna; an Exposi-
tion of the 613 Laws of Moses, etc. He 
 wrote in Hebrew a complete system of 
the Talmudic Judaism.

Main (män), a river of Germany, 
which rises in the Fichtelgebirge, flows in a generally westerly direc-
tion for a distance of 300 miles and 
joints the Rhine a little above the town 
of Mainz. It is navigable for about 200 
miles, and has recently been improved so 
as to admit the largest Rhine steamers 
to Frankfort. By means of King Lud-
wig's canal it affords navigation 
through the Danube. The chief tributaries are 
the Regnitz and Tauber on the left bank, 
and the Franco-Napoleonic Saale on the right.

Maine (män), one of the eastern and 
maritime States of the United 
States, bounded on the east and northeast by New 
Brunswick, north and northwest by Quebec, west by New 
Hampshire, and south by the Atlantic Ocean; 
area, 33,040 square miles. It is mostly 
an elevated country, but hilly rather 
than mountainous. The highest peak, 
Mount Katahdin, has an elevation of 
5200 feet. The State is almost com-
pletely traversed by navigable rivers, the 
principal of which are the Penobscot and 
Kennebec; and in the interior are numer-
umous lakes. The coast abounds with 
small islands, the largest of which is Mount 
Desert, 35 miles long and 12 miles broad; 
and is indented with numerous bays 
and inlets, the principal of which are Penob-
scot, Casco and Passamaquoddy. Grass 
lands are extensive, and Indian corn, pota-
toes, wheat, barley, rye, flax and hay are 
the chief crops. Many thousands of cases 
of sweet corn are packed yearly, and oats 
of superior quality are grown. Many 
11 horses and cattle are kept, and the 
wool-clip is large and of good quality. 
The leading industry is the production of 
lumber. Not long ago the forests cov-
ered about one-half the surface of the 
State, but they are rapidly diminishing. 
The white pine, once the most im-
portant lumber product, has largely van-
ished, but the woodlands which still cover 
90 per cent. of the area of the State, are 
being carefully managed to yield a 
large product. The manufacture of paper 
and pulp is important. Slate, limestone 
and clay are abundant. Iron, ore, lead, 
copper and gold are found in small 
quantities, but are not so rich as to 
prompt large mining operations. The 
fisheries give employment to a large por-
tion of the population; and other indus-
tries are shipbuilding, the manufacture of 
cotton and woolen fabrics, leather, 
boots and shoes, farm implements, etc. 
There are about 2300 miles of railroad 
and lines of steamships ply from its ports, 
notably from Portland, which has a fine 
harbor. Maine's liquor-prohibition laws 
date back to 1846. The prohibition 
amendment to the State constitution was 
passed in 1885. It has many institutions 
of learning, among them being the Uni-
Wreck of the battleship Maine, Havana Harbor.

A general view of the scene of the Spanish-American War, showing the condemnation built to permit a thorough examination, which proved the theory that the disaster was caused by a sunken mine or torpedo. After the explosion the wreck was cut up, hauled out, and sunk in the Gulf of Mexico.
versity of Maine, at Orono (organized 1865; 1,210 students); Bowdoin College, at Brunswick (founded 1804); Bates College, at Lewiston; and Colby College, at Waterville. Maine was admitted into the Union in 1820. The capital is Augusta; largest city, Portland; other large cities are Lewiston and Bangor. Pop. (1900) 804,468; (1910) 742,371; (1920) 768,014.

Maine, The United States battleship, sunk from an explosion in Havana harbor, Cuba, Feb. 15, 1898; 258 of its crew of 303 being killed, and 9 reported missing. This disaster filled the nation with horror and consternation. It occurred when the relations between Spain and the United States were strained and was the main cause of the war that followed, a court of inquiry holding the vessel had been blown up intentionally. The wreck was raised and sunk outside the harbor in 1912.

Maine, an ancient province of France, lying immediately s. of Normandy, and comprising the modern departments of Sarthe, Mayenne, and parts of Orne and Eure-et-Loir. It was part of the French dominions of Henry II of England, and was wrested from John by Philip Augustus.

Maine, Sir Henry James Sumner, an English jurist, born in 1822; was graduated at Pembroke College, Cambridge, in 1842. He was appointed regius professor of civil law in the same university in 1847, and reader on jurisprudence at the Middle Temple in 1854. From 1852 to 1863 he was law member of the Supreme Council of India, and on his return home he was elected Corpus professor of jurisprudence at Oxford. In 1877 he became Master of Trinity Hall, Cambridge. His works are of great value and include Ancient Law in Connection with the Early History of Sorbon; Village Communities in the East and West; The Early History of Institutions; Dissertations on Early Law and Custom, and the Whewell Lectures on International Law. He died in 1888.

Maine-et-Loire (mān-e-lōr), a western depart-ment of France; area, 2,770 square miles. It has a gently-undulating surface, the slopes of which are generally covered with vines, while the plains are of great fertility. About one-half of the entire area is arable. Some of the white wines produced are much esteemed. The Loire traverses it almost centrally, east to west, and receives within the department the Maine, formed by the united streams of the Loire, Sarthe and Mayenne. The manufacture of cotton, linen and woolen tissues is important. Pop. 815,400.

Maine Liquor Law. See under Maine.

Mainpuri (mīn-pūrī), a district and town of British India, Agra division, Northwestern Provinces. Area of district, 1,007 square miles; pop. 901,216.—Mainpuri, the capital of the district on the Agra branch of the Grand Trunk Road, has a pop. of about 10,000.

Maintenance, Maintenance,

Mainton (man-tōn), Françoise D'Aubigné, Marchioness de, wife of Louis XIV, and granddaughter of Henry the Fourth's friend Theodore Agrippa D'Aubigné, was born in 1636, in the prison of Niort in Poitou, where her father, a profligate adventurer, was then confined. Left quite destitute on his death in her tenth year, Mademoiselle D'Aubigné spent her youth in dependence on her rich relatives, and was glad to contract a nominal marriage with the famous Paul Scarron, a deformed, old and infirm man. Her beauty, liveliness and propriety of conduct gained for her powerful friends among those who frequented her husband’s house; and on Scarron's death she was entrusted with the charge of the children born to Louis XIV by Madame de Montespan. She assumed this office in 1693, and played her cards so dexterously that the king married her privately, probably in 1695, when her age was fifty and his own forty-seven. For the remaining years of his life she was his most confidential adviser. She was a virtuous woman, and a devout and bigoted Catholic, ambitious and resolute, but disinterested and charitable. Her published letters give her a creditable place in French literature. She died in 1719, at the nunnery or school of Saint Cyr, which she herself had founded.

Mainz (mānts; English, Menz: French, Mayence), a fortified town of Germany, in the grand-duchy of Hesse, finely situated on the left bank of the Rhine, opposite the mouth of the Main, 20 miles w. s. w. Frankfort. The Rhine is here crossed by a bridge connecting Mainz with the small town of Castel, which is within the system of fortifications. There is also a railway bridge. The older part of the town has been mostly modernized since the destruction caused by a powder-magazine explosion in 1837, and an extensive new quarter has been added since the recent widening of the fortified circuit. Among the more interesting buildings are the cathedral (recently restored), a vast building of red sandstone, finished in the fourteenth century, adorned with several
Maiolica

finely painted windows, frescoes, and a great number of ancient and curious monuments; the former electoral palace, now containing the city library (150,000 vols.), picture gallery, museum, etc.; the old collegiate church of St. Stephen, a fine specimen of Gothic architecture; the grand-ducal castle; the courts of justice; the government buildings; the town hall, a new renaissance structure; the theater and central railway station, Gutenberg's house and other buildings associated with the invention of printing, etc. There is a fine statue of Gutenberg by Thorwaldsen. The handsome new quay, about 330 feet in breadth, along the Rhine, affords a pleasant promenade; and there are several docks. The manufactures embrace leather, furniture, hardware, carriages, tobacco, beer, chemicals, musical instruments, etc. The trade, particularly transit, is extensive. Mainz was for long the first ecclesiastical city of the German Empire, of which its archbishop-elector ranked as the premier prince. Its history during the sixteenth century is of considerable interest in connection with the progress of the Reformation. Pop. (1910) 112,245.

Maiolica (má-yol'ká). See Faience.

Mair, John. See Major.

Maire, Le Straits of, a channel between Terra del Fuego and Staten Island, named from a Dutch pilot who discovered it in 1616.

Maisonneuve (má-so-név), a city of Quebec province, Canada. Pop. (1911) 18,694.

Maistre (má-tr or mä-tr), Joseph Marie Comte de, an Italian statesman and political writer, born at Chambery in 1754; died at Turin in 1821. In 1803 he was sent as ambassador to St. Peters burg, returning to Turin in 1814, where he became a member of the Sardinian ministry. He was a reactionary in politics, religion and philosophy, a supporter of absolute monarchy, and of the infallibility of the pope. His principal writings are Du Fape, De l'Empire Gallicane, and the Soirées de St. Petersburg. His younger brother, Xavier de Maistre, born at Chambery in 1753; died at St. Petersburg in 1802; is chiefly famous for his Voyage autour de ma Chambre, a delightful work.

Maitland (mat-lánd), a town in New South Wales, 96 miles north of Sydney, on the Hunter River. It comprises two distinct municipalities, East Maitland and West Maitland, separated from each other by Walls Creek, over which is an excellent bridge. It is situated in the midst of a very fertile agricultural district, and coal of excellent quality and great quantity is found in the neighborhood. The industries comprise coach-building, tanning, printing, etc. Population of East and West Maitland 10,214.

Maitland, John. See Lauderdale.

Maitland, Sir Richard (Lord Leithington), a Scottish politician, lawyer, and statesman, born in 1499, died in 1586. He studied at St. Andrews and in France, and on his return to Scotland, was employed in various commissions by James V, and afterwards by the Regent Arran and Mary of Guise. He collected the decisions of the Court of Session from September, 1550, to July, 1555, and made a celebrated collection of early Scottish poetry. His own verses, chiefly satirical, were printed by the Maitland Club in 1580.

Maitland, William, commonly known as Secretary Lethington, a Scottish statesman, eldest son of Sir Richard Maitland, born about 1522, died in 1573. He early adopted reformed doctrines, and was one of the first public men openly to renounce the mass. In 1558 he was appointed secretary of state by Mary of Guise. In the following year he joined the Lords of the Congregation, who had taken possession of Edinburgh. In 1560 he was speaker of the parliament which abolished the authority of the pope in Scotland. On Queen Mary's arrival in Scotland he was chosen one of her principal ministers, and was continually employed as her envoy to the English court. After Darnley's murder he conspired to effect Mary's escape to Lochleven; yet he attended the coronation of James VI, and fought against her at Langside. The regent Moray, suspecting him of being at the bottom of the intrigues in favor of Mary both in England and Scotland, had him arrested in 1569 as an accessory to Darnley's murder. He was set at liberty by Kirkcaldy of Grange, and after the assassination of Moray he became the life and soul of the queen's party, and kept up an active correspondence with Mary. In 1571 he joined Kirkcaldy in Edinburgh Castle; was proclaimed a traitor by the parliament, and attained with his two brothers. On the surrender of Edinburgh Castle, Kirkcaldy and his brother were hanged, but Maitland died in prison in Leith, presumably by his own hand.

Maize (máiz; Sp. maíz, from Haytian maizis, the native name of the plant), Indian corn, a prominent species
Maize

of a genus of plants found in the warmer parts of the world, where it answers a purpose similar to that of wheat in more northern countries. The common maize or Indian corn is the Zea Mays of botanists, a monoeocious grass, of vigorous growth, with stems not more than 2 feet high in some varieties, and reaching the height of 8 or even 10 feet in others. The grains are large, compressed, and packed closely in regular parallel rows along the sides of a receptacle many inches long. In large varieties the ear or cob is often 1 foot long and 2 or 3 inches in thickness. Maize is extensively cultivated in the United States, it being known as corn, and the crop at times has reached the vast amount of 3,000,000,000 bushels annually. Its flour, though very nourishing, is not glutinous, and is usually mixed with wheat, rye, or other flour before it is baked. It is largely used in the United States for making cakes and bread of various kinds, the favorite brown bread of New England being made from a mixture of corn and rye meal. The tender variety known as sugar-corn is, when boiled, a favorite table vegetable. It is largely kept for winter use by canning. In America, large quantities of this grain are roasted till they split, and are then eaten under the name of pop-corn. From the green stems a juice is expressed, which unfermented gives a pleasant syrup, and fermented is converted into an excellent spirit. Paper has been made from maize fibers. The pith of the stem has been used as packing for the sides of war vessels, it swelling when wet so as to prevent the flow of water through holes made by artillery. Maize is also cultivated throughout a great part of Asia and Africa, and in several countries of the south of Europe, as Spain, Italy and Roumania. The green stems and leaves form nutritious food for cattle, and in Great Britain it is grown and cut green for this purpose. Z. Curagua, a smaller species, is the Chile maize or Valparaiso corn.

Majorca, or MAJORICA. See Palma.

Major (məˈjər), in the army, is a field officer next in rank above a captain and below a lieutenant-colonel. His duties are to superintend the exercises of the regiment or battalion, to carry out the orders of his superior officers, and to command in the absence of the lieutenant-colonel.

Major, in music, designates in general a larger in contradistinction to a smaller interval of the same denomination, called a minor interval; thus a major tone is the interval between two tones having the proportion to each other in number of vibrations of 8:9; a minor tone the interval between two tones in the ratio of 9:10; a major third is an interval of two tones (major and minor); a minor third an interval of a tone and semitone. The major mode is one of the two recognized modern modes (or forms of the scale), in which the first third in the scale is a major third, in contradistinction to the minor mode, in which the first third is regarded as a minor third.

Major, Charles ('Edwin Casko-
den'), an American author, born at Indianapolis, Indiana, July 25, 1856; died February 13, 1913. He practiced law at Shelbyville. His historical novel, When Neighborhood Was Greater (1898) won instant success. This was followed by others, including Dorothy Vernon of Haddon Hall (1902), A Forest Hearth (1903), and Yolanda, Maid of Burgundy (1905).

Majorca (maˈjoɾˈka; Spanish, MA-
lorcə), an island in the Mediterranean belonging to Spain, the largest of the Balearic group, between Ibiza and Minorca; greatest length, 58 miles; greatest breadth, 46 miles; area, 1420 square miles. It is very irregular in shape, and deeply indented. The coasts on the west and north, facing Spain, are lofty and steep; in other directions, and particularly on the east, they are low and shelving. The island is generally fertile, producing, besides large crops of cereals, hemp, flax, silk and saffron. Fruits abound; the pastures are rich, and maintain large numbers of cattle; and the fisheries on the coasts are valuable. It is traversed by
Majority

Majority (major′i-ti), in law, is the period of full age, at which the laws of a country permit a young person to manage his own affairs. In the United States, as well as in most other countries, the age of majority is twenty-one years.

Makaroff (mak′a-rof), STEFAN OSIPOVICH, a Russian admiral, born in 1848. He served with conspicuous courage in the Russo-Turkish war of 1877-78. From 1891-94 he served as admiral and inspector-in-chief of naval artillery, and designed the famous ice-breaking steamer Ernak. He was given command of the fleet at Port Arthur in the war with Japan, and on April 13, 1904, was one of the 600 who perished from the bowing up of the Japanese, of the battleship Petropavlosk.

Makart (mak′art), HANS, a German painter, born at Salzburg in 1840; died in 1884. He studied at Vienna and Munich, and latterly settled at Vienna. He was a great colorist, but was deficient in conception and drawing. Among his chief works are: A Trilogy of Modern Amorettes; The Seven Deadly Sins; The Dream of a Man of Pleasure; The Gifts of Sea and Earth; Leda; and The Entrance of Charles V into Antwerp.

Maki (ma′ki), a name applied to some of the lemurs.

Makó (ma′kō), or MAKOVIA, a town of Hungary, on the right bank of the Maros, 22 miles east by south of Szegedin. It has pastoral, agricultural and fishing interests and a number of oil mills. Pop. 33,722.

Makololo (ma-ko-lo′lo), a large and once powerful tribe in South Africa, between lat. 13° and 20° S. The Makololos attained considerable eminence during Livingstone's time, but shortly after 1864 the kingdom was broken up.

Makrize (ma-kriz′e), ABU AH M A D MOHAMED, Al, an Arabic writer, born in 1300; died in 1442. He wrote an Historical and Topographical Description of Egypt, a History of Saladin, a Treatise on Moslem Coins, etc.

Malabar (mal-a-bir′), a maritime district of British India, in the presidency of Madras, on the west coast; area, 5765 square miles; breadth, varying from 25 miles on the N. to 70 miles on the S. A great portion is comparatively low, intersected by narrow ravines, covered with forests and jungle, and watered by innumerable streams. Tea and coffee plantations have been successfully established. The principal towns are Cananor, Tellicherry and Calicut. Pop. 0,029,304. The name Malabar is often applied to the whole extent of coast country as far north as Bombay.

Malabar Leaf, the leaf of Cin- námomum malabath- rum of Malabar, formerly used in European medicine.

Malabar Plum, a tree and its fruit, the Eugenia Jambos, nat. order Myrtaceæ. It grows plentifully on the Malabar coast, and its fruit is much esteemed. Called also Rose-apple.

Malacca (ma-lak′a), a territory and town forming part of the British colony of the Straits Settlements, on the west coast of the Malay Peninsula, on the Strait of Malacca. It extends about 40 miles alongside the shore of the strait, and about 25 miles inland. Area, 875 sq. miles. The sea-coast is rocky, and the interior in some parts mountainous, with picturesque and fertile valleys intervening. Tapioca and rice are the chief products. The district contains deposits of gold and tin. Malacca is ruled by a resident councilor subject to the governor of the Straits Settlements. The town is one of the oldest European settlements in the East, being founded by the Portuguese in 1509. It was acquired from the Dutch in 1825. Its trade and importance are now slight. Pop. of town and territory 124,081.

Malacca, STRAIT OF, the channel between the Malay Peninsula and the Island of Sumatra, extending from latitude 1° to about 6° N. Entire length, about 520 miles; breadth, varying from 25 miles to 200 miles.

Malacca Bean, the fruit of the Semecarpus Anacardi- dium, or marking-nut tree of India, belonging to the nat. order Anacardi- ceæ. It closely resembles the cashewnut.

Malacca Cane, a cane made from erect, slender, cane-stemmed palm Calô- mus scipioûnum, which, when dressed, is of a brown color, sometimes motled or clouded. It is brought from Singapore and Malacca, but is chiefly produced in Sumatra.

Malachi (mal′a-kti), the twelfth and last of the minor prophets. Nothing is known of the history of the writer, and it is even doubtful if Malachi ('Messenger of Jehovah') be a proper name or an assumed epithet. The book evidently belongs to the latter part of the governorship of Nehemiah, about B.C. 420. It contains denunciations of the sins of the Israelites, and predicts the
coming of the Messiah and the conversion of the Gentiles.

Malachite (mal-a-kit), a carbonate of copper, of a dark emerald-green color, and of a laminated, fibrous, or massive structure. The finest specimens are obtained from Siberia, but it is found in many places all over the world. Fibrous malachite, when finely pulverized, is used as a paint; massive malachite is made into boxes, knife-handles, table-slabs, and other ornamental articles, and is susceptible of a beautiful polish. Blue malachite or azurite contains a larger proportion of carbonate acid.

Malacology (mal-a-kol’-o-jí), the science of molluscan or soft-bodied animals.

Malacostraci, MALACOPTERYGII (mal-a-kóp-tér-i jí-lí), a name given to those osseous fishes which are distinguished by all the rays of the fins being soft (except in a few individuals), exhibiting minute articulations, and often divided into small fibers at their extremities. They are divided into two suborders, the Malacostraci (proper) and the Anacanthini. They include the carp, salmon, pike, herring, cod, turbot and other flat fish, and the eels. See Ichthyology.

Malacostraca (mal-a-kos’tra-ka), a subclass of crustaceans divided into two primary groups, sessile-eyed and stalk-eyed, and including the shrimps, lobsters, crabs, etc., together with the wood-llice, sandhoppers, etc.

Malaga (má-lá’-ga), a seaport of southern Spain, in Andalusia, capital of a province of the same name, on the Mediterranean. It was anciently called Malaca; was a flourishing city under the Romans, and its long occupation by the Moors has left distinct marks in the older parts of the town; the Gibralbaro, or Moorish castle, on a hill overlooking the town, and considerable portions of the ancient fortifications yet remaining. Among the important buildings are the cathedral, a highly decorated structure in the composite style, with a spire 300 feet high; the Episcopal palace, custom house, and several hospitals and charitable institutions, etc. The manufactures consist chiefly of iron, the ore of which is obtained from rich mines in the vicinity; soap, cottons, linens, machinery, etc. The trade is of much more importance, the principal exports being olive oil, lead in bars, wine and fruit, particularly raisins, oranges, and almonds. The climate is one of the mildest and most equal in Europe. Pop. 130,109.

—The province of Malaga has an area of 2822 sq. miles; pop. 511,980. It is traversed in all directions by offsets of the Sierra Nevada. The valleys are fertile and generally well cultivated, yielding cereals, grapes, oranges, lemons, figs, almonds, sugar-cane, etc.

Malaga Wine, a sweet Spanish wine, rich, luscious and full of body.

Malaria. This term was formerly used to denote a very large and vague class of ailments, which were supposed to be due to noxious emanations and 'bad air' in general. The term is now used to denote an infectious disease characterized by fever of an intermittent or remittent type, chills, anemia, and splenomegalie; and the causative agent is a protozoon—the Plasmodium, or Hemameba, of malaria. This protozoon gains entrance to the body by the bite of an infected mosquito, belonging to the Anopheles group. There are three varieties of malaria, called tertian, quartan, and estivo-annual; of these, the tertian is by far the most common in the United States. Since the disease is carried by infected mosquitoes, the means of preventing the disease is obvious—termination of the anopheles mosquito, and screening all patients suffering from malaria so that the mosquitoes cannot bite them and thus become infected and capable of carrying the infection to others. The one remedy for patients suffering from malaria is quinine given in proper doses and at proper periods of time; quinine should also be taken by people living in districts said to be malarial. With this definite knowledge of the cause of malaria, its means of propagation, and a specific remedy for it, there is no reason why each community should not determine that the disease should become a thing of the past. The anopheles mosquito breeds in puddles, marshes, pools and lakes; all swampy districts should be drained, and filled up; petroleum has been used with success in such districts, the larvae of the mosquito being killed by this agent. The dosage of quinine and the exact hours for its administration must be determined by the physician, and will depend on the time of the chill. The diagnosis of malaria is made by microscopical examination of the blood.

Malay Archipelago (má-lá’), also known as the "East Indies," the great group of islands situated to the southeast of Asia, and washed on the west by the Indian and east by the Pacific Ocean. The archipelago may roughly be said to lie between the meridians of 93° and 135° E., and the parallels of 11°
Malay Peninsula

S. and 17°N. Within these limits lie some of the largest and finest islands in the world, as Borneo, Sumatra, Java, Celebes, the Philippines, etc., but New Guinea is not ranked as belonging to the group. The chief of the smaller islands are the Moluccas or Spice Islands, Billiton, Banca, Madura, Bali, Lombok, Sumbawa, Flores, Timor. The small islands are exceedingly numerous. They are generally fertile and covered with a luxuriant vegetation, and they produce all kinds of tropical products in abundance. Many of them contain volcanoes. As regards their fauna and flora they may be divided into two main groups, those east of the Strait of Macassar and the channel between Bali and Lombok having more affinities with Australia, while the others are rather Asiatic in character. The aboriginal race is the Malay. A large portion of the archipelago is really or nominally under the sway of Holland, and this portion is frequently called the Dutch East Indies. See separate articles on the principal islands or groups.

Malay Peninsula, the most southern part of continental Asia, the long narrow projection that stretches first S. and then S.E. from Siam and Burmah. It is connected with Lower Siam by the Isthmus of Kra, has on the E. the Gulf of Siam and the China Sea, and on the W. the Strait of Malacca. It varies in width from 45 miles at the N. to about 210 miles. The area is about 70,000 sq. miles, and the population is variously estimated at from 1,000,000 to 2,000,000, including large numbers of Chinese. The country is mountainous, with peaks of from 5000 to 9000 feet high; it is densely wooded; rivers numerous but short; minerals important, more especially tin, which is found in great quantity and largely exported. Politically the peninsula, with the exception of the British territories of Penang and Malacca, is divided among a number of more or less independent chiefs tributary to or in treaty with Siam and British India. The aboriginal races are Siamese, Malays, and Negritos.

Malays, the name of a race of people inhabiting the Malay peninsula, and spread over all the Asiatic Archipelago. They claim to have had their native country in the Highlands of Sumatra, where they established the once powerful state of Menangkabo, now subject to the Dutch. In physical appearance they are rather under the middle height, light-brown in color, with black straight hair, high cheek bones, black and slightly oblique eyes, and scanty or no beard. The civilized Malays profess the Mohammedan religion. They are said to be of a taciturn undemonstrative disposition; naturally indolent, treacherous in their alliances and addicted to piracy. When under excitement or passion they are often seized with the 'amok' fever, when they indiscriminately cut down with great ferocity every one they meet. The Malay language is agglutinative in character, and is very extensively used as that of literature and commerce. See Ethnology.

Malcolm I (mal'kum), King of Scotland, reigned from 943 to 964.—Malcolm II succeeded Kenneth II in 1005. In his reign Lothian and Strathclyde became parts of the Scottish kingdom. He was assassinated at Glamis in 1034. He was the last direct male descendant of the MacAlpin dynasty. Malcolm III, surnamed Caismore (Great Head), born about 1024. After the murder of his father, Duncan, by Macbeth, he sought aid from Sward of Northumbria, and his cause was also espoused by Edward the Confessor. He was crowned at Scone in 1058. In 1068 he granted asylum to Edgar Atheling, his mother, and two sisters (one of whom, Margaret, he married in 1070), with a number of Saxon exiles. His reign, which was mostly taken up with wars with England, had nevertheless an important bearing on the civilization and consolidation of Scotland.—Malcolm IV (the Malden) succeeded his grandfather, David I, in 1153. He surrendered Northumberland and Cumberland to Henry II in 1157. Died at Jedburgh in 1165, at the age of twenty-four.

Malcolm, Sir John, a distinguished soldier and diplomatist, was born near Insholm, in Kincardineshire, 1769; died in London in 1833. He entered in 1782, as a cadet, the service of the East India Company. In 1797 he was made captain; and from that time to 1799 he was engaged in a variety of important services, terminating at the fall of Srirangapatam. He was three times ambassador to Persia, and did excellent service in the pacification of India after the wars of Holkar and the Peshwa. In 1822 he was made major-general, and received a grant of £1000 per year from the East India Company. In 1827 he was appointed governor of Bombay, which post he continued to fill until 1831, when he finally returned to Britain. He received the honor of knighthood in 1812. As an author his principal works are: A Sketch of the Sairs; The History of Persia; Sketches of Per-
Malden (mal‘den), a city of Massachusetts, in Middlesex county, on the Malden River, 5 miles N. of Boston. It has beautiful parks and residences and numerous industrial establishments, notably the great plant of the Boston Rubber Shoe Co. Besides rubber boots and shoes, it has manufactures of emery and sand paper, chemicals, leather lasts, cords and tassels, etc. Pop. (1910) 44,404; (1920) 49,163.

Maldive Islands (mal’dív), a remarkable chain of islands in the Indian Ocean, extending from lat. 0° 40' S. to 7° 6' N., nearly on the meridian of 73° 30' E., and composed of seventeen islands, the largest of which is Maldívul. The larger islands are richly clothed with wood, chiefly palm, and are fertile in fruit and in various kinds of edible roots; they also produce millet, and abound in cocomanuts, fowls, and all descriptions of fish. The inhabitants carry on a considerable trade with Bengal, Ceylon and the Malabar coast, extending also to the Red Sea and to Sumatra. They are governed by a sultan, who resides in the island of Male or Mohi, and pays annual tribute to the British government in Ceylon. Pop. about 30,000.

Maldon (mal’dun), a municipal borough and river port of England, county of Essex, 36 miles northeast of London, on the Blackwater estuary, near the mouth of the Chelmer. It has a fine old church dating from 1056, an interesting old town hall and a grammar school dating from the reign of Edward VI. Its industries are salt-crystallizing, iron-founding and oyster-fishing. Pop. 6255.

Malebranche (mal-bránsh), NICOLAS, a French philosopher, born in 1638; died in 1715. He studied theology and philosophy at the colleges of La Marche and of the Sorbonne, and at the age of twenty-two he was admitted into the congregation of the oratory. In 1673 he published his treatise De la Recherche de la Vérité. The doctrines of this celebrated work are founded upon Cartesian principles. Among his other writings are Conversations; Traité de la Nature et de la Grace; Méditations Métaphysiques et Chrétiennes; Traité de morale, etc.

Male-fern, the Nephrodium or Lathraea Filis-mas, a hardy fern common throughout the temperate part of the northern hemisphere, with large fronds rising from a short erect caudex. Its rhizome and root-stalk have anthelmintic properties, and are used for the expulsion of tapeworms.

Malesherbes (mál-zér-bés), CHRÉTIEN GUILLAUME DE LAMOIGNON DE, a French statesman, the son of Guillaume de Lamoignon, chancellor of France, was born at Paris in 1721. After studying at the Jesuits' college he qualified himself for the legal profession, and became a counselor of the parliament of Paris. He passed through several grades of office, and was in 1750 made president of the Court of Aids. His functions were suspended by the temporary abolition of the parliament in the reign of Louis XV, and were restored with its revival under Louis XVI. He held office along with Turgot, and resigned on his retirement. Appointed by Tronchet and Desèze he acted as leading counsel for Louis XVI. Acts of loyalty far less decided were in that day the sure road to destruction. He was condemned to death and guillotined on April 22, 1794. He was the author of a few miscellaneous treatises.

Malherbe (mál-er-bé), FRANÇOIS DE, a French poet, born at Caen in 1555; died in 1628. He was the prototype of Henry IV; wrote light lyrics, odes, epigrams, etc.; and so far as form is concerned he may be considered the father of French classical poetry.

Malibran (mál-le-brán), MARIA FELICITA, one of the greatest singers of modern times, born at Paris in 1808, the daughter of a well-known singer and singing master, Manuel Garcia. She made her début in 1825 at the opera in London, and the following year went to New York, where she married M. Malibran, a French banker, from whom she soon separated. She returned to Europe, where her splendid vocal powers and dramatic ability made her an extraordinary favorite in Britain and on the Continent. Having obtained a divorce from her first husband, she married the violinist De Beriot in 1836, but died the same year.

Malic Acid (mal‘ik; C₄H₂O₄), a bi-basic acid found in many fruits, particularly in the apple, hence the name, from L. malum. It is most easily obtained from the fruit of Pyrus Aesculapii (mountain-ash), immediately after it has turned red, but while still unripe. It is very soluble in water, and has a pleasant acid taste.

Malice (mal‘is), in law, a formed design or intention of doing mischief to another called also malice prepense or aforesaid. It is expressed when the formed design is evidenced by certain circumstances discovering such
intention; and implied when the act is done in such a deliberate manner that the law presumes malice, though no particular enmity can be proved. Malicious mischief is the committing of an injury to public or private property from sheer wantonness or malice. This offense is punishable with great severity. Intent is the material ingredient in offenses of this nature; but as the law presumes malice in the very commission of the act, it lies on the party indicted to rebut the presumption of malice, or sufficiently explain the act. A malicious prosecution is a prosecution brought against a person maliciously and without reasonable cause. From the mere want of probable cause malice may be inferred.

**Malignants** (mal-i-g’nantz), in English history, a name applied by the parliamentary party during the civil war to describe the king's evil advisers; the name came to be afterwards given to all who supported the king against the parliament.

**Malines** (má-lén). See Mechlin.

**Mallard.** See Duck.

**Malleability** (mal-e-a-bil’-ti), the property of being susceptible of extension by beating; almost restricted to metals. The following is the order of malleability of the metals:—Gold, silver, copper, platinum, iron, aluminium, tin, zinc, lead, cadmium, nickel, cobalt. Ductility and malleability are nearly allied, but they are seldom possessed in the same proportion by the same metal.

**Malleus** (mal’-lus), one of the bones of the ear. See Ear.

**Mallock** (mal’ok). William Hurrell, was born in Devonshire, England, in 1849, his mother being a sister of Froude, the historian. He was educated privately and at Balliol College, Oxford, where he gained the Newdigate for a poem on the Isthmus of Suez. He is a frequent writer on political and social subjects in the magazines, and has published The New Republic; The New Paul and Virginia: Is Life Worth Living?; A Romance of the Nineteenth Century; The Old Order Changes, a novel; etc.

**Mallow** (mal’o; Malva), a genus of plants of the natural order Malvaceae. M. sylvestris (the common mallow) is a common and widely diffused species, possessed of mucilaginous properties. The whole plant is used officinally in fomentations, cataplasms and emollient enemas. When fresh the flowers are reddish-purple, but on drying become blue, and yield their coloring principle both to water and alcohol. The alcoholic tincture furnishes one of the most delicate of reagents for testing the presence of alkalis or acids. The dwarf mallow (M. rotundifolia) and musk mallow (M. moschata) are also found in Britain. The fiber of M. crispa is sufficiently tenacious to be used in making cordage. Mallow has been naturalized in the United States.

**Malmaison** (mal-mä-zon), a historic château in France, department of the Seine, 5 miles w. of Paris, once the property of Richelieu. It was the favorite residence of the Empress Josephine, wife of Napoleon I.

**Malmedy** (mäl’mé-de’), a town of Rhenish Prussia, about 24 miles south of Aix-la-Chapelle, on the Warche in a basin surrounded by hills; manufactures of sole-leather, paper, etc. Pop. 4680.

**Malmesbury** (mål-mes’bè-ri), a town of England, county of Wilts, on an eminence, 23 miles n. e. of Bristol. It is well built, and has the remains of an abbey founded in the sixth century. Pop. (1911) 2657.

**Malmesbury, James Harris, Earl of**, son of James Harris, the author of Hermes, born in 1745; died in 1820. His diplomatic career, dating from 1768, was a brilliant success, and earned him the reward of an earldom in 1800. His Diaries and Correspondence were published in 1844, his Letters in 1870.—His grandson, James Howard, third earl, born in 1807, has been foreign secretary and keeper of the privy seal. He published Memoirs of an Ex-Minister in 1884.

**Malmesbury, William of, an English historian, born probably in Somersetshire about the year 1075; died about 1143.** He received his education at the Benedictine Abbey of Malmesbury, and subsequently became librarian and precentor of the abbey. His De Gestis Regum Anglorum is a general history of England, from the arrival of the Saxons in 449 to 1128; he also wrote a history from that year to 1143; De Gestis Pontificum Anglicorum; Antiquities of Glastonbury; etc. All his works are
Malmö

highly esteemed as trustworthy chronicles.

Malmö (mål'me), a seaport of Sweden, capital of the laen or prefecture of Malmöhus, situated on the eastern shore of the Sound, opposite Copenhagen. The manufactures and other industries are considerable, and the shipping trade of the port is large. Pop. (1912) 92,338.

Malmsey Wine (måm'zi), is a sweet wine obtained from a grape originally brought from Malvasia or Malvoisie in the Morea. It is made in the Azores, the Lipari Islands, Teneriffe, Sardinia, Sicily, but more especially in Madeira, from grapes that have been allowed to shrivel on the vine.

Malo (mål'o), St., a fortified seaport of northwest France, department of Ille-et-Vilaine, on a rocky island communicating with the mainland by a long causeway. It has a commodious and secure harbor formed by the mouth of the Rance, the island, and causeway. Pop. 10,847.

Malone (mål'lon), county seat of Malone Co., New York, 59 miles N. E. of Ogdensburg. It has iron, woolen, paper, flour and pulp mills, etc. Pop. (1920) 7556.

Malone, Edmund, a commentator and editor of Shakespeare, was born at Dublin in 1741; died in 1822. He was called to the London bar in 1797, but devoted himself entirely to literary pursuits. He published an edition of Shakespeare with suggestive notes, in 1790; Remarks on the Roweley (Chatterton) Controversy; an Inquiry into the Identity of Shakespeare's Forgeries; biographical memoirs of Sir Joshua Reynolds, Dryden, W. Gerard, Hamilton, etc.

Malory (mål'o-ri), Sir Thomas, born probably about 1430. His compilation, The Most Ancient and Famous History of the Renowned Prince Arthur, based on the romances of Merlin, Lancelot, Tristan, the Quest of the Grail, and the Mort d'Arthur, was first printed by Caxton in 1485. Malory is supposed to have been a Welshman, but all that is known of him is that he was a knight, and finished the book about 1470. The work is one of the most celebrated of medieval productions.

Malot, Hector Henri, a French novelist, born near Rouen in 1830; dead in 1907. He lived in London as a newspaper correspondent and wrote numerous novels, including the autobiographical Le Roman de mes Romans.

Malpighi (mål-pé'gē), Marcello, an Italian physician and anatomist, born in 1628; died in 1694. He was successively professor of medicine at Bologna, Pisa and Messina. In 1681 he became physician to Pope Innocent XII. His works relate to anatomy, physiology and vegetable anatomy.

Malpighia (mål-pé'gē-a), named after Marcello Malpighi, a genus of plants, the type of the nat. order Malpighiaceae. The species are small trees or shrubs, with opposite, broadly ovate, leaves and axillary and terminal fascicles or corymbs of white or red flowers. The fruit of one species (Malpighia urens) is the Barbadoes cherry of the West Indies.

Malpighian Bodies and Corporcles, in anatomy, certain small round bodies in the cortical substance of the kidney and in the spleen. See Kidney and Spleen.

Malplaqut (mål-plä'kūt), a village in the French department of Nord, on the Belgian frontier, 26 miles S. E. of Valenciennes, celebrated for the defeat of the French under Villars by the allied British and Austrian troops under Marlborough and Prince Eugene, September 11, 1709.

Malt (malt), grain, usually barley, steeped in water and made to germinate, the starch of the grain being thus converted into saccharine matter, after which it is dried in the kiln, and then used in the brewing of porter, ale, or beer, and in whisky distilling. One hundred parts of barley yield about ninety-two parts of air-dried malt. See Brewing.

Malta (mált'a; anciently Melita), an island in the Mediterranean belonging to Britain, 62 miles S. S. W. of Sicily, and 197 miles N. of Africa; length, northwest to southeast, 17 miles; central breadth, about 9 miles; area, 98 square miles, to which the adjoining islands of Gozo and Comino add but 8 square miles. It is an irregular oval shape, deeply indented on all sides except the south, where the coast forms a continuous and almost unbroken line. The most important indentation is the double bay on which the capital, Valletta, stands. The greatest elevation of the island is about 750 feet. There are only a few small streams, but the springs are so numerous and copious that no deficiency of water is felt. An extensive series of water-works, including reservoirs for irrigation, have recently been constructed. The soil is thin, and rests on a calcareous rock; in some parts earth has been brought from Sicily and put down. Corn, cotton, potatoes and clover are the chief crops. Both the vine and olive are
cultivated, and fruit, particularly figs and oranges, is very abundant. The manufactures consist of cotton goods, lace, jewelry, etc. The central position of Malta in the Mediterranean makes Valetta an invaluable naval station. It has, in consequence, been provided with excellent docks and very strong fortifications. The climate is very hot in summer, but pleasant and healthy in winter, attracting many visitors at this season. Malta passed successively through the hands of the Phenicians, Greeks, and Carthaginians, and was finally attached to Rome during the second Punic war. After the fall of the Roman Empire it was seized at different times by Vandals, Goths and Saracens. From the last it passed to Sicily, and followed its fortunes till 1522, when Charles V granted it to the order of St. John of Jerusalem, the knights of which defended it successfully against a tremendous siege by the Turks in 1565. In 1798 the grand-master surrendered it without resistance to Napoleon. It was taken by the British in 1800, and finally annexed by them in 1814. The executive government is in the hands of a governor and council. By a new constitution adopted in 1888 the legislative council consists of the governor and the members of council (6), with 14 members elected by the constituencies into which Malta and the islands of Gozo and Comino have been divided. The people are mainly of Arabic race and speak a kind of Arabic mixed with Italian. Italian and English are also spoken. The educational institutions include a university, a lyceum, two secondary schools, besides primary and infant schools. Besides the capital Valetta and the Three Cities adjoining, there are several considerable towns or villages. The total population, inclusive of the garrison (about 5000) 206,690.

Malte-Brun (malt-brun), geographer, properly MALTIE KON-
Malton (mal'tun), a town of England, county of York, 16 miles northeast of the city of that name, on the right bank of the Derwent. There are some large breweries, and also foundries, agricultural implement works, etc. Till 1886 it returned a member to Parliament. Pop. (1911) 4522.

Malva. See Mallow.

Malvaceae (mal-vä-se-e), the mallows, a large nat. ord. of exogenous plants, having polypetalous flowers, monadelphous stamens, unilocular anthers, valvate estivation, and often an external calyx (epicalyx) or involucre. A large proportion of the order consists of herbaceous or annual plants, inhabiting all the milder parts of the world, but found most plentifully in hot countries. Several species are of essential service to man. As emollients they are well known in medical practice. The hairy covering of the seeds of the various species of Gossypium forms raw cotton. The inner bark of many species yields fiber of considerable value. Many species of Althaea, Sida and Hibiscus are splendid flowering plants. See Mallow.

Malvasia (mal-vä'-shi-a), the Italian Napo di Malvasia, a great fortress and commercial center of the Levant during the middle ages; now a small town with about 1000 inhabitants on the eastern shore of the Morea.

Malvern (mal'vern). GREAT, a fashionable watering-place and health resort of England, county of Worcester, 8 miles s. w. of the city of Worcester, on the eastern slope of the Malvern Hills. It is irregularly built, but is surrounded by beautiful villas and handsome mansions, and has large and handsome hydraulic establishments, a fine church, etc. Malvern College is a flourishing proprietary institution on the plan of the great public schools. Pop. (1911) 16,514.

Malvern Hills, a range of England, on the borders of Worcestershire and Herefordshire. It extends north and south for about 9 miles, and attains an altitude of 1396 feet.

Malwan (mal'win), a town of India, Bombay, on an island off the coast, 210 miles s. of Bombay. Pop. about 17,000.

Mamaroneck (m-a-mar'o-nek), a town of Westchester Co., New York, on Long Island Sound, 20 miles eastward from New York City. It is a residence place for New Yorkers and has many fine homes. Pop. 6571.

Mamelukes or MAMALUKES (mam'ä-lûks; Arabic, 'slaves'), the former mounted soldiery of Egypt, consisting originally of Circassian slaves. As early as 1254 they became so powerful that they made one of their own number sultan, this dynasty continuing till 1617, when it was overthrown by Selim I. They still, however, continued to be virtual masters of the country. They suffered severely in opposing the French at the end of the eighteenth century, and in 1811 Mehemet Ali caused a general massacre of them throughout Egypt.

Mammalia (m-a-m-mä'lya; Latin, mamma, a breast), the highest class at once of the Vertebrata and of the animal kingdom, including those warm-blooded animals we familiarly term ‘quadrupeds,’ the whales and other fish-like forms, and man himself. Their distinctive characteristic is that the female suckles the young on a secretion peculiar to the class, furnished by the mammary glands of the mother, and known as milk. The skin is always more or less covered with hairs, which are found in many forms, from the finest wool or silky down to large coarse bristles and even spines. The skeleton exhibits a uniformity of essential structure, and in most points agrees with that of man. The cavity of the thorax or chest is bounded by the ribs, which vary greatly in number, but generally correspond to that of the dorsal vertebrae. The skull forms a single piece composed of bones immovably fastened together, to which is articulated the lower jaw, composed of two halves united at the chin. The skull is joined to the spine by means of two condyles which fit into the first cervical vertebrae. The limbs, like those of all other Vertebrata, are never more than four. The front

Digestive System of a Mammal.

Mammalia

limbs are invariably present, but in cetaceans and such allied forms as the dugongs and manatees the hinder limbs are either completely suppressed or present only in a rudimentary state. The limbs are generally well developed, and are most commonly adapted for terrestrial progression; some are suited for burrowing, others for climbing, those of the cetaceans and seals for swimming, while some (the bats) have the forelimbs developed into a kind of wing. Teeth are present in most mammals; but they are only represented in the embryo in the whale-bone whales, and are entirely absent in the ant-eater, pangolin, and echidna. The teeth are lodged in alveoli or sockets, and are not ossified in the jaw-bones as in lower forms. Mammals which have only a single set of teeth throughout life are termed monophyodont; those who have the first set of teeth (milk or deciduous teeth) replaced by a second set of teeth are called diphyodont. The teeth are referable to four groups, which differ in form, position, and function: incisors, canines, premolars and molars. The chest or thorax in all mammals is separated from the abdominal cavity by a complete diaphragm or 'midriff,' which thus constitutes a great muscular partition between these cavities, and also forms the most important agent in effecting the movements of the chest during respiration. Within the thorax the heart and lungs are contained; while the abdomen and its lesser pelvic cavity contain the organs relating generally to digestion, excretion, and reproduction. The stomach, generally simple, may, as in some monkeys, in the kangaroos, in the pig, and most of all in the ruminants, exhibit a division into compartments. A liver and pancreas are present in all Mammalia. The lungs agree in essential structure with those of man, as also does the heart with its four chambers—right and left auricles and right and left ventricles. The red corpuscles of the blood are non-nucleated, and are circular in shape except in the case of the camels. All mammals with the exception of the monotremes are viviparous, but there are considerable differences in the relations subsisting between mother and young before birth, thus leading to the division into placental and aplacental mammals (see Placenta). Man and all other mammals except the monotremes and marsupials belong to the former division. All mammals possess mammary or milk glands, which, however, may differ chiefly in number and position but little in the class. (See Mammary Glands.) In the classification of this important group authorities differ somewhat, but the mammals may be divided into the following groups:—Man (Hominidæ); Apes and Monkeys (Simia); the Prosimians or Lemurs (Prosimii); the Bats (Chiroptera); the Insect-eaters (Insectivora); the Flesh-eaters (Carnivora); the Seals (Pinnipedia); the Whales and Dolphins (Cetacea); the Sea-cows (Sirenia); the Elephants (Proboscidea); the Odd-toed Ungulates (Perissodactyla); the Even-toed Ungulates (Artiodactyla); the Gnawers or Rodents (Rodentia); the Edentates (Edentata); the Marsupials, or Pouch-bearing Mammals (Marsupialia); and the Monotremes (Monotremata).

Mammary Glands (mam'ə-rahl), the milk-producing organs, the distinctive mark of the mammals. These structures present in man an essentially permanent position. The lobes are divisible into smaller lobules, which consist ultimately of groups of vesicles which open into minute ducts converging into larger channels which lead to the milk reservoirs at the nipple. The nipple itself is composed of unstripped muscular fibers and areolar tissue. It also possesses erectile powers, and blood-vessels are in consequence freely distributed to it. These glands, save in exceptional instances, are undeveloped in the male. They are always in pairs on some part of the ventral surface of the body, but in number and position they vary much in the various groups.

Mammee Tree (ma-mē'), or West India Apricot
(Mammalia Americana), nat. order Guttiferæ, a tall, handsome tree bearing a fruit about the size of a coconut. This has two rinds enclosing the pulp, which is firm, bright yellow, and has a pleasant taste and smell. The seeds, which are large, are used as anthelmintics, and a gum distilled from the bark is used to destroy chigoes.

Mammon (mam'uhn), a Syriac word used in St. Matthew as a personation of riches or worldliness. There does not appear to have been any idol in the East receiving divine honors under this name.

Mammoth (mam'uth), a species of extinct elephant, the fossil remains of which are found in European, Asiatic, and North American formations. Geologically speaking, the mammoth, or Elephas primigenius, dates from the Post-Pliocene period. It survived the glacial period, and lived into the earlier portion of the human period; its remains having been frequently found associated with human remains, and its figure carved on bone. It appears to have been widely distributed over the northern hemisphere, but never south of a line drawn through the Pyrenees, the Alps, the northern shores of the Caspian, Lake Baikal, Kamchatka and the Stanovol Mountains. It had large curved tusks and shaggy hair. The bones and tusks have been found in great abundance in Siberia; and an entire carcass which had been preserved in the ice and eventually thawed out, was discovered towards the close of the eighteenth century on the banks of the river Lena, in such a perfect state that the flesh was eaten by dogs, wolves and bears. Its skin was perfectly preserved, and was seen to be clothed with a furry wool of reddish color, interspersed with black hairs. The skeleton and other parts of this animal are preserved in the St. Petersburg Royal Museum. It must have been twice as bulky as the elephants at present living. Other examples have since been found.

Mammoth Cave, a stupendous cave in Kentucky, near Green River, about 80 miles S. S.W. of Louisville. It is one of a large series of vast caverns here formed in the limestone rock, and which are found over an area of 6000 miles in Kentucky, Tennessee and Indiana. It has been penetrated 14 miles, and has many windings and offshoots, some of them but imperfectly explored. It is a dry cave, and the remains of its stalactite and stalagmite formations are dusty and dilapidated; consequently it is more remarkable for its extent, the size of its halls, and height of its domes, than for the variety or beauty of its scenery. It contains several small lakes or rivers, the largest, Echo River, being more than half a mile long. It rises and falls according as Green River is in flood or otherwise, there being an underground connection between them. The animals of the cave include blind wingless grass-hoppers, beetles, rats, etc., and the viviparous blind fish Amblyopsis.

Man, the most highly organized member of the animal world. The endeavor has often been made in classification to separate man from the brute creation. One system, expressing a vast gap between the Quadrumanæ and man, classifies man in the order Bimana ('two-handed'), the highest division of the Mammalian class; and relegates the monkeys and apes to the lower and distinct order—that of the Quadrumanæ ('four-
handed'). The more recent arrangements, however, classify man and the monkeys in one order, making man the highest family or group of this order. From the purely anatomical point of view the differences which separate the anthropoid apes from man are in some respects less than those which separate these higher apes from apes lower in the scale. But the mental or psychical endowments of man oblige us to remove him far above the highest Quadrupedana; and even the characters by which he is anatomically separated from the highest apes form a well marked and appreciable series. The first special characteristic of man is his erect position and bipedal progression. The lower limbs, with the feet broad and plantigrade and the well-developed heel, are devoted exclusively to progression and supporting the weight of the body; the upper arms have nothing to do with progression, but subserve prehension entirely. The bones of the face in man do not project forwards, but they are elongated in a downward direction: the face and forehead in the more civilized races being situated very nearly in the same plane. Similarly the development of a distinct chin is also a peculiarly human feature, and one which in the highest varieties of mankind becomes most marked. The great cranial capacity of man, or the greater size of the cranial or brain portion as compared with the facial portion of the skull, forms another noteworthy and distinctive character of the human form. The brain convolutions also are more numerous and complex than is the case with any other mammal. The teeth of man are arranged in a continuous series, and without any diastema or interval. The development of hair also is very partial. The gorilla presents all the apes the nearest approach to the human type taken in its entirety, but still controlling in the relative number of vertebrae (13 dorsal and 4 lumbar, to 12 and 5 respectively in man), in the order of dental succession and in the presence of the interval or diastema, in the less prominent muscular development of the buttocks and calves, and in other minor differences. The orang most closely approach man's structure in the number of ribs and in the form of the cerebrum, while they exhibit the greatest differences from him in the relative length of the limbs. The chimpanzees are most anthropoid in the shape of the cranium, in the arrangement and succession of the teeth, and in the length of the arms as compared with that of the legs. Of the higher apes the gibbons are those furthest removed from the human type of structure. Chief among the psychical features, or rather among the results of the operation of the principle of mind, we note the possession of the moral idea of right and wrong. The possession of an articulate language, by which he can communicate his thoughts, is also the exclusive possession of man, and draws a sharp line of separation between him and all other animals. With regard to the geological history of man, the earliest traces yet discovered belong to the Post-Pliocene deposits in conjunction with existing species of shells and some extinct species of mammals. Man's advent upon the earth is consequently referred to a period much anterior to that which former limits and theological ideas prescribed. Among the modern theories regarding the origin of man may be noted those of (1) Darwin: that man is directly descended from an extinct form of anthropoid ape, with a tail and pointed ears, arboreal in its habits and an inhabitant of the Old World; further, that man has diverged into different races or subspecies, but that all the races agree in so many unimportant details of structure, and in so many mental peculiarities, that they can be accounted for only through inheritance from a common progenitor. (2) Wallace also affirms the original unity of man, and places him apart as not only the head and culminating point of the grand series of organic nature, but as, in some degree, a new and distinct order of being; maintaining that a superior intelligence has guided the development of man in a definite direction and for a special purpose, just as man guides the development of many animal and vegetable forms. (3) Carl Vogt holds a plurality of the race; adopts Darwin's idea of natural selection accounting for the origin and endowments of man, but rejects Wallace's idea of the higher intelligence. Man is supposed a theory of a natural evolution of man as to his body, combined with a supernatural creation as to his soul. See also Ethnology, Anthropology, Anthropometry, etc.
Manaar

an important industry, but the manufactures are almost entirely domestic. The island is governed by an independent legislature called the Tynwald, consisting of two branches—the Governor and Council and the House of Keys. Two judges or "deemsters" try civil and criminal cases. The Manx language, a Celtic dialect, is still in use, although all the inhabitants speak English. The principal towns are Douglas, Castletown, Peel and Ramsey. This island was taken by the Norwegians in 1098, sold to the Scots in 1296, and was repeatedly occupied by the English and Scots up till 1544, when it remained in possession of the former. It was later held as a feudal sovereignty by the earls of Derby, and more recently by the dukes of Athole, from whom it was purchased for the British crown in 1764 for £70,000; and finally, in 1829, certain remaining privileges were ceded by the duke on receiving an award of £416,000. Pop. (1911) 52,034.

Manacor (mă-nák-o-ră), a town of Spain, in the island of Majorca. Pop. 12,408.

Managua (mă-ná-găwă), a town in Central America, capital of the state of Nicaragua, near the south-west shore of the lake of same name, 32 miles s. s. w. of Leon. Pop., with the district, about 30,000. —The lake, about 38 miles long and 16 broad, discharges itself into that of Nicaragua.

Manakin (mān-a-kĭn), the name given to the dentirostral insessorial birds forming the subfamily Pipiranini, in small and of brilliant plumage, and are mostly confined to South America, a few species being found in Central America and Mexico. The typical genus is Pipra, which includes the bearded manakin (P. Manduca), and several others. An allied species is the beautiful arrow manakin or cock-of-the-rock (Rupicola aurantia).

Manãos (mā-ná-oosh), a town of Brazil, capital of province Amazonas, on the Rio Negro. It has a large export trade in India rubber, cacao, dried fish, Brazil nuts, etc. Pop. 40,000.

Manassas. See Bull Run.

Manassch (ma-nas'ch), (1) eldest son of Joseph, born in Egypt. His descendants formed a tribe, which, in the Promised Land, was settled half east of the Jordan and half to the west of this river. (2) King of Judah, son of Hezekiah, whom he succeeded at twelve years of age, 697 B.C. He became an open idolater; was taken captive to Babylon; ultimately repented and was restored to his kingdom. He reigned for fifty-five years.

Manate (man-a-tē'), the sea-cow or lamanin, a gregarious aquatic mammal of the genus Manatus, order Sirenia, found on the coasts of South America, Africa, and Australia. They frequently frequent the mouths of rivers and estuaries, and feed on algae and such littoral land vegetation as they can reach at high tide. Their anterior limbs or swimming paws are furnished with nails, by means of which they drag themselves along the shore. They are large awkward animals, attaining a length of 8 to 10 feet as a rule, but sometimes growing to 20 feet. The skin is of a grayish color, sparsely covered with hairs. Their flesh is excellent, and they furnish a soft, clear oil which does not become rancid. There are several species, the principal being the American manatee (M. Americana), which inhabits the shallow waters of the east coasts of South and North America, and the African manatee (M. Senegalensis). The dugong (which see) belongs to the same order.

Manby (mān'bi), Captain George William, born in Norfolk in 1765; died in 1854. About 1808 he invented the apparatus known by his name for saving life from shipwrecked vessels near the coast, and was rewarded with about £7000. See Life-Rockets.

Mancha, province of Spain, in New
Manche

Manche, forming the chief part of the modern province of Ciudad-Real; famous as the scene of Don Quixote's adventures.

Manche (mänsh), LA, a department of Northern France, bounded on the W., N., and N. E. by the English Channel, and landward by the departments of Calvados, Orne and Mayenne. It is about 80 miles long by 30 broad, and has an area of 2475 sq. miles. Pop. 476,119.

Manchester (man'ches-tér), a town of Hartford Co., Connecticut, 9 miles E. of Hartford. It has great silk mills, and manufactures of paper, woolen and cotton goods, needles, machinery, electrical appliances, etc. Pop. (1910) 13,641; (1920) 18,370.

Manchester, a city, one of the county seats of Hillsborough Co., New Hampshire, the largest city north of the Massachusetts line in New England. It is on the Merrimac and Piscataquog rivers, 18 miles S. of Concord, on Boston & Maine R. R. Abundant water power is derived from Amoskeag Falls. It is one of the first cities in the country in the production of textile fabrics, the making of shoes, and the manufacture of cigars. There are over 20,000 textile workers; over 10,000 are employed in the shoe business. It has a county court house, State industrial school, Institute of Arts and Sciences. The grave of General Stark (q.v.) is in Stark Park. A World War Memorial is in Merrimack Square. Pop. (1910) 70,063; (1920) 78,384.

Manchester, a municipal and parliamentary borough and city of Lancashire, England, 188 miles N. N. W. from London by railway, and 32 miles east by north of Liverpool. The old town of Manchester proper, and the large and populous townships of Heiine, Chorlton, Ardwick, Cheetham, etc., are situated on the east or left bank of the Irwell, while the extensive borough of Salford is situated on the right bank; but communication by a dozen bridges serves to make them practically one city. The Manchester charter of incorporation dates from 1838; in 1832 it was made a parliamentary borough, and in 1852 it became a city. It has many important and handsome public buildings and many fine streets. The center of the town is largely occupied by immense piles of warehouses and offices, while the factories and other manufacturing works are chiefly in the outskirts. Among the chief public buildings are the town hall or municipal buildings in the Gothic style, finished in 1877 at a cost of £1,053,264; the Assize Courts, also a fine specimen of modern Gothic, behind them being a well-arranged prison; the Royal Exchange; the Royal Infirmary; the old town-hall, in which the Free Reference Library is now located; the Free Trade Hall, used for public meetings; the Royal Institution, etc. Among the churches the first place is due to the cathedral, a fine specimen of Perpendicular Gothic, built in 1422; but the soft stone of which it is built having necessitated numerous re
pairs, the edifice has a comparatively
ew appearance. The chief educational
institution is Owens College, the nucleus
of the Victoria University, founded in
1848 by a bequest of upwards of £100,000
from John Owens. (See Owens Col-
lege.) Cheetham's Hospital was founded
under the will of Humphrey Cheetham in
1653 for the education of poor boys.
Attached to the institution is a library of
nearly 40,000 volumes, the first free
library in Europe. The city has also a
number of denominational colleges—the
Lancashire Independent College, the
Primitive Methodist College, St. Bede's
Roman Catholic College, etc. The Gram-
mar School was founded in 1530, and has
exhibitions at Oxford or Cambridge.
There are numerous literary, scientific
and philosophical societies, some of them
of considerable standing. The Free
Library, established in 1851, has a refer-
gence library in the main building of
200,000 volumes and six branches with
upwards of 100,000 volumes. Benevolent
and charitable institutions are numerous.
For open-air recreation there are the
botanical and horticultural garden; the
Queen's Alexandra and Philip's parks;
the Belle Vue Zoological gardens; and
Peel Park, Salford, with an excellent mu-
seum, and covering an area of 40 acres.
Among the public monuments the most
noteworthy is the Albert Memorial in
front of the town hall. The chief manu-
facture is cotton, though woollen and silk
fabrics are also produced. Metal manu-
factures, engineering, and the making of
all kinds of machinery employ many
hands. Railway communication is of the
most extensive kind, the largest stations
being Victoria, London Road, Exchange
and Central. The commerce of the town
has been much facilitated and extended by
the completion of the Liverpool and Man-
chester ship canal, opened January 1,
1894. Its length is 364 miles; its width
at the top is 17 feet; at bottom 120
feet; depth 26 feet; dock accommodation
133 acres. The manufacture of
gas, supply of water, working of tram-
ways, etc., are directly or indirectly in
the hands of the corporation, and an ex-
tensive sewerage is being proceeded with
for bringing an improved water supply
from Thirlmere in the Lake District.—
Manchester is the Mancunium of the Ro-
mans. Its history is legendary down to
the tenth century, when it was devas-
tated by the Danes. In the twelfth cen-
tury the woolen manufactures began to
develop, and in 1301 it received munici-
pal liberties and privileges. During
the civil war the town suffered much at
the hands of both parties. The introduction
of machinery in cotton-spinning towards
the end of the eighteenth century gave
power and direction to the trade of mod-
ern Manchester, and its progress since
has been extraordinarily rapid. A tem-
porary check resulted from the Civil war
in America, which led to a cotton famine
in 1862, causing the deepest distress in
South Lancashire. Pop. of Manchester,
(1911) 714,427; of Salford, 231,380.

Manchester Party or School,
the name given to an English political
party whose exertions were particularly
directed to the development and thorough
carrying out of the principles of free
trade. They had their chief seat in Man-
chester, and Meers. Cobden and Bright
were the principal leaders. From their
advocating non-intervention in foreign af-
fairs, of arbitration instead of war, etc.,
they were sometimes called the 'peace-at-
any-price' party.

Manchinee (man'ki-nil), a lofty
tree (Hippomane Man-
cinella) belonging to the natural order
Euphorbiaceae. It is a native of the
West India Islands and Central America,
and is valuable for cabinet work. It
possesses poisonous properties, which,
however, have been greatly exaggerated.
The milky juice when dropped upon the
skin produces a sensation of severe burn-
ing, followed by a blister.

Manchuria, or MANCHOOKIA (man-
choo'ria; Chines e
Shing-King), a Chinese territory occupying
the northeastern section of the em-
pire. It is bounded on the north and
east by the Amur or Amoor and Usuri,
which separate it from Russian territory;
the west by the provinces of Irkutsk,
Mongolla and Chih-He; on the south by
the Gulf of Leaotong, the Yellow Sea
and Corea. It is divided into three
provinces, Shing-King, Feng-Tien, or
Leaotong in the south, of which Mukden
is the capital; Kirin in the center, with
a capital of the same name; and He-
Lung-Kiang in the north, with capital
Tsitsihar. On the southern extremity of
the peninsula is the historically famous
harbor of Port Arthur. The total area
is about 300,000 sq. miles. The Manchu
are a hardy race, and their country has
long been the great recruiting ground for
the Chinese army; but of late years large
numbers of Chinese proper have flocked
into it, so that now they far outnumber
the native race. In the seventeenth
century the Manchus invaded China and
placed their leader's son upon the throne.
From that time until February, 1912, the
Manchu dynasty continued to reign in
China; the Manchu language becoming
the court and official language. The country is mountainous, but on the whole fertile. The climate is good, for although the winters are severe they are healthy and bracing. The vast forests of the north are rich in useful timber of all kinds. The principal food crops are pulse, millet, barley and wheat. The vine, indigo, cotton, opium, tobacco, etc., are cultivated. In 1898 Russia obtained from China a lease of the harbors of Port Arthur and Tal-lien-wan, at the latter of which the city of Dalny was built. The encroachments of Russia in Manchuria led in 1906 to a disastrous war with Japan, the armies of the latter capturing Port Arthur, Dalny and Mukden. By the terms of the treaty of 1905 Russia agreed to withdraw from Manchuria, while Japan restored that country to China. The Chinese revolution of 1911-12 overthrew the Manchu dynasty in China, and a republican government succeeded the empire.

Manchus, or Manchus. See preceding article.

Mandalay (man-da-la), the capital of Burma from 1860 to its annexation by India in 1886. It is situated in a level plain about 2 miles from the left bank of the Irrawaddy. It consists of four concentric quadrangles, of which under native rule the innermost contained the palace, etc.; the second, which was surrounded by a moat and walls, contained the houses of the government officials, soldiers, etc.; while outside dwelt the general body of the people. Since the British occupation the town has suffered severely from fires and floods. Pop. (1911) 138,299.

Mandamus (man-da'mus), in law, a command or writ issuing from a superior court, directed to any person, corporation, or inferior court, requiring them to do some act thereto specified which appertains to their office and duty, as to admit a person to an office or franchise, or to deliver papers, etc.

Mandarin (man-da-rin), the term applied by Europeans to government officials of every grade in China. The Chinese equivalent is kwan, which signifies literally a public character.

Mandarin Duck, a beautiful species of duck (Anas or Dendrocygna barbata) from Eastern Asia, the males of which exhibit a highly variegated plumage of green, purple, white and chestnut, the females being colored a more sober brown. The male loses his fine plumage in summer.

Mandats (mândâts), a kind of paper money issued during the French revolution, differing from the assignats (which see) insofar as specific pieces of property, enumerated in a table, were pledged for the redemption of the bills, while the assignats furnished only a general claim.

Mandavi. See Mandavi.

Mandelay. See Mandalay.

Mandeville (man-de-vil), Bernard, poet and philosophical writer, born in Holland about 1670; died in 1733. His most celebrated production is the Fable of the Bees, or Private Vices Public Benefts, the first part of which appeared in 1723, and the second in 1728. It created quite a sensation, and called forth replies from Bishop Berkeley, William Law, and others. Among his other works are Free Thoughts on Religion (1720), and Origin of Honor (1732).

Mandeville, Sir John de, the name adopted by the compiler of an extraordinary book of travels originally written in French between 1357 and 1371. An English version was made from the French MS. about the beginning of the fifteenth century. That part of the book which treats of the Holy Land may be a record of the author's experience, but the greater part is taken from the travels of the friar Odoric, written in 1330, and other sources. The first printed English edition is that of Wynkyn de Worde, 1499; and the best that of Halliwell, 1839, reprinted 1869. Mandeville had long the reputation of being the 'father of English prose.' He was said to have been born at St. Albans about 1300, set out on his travels in 1322, returned in 1357, died and was buried at Liege; but much of his personal history is mere invention, and the very name of the compiler of the travels is a matter of doubt.

Mandible (man-di-bl), the term more especially applied to both the upper and under jaws of birds. In mammals it is applied only to the under jaw, and in the Articulata to the upper or anterior pair of jaws, which are generally solid, horny, biting organs. It is also applied to the beak of the Cephalopods.

Mandingoes (man-ding-o's), a negro tribe of West Africa, remarkable for their intelligence, and generally for the advances they have made in civilization. The original country of this people, who are now spread over a great portion of West Africa, was the north slope of the high tableland of
Mandioc | Mangalore

Senegal. They are nominally Mohammedans, are keen traders, work iron and gold, manufacture cotton cloth and leather, and cultivate a variety of crops. They live in small independent states, their clay-built walled towns often containing about 10,000 inhabitants.

Mandioc. See Cassava.

Mandogarh. See Mandu.

Mandoline (man-du-lin), a musical instrument of the guitar kind. There are several varieties, each with different tunings. The Neapolitan has four strings tuned like those of the violin G, D, A, E; the Milanese has five strings (each pair in unison) tuned G, C, A, D, E. A plectrum is used in the right hand, the fingers of the left stopping the strings on the fretted finger-board.

Mandrake (man′drāk) the popular name of plants of the genus Mandragora, nat. order Solanaeae, natives of southern and eastern Europe and Western Asia, and not uncommon in British gardens. M. officinalis has large tap-roots; the leaves radical, sessile, ovate, entire and waved. There is no stem; but the flowers, which are white with a bell-shaped corolla, stand upon simple stalks. The fruit is a large twocelled berry of an orange color, containing many kidney-shaped seeds. The root possesses narcotic qualities, and from its occasional resemblance to the human figure was formerly supposed to possess an inferior kind of animal life, and to shriek when torn up. It was believed to have many magical virtues, and to be an aphrodisiac and a cure for barrenness (Gen., xxx, 14, 18).

Mandrill (man-drill), a species of beboon (Ocynecephalus mormon), which is distinguished by the short or rudimentary tail, by the elongated dog-like muzzle, and by the presence of buttock callosities which are generally brightly colored. The mandrills inhabit Western Africa, where they associate in large troops. Full-grown males measure about 5 feet; they are exceedingly strong and muscular, and fierce in disposition. They have cheek protuberances colored with stripes of brilliant red and blue.

Mandu (man′du), or Mandogarh, a deserted town in Dhar State, Central India, the ancient capital of Malwah, 38 miles S. W. of Indore. It is celebrated for its magnificent ruins, including the great mosque, the finest specimen of Afghan architecture in India; a marble mausoleum of one of the kings of Malwah, a royal palace, etc. It occupies about 8 sq. miles of ground.

Manduria (man-dôr′ē-a), a town of Southern Italy, province of Lecce, 54 miles N. N. W. of Otranto. Pop. 13,190.

Mandvi (mãnd′ve), a seaport in the state of Cutch, Bombay, India. It is situated on the Gulf of Cutch, 36 miles S. of Bhuj, the capital of the state, and is a port of call for British-India steamers. Pop. 24,683.

Maneh (ma′ne; Heb.), a Hebrew weight used in estimating gold and silver, and believed to contain a hundred shekels of gold and sixty of silver.

Manes (mã′nēz), among the Romans, the souls or ghosts of the dead, to whom were presented oblations of victuals, wine, milk, garlands of flowers, etc.

Manet (mã′nēt), Édouard, a French painter of the modern realistic school, born at Paris in 1832; died in 1883. The Boy with the Sword, in the Metropolitan Museum, New York, is one of his most representative works.

Manetho (man′e-thō), an Egyptian priest and historian, who belonged to the town of Sebennytus in Lower Egypt, and lived in the reign of Ptolemy Soter, about the beginning of the third century B.C. He wrote a General History of Egypt, beginning with the mythological period and ending with the period when Egypt fell under the rule of Alexander the Great. The history is lost, but the lists of the dynasties are preserved in Julius Africanus and Eusebius.

Manfred (man′fred), King of the Two Sicilies; born in 1231; died in 1266. A natural son of the Emperor Frederick II, he was regent in Italy first for his brother and then for his nephew, on whose rumored death he was crowned king. He refused to resign in favor of his nephew, was excommunicated, and his kingdom of the Sicilies given as a papal fief to Charles of Anjou. The latter marched into Naples and gained a victory, in which Manfred was killed.

Manfredonia (man-frēdô-nē-à), a seaport of South Italy, province of Foggia, on the gulf of same name, at the foot of Mount Gargano, 22 miles northeast of Foggia. It was founded by King Manfred about 1263. Pop. 11,549.

Mangalore (man-ga-lôr′), a seaport and military station of India, in South Canara district, Madras. It is a clean and prosperous town, and has large exports of coffee. There is a Roman Catholic College, and the Basel Lutheran Mission has its headquarters here. Pop. (1912) 48,412.
Manganese

Manganese (mænˈɡa-ˌnēz; chemical symbol Mn, atomic weight 55), a metal of a dusky-white or whitish-gray color, very hard and difficult to fuse. Exposed to air it speedily oxidizes; it decomposes water with evolution of hydrogen. The common ore of manganese is the dioxide, black oxide, or peroxide (MnO₂), the pyrolusite of mineralogists, a substance largely employed in the preparation of chlorine for the manufacture of bleaching powder or chloride of lime. It is employed in the manufacture of plate glass, to correct the yellow color which oxide of iron is apt to impart to the glass. It is also used in making the black enamel of pottery. Other oxides are the protoxide (MnO), sesquioxide (Mn₂O₃), the red oxide (MnO₂), and permanganic acid (MnO₄⁻).

The latter is only known in solution or in a state of combination. It is largely used in analytical chemistry. Metallic manganese is obtained by reduction of the oxide by means of heat and finely divided carbon. It resembles iron in appearance and properties; is a constituent of many mineral waters, and is employed in medicine. In steel manufacture it is used in certain proportions with advantage as regards the ductility of the steel and ability to withstand forging, and in other manufacturing operations it forms an important element. It is found in the United States, which yields an annual product at times above 300,000 tons.

Manganese Bronze, a kind of bronze in which the copper forming the base of the alloy is mixed with a certain proportion of ferro-manganese, and which has exceptional qualities in the way of strength, hardness, toughness, etc. Various qualities are manufactured, each suited for certain special purposes. One quality, in which the zinc alloyed with the treated copper is considerably in excess of the tin, is made into rods, plates, etc., and when simply cast is said to have a tensile strength of about 24 tons per square inch, with an elastic limit of from 14 to 15 tons. Another quality used in gun founding has all the characteristics of forged steel without any of its defects. Another quality is in extensive use for toothed wheels, gearing, brackets, and all kinds of machinery supports. From its non-visibility to corrosion it is largely employed in the manufacture of propellers.

Manganese-brown. See Cappauh-brown.

Manganite (mænˈɡa-nīt), one of the ores of manganese, the hydrated sesquioxide. It is also called hydrated sesquioxide or Gray Manganese-ore. It is used in the manufacture of glass.

Mange (mænij), a cutaneous disease to which dogs, horses, cattle, etc., are liable. It resembles in some measure the itch in the human subject, ordinary mange being due to the presence of a burrowing parasite. Both local application and internal remedies are used in its cure.

Mangel-wurzel (mæŋˈɡəl wərˈzəl), a large-rooted species of beet (Beta vulgaris macrorhiza) extensively cultivated in Europe for feeding cattle. It requires a liberally manured generous soil, which in favorable circumstances may grow from 70 to 80 tons per acre. It is produced largely in the United States.

Mango (mæŋˈɡō), the fruit of the mango tree (Mangifera indica), nat. order Anacardiaceae, a native of tropical Asia, but now widely cultivated throughout the tropics. Fine varieties produce a luscious, slightly acid fruit much prized for dessert. The large flat kernel is nutritious, and has been cooked for food in times of scarcity.

Mango-bird, the Indian oriole (Oriolus kundoo).

Mango-fish, a fish of the Ganges (Polygnathus risius), about 15 inches long, and highly esteemed for food. It is of a beautiful yellow color, and the pectoral fins have some of the rays extended into long threads. It ascends the Ganges in April and May, and is then sought after as a great delicacy.

Mangold-wurzel. See Mangel-wurzel.

Mangosteen (mæŋˈɡoʊ-stēn), a tree of the East Indies, Garcinia Mangostana, nat. order Guttiferae. The tree grows to the height of 18 feet, and the fruit is about the size of an orange, and contains a juicy white pulp of a delicate, sweet, subacid flavor. It is esteemed one of the most delicious and wholesome of all known fruits.

Mangrove (mæŋˈgrōv; Rhizophora), a genus of plants (type of the family Rhizophoraceae) consisting of trees or shrubs which grow in tropical countries along the muddy beaches of low coasts, where they form impenetrable barriers for long distances. They throw out numerous roots from the lower part of the stem, and also send down long slender roots from the branches, like the Indian banyan tree. The seeds germinate in the seed-vessel, the root growing downward till it fixes itself in the mud. The wood of the R. Mangie is dark red, hard and durable, and the bark is used for...
The fruit is said to be sweet and edible, and the fermented juice is made into a kind of light wine. The name is also given to the genus Areciea of the verbena family, which occupies large tracts of shore in tropical countries, extending as far south as New Zealand and Tasmania.

**Manhattan**

(ma n-ha t’a n), a city, capital of Rilev Co., Kansas, on the Kansas River, 52 miles w. of Topeka. It is the seat of the Kansas Agricultural College. Pop. (1920) 7,080.

**Manhattan, City** (see New York). Pop. (1900) 1,850,583; (1910) 2,331,542; (1920) 2,284,103.

**Manhattan Island**, New York, at the mouth of the Hudson River, and bounded on the north by Spuyten Duyvil Creek (now the Harlem ship canal), is about 13 miles long and 2½ wide, and contains the principal business and residential section of the city of New York. It rises to an elevation of about 250 feet in its northern section, and is almost completely built over, with the exception of the extreme northern section.

**Manhole** (man’hol), an opening into a drain, boiler, tank, or other enclosure in the earth or elsewhere, through which a man may enter for examination, cleaning, or repair.

**Manicheism** (man’i-kéiz’um), a great religious system which sprung up in western Asia, near the close of the third century, of Semitic origin, but which adopted many Christian elements. It lingered on through persecution until the middle ages. It was founded by Miguel Lopez de Legaspe, the conqueror of the Philippine Islands, in 1571. It has frequently suffered from earthquakes, one of the most disastrous occurring in 1863. This city, formerly the capital of the Spanish Philippines, was captured by the United States in the war with Spain of 1898. It is the seat of government of the Philippine Islands. Pop. 507,995.

**Manilla,** or **Manila Hemp.** See **Manilla.**

**Manioc.** See **Cassava.**

**Maniple** (man’i-pl), in the Roman Catholic and some other churches, one of the sacred vestments, being an ornament worn by the priest above the left wrist at the celebration of the eucharist. It is now of the same width and color as the stole and the vestment or chasuble, fringed at the ends.
Manipur

and generally about 1 3/4 yards in length. See Chasuble.

Manipur (man-i-pör'), a native state of Northeastern India, consisting principally of an extensive valley in the heart of the mountainous country lying between Assam, Cachar, Burmah and Chittagong; area, 8300 sq. miles; pop. 284,463.

Manis (ma'nis), a genus of edentate mammals covered with large, hard, triangular scales with sharp edges, and overlapping each other like tiles on a roof; often called Scaly Lizards, Scaly Ant-eaters, or Pangolins. See Pangolin.

Manisa (mâ-ne-sâ; anciently Mâgânesia), a town in Asiatic Turkey. It was an important town in the middle ages, and is now a busy center of trade. Pop. about 35,000.

Manistee (man-is-tè'), a city, capital of Manistee County, Michigan, on Lake Michigan, at the mouth of the Manistee River, 70 miles s. w. of Traverse City. It is an important center of lumber manufacture, having many saw and shingle mills, also ironworks, shirt, watch and furniture factories, etc. Fruit-growing is a large industry. Pop. 9604.

Manistique (man-is-tè-k'), a city, county seat of Schoolcraft Co., Michigan, on Lake Michigan, at the mouth of the Manistique River, 100 miles w. by s. of Sault Ste. Marie. It has iron works, lumber mills, chemical factories, charcoal works, etc. It is a summer resort. Pop. (1920) 6860.

Manitou (man-i-tó), Manitou, among certain of the North American Indians, a name given to whatever is an object of religious awe or reverence, whether a good or evil spirit or a fetish. Two manitos or spirits are spoken of by primitiveness, the one the spirit of good, the other the spirit of evil.

Manitoba (man-i-tô-bé'), a province of the Dominion of Canada, bounded on the south by the United States, on the north and east by the N. W. Territories, east by Ontario, and west by Saskatchewan. It occupies a position nearly in the center of the North American continent, and extends from 49° to 52° 50' n. lat.; and from 89° to 101° 20' w. lon.; area, 251,832 sq. miles. The climate is warm in summer, but very cold in winter. The summer mean is about 88°, but in winter the thermometer sinks to 30°, 40°, and sometimes 50° below zero, though this severe cold is mitigated by a clear dry atmosphere. The summer months are part of May, June, July, August and September. The principal rivers are the Assiniboine and the Red River, the latter having the greater part of its course in the United States. The largest lakes are Winnipeg, Winnipegoosis and Manitoba, the two former being only partially included within the boundaries of the province. The greater part of the province consists of level treeless prairie land, covered with a rich vegetable growth in summer. The banks of the streams, however, are lined with a timber belt extending from about half a mile to ten miles back. The soil is generally a rich black mold, resting partly on a limestone formation, and partly on a thick coat of hard clay. Wheat, oats, barley, Indian corn, hops, flax, hemp, and all kinds of garden vegetables produce excellent crops. For wheat growing Manitoba presents peculiar advantages, and the production is large. Potatoes and all other root-crops thrive well, and the prairie grasses furnish good hay. Game is abundant, and the rivers and lakes teem with fish. Lignite is found and the mountains give promise of considerable mineral wealth. The public affairs are administered by a lieutenant-governor, an executive council, and a legislative assembly elected for four years. The school system established by law is entirely denominational, and is supported by local assessments, supplemented by legislative grants. The capital of the province is Winnipeg, situated at the junction of the Assiniboine and Red rivers; other towns are Portage la Prairie, Brandon, Selkirk and Emerson. The nucleus of Manitoba was the Red River Settlement established in 1812, but little progress was made till the territory became part of Canada in 1870. The trade of the province has been greatly increased since 1878, when Winnipeg was connected with the railway system of the United States; and the construction of the Canadian Pacific has added to its prosperity. By the Extension Act of 1912 the area of Manitoba was increased by 188,100 sq. miles, taken from the Northwest Territory. Pop. (1911) 455,614.

Manitoba Lake, a lake of Canada, in the province of Mani- toba, 30 or 40 miles s. w. of Lake Winnipeg, about 120 miles in length by about 25 miles in breadth; area, 1900 sq. miles. It receives the waters of several lakes at its northern extremity, and at its southern White Mud River. It discharges into Lake Winnipeg through the Dauphin River.

Manitou. See Manito.

Manitoulin Islands (ma-ni-tô-lin), a group of North American islands in Lake Huron, consisting of Grand Manitoulin, 80
Manitowoc

Manitowoc (man-i-tó-wok'), a city, county seat of Manitowoc Co., Wisconsin, on Lake Michigan, 75 miles N. of Milwaukee. It has a fine harbor, with excellent shipping docks, and shipbuilding is an active industry. Its lake commerce is large, and there are grain elevators, coal docks, aluminum-ware factories, farm-implement works, cigar and furniture factories, etc. There is here a Polish orphan asylum; also the county insane asylum. Pop. (1910) 13,277; (1920) 13,439.

Mankato (man-kát'o), a city, county seat of Blue Earth Co., Minnesota, at confluence of Minnesota and Blue Earth rivers, 86 miles s.w. of St. Paul. It has flour and knitting mills, furniture and engine works, plow and brick factories and many other industries. It has a State normal school. Pop. (1910) 10,365; (1920) 12,400.

Mann, HORACE, educator, born at Franklin, Massachusetts, in 1786; died in 1859. The revival of the common school system was the work of his life, and his reports of the ignorance of the people and the incompentence of the teachers stirred the people strongly to the need of reform. He was secretary of the Massachusetts Board of Education for 11 years, and through his influence important changes were made in the school system of the State. He was elected to Congress in 1848, and became president of Amherst College in 1852. His labors have been acknowledged by giving him a place in the New York Hall of Fame.

Manna (man'a), the sweet concrete juice which is obtained by incisions made in the stem of a species of ash, Fraxinus Ormus, a native of Sicily, Calabria, and other parts of the south of Europe. The manna of commerce is collected in Sicily, where the manna-ash is cultivated for the purpose in regular plantations. The best manna is in oblong pieces or flakes of a whitish or pale-yellow color, light, friable, and somewhat transparent. It has a slight peculiar odor, and a sweetish taste mixed with a slight degree of bitterness, and is employed as a gentle laxative for children or persons of weak habit. It is, however, generally used as an adjunct to other more active medicines. Other sweetish secretions exuded by some other plants growing in warm and dry climates, as the Eucalyptus maniflora of Australia, the Tamarix maniflora or gallica of Arabia and Syria, are considered to be kinds of manna. Small quantities of manna, known under the name of Briancon manna, are obtained from the common larch. In Scripture we are told that a substance called manna was miraculously furnished as food for the Israelites in their journey through the wilderness of Arabia. Some persons identify it with the saccharine substance yielded by the Tamarix maniflora.

Manna-ash. See Manna.

Manna-croup, a granular preparation of wheat-flour deprived of bran. It consists of the large hard grains of wheat-flour retained in the bolting-machine after the fine flour has been passed through its meshes. It is used for making soups, puddings, etc. See also Manna Grass.

Manna Grass, Poa or Glyceria fluitans, a grass growing in wet places throughout the temperate regions of the globe. It affords food for cattle, and the seeds, called Polish manna, manna seeds and manna-croup, are used in some countries in soups and gruels.

Mannheim (man'hlm), a town of Germany, grand-duchy of Baden, on the right bank of the Rhine, near the confluence of that river with the Neckar. It is regularly laid out in square blocks, and is surrounded by a promenade on the site of the ancient ramparts. It is connected by a bridge with Ludvigshafen, a thriving town on the opposite bank of the Rhine, in Bavarian territory. It has an extensive harbor and docks, and is the chief commercial town on the Upper Rhine. Industries include the manufacture of machinery, sugar, chemicals, wall-paper, tobacco, etc. The principal buildings are the Schloss or castle, the theater, arsenal, Jesuits' church, etc. The town has suffered severely from war; in the siege of 1795 only a few houses were uninjured. Pop. (1910) 193,879.

Manning (man'ing), HENRY EDWARD, CARDINAL, born at Totteridge, Hertfordshire in 1608; educated at Harrow and Balliol College, Oxford; rector of Lavington and Graffham, Sussex (1834-40); archdeacon of Chichester (1840-51). He took an active part in the Tractarian movement, and in 1851 joined the Church of Rome, and was ordained priest. On the death of Cardinal Wiseman he succeeded him as Archbishop of Westminster (1865), and ten years after he was made cardinal. Social and
philanthropic questions received much of his attention; he was an ardent supporter of total abstinence, and was a member of the commissions on the housing of the poor and on education. He wrote *The Temporal Power of the Pope; The True Story of the Vatican Council, and The Four Great Evils of the Day*. He died in 1892.

**Mannite** (ma-nit; CaH3O6), a peculiar variety of sugar obtained from manna, and also found in the juices which exude from several species of cherry, in the fermented juice of beetroot, carrots, etc.

**Manoeuvres** (ma-nôv'ær), the movements and evolutions of any large body of troops or fleet of ships, for the purpose of testing the efficiency of the various bodies of the service under the conditions of actual warfare, and for the purpose of instructing officers in tactics, and officers and men in their various duties. For these purposes mimic warfare is carried on periodically under the name of military or naval manoeuvres by several of the leading powers.

**Man-of-war Bird.** See *Albatross*.

**Manometer** (ma-nôm’ô-tér; Gr. manôs, rare, metron, measure), an instrument to measure or show the alterations in the rarity or density of the air, or to measure the rarity of any gas. Such instruments as measure the elastic force of steam are also properly termed manometers. They are variously constructed.

**Manor** (man’or), originally a piece of territory held by a lord or great personage, who occupied a part of it, as much as was necessary for the use of his own immediate family, and granted or leased the remainder to tenants for stipulated rents or services. Manors were also called baronies, as they still are lordships, and the lord was empowered to hold a domestic court called the court baron for punishing misdemeanors, settling disputes, etc., within the manor.

**Manresa** (man-re’sa), a city in Spain, province of and 34 miles northwest of the city of Barcelona. It is well built, surrounded by old walls, commanded by a fort, and has considerable manufactures, etc. Pop. 23,252.

**Mans, Le (lé män), a town of France, capital of department Sarthe, on a height above the Sarthe, 115 miles southwest of Paris. The principal edifice is a fine Gothic cathedral, in part supposed to be of the tenth century. The nave is in the Romanesque style; the choir (104 feet high) is Gothic of the thirteenth century. The principal manufa-

**Mansard** (mán’sár), a French architect, born at Paris in 1598; died in 1666. The roof known by his name was his invention. (See *Mansard Roof*.)

**Mansard Roof**, a roof formed with an upper and under set of rafters on each side, the under set

---

**Mansel** (máns’el), HENRY LONGVILLE, a logician and theologian, born at Cosgrove, Northamptonshire, 1820; died in London, 1871. He was educated at *Merchant Taylers* School, London, and at St. John's College, Oxford, where he took his degree with double first-class honors in 1843. He became professor of moral and metaphysical philosophy at Oxford in 1859; professor of ecclesiastical history in 1867, and Dean of St. Paul's, London, 1868. Among his publications are *The Philosophy of Kant* (1856), *The Limits of Religious Thought*,
Mansfeld

Metaphysics, or the Philosophy of Consciousness (1800), The Philosophy of the Conditioned 1869, etc.

Mansfeld (māns-felt), Peter Ernst, Count von, Austrian general and statesman, born in 1517; died in 1604. He became governor of the Low Countries after the death of the Duke of Parma. — His natural son, Ernst (1585-1626), one of the best generals of the age, being disappointed in regard to the possession of his father’s lands, joined the Protestant princes and became the bitter enemy of Austria, and a prominent leader in the Thirty Years’ War. He was defeated by Wallenstein at Dessau in 1626, and died shortly afterwards.

Mansfield, (māns-feld) town of England, Nottinghamshire, 14 miles north by west of Nottingham, in a deep valley, surrounded by vestiges of Sherwood Forest. There are cotton mills, manufactures of silk and cotton hosiery, lace, thread mills, etc. Pop. (1911) 36,897.

Mansfield, a town in Bristol Co., Massachusetts, 24 miles S. by W. of Boston. It has manufactures of straw and felt goods, machinists’ tools, chocolate, etc. Pop. (1920) 6255.

Mansfield, a city, county seat of Richland Co., Ohio, 175 miles W. of Pittsburgh, on Pennsylvania, Baltimore & Ohio, and Erie railroads. It is a manufacturing city, producing sheet steel, open hearth steel products, sanitary devices, stoves, brass and electrical goods, motors, farm implements, watch cases, steel chains, rubber goods, pumps, machinery, steel abrasives, mattresses, and other products. Seat of State reformatory. Pop. (1910) 20,768; (1920) 27,834.

Mansfield, Richard, actor, was born at Heligoland in 1857; died in 1907. He studied art in England, but adopted the theatrical profession, his career being mainly in the United States, where he was very popular, his range of characters extending from the Mikado to Richard III.

Mansfield, William Murray, Earl of, the fourth son of David, Lord Stormont, was born at Scone, in Scotland in 1705; died in 1793. Educated at Westminster School and at Oxford, he entered Lincoln’s Inn and was called to the bar in 1731. In 1742 he was appointed solicitor-general, and obtained a seat in Parliament about the same time. In 1754 he was attorney-general, and in 1756 he was appointed chief-justice of the King’s Bench, and made Baron Mansfield. In 1776 he was made an earl. On the trial of Woodfall for publishing Junius’ Letters, and on some other occasions, he showed himself the zealous supporter of the government, and gave offense to the popular party. During the riots of 1780 his house in London was burned down by the mob. In 1788 he resigned his office of chief-justice; and the remainder of his life was spent in retirement. He was a great lawyer, not merely in a technical sense, but as one who could direct the practice of the courts towards broad principles of jurisprudence.

Manslaughter. See Homicide.

Mansura (mān-sō’rä), a town of Lower Egypt, on the Damietta branch of the Nile, 34 miles S. W. of Damietta. It is the chief depot of the breadstuffs, cotton, indigo, hemp, and flax which this part of the Delta produces; has linen and cotton manufactories, etc. Pop. 40,279.

Mant, Richard, born at Southampton, England, where his father held a living in the church, 1776; began his ecclesiastical career as vicar of Coggeshall, in Essex, in 1810. In 1820 he became bishop of Killaloe; in 1823 bishop of Down and Connor; and in 1842 was translated to the see of Dromore. He died in 1848. The works of Dr. Mant consist of a vast number of sermons and tracts, but his celebrity rests on an edition of the Bible, which he prepared in conjunction with Dr. D’Orey.

Mantchos. See Mancuria.

Mantegna (mān-tēn’yā), Andrea, an early Italian painter, born at Padua in 1431; died at Mantua in 1506. He was a pupil of Squarcione, who adopted him as a son, but this affectionate relation did not continue. About 1459 he went to Verona, where he painted a magnificent altarpiece, in the church of St. Zeno. About 1460 he removed to Mantua, and the rest of his life was passed there, with the exception of two years at Rome. At Mantua, where he was patronized by the Marquis Gonzaga, he opened a school, and painted, among his most important works, the Triumph of Julius Caesar, now at Hampton Court. One of the latest and best of this artist’s works is the Madonna della Vittoria, now in the Louvre at Paris. There are others of his works in the Louvre, in particular Wisdom Vanquishing Vice, and a mythological work, Parnassus. Mantegna excelled in perspective, which was then a rare merit; he also excelled in engraving, and introduced the art of engraving on copper into Italy. His two sons, Francesco and Carlo, were also painters.
Mantelet (man-telet), or Mantlet, was a musket-proof shield of iron or some other material, used at sieges for embrasures as a protection to gunners, and also for protecting markers at rifle-shooting target ranges.

Mantell (man-tel), Gideon Algernon, geologist and paleontologist, born at Lewes, in Sussex in 1790; died in London in 1852. He practiced medicine in his native town, and later in London. Through his investigations the fossilized skeletons of those gigantic reptiles the Iguanodon and Hylaeosaurus were discovered. He was a popular lecturer on geology, and published *The Fossils of the South Downs* (1822), *Illustrations of the Geology of Sussex* (1827), *Wonders of Geology* (1838), and *Medals of Creation* (1844).

Mantes (mants), a town in France, department of Seine-et-Oise, on the Seine, 36 miles W. N. W. of Paris. It contains a fine Gothic church. Pop. 8113.

Manteuffel (man-ˈtə-fəl), Edwin, Baron v. d., a German field-marshall, born in 1809; died in 1885. He entered the army in 1827 and advanced rapidly, becoming lieutenant-general of cavalry in 1861. He took part in the Danish war of 1864, and next year was appointed governor of Schleswig. During the war between Prussia and Austria he commanded the army of the Main and fought at Hemstadt, Yettingen, Rossbrunn and Würzburg. He played a distinguished part in the Franco-German war, especially in several actions around Metz, at Amiens, and in driving Bourbaki’s army across the frontier into Switzerland. From June, 1871, to July, 1873, he commanded the army of occupation in France, and was made field-marshall. In 1879 he was appointed governor-general of Alsace-Lorraine.

Mantinea (män-ˈte-ne-ə; Greek, Man-ˈtineia), an ancient city of Greece, in Arcadia, on the frontier of Argolis. It was the scene of the victory and death of Epaminondas, B.C. 362; and other famous battles.

Mantis (man-tis), a genus of orthopterous insects, remarkable for their grotesque forms. They frequent trees and plants, and the forms and colors of their bodies and wings are so like the leaves and twigs which surround them as to give them remarkable power to elude observation. (See Mimicry.) The *M. religiosa*, or praying-mantis, has received its name from the peculiar position of the anterior pair of legs, resembling that of a person’s hands in prayer. In their habits they are very voracious, killing insects and cutting them to pieces. They are natives chiefly of tropical regions, but are also found in France, Spain and the warmer parts of Europe. They are very pugnacious, and are kept by the Chinese for the purpose of watching them fight.

Mantis-crab, a name given to *Cru-tacea* of the genus *Squilla*, from the second pair of jaw-feet being very large, and formed very like the fore-legs of insects of the genus *Mantis*.

Mantle (man-tl), a kind of cloak or loose garment to be worn over other garments. In heraldry the name is given to the cloak or mantle which is often represented behind the escutcheon. In zoology the mantle is the soft skin or integument of molluscan animals, otherwise known as the *pallium*. This structure secretes the shell when present, and where the shell is absent the mantle forms an investing sac or integument in which the viscera and other organs are contained and protected.

Mantelet. See *Mantelet*.

Mantua (man-tu-a; Italian, Man-ˈtuva), a strongly fortified town of Northern Italy, one of four forming the Quadrilateral, capital of the province of the same name, 80 miles E. S. E. of Milan, on an almost insular site on the Mincio, which here divides into several arms, and afterwards spreads out into a marshy lake. The streets are regular and wide, and the public and private buildings have an ancient and substantial look. The most remarkable edifices are the cathedral, not very capacious, but after an elegant design by Giulio Romano; several churches; the ancient ducal palace of the Gonzagas, partly used as barracks; the Academy of Science and the Fine Arts; the Lyceum, containing a library and museum; the arsenal, and two theaters, one called the Teatro Virgiliano, employed for open-air performances in summer. The manufactures are limited. The trade is chiefly in the hands of the Jews, who live in a separate quarter called the Ghetto. Mantua is a very ancient city, having been founded, it is said, by the Etruscans before the building of Rome. The Gonzagas governed it for about three centuries with great ability, and distinguished themselves by the splendor of their court and their pad
ronage of literature and art. Virgil was born at the adjoining village of Andes, supposed to be the modern Pietole. Pop. 37,937. — The province, which is intersected by the Po, Mincio, and other streams, produces rice, wheat, silk, wine, etc.; area, 961 sq. miles; pop. 311,942.

Manu (m-anu), an early Sanskrit writer, author of a book of laws, civil and religious, called the Institutes of Manu, still extant and holding an important place in Hindu literature.

Manual Alphabet. See Deaf and Dumb.

Manual Training, the education, of the hands to the practical use of tools and art implements, which is becoming a part of the ordinary school culture. Before 1876 education in this direction was not attempted in the schools, except to some minor extent in Russia and Finland. It was an Russian exhibit in this field at the Centennial Exposition of 1876 that turned the attention of American educators toward this hopeful method, and manual training work was begun in 1877 at the Massachusetts Institute of Technology and at Washington University, St. Louis. The first manual training public school was opened in 1880 at St. Louis, and was so successful that similar schools were soon established in Chicago, Philadelphia, Baltimore and Toledo. Since 1885 manual training has become part of the course of study in all agricultural and mechanical colleges, and high schools of this character have been opened in large cities in general. These are not trade schools, founded for the purpose of teaching special trades, but were designed to give instruction in general manual dexterity. But they have led to the opening of special trade schools in some cities, where particular trades can be learned. Manual training has recently been added to the work of the lower schools in some cities.

Manuel II (m-anu-él), King of Portugal, born in 1889, second son of Carlos I., succeeded to the throne on the assassination of his father, Carlos I., February 1, 1908, his elder brother, the crown prince, being assassinated at the same time. His reign failed to give satisfaction to the people, the long-continued corruption in administration and the state finances continuing, while profligacy and incapacity marked the character of the youthful king. In consequence a revolution broke out, October 4, 1910, which was quickly successful, the army and navy joining the insurgents. King Manuel fled to Gibraltar, a republic was proclaimed, and an edict was issued forbid-

Manures (ma-nürz), vegetable, animal and mineral matters introduced into the soil to accelerate vegetation and increase the production of crops; substances used to improve the natural soil, or to restore to it the fertility which is diminished by the crops annually carried away. Animal substances employed as manures comprehend the putrefying carcases of animals, ground bones, blood, the excrements of animals, as the dung of horses, cattle, sheep, poultry, etc.; urine, guano (the decomposed excrement of aquatic birds); the scrapings of leather, horn and the refuse of the shambles; the hair or wool of animals. Liquid manure, consisting of town sewage, the drainings of dung-heaps, stables and cow-houses, has largely been returned in many districts. Almost every kind of vegetable substance, in one state or another, is used as manure. The principal mineral substances employed as manures are lime, chalk, sand, clay, marl; sulphates of potash, soda, ammonia and magnesia; nitrates of potash and soda; and phosphates of lime. It is from containing one or other of these substances that apatite, basic slag, cubic niter, kainite, etc., are so valuable. Manures are usually distributed over the surface of the land and then ploughed or harrowed into the soil; or they may be applied in drills when the object is to give direct benefit to the young plant. The kind of manure required for each crop depends on the nature of the crop, the quality and composition of the soil, and many other conditions. Modern researches upon plant nutrition, and the chemistry of agriculture in general, have shown us that the food of plants may be classified under the two headings of air food and mineral food. Air food consists of nitrogen, ammonia, water and carbon dioxide; mineral food, of those substances which remain as ash when the plant is ignited. The former class of food is supplied to the plant partly from the atmosphere and partly from the soil, the latter from the soil entirely. In the production of food by natural processes of plant growth a certain amount of air food and also of mineral food is abstracted from the soil, those amounts varying for different species of plants; if this food be returned to the soil, then a further growth of plants may be expected; if, however, seed is sown in the partially impoverished soil, there must be a decrease in the amount of crop obtained from that soil. As the plants serve to nourish animals, it sol-
Manuscripts

allows that the substances which have been withdrawn from the soil by the plants may be returned to it in the shape partly of animal excreta, and partly of ground bones, i.e. Different plants require different kinds of food; if, therefore, the kind of crop grown on the same land be varied from year to year, and if the soil be tilled so as to unlock its natural supplies of mineral food, it will be found that the average yield of crops may be maintained solely by the restitution to the land of that amount of food which has been removed from it by the plants. In this restitution it must be borne in mind that it is not only mineral but also air food which is to be restored. Planted heavily with large supplies of nitrogen and carbon from the atmosphere, but it has been abundantly proved that unless this supply is augmented by artificial sources the plants soon begin to fall off and the yield of crop very sensibly to diminish. The theory of manuring consists, then, in maintaining in the soil such an amount of plant food, both mineral and organic, as shall enable us to reap the largest possible amount of crops from that soil.

Manuscripts (m a nů s-kripsi; Lat. manus scriptus, written by the hand) are literally writings of any kind, whether on paper or any other material, in contradistinction to printed matter. Previous to the introduction of printing all literature was contained in manuscripts, and the deciphering and proper use of these form an important part in the science of paleography. All the existing ancient manuscripts are written on parchment or on paper. The paper is sometimes Egyptian (prepared from the real papyrus plant), sometimes cotton or silk paper (shorta bombycina). The most common ink is the black, which is very old. Red ink of a dazzling beauty is also found in ancient times in manuscripts. With it were written the lines, the lines, and the titles, which were hence called rubrics. Blue, green and yellow inks were more rarely used. On rare occasions gold and silver were the mediums, though from their cost they are oftenest confined to initial letters to external form. Manuscripts are divided into rolls (columna), and into stitched books or volumes (properly codices). Among the ancients the writers of manuscripts were mainly freedmen or slaves (scribe liber- rit). At a later period the monks were largely engaged in the production of manuscripts. In all the principal monasteries was a scriptorium, in which the scriptor or scribe could pursue his work in quiet, generally assisted by a dictator, who read aloud the text to be copied; the manuscript was then revised by a corrector, and afterwards handed to the minister, who added the ornamental capitals and artistic designs. The most ancient manuscripts still preserved are those written on papyrus which have been found in Egyptian tombs. Several of these a.e of date considerably before the Christian era; notably fragments of the Iliad and a papyrus containing the orations of Lycophron and Euxenippus, 11 feet in length and containing 49 columns of writing. Next to them in point of age are the Latin manuscripts found at Herculanum. Then there are the manuscripts of the imperial era of Rome, among which are the Vatican Terence and Septuagint, and the Alexandrine codex of the British Museum. Numerous manuscripts of the Old and New Testaments of the second and third centuries exist; and among those of profane authors may be noted that of Virgil (fourth century), in the Laurentian Library at Florence; a Livy (fifth century), in the Imperial Library of Vienna; the Jewish Antiquities of Josephus, in the Ambrosian Library, Milan, etc. It was a common custom in the middle ages to obliterate and erase writings on parchment, for the purpose of writing on the materials anew, manuscripts thus treated being called palimpsests.

The art of illuminating manuscripts dates from the remotest antiquity. The Egyptian papyri were ornamented with vignettes or miniatures attached to the chapters, either designed in black outlines or painted in primary colors in distemper. The oldest ornamented Greek and Roman manuscripts that have survived are the Dioscorides of Vienna and the Virgil of the Vatican, both of the fourth century, and having vignettes or pictures in a Byzantine style of art. From the eighth to the eleventh centuries initial letters in use were composed of figures of men, quadrupeds, fishes, birds, etc. The initials of the twelfth century are made up of masses of conventional foliage interspersed with the animal figures of the preceding centuries. Continuous borders, with vignettes, tail-pieces, etc., were also prevalent in later times, and some manuscripts are ornamented with very artistic designs. In the sixteenth century the art of illumination became extinct. Some attempts have been made to revive it by adorning paper, parchment and vellum with designs in colors or metals.

Manutius (ma-nůshe-us), Aldus, or Aldo Manuzio, an Italian printer, born about 1447; died in 1515. In
1488 he established himself as a printer at Venice, but the first work which he finished was not published till 1494. In the course of the ensuing twenty years he printed the works of the most ancient Latin and Greek authors extant, as well as many productions of his contemporaries, and some treatises of his own composition. He was the inventor of the italic or cursive character, hence called Aldine. His business was continued by his son Paolo Manuzio, born in 1512; died in 1574; a man distinguished as a classical scholar no less than as a printer; and by his grandson Aldo, born in 1547; died in 1597. See Aldine Editions.

Manyples (men'ū-pliz), the popular name given to the psal-terium or omsus, the third chamber or cavity of the ruminant stomach.

Manych. See Manich.

Manzanillo (män-tha-në-yô'), (1) A seaport on the south coast of Cuba, with a good roadway. Pop. 15,819. (2) A seaport of Mexico, state of Colima, on the Pacific. Pop. 4,900.

Manzonì (män-zô'në), Alessandro, an Italian poet and novelist, was born in 1784; died in 1873. He was the son of Count Pietro Manzoni and of the Marchioness Giulia Beccaria, daughter of the Marquis Cesare Beccaria, author of the well-known treatise on Crimes and Their Punishment. After his father's death in 1805 he lived for some time in Paris with his mother, and in 1808 he married the daughter of a Genoese banker, under whose influence he settled down into the fervent Catholicism which colored all the rest of his life. His chief works are the Inni Sacri, a series of sacred lyrics; Il Cinque Maggio, a powerful ode on the death of Napoleon; the tragedies: Il Sogno di Tigranculo and Adelchi; and his great novel I Promessi Sposi ("The Betrothed").

Maoris (mä'o-riz or mō'ur'is), the name given to the natives of New Zealand. See New Zealand.

Map, a projection on a plane surface of the whole or a part of the earth's surface, showing its main features in more or less detail. The earth being a spheroid, its surface cannot be made to coincide rigorously with a plane; and it therefore becomes necessary to have recourse to a projection, that is, a plan on a plane surface, which indicates with sufficient correctness the relative positions, dimensions, etc., of the different parts of the spherical surface. There are five principal projections, the orthographic, the stereographic, the globular, the conical and the cylindrical or Mercator's, distinguished from each other by the different positions of the point of projection, or that in which the eye is supposed to be placed. The last named gives a very erroneous idea of the relative size of the different portions of the earth's surface, especially towards the poles, but is very useful to mariners, in enabling them to lay off a course that can be steered by compass in straight lines. (See Mercator's Projection.) A nautical map is usually called a chart (which see). A map of the earth, or a portion of the earth, usually exhibits merely the positions of countries, mountains, rivers, lakes, cities, etc., relatively to one another, and by means of lines of latitude and longitude relatively to every other point on the earth's surface. But a map may be so colored or shaded as to give a variety of information: for example, to indicate the geological structure, the amount of rainfall, or other meteorological phenomena, the results of statistical inquiry, the languages spoken, etc. Hence we have geological, meteorological, linguistic, and other kinds of maps. We find traces of maps among the Egyptians in the times of Sesostris (B.C. 1618), who caused his hereditary dominions and his conquests to be represented on tablets for his people. The first attempt to draw a map of the whole known world was made by Anaximander of Miletus (B.C. 611-547). Ptolemy (flourished 126-161 A.D.) drew maps according to the stereographic projection. Agathodesmion, an artist of Alexandria, drew twenty-six maps for the geography of Ptolemy. Roman map-making is represented by the Peutinger table made about 230 A.D., which gives itineraries of the whole world known to the Romans from Britzla to India. No attempt at scientific mapping was made during the Middle Ages, and modern map-making was identified in its early days with the names of Abraham Ortelius Gerhard Mercator (born in 1512; died in 1594), William and John Blaeu (who produced 616 maps), Sanson, Schenk, Visscher, De Witt, Hondius. It is only, however, during the present period that mathematically accurate surveys and delineations of the earth's surface have been made.

Map, or MAPES, Walter, a scholar and poet of the twelfth century, a native of the Welsh Marches, is supposed to have been born about 1150; and to have died about 1210. He studied at the University of Paris, and made an important figure in the court of Henry II. He became Archdeacon of Oxford in 1199; contributed to the Arthurian cycle...
Maple

of romance the romances of the Quête du Saint Graal, Lancelot du Lac, and the Mort Artus; was the author of a curious book, De Nugis Curialium, a note-book of the events of the day and of court gossip; and to him is attributed a collection of rhymed Latin verse, in which the abuses of the church are hit off with vigor and humor. Among the most remarkable of these are the satirical Apocalypse and the Confession of Bishop Goliad.

Maple (má'pl), a name for trees of the genus Acer, nat. order Aceraceae or Sapindaceae, peculiar to the northern and temperate parts of the globe.

Sugar Maple (Acer saccharinum).

About fifty species are known, distributed through North America, Europe, and different parts of Asia. They include small or large trees, with a sweetish, rarely milky, sap, opposite deciduous, simple, usually lobed leaves, and axillary and terminal racemes or corymbs of small greenish flowers. The characteristic form of the fruit is shown in the figure. Two species are common in Europe: the great maple, often miscalled sycamore (A. Pseudo-platanus), and the common maple (A. campestris). The wood of the former is valuable for various purposes, as for carving, turnery, musical instruments, wooden dishes, etc. Another well-known species is the Norway maple (A. platanoides), often planted as an ornamental tree. The wood of several American species is also applied to various uses. The sugar or rock maple (A. saccharinum) is the most important species; this yields maple sugar, which in many parts of the United States is an important article of manufacture. A tree of ordinary size will yield from 15 to 30 gallons of sap yearly, from which are made from 2 to 4 lbs. of sugar. The knotted parts of the sugar-maple furnish the pretty bird's-eye maple of cabinet-makers. Some other American species are the white maple (A. dumosum); the red or swamp maple (A. rubrum); the striped maple or moose wood (A. Pennsylvanicum); the mountain maple (A. spicatum); the striped maple or moose wood (A. circinatum); and the large-leaved maple (A. macrophyllum).

Maplewood, a residential city of St. Louis Co., Mo., adjoining St. Louis. Pop. 7431.

Maqui (mā'kwi), a Chilean evergreen or evergreen shrub (Aristotelia maqui), from the juice of whose fruit a wine is made. From its wood musical instruments are made. It is cultivated as an ornamental shrub in northern countries.

Marabou-stork (mərəˈbō-stork), the name given to two species of storks, the delicate white feathers beneath the wing and tail of which form the beautiful and ornamental marabou feathers. One species is a native of West Africa (Leptoptilus marabou), another is common in India, where it is generally called the adjutant (which see).

Marabouts (mərəˈbōts), MARABUTS, among the Berbers of Northern Africa a sort of saints or sorcerers, who are held in high estimation, and who exercise in some villages a despotic authority. They distribute amulets, affect to work miracles, and are thought to exercise the gift of prophecy.—The name Marabouts is also used as equivalent to Almoravides (which see).

Maracaibo of Vene zuel a, on the western side of the strait which unites the lake and gulf of the same name, about 20 miles from the sea. There is a good trade in coffee, cacao, leather, hides, medicinal plants, etc. Pop. about 50,000—The Lake of Maracaibo is about 98 miles long and 80 broad at the widest part. It communicates, by a strait about 18 miles long and 3 broad, with the gulf of the same name, which is an inlet of the Caribbean Sea, 90 miles in length, and about 60 miles in width at the entrance.

Maragha (məˈrā-gə), an ancient walled town in Azerbaijan, Persia, 10 miles from Lake Urmiah; famous for a fine marble which in thin plates is nearly transparent. Pop. 16,000.

Marajo (məˈrā-zhō), an island of Brazil, formed by the estuaries of the Amazon and Pará, and belonging to the province of Pará; length, 150 miles; breadth, 125; pop. (chiefly Indians and mestizos), 20,000.

Maranham (məˈrā-nəm), or Maranhão (məˈrā-nəˈwō),
Marañón

a province of Brazil, on the northeast coast; area, 177,568 sq. miles. A considerable part of the surface is occupied by forests, yielding excellent timber and dyewoods. The soil is very fertile, producing maize, cotton, sugar, rice, cocoa, pimento, ginger, etc. Pop. 490,368. The capital, Maranhão (San Luis de M.), is a prosperous, well-built city on an island of the same name, carrying on a good trade in cotton, caoutchouc, hides, etc. Pop. about 40,000.

Marathon

August 10, 1792, after which he took his seat at the commune, and played a leading part in the assassinations of September (1792). He was a member of the terrible committee of public safety.

Maranta, a genus of plants, nat. order Marantaceae. See Arrow-root.

Marantaceae (mar-an-tā'-se-ē), an order of endogenous plants, growing in tropical countries; called also Cannaceae. They are perennial herbs with fibrous roots or fleshy creeping rhizomes, alternate simple leaves with sheathing footstalks, and irregular racemose or paniced flowers. The type genus is Maranta, which is more commonly called arrow-root.

Maraschino (ma-ras'-kē-nō), a fine liquor distilled from a small black wild variety of cherry. The best-known kinds are the maraschino de Zara, from Zara in Dalmatia, and that from Corsica. An inferior kind is made in Germany.

Marasmus (ma-ras'-mūs), a wasting of the flesh without fever or apparent disease; often, however, dependent on disease of the mesenteryic glands, or some obstruction in the course of the chyle.

Marat (ma-rā'), Jean Paul, one of the most famous leaders of the French revolution, born near Neufchâtel in 1744. He studied medicine at Paris, and travelled about many years in travel, visiting London, Edinburgh, Dublin, Amsterdam, etc., supporting himself by giving lessons in the modern languages, and at intervals publishing works on medical and scientific subjects. The first breath of the revolution, however, brought him to the front, and when Danton instituted the club of the Cordeliers, Marat became the editor of the Publiciste Parisien, better known under its later title L'Ami du Peuple, which was again changed to the Journal de la République Française, a journal which was the organ of that society, and soon became the oracle of the mob. It early advocated the most extreme measures, and the tone became more furious as Marat was inflamed by the prosecutions of the authorities. His paper was issued from various places of concealment until and of the convention where General Dumouriers and the Girondists, who endeavored at first to prevent his taking his seat, were the special objects of his attack. The establishment of the revolutionary tribunal, and of the committee for arresting the suspected, was adopted on his motions. On the approach of May 31, as president of the Jacobin Club he signed an address instigating the people to an insurrection, and to massacre all traitors. For this Marat was delivered over to the revolutionary tribunal, which acquitted him; and the people received him in triumph and covered him with wreaths. He was assassinated shortly after by Charlotte Corday, July 13, 1793. His remains were deposited in the Pantheon with national honors, but were subsequently removed.

Marathi (ma-rā-thē), a language of Southern India, closely allied to Sanskrit and written in the Sanskrit character. It is the vernacular of some sixteen millions of people, mostly in Hyderabad and Bombay presidency.

Marathon (mar-a-thon), a village of ancient Greece, in Attica, about 20 miles northeast of Athens. It was situated (probably on the site of the modern Vrana) on a plain which extends for about 6 miles along the seashore, with a breadth of from 1 1/2 to 3 miles. It is famous for the overthrow of the Persians by the Athenians under Miltiades, 490 B.C., and for the Marathon races. (See following article.)
Marathon Run, a form of athletic training of recent adoption in several countries, arising from the development of the ancient Greek sports. After the battle of Marathon, a runner carried the news of the victory to Athens, many miles distant. The legend is that he fell dead after telling his story. Long runs of this character have now become common in many of our cities, in competition for marks of honor.

Marattas. See Maharattas.

Maratti (mâ-rät’të), CARLO, an Italian painter and engraver, born in 1625. Louis XIV employed him to paint his celebrated picture of Daphne, Clement IX, whose portrait he painted, appointed him overseer of the Vatican gallery. He has been styled the last painter of the Roman school. His Hydromedusa were particularly admired. He died in 1713 at Rome, where his chief works are to be found.

Marble (mär’bl’), the name given to certain varieties of limestone capable of receiving a brilliant polish, and which, both from their durability and the beauty of the tints of many of them, have at all periods been greatly in request for purposes of art or ornament. White statuary marble is a pure carbonate of calcium. Marbles have been divided into seven varieties or classes, viz. 1. marbles of a uniform color, comprising solely those which are either white or black; 2. variegated marbles, or those in which the spots and veins are interlaced and disposed without regularity; 3. shell marbles, or those which are in part made up of shells; 4. lunachelli marbles, or those apparently wholly formed of shells; 5. cipollino marbles, or those veined with green tale; 6. breccia marbles, or those which are formed of angular fragments of different marbles united by a cement of some different color; 7. pudding-stone marbles, or those which are formed of united fragments, like the breccia marbles, only with the difference of having the pebbles rounded in place of being angular. By antique marbles are understood those kinds made use of by the ancients, the quarries of which are now, for the most part, exhausted or unknown. These include Parian marble, Pentelic marble, Carrara marble (still largely quarried), rosso antico, giallo antico, verde antico, etc.

Marblehead (mär’bl-hed’), a seaport and township of Essex County, Massachusetts, 12 miles northeast from Boston, on a rocky point projecting into Massachusetts Bay. It has a good harbor, and is the summer headquarters for the Eastern, Boston and Corinthian Yacht Clubs. It was formerly one of the most important maritime towns of New England and is one of its oldest and quaintest places. It has boot and shoe factories, a seed-growing industry, and the workshop of the Curtis-Burgess flying machines. Pop. 7338.

Marbling, a process of ornamenting the edges of books by dipping them, when cut, in a trough about 2 inches deep and filled with gum-water on the surface of which colored pigments have been thrown and disposed in various forms with a quill and comb. The colors adhering to the edge of the book are set by dashing cold water over them.

Marburg (mär’bôr’g), a town of Hesse-Nassau, capital of the district of Cassel, on the slopes of an acclivity above the Lahn, 46 miles north from Frankfurt. The principal buildings are the castle of the landgraves of Hesse, now partly used as a prison; the university (about 800 students), the first founded in Germany after the Reformation; the church of St. Elizabeth (thirteenth century), the chancery, library and town house. Pop. (1905) 20,137.

Marcasite (mär’ka-sit’), iron pyrites or bisulphide of iron. It is of a paler color than ordinary pyrites, being nearly of the color of tin, and its luster is more strongly metallic.

Marcellinus. See Ammianus Marcellinus.

Marcellus (mâr-sel’us), MARCUS CLAUDIUS, a Roman general, five times consul (222, 215, 214, 210 and 205 B.C.): the first Roman who successfully encountered Hannibal in the second Punic war; and the conqueror of Syracuse (212 B.C.). He was killed in a skirmish with the Carthaginians in 205 B.C.

March, the measured and uniform tread of a body of men, as soldiers. It may be in slow, quick, or double time, the standard for the first or parade march being 75 paces in a minute, for the second 110 for the third 150.

March, a town of England, in the county and 29 miles northwest of Cambridge, on both sides of the Old Nene. Its two principal streets cross at right angles, and are each nearly 2 miles long. Pop. (1911) 8403.

March, originally the first month of the Roman year. Till the adoption of the new style in Britain (1752), the 25th of March was the first
day of the legal year; hence January, February, and the first twenty-four days of March have frequently two years indicated, as January 1, 1701, or 1701-02.

March, Francis Andrew, philologist, born at Milbury, Massachusetts, in 1825. He became a lawyer in 1850 and professor of comparative philology at Lafayette College in 1858. He was made president of the Spelling Reform Association on its organization in 1876. His ability in philological science is very high, and he has written *Comparative Grammar of the Anglo-Saxon Language, Philological Study of the English Language*, etc.

March Peyton Conway (1864- ), son of F. A., an American army officer, chief of staff of the U. S. Army from February, 1918. He was born at Easton, Pa., educated at Lafayette College, graduated from the U. S. Military Academy in 1888. He served in the Philippines and received the surrender of Aguinaldo’s chief of staff.—Francis A. March, Jr. (1863- ), brother of former, philologist, editor *Thesaurus Dictionary*, author *The World War*, etc.

Marchena (mär’cha-ná), a town of Spain, in Andalusia, province of Seville, and 30 miles east by south from the city of that name. There are sulphur springs in its vicinity. Pop. 12,468.

Marches (mär’chez), the frontiers or boundaries of a territory. The term is most familiar as applied to the boundaries between England and Wales, and England and Scotland. The latter were divided into three portions, the western, the eastern and the middle marches, each of which had a governor, called warden of the marches.

Marches, the territory of Italy, comprising a region lying between the Adriatic Sea and the Apennines, and divided into four provinces—Urbino and Pesaro, Ancona, Macerata and Ascoli.

Marcion (mär’s-ion), the founder of an ascetic Gnostic sect, called after him Marcionites, was born at Sinope about the beginning of the second century of our era, his father being bishop of Sinope. He went to Rome about 140 A.D. and founded a system which assumed the existence of three original principles—the supreme and invincible, whom Marcion called the Good; the visible God, the Creator; and the Devil, or perhaps matter, the source of evil. The Creator, the God of the Old Testament, was the author of suffering. Jesus was not the Messiah promised by this being, but the son of the unseen God, who took the form, but not the substance of man. Marcion denied the resurrection of the body; he condemned marriage, thinking it wrong to increase a race born in subjection to the harsh rule of the Creator. His sect lasted for several centuries.

Marcomanni (mär’ko-mān’i), Marcomanni, the name of an ancient German tribe or tribal league, apparently originally marches or borderers on the Rhenish frontier. They subsequently migrated east, displaced the Boii from their territory (the modern Bohemia), and under their king Maroboduus formed a great Marcomannian confederacy to hinder the extension of the Roman power beyond Pannonia. Being defeated, however, by a rival confederacy composed of the Cherusci and their allies, they entered into more or less friendly relations with Rome until the time of Donitian, whom they defeated. Trajan and Hadrian kept them in check, but in 106 A.D. they invaded Pannonia, and commenced the long *Marcomannic war*. Aurelius drove them back, and Commodus purchased peace from them, but they continued to make inroads into Rhetia and Noricum, and in the reign of Aurelian penetrated Italy as far as Ancona, and even threatened Rome itself. After that, however, they practically pass out of history.

Marconi (mär-kō’né), Guglielmo (William), an Italian physicist, born near Bologna in 1875. He was the first to succeed in devising a practical system of wireless telegraphy, beginning his researches at the age of 15. His apparatus was tested in England in 1897, when messages were sent over a distance of 15 kilometers. He used it in reporting election returns in 1900, and rapidly increased the distance covered, until in 1915 he succeeded in signaling across the Atlantic. Ocean news service by wireless was inaugurated by him in 1904, and his method developed until news items were regularly transmitted across the Atlantic, and in 1910 a message was transmitted from Ireland to Argentina. He was awarded, in 1909, one-half the Nobel prize for physics.

Marco Polo. See Polo.

Marcou, Jules, geologist, born at Salins, France, in 1824. He took part in the geological survey of the Jura Mountains. While in this work he made the acquaintance of Louis Agassiz, who invited him to the United States, and whom he assisted on his survey of the Lake Superior region in 1948. He
became connected with the Museum of Comparative Zoology at Cambridge in 1861. He died in 1868.

**Marcus Aurelius.** See Aurelius Antoninus.

**Marcus Hook,** a borough and port of Delaware River, 19 miles s.w. of Philadelphia. It has large marine trade, steel mills, foundries, chemical works, artificial silk mills, etc. Pop. 6324.

**Marcy** (mar'si), **William Learned** (1786-1857), an American statesman, born at Southbridge, Mass. Graduating from Brown University, he practiced law in Troy, N.Y. At the opening of the war of 1812 he entered the volunteer service as a lieutenant and led a successful attack on St. Regis, a Canadian post, capturing the first flag taken on land in the war. He became associate justice of the New York Supreme Court in 1829, and in 1831 was elected senator of the United States by the Democratic party, but resigned upon being chosen governor of New York, in 1832, an office which he held for three terms, though defeated in 1838 by William H. Seward. He was secretary of state in Pierce's administration, settling such important questions as the Oregon claim, the Arizona dispute, the Mexican boundary, Commodore Perry's negotiations with Japan, and the British fisheries dispute.

**Mardi Gras** (mär'də-gras; 'fat Tuesday'), Shrove Tuesday, the last day before Lent. It is signalized in France by a gorgeous procession, which includes a fat ox richly caparisoned. In the United States the day is observed in New Orleans and some other southern cities with showy processions and other ceremonies.

**Maremme** (mä-rem'mə), low swampy tracts of Italy, extending along the coast of Tuscany from the mouth of the Cecina to Orbetello.

**Marengo** (mär'en-gō), a village in Italy, in the province of Alessandria, and so near the town of that name as to be considered one of its suburbs; celebrated for the battle of June 14, 1800, when the French under Bonaparte defeated the Austrians under Melas.

**Mareotis** (mar-ō'tis), or Mariout, a lake of Lower Egypt, separated from the Mediterranean by the long narrow belt on which Alexandria stands. The main expanse is about 28 miles long by 20 broad, and lies 8 feet below the sea level. Salt is extensively made here by evaporation.

**Mare's-tail Coral.** See *Isis.*

**Margaret of Anjou,** daughter of René, titular king of Sicily, was born at Pont-à-Mousson, in Lorraine, in 1422, and was married in 1443 to Henry VI of England. The imbecility of the king made her practically regent, and her power being contested by the Duke of York, a claimant of the throne by an elder line, the protracted wars of the Roses commenced. At first victorious she was afterwards compelled to flee to Scotland, but raising an army in the north, she secured, by the battles of Wakefield (1460) and St. Albans (1461), the death of York and the release of the king. Her army, however, was soon afterwards annihilated at Towton (1461), and Edward (IV), the son of the late Duke of York, was declared king. She succeeded in obtaining assistance from Louis XI of France, but was once more defeated, and took refuge in France. Warwick then became embroiled with the young king, and determined to replace Henry on the throne. Edward was in turn obliged to escape to the continent, but obtaining assistance from the Duke of Burgundy, returned and defeated Warwick at Barnet (1471). Margaret, collecting her partisans, fought the battle of Tewkesbury (1471), but was totally defeated. She and her son were made prisoners, and the latter, when led into the presence of the royal victor,
was killed. Henry soon after died or was murdered in the Tower, and Margaret remained in prison four years. Louis XI ransomed her for 50,000 crowns, and in 1482 she died.

**Margaret of Valois, Queen of Navarre**, sister to Francis I, of France, was born at Angoulême in 1492. She was brought up at the court of Louis XII, and married the Duke of Alençon in 1504, became a widow in 1525, and in 1527 was espoused to Henry d'Albret, count of Béarn and titular king of Navarre. From this time she resided at Béarn, assisting in the development of the resources of the small kingdom, and making it a center of liberal influence. Many Protestant took refuge in her territories; and her name is closely linked with those of Rabelais, Dolez, Marot and the leading men of the period. She herself possessed no ordinary culture, being credited with a knowledge of six languages, and was the author of several works, of which the chief were *Le Miroir de l'Amé Pêcheresse*, printed in 1533 and condemned by the Sorbonne for its Protestant tendencies; the *Heptaméron*, a collection of tales in imitation of the *Decamerone* of Boccaccio, and first printed in 1559; and a collection of poems published in 1547 under the title of *Marguerites de la Marguerite des Princesses*. She died in 1549, leaving one child, Jeanne d'Albret, afterwards mother of Henry IV.

**Margarine** (mär'ga-rin), a mixture of stearine and palmite, obtained from beef fat, lard, etc., and formerly regarded as a single fat. The name is now applied to an imitation of butter. See Butterine.

**Margarita** (mär-gär'tā), an island belonging to Venezuela, in the Caribbean Sea; greatest length, 37 miles; greatest breadth, about 20. Margarita was discovered by Columbus in 1498. Pop. about 40,000.

**Margate** (mär'gāt), a seaport, municipal borough, and watering place in England, in the county of Kent, 64 miles east by south from London, pleasantly situated at the northern extremity of the Isle of Thanet. The town, which is a favorite resort with Londoners, is in the main well laid out with fine piers and promenades. The special features of Margate are its hospitals and its hotels; the only industry of importance, as apart from the entertainment of visitors, being its sea-fishing. Pop. (1911) 27,086.

**Margay** (mär'gā), a Brazilian animal of the cat kind, the Felis Margay or *F. tigrina*. It is about the size of the domestic cat, is of a pale fawn color, with black bands on the foreparts, and leopard-like spots on the hindparts and on the long bushy tail. It has been domesticated and made very useful in rat killing.

**Margrave** (mär'grav; German *markgraf*, count of the mark), originally a commander entrusted with the protection of a mark, or country on the frontier. The margraves acquired the rank of princes, and stood between counts and dukes in the German Empire.

**Maria Louisa** (mā-řē'a lou'-ē-sā), second wife of Napoleon I; born in 1781; eldest daughter of the Emperor Francis I of Austria. Her marriage with Napoleon took place in 1810 after the divorce of Josephine, and in 1811 she bore him a son. After his overthrow she received in 1816 the duchies of Parma, Placentia and Guastalla, which she governed till her death in 1847. At Napoleon's death she made a morganatic marriage with her chamberlain, Count Neipperg.

**Mariana** (mā-re-ā'nā), *Juan*, a Spanish historian (1537-1623). In 1553 he entered the Society of Jesus and taught theology in Rome, Sicily and Paris. He wrote a *History of Spain* and *De Rege et Regis Institutione*; the latter countenanced the slaying of tyrants.

**Mariana Isles** (or MARIANNE). See Ladrone.

**Mariana, a city, county seat of Lee Co., Arkansas, on the Anguille River, 25 miles n.n.w. of Helena, on the Missouri Pacific R. R. It has cotton interests, with gins, oil mill, etc. Pop. (1920) 5074.**

**Maria Theresa** (mā-ar'ē-a tā-rē'sā), Queen of Hungary and Bohemia, Archduchess of Austria, and Empress of Germany, daughter of the Emperor Charles VI, was born at Vienna in 1717, and in 1736 married Francis Stephen, grand-duke of Tuscany. On the death of her father in 1740 she ascended the throne of Hungary, Bohemia, and Austria, and a little later declared her husband joint ruler. Her accession was in accordance with the Pragmatic Sanction, but her claims were at once contested. Frederick the Great made himself master of Silesia; Spain and Naples gained possession of the Austrian territory in Italy; and the French, Bavarians and Saxons marched into Bohemia, carrying all before them. Charles Albert was proclaimed Archduke of Austria, and shortly after Emperor of Germany; and the young queen fled to Pressburg, where she convoked the diet...
and threw herself upon the sympathy of her Hungarian subjects. The French and Bavarians were speedily driven from her hereditary states; Prussia made a secret peace with the queen, who unwillingly abandoned Silicia and Giatz to Frederick; and though by the Treaty of Aix-la-Chapelle (1748) she was also compelled to give up the duchies of Parma, Piacenza, and Guastalla to Spain, her husband was elected emperor. During the time of peace which followed Maria Theresa, with the aid of her husband and the minister Kaunitz, made great financial reforms; agriculture, manufactures and commerce flourished, the national revenue greatly increased, and the burdens were diminished. The Seven Years' war again reduced Austria to a state of great exhaustion, but on its conclusion the empress renewed her efforts to promote the prosperity of her dominions. Her son Joseph was elected king of the Romans in 1764, and on the death of her husband, in 1780, she associated the young prince with herself in the government. In 1772 she joined in the dismemberment of Poland, obtaining Galicia and Lodomeria, while in 1777 she acquired Bukowina from the Porte, and in 1779, by the Peace of Teschen, gained the Inn valley. She died in 1780. Of the sixteen children which she bore to the emperor ten survived her, one of whom was the unfortunate Marie Antoinette.

Maria-Theresiopel. See Theresiopel.

Maria-Zell (mâ-râ'ê-tsel), a small town of Austria in the extreme north of Styria, in the midst of mountains, near the Salza. Its celebrity is due to the possession of a handsome church, with a shrine containing a small black image of the Virgin and Child, to which numerous pilgrimages proceed annually from different parts of the Austrian dominions. The number of annual pilgrims is said to reach the great number of 200,000.

Marie Antoinette. See Antoinette.

Marie de Medici (mâ-rê dé me'di-she'), the daughter of Francis II of Tuscany, born in 1573; married in 1600 to Henry IV of France. On the assassination of Henry she became regent, but proved utterly incompetent to rule. Her partiality for unworthy favorites caused her deposition and imprisonment. She became reconciled to her son, the weak Louis XIII., through Richelieu, who had possessed himself of the highest power, but was again imprisoned at Compiègne in 1630. Thence she escaped, and after wandering through several countries died in misery at Cologne in 1642.

Marie Galante (gâ-lânt'), an island belonging to France, 5 leagues from the Juan de la Peu, of which it is a dependency. The chief productions are sugar, coffee, tobacco, indigo and cotton. Pop. about 17,000, chiefly negroes.

Marienburg (mâ'ri-en-bûrân), a town in Prussia, in the government of Danzig, and 27 miles southeast of the city of that name, on the Nogat. It was once the seat of the knights of the Teutonic order, and contains the fine castle of the grand masters. Pop. (1905) 13,086.

Marienwerder (mâ'ri-en-ve-rûrâ'), a town of West Prussia, on a height near the confluence of the Vistula and Nogat, 43 miles S. S. E. of Danzig. It has an ancient and handsome cathedral and an old castle, partly used as a courthouse, partly as a prison. Pop. (1905) 10,258.

Marietta, a city of Ohio, capital of Washington Co., and the oldest town in the State. It is on the Ohio and the mouth of the Muskingum River, 80 miles S. E. of Zanesville. Here is Marietta College, founded in 1835. Petroleum wells in its vicinity furnish an extensive trade, and it has large flour mills, oil-well supply factory and chair company with numerous other industries. Pop. (1910) 12,423; (1920) 14,783.

Marietta, a city, capital of Cobb Co., Georgia, 20 miles N. W. of Atlanta. It is on an elevated site and is a place of resort. It has various manufactories. Pop. (1920) 6190.

Mariette (mâ-re-et), Auguste Edmond, a distinguished French Egyptologist, born in 1811. He was attached to the Egyptian museum in Paris, and after successful scientific expeditions to Egypt he was appointed by the viceroy inspector-general of monuments and curator of the museum at Boulak, with the title of Bey, and latterly of Pasha. He died in 1881. His works were very numerous.

Marignano (mâ-rê-në-yâ'no), or Mel-les n-la-vo-an (mê-lê-ë-yâ'no), a town of North Italy, 10 miles southeast of Milan; famous for the defeat of the Imperialists by Francis I. in 1515, and for a victory of the French and Italians over the Austrians in 1597. Pop. 6956.
Marigold (mar′i-gold), a name of several composite plants. The common marigold (Calendula officinalis) is a native of France and of the more southern parts of Europe. It is an annual, from 1 to 2 feet high, with large deep-yellow flowers. It is as prolific as any weed, and was formerly used in broths and soups, partly to give color, and partly as an aromatic seasoning. It had also many medicinal virtues assigned to it, such as emmenagogue, diaphoretic, tonic, antispasmodic and alterative. Locally it is used as an embrocation for bruises. It is now but little used, as it has been replaced by other drugs. A number of species of this genus are indigenous to the Cape of Good Hope. The so-called African marigold and French marigold, common in flower borders, are both Mexican species, and have brilliant flowers. They belong to the genus Tagetes. The corn-marigold is Chrysanthemum segetum; the fig-marigold is a Mesembryanthemum; the marsh-marigold is Caltha palustris.

Mariner's Compass. See Compass.

Marines (ma-rēnz′), a military force drilled as infantry, whose special duty is to serve on board ships of war when on commission, and also on shore under certain circumstances. They are trained to seamen's duties, but do not go aloft, being mainly employed in sentry duty, etc. The force was first embodied by an order in council in 1664 as a nursery for seamen to man the fleet. The United States and Britain are the only nations which employ marines in this manner.

Marinette, a city, county seat of Marinette Co., on Green Bay, Wisconsin. Bridges here cross the Menominee River to Menominee, Michigan. It has numerous saw mills, the lumber interests being large; also large fishing interests, and manufactures of pulp, cutty, excelsior, boxes, hoops, novelties, flour, paper and pulp, etc. Pop. (1910) 14,610; (1920) 13,610.

Marino (ma-rē-no′), San, a town and small independent republic in Italy. The territory consists of a craggy tract, with an area of about 22 square miles, on the borders of the provinces of Forli and Urbino, near the Adriatic coast. It is the last surviving representative of the Italian republics. At the head of the government are two "captains regent" elected for six months. There is a millitia of 950 men. The town San Marino occupies the crest of a rocky hill 2200 feet in height, and is accessible only by the road from Rimini. The principal inhabitants, however, reside in the hamlet of Il Borgo, at its foot. Pop. 7307.

Mario (ma-re-o′), GIUSEPPE, Marquis di Candia, a famous tenor, born at Turin in 1808. In 1830 he became an officer in the Sardinian army, but to escape the punishment of some youthful freak threw up his commission and fled to Paris. There in 1838, under the assumed name of Mario, he accepted an appointment as first tenor of the opera, and later sang in America. He died in 1883.

Marion (mar′ion), FRANCIS, an American soldier (1732-95), born at Winyah, South Carolina. His career as a partisan soldier in the Revolutionary war was most brilliant, and he ranks among the most famous of American soldiers, having made himself a hero of romance by the character of his exploits.

Marion, a city, county seat of Wilson Co., Indiana, on the Mississinewa River, 63 miles N. E. of Indianapolis, on four railroads, in a fertile farming district. It has manufactures of motor trucks, glassware, castings, machinery, gasoline motors, shoes, brick, flour, pulp and paper, engines, boilers, and many other products. A National Soldiers Home is here. Pop. (1910) 10,359; (1920) 23,747.

Marion, a city, county seat of Grant Co., Ohio, 45 miles N. of Columbus, on the Big Four, Hocking Valley, Pennsylvania, and Erie railroads. Noted politically as the home of President Harding, whose "front porch" campaign, of 1920, brought crowds to the city. Noted commercially for its manufacture of steam shovels, dredges, winches, garments, cut glass, tires and tubes, silk, steel and gray iron castings, band implements, brass and bronze castings, etc. It has stockyard, packing plant and the Erie shops. Pop. (1910) 18,232; (1920) 27,891.

Mariotte (ma-ro′ot), EDMÉ, a French mathematician and natural philosopher, born in Burgundy in 1620, served as priest at St. Maurice, Beaune, became member of the Academy of Sciences in 1666, and died in 1684. He followed closely in the steps of Galileo and Torricelli, and made many important discoveries in hydrostatics and hydraulics. The law according to which the density of the atmosphere is regulated was discovered by him and Boyle independently. See Boyle's Law.
Mariposa (mar-i-pó'sá), a large and beautiful fish found in the open Atlantic and Pacific Oceans.

Maripos (L. Capraria luna).

Mariput (mar'i-pút), the zoril, an animal of the genus Viverra, the V. sorilla, a species of civet.

Maritime Law. See Commercial Law.

Maritza (mä-rë'tsà; the ancient Hebrus), a river of Turkey, rising in the Balkans and flowing through Eastern Roumelia, southeast to Adrianople, where it bends to the southwest, and falls into the Aegean Sea by the Gulf of Enos. It is over 300 miles long, and navigable to Adrianople, about 100 miles from its mouth.

Maritzburg. See Pietermaritzburg.

Mariupol (mä-riú-pol), a town and seaport of S. Russia, in the government of Ekaterinoslav, on the Sea of Azof. Pop. 52,770.

Marius (mär'i-us), Catius, a Roman general, born in 157 B.C., of obscure parents, at the village of Cerestra, near Arpinum. He served with distinction at Numantia in 134 B.C. under Scipio Africanus; was made tribune of the people in 119, and acquired much popularity by his opposition to the nobles. In 115 B.C. he was appointed praetor, and a year later proconsul of Spain, which he cleared of robbers; he also increased his influence by his marriage with Julia, the aunt of Julius Caesar. In 109 B.C. he accompanied the Consul Q. Cæcilius Metellus as his lieutenant to the Jugurthine war. He brought this war and the war in Transalpine Gaul against the Teutons to a victorious close; and six times was chosen consul. On the outbreak of the war against Mithridates, Marius, who had long been jealous of Sulla, endeavored to deprive him of his command, and in the struggle which followed was compelled to flee from Italy. After various escapes he landed in Africa and the ruins of Carthage, and remained there until recalled by Cinna, who had hesitated a successful movement in his favor. In company with Cinna he marched against Rome, which was obliged to yield the entry of Marius and his followers; the massacre of most of his chief opponents. On the completion of the term of Cinna’s consulate he declared himself and Marius consul (B.C. 86), but the latter died seventeen days later at the age of seventy.

Marivaux (mä-rë-vô), Pierre Carlet de Chamblain de, a French dramatic writer and novelist, born at Paris in 1658. After writing three or four novels and a series of articles of the “Spectator” type, from 1709 onwards he produced a large number of plays, the best being the Surprize de l’Amour (1722), the Jeu de l’Amour et du Hazard (1730), and Les Fausse Confidences (1731). They were characterized by a certain skilfully embroidered phrasing which gave rise to the term marivaudage, but they have also no little charm of feeling as well as of intellectual finesse. Two uncompleted novels, Marianne and the Payson Pareau, contain much excellent work. He was made an academician in 1736, and died in 1763.

Marjoram (marjó-ram; Origanum), a genus of plants of the nat. order Labiatae. The common marjoram (Origanum vulgare), a native of Britain, is a perennial under-shrub growing among copsewood in calcareous soils. The leaves are small and acute; the flowers reddish, in clustered spikes. Sweet marjoram (O. Majorana) is a biennial, cultivated in gardens. As soon as it blossoms it is cut and dried for culinary use, being employed as a seasoning.

Mark, a term formerly used in England for a money of account, and in some other countries for a coin. The English mark was two-thirds of £1 sterling, or 13 of 4d.; and the Scotch mark, or mack, was two-thirds of £1 Scots, or 13 1/3d. sterling. In the coinage of the German Empire the mark is a coin of nearly the same value as the English shilling. A mark banco used to be a money of account in Hamburg equal to nearly 1a. 6d.

Mark, St., the Evangelist, according to the old ecclesiastical writers,
the person known in the Acts of the
Apostles as 'John, whose surname was
Mark' (Acts, xii, 25, 25), for many years
the companion of Paul and Peter on their
journeys. His mother, Mary, was gen-
erally in the train of Jesus, and Mark
was himself present at a part of the
events which he relates in his gospel, and
received his information partly from eye-
witnesses. He was the cousin of Barna-
bas (Col., iv, 10), and accompanied Paul
and him to Antioch, Cyprus and Perga
in Pamphylia. He returned to Jerusa-
lem, whence he afterwards went to Cy-
prus, and thence to Rome. He was the
cause of the memorable 'sharp con-
tention' between Paul and Barnabas. Of
the close of his career nothing is known;
and it is by no means certain even that
the various passages, on which the church
has based the biographical notes already
cited, uniformly refer to the same indi-
vidual. See Gospels.

Mark Antony. See Antonius.

Markets. See Fairs.

Markham (mark'am), Clements
Robert, an English geog-
rapher and traveler, was born in 1530,
and educated at Westminster School.
He was in the navy in 1544-51, after which
he traveled in Peru, and published
Cusco and Lima (1566). In 1600-61 he
visited Peru and India in connection with
the establishment of chinchona plantations
in the latter country, one result being the
publication of Travels in Peru and India
(1682). In 1685-66 he visited Ceylon
and India, and in 1687-88 accompanied
the Abyssinian expedition, an account of
which he wrote. He was made C.B. in
1671. He held several government
appointments. Other works of his are:
Life of the Great Lord Fairfax; Sketch
of the History of Persia; Peruvian Bark;
The War Between Peru and Chile, etc.
He was knighted in 1806, and died Jan.
30, 1811. A first cousin, Albert Hastings
Markham, born in 1841, was an Arctic
voyager and writer on polar research and
was made a rear-admiral in 1892.

Markham, Edwin (1852- ), an
American poet, born at
Oregon City, Oregon. In his boy-
hood days he was taken to California and
there worked at farming and sheep-herd-
ing and blacksmithing. He was educated
at San José Normal School and two west-
ern colleges; was superintendent of pub-
lic schools till 1890, in which year his
striking poem, 'The Man with the Hoe,'
was written. He had written verses for
many years, but it was not until 'The
Man with the Hoe' appeared that he won
nation-wide fame. He subsequently de-
vo ted himself to writing and lecturing.
In 1900 he published 'The Man with the
Hoe, with Notes by the Author.' 'Lin-
colin and Other Poems' appeared in 1901.
He wrote a number of essays including
'The Poetry of Jesus,' 'The Science of
Science,' 'The Hoe-Man in the Making,'
'The Children in Bondage.' He compiled
and edited 'Remarkable Writings of
Thomas Lake Harris.'

Markham, William (1835-1704), an
English colonial governor in
America. He was a first cousin of
William Penn, who in 1681 appointed him
deputy governor of Pennsylvania. He
represented the colony in the boundary
dispute with Maryland. He was deputy
governor of the Territories (Delaware)
in 1691. He had many quarrels with
Penn and was charged with connivance
with pirates and privateers who took
refuge in Delaware Bay.

Markhor (mar'khor), a wild goat na-
tive to Asia. It is closely
related to the domestic variety, but has
long massive spirally twisted horns.
There are four subspecies, distinguished
chiefly by variation in the shape of the
horns. The extremes are represented
by the Astor and Sullivan markhor. In
the first, which is named from the village
of Astor in northwestern Kashmir, the
horns form an open spiral and are long
and massive; in the second, named from
the Sullivan range in which it is found,
the horns are short and straight with the
keel running around them like the thread
of a screw.

Marking-nut (Semecarpus Anacard-
dium), a tree of the
cashew family, belonging to India, having
a fruit that is roasted and eaten. The
black juice of the unripe fruit serves to
make a marking-ink.

Markirch (mär'kitch), or St. Marie-
aux-Mines, a town of Ger-
many, in Upper Alsace, in a valley on
both sides of the river Leber. Pop.
12,372.

Mark Twain. See Clemens, Samuel
Langhorne.

Marl, an earthy substance essentially
composed of carbonate of lime
and clay in various proportions. In some
marls the argillaceous ingredient is
comparatively small, while in others it
abounds, and furnishes the predominant
characters. The most general use of marl
is to improve soils. The fertility of any
soil depends in a great degree on the
suitable proportion of the earths which
it contains; and whether a calcareous or
an argillaceous marl will be more suitable
"a given soil may be determined with
much probability by its tenacity or looseness, moisture or dryness.

Marlborough (malrˈbər-ə), a city of Middlesex Co., Massachusetts, 25 miles w. of Boston. It has extensive manufactures of boots and shoes, also produces shoe machinery, electric appliances, etc. Pop. (1910) 14,678; (1920) 15,028.

Marlborough (malrˈbruh), a municipal borough of England, in Wiltshire, on the Kennet, a tributary of the Thames. There is here a flourishing grammar school, Marlborough College, opened in 1845. Pop. 4401.

Marlborough, a provincial district, New Zealand, occupying the northeast portion of South Island, and bounded by the sea and the provincial district of Nelson. Its extreme length is 130 miles, breadth 60 miles; area, about 3700 sq. miles. In the south of the district are the Wairau Plains, one of the finest sheep tracts in New Zealand. Capital, Picton, situated on an arm of Queen Charlotte Sound. Pop. 11,113.

Marlborough, John Churchill, Duke of, an English general and statesman, second son of Sir Winston Churchill; was born at Ashe, in Devonshire, in 1650. At the age of twelve he became page to the Duke of York (afterwards James II), by whom at sixteen he was appointed an ensign. He as to obtain the public thanks of the king of France. On his return to England he was made lieutenant-colonel, and through the influence of his sister Arabella, mistress of the Duke of York, his advancement was rapid. He had a regiment of dragoons presented to him, and strengthened his influence at court by his marriage with Sarah Jennings, an attendant upon the princess, afterwards Queen Anne. In 1682 he obtained the title of Baron of Eyemouth, and a colonelcy in the guards. On the accession of James II he was sent as ambassador to France, and soon after his return was created Baron Churchill of Sundridge, and raised to the rank of general. The same year he suppressed the rebellion of the Duke of Monmouth. On the arrival of the Prince of Orange he joined him at Axminster, and was rewarded by the earldom of Marlborough, and the appointment of commander-in-chief of the English army in the Low Countries. The following year he served in Ireland, where he reduced Cork, Kinsale, and other places. In 1691 he was suddenly dismissed from all his employments and committed to the Tower on the charge of high treason, but soon obtained his release; though it appears that the suspicions against him were not without foundation. On the death of Queen Mary he was made a privy-counselor, and appointed governor to the young Duke of Gloucester; and in 1701 was created by King William commander-in-chief of the English forces in Holland, and also ambassador plenipotentiary to the states-general. Still greater honors awaited him on the accession of Queen Anne in 1702, when he was created captain-general of all the forces at home and abroad, and sent plenipotentiary to The Hague, where he was also made captain-general by the states. In the campaign of the same year he drove the French out of Spanish Guelders, and took Liège and other towns, for which he was created Duke of Marlborough. In 1704 he stormed the French and Bavarian lines at Donaúworlth, and in the same year, in conjunction with Prince Eugene, gained the victory of Blenheim over the French and Bavarians, headed by Marshal Tallard and the Elector of Bavaria. The nation testified its gratitude by the honor of Woodstock and hundred of Wotton, and erected Blenheim Palace for him, one of the finest seats in the kingdom. During the year 1705 he conducted successful negotiations at the courts of Berlin, Hanover and Venice, and the new emperor, Joseph, presented him with the principality of Mindelheim. On the victory of Ramillies, 1706, a bill

Duke of Marlborough.
Marlowe, JULIA, actress, born at Caldbbeck, England, in 1870, and was taken to the United States at five years of age. She began her theatrical career with child parts, her first mature part being Parthenia, in Ingomar, in 1888. Since that date she has been a favorite in Shakespearean and other leading parts. She married Robert Tabor, and later, Edward H. Sothern.

Marmont (mar-mont), a village of France, on the Seine, 10 miles west of Paris. It contained a royal castle, built by Louis XIV and destroyed after the revolution.

Marmalade (mahr-muh-lay), a jelly made from quinces, peaches, apricots, oranges, etc., and portions of their rinds, the most common kind being made from bitter or Seville oranges.

Marmalade-tree, Marmalade-plum, a tree of the order Sapotaceae, a native of the West Indies and tropical America, valued for its fruit, the pulp of which resembles marmalade. It is also called Mame-sapote.

Marmalade-water (mar-muh-lay), a fragrant liquid distilled in Ceylon from the flowers of the Bengal quince (Bawal Marmelos), and much used by the natives as a perfume for sparkling.

Marlowe, CHRISTOPHER, an English poet and dramatist, born at Canterbury in 1564, and educated at Cambridge, whence he proceeded M.A. in 1587. He afterwards settled in London, and became an actor as well as a writer for the stage. Besides six tragedies of his own composition, the best known of which are Tamburlaine the Great, Edward II, Dr. Faustus, and the Jew of Malta, he left a translation of the Metamorphoses of Ovid, and some lyrical poems, among them the Passionate Shepherd; another poem, Hero and Leander, was completed by George Chapman. He appears to have led a reckless, dissipated life, and died in 1593, from a wound received in a quarrel with a serving-man at Deptford. Marlowe was by far the greatest dramatic writer before Shakespeare.

Marly-le-Roi (mar-lee-ray), a Lyons, France.

Marlitt, E., the pseudonym of the German novelist, Eugenie John, born at Arnstadt, Thuringia, in 1829; died in 1877. She was for a time on the operatic stage and after 1863 wrote a long series of novels, many of which were translated into English.

Marlowe. See Great Marlowe.

Marline-spike (mar-lin-spike), a pin tapering to a point, and principally used on board ship to separate the strands of a rope in order to introduce the ends of some other through the intervals in the act of knotting or splicing; it is also used as a lever in various operations.

Great, Edward II, Dr. Faustus, and the Jew of Malta, he left a translation of the Metamorphoses of Ovid, and some lyrical poems, among them the Passionate Shepherd; another poem, Hero and Leander, was completed by George Chapman. He appears to have led a reckless, dissipated life, and died in 1593, from a wound received in a quarrel with a serving-man at Deptford. Marlowe was by far the greatest dramatic writer before Shakespeare.
sians and Montenegro. He was present at Wagam, and after the truce of Znaim which made field marshal he afterwards governed the Illyrian Provinces till 1811, when he succeeded Masséna as commander in Portugal. In conjunction with Soult he raised the siege of Bajador, but was ultimately badly beaten at Salamanca by Wellington. In the campaign of 1813 he held the command of an army corps in Germany, and fought in the battles of Lützen, Bautzen and Dresden. In 1814 he fought a final battle under the walls of Paris, but opposition appearing fruitless he surrendered to the allies. This proceeding was one main cause of Napoleon's immediate abdication, and brought Marmont into favor with the Bourbons. After the restoration Louis XVIII made him a peer of France, but he was compelled to withdraw from Paris by the revolution of 1830, and his name was struck off the army list. He accompanied Charles X in his exile, and afterwards traveled, publishing the results of his travels in 1837-39. He also wrote ‘Esprit des Institutions Militaires’ and his own memoirs. He died at Venice in 1852.

Marmontel (mərˈmɔ̃tɛl), Jean François, a French writer, born in 1725; died in 1799. After acting as a teacher of philosophy in a seminary at Toulouse he in 1745 went by Voltaire’s advice to Paris, where his tragedies ‘Denys le Tyrant’ (1748) and ‘Aristomène’ (1749) brought him considerable celebrity. By the favor of Madame Pompadour he was appointed to a post in connection with the royal buildings. In 1761 he published his first series of ‘Contes Moraux’ (‘Moral Tales’). In 1768 he succeeded Marivaux as a member of the French Academy, and he was appointed historiographer of France. In 1783 he was elected secretary to the French Academy. On the breaking out of the revolution he retired to a cottage in Normandy, where he wrote a new series of tales and ‘Memoirs of his own life. He also wrote ‘Bélisaire’ (1767), ‘Les Invains de la Table’, articles for the ‘Encyclopédie’, etc.

Marmora (mərˈmɔrə), or MARMARA, Sea of (anciently Proponcia), an inland sea, lying between European and Asiatic Turkey, communicating with the Mediterranean by the Dardanelles, and with the Black Sea by the Bosporus: length from Gallipoli to the head of the Gulf of Izmid, 177 miles; greatest breadth, rather more than 50 miles. It contains several islands, of which the largest is Marama, famous for its quarries of marble and alabaster.

Marmose (mərˈməs), a marsupial quadruped resembling the opossum, but is a being only about 6 inches in length exclusive of the tail; the

Didelphys murina of Cayenne, D. derigera of Surinam. It carries its young about with it on its back.

Marmoset (mərˈmuːs), a name of several small South American monkeys, the smallest of the monkey tribe. They are agile in their movements, possess long, non-prehensile tails, and have a thick wooly fur. They bear a close resemblance to squirrels in general appearance, feed upon fruit and insects, and occasionally upon the smaller birds and their eggs. The marmoset family (Hapalidae) is generally divided into two genera, Hapale and Micas, each including a great number of distinct species, the most familiar being the Black-eared marmoset (Hapale Jacchus) and its varieties H. penicillata, H. vulgata, etc. These are also known by the name of Ouistiti.

Marmot (mərˈmut), a rodent quadraped of the genus Arctomys, classed with the squirrels. They are thick-bodied, have short tails and short legs, and live in burrows, which are generally excavated in mountainous situations, and consist of a series of galleries in which whole communities reside. During the winter they lie dormant. The marmots inhabit Europe, Northern Asia and North America. The Alpine or European Marmot (Arctomys Alpinus) is found in plenty on the Alps, and averages a rabbit in size. The prairie-dog or prairie-marmot, or wistownish, of North America (Cynomys Ludoviciînus) is the most familiar American species. Another species found in America is the woodchuck of the middle American states (A. monax).

Marne (märn; Latin, Matrona), a river of France, the largest tributary of the Seine on the right, rises in the department of Haute-Marne, and enters the Seine about 3 miles above Paris. It has a course of about 290 miles, of which 210 miles are navigable.
Marne, a department of France, bounded by Ardennes, Aisne, Seine-et-Marne, Aube, Haute-Marne and Meuse; 67 miles long by 60 miles broad; area, 3158 square miles. About two-thirds of it is arable, and the crops, chiefly rye and oats, more than supply the consumption. The vine is largely cultivated; but though the champagne of Rheims and Epernay are famous, the general produce of the vineyards is indifferent. Châlons-sur-Marne is the capital. Pop. (1906) 434,157.

Marne, Haute (Upper Marne), a department of France, bounded by Meuse, Marne, Aube, Côte d'Or, Haute-Saône and Vosges; area, 2401 sq. miles. Ramifications of the Vosges make the greater part of the surface mountainous, and the elevated plateau of Langres in the department forms part of the great European watershed. The principal rivers are the Marne with its tributaries, and the Meuse. The ordinary agricultural crops equal the consumption, and the wine is partially exported. The forests are extensive, and furnish fuel for smelting the ironstone of the department. The coal-measures are partially developed, but the prevailing rock in Jura limestone. Chaumont is the capital. Pop. 224,888.

Marne, Battle of the, the great conflict which marked the climax of the German advance into France in the Great European War, and their retreat to the serried array of trenches to which the fighting was to become confined. This battle is regarded by many as the turning point in the war so far as the struggle in the west was concerned, and the rescue of France from a situation of imminent danger. In the direction of the river Marne, with Paris as their goal, marched the great German hosts after they had overrun Belgium in August, 1914, the French and British armies retreating before their seemingly irresistible advance. It was a critical period in the history of France, one in which the Germans, estimated at 900,000 in number, and flushed with victory over the Belgians, faced 1,000,000 French and British, as yet practically untried on the battlefield, but fully recognizing the need of a desperate defense. The British wing of the allied armies, small in number, was struck at Mons on August 28 by a greatly superior force and hastily fell back, barely escaping disaster; while the French were stubbornly retreating before the powerful German forces which had fought their way to the Paris-Verdun line, and were sternly driving forward towards the French capital. General Joffre, the French commander-in-chief, while retreating, did so only for strategic reasons, having it in view to halt and give battle in a selected position behind the waters of the Marne, where he could avail himself of the large body of troops occupying the outlying defenses of Paris. On reaching this position in early September, he began a new disposition of his forces, shifting his center eastward. General Von Kluck, commanding the right wing of the invaders, and marching directly upon Paris, made a sudden shift in the same direction, doubtless deeming it more important just then to annihilate the opposing forces than to occupy the capital. The latter could wait.

On September 5, Von Kluck crossed the Marne above Meaux, leaving a strong force on the west bank of the Ourcq to protect his right wing. East of him lay Von Bulow's army, the remaining German armies being disposed to support those named. It was a formidable force which Joffre thus faced when he halted his retreat with the purpose of striking the blow which he had in view in his retreat. Paris, indeed, was in such danger that the official of the government had been hastily transferred to Bordeaux, and on September 6 the forces assigned for its protection were hastily transferred to the front, leaving the Paris forces by every means of transportation available. The day designed for the launching of Joffre's forces against the Germans had been reached and the two great armies faced each other along a wide front. Sunday, September 6, 1914, was a critical date in the history of France. Joffre's attitude of defense was about to be changed for an attitude of offense and no man could safely predict the issue. If the German army would force its way through the opposing line Paris would fall once more into the hands of a powerful foe and an immense advantage be gained, even if this event should not prove fatal.

The unexpected forward movement of the French forces upon Von Kluck's flank caused him in all haste to check his advance across the Marne and form new plans to meet the advancing foe. This led to one of the events that decided the fate of the battle. The British had joined in the advance, striking Von Kluck's right and center, and by nightfall their line was firmly fixed across and south of the Grand Morin. The important result of this day's manoeuvres was that Von Kluck's right had been turned, compelling him to present two fronts to the advancing foe. September 7 was a day marked along the whole line of desperate fighting, Von
Maronites

Kluck bearing the brunt of the most furious assaults and being in the end obliged to draw back from the Grand Morin. The following day marked a general turning of the tide, its most important event being the capture of Montmartail, in the Petit Morin, by D'Esperay, a feat which led to the exposure of Von Bulow's right flank. This fact was quickly discovered by General Foch, who pushed his left wing forward during the night, gaining a position well to the west of Von Bulow. Far more important, however, was a signal fact discovered by his air scouts. In some way not easily explained Von Bulow's left and Von Housen's right had been separated, leaving a gap into which Foch daringly pushed his way between the two German armies.

September 9 was a day of heavy rain, but by its end the German right had been hopelessly broken, Foch and D'Esperay occupying the gap that had been made, and driving two of Von Bulow's corps into an area of marshy ground. They got to higher ground in the next morning, but had lost many men taken prisoners and at least 40 guns. Von Bulow's left and Von Housen's right were now in similar straits, the French lines between them, well equipped with artillery, causing serious loss of life, while the German armies were driven back to right and left and their lines hopelessly separated. Reinforcements at this time reached the German lines, but they were unable to check the French advance, while the Crown Prince's army sought in vain to drive a wedge between the French right and the front of the Meuse. By the evening of the 10th the battle was practically at an end and the French victory assured. The retreat continued during the next day and on the 12th the Germans reached the fortified ground they had previously prepared on the line of the Aisne. The great Teutonic drive had signalily failed; the French were the victors; Paris was saved.

Maronites (mar-on-itz), a sect of eastern Christians, whose origin was a consequence of the Monotheilite controversy. (See Monotheilites.) On the condemnation of the Monotheilites by Anastasius, early in the eighth century, the remnant of this party survived in the Maronites, so named from their founder Maron—a society of monks in Syria, about Mount Lebanon, which is mentioned as early as the sixth century. They became a warlike mountain people, who defended their political and religious independence boldly against the Mohammedans. Their political constitution is that of a military commonwealth. Since the twelfth century they have several times submitted to the pope and joined the Roman Catholic Church. See Druses.

Maroons (ma-rōnz'), the name given to runaway negroes in Jamaica and in some parts of South America. In many cases they rendered themselves formidable to the colonists. When Jamaica was conquered by the English in 1655 about 1500 slaves retreated to the mountains, and continued to harass the island till 1705, when they were reduced by the aid of bloodhounds.

Maros (ma'rosh), a river of Hungary which enters the Theiss at Szeged in after a course of 400 miles.

Maros-Vásárhely (ma'rosh-vá-sár-hel' ye), a town of Transylvania, on the Maros, in a beautiful and fertile district, 54 miles N. N. E. of Hermannstadt. Pop. 19,522.

Marot (ma-ro), CLEMENT, a French epigrammatist and writer of light lyrical pieces, born at Cahors in 1495. He went to Paris as page of Margaret of France, duchess of Alençon, whose brother Francis I he afterwards accompanied to the Netherlands. In 1525, having followed the king to Italy, he was wounded and made prisoner in the battle of Pavia. After his return to Paris he was suspected, possibly on the charge of his mistress Diana of Poitiers, of being favorable to Calvinism, and was thrown into prison. During his confinement he wrote L'Enfer, a satire on his judges; and a modernized edition of the Romance of the Rose; and the king finally set him at liberty. His connection with Margaret, now Queen of Navarre, with whom he had quarreled, was renewed, but he soon went to Italy and thence to Geneva (1543), where Calvin succeeded in making him a nominal proselyte. He recanted, however, and returned to Paris; but being again in danger as a suspected heretic, he fled to Turin, where he died in poverty in 1544. His translation of the Psalms, made in conjunction with Beza, was long used in the Protestant churches in France, though his own life was marked by complete religious indifference. The combination of satirical humor, naïveté, and delicacy exhibited in his works is known as the Style Marotique, of which La Fontaine furnishes the best subsequent examples.

Marque (mark), LETTERS OF, or LETTERS OF MARQUE AND REPRISAL, a license or extraordinary commission granted by a sovereign or the supreme power of one state to the citizens of this state to make reprisals at sea on the subjects of another, under pretense of indemnification for injuries received;
that is a license to engage in privateering. Letters of marque were abolished among European nations by the Treaty of Paris of 1856. The United States of America was invited to accede to this agreement, but declined.

**Marquesas** (mär-kā'sas; Fr. M ar -que-sa), an island group in the South Pacific Ocean, lat. 8° to 11° S.; lon. 138° 30' to 143° W., belonging to France, composed of twelve islands and islets. Their coasts are generally inaccessible, rising from the water like walls; but in Nukahiva, the largest, there are one or two excellent natural harbors. Hiva-ooa is the next in size. Some of their mountains reach an elevation of about 3500 feet; the intervening valleys are singularly fertile and picturesque. Their principal productions are yams, bread-fruit and coconuts. They were discovered in 1595.

**Marquetry** (mär'ket-ri; Fr. marquéterie), inlaid cabinet work in which thin slices of different colored wood, sometimes of ivory, pearl, shell, or metal, are inlaid on a ground usually of oak or fir, well seasoned to prevent warping.

**Marquette** (mär-kät), Jacques, Jesuit missionary and explorer in North America, born in Picardy, France. After spending several years in mission work, he led a party down the Illinois and the Mississippi to the Arkansas. Died in 1675.

**Marquette**, a city and summer resort, capital of Marquette County, Michigan, on the shore of Lake Superior, 430 miles N. of Chicago. It has a good harbor and immense docks for the shipment of iron ore, which is abundant in the county. There is also an extensive brownstone quarry, large machine shops and blast furnaces, railroad shops, woodworking factories, trap rock quarries, etc. There is a State normal school, a State prison, and a house of correction. Pop. (1920) 12,718.

**Marquis** (mär'quis), **Marquess** (Fr. marquis; It. marchese; Ger. marquis), a title of honor next in dignity to that of duke, first given to those who commanded on the marches or frontiers of countries. The title was first introduced into England by King Richard II. in the year 1387, but fell into disuse until the reign of Edward VI, who created the Marquises of Winchester in 1551. The corresponding female title is marchioness.

**Marriage** (mär'ij), a solemn contract between a man and woman, by which they are united for life and assume the legal relation of husband and wife. Different localities have different forms of the institution, the most broadly marked of which are connected with the right to have only one wife—monogamy, or a plurality of wives—polygamy. Polyandry, by which a woman may have several husbands, is known to have existed in ancient times, and still exists in certain localities, as in Thibet. Among the most civilized communities monogamy is the prevailing practice. Though the Church of Rome ranks marriage among the sacraments, and religious observances are almost everywhere customary on its celebration, the law regards it as nothing more than a civil contract. To render valid the civil contract constituting marriage in England and the United States, it is requisite that the free will of each of the parties should be spontaneously exercised, and that each should be capable of giving an intelligent consent. By common law the age of consent is fourteen for males and twelve for females. This prevails in England, and in the United States except where changed by State legislation. In the United States marriage is regarded as being entirely based on contract or on the present mutual consent of the parties; solemnization by a clergyman or by a magistrate, the presence of witnesses, and all the customary forms and ceremonies being simply convenient means of perpetuating the evidence of the contract.

**Marrow. See Medulla.**

**Marryat** (mär'ri-at), Frederick, an English novelist and naval officer, born in 1792. In 1806 he entered the navy as midshipman on board the Impératrice, commanded by the celebrated Cochrane, afterwards Lord Dundonald; and having served with distinction and attained the rank of captain he retired in 1830. His first attempt in literature was made in 1829, by the publication of Frank Mildmay. His success led to an extensive series of works of the like kind, including The King's Own, Peter Simple, Jacob Faithful, Japhet in Search of a Father, Midshipman Easy, The Pacha of Many Tales, and others. He was also the author of a Code of Signals for the Merchant Service (1837). Captain Marryat's novels are remarkable for broad humor and fidelity of description, and are suitable for the life, but he cannot be said to be a great master of plot. He died at Langham, Norfolk, in 1848. One of his daughters, Florence Marryat, gained distinction as a novelist. See Ross-Church.

**Mars** (märz), the Roman god of war, at an early period identified with
the Greek Arès, a deity of similar attributes. Like Jupiter he was designated as the father of the Roman people, Romulus and Remus being the fruit of his intercourse with Rhea Sylvia. Several temples at Rome were dedicated to him. His service was celebrated not only by particular flamines devoted to him, but by the College of the Salii, or priests of Mars. The month of March, the first month of the Roman year, was sacred to him. As the tutelary deity of Rome he was called Quirinus, in his character as the god of war Græcina (the Striding). Ares, the Greek god of war, was the son of Zeus (Jupiter) and Hera (Juno). He is represented as terrible in battle, but not as inhuman, since he was wounded at various times by Heracles, Diomedes, and others. He is represented as a youthful warrior of strong frame, either naked or clothed with the chlamys. The chief seats of the worship of Ares were in Thrace and Scythia.

Mars, the planet which lies next beyond the orbit of the earth. It moves around the sun in 686.9797 of our mean solar days, at the average distance of 139,312,000 miles, its greatest and least distances being 152,284,000 and 126,340,000 miles; its orbit is inclined to the ecliptic at an angle of 1° 51' 5"; its distance from the earth varies from about 35,000,000 to 224,000,000 miles; it rotates on its axis in 24 hours 37 minutes 22 seconds; the inclination of its axis, or the angle between its equator and its orbit, is 23°; its diameter is about 4400 miles. Its surface bears some degree of resemblance to that of the earth, though with variations of singular character. These consist of canal-like markings covering much of the surface and which have been attributed to some astronomers contending that they are irrigation canals of artificial origin, and indicate that Mars is inhabited. This theory however, is not widely accepted. The reddish hue of Mars is one of its characteristic features. About every 8 years 7 months it is in perihelion and perigee at the same time, and has a wonderful brilliancy. At its poles are white portions, which decrease and increase in size at the beginning and end of the Martian summer, so that the poles are supposed to be surrounded with snow, though much doubt is felt regarding this. In 1877 two satellites, both very small bodies, were discovered by Professor Hall of the Naval Observatory, Washington. The outer one, 14,500 miles distant from the center of Mars, revolves round the planet in a period of 30 hours 14 minutes; the inner one, 5800 miles from the center of Mars, has a period of 7 hours 38 minutes.

Mars, Anne Françoise Hypolite Boutet, a French actress, born at Paris in 1779. As Célimène in Molière's Misanthrope, and Eimine in Tartuffe, as well as in several similar characters in the plays of Marivaux, she was superb. Louis XVIII settled on her, as well as on Talma, a pension of 30,000 francs. She quitted the stage in 1841, and died at Paris in 1847.

Marsala (mar' sa lâ), a seaport of Sicily, on the promontory of Cape Boeo, 18 miles s. w. of Trapani. The principal edifice is a large cathedral. The harbor has been so silted up as to admit only small vessels. See Lilli'brum, Pop. 14,452.

Marsden (marz'den), William, oriental scholar, born in Dublin in 1754, was sent out early in life to Sumatra, in the East India Co.'s service, and returned to England in 1779. In 1796 he became chief secretary in the admiralty, retiring in 1807. Among his works are: History of Sumatra, Dictionary of the Malay Language; Grammar of the Malayan Language; Translation of the Travels of Marco Polo, with a commentary; and Numismata Orientalis. He died in 1836.

Marseillaise Hymn (mâr-se láz'), the war-song of the French Republic. The words, and, as is generally believed, the music, were written in 1792 by Rouget de l'Île, an officer in garrison at Strasbourg, on the occasion of a body of volunteers leaving that city for the war against Austria and Prussia, and the poem was entitled by him Chant du Guerre de l'Armée du Rhin ('War-song of the Army of the Rhine'). It was afterwards called Marseillaize because first sung in Paris by volunteers from Marseilles.

Marseille, French Marseille (mâr sô lâ'; mār-sâ-yë; Latin, Massilia), a city and the principal commercial seaport of France, on the Mediterranean, capital of the department of Bouches-du-Rhône. It is situated on the northeastern shore of the Gulf of Lyons, and lies in the form of an amphitheater round a natural harbor of modern size now known as the Old Harbor. From the inner end of the harbor runs inland one of the finest of the city thoroughfares, called the Canebière next the harbor, while at right angles to this another great thoroughfare or broad avenue runs through the city. Though a handsome city as a whole, Marseilles is not rich
in public edifices. The most deserving of notice are the large new cathedral in the Byzantine style; the church of Notre Dame de la Garde, on a hill of same name; the château of St. Victor; the Hôtel de Ville; the Préfecture; the Palais des Arts de Longchamp, with picture gallery and natural history museum; the exchange; public library; and the triumphal arch through which the town is entered on the side of Aix. The harbor is strongly defended by various works. What is called the New Harbor consists of a series of extensive docks along the shore to the west, with a protecting breakwater in front. In recent times Marseille has made great progress in its extent, street improvements, population and commerce, largely owing to the conquest of Algeria and the opening of the Suez Canal. The most important manufactures are soap, soda and other chemical products; also olive and other oils, sugar, matches, and the manufacture of bread, wine, brandy, corn, flour, dried fruits, tobacco, wool, skins, iron, cotton, etc. Marseille was founded by a colony of Greeks from Asia Minor about 600 years before Christ, the original name being Massalia. It attained great prosperity as a Greek colonial center, and the Greek language is said to have been spoken here till several centuries after Christ. It was taken by Cæsar in B.C. 49. On the decline of the Roman Empire it became a prey to the Goths, Burgundians and Franks. In 736 it fell into the hands of the Saracens, and in the tenth century it came under the dominion of the county of Provence, and for some centuries after followed the fortunes of that house. Pop. (1911) 550,639.

Marsh, George Perkins, scholar and diplomatist, born at Woodstock, Vermont, in 1801. He was graduated at Dartmouth College, studied law, and practiced at the bar. In 1842-49 he was a member of Congress, and in 1851 American minister at Constantinople. From 1851 till his death in 1882 he was American minister to Italy. He published a Grammar of the Old Icelandic Language, The Origin and History of the English Language, The Earth as Modified by Human Action, etc.

Marsh, Othniel C., naturalist, born at Lockport, New York, in 1831. He devoted himself to the investigation of extinct vertebrate animals. From 1883 he was President of the National Academy of Science. In 1866 he was appointed professor of paleontology in Yale College, and was distinguished for the many species of extinct vertebrate animals described by him, largely from the Rocky Mountains. He wrote Odonomithes, Dinocerata, etc., with a large number of scientific papers. He died in 1899.

Marshall (mär'shal), French MArzshal, a word of German origin signifying originally a man appointed to take care of horses. A similar term is the French constable or constable, from L. comes stabuli (count or master of the stable). The marshal of the German Empire derived his origin from the Frankish monarchs, and was equivalent to the comes stabuli or constable. He had to superintend the ceremonies at the coronation of the emperor, and on other high occasions. There is still a marshal at the head of the households of German sovereigns. In France maréchal de France is the highest military honor. In Germany general-field-marshal is the highest military honor. In the United States a marshal is an executive officer (resembling the sheriff) connected with the courts.

Marshall, a city, county seat of Saline County, Missouri; 84 miles east of Kansas City, on Chicago & Alton and Missouri Pacific Railways. Here are Missouri Valley College, the Academy Notre Dame de Sion, etc. It has milling plants, elevators, serum plant, large shoe factory and other industries. Pop. 5200.

Marshall, a city of Texas, seat of Harrison Co., 40 miles w. of Shreveport, La. Timber and gulf sand are plentiful in the vicinity, and there are car-wheel works, saw and planing mills, cotton-seed oil mill, ice factory, etc. Here are Wiley University (Methodist Episcopal) and Bishop College (Baptist) for colored students. Pop. (1910) 11,462; (1920) 14,271.

Marshall, John, an eminent jurist and statesman, born at Germantown, Virginia, in 1735. He became a captain in the Revolutionary war and took part in several battles, became a lawyer, and in 1788 advocated the adoption of the Federal Constitution in several powerful speeches. He was elected to Congress in 1799. In 1800 he was appointed Secretary of State by President Adams. He had long been at the head of the Virginia bar, and in the branches of international and public law had no superior in the country. On January 31, 1801, he was appointed Chief-Justice of the Supreme Court of the United States, and held this high office for thirty-four years, his decisions being regarded as the standard authority on
Marshall

constitutional questions. No man has equaled him in developing the fundamental principles of the Constitution. He died in 1885.

Marshall, Thomas Riley, an American lawyer and statesman, was born in Manchester, Indiana, March 14, 1834. He was graduated from Wabash College in 1853, and admitted to the bar in 1875. In 1908 he was elected Democratic governor of Indiana. In November, 1912, he was elected vice-president of the United States on the Democratic ticket and was re-elected in 1916.

Marshalltown (marsh-toun'), a city, capital of Marshall County, Iowa, is situated near the Iowa River, 50 miles N. E. of Des Moines. Large quantities of grain are shipped; there is a large pork-packing establishment, manufactures of furnaces, engines, machinery, glass, etc. Pop. 15,731.

Marshalsea (mär-shal-se), formerly one of the London prisons, set apart for the detention of debtors.

Marsh-elder. See Guelder-rose.

Marshfield, a city of Wood Co., Wisconsin, 165 miles n. w. of Milwaukee. It has manufactures of furniture, stoves, wood veneer, excelsior, bed-springs, etc. Pop. (1820) 7394.

Marsh-gas. See Fire-damp.

Marshmallow (marsh-mal'lo), Althaea officinalis, a common European plant, growing in marshes, especially near the sea, in great abundance. It is employed medicinally as a demulcent, and is the guimauve of the French, used in the preparation of demulcent lozenges. It is perennial, and has a white, fleshy, carrot-shaped root, which may be used as food. The hollyhock (A. rosea) is another species.

Marshman (marsh'man), Joshua, an English missionary, born in Wiltshire, 1768, and sent in 1799 by the Baptist Missionary Society to Serampore, India. He translated a great portion of the Bible into Chinese, published the works of Confucius (1811), a Chinese grammar (1814), and with Carey a Sanskrit Grammar (1815) and a Bengali-English Dictionary (1825). He died at Serampore in 1837.—His son, John Clark Marshall (1794-1877), was official Bengali translator, and wrote a History of India.

Marsh-marigold (mar'igold; Caltha palustris), a plant of the nat. order, Ranunculaceae, is a common wild plant found in damp places; in America also known as cowslip. It has kidney-shaped, shining leaves, and large yellow flowers.

Marsh-rosemary (mär's-ra-marl), the North American name for Limonium, Limonium, a salt-marsh plant of North America and Europe, the root of which is a strong astringent, and sometimes used in medicine.

Marsilius of Padua or Marsiglio

Mainardino, an Italian medieval scholar, born at Padua in 1270; died about 1342. He went to Paris about 1311, where in collaboration with John of Jandun, he composed the famous Defensor pacis (1224). A violent struggle had just broken out between pope John XXII and Louis of Bavaria, King of Romans, and the authors chose this opportunity to demonstrate by plausible arguments the supremacy of the Empire and its independence of the Holy See. Marsilius accompanied Louis to Rome, and saw him crowned emperor by those who claimed to be the delegates of the people while John XXII was deposed and a mendicant friar raised to the papal seat. Marsilius was later appointed archbishop of Milan.

Marsipobranchii (mar-si-pó-brank'-i; Gr. marsipos, a pouch, and branchia, gills), the order of fishes comprising the hag-fishes and sea lampreys, with pouch-like gills. The organization of these fishes is of a very low grade, as indicated chiefly by the persistent notochord without ossified vertebral centra, the absence of any traces of limbs, the absence of a mandible and of ribs, and the structure of the gills.

Marston (mar's-ton), John, an English dramatic author, of the reigns of Elizabeth and James I; educated at Brasenose College, Oxford.
He was entered at the Middle Temple, of which society he became lecturer, and died after 1633. He was the author of eight plays, all acted at the Black Friars theater with applause. Six of these were printed in one volume in 1633, and dedicated to the Viscountess Falkland. He assisted Ben Jonson and Chapman in the composition of Eastward Ho. He also wrote three books of satires, entitled the Scourge of Villany (1599).

Marston, Philip Bourke, an English poet, son of Westland Marston, born at London in 1830. He became blind in his fourth year, and to this the introspective and morbid character of much of his work must be attributed. His poems were collected at various times in the volumes entitled Songs of Childhood (1857), and The Voices (1883). He also wrote critical papers and novelettes. A selection of the stories was published after his death under the title For a Song's Sake. He died in 1867.

Marston, Westland, an English poet and dramatist, born at Boston in 1820; died in 1890. He went to London to study law, but devoted himself to literature, his first tragedy, The Patriot's Daughter, being produced at Drury Lane in 1842 by Macready, Phelps and Helen Faucit. Of his many subsequent plays (collected in two volumes in 1876) the best known are Strathmore (1849), Ann Blake (1852), and Life for Life (1868). He is also the author of several lyrical compositions, some short stories collected in 1861 under the title of Family Credit, and a novel, A Lady in her own Right, published in 1890.

Marston Moor, in Yorkshire, about 7 miles west of York, a locality celebrated for the battle between the royal forces under Prince Rupert and the troops of the Parliament under Fairfax and Cromwell (July 2, 1644), in which the latter were victorious.

Marsupialia, sup'k-sål'ē-ā: L. m u s s r u p i a , or MARSUPIALs (már-su-pi-ālz), an extensive group of mammals, differing from all others in their organization, and including genera which correspond to several orders of ordinary mammals. They belong to the placental mammals, and their most striking peculiarity is the production of the young in an immature state, a feature which renders necessary the pouch in which the immature young are placed immediately on their birth. In this pouch are the mamme or teats, and sheltered here the imperfect young ones, attached to the nipple by the mouth, remain till fully developed. The marsupials link the mammals, through the Monotremata (which see), to the birds and reptiles. There are many genera both herbivorous and carnivorous, the great bulk of them being confined to the Australian region. The kangaroo and opossum are familiar examples. The Marsupialia are divided into the following sections:—Rhizopha ga (root-eaters), including the rodent-like wombat; Poephaga (grass-eaters), including the kangaroo, and kangaroo-rats or potoroos, all strictly plant-eaters; the Carpophaga (fruit-eaters), of which the typical group is the phalangers, the best known being the Australian opossum; the Entomopha ga (insect-eaters), in which are the American or true opossum, the bandicoots, and the banded ant-eater; Necrophaga (flesh-eaters), of which the best known are the 'Tasmanian wolf' and 'Tasmanian devil.'

Maruyas (mär'z-i-as), a personage in G r e e k mythology, who is said to have challenged Apollo to a trial of skill in flute-playing; if he were beaten, was flayed alive by the god.

Martaban (mär-tā-bān'), a small town in Burmah, at one time seat of the Burmese government, on the right bank and near the mouth of the Salwen River, captured by the British in 1824, and again in 1852.

Martagon (mār'tā-gōn), a kind of lily, Lilium Martagon, the bulbs of which are eaten by the Cosacks.

Martel-de-fer, having a kind of cross-head forming at one end a pick, and at the other a hammer, axe-blade, half-moon, or other termination.

Martello-towers (mār-tel-'ō), the name (of doubtful origin) given to small circular-shaped forts with very thick walls, chiefly built to defend the seaboard. A number of such towers were built on the British coasts, especially in the south, in the time of Napoleon I. They are in two stages, the basement store-rooms and m a g a z i n e, the upper serving as a casemate for the defenders; the roof is shell-proof. The armament is a single heavy traversing gun.

Marten (mär'ten), the name of several species of carnivorous quadrupeds of the genus Mustela or Martes, family Mustelidae (weasels). The body of the marten, like that of the weasel, is elongated and slender. The legs are short, the feet being provided with five toes, armed with sharp claws. In habit the martens differ from the weasels in being arboreal, these forms climbing trees with
great ease. The common marten (Martes (Mustela) foina), is found in Europe generally, as also is the pine-marten (M. abietium). They feed on the smaller wild animals, such as rats, mice, etc., but also attack birds and devour eggs. The pine-marten occurs chiefly in North America and in the northern parts of Asia. It is of smaller size than the common marten, possesses a yellowish mark

Pine-marten (Mustela Martes or Martes abietium).
on the throat, and has a finer fur largely used for trimmings. It burrows in the ground. The famous sable marten (M. Zibellina), which furnishes the valuable sable fur, is nearly allied to the pine-marten. It inhabits Siberia. The American sable is furnished by the M. leucopus; and Pennant’s marten (M. Canadensis), or the fisher, as it is popularly called, is another well-known species.

Martha’s Vineyard, the principal

Dukes county, Massachusetts, 12 miles

w. n. w. of Nantucket, 19 miles long,

and from 2 to 10 broad. It contains

several towns and seaside resorts.

Martial (Maršal), in full Marcus

Valerius Martialis, a Roman

writer of epigrams, was born at

Biliblia, in Spain, A.D. 43, and educated

at Calagurris (Calahorra), the birthplace

of his friend Quinctilian. He went to

Rome when young, during the reign of

Nero, and lived under Galba and the

following emperors. Domitian gave him

the rank of tribune and the rights of the

equestrian order. In 100 A.D. he returned to

Spain to his native city, and died

t here not earlier than 104 A.D. His ce-

lebrity is founded on fourteen books of

epigrams, which for the most part depict

with no less good sense than pungent

wit the life of imperial Rome.

Martial Law, the law by which the

discipline of an army is maintained, applying only to persons in actual military service, and only to their conduct in such service. The jurisdiction under the law martial is in

a distinct tribunal, known as a court-
martial appointed by some superior offi-
cer. Under special circumstances of insur-

rection or rebellion, where the ordi-
nary law is insufficient to protect life and

property, it is sometimes necessary to

administer the law according to the prac-
tice of military courts, by an armed force

occupying the disturbed district. The dis-

ctrict is then said to be under martial

law.

Martin (már’tín), a name applied to

several birds of the genus

Hirundo or swallows. The one best

known is the H. rustica, or house-mar-

tin, a familiar British bird which builds

globular nest under the eaves of houses,
or in the upper angles of chimneys. Its

habits resemble the chimney-swallow,

but its bill is less markedly forked, while

its nest is also different, that of the

chimney-swallow being cup-shaped. See

Swallow.

Martin, Homer Dodge, American ar-

tist, born at Albany, N. Y.,

in 1836; died in 1897. After a trip to

Europe (1876) he fell under the influence

of the Barbizon School, and lived in

France, 1882–86, gaining a reputation as

one of America’s great landscape paint-

ers. Among his pictures are Harp of the

Winds, now in the Metropolitan Museum,

New York; Westchester Hills, Adiron-

dack Scenery, Sand Dunes, and A New-

port Landscape.

Martin, Luther, American lawyer,

born in New Brunswick,

N. J., in 1744; died in 1826. He was

graduated at the College of New Jersey

(Princeton) in 1762, and was admitted
to the Maryland bar in 1771. He was

active in opposition to Great Britain, and

became attorney-general of Maryland in

1778. He was a delegate to the conven-
tion to frame the U. S. Constitution

(1787), but withdrew because of his op-

position to a strong national govern-

ment. From 1814 to 1816 he was chief

justice of the court of oyer and terminer in

Baltimore; and was again attorney-

general of Maryland in 1818–20.

Martin, St., St. Martin of Tours,

was born of hearthen parents in

Pannonia about the year 316. He

served under Constantius and Julian, and

went to Gaul. Among other virtuous and

benevolent acts he divided his cloak with a

poor man whom he met at the gates of

Amlens (Ambianum). The legend

eaves that Christ appeared to him in the

following night covered with the half of

this cloak. Soon after this vision Martin

was baptized, in 337. After living many

years in retirement he visited his native

place, and converted his mother. About

About
the year 375 he was chosen against his will Bishop of Tours. In order to withdraw himself from the world he built the famous convent of Marmoutiers, and is said to have died about the year 400. He was the first saint to whom the Roman Church offered public adoration. His festival takes place on the 11th of November. See Martinmas.

Martin, St., one of the Leeward Islands, West Indies, belonging partly to the French and partly to the Dutch: area, 30 square miles. From the salt-water lagoons in the south quantities of salt are obtained. The climate is considered healthy. Nearly all the inhabitants are English. Pop. 7000.

Martin, Sir Theodore, man of letters, born at Edinburgh in 1816, educated there at the High School and university, settled in London in 1846 as solicitor and parliamentary agent. In 1851 he married Miss Helen Faucit, who had been the joint-author with Professor Ayton of the Bon Gaultier Ballads, and he published many volumes of translations in verse—the Poems and Ballads of Goethe (1853), Dramas by H. Herz and Oehlenschläger (1854-57), The Odes of Horace (1860), Poems of Catullus (1861), etc. He was also the author of the Life of Professor Ayton (1867), and of the Life of the Prince Consort, on the completion of which (5 vols. 1874-80), he was knighted and made K.C.B. In the same year he was elected rector of St. Andrew's University.

Martineau, Harriet, an English authoress, of French Huguenot descent, born at Norwich in 1802; died at Ambleside in 1876. Her first work, Devotional Exercises for the Use of Young Persons, appeared in 1823. Next came a number of stories, mostly intended to inculcate some useful lesson, such as those having the title of Illustrations of Political Economy (1831-34), which were followed by Illustrations of Taxation and Poor Laws and Paupers. In 1834 Miss Martineau visited the United States, after returning from which she published Society in America, and A retrospect of Western Travel. In 1839 and 1840 appeared Deerbrook and The Hour and the Man, two novels, the first of which especially acquired a wide popularity. In 1848 she issued Eastern Life, Past and Present, the result of a visit made by her to the East in 1846. Up to about this time Miss Martineau had been known as a Unitarian, but she now showed a decided leaning towards Positivism, and in 1852 published a condensation of Comte's Positive Philosophy. Among her other works of importance may be mentioned her History of England during the Thirty Years' Peace. During the last twenty years of her life her writings consisted mainly of pamphlets and contributions to newspapers and periodicals. A remarkably candid autobiography which had been written for many years was published after her death, with some additions by a friend (Mrs. Chapman).

Martineau, James, Unitarian minister and philosophical writer, a younger brother of Harriet Martineau, born at Norwich in 1806. Educated at the Norwich Grammar School, Dr. Lant Carpenter at Bristol, and Manchester New College, York. After holding ministerial appointments in Dublin and Liverpool, he became in 1841 professor of mental and moral philosophy in Manchester New College. In 1857 he removed to London, and was minister of Little Portland Street chapel from 1859 to 1872. In 1868 he was appointed principal of Manchester New College (which from 1863 had been in London). He is the author of The Rationale of Religious Inquiry (1837), Endeavors after the Christian Life (2 vols. 1843-47), Miscellanies (1852), Studies of Christianity (1858), A Study of Spinoza (1882), Types of Ethical Theory (1886), etc. He died in 1900.

Martineau (mär'ți-nō'k), one of the French West India Islands, in the Windward group, 30 miles south by west of Dominica and 20 miles north of St. Lucia. It is of irregular form, high and rocky, about 45 miles long and 10 to 15 broad; area, 380 square miles. Its loftiest summit, Mount Pelée, is 4450 feet high. The climate is hot, but not unhealthy. Hurricanes and earthquakes are not frequent. About two-fifths of the island are under cultivation, with sugar-cane, manioc, yams, bananas, sweet-potatoes, coffee and cacao. The mountain slopes are in most parts covered with primeval forests. There are several good harbors, the best of which is Port Royal, on the southwestern side of the island. The island was discovered by the Spaniards on St. Martin's Day, 1493, being then peopled by Caribs, and was settled by the French in 1636. It was twice captured by the British, in 1794 and in 1809, being restored to France in 1814. Its chief town, St. Pierre, with about 30,000 inhabitants, was completely destroyed, with all its
people, by a terrible volcanic explosion in 1002. Pop. 203,761.

Martinmas (mâr'tin-mas), the feast of St. Martin of Tours, the 11th of November.

Martinsburg, capital of Berkeley County, West Virginia, on the Baltimore and Ohio Railroad, 100 miles w. of Baltimore. It produces carriages, flour, furniture, woolens and worsted, etc. Pop. (1920) 12,515.

Martins Ferry, a city of Belmont Co., Ohio, on the Ohio River, 2 miles above Wheeling. Coal is abundant in the vicinity, and it has large glassworks, a blast furnace, tin and rolling mills, machine works, etc. Pop. (1910) 9,133; (1920) 11,634.

Martius (mâr'te-us), KARL FRIEDRICH PHILIPP VON, a German traveler and naturalist, born in 1794; died in 1868. After taking the degree of Doctor of Medicine at Erlangen, he joined Spix in the scientific expedition to Brazil, set on foot by the Austrian and Bavarian governments (1817 to 1820). On his return to Bavaria he was appointed professor of botany and director of the botanical garden at Munich, appointments which he held till 1864, when he retired. He was the author of a large number of botanical works, but is chiefly known through those arising out of his journey to Brazil—Reise nach Brasilien (1824-31); Historia naturalis Palmarum (1823-45); and Flora Brasiliensis (1840-71), the last two of which are among the most remarkable in botanical literature.

Martos (mâr'tôs), a town in Spain, Andalusia, in the province of Jaen. It contains a fine thirteenth century church. Martos was taken from the Moors in 1226 by Ferdinand III, who bestowed on it the order of Calatrava. Pop. 17,078.

Martyn (mâr'tin), HENRY, missionary, son of a miner, born near Truro, Cornwall, in 1781. He was graduated as senior wrangler at Cambridge in 1797, and in 1805 went out to India as military chaplain. In 1811 he went to Persia, and died in 1812 at Tokat in Asia Minor, while on his way back to Europe. He translated the New Testament into Hindustani and Persian.

Martyr (mâr'tër), PETER (more correctly PIETRO MARTIRE D'ANGHIERA), an Italian historian and geographical writer, born in 1455; died in 1528. In 1487 he entered the service of Ferdinand and Isabella of Spain, who created him counselor of the Indies. Charles V also treated him with favor. His principal works are De Robus Oceania et Orbe Novo Decades octo—a history of the discoveries of Columbus and his successors, from their own narratives: De Insulis nuper Inventis; De Legatione Babylonica—an account of his embassy to Egypt in 1501, and his Opus Epistolorum.

Martyr, Peter (Pietro Vermigli), a Protestant divine, born at Florence in 1500; entered the order of the regular canons of St Augustine at Fiesole in 1516, and in 1519 removed to Padua, where he studied Greek and philosophy. After holding important offices in his order he was compelled in 1542 on account of his religious opinions to take refuge in Zürich. Soon after he became professor of divinity at Strasburg, and in 1547 accompanied Bucer and other reformers, on the invitation of Archbishop Cranmer, to England. He was appointed to the theological chair at Oxford in 1549, but on the accession of Queen Mary was commanded to quit the country, and returned to his Strasburg professorship. In 1556 he removed to Zürich to occupy the office of theological professor. He died in 1562. Peter Martyr was the author of many works on divinity, including Biblical commentaries. His Epistolae were published in 1570; and his Loci Communis Theologicorum in 1580-83.

Martyrology (mâr'ter-ol-o-ji), originally a collection of the acts of the martyrs; now commonly applied to mere registers of names and deaths of those who have suffered martyrdom for the Christian faith.

Martyrs (mâr'tërs: Greek for 'witnesses'), a name applied by the Christian church to those persons in particular, who in the early ages of Christianity, and during the great persecutions, suffered ignominy and death, rather than renounce their faith. Festivals in honor of the martyrs seem to have been observed as early as the second century. The Christians offered prayers at the tombs of the martyrs, and thanked God for the example which they had given to the world. The rite was concluded with the sacrament of the Lord's supper and the distribution of alms. Eulogies were also delivered, and accounts of the lives and actions of the deceased read.

Maruts (mâr'utz), in Hindu mythology, the gods or geniæ of the winds.

Marvell (mâr'vel), ANDREW, a political and miscellaneous writer, born at Hull in 1620; died at London in 1678. In 1636 he was sent to Trinity College, Cambridge. On the death of
Marvel of Peru  Mary II

his father in 1640 he made the tour of Europe; afterwards acted as secretary to the English legation at Constantinople; and on his return was appointed assistant to Milton in his office of Latin secretary. In 1660 he was elected to parliament for his native place, which he represented honorably to the end of his life. Besides a small handful of finely musical poems, he composed much humorously and satirical verse, and was the writer of several political pamphlets. Notwithstanding his opposition to the court, his wit commended him to Charles II, who made more than one attempt to win him by bribes, but failed to shake the probity and love of liberty which had gained him the name of the 'English Aristides.'

Marvel of Peru. See Mirabilia.

Marx (marks), Karl, a German socialist, born in 1818, studied law and philosophy at Berlin. After editing the Rheinische Zeitung at Cologne from 1841 till its suppression, he went in 1844 to Paris, where he took part in the publication of the Deutsch-Französische Jahrbücher, and a newspaper Vorwärts. Being compelled to flee to Brussels, there in 1848 became head of the central committee of the socialists. In the same year he made an attempt at Cologne to revive the Rheinische Zeitung, but removed to London in 1849. In 1864 he established the International, but after the disruption in 1872, when he led the extreme party, he removed from London to New York. He died in 1883. His chief work, the Bible of one group of socialists, was Das Kapital, published in 1867.

Mary (mæ'ri), The Virgin, the mother of Jesus, according to tradition embodied in the apocryphal gospels the daughter of Joachim and Anna (Luke, i, 32). The story of her life so far as it is given in the New Testament begins with her betrothal to Joseph (Luke, i), and the narrative of the birth of Christ. She is thrice mentioned during Christ's public ministry (John, ii; Matt., xii, 47; John, xix, 25-27), and once after his death (Acts, i, 14). A tradition asserts that she lived and died at Jerusalem under the care of John; another that she died at Ephesus, to which she and John had retired from the siege of Jerusalem. A later tradition asserts that on her grave being opened three days after her burial only the grave-clothes were found in it. The devotion or veneration paid by Roman Catholics and others to the Virgin Mary is condemned by Protestants in general, who stigmatize it as Marianity. The title of Mary to veneration did not become official in the orthodox Latin Church till the 6th century, when the Christian Church began to celebrate festivals in her honor, of which the Purification, the Annunciation, and the Visitation (the visits of Mary to Elizabeth) are still retained in Protestant countries. The Greeks and Roman Catholics, and the schismatic churches in the East, observe several feasts besides the above in honor of the Virgin; for instance the birth of Mary, and her death and reception into heaven (by the Roman Catholics called the Assumption). The festival of the Immaculate Conception is celebrated only by the Roman Catholic Church.

Mary I, Queen of England, daughter of Henry VIII by Catharine of Aragon, was born in 1516. After her mother's death she was declared illegitimate, but was restored to her rights when the succession was finally settled in 1544. She was bred up by her mother in the Roman Catholic faith, on which account she was treated with rigor under Edward VI. She ascended the throne in 1553, after an abortive attempt to set her aside in favor of Lady Jane Grey. One of her first measures was the reinstatement of the Roman Catholic prelates who had been superseded in the late reign. Her marriage to Philip II of Spain, united as it was with a complete restoration of the Catholic worship, produced much discontent. Insurrections broke out under Cavend in Devonshire, and Wyat in Kent, which, although suppressed, formed sufficient excuses for the imprisonment of the Princess Elizabeth in the Tower, and the execution of Lady Jane Grey. After her husband Lord Guildford Dudley, England was now formally declared to be reconciled to the pope. As victims of heresy and political conspiracy, nearly 300 perished at the stake, including Cranmer, Latimer and Ridley. Under Philip's influence a war began with France, which ended in the loss of Calais in 1558, after it had been in the hands of the English for above 200 years. This disgrace, and the aversion alike of her subjects and of her husband, told acutely upon Mary's already disordered health, and she died in 1558 after a reign of five years.

Mary II, Queen of England, born in 1662, was daughter of James, duke of York, afterwards James II, by his wife, Anne Hyde, daughter of Lord Clarendon. She was married in 1677 to William, prince of Orange; and when the Revolution dethroned her father, Mary was declared joint possessor of the throne with William, on whom all
Maryborough

the administration devolved. She died in 1694. See William III.

Maryborough, a town, Queensland, Australia, 180 miles north of Brisbane, center of a gold, coal, timber and sugar district. Pop. 13,000.

Maryborough, a municipal town, 112 miles by rail n.e. of Melbourne, Australia. Pop. 6000.

Maryland, one of the American colonies and of the United States; bounded n. by Pennsylvania, E. and s.e. by Delaware and the Atlantic, s. by Virginia and Chesapeake Bay, and s.w. by Virginia and West Virginia; area 12,327 sq. miles, the land area being 9641 sq. miles. The part of the state lying to the east of Chesapeake Bay is called the Eastern shore, and the other on the west the Western shore. The Eastern shore has a low, flat and somewhat sandy surface, covered in many places with stagnant water, which makes a large and intermittent fever prevalent. West of the eastern shore gradually rises towards the northwest, where it becomes very mountainous, being traversed by five or six ridges of the Appalachian chain, and attains the height of 3000 feet above sea-level. Beyond this the land again sinks, forming the Hagerstown Valley, part of the great Appalachian Valley. In the extreme west are the beautiful elevated valleys named glades. The chief rivers are the Potomac, the Susquehanna and the Patapsco. Almost all the lower part of Maryland is covered with alluvial deposits. In the Hagerstown Valley there is a full development of the Carboniferous system, with its valuable seams of coal and ores of iron. There are three important coal fields in the state. The other minerals are numerous and some of them of value. The most important crops are Indian corn, wheat and oats. Tobacco is very largely grown. The soil of the Eastern shore is well adapted for peaches and market gardening. The fisheries are productive and there are extensive oyster beds, surpassing those of any other state. The principal manufactures are canned fruits and oysters, cotton and woolen goods, cordage, bricks and articles in iron; the trade, chiefly foreign, is extensive. A large part of the foreign trade consists in the exportation of canned fruits, vegetables and oysters. Annapolis is the seat of government; but Baltimore is the most important city of the State, and the chief seat of commerce. There is an excellent system of free public schools, and among the higher educational institutions may be noted the St. John's College at Annapolis, and the Peabody Institute (founded in 1857), and the Johns Hopkins University (opened in 1876), both at Baltimore. Maryland received its name from Henrietta Maria, queen of Charles I, by whom this district was granted in 1632 to Sir George Calvert, Lord Baltimore, who designed it as a place of refuge for the Catholics of England. It was one of the original thirteen States. During the Civil war opinion was much divided in the State, but it was retained on the Northern side

Maryport (məˈriːpɔːrt), a seaport of Cumberland, Eng., at the mouth of the Ellen. The industries include iron-founding, brewing, tanning, flour-milling and sail-making. The herring fishery is productive. There are several collieries and iron furnaces. Pop. 11,423.

Mary Stuart, Queen of Scots, was born at Linlithgow Palace in 1542, and was the daughter of James V by his queen, Mary of Lorraine, a princess of the family of Guise. Her father dying when she was a few days old, the regency was, after some dispute, vested in the Earl of Arran, who declined Henry VIII's demand for the hand of Mary for his son Edward. In the summer of 1548 the young queen was sent by her mother to France, where she was educated in a French convent, and in 1558 was married to the dauphin, afterwards Francis II. He died seventeen months after his accession to the crown, in December, 1560, and in August, 1561, the widowed queen returned to Scotland. Mary had, of course, been educated in France as a Roman Catholic, but when she returned to Scotland she repudiated the influence of the Presbyterians was paramount in her kingdom. Though inclined to have Roman Catholicism again set up in Scotland, after a vain attempt to influence Knox she resigned herself to circumstances, quietly allowed her half-brother, the Protestant Earl of Moray, to assume the position of first minister, surrounded herself with a number of other Protestant advisers, and dismissed the greater part of her train of French courtiers. She even gave these ministers her active support in various measures that had the effect of strengthening the Presbyterian party; but she still continued to have the mass performed in her own private chapel at Holyrood. At first her subjects were quiet, she herself was popular, and her court was one of the most brilliant in Europe. The calamities of Mary began with her second marriage, namely, to her cousin, Lord Darnley, whom she married on July 29, 1565.
Darnley was a Roman Catholic, and immediately after the marriage the Earl of Moray and others of the Protestant lords combined against the new order of things. They were compelled to take refuge in England, and the popularity of Mary began to decline. In addition to this Darnley proved a weak and worthless profligate, and almost entirely alienated the queen by his complicity in the murder of Rizzio (March 9, 1566), though a reconciliation seemed to be effected between them about the time of the birth of their son, afterwards James VI of Scotland and I of England (June 19, 1566). About the close of the same year, however, Darnley withdrew from the court, and in the meantime the Earl of Bothwell had risen high in the queen's favor. When the young prince James was baptized at Stirling Castle, on December 7, 1566, Bothwell did the honors of the occasion, and Darnley, the father of the prince, was not even present. Once more, however, an apparent reconciliation took place between the king and queen. Darnley had fallen ill, and was lying at Glasgow under the care of his father. Mary visited him, and took measures for his removal to Edinburgh, where he was lodged in a house called Kirk-of-Field, close to the city wall. He was there tended by the queen herself; but during the absence of Mary at a masque at Holyrood the house in which Darnley lay was blown up by gunpowder, and he himself was afterwards found dead with marks of violence on his person (February 9, 1567). The circumstances attending this crime were very imperfectly investigated, but popular suspicion unequivocally pointed to Bothwell as the ringleader in the outrage, and the queen herself was suspected, suspicion becoming still stronger when she was carried off by Bothwell, with little show of resistance, and married to him on the 15th of May. A number of the nobles now banded together against Bothwell, who succeeded in collecting a force; but on Carberry Hill, where the armies met on the 15th of June, his army melted away. The queen was forced to surrender herself to her insurgent nobles, Bothwell making his escape to Dunbar, then to the Orkney Islands, and finally to Denmark. The confederates first conveyed the queen to Edinburgh, and thence to Loch Leven Castle, where she was placed in the custody of Lady Douglas, mother of the Earl of Moray. A few days after, on the 20th of June, a casket containing eight letters and some poetry, all said to be in the handwriting of the queen, fell into the hands of the confederates. The letters, which have come down to us only in the form of a translation appended to Buchanan's Detection, clearly show, if they are genuine, that the writer was herself a party to the murder of Darnley. They were held by the confederates to afford unmistakable evidence of the queen's guilt, and on the 24th of July she was forced to sign a document renouncing the crown of Scotland in favor of her infant son, and appointing the Earl of Moray regent during her son's minority. After remaining nearly a year in captivity Mary succeeded in making her escape from Loch Leven (May 2, 1568), and assisted by the few friends who still remained attached to her, made an effort for the recovery of her power. Defeated by the regent's forces at the battle of Langside (May 13, 1568), she fled to England, and wrote to Elizabeth entreaty protection and personal interview; but this the latter refused to grant until Mary should have cleared herself from the charges laid against her by her subjects. For one reason or another Elizabeth never granted Mary an interview, but kept her in more or less close captivity in England, where her life was passed in a succession of intrigues for accomplishing her deliverance. For more than eighteen years she continued to be the prisoner of Elizabeth, and in that time the place of her imprisonment was frequently changed, her final prison being Fotheringhay Castle, Northamptonshire. She was at last accused of being implicated in a plot by one Babington against Elizabeth's life, and having been tried by a court of Elizabeth's appointing, was on October 25, 1586, condemned to be executed. There was a long delay before Elizabeth signed the warrant, but this was at last done on February 1, 1587. Mary received the news with great serenity, and was beheaded a week later, on February 8, 1587, in the castle of Fotheringhay. Authorities are more agreed as to the attractions, talents and accomplishments of Mary Stuart than as to her character. Contemporary writers who saw her unite in testifying to the beauty of her person, and the fascination of her manners and address. She was witty in conversation, and ready in dispute. In her trial for alleged complicity in Babington's plot she held her ground against the ablest statesmen and lawyers of England. Besides letters and other prose writings, Mary was the author of some short poems of no great merit. The best is one on the death of her first husband, Francis II. The lines beginning 'Adieu, charming pays de
Marysville

France, long ascribed to her, were written by a French journalist of the eighteenth century.

Marysville, a city, capital of Yuba County, California, at the head of navigation on the Yuba River, 52 miles N. of Sacramento. It contains Notre Dame College, and has fruit canneries, woolen mills, etc. Pop. (1920) 5461.

Masaccio (mā-səkˈcho), properly Tommaso Guidi, one of the oldest painters of the Florentine school, said to have been born about 1401. In the church del Carmine, at Florence, are some excellent paintings of his, also at St. Clemente in Rome, but in a bad state. Baldinucci and Vasari place Masaccio among the first painters by whom the hardness and dryness of art was diminished, and life and expression given to it. He died in 1428.

Masai-Land (maˈsaˌlənd), a region in eastern equatorial Africa, between the Victoria Nyanza and the sea, so named from the Masai, who are its chief inhabitants. It is generally elevated, Mount Kilimanjaro being the chief mountain mass. It contains Nalvasha and other lakes. The Masai are a well-built race, not of the negro type, and support themselves partly by cattle-raising, partly by the plunder of their weaker neighbors. It is partly within British, partly within German East Africa.

Masefield (māˈfeld), John, an English poet and dramatist (1874- ). For many years he led a roving life, at sea and on shore. His narrative poems include The Everlasting Mercy, The Widow of Bygones, The Fox, and many others. His dramatic works include The Tragedy of Pompey the Great, Philip the King, The Condemned Cell, Good Friday, etc.

Masinissa (maˈsinəs’a), king of ancient Numidia, at first only of the eastern portion of the country, but later of the whole, having, by the help of the Romans during the second Punic war, defeated Syphax, king of Western Numidia. His acquisition of a number of Carthaginian provinces led to the third Punic war, in the second year of which he died (148 B.C.), aged about a hundred years. His kingdom, at his own desire, was divided among his three sons, of whom Mastanabal, the youngest, was the father of the notorious Jugurtha.

Masate (māˈsätə), a province of the Visayan Islands, Philippines, composed of three main islands, Burias, and Ticao, and 65 dependent islands. Area, 1732 square miles; pop. 4500.

Mascagni (māˈskän-yē′), Pietro, an Italian operatic composer, born in 1863. His works include Caroleria Rusticana, L’Amico Fritz, etc.

Mascalunge (māˈskəˌlong; Ezoˈnə bilˈyərə), a fine North American freshwater fish of the pike genus, inhabiting the St. Lawrence basin, but also introduced into other waters.

Masca (maˈskə), a town in Algeria, picturesquely situated on the south slope of Mount Atlas, 48 miles southeast of Oran, surrounded by a wall. It was a stronghold of Abd-el-Kader, and was taken by the French in 1835 and 1841. Pop. 22,934.

Mascarene Islands, (maˈskəˌrenə), the islands of Réunion, Mauritius and Rodriguez, situated east of Madagascar.

Masate, a covering for the face, often shaped so as to form a rude representation of the human features. They have been in use from the most ancient times. Among the Greeks they were used particularly in the processions and ceremonies attending the worship of Dionysus (Bacchus). As the origin of Grecian tragedy was closely connected with the worship of Dionysus, masks were used in it even in the beginning. The ancient masks usually covered the whole head and represented, with the features, the head, hair and eyes. They had mostly very large open mouths, and seem to
have had some effect in strengthening the voice of the speaker, this being required by the immense size of the old theaters. The Roman theater differed little from the Grecian in the use of the mask, which the Italian popular theater, called Commedia dell' Arte, closely resembling the old Roman mime and pantomimes, still retains. The mask ordinarily used at masked balls or masquerades is a covering for the head and face made from a light stuff, a common form being the half-mask covering eyes and nose only. See Masqued Ball.

Mask, a species of drama. See Masque.

Maskelongo. See Mascalonge.

Maskelyne (mask'e-lin), NEVIL, an English mathematician and astronomer, born in 1732; was educated at Westminster and Cambridge, chosen a fellow of the Royal Society, and in 1761 deputed to proceed to St. Helena to observe the transit of Venus. In 1765 he became astronomer royal; and in 1767 commenced the publication of the Nautical Almanac, which he edited till his death. In 1774 he was employed in observations on the eclipses of Jupiter's satellites; and the same year went to Scotland to ascertain the gravitational attraction of the mountain Schiehallien. He died in 1811.

Mason (ma'son), WILLIAM, an English poet, born in 1725. He studied at Cambridge, and in 1748 published Isis, a poem, in which he satirized the Jacobitism and high churchism prevalent in the University of Oxford. This poem provoked a reply from Thomas Warton, entitled the Triumph of Isis. In 1752 he published his Elfrida, a tragedy on the Greek model. Having obtained the living of Aston, Yorkshire, he was appointed one of the royal chaplains. In 1767 appeared his Caractacus, a drama. Some years after Mason was made precentor and residuary canon at York. One of his principal works, the English Garden, a poem, appeared between 1772 and 1782. In 1775 he published the poems of Gray. Died in 1797.

Mason City, county seat of Cerro Co., Iowa, 121 miles N. of Des Moines, on 5 railroads. The manufacturing and jobbing houses here do an annual business of $41,000,000. It has the largest beet-sugar plant in Iowa, great cement plants, packing plants, brick and tile works, and other industries. Seat of National Memorial University; also a Junior College affiliated with the High School. Commission form of government. Pop. (1910) 11,230; (1920) 20,065.

Mason and Dixon's Line, the line of 39° 43' 26.3" north latitude, which separates the States of Maryland and Pennsylvania. From the time of the grant of the latter territory to William Penn by Charles II, there were active disputes between the family of Penn and that of the Lords Baltimore, the possessors of Maryland, as to the boundary between the two territories. Delaware was first delimited from Maryland by a line running north and south, and the final boundary line was surveyed in 1763, the line of demarcation being named after the astronomers Charles Mason and Jeremiah Dixon, who traced the greater part of it. The charter to Penn fixed the southern boundary of his province at the 40th degree of latitude, and the dispute was as to whether this meant the beginning or the end of the 40th degree. The first would have extended Pennsylvania southward below Baltimore; the second would have given to Maryland the site of Philadelphia. The boundary, as finally fixed, ran nearly midway between these extremes. Milestones were set up along the whole of this boundary line. The line, as finally drawn, has been popularly supposed to have been the dividing line between the free and slave States; but this is an error, as slavery until abolished by the Fourteenth Amendment to the Constitution was still legal in Delaware, which is both north and east of the line. The line extended westward through three degrees of longitude, to the border of Virginia, the present West Virginia, ending at the peculiar tract of land known as 'the peninsulas' where a part of West Virginia runs up between Pennsylvania and the Ohio River.

Masonry, see Freemasonry.

Mason-spider (M y g d e x or Ctenis compositaria), a spider more commonly known as the 'Trap-door Spider' (which see).

Mason-wasp, a name given to certain hymenopterous insects, especially Odynerus musarius, from their ingenuity in excavating their habitation in the sand.

Masoola-boat (ma-sool'a), a large East Indian boat used on the Coromandel coast for conveying passengers and goods between ships and the shore. They stand high out of the water, are difficult to manage, and sail slow; but they sustain shocks that would break up any European boat, the planks of which they are built being
Masora fastened together by coconut fiber. They are rowed sometimes with as many as sixteen oars.

Masora, or Massorah (מַאֱשָרָה), a Hebrew word signifying 'tradition,' the name of a collection of notes referring to the Hebrew text of the Old Testament, and written in Chaldee chiefly on the margin of Hebrew MSS. These notes are various in their character, critical, grammatical and explanatory, and include an indication of the vowel-points and accentuation of the Hebrew text according to the Jewish tradition. At what time the accumulation of these notes was commenced cannot be ascertained. According to some Jewish writers they were begun in the time of Ezra. A large part of them were compiled in the Jewish schools of Tiberias subsequent to the third century, and the collection was not completed till the eighth century at the earliest.

Masque (mask), or Mask, a dramatic entertainment much in favor in the courts of princes during the sixteenth and seventeenth centuries, in the latter particularly in England. In its earliest form it is perhaps best described as a masquerade with an arranged program of music, dancing, etc., and a banquet. The first masque of this kind in England, according to Holinshed's Chronica, was performed in 1510, and they were frequently introduced into the plays of Shakespeare, and Beaumont and Fletcher. The parts in the masques of the sixteenth and seventeenth centuries were usually represented by the first personages of the kingdom; if at court the king, queen, or prince stood for them, or performed in them. Under James I the masque assumed a higher character, more artistic and literary care being expended in its preparation. In this regard Ben Jonson takes an important place, his masques, despite much that is frigid and pedantic, having not a little genuine poetry. Inigo Jones was for a number of years exclusively, employed upon the decorations and elaborate machinery of the court masques, and Henry Lawes wrote the music for several of them. Milton's Comus, is, from the literary point of view, the most beautiful of the productions which bear the name of masque, though possibly defective in the matter of spectacle and music. The taste for masques decreased in the reign of Charles I, and after the interruption given to the progress of English dramatic art and literature by the Civil war, they were not again brought into fashion.

Masqué Ball (maskt bał), an entertainment, generally of a public character, in which the company are masked or otherwise disguised by dominoes. This kind of amusement became popular in Italy about the year 1512, about which time it was introduced into England by Henry VIII.

Mass, in the Roman Catholic Church, the prayers and ceremonies which accompany the consecration of the eucharist. The word is used generally for all that part of the Catholic service in which the eucharist is offered. At present the mass consists of four chief parts:—1. The introduction; 2. the offertory, or sacrifice; 3. the consecration; 4. the communion. These four chief parts, of which the latter three are considered the most essential, are composed of several smaller parts, each having its proper denomination. They consist of prayers, hymns, shorter and longer passages of the Holy Scriptures, and a number of ceremonies, which, as the essential point of the mass is the sacrifice of the Lord, consist partly of symbolical ceremonies commemorative of important circumstances in the Saviour's life, or signs of devotion and homage paid to the presence of the Lord in the host. The order of these ceremonies, and of the whole celebration of the mass, is given in the missal or mass-book. The masses are modified according to many circumstances, e.g., according to the saint in honor of whom the mass is celebrated, or the seasons of the year connected with different events in the Saviour's life, or the purpose for which the mass is said, as the missa pro defunctis (mass for the dead). Votive mass is an extraordinary mass, instead of the officium that is performed on some special occasion. Low mass is the ordinary mass performed by the priest, without music. High mass is celebrated by the priest, assisted by a deacon and subdeacon or other clergy, and sung by the choir, sometimes accompanied by the organ and other musical instruments. Besides these there are different masses according to the different rites: the Greek mass, the Latin mass, the Roman and Gregorian mass, etc.

Mass, in physics, the quantity of matter in any body, or the sum of all the material particles of a body. The mass of a body is estimated by its weight, whatever be its figure, or whether its bulk...
or magnitude be great or small. See *Dynamics*.

**Massa-Carrara** (mäs'-a-kär-rah) formerly a small state of Italy, situated on the western slope of the Apennines, bounded principally by Tuscany and the Duchy of Modena. In 1741 it passed into the hands of the house of Modena, with whom, excepting the period of French occupation (1796-1814), it remained until 1859, when it was united with those portions of the duchies of Parma and Modena lying west of the Apennines, and erected into the province Massa e Carrara. The province is celebrated for the Carrara marble. Area, 686 sq. miles; pop. 130,631.

**Massachusetts** (mas'-a-chú'-sets), one of the original United States, bounded north by Vermont and New Hampshire; east by the Atlantic Ocean, Rhode Island, and Connecticut; and west by New York; area, 8,236 sq. miles; capital, Boston. The greatest length is 160 miles; width 47 to 90 miles; the coast line, which has a length of about 250 miles, is indented with deep and extensive bays, of which Massachusetts Bay (which includes the large bays of Boston and Cape Cod), Buzzard and Nantucket bays are the most capacious. The indentations in these bays form excellent harbors, the most commodious of which are Newburyport, Boston Harbor and Marblehead. The islands of Nantucket and Martha's Vineyard, with several others, belong to Massachusetts. The west part of the state is traversed by the Green Mountains, whose loftiest peak rises 3,600 feet above sea-level. The most considerable rivers are the Connecticut, Housatonic and the Merrimac. The soil is poor and sandy near the coast, where salt marshes frequently occur, these yielding good crops of hay. The s.e. section has many shallow lakes and swamps, producing cedar timber and yielding large crops of cranberries. In the middle and western parts the soil is fertile and well cultivated. Among the chief products are potatoes, hay, maple sugar, honey and dairy materials; tobacco yields good returns and cattle are largely kept. The chief grains are oats, rye and barley; corn being raised for home consumption and wheat, buckwheat and barley raised only in small quantities. A considerable portion of the surface of the ground is still covered with forests, consisting of pine, oak, walnut, birch, maple, ash, cedar, cherry and chestnut. Of fruits the apple gives the largest yield. The climate is liable to extremes of heat and cold.

Of mineral products granite is largely quarried, and marble, limestone, iron and quartz are abundant. There are many springs throughout the state. Massachusetts is, in regard to the actual amount of its manufactures, the third State in the Union, being excelled in this respect only by New York and Pennsylvania; but in proportion to its area and population it is the first. Massachusetts is pre-eminently a manufacturing state, due in part to its early settlement and in part to its superior water-power advantages. The chief manufactures are boots and shoes, cotton goods, woolen goods, foundry and machine products, printing and publishing, slaughtering and meat packing, paper and wood pulp, finished leather, electrical machinery and supplies. The fisheries are a valuable and important industry. In shipping Massachusetts is superior to any other State of the Union except New York. Boston, the second seaport of the Atlantic coast, affords excellent opportunities for both domestic and foreign commerce. In connection with the railways may be mentioned the Hoosac Tunnel piercing the Hoosac Mountain in the northwest corner of the State, with a length of 5½ miles. In educational matters Massachusetts has a high reputation, among its leading institutions being Harvard University, the oldest in the Union, Boston University, Amherst College, Clark University, Williams College, etc. Massachusetts is divided into fourteen counties; and besides the capital, Boston, the chief towns are Worcester, Lowell, Cambridge, Fall River, Lawrence and Lynn. It was at first composed of two colonies—Plymouth colony, first settled by Puritans who landed in Plymouth in 1620; and Massachusetts Bay colony. These were united in 1692. Pop. (1900) 2,803,346; (1910) 3,366,416; (1920) 3,352,336.

**Massachusetts Bay**, a large bay, to the east of the central part of Massachusetts, extending from Cape Ann to Plymouth Bay.

**Massachusetts Institute of Technology**, a school of applied science, established in Boston in 1861, but now at Cambridge in a striking group of buildings on the Charles River, dedicated in June, 1916. Instruction is given in subjects leading to the degrees of bachelor and master of science, and doctor of philosophy and of engineering. The Engineering and Mining Schools of Harvard University are conducted in cooperation with the Institute.

**Massage** (mas'-ah. Fr. masser, to knead), a form of medical
Massagetæ, Massey
treatment in which the body of the patient, or some particular part of it, is subjected at the hands of an attendant to a variety of processes, technically discriminated as stroking, rubbing, kneading, pinching, pressing, squeezing and hacking. The tendency of this treatment is to assist and stimulate the circulation, and to increase the waste-removing action of the lymphatic vessels, and thus to affect the nutrition, not only of the parts acted upon, but of the whole body, and promote the removal of local swellings, inflammatory products, etc. The process, for which half an hour daily is usually sufficient, is performed upon the naked skin by the bare hands of the operator, no oil being used; and the hands ought to be strong and firm, but soft, very considerable exertion being expended in the operation. The attendant (who is termed a masseur, if a man; a masseuse, if a woman) needs to be carefully trained, and should have a sufficient knowledge of anatomy to be able to separate out with the fingers a single muscle or group of muscles for treatment, and to trace the direction of the larger vessels and nerve-trunks and act upon them directly. The principal movements should be characterized by a certain uniformity and method. Thus, in stroking with a steady pressure the limbs of the patient, the strokes should always be from the extremities towards the heart, not backwards and forwards in a random way; and in kneading the belly with the heel of the hand, the movements are carried round in the direction of the colon. The treatment has been remarkably successful in cases of nervous disorder of a hysterical kind, and in cases of wasting through imperfect nutrition dependent upon disturbances of stomach, bowels, or liver; and it has proved valuable in diabetes, some of the special diseases of women, and certain cases of paralyzed and contracted muscles.

Massagetae (mas-saj’e-tē), a collective name given by the ancients to the nomadic tribes of Central Asia who dwelt to the east and northeast of the Caspian Sea. Cyrus lost his life in fighting against them.

Massai. See Massai.

Massaua. See Massowa.

Masséna (más-a-ná), André, Marshal of France, born in 1758 at Nice. In 1775 he entered the French army, in which he became an inferior officer. After fourteen years’ service he left the army and returned to Nice, where he married. During the revolution he entered a battalion of volunteers, was elected chief of his battalion in 1792, and in 1793 made general of brigade. In 1794 he was appointed general of division, and took command of the right wing of the French army in Italy, where, at Rivoli and elsewhere, he highly distinguished himself. In 1799 he defeated the Austrian and Russian forces at Zürich, and in 1800, by his defense of Genoa for three months, gave Napoleon time to strike successfully at Marengo. In 1804 he was created a marshal of the empire. In 1805 he received the chief command in Italy, where he lost the battle of Caldiero, and after the peace of Pressburg occupied the kingdom of Naples. In 1807 he was given the command of the right wing of the French army in Poland, and soon after received the title of Duke of Rivoli. In 1809 he distinguished himself against the Austrians, and at Esslingen his constancy and firmness saved the French army from total destruction. Napoleon rewarded him with the dignity of Prince of Esslingen. In 1810 he took command of the army in Portugal, and forced Wellington within the lines of Torres Vedras, till want of provisions compelled Masséna to retire. Napoleon recalled him from Spain, and in 1812 left him without a command. He died in 1817.

Massena, a village of St. Lawrence Co., New York, on St. Lawrence, Grasse and Racquette rivers. Electrical power is developed from the St. Lawrence. It has aluminum works (4000 employees), silk mills, dairy plants, etc. Pop. (1920) 5603.

Massenet (mas-né), Jules, a French composer (1842-1912), author of many operas including Héroïdes, Don César de Bazan, Manon Lescaut, Thaïs, Le Cid, Le Jongleur de Notre Dame, Ariane, etc.; also oratorios, cantatas, and orchestral works: Pittoresques, Hongroises, and Dramatiques.

Massey (mas’sé), Gerald, an English poet, born at Tring in 1828, of poor parents, and for some time an errand-boy in London. He subsequently edited the Spirit of Freedom, a Radical paper, and in 1854 published his Ballad of Babe Christabel, and other poems. The volume attracted the notice of Landor, and the poems issued in succession to it met with no little popularity. For some years Massey wrote poetical criticisms for the Athenæum. One of the best of his prose works is the ingenious Secret Drama of Shakespeare’s Sonnets, first published in 1864-72, and since republished. Other works are A Tale of Eternity and other Poems (1889), Concerning Spirit-
Massico

ualism (1872), A Book of the Beginnings (1882), and the Natural Genesis (1884). For some years he was popular both at home and in the colonies as a lecturer on Spiritualism and various social and socialistic subjects. He died in 1907.

Massico (mas’i-kō; Mons Massicus), a mountain in the province of Terra di Lavoro, Naples, Italy, and having on its slopes a town of the same name. The Massic wine has been famous from remote times.

Massicot (mas’i-kot), the yellow protoxide of lead (PbO), used as a pigment, etc. See Litharge.

Massillon (mas’i-yō’), Jean Baptiste, a French pulpit orator, born in 1635 at Hauteville in Franche-Comté; entered in his eighteenth year the congregation of the Oratory, professed belles-lettres and theology at Montbrison and Vienne; and was called to Paris in 1686 to direct the Seminary of St. Maloire. The applause which he met with in Paris, even at court, was almost without example. Louis XIV gave him special praise, and the death of Bossuet and Bourdaloue, in 1704, left him at the head of the French preachers. He pronounced the funeral oration of Louis XIV in 1715, and in 1717 the regent appointed him to the see of Clermont. In the year following he was chosen to preach before Louis XV. He died in 1742.

Massillon (mas’si-lon), a city of Stark Co., Ohio, on the Tuscarawas River and the Ohio Canal, 8 miles w. of Canton. The natural resources are a high grade of domestic coal, sandstone and fire clay. From the stone and clay are manufactured very fine qualities of sand and brick. Other manufactured articles are engines, threshers, saw mills, feed cutters, stoves, furnaces, cast iron pipe, sheet steel, steam hammers, etc. The city is surrounded by very fertile farm lands. It was founded in 1822. Pop. (1910) 13,879; (1920) 17,428.

Massinger (mas’in-jər), Philip, a distinguished English dramatist, born at Salisbury in 1584. He studied at Oxford, but quitted the university without taking a degree, and repaired to London about 1606. Little is known of his personal history beyond the fact that he was associated with Fletcher, Middleton, Rowley and Dekker in the composition of certain plays. A note of his burial appears in the register of St. Saviour’s, Southwark: March 20, 1659-1660, buried Philip Massinger, a stranger. As a dramatist Massinger is more natural in his characters and poetical in his diction than Jonson, and some critics rank him next to Shakespeare. In tragedy, however, he is rather eloquent and forcible than pathetic, and he is defective in humor. His best plays are the Duke of Milan, A City Madam, A Very Woman, The Fatal Dowry, A New Way to Pay Old Debts. The last-mentioned still maintains its place on the stage, chiefly on account of the characters Marrall and Overreach.

Masson (mas’on), David, critical and biographical writer, born at Aberdeen, Scotland, in 1805; was educated at the Marischal College and at Edinburgh University. After engaging in miscellaneous literary work in Edinburgh and London, he was in 1852 appointed to the chair of English language and literature at University College, London. In 1859 he became editor of Macmillan’s Magazine, and in 1865 accepted the chair of rhetoric and English literature in the University of Edinburgh. His works include his collected contributions to the quarterly and other magazines (1856, reprinted with additions in 1874); an elaborate and comprehensive study of Milton’s life and times (six volumes, 1858-80); British Novelists and Their Styles (1859); Recent British Philosophy (1865); Drummond of Hawthornden (1873): The Three Decads (1874); an important edition of Milton’s Poems (1877); and a life of De Quincey (1878). He died in 1907.

Massowa, Massowah, or Massaua, a seaport on the Red Sea coast of Africa, now belonging to Italy, and capital of the Italian colony of Eritrea. The town stands on a small barren coral island only a few hundred yards from the mainland, and is very hot and unhealthy. It is the natural commercial outlet for the products of the Sudan and northern Abyssinia, and the exports brought by caravans from the interior include rhinoceros horns, gold, ivory, honey, wax, etc. Until 1885 it was an Egyptian possession, but was then taken possession of by Italy. Pop. (exclusive of Italian troops) 7775.

Massys. See Matsys.

Mast. See Ship.

Master (mas‘tər), in the navy, formerly the name of the officer who had charge of the details of the navigation of the ship under the general orders of the captain. The duties discharged by the master have latterly been consigned to an officer known as navigating lieutenant. The rank of master (between that of ensign and lieutenant) still exists in the navy of the United States. In the merchant service, the mas.
Master in Chancery

Master of the Horse, the third officer in the royal household of Britain, whose duty it is to superintend the royal stables and all horses belonging to the king. He has the privilege of using the royal horses, pages and servants, and rides next to the king on all state occasions. His tenure of office is dependent upon the existence of his political party in power.

Master of the Rolls, an English official, one of the judges of the Chancery Division of the High Court of Justice, the keeper of the rolls of all patents and grants that pass the great seal, and of all records of the Court of Chancery. He ranks next after the Lord Chief Justice of the Queen's Bench, and above the Lord Chief Justice of the Common Pleas.

Master-singers (German, Meistersinger), the name of a literary guild or association which flourished in Mainz, Strasbourg, Augsburg, Nürnberg and various other German cities, in the fourteenth and fifteenth centuries, in some cases surviving even to recent times. It represented the poetical efflorescence of burgher life as the Minnesingers had represented that of the feudal chivalry. The members of the guild met and criticised each other's productions in accordance with a remarkable series of canons dealing with literary form. Victory in their own competitions carried with it the right to take apprentices in song craft, who at the expiry of their term, and after singing for some time with acclamation, were themselves admitted as full masters. Among the most famous master-singers were Hans Sachs, Henry of Meissen (Frauenlob), Regenbogen, Hadlaub and Muscatblut. The development of artificial canons in the search for novelty ultimately reduced the whole scheme to utter absurdity, the literary productions becoming lifelessly mechanical.

Mastic (mas'tik), a kind of mortar or cement for plastering walls. It is composed of finely ground oolithic limestone mixed with sand and litharge, and is used with a considerable portion of linseed oil; it sets hard in a few days, and is much used in works where great expedition is required.

Mastic, Masticum, a resin exuding from the mastic tree (Pistacia Lenticclus), a native of Southern Europe, North Africa, and Western Asia. The resin, which is principally produced in the Levant, and chiefly in the island of Chios, is obtained by making transverse incisions in the bark, from which it issues in drops. It comes to us in yellow,
Mastication

brittle, transparent, rounded tears, which
sotten between the teeth with a bitterish
taste and aromatic smell. Mastic cons-
ists of two resins, one soluble in dilute
alcohol, but both soluble in strong alco-
hol. It is used as an astrigent and
an aromatic. Its solution in spirits of
wine constitutes a good varnish. Barb-
ary mastic is obtained from the Pis-
tacia atlantica, which grows in the north
of Africa and the Levant. Mastic is con-
sumed in vast quantities throughout the
Turkish Empire as a masticatory for
cleansing the teeth and imparting an
agreeable odor to the breath. It was
formerly in great repute as a medicine
throughout Europe. See also Lenticea.

Mastication (mas-ti-kä-shun), the
process of division of
the food effected in the mouth by the
combined action of the jaws and teeth,
the tongue, palate and muscles of the
cheeks. This process is seen in its typi-
cal perfection in the higher Vertebrata
only. By it the food, besides being tritur-
ated, is mixed with the salivary fluid.
Imperfect mastication is a fertile
source of indigestion.

Mastiff (mas'tif), a race of large dogs
found under various names
from Tibet to England. The English
mastiff is a noble looking dog with a
large head, a broad muzzle, lips thick
and pendulous on each side of the mouth,
hanging ears and smooth hair, the height
at the shoulder usually ranging from 25
to 29 inches. The old English breed was
brindled, but the usual color to-day is
some shade of buff with dark muzzle and
ears. The Tibet mastiff, which is also a
fine animal, is common in Tibet and in
Bhutan as a house dog.

Mastiff-bat, Asiatic and South Africa-
can bat of the genus Molossus, from its
head resembling that of the mastiff-dog.

Mastitis (mas-ti'tis), or Mammitis,
induration of the breast.

Mastodon

Mastodon (mas-tö-don), an extinct
genius of Proboscidea or
Elephants, the fossil remains of which
first occur in the Miocene rocks of the
Tertiary period, and which persist
through the Pliocene and Post-pliocene
epochs. In general structure the masto-
dons bear a close resemblance to the ex-
isting species of elephants. Their chief
peculiarities consist in the dentition and
structure of the teeth, from the curious
mammary processes on which the gen-
eric name is derived (Greek mastos,
breast). The geographical range of the
mastodons included North America, Eu-
rope and Asia—one species, the Masto-
don longirostris, having inhabited Eng-
land, Germany, France and Italy. A
specimen, almost entire, of the Masto-
don turicensis, from the Pliocene deposits of

Piedmont, measured 17 feet from the
tusks to the tail; and an American spec-
imen measured 18 feet in length and 11
feet 6 inches in height.

Masulipatam (ma-so-li-pa-tam'), a
town of India, presidency of Madras, 220 miles N. N. E. from
the city of that name, on a low flat on the Bay of Bengal, near one of the
mouths of the Kistnah. It consists of
the pettah or native town, the European
quarter, and the fort, at some distance
and now neglected. The town is a sta-
tion of the Church Missionary Society,
and there are both Protestant and Roman
Catholic churches. The manufactures
consist chiefly of cotton goods, plain or
printed. Large ships cannot an-
chor within 5 miles of the shore. In 1864 a
storm-wave swept over the town, which
is said to have destroyed 30,000 lives, and
Masulipatam has never since regained
its prosperity. Pop. (1011) 42,123.

Matabele (mat-ä-bä'le), a Kaffir race
or tribe inhabiting part of
South Africa between the Limpopo and
Matamoros (mat-a-mô'ros), a city of México, department of Tamaulipas, on the right bank of the Rio Grande del Nôtre, about 10 miles above its mouth in the Gulf of Mexico. Pop. 8347.

Matanzas (ma-tân'zas), a seaport on the northwest coast of Cuba, 52 miles east of Havana, with one of the largest, safest, and most convenient harbors in America. It has considerable commerce, exporting sugar, molasses, and coffee, and ranking in importance next to Havana. Pop. 64,985. It is the capital of Matanzas province, 3700 sq. miles in area; pop. 202,444.

Matapan (ma-tâ-pân), Càpe (an- ciently Òænandrûm Promen- torîum), the most southern extremity of the Morea, Greece, and of the European continent. It terminates in a high, steep, pyramidal point, at the base of which is a volcanic cavern. Upon its summit are the ruins of a temple, probably of Posei- don.

Mataró (ma-tâ-rô'ô), a town of Spain, in Catalonia, on the Medi- terranean, 19 miles northeast of Barcelona. It has manufactures of linen, cotton and woolen goods, soap, etc.; and a considerable trade. Pop. 19,704.

Match (mach). In the most common sense of the term, matches are splints or small slips of wood, one end of which is dipped into a composition that ignites by friction or other means. One of the first forms of this article was the brimstone match, which was a thin strip of resinous or dry pine wood with pointed ends dipped in sulphur, which were lighted with tinder ignited by a flint and steel. The lucifer match was introduced in 1827, the inflammable substance being a mixture of chloride of potash and sulphide of antimony applied to the match, which had been previously dipped into melted sulphur. The matches were ign- ited by being drawn smartly through a piece of folded sandpaper. This was succeeded after a few years by the Congreave match, in which phosphorus was substituted for the sulphide of antimony. Many improvements have since been made both in the composition of the igniting materials and in the process of manufacture. Sulphur, owing to its off-ensive smell, is now commonly discarded in favor of paraffin. The igniting com- position is essentially an emulsion of phosphorus in a solution of gum or glue, combined with a quantity of chloride of potash, red lead, or nitrate of lead, to increase the combustibility, and some coloring matter as cinnamon, smalt, etc.

The use of common phosphorus has led to many accidental deaths and even to willful poisoning. The operatives, also, who are exposed to the phosphoric fumes during the process of manufacture, are subject to an insidious disease (necrosis) which frequently proves fatal. Fortunately all risks whatever may be avoided by the use of amorphous phosphorus, which is an efficient substitute, and entirely innocuous.—Safety-matches were invented in Sweden in 1855, and are now extensively used. In the safety-match the composition is divided between the match and the friction paper attached to the box, so that the match can be lighted in ordinary circumstances only by being rubbed on the prepared paper. The compound put on the match consists of chlorate and bichromate of potash, red-lead, and sulphide of antimony,—Vestas are a kind of matches made of a wick of fine cotton threads coated with stearine and paraffin, smoothed and rounded by being drawn through a metal plate pierced with circular holes of the desired size; the wick is then cut into vesta lengths, which are tipped with the ordinary igniting com- position,—Fusees are made of a thick spongy paper soaked in a solution of nitro and bichromate of potash, and tipped with the usual ingredients.—Vesuviana are round matches of wood having a large head at each end made of a mixture of charcoal, niter, etc., and tipped with the ordinary igniting com- position.

Matchlock (mach'lok), an old form of musket fired by means of a match. They were invented in the first half of the fifteenth century, and were succeeded by the arquebus. See Musquet.

Mate (mâ't). an officer in a merchant- ship, or ship-of-war, whose duty is to assist the master or commander, and to take, in his absence, the command. There is sometimes only one, and sometimes two, three, or four mates in a mer-
MATCH MAKING MACHINE

The match sticks are prepared, dipped in the ignition composition and dried by this machine. The matches are removed and packed in boxes by automatic machinery so that manual labor is practically eliminated in the manufacture.
chantman, according to her size, denominated first, second, third, etc., mates. The law of the United States recognizes only two descriptions of persons in a merchantman—the master and mariners, the mates being included in the latter, and the captain being responsible for their proceedings. In the British navy the term is limited to the assistants of certain warrant officers, as boatswain's mate, gunner's mate, etc.

Maté (mā'tē), the plant that yields Paraguay tea, the Ilex Paraguayensis, a kind of holly, nat. order Aquifoliaceae. It has smooth, ovate-lanceolate, unequally serrated leaves, much-branched racemes of flowers, the subdivisions of which are somewhat unbellate. In Brazil and other parts of South America the leaves are extensively used as a substitute for tea, the name Maté having been transferred to the plant from the gourd or calabash in which the leaves are infused. Boiling water is poured upon the powdered leaves, then a lump of burned sugar and sometimes a few drops of lemon juice are added. Usually the infusion is sucked through a tube, sometimes of silver, having a perforated bulb to act as a strainer at the lower end. It contains theine, and acts as a slight aperient and diuretic.

Matera (mā-tārā), a town of South Italy, province of Potenza. It is the residence of an archbishop, and has a cathedral and three convents. Pop. 17,801.

Materialism (mā-tē'ri-āl-ism), in philosophy, that system which denies the existence of a spiritual or immaterial principle in man, called the mind or soul, distinct from matter; or in a more extended sense, the doctrine that is founded on the hypothesis that all existence (including, of course, the concrete[J.]), may be resolved into a modification of matter.

Materia Medica (mā-tē'ri-á med'ika), the collective name given to the materials with which physicians attempt to cure or alleviate the numerous diseases of the human body, and which comprehend a great variety of substances taken from the mineral, animal and vegetable kingdoms—such as mercury, antimony, arsenic, and zinc, from among the metallic bodies; sulphur, lime, soda, niter, magnesia, borax and several salts, from among the other minerals; and some 200 substances belonging to the animal and vegetable kingdoms.

Mathematics (māth-e-mat'iks) is the science in which known relations between magnitudes are subjected to certain processes which enable other relations to be deduced. Mathematical principles which are deduced from axioms with the help of certain definitions belong to pure mathematics, and those which have been deduced with the help of pure mathematics from certain simple physical laws, belong to mixed mathematics. Arithmetic, geometry, algebra, plane and spherical trigonometry, analytical or coordinate geometry, the differential and integral calculus, quaternions, the calculus of finite differences, etc., are departments of pure mathematics; the dynamics of rigid bodies and the application of its principles in astronomy and in investigating the actions of forces on ordinary matter, acoustics, the undulatory theory of light, optics, thermodynamics, electricity and magnetism, etc., are departments of mixed mathematics. See Algebra, Arithmetic, Dynamics, Geometry, etc.

Mather (math'ēr), Cotton, colonial author, the eldest son of Increase Mather, was born at Boston in 1635. He was graduated at Harvard College in 1658; and in 1664 was ordained minister in Boston, as colleague of his father. He strove to maintain the ascendancy which had formerly belonged to the New England clergy in civil affairs, but which was then on the decline. In 1686 he published his Memorable Providences relating to Witchcraft and Possessions, which was used as an authority in the persecution and condemnation of nineteen victims burned for witchcraft at Salem in 1692. He died in 1728, with the reputation of having been the greatest scholar and author that America had then produced, his publications, some of huge dimensions, amounting to 382. Credulity, pedantry, quaintness, eccentricity, are blended in most of his works with great crudity. His largest and most celebrated work is his Magnalia Christiana, or the Ecclesiastical History of New England from 1625 to 1698. His life was written by his son and successor, Samuel Mather, also a learned divine and author.

Mather, Increase, one of the early presidents of Harvard College, was born at Dorchester, Massachusetts, in 1638; was graduated at Harvard in 1656; was ordained a minister in 1661; president of Harvard College from 1685 to 1701. When King Charles II signified his wish that the charter of Massachusetts should be signed into his hands, in 1682, Dr. Mather contended against a compliance. In 1689 he was deputed to England, as agent of the province, to procure redress for grievances.
Mathew

He held conferences with King James II, and with William and Mary, and in 1682 returned to Boston with a new charter from the crown, settling the government of the province. He died at Boston in 1723. His publications were 92 in number, of which his essay for the recording of *Ilustrious Providences* (1654) is one of the chief. His book to prove that the devil might appear in the shape of an innocent man, enabled many convicted of witchcraft to escape death.

Mathew (math'ə), Theobald, popularly known as Father Mathew, Irish apostle of temperance, was born in 1770, studied at Maynough, and was ordained a priest in 1814. Shortly afterwards he was appointed to a missionary charge at Cork, and established a society, on the model of those of St. Vincent de Paul for visiting the sick and distressed. A more extended undertaking was the celebrated temperance crusade, which was so successful that in a few months he had 150,000 converts in county Cork alone. A similar success attended his work in many Irish and English towns, and in recognition of this a civil list pension of £300 was bestowed on him. He died in 1856.

Matisse, Henri, French artist and sculptor, was born at Cateau in 1869 and studied at the Ecole des Beaux Arts, Paris. He joined the school of Impressionism (q.v.) and quickly made himself leader of the post-impressionists, startling the world with a number of grotesque paintings that were designed to stimulate the imagination of the beholder rather than present a photographic reproduction of objects. Among his paintings are: *The Woman with the Green Eyes,* *Gold Fish,* *Nude Model."

Matsukata (mat'so-kə'tə), Masao, Marquis, Japanese statesman, was minister of finance in 1881, premier of Japan 1891-92 and 1896-97, minister of finance in 1898, and privy councillor 1903.

Matsumoto, a town of Honshu, Japan, 130 miles N.W. of Tokyo, manufactures silks, baskets, and preserved fruits. Pop. 35,000.

Matsushima, a pine-clad archipelago (over 800 islets) in Sendai Bay, E. coast of Honshu, is considered one of the three natural wonders of Japan.

Matsuyama, a town in the w. part of Shikoku, Japan, 5 miles by railroad from its port, Mitu, has a large feudal castle. Pop. 44,000.

Matsuye, a town in an inlet of the Japan Sea, 149 miles w. by n. of Kyoto, has large manufactures of paper. Pop. 38,000.

Mathura. See Mātrā.

Matlock (mat'lok), a town of England, in Derbyshire, on the Derwent, 17 miles northwest of Derby, with lead mines which employ a number of the inhabitants. Pop. (1911) 6746.—The village of Matlock-Bath, about a mile and a half distant, is a much-frequented watering-place.

Matricaria (ma-tri-kə'ri-a), a genus of plants of the nat. order Composite. See Chamomile.

Matrix (ma-triks), in mining and geology, the rock or main substance in which any accidental crystal, mineral, or fossil is embedded.

Matriarchate (ma-trı-kär'tät). Any social group which is ruled over by a woman or women. It is doubtful, however, if such a custom anywhere exists; since it appears that it is not the mother that rules over her children, but her nearest male relative.

Matsys, Quentin, a Flemish painter who was originally a blacksmith, born at Louvain in 1466. It is said he quitte for the pencil in consequence of having become enamored of the daughter of a painter, whose hand was to be obtained only by a master of the same profession. He quitted his native city in 1491 and went to Antwerp, when he was made a master of the famous guild of painters of that city. He chiefly painted portraits and half-figures in common life, but sometimes undertook great works, of which a *Descent from the Cross,* in the cathedral of Antwerp, is a favorable specimen, also his picture of the *Two Misers.* He died in 1530.

Matteawan (mat-te'ə-wən), a vil-

lage of Dutchess county, New York, on Fishkill Creek, near the Hudson River and 3 miles E. of New-

burgh. It has abundant water power and manufactures of hats, silk, machinery, air-brakes, etc. Here is the State Hospital for the Criminal Insane. Pop. 6727.

Matter (mat'er), that which occupies space, and through which force is manifested. It is also that which makes itself known to us by our bodily senses, though there is believed to exist one kind of matter at least which is too subtle to be perceived by the senses, namely, the intermolecular and interstellar ether, the light-conveying element. Roughly speaking, matter exists in one of three states, solid, liquid, or gaseous, but these are not marked off by any distinct
line. It is believed to consist of minute particles termed atoms, which collect into small aggregates known as molecules, these being the basic elements of the chemical bodies and of all material masses. Matter is commonly regarded as the antithesis of mind.

**Matterhorn.** See Cervin.

Matthew (math'thə), St., evangelist and apostle, son of Alpheus; previous to his call a publican or officer of the Roman customs, and, according to tradition, a native of Nazareth. After the ascension of Christ we find him at Jerusalem with the other apostles, but this is the last notice of him in Scripture. Tradition represents him as preaching fifteen years in Jerusalem, then visiting the Ethiopians, Macedonians, Persians, Syrians, etc., and finally suffering martyrdom in Persia. His gospel has been supposed by some critics to have been originally written in Hebrew, or rather Aramaic, but it is only found in Greek. The chief aim of this Gospel is evidently to prove the Messianic character of Jesus. See Gospel.

**Matthew of Westminster,** an old English chronicler, a Benedictine monk of the Abbey of Westminster, who lived in the fourteenth century. His chronicle, extending from the creation to 1307, was entitled by him Flores Historiarum ("Flowers of Histories"), whence his name of Florileges. The work is very freely transcribed from Matthew Paris.

Matthias Corvinus (mat'θi-as kor'vy-nus), King of Hungary, second son of John Hunyades. The enemies of his father kept him imprisoned in Bohemia, but in 1458, at the age of sixteen years, he was called to the throne of Hungary. He maintained his position against Frederick III, repelled the invading Turks, and between 1468 and 1478, conquered Silesia, Moravia, and Lusatia; he was also victorious over the Poles, and took the greater part of Austria, including Vienna, from Frederick, and held all his extensive conquests till his death. He encouraged science and scholarship, and collected a great library (afterwards destroyed by the Turks) at Buda. He died in 1490.

**Matto-Grosso** (mat'to-grō'so; Great Western), the most western and second largest province of Brazil, bordering on Paraguay and Bolivia; area, 532,445 square miles. The dense forests which cover a great part of the surface abound with inexhaustible supplies of the finest timber, and yield valuable gums, balsams and medicinal plants. Gold, diamonds and other gems are obtained. Little of the soil is as yet under cultivation. Pop. (exclusive of Indians) 118,025.—The city of Matto-Grosso, formerly the capital of this province and of much importance in connection with the gold diggings, has dwindled in population from 20,000 to 1000.

**Mattoon** (mat'ə-nən), a city of Coles county, Illinois, 12 miles s.e. of Peoria, on the Illinois Central and other railroads. It has large grain elevators, railroad repair shops and foundries, machine shops, broom factories, flour mills, wagon and carriage works, tile factories, etc. It is central to the great broomcorn belt of central Illinois. Pop. (1910) 11,456; (1920) 13,552.

Mauch Chunk (məch kunch), a borough of Pennsylvania, capital of Carbon county, on the w. bank of Lehigh River, 80 miles n.w. of Philadelphia. It is picturesquely situated in a narrow valley or ravine between steep hills, which contain an abundance of anthracite coal. A railway called the Switchback ascends the hills and affords fine views of the scenery, attracting many visitors during the summer. Pop. 4029.

Maude, Sir Frederick Stanley, British general, and captor of Bagdad in 1917 during the European war. Born in 1864; died 1917.

Maulmain. See Moulin.

Mauna Loa (mō'na lō'ə), a celebrated volcano near the center of Hawaii; height 13,680 feet; distinguished by the size of its crater, 12,400 feet diameter.—Mauna Kea, an extinct volcano of Hawaii, is the highest peak in the Pacific Ocean, rising 13,805.

Maupassant (mō-paš′), Guy de, French author, born at Miromesnil in Normandy, 1850; died 1893. He was initiated by Gustave Flaubert into the craft of letters, and attached himself to the younger branch of the naturalistic school. He produced a play, Histoire du Vieux Temps, and a striking volume of lyrics published under the title Des Vers (1880); but he won his real reputation as a fiction writer, with La Maison Tellier (1881), Les Soeurs Roudoir (1884), Contes du Jour (1885), Contes et Nouvelles (1885), Monseur Parent (1885), Bel-Ami (1885), La petite Roque (1886), Pierre et Jean (1888), Fort comme la Mort (1889), and Notre Coeur (1890).

Maupertuis (mō-peer-twā'), Pierre Louis Moreau de, a French mathematician and philosopher, born at St. Malo in 1698. After four
years’ service in the army, he was in 1728 received into the Academy of Sciences. He then visited England and Switzerland, and became a pupil of Newton. In 1736 he conducted a scientific expedition to Lapland for the purpose of measuring an arc of the meridian. In 1740 he accepted an invitation from the King of Prussia to settle at Berlin, where, in 1746, he was declared president of the Academy of Sciences. He died at Basel in 1759.

Maura, SANTA. See Leucadia.

Maurepas (môr-pâ’), JEAN FRÉDÉRIC PHELIPPEAUX, COUNT DE, a French statesman, born in 1701. At the age of twenty-three years he became minister (by inheritance) of the French marine. An epigram on Madame de Pompadour led to his banishment from the court in 1740, but Louis XVI recalled him in 1774, and placed him at the head of his ministry, and he retained the confidence of the king till his death, in 1781. The restoration of the parliament was the principal measure of his latter ministry.

Maurice, of Saxony, Count. See Saxe.

Maurice (môr’is), JOHN FREDERICK DENISON, an Anglican divine and prominent leader of the Broad Church party, son of a Unitarian minister, was born in 1806, at Normanston, Suffolk. In 1823 he entered Trinity College, Cambridge, where he declined a fellowship on the ground that he could not sign the Thirty-Nine Articles. In 1825 he settled in London, and applied himself to literature, his first work of any extent being Eustace Conyers, a novel (1834). He also contributed, along with John Sterling, to the Athenæum, then recently started. A change in his religious sentiments, however, induced him to become a clergyman of the Church of England (1835), and in 1836 he was appointed chaplain to Guy’s Hospital, a post which he kept for ten years. In 1840 he became professor of modern history and English literature in King’s College, London, and in 1846 professor of ecclesiastical history, but in 1853 the publication by him of an essay on future punishment, necessitated his resignation of both chairs. In 1854 he founded the first workingman’s college in London, of which he became principal. In 1890 he was appointed perpetual curate of St. Peter’s, Vere Street, Cavendish Square, and in 1896 professor of moral philosophy at Cambridge, a position which he held until his death in 1892. Besides the books above mentioned, he published several volumes of sermons, and treatises on various subjects.

Maurice of Nassau, Prince of Orange, stadtholder of the Netherlands, the youngest son of William the Silent, was born in 1567. He was elected stadtholder of the provinces of Zeeland and Holland on the assassination of his father in 1585, and subsequently of Utrecht, Over-assel and Gelderland; and as commander of the army of the Netherlands he carried on war against the Spaniards with extraordinary success, driving them entirely out of the United Provinces. Previous to the truce of twelve years, concluded in 1609, when Spain was compelled to acknowledge the United Provinces as a free republic, about forty towns and several fortresses had fallen into his hands. He had defeated the Spaniards in three pitched battles, besides the naval victories which were gained by the vice-admirals of the republic on the coasts of Spain and Flanders. In 1621 the war with Spain was renewed, but the superior force under Spinola compelled Maurice to act upon the defensive only. He died at The Hague in 1625, and was succeeded by his brother Frederick Henry.

Mauricius (môr-ri’s-ëz), Flavius Tiberius, one of the greatest Byzantine emperors, was born about 539 A.D. He distinguished himself in war against the Persians, obtaining, by his complete victory over them in 581, the honor of a triumph at Constantinople. On the death of the Emperor Phocas, whose daughter he had married, he ascended the throne (582). The war with the Persians continued with varying success, but was brought to a close in 591 by the appeal of the Persian king, Chosroes, to the Byzantines for aid against a rebel claimant to the imperial crown of the Byzantines by the Avars, and the massacre of the Byzantine prisoners, whom Mauricius declined to ransom, led to a revolt of his troops on the Danube. They marched on Constantinople under Phocas, who was proclaimed emperor (602), and Mauricius was seized and executed in 603.

Mauritania, or Mauretania (môr-i-tan’a), the ancient name of the northwestern portion of Africa, corresponding in its area to the present Morocco and the western part of Algeria. The ancient boundary of Mauritania on the south was the Atlas. In A.D. 40 it became a Roman province. From 429 to 534 A.D. it was held by the Vandals, and in 630 A.D. it was conquered by the Arabs.
Mauritia (mār'ish'-i-a), or B URIT I PALM, ( Mauritia vinifera), called also the Brazilian wine palm, one of the tallest of the palms, rising to a height of 110-150 feet with a diameter of only 2 feet, and bearing an imposing crown of immense fan-shaped leaves with long foot-stalks. It grows in marshy spots. From the juice of the stem and of the fruit a sweet vinous liquor is prepared. The fruit is of the size of a hen's egg. To the same genus belongs the fan-palm of the Orinoco (M. florense), which furnishes the Guarani Indians of the Orinoco region with all the necessaries of life.

Mauritius (mə-ree'-tē-əs), or ISLE of FRANCE, an island in the Indian Ocean, a colony of Great Britain, 400 miles east from the island of Madagascar. It is of an oval form, about 40 miles long from northeast to southwest, and 23 miles in breadth, and is surrounded by coral reefs. It is composed chiefly of rugged and irregular mountains, the highest, the Montagne de la Rivièrè, 2700 feet, and the isolated rock Peter Botte, 2600 feet. Between the mountains, however, and along the coast, there are large and fertile plains and valleys, having a rich soil of black vegetable mold or stiff clay. The climate is pleasant during the cool season, but oppressively hot in summer, and the island is occasionally visited by severe epidemics. In its vegetation Mauritius resembles the Cape in the number of succulent plants, cactuses, spurge, and aloes. The principal objects of cultivation are sugar, rice, maize, cotton, coffee, manioc and vegetables. The imports consist of rice, wheat, cattle, cotton goods, haberdashery, hardware, etc.

The government is vested in a lieutenant-governor and legislative council. The island has two railways crossing it, in all 87 miles. Mauritius was discovered in 1505 by the Portuguese. The Dutch took possession of it in 1638, and named it after Prince Maurice. After occupation by the French it was captured by Britain in 1810. Principal towns, Port Louis and Mahebourg. Pop. 371,023, two-thirds of whom were originally coolies or their descendants imported to work the sugar estates. French is the language chiefly spoken.

Maury (mər'ē), MATTHEW FONTAINE, naval officer and hydrographer, was born in Virginia, in 1806, and entered the United States navy in 1825. In 1839 he was lamed by an accident, and quitted active service afloat for scientific work at the Washington Observatory. He wrote valuable papers on the Gulf Stream, ocean currents, great circle sailing, etc., and his Physical Geography of the Sea, published in 1856, gave him a wide reputation. In 1861 he resigned his appointment at the Washington Observatory and entered the Confederate service, in which he obtained the rank of commodore. He died in 1873.

Mauzer Rifle (mə-zər'ar), a breech-loading rifle named after its inventor. It is 6 lbs lighter than the Springfield, and has a smaller bore. See Rifle.

Mausoleum (mə-so'li-əm; Greek mausoleion), a sepulchral monument, so named from Mausolus, a king of Caria, to whom his wife Artemisia erected a monument which became so famous as to be esteemed the seventh wonder of the world, and to give a generic name to all similar edifices erected for the reception of a monument, or to contain tombs.

Mauvais Terres (mə-vās-tār; bad lands'), the name given to desolate tracts of land in various parts of the North-central United States; more especially to a barren region in Dakota along the White River as an afflunt of the Missouri. Here the elevated clayey ground has been eroded by the rains until it presents many curious effects, resembling those of ruined architecture.

Mauve (məv'), a beautiful purple dye obtained from aniline, used for dyeing silks, etc. In silk and wool the colors are permanent without the use of mordants.

Maverick (məv'er-ik), the name given in the cattle ranges of the Western United States to unbranded animals, which the finder often brands for himself or his employer:—hence, something dishonestly appropriated. On these ranges the cattle of different owners herd together and must be branded to prove ownership. If a calf strays away from its mother before being branded, it may be illegally branded, and thus become a maverick. The name is also applied to the unbranded animals driven in at the general round-up and equitably divided among the owners. The word came from Samuel Maverick, a Texan cattleman, who distinguished his animals by leaving them unbranded, and when they became mixed with other herds claimed all unbranded animals as 'mavericks.'
Mavis. See Thrush.

Mavrocordato (m a v r o kor da to), Alexander, prince, a Greek politician and diplomatist, born at Constantinople in 1791; died in 1805. He took part in the Greek movement for freedom (1821); prepared the declaration of independence; became president of the Executive Council; and successfully defended Missolonghi (1822). When Otho was placed on the Greek throne by the European powers, Mavrocordato became his financial minister, and he was afterwards ambassador to Munich, London and Berlin. During the insurrection of 1843-44 he was president of the Constitutional Assembly, and at the outbreak of the Crimean war he became head of the Greek government.

Maxentius (m a k s en shi us), M. Aurelius Valerius, a Roman emperor, 306-312 A.D., son of Maximianus, and son-in-law of Galerius, whom he deposed. He reigned along with his father for a short time; was defeated by Constantine in 312, and in the retreat was drowned in the Tiber.

Maxilla (m a k s i l a; Latin, maxilla, a jaw), the term applied in comparative anatomy to the upper jaw bones of Vertebrates, in contradistinction to the mandible or lower jaw; and in Invertebrata to the second or lesser pair or pairs of jaws. Thus in insects, spiders, crustaceans, etc., the maxillae form definite and important organs in the triturating and division of food.

Maxim (m a k s im), Hiram Stevens, inventor, born at Sangerville, Maine, in 1840. He worked as coach builder and engineer and took out patents for various inventions, chief among them being the Maxim machine gun, in which the force of the recoil is used for reloading. He also invented cordite, a smokeless powder, and was one of the first to experiment with flying machines. He lived in England after 1888. Died Nov. 24, 1916.

Maximianus (m a k s i m i an us), Marcus Aurelius Valerius Herculeus, a Roman emperor, who became colleague of Diocletian in the empire in 286 A.D. He endeavored to murder his rival Constantine, to whom he had given his daughter Faustina in marriage, and being frustrated by the fidelity of the latter, strangled himself 310. He was the father and contemporary of Maxentius.

Maximilian I (m a k s i mil yan), Emperor of Germany, son of the Emperor Frederick III and of Eleonora of Portugal, was born in 1459; in 1488 was elected king of the Romans, and emperor in 1493. He first became an independent prince by his marriage with Mary of Burgundy, the daughter of Charles the Bold, who was killed in 1477. This match involved him in a war with Louis XI, king of France, in which he was successful, though he was defeated at a later period by the Milanese. He died in 1519, and was succeeded by his grandson, Charles V. See Germany.

Maximilian II, Emperor of Germany, born in 1527; died in 1576. He succeeded his father, Ferdinand I, in 1564; was tolerant of the Reformation, but did not join the Protestant church.

Maximilian, Emperor of Mexico, known in his earlier life as Ferdinand Maximilian Joseph. Archduke of Austria, born at Vienna in 1832, was the younger brother of Francis Joseph I of Austria. In 1863 he was induced by the Emperor Napoleon III, and also by a deputation of Mexican notables, to accept the throne of Mexico. With this intention he entered Mexico in June, 1864. Maximilian was at first extremely popular; yet he failed to conciliate either the church party or the republicans, and the latter, under Juarez, rose in revolt. Having become involved in financial and political difficulties, Maximilian, with the approval of Napoleon, resolved to abdicate (1866), and he had proceeded to Orizaba when he was induced to return by the Conservative party in the state. The fighting which followed culminated in the capture and execution of the emperor and two of his chief generals, June 19, 1867.

Maximilian Joseph, King of Bavaria, born in 1756; died in 1825. He married his daughter to Eugene Beauharnais, son of Napoleon's wife Josephine, and had his
Maximinus

Maximinus (ma-k'i-mi'nus), Julius Verus, a Roman emperor, the son of a peasant of Thrace. He entered the Roman army under Septimus Severus before 210, and gradually rose in rank until, on the death of Alexander Severus, he caused himself to be proclaimed emperor, A.D. 235. He was successful in his German campaigns, but his acts of barbarity and tyranny provoked an insurrection, in the attempt to quell which he was assassinated by his own soldiery, in A.D. 238. He is represented as being of immense stature and strength.

Maximum (mak'si-mum), the greatest quantity or degree fixed, attainable, or attained, in any given case as opposed to the smallest. It is used also for the value of which a varying quantity has at the moment when it ceases to increase and begins to decrease.

Maxwell (maks'wel), James Clerk, born at Kirkudbright in 1831; died in 1879. He was educated at Edinburgh and Trinity College, Cambridge, where in 1854 he was second wrangler. He held the professorship of natural philosophy in Marischal College, Aberdeen, in 1856-60; afterwards the chair of physics and astronomy in King's College, London, 1860-68, and the professorship of physics in Cambridge from 1871 until his death. He published treatises on Electricity and Magnetism, The Theory of Heat, Matter and Motion, etc., and won high esteem among scientists for his powers of deduction and mathematical analysis.

May (mā), the fifth month in the year, but third in the old Roman calendar, has thirty-one days. The Romans regarded it as unlucky to contract marriages during its course—a superstition still prevalent in some parts of Europe. On the first of May the old Celtic peoples held a festival called Beltane (see Beltane). In former days outdoor sports and pastimes on the first of May were very common, and are not yet entirely given up. They included the erection of a May-pole decorated with flowers and foliage, round which young men and maidens danced, one of the latter being chosen for her good looks as queen of the festival, or 'Queen of the May.'

May, Samuel, Reverend, abolitionist, born at Boston, Massachusetts, in 1810; died in 1889. He was graduated at Harvard in 1832; was pastor of a Unitarian church, 1834-46; was general agent of the Massachusetts Anti-Slavery Society, 1847-61; also of the American Anti-Slavery Society. He was a regular contributor to the Liberator and other anti-slavery literature.

May, Thomas Erskine, born in 1815; died in 1886. He became assistant librarian to the House of Commons in 1831, and held other positions. He was the author of A Treatise on the Law, Privileges, Proceedings, and Usages of Parliament (1844); The Constitutional History of England since the Accession of George III (1790-1860); and a history of Democracy in Europe (1877). He was subsequently created Baron Farnborough.

Mayaguez (mā-yā'gwez), a seaport town on the west coast of the West Indian island of Porto Rico. Pop. 16,563.

May-apple, a plant, Podophyllum peltatum, order Berberidaceae (barberries). It is a native of North America, and its creeping rootstalk affords an active cathartic medicine known as podophyllin. The yellowish pulpy fruit, of the size of a pigeon's egg, is slightly acid, and is sometimes eaten.

Mayas (mā'as), a race of Indians inhabiting Yucatan and the adjacent regions of Mexico and Central America, believed to be the descendants of those who built the great ruined cities of these parts.

Maybole (mā'bōl), a police burgh of Ayrshire, Scotland, 49 miles s. s. w. by rail from Glasgow. It contains an old castle, at one time the town residence of the Ailsa family. Shoe-making is the chief industry. Pop. 5892.

Mayence (mā-yāns). See Mainz.

Mayenne (mā-yen), a department of northwestern France, named from the small river Mayenne, which joins with the Sarthe to form the Maine; area, 1966 square miles. The soil is rich and yields corn, flax, hemp, apples, etc. Coal and slate are obtained in small quantities. Laval is the capital. Pop. 237,732.

Mayenne, a town of France, in the above department, on a river of the same name, 17 miles N. N. E. of
Mayfield

Laval. It has a picturesque old castle, iron foundries, etc. Pop. 9961.

Mayfield, a city, county seat of Graves Co., Kentucky, 26 miles s.
of Paducah. Has woolen and flour mills, foundry, machine shops, and large grain interests. Pop. (1920) 6583.

Mayflower, the small ship (180 tons) which brought the Pilgrim Fathers from Southampton, England, to Plymouth, Mass., December 22, 1620, after a voyage of 63 days.

Mayflower Descendants, Society of, a patriotic association established in New York in 1894. It is open to lineal descendants of the Pilgrims who came over in the Mayflower in 1620, including all signers of the compact. Its objects are to preserve the memory and records of the Mayflower Pilgrims.

Mayhew (mā’hō), Henry, born at London in 1810; died in 1887. He was educated at Westminster school and entered the law office of his father; joined the literary profession as author of the farce, The Wandering Minstrel; and started a comic paper called Pigaro in London which was succeeded by Punch (1841).

Maynard (mā’nard), Edward, inventor, born at Madison, New Jersey, in 1813; died in 1891. He became a dentist and was the inventor of many surgical instruments; but is best known for his breech-loading rifle, patented in 1851, and the forerunner of the modern improved rifle.

Maynard, a town (township) in Middlesex Co., Massachusetts, containing a manufacturing village of same name, 26 miles w. of Boston. It has large woolen and powder mills. Pop. (1920) 7096.

Maynooth (mā’noth), a market town of Kildare, Ireland, 13 miles w. n. w. of Dublin. It has a Protestant and a Roman Catholic church, and the well-known college of St. Patrick (see next article). Pop. about 1400.

Maynooth College, or St. Patrick’s College, the chief college of the Catholic University of Ireland, was founded in 1795 by an act of the Irish parliament, for the education of the Irish Roman Catholic clergy. The annual vote from the British parliament for its maintenance was changed in 1845 to a permanent endowment of £26,000, and a sum of £30,000 for new buildings granted, while this again was commuted by the Irish Church Act (1869) for a lump sum of £372,276. All the students are destined for the priesthood, and all are resident within the building. The college buildings consist of an old and a new quadrangle, the latter a fine Gothic structure.

Mayo (mā’yo), a western maritime county of Ireland, in Connacht; area, 2157 sq. miles. The county is in many parts extremely mountainous, its highest summit reaching 2680 feet. The principal river is the Moy, and the largest lakes are Conn and Mask, the latter only partly in the county. Iron ore abounds, but remains unwrought; there are several valuable slate quarries. Oats form the chief crop; and barley, beer, rye, potatoes and turnips are grown; but pasturage is more attended to than tillage, only a small part of the soil being arable. The fisheries are productive. Principal towns, Castlebar (the county town), Ballina and Westport. Pop. 106,186.

Mayo, Henry Thomas, rear-admiral of the U. S. Navy, was born at Burlington, Vt., in 1836, graduated from Annapolis in 1876, advanced through various stages and was promoted to rear-admiral in 1913. He made history in 1914 by demanding an apology from the Mexican commander and the firing of a national salute of 21 guns to the United States flag to make amends for the arrest of the crew of the dispatch boat Dolphin at Tampico while loading gasoline into a whaleboat. He became chief of the U. S. Atlantic Fleet in 1917, with the rank of admiral.

Mayor (mā’ur), the chief magistrate of a city or corporate town in the United States and the British islands and colonies; in Scotland called provost. In the United States the mayor is elected by the qualified voters of the city or town for a certain term of years. The power and authority which mayors possess, being given to them by local regulations, vary in different places. The Mayors of London, York and Dublin are each called 'lord mayor'; the Lord Mayor of London having the further title of 'right honorable,' first allowed in 1334 by Edward III.

Mayotte, or Mayotta (mā-yōt’ta), an island in the Indian Ocean, one of the Comoros, at the northeast entrance of the Mozambique Channel, and a French colony. It is about 30 miles long by 20 miles broad, and some of its volcanic peaks are nearly 2000 ft. high. Pop. 11,840.

Maysville (mā’svil), capital of Mason Co., Kentucky, on the Ohio River, 65 miles above Cincinnati. It is an important shipping point for tobacco and wheat, and has varied manu-
May-weed, a European plant (An- 
thémis Ootule), nat. or- 
der Composite. It is a troublesome weed in 
corn, and difficult to eradicate.

Maywood, a village of Cook Co., Illi- 
nois, on Des Plaines River, 
10 miles w. of Chicago. It has one of the 
largest plants of the American Can Co., 
and other industrial plants. It contains a 
Lutheran Theological Seminary, Baptist 
Orphanage, Baptist Old People's Home, 
etc. Pop. (1910) 8033; (1920) 12,072.

Mazamet (má-zá-má), a town of Tarn, 
France, 50 miles e. s. e. of 
Toulouse. Has flannel, leather and cloth 
mills, etc. Pop. 14,764.

Mazanderan (máz-ánder-án), or 
Mazenderan, a prov- 
ince of Persia, bounded on the north by 
the Caspian. Along the Caspian Sea the 
land is flat and fertile, but southward it 
rises rapidly into the spurs of the Elburz 
Mountains. Sugar-cane, rice, cotton and 
mulberry trees grow luxuriantly. 

Mazarin (má-zá-ran), Jules, or 
Giulio Mazarini, first 
minister of Louis XIV and cardinal, an 
Italian by origin, born in 1602; died in 
1662. He was educated at Rome by the 
Jesuits, thence proceeded to the University 
of Alcalá in Spain; entered the 
pope's military service, and distinguished 
himself by diplomatic ability, for which 
he was rewarded with two canonnies, and 
the appointment of nuncio to the court of 
France (1634-36). Here he gained the 
favor of Richelieu; accepted service from 
the king, and became a naturalized citi- 
sen of France; was made a cardinal in 
recognition of his diplomatic services in 

Mazare, a European plant (An-

Mazzara (mátsár-á), a sea-port and 
cathedral town of Sicily, on 
the south coast of the western extremity, 
surrounded by Moorish walls. Pop. 
20,180.
Mazzarino (mats-a-re'no), a town of Sicily, province Caltanissetta. Pop. 15,206.

Mazzini (mats-se'ne), GIUSEPPE, an Italian patriot, born at Genoa in 1803; died at Pisa in 1872. His father was a physician and a professor in the university, and Mazzini studied with a view to follow this profession, but afterwards took a new bent and was graduated (1826) in law. While he was an advocate he turned his attention to literature, his first significant essay being Dante's _Love of Country_. As his writings grew more distinctly liberal in their politics the government suppressed the _Indicatore Genovese_ and the _Indicatore Livornese_, the papers in which they appeared. He afterwards joined the Carbonari, and was imprisoned in Savona for some months. On his release (1832) he was exiled to Marseilles, but he was compelled by the French government to retire into Switzerland. During the following five years he planned and organized various unsuccessful revolutionary movements, until, in 1837, he was expelled by the Swiss authorities and sought refuge in London. During the revolutionary movements of 1848 he proceeded to Italy; served for a time under Garibaldi, and when the pope fled from Rome he became president of its short-lived republic and made a heroic defense of the capital against the French, until compelled to surrender. From that time he continued to organize various risings in Italy, and the successful Sicilian expedition of Garibaldi in 1860 was due largely to his labors. When Italian unity was accomplished under a monarchy Mazzini accepted the results with reserve. The latter part of his life was spent chiefly between London and Lugano. He was buried at Genoa.

Mazzola (mats-o'la), or Mazzulli (mats-o'yole), GIROLAMO FRANCESCO di (called il Parmigiano, the Parmesan), a painter of the Lombard school, born at Parma in 1503; died in 1540. His earliest works were in the style of Correggio, but in his twentieth year he went to Rome, where he came under the influence of Raphael and Michael Angelo, and was patronized by Clement VII. After the sack of Rome in 1527 he went to Bologna. His paintings are numerous, both fresco and easel. He was the earliest Italian etcher, and many of his engravings yet exist.

McAdam (mak-ad'am), JOHN Louden, originator of the method of road construction known as "macadamizing," was born in Ayr, Scotland, in 1756, emigrated with his father to America in 1770, and favored England in the War of the Revolution. Returning to his native land he interested himself in road building and in 1815 was appointed superintendent of roads in Bristol, England. Here he had an opportunity to put his road-making improvements into practice. He was so successful in this that the House of Commons presented him with a sum of two thousand pounds ($10,000), and the macadamized road became general throughout Britain. The method consists in covering the highway or forming the road crust with small broken stones to a considerable depth, and consolidating them by carriages working upon the road, or by rollers so as to form a hard, firm and smooth surface. See Road.

McAdoo (mak-á-doo'), WILLIAM Gibbs, American lawyer, cabinet officer and railroad official, was born in Marietta, Ga., in 1863. He was educated at the University of Tennessee and studied law in Knoxville while supporting himself as a deputy clerk in the United States Circuit Court for the Southern Division. In 1884 he was admitted to the bar and learned transportation while counsel for the Richmond and Danville Railroad. Going to New York he formed a law partnership with William McAdoo. He became interested in a partially completed tunnel under the North River, connecting the New Jersey shore with the metropolis, and developed the scheme into a $70,000,000 project of which the Hudson and Manhattan Railroad Company and the Hudson Terminal buildings were the two main parts. His success brought him into public notice and he was strongly favored for the gubernatorial nomination in 1910 by the progressive wing of the Democratic party. As a delegate to the Democratic National Convention in 1912 he was indefatigable in his support of Woodrow Wilson, and after Wilson's nomination he was appointed vice-chairman of the National Committee, and was practically director of the successful campaign. He became Secretary of the Treasury in President Wilson's cabinet in 1913; Director-General of Railroads, 1917.

McAlester (mak-al'ester), county seat of Pittsburg Co., Oklahoma, 62 miles s. of Muskogee, on main lines of Missouri, Kansas & Texas and Chicago, Rock Island & Pacific railroads. It is the coal capital of the Southwest, and is the center of much cotton and industrial activity. Pop. (1920) 12,065.

McAllen, a city of Hidalgo Co., Texas, 52 miles n.w. of Brownsville, on St. Louis, Brownsville & Mexican
McAlester

R. R., in a cotton, sugar cane, corn, alfalfa and truck-raising district. Pop. (1920) 6331.

McAllister (m'kāl'is-tər), WARD, an American social leader, born in Savannah, Ga., in 1830; died in 1891. Coming to New York he devoted himself to social life and became the most conspicuous leader of New York society. He is best remembered by his remark that 'smart society in New York included only about 400 persons. From this the term of New York's 'Four Hundred' arose. He contributed much to the press on society matters in his later years and wrote a book entitled 'Society as I Have Found It' (1890), which did much to weaken his influence.

McAll Mission, the largest Protestant mission in France, founded in 1872 by the Rev. Robert W. McAll, an English Congregational minister, and his wife. It has now numerous stations, and has been an active and reconstructive force in the midst of French protestantism.

McAlpine (mák-ál'pin), WILLIAM JARVIS, an American civil engineer, born in New York City April 30, 1812; died at New Brighton, Staten Island, N. Y., February 18, 1890. He received some education in schools at Newburgh and Rome, N. Y., and then began his career as a rodman on canal work at Carbondale, Pa. After a number of engagements on rivers, canals and railways he became engineer in charge of many important public and private water systems, including those of Brooklyn, Montreal, Philadelphia, New York and others. He became engineer of the United States Bureau of Yards and Docks and as such had charge of the construction of the great stone dock of the Brooklyn Navy Yard. He was State Engineer of New York (1852-54) and a railroad commissioner of that state (1854-56). He was connected with many railroads in an engineering capacity, being engineer and vice-president of the Erie (1858), the Galena and Chicago (1857), the Ohio and Mississippi, 1861-63, besides being engineer-in-chief of many other projects. He found time to write a number of important papers on engineering subjects and was a member of many engineering societies both in the United States and abroad.

McArthur, ARTHUR, soldier, born in Massachusetts in 1845; served throughout the Civil war, and entered the regular army as lieutenant after the war. He served in the Spanish war in the Philippines, was promoted brigadier-general in the regular army in 1900 and major general in 1901. He retired in 1909 and died September 5, 1912.

McArthur, DUNCAN, an American soldier, born in Dutchess county, New York, in 1772; died in 1839. He served as a volunteer in campaigns against the Indians in Pennsylvania. In the war of 1812 he was made colonel of an Ohio volunteer regiment and promoted to brigadier-general in 1813. In 1814 he was put in command of the Army of the West. He was a member of the Ohio State Legislature from 1815-21, a member of Congress, 1823-25 and governor of Ohio, 1831-33.

McClimontock, J ohn, an American theologian and educator, born in Philadelphia in 1814; died in 1870. He was professor of mathematics and classics in Dickinson College, Carlisle, Pa. (1837-48); edited the Methodist Quarterly Review (1848-56), and was pastor of St. Paul's Church, New York (1856-60); had charge of the American chapel in Paris (1860-64), and in 1867 became president of Drew Theological Seminary at Madison, N. J. His great work was McClintock and Strong's Cyclopedia of Biblical, Theological and Ecclesiastical Literature.

McCloskey (má-kloiski), John, a cardinal, born in Brooklyn, New York, in 1810; died in 1885. In 1834 he was ordained priest and in 1844 was made coadjutor of the diocese of New York. In 1847 he was transferred to the Diocese of Albany; in 1864 he was made Archbishop of New York and in 1876 he was appointed cardinal-priest.

McComb, a city of Pike Co., Mississippi, 100 miles N. of New Orleans. It has railroad, cotton mills, etc. Pop. (1920) 7775.

McCook, Henry Christopher, American theologian and entomologist, born at New Lisbon, Ohio, in 1837; died in 1911. As a naturalist, he devoted himself to the study of ants and spiders, and wrote Mound-Making Ants, American Spiders, The Tenants of an Old Farm, and other works. He was a brother of Alexander McDowell McCook (1831-1903), who served with distinction in the Civil war.

McCormick (má-kor'mik), Cyrus H., inventor, was born at Walnut Grove, Virginia, in 1809. In 1831 he invented the reaping-machine, which has done much for the cause of agriculture. He died in 1884.

McCrie (ma-krè), THOMAS, a Scottish writer and clergyman, born in 1772; died in 1835. He studied in Edinburgh University; was licensed as a preacher by the Antiburghers; and in
1795 became minister to a congregation in Edinburgh. He contributed a series of papers on the Reformation (1802-06) to the "Christian Magazine," and in 1811 published his well-known "Life of Knox." This was followed in 1819 by the "Life of Andrew Melville." It is upon these two works that his fame chiefly rests, but he also wrote "The History of the Reformation in Italy" (1827) and the "History of the Reformation in Spain" (1829), besides a volume of "Sermons," etc.

McDowell, IRVING, soldier, born in Franklin county, Ohio, about 1818; died in 1885. He was graduated at West Point, served in the Mexican war, and as brigadier-general in the regular army, commanded the Union forces at the battle of Bull Run in 1861. He commanded a corps in the second battle of Bull Run, 1862. He was promoted major-general in 1862; retired in 1867. McGee (mak'-gē), THOMAS D'arcy, born at Carlingford, Ireland, in 1825; became prominent in the Young Ireland party, and had to make his escape to the United States, where he soon made a name as a journalist. His views then underwent a change; he became an ardent royalist; went to Canada, and entered parliament in 1857. In 1864 he became president of the executive council, and up till near his death took a prominent part in the measures of the day. Obnoxious to the Fenians, he was assassinated by a member of that body in 1868.

McGee, W. J., ethnologist, born in Iowa in 1853. He made extensive explorations in connection with the U. S. Geological Survey, and in 1893 was placed in charge of the Bureau of American Ethnology. Resigned to take charge of the ethnologic section of the St. Louis Exposition in 1903; director of St. Louis public museum 1905-07; on the Inland Waterways Commission since 1907. He wrote much on ethnologic and other subjects.

McGill (mak-gill), JAMES, born at Glasgow, Scotland, in 1744; died at Montreal in 1813. He emigrated to Canada, and ultimately became one of the chief merchants in Montreal. He left property valued at $150,000 (now enormously increased in value), and $550,000 cash to found the university in Montreal which bears his name.

McGill University, an institution of learning at Montreal, Canada, founded in 1821 under a bequest from James McGill (see above). It is well equipped, has a library of 150,000 volumes, a faculty of 260 instructors and students numbering nearly 2000.

McHenry, Fort, a fortification at the entrance of Baltimore harbor, which was unsuccessfully bombarded by the British fleet. It is notable from the fact that "The Star Spangled Banner" was written at this time by Francis Scott Key, an American citizen, who was detained on board a British vessel and witnessed the bombardment.

McKeeport (mak-kē-port'), a city of Allegheny Co., Pennsylvania, at the confluence of the Monongahela and Youghiogheny rivers, 14 miles s. E. of Pittsburgh. Coal is mined near by and is the chief source of its prosperity. It has large blast furnaces, immense tube works, employing several thousand hands, railroad construction works, and manufactures of iron, steel, glass, etc. Natural gas is found here. Pop. (1910) 42,694; (1920) 48,976.

McKees Rocks, a borough of Allegheny Co., Pennsylvania, 5 miles n. w. of Pittsburgh; a railroad center. Here are steel and iron works, car shops, with natural gas fuel. Coal and lumber are shipped. Pop. 16,713.

McKinley, WILLIAM (mak-kin'ē), President of the United States, born at Niles, Ohio, in 1844. He served in the Civil war, attaining the rank of major, and was afterward attorney of Stark Co., Ohio. He twice served in the House of Representatives, being chairman of the Ways and Means Committee when the well-known tariff bill bearing his name was enacted. In 1884 and 1888 he was chairman of the Platform Committee in the Republican National Convention. He was elected Governor of Ohio in 1891, and reelected in 1893. In 1896 he was the Republican candidate for President, and was elected, serving as the national executive through the Spanish war. In 1900 he was reelected by a largely increased majority over his former Democratic opponent, W. J. Bryan. On September 6, 1901, while attending the Pan-American Exposition at Buffalo, he was shot by an anarchist named Leon Czolgosz. After surgical treatment for the injuries caused by the two entering bullets, the President died September 14. He was buried at Canton, Ohio. Theodore Roosevelt (q. v.) succeeded him as President.

McKinney, county seat of Collin Co., Texas, 32 miles n. by E. of Dallas. It has large cotton mill, compress, gins, grain elevators, livestock pavilion, etc. Pop. (1920) 6677.

McMaster (mak-mas'ter), JOHN BACH, historian, born at Brooklyn, New York, in 1853. He be-
Mead (med), Larkin Goldsmith, sculptor, born at Chesterfield, New Hampshire, in 1836. He studied the art of sculpture, and in 1862 went to Florence for study. In 1865 he exhibited several works in New York city. Prominent among his productions are the statue of Lincoln on the monument at Springfield, Illinois, the statue of Ethan Allen in the capitol at Washington, and the colossal statue of 'Vermont,' made for the statehouse at Montpelier, and several other colossal statues and groups.

Mead (med), George Gordon, soldier, born in Cadiz, Spain, where his father was United States consul, in 1815. He served in the Mexican and Seminole wars. In the Civil War he was especially distinguished. In 1863, as commander of the Army of the Potomac, at Gettysburg, he checked Lee's invasion of Pennsylvania, winning one of the most important battles of the war. When Grant assumed control of the Army of the Potomac he left the command of it, as far as possible, to General Meade. He was in every battle but two fought by the Army of the Potomac. He died in 1872.

Meadowlark, an American icteric bird of the genus Sturnella. The S. magna is the best-known species and is brownish, or grayish above, with black and yellow beneath, and with a black crescent on the chest of the male. It is more correctly called the American starling, and has a very sweet song. and is found from New Brunswick to the Gulf of Mexico.

Meadow-sweet, a well-known herbaaceous plant Spiraea ulmaria, nat. order Rosaceae. It grows in damp places, has pinnate leaves, and stems two feet high bearing corymbs of white fragrant flowers.

Meadville (med'v'il), a city, seat of Crawford Co., Pennsylvania, 36 miles s. of Erie, on the main line of the Erie railroad, about midway between New York and Chicago. It is the center of a rich agricultural country and has numerous and varied industries, including the main shops of the Erie railroad. The city is the seat of Allegheny College (Methodist) and Meadville Theological College (Unitarian). Pop. (1910) 12,780; (1920) 14,508.

Meagher (mæ'gar), or Meeker (mek'ar), Thomas Francis, soldier, was born in Waterford, Ireland, in 1822; died at Fort Benton, Montana, in 1867. He was a popular leader in the Young Ireland party; found guilty of high treason, was sentenced to death, but transported to Van Diemen's Land. In 1861 he joined the Union army; organized the Irish Brigade, was engaged in the seven day's battles before Richmond, at Manassas and Antietam; and was wounded at Fredericksburg; served also in Tennessee and Georgia.

Measles (mez'lis), also called Rubella, an acute infectious fever, chiefly affecting children. In a period of from ten to fourteen days after contagion, symptoms of the disease begin to appear in sneezing, watering of the eyes, hoarseness, a hard cough and high temperature. On the fourth day of the fever a rash appears in blotches, crescentic in form, first upon the temples and gradually extends over the whole surface of the body. It begins to fade about the seventh day. The complications most to be dreaded are inflammations of the mucous membranes of the eye, ear and chest.

The treatment consists in keeping the patient confined to bed in a warm room, relieving the chest by hot bathing or warm packing, reducing fever and preventing constipation. During convalescence give good, nourishing food.

Measures. See Weights and Measures.

Meath (meth), a county of Ireland, province of Leinster, abutting on the Irish Sea; area, 906 sq. miles. Its coast line of 7 miles is low and sandy; there is no good harbor; the surface is generally level; and the principal rivers are the Boyne and the Blackwater. The land is mostly laid out in grass. Some coarse linens are manufactured and there are one or two woolen factories. Principal towns, Navan and Kells. Meath contains the royal seat, 'Tara of the kings,' the scene of St. Patrick's first preaching of Christianity. Pop. 67,497.

Meaux (mō), a town of France, department Seine-et-Marne, on the Marne, 24 miles E. N. E. of Paris. It has a fine Gothic cathedral, an episcopal palace, town-house, college, diocesan seminary, etc. Pop. (1911) 13,000.

Mecca, or Mecca (mek'ə), a city of Arabia, about 60 miles from Jidda, its port on the Red Sea, and the birthplace of Mohammed, consequently the holiest city of the Mohammedan world. It stands in a narrow, sandy valley enclosed by sterile hills, and is ill supplied with water. In its center is the Beith-Ilah ('house of God'), or El-Haram ('the inviolable')—the great mosque
enclosing the Kaaba, occupying a square dividing the upper from the lower town. The city is annually filled at the time of the Hajj or pilgrimage to the Kaaba (which see), when apartments in almost every house are hired to strangers. This pilgrimage, enjoined by Mohammed on all his followers, is the sole foundation of Mecca’s fame, and the only source of its wealth and occupation. A number of the inhabitants claim to be Sheeriffs, or direct descendants of Mohammed, and the city is under a grand Sheriff. It is dangerous for an infidel to visit Mecca, but R. E. Burton visited it in disguise in 1853. The pop. is estimated at about 50,000, with the periodic addition of from 100,000 to 150,000 pilgrims.

 Méchadin (mà-shan), Pierre François André, a French astronomer, born in 1744; died in 1804. His name is notably connected with the measurement of a degree of the meridian in order to get a natural basis for the new French decimal system of weights and measures.

Mechanical Powers (me-kán’i-kal) the simple instruments or elements of which every machine, however complicated, must be constructed; they are the lever, the wheel and axle, the pulley, the inclined plane, the wedge and screw. See those terms.

Mechanics (me-kán’ikz), the term originally used to denote the general principles involved in the construction of machinery. Subsequently the term became divorced from all direct connection with practical applications, and dealt entirely with abstract questions in which the laws of force and motion were involved. In this sense mechanics is usually divided into dynamics, which treats of moving bodies and the forces which produce their motion; and statics, which treats of forces compelling bodies to remain at rest. See Dynamics and Statics.

Mechanicville, a city of Saratoga Co., New York, on the Hudson River, 20 miles N. of Albany. It has manufactures of knitted goods, pulp and paper, brick, shirts, dresses, etc. Pop. (1920) 8106.

Mechitarists (me-chi’tá-ra-tz), an important section of Armenians acknowledging the authority of the pope, but retaining their own ritual with a few alterations. They have printed the best editions of Armenian classics. The name originated from Mechitar Da Petro, who founded a religious society at Constantinople for the purpose of disseminating a knowledge of the old Armenian language and literature.

Mechlin (mek’lin; French, Malines; Flemish, Mechelen), a town of Belgium, on the Dyle, in the province of and 14 miles S. S. E. of Antwerp. Its principal edifices are its cathedral, an ancient Gothic structure; the church of Notre Dame, the church of St. Peter and St. Paul, and the archbishop’s palace. The manufactures, which are numerous, consist of the famous Mechlin lace, felt and straw hats, woolen stuffs, etc. Pop. 56,103.

Mecklenburg-Schwerin (mek’lin-stör-borg-shwà-rén’), a grand-duchy of the German Empire; bounded on the north by the Baltic Sea, elsewhere chiefly by Prussia and Mecklenburg-Strelitz; area, 5135 square miles; capital, Schwerin. The surface is flat, except where a ridge of low hills forms the watershed between the Elbe and the Baltic. The sea coast is indentured by several inlets, and lakes are very numerous. The streams flow partly to the Elbe, partly to the Baltic. The chief products are corn, peas, beans, potatoes, beets and turnips. Both horses and cattle are exported. Distilling is largely carried on. The government is intimately connected with that of Mecklenburg-Strelitz. Each duchy has a separate legislative body, but both meet annually, and legislate for the whole of Mecklenburg. Pop. (1910) 639,879.

Mecklenburg-Strelitz (strál’titz), a grand-duchy of the German Empire; capital, Neu-Strelitz. It consists of two larger and several smaller districts; the former separated by the interposition of Mecklenburg-Schwerin, and the latter existing in separate patches. The whole area is estimated at 1052 square miles. The physical features and general character of this duchy are similar to those of Mecklenburg-Schwerin (which see). Pop. (1905) 103,451.

Meconic Acid (me-kon’ik), an acid with which morphia is combined in opium. When pure, meconic acid (\(\text{C}_7\text{H}_6\text{O}_7\)), forms small, white crystals. Its aqueous solution forms a deep red color with the persalts of iron, which therefore are good tests for it.

Medallion (me-dal’yon), a term applied to the large ancient medals struck in Rome and in the provinces by the emperors. They were usually of gold or silver, and exceeded in size the largest coins of these metals of which the name and value are known. They were probably struck to commemorate persons or events. In architecture the term is applied to any circular or oval, and sometimes square, tablet, bear-
ing on it objects represented in relief, as figures, heads, animals, flowers, etc.

Medals. See Numismatics.

Medea (me dé a), in Greek mythology, daughter of Aetes, king of Colchis. She fell in love with Jason the Argonaut and enabled him to obtain the celebrated golden fleece (which see), and lived with him for ten years, until he discarded her in favor of Glauce or Creusa, daughter of King Creon. In revenge she sent Glauce a bridal robe which enveloped her in consuming flame, and thereafter she slew her own children by Jason. There are many versions of this Greek myth, and it has been a favorite theme alike with painter and dramatist. Euripides wrote a well-known tragedy of this name. See also Jason and Argonaut.

Medellin (me del e'en), a city of Colombia, capital of the department of Antioquia, 150 miles N. W. of Bogota. Pop. 71,004.

Medford (med ford), a city of Middlesex Co., Massachusetts, on the Mystic River, 5 miles N. W. of Boston. It is the seat of Tufts College, and contains several historical buildings, the Craddock House dating from 1677. It has large print works, and manufactures of machinery, calico, etc. Pop. (1910) 28,150; (1920) 39,033.

Medford, a city of Jackson Co., Oregon, 6 miles N. of Jacksonville; a wholesale and jobbing center, with farming, orchard, mining and timber interests. Pop. (1920) 5756.

Media (med ia), an ancient kingdom in Western Asia, corresponding nearly to the northwestern portion of modern Persia. According to the Greek historians, Delioces, B.C. 708-655, was the first native king, but the true founder of the great Medean monarchy was Cyrus, 559-530 B.C. He extended his dominion over the highlands of Southern Armenia and Asia Minor as far as the Halys, overthrew the Assyrian monarchy, and in conjunction with Nabopolassar, king of Babylon, destroyed Nineveh 607 or 605 B.C. Astyages, the successor of Cyrus, and the last king, reigned for thirty-five years, B.C. 593 to 558, when he was overthrown or deposed by Cyrus. He is supposed by some authorities to be the Darius the Mede mentioned in the Book of Daniel as reigning over Babylon after its conquest by the Persians. The Medes and Persians, from their near resemblance to each other, appear to have amalgamated readily after the conquest or revolution which gave the ascendancy to the latter. Media henceforward formed part of the Persian Empire, and shared its fate.

Mediastine, Mediastinum (mé di as ti num), the membranous septum of the chest, formed by the duplicature of the pleura under the sternum, and dividing the cavity into two parts.

Medical Jurisprudence. See Forrenio

Medicine. Medici (má di che), a Florentine family who rose to wealth and influence by successful commerce, and who continued to combine the career of mer-

chants and bankers with the exercise of political power, a princely display of private munificence, and a liberal patronage of literature and art. The Medici were associated with the history of the Florentine republic from an early period, but they first became prominent in the person of Salvestro, who became gonfalonier in 1378.—GIOVANNI DE' MEDICI (1300-1429) amassed great riches by trade; rendered great services to the city, and in 1421 became gonfalonier. He was succeeded by his son COSMO (the elder, 1389-1464), surnamed the father of his country. Cosmo acquired immense wealth and influence, and laid the foundation of his reputation by the munificent patronage of art and letters, and the conjunction of consummate statesmanship with his commercial enterprise. He was for thirty-four years the sole arbitrator of the re-
public and the adviser of the sovereign House of Italy—His grandson, Lorenzo the Magnificent (1449-92), was the second great man of the house of Medici. He governed the state in conjunction with his brother Giuliano (1453-78) till the latter was assassinated by the Pazzi, a rival Florentine family. Escaping from this massacre he sustained a war with Ferdinand of Naples, with whom he signed a definitive peace in 1480. The rest of Lorenzo's reign was passed in peace and in those acts of profuse liberality and magnificent patronage of arts and sciences in which he rivaled or excelled his grandfather. He left three sons—Piero (1471-1503), Giovanni (afterwards Pope Leo X), and Giuliano, duke of Nemours. Piero succeeded his father, but was deprived of his estates when the French invaded Italy in 1494. He finished his career in the service of France. His eldest son, Lorenzo, came to power by the abdication of his uncle, Giuliano, who became Duke of Urbino. He died in 1519, leaving a daughter, the famous Caterina de'Medici, queen of France. After several reverses in the family, Alessandro, an illegitimate son of the last named Lorenzo, was restored to Florence by the troops of Charles V, and by an imperial decree he was declared head of the republic, and afterwards Duke of Florence. The next name of importance in the family is that of Cosimo 'the great,' in 1537 proclaimed Duke of Florence and afterwards Grand-duke of Tuscany. A learned man himself, he was a great patron of learning and art, a collector of paintings and antiquities. He died in 1574.—Francisco Maria, his son, obtained from the Emperor Maximilian II, whose daughter, Joanna, he had married, the confirmation of his title as grand-duke in 1575, which continued in his family until it became extinct in 1737 on the death of Giovanni Gasto, who was succeeded by Francis, duke of Lorraine. See Tuscany, Catherine de Medicis, Marie de Medicis.

Medicine (med'i-sin), the science of diseases, and the art of preventing, healing, or alleviating them. It deals with the facts of disease, with the remedies appropriate to various diseases, with the results of accident or injury to the human body, with the causes that affect the course and duration of diseases, and with the general laws that regulate the health of individuals and the health of communities. It is broadly divided into two great sections, surgery (which see) and medicine proper. A department related to both is obstetric medicine or midwifery, dealing with childbearing and with the diseases peculiar to women. With this department is closely connected that which comprehends the diseases of children. There are also departments dealing with special organs, such as those relating to diseases of the eye, of the ear, of the throat, of the skin, etc., each of which occupies its own domain of knowledge, and is represented by highly-trained specialists. The treatment of the insane, as it is concerned with nervous diseases and correlated states of other organs, is an integral part of medical practice. War also has given rise to special developments of medical and surgical science, viz.: military hygiene and military surgery; and the administration of the law has created a special branch—medical jurisprudence or forensic medicine.

At first all diseases, in common with other phenomena, were founded on the belief in supernatural causes, and the direct doings of unseen beings, and had to be exorcised by ceremonies, prayers and adjurations. In course of time it was recognized that diseases were natural phenomena, but at the same time each was held to be a principle or entity distinct from its effects, and each disease was supposed to have a specific remedy—something that would actually cure the disease. Such views led to the adoption of various systems of treatment. Several of these are of recent development. For instance, one school holds that only vegetable remedies are appropriate to the treatment of diseases. Another school upholds the hydropathic system, or the virtues of the bath in one or other of its forms, as a universal panacea for all human ills. A third maintains the application of the homoeopathic principle that similar are cured by similars, that is to say, diseases are cured by substances having, in small doses, an action on the body similar to that of the disease, so that one might treat diseases by a series of fixed and specific formulae all depending on this single principle. A fourth, of late origin, maintains the curative powers of skilful manipulation of the bones, muscles and nerves. Finally, even in orthodox medical circles, there is a strong disposition to attribute success of treatment to particular drugs, and to simply act on a principle contrary to that of homoeopathy, viz., that diseases are cured by contraries, that is, by remedies having an action on the body the reverse of that of the disease. Most of these opinions depend on a mistaken view of disease. Anything that interferes with the free and healthy action of any part of the body produces a state of diseas and the symptoms of the disturbance manifest the disease. For instance, in
the case of zymotic diseases, they are caused by the entrance into the body of living germs which grow and multiply in the blood and tissues, and interfere with the various organs. These germs are, however, not the disease, but the cause of the disease. Again many diseases are due, not to something that has entered the body, but to a breaking down of a certain part of the system. In these the physician seeks to restore as far as possible the conditions of healthy action; to remove if he can the cause of the disease, to relieve pain, and to control symptoms so as to direct them towards recovery. In germ diseases, treatment by inoculation of prepared lymphs, derived from cultures of the specific microbes causing the disease, is now widely practised, the oldest example of it being that of vaccination in smallpox.

The chief departments of medical science may be given as follows:—The science of health is called hygiene, or as far as it relates to the regulation of the diet, dietetics. Pathology is the science of disease, of that in which it consists, its origin, etc. Nosology treats of the various sorts of diseases, their origin and symptoms, and strives to arrange diseases according to a scientific classification. Pathological anatomy deals with the mechanical alterations and changes of structure. Therapeutics is the science of the cure of disease, often divided into general, treating of the subject of cure in general, its character, etc.; and special, of the cures of the particular diseases. Surgery treats of the mode of relieving derangements by operative means. Obstetrics treats of the modes of facilitating delivery. Pharmacy is the science of medicines, their external appearance, history and effects on the human organization. Pharmacy teaches how to preserve drugs, etc., and to mix medicines. Clinical applies the results of all these sciences at the bedside of the patient. (See the various medical articles under separate heads.) Among names famous in the history of medicine, may be mentioned Hippocrates, the father of medicine; Celsus, Galen, Avicenna, Paracelsus, Vesalius, Sylvin, Stahl, Harvey, Boerhaave, Hoffman, Brown, Hunter, Jenner, Hahnemann, Physick, Gross, Agnew, Holmes, Lister, etc.

Medicine Hat, a city of Alberta, province, Canada, on the Saskatchewan River. Pop. (1913) 16,000.

Medick (med'ik; Medicago), a genus of plants, nat. order Leguminosae, nearly allied to the clover. For purple medick or lucerne, see Lucerne.

Black medick (M. lupulina), so called from the black color of the ripe pods, is also known, from the color of its flower, as yellow lucerne. There are about forty species, natives of Europe, Western Asia and Northern Africa.

Medina (mé-d'n'a; Arabic Medina-el-Nebi, 'The Prophet's City'), a city in Arabia, containing the tomb of Mohammed, about 250 miles north by west of Mecca, in the most fertile spot of all Hejaz. The Mosque of the Prophet, which is the only building of importance, contains the sacred tomb, enclosed with a screen of iron filigree. Though the pilgrimage to the tomb is not considered by Mohammedans as an imperative duty, like that to the Kaaba, it is estimated that one-third of the Mecca pilgrims go on to Medina. Unbelievers enter the city at peril of their lives. Pop. about 40,000.

Medina, a village of Orleans Co., New York, on the Erie Canal, 41 miles w. of Rochester. The picturesque Medina Falls are in the vicinity. It has foundries, furniture factories, clock works, canneries, etc. Pop. (1920) 6011.

Medina-Sidonia (me-d'ë-don-ë, a town of Spain, in Andalusia, in the province of Cadiz. 20 miles E.S.E. of Cadiz city. Pop. 11,602.

Mediterranean Sea (medi-tér-r-r' në-an; Lat. Mare Internum), the great inland sea between Europe, Asia and Africa, about 2200 miles long and 5500 in extreme breadth. It communicates on the west with the Atlantic Ocean by the Strait of Gibraltar, and on the northeast with the Black Sea through the Sea of Marmora and the Straits of the Dardanelles and Constantinople. It is very irregular in shape, and is divided, near its eastern end, into two distinct and not very unequal portions, an eastern and a western, the latter lying west of Italy, Sicily and Cape Bon in Africa. The other important subdivisions are the Adriatic Sea or Gulf of Venice, the Tyrrhenian Sea or Archipelago. The largest and most important islands are Sicily, Corsica and the Balearic Isles, in the west division; and Cyprus, Rhodes, Crete, the Ionian Isles and Malta, in the east division. The principal rivers which discharge themselves directly into the Mediterranean are the Ebro, Rhône, Po and Nile. The depth varies from 30 to 2150 fathoms. Owing to the very narrow channel which connects the Mediterranean with the
Medium

Main ocean there is very little tide; though on parts of the African coast, etc., a rise of more than 6 feet sometimes occurs. The Mediterranean abounds with fish, and also furnishes the finest coral and sponges. It is a great highway of traffic.

Medium (mēd’i-um), the name given to one who professes to be able to communicate with the spirits of the departed and bring messages from them to friends on earth; usually known as a spiritual medium.

Medjidie (med-jid’i-ā), a Turkish order of knighthood, instituted in 1832, and conferred on many British and other officers who took part with Turkey in the Crimean war.—The term is also applied to a Turkish golden coin worth about $4.50.

Medlar (med’lär), a tree of the genus Malus, the M. germanica, found wild in several parts of central Europe, and cultivated for its fruit, which is remarkable for its acerbity when first gathered. It loses this acerbity after a few weeks' keeping.

Medoc (me-dök’), a district of Western France, in the department of the Gironde. It is celebrated for its wines. See Bordeaux Wines.

Medulla (me-du’la), or Marrow, in animals, the highly vascular connective tissue, interspersed with adipose or fat-cells, which fills up the hollow shafts or medullary canals of long bones, and which forms a center of nourishment for the inner osseous material of which the bone is composed. The medulla oblongata is the upper enlarged portion of the spinal cord, while the medulla spinalis is the continuation downwards of the brain matter. In vegetable physiology the medulla is otherwise known as the pith. See Botany.

Medu’sa. See Gorgons.

Medusidae (me-du’si-dē), the jelly-fishes or sea-nettles, a name given to ccelenterate animals of the class Hydrozoa, being free and oceanic animals, the most typical of which consist of a single nectocalyx or swimming-bell, from the roof of which one or several polypites are suspended. The nectocalyx is furnished with a system of canals, and a number of tentacles depend from its margin. A number of the medusae formerly believed to be distinct animals have been shown to be really the free, generative buds of other Hydrozoa.

Medway (med’wā), a river of England, which flows in a winding course across Kent, past Tunbridge and Maidstone, to Rochester and Chatham, where it spreads out into a broad estuary, joining that of the Thames. It is navigable to Maidstone; length 70 miles.

Meehan (mē’han), Thomas, botanist, born in England in 1826; removed to Philadelphia at an early age, and became prominent among American botanists for active research. He was botanist of the Board of Agriculture of Pennsylvania. He died in 1901.

Meerane (mār’ā-nē), a town in the kingdom of Saxony, 12 miles N. N. E. of Zwickau, with manufactures of woollens, dye-works, etc. It has grown recently from an insignificant country town to a manufacturing center. Pop. (1905) 26,006.

Meerschaum (mēr’shəm), a hydrated silicate of magnesium, consisting of 80.9 parts silica, 28.1 magnesium, and 12.0 water, occurring as a fine white compact clay. It is found in Europe, but more abundantly in Asia Minor, and is manufactured into tobacco pipes.

Meerut (mē’rut’), or Mirar, a city, cantonment, and administrative center of the Northwest Provinces of India, situated between the Jumna and the Ganges, 36 miles northeast of Delhi. It is surrounded by a dilapidated wall enclosing narrow streets and wretchedly-built houses. The church is one of the largest in India, and there is also a Roman Catholic chapel, government schools, hospital, etc. Meerut was the scene of the first great outbreak among the Sepoys, in 1857. Being at an altitude of 800 feet above the sea, it is an agreeable and salubrious residence. Pop. 118,642.—The District of Meerut occupies an area of 2379 square miles, and is the most fertile territory in the region known as the Doab.

Megaceros. See Elk (Irish).

Megāra (me-jär’ə), one of the Furies (which see).

Megalichthys (meg’a-lik’thiς), a genus of fossil ganoid fishes of the carboniferous period, characterized by large smooth, but minutely punctured, enamel scales, some of which have been found as large as 5 inches in diameter, indicating a fish of great size.

Megalithic Monuments (meg’a-li-thik), large unhewn, or partly hewn, stones, or structures of such stones erected in prehistoric times, either as burial monuments or for religious or other purposes. Monuments of this kind are numerous, being found most abun-
Megalonyx (meg-a-’loniks), a genus of fossil edentate mammals, allied to the sloth, but adapted for a terrestrial instead of an arboreal life, found in the upper tertiaries of America. 

Megalosaurus (meg-a-lō-sā’rus), a fossil reptile found in the Oolite and Wealden strata. Its length has been estimated at between 40 and 50 feet. Its powerful, pointed and trenchant teeth indicate its carnivorous habits, and from its gigantic size and strength it must have been very destructive to other animals.

Megalotis (meg-a-lō’tis), the generic name of the fennec.

Megaphone (meg-a-fon), an instrument invented by Thomas A. Edison for carrying the sound of the voice long distances without the aid of wires. It consists of two large funnels which collect the waves of sound and transmit them to the ears by means of tubes. It is used in connection with the telephone to convey sound through a large hall. The word is also applied to an open-mouthed trumpet which enables the sound of the voice to be distinctly heard at a considerable distance.

Megapodium (meg-a-pō’di-um), a genus of rascular birds, type of the family Megapodiidae, the best known and most remarkable species of which is the Australian jungle-fowl (M. tumulus), a large bird remarkable for erecting considerable mounds, composed of earth, grass, decayed leaves, etc., sometimes 15 feet high and 150 in circumference, and in the center of which, at a depth of 2 or 3 feet, it deposits its eggs, leaving them to be hatched by the heat of the fermenting vegetable mass. The leipoas and tallegalla are akin.

Megaptera (meg-ap’ter-a), a genus of whales of the family Balaenidae, including the hump-backed whales.

Megara, a town of Attica, Greece. See Megaritis.

Megaris (meg-a-ri’s), a small district or state of ancient Greece, partly in Northern Greece, partly on the Corinthian isthmus. The only important town was Megara, situated a mile from the sea. Megaris had flourishing colonies at an early period, but afterwards became annexed to Attica.

Megatherium (meg-a-thē’ri-um), a fossil genus of edentate mammals, allied to the sloths, but having feet adapted for walking on the ground, found in the upper Tertiary or pampas deposits of South America. It was about 8 feet high and its body 12 to 18 feet long. Its teeth prove that it lived on vegetation, and its forefeet, about a yard in length and armed with gigantic claws, show that roots were its chief objects of search.

Megna (meg-na), a river or estuary of Bengal, which carries the waters of the Ganges and the Brahmaputra to the sea. Its most noteworthy characteristic is the ‘bore’, or tidal wave which advances swiftly at the height of 20 feet.

Megrim (me’grim), the term applied when a horse reels, stands for a minute dull and stupid, or falls to the ground, lying for a time partially insensible. Such attacks are also called vertigo. They come on suddenly, and are most frequent during hot weather, and when the animal is drawing up hill. They indicate weakness of heart action, or disturbance of brain circulation by the pressure of tumors.

Mehemet Ali (meh-he-met), Viceroy of Egypt, born at Kavala, in Macedonia, in 1769; died in 1849. He entered the Turkish army, and served in Egypt against the French; rose rapidly in military and political importance; became pasha of Cairo, Alexandria, and subsequently of all Egypt.
1811 he massacred the Mamelukes and commenced a war of six years' duration against the Wahabees of Arabia, which was brought to a successful conclusion by his son Ibrahim (q. v.), and greatly extended his dominions. By means of a vigorous domestic policy Mehemet reduced the finances to order; organized an army and a navy; stimulated agriculture, and encouraged manufactures. In 1824-27 he assisted the sultan in endeavoring to reduce the Morea, which led to the destruction of his fleet by the allied European powers at Navarino (1827). Subsequently he turned his arms against the sultan, and in his efforts to secure dominion over Syria by armed invasion he was so far successful that the European powers had to interfere and compel him to sign a treaty in 1839, which gave him the hereditary pashalic of Egypt in lieu of Syria and Crete.

Méhul (ma-ul'), Etienne Henri, musical composer, born at Givet in 1763; died in 1817. He studied under Gluck; made his début as a composer at the Paris Opéra Comique with his opera Euphrosine and Corradin (1790), and followed up his success with Irato, Joseph, and other operas to the number of forty-two. Méhul gained considerable fame by his musical setting of Chenier's patriotic songs, le Chant du Départ, etc.

Meighen (me'en), Arthur, Premier of Canada, born in 1874, in the province of Ontario. He was graduated from the University of Toronto in 1896, practiced law at Portage la Prairie, and entered the House of Commons in 1908. Although a Conservative in his political affiliations, he was always somewhat radical in his opinions; but it was radicalism of the safe and sane type. He was a spirited opponent of the government in the reciprocity campaign of 1911, and when his party came into power as the result of the defeat of the Laurier government, Arthur Meighen's power began to be felt. In 1913 he was appointed Solicitor General; in 1915 he was made a Privy Councillor with a seat in the cabinet; in 1917 he became Secretary of State, and later Minister of the Interior, becoming Premier in 1920, the youngest man to hold that office, and the first to be specifically sworn in as Prime Minister.

Meiningen (mi'ning-en), a town in Germany, capital of Saxe-Meiningen, in a narrow and picturesque valley, on the Werra, 40 miles s. s. e. of Erfurt. The castle contains a picture gallery, cabinet of coins, public and private library, etc. Pop. 17,200.

Meissen (mi'sen), an ancient town of Saxony, founded by Henry I, in 922-933, 14 miles w. n. w. of Dresden, at the influx of the Triebisch into the Elbe. On a height above the town stand a noble Gothic cathedral, founded in the thirteenth century, and an extensive castle in the late Gothic style, belonging to the fifteenth century, recently restored and decorated with frescoes. Porcelain (in the royal porcelain factory near the town) is the staple manufacture. Meissen is the see of an archbishop. Pop. 34,000.

Meissonier (ma'son-yar), Jean Louis, a French painter, born in Lyons in 1815; went to Paris in 1830; first picture exhibited, The Visitors, 1834. He first became known as an illustrator of books, but rapidly became famous for the singular perfection of his art. His pictures, which, whether in genre or in portraiture, are almost without exception upon a small scale, are characterized by a great minuteness of execution and high finish, but are at the same time not less remarkable for their excellence in composition and breadth of treatment. They have the force of appeal of large works. The greater number of them are groups of figures (chiefly of the seventeenth and eighteenth centuries) in conversation, single quiescent figures, and battle scenes or military subjects. Great accuracy of draughtsmanship, keen observation, and the sharp accentuation of the important note in the picture distinguish all his works. Among his pictures, which possess an astonishing market value, may be mentioned, The Smoker (1839); La Partie des Boules (1848); Napoleon III at Solferino (1864); the Cavalry Charge (1867), sold for 150,000 francs; the picture entitled 1867 (1875), one of his largest works, representing Napoleon I in the battle of Friedland, sold for 300,000 francs; Jena (1889). He died in 1891.

Meistersinger (mester-zing-er), the name given to the burgher poets and musicians of Germany who succeeded the Minnesingers (q. v.) in the 14th and later centuries. Wagner's opera, Die Meistersinger, von Nurnberg (produced in 1868) gives a fair picture of the Meistersinger's art. See Master-singer.

Mekong (ma'kon), Mekhong, or Cambodia, the longest of all the Indo-Chinese rivers, rises in East Tibet, flows through part of China, Siam, Cambodia and French Cochinchina, and enters the Chinese Sea by several mouths; length estimated at 2700 miles. It is of comparatively little use for inland navigation, its channel being obstructed by rapids.
Mekran, a maritime district of Southern Asia, forming part of Persia and of Beluchistan. It is mostly arid and barren, but there are fertile tracts along the river valleys yielding excellent dates.

Mela, Pomponius, a Roman geographer who flourished during the first century after Christ, and is the author of a treatise, De Situ Orbis, containing a concise view of the state of the world as known to the Romans. See Cepeut.

Melaleuca, Melancholie. See Insanity.

Melanchthon, Melanchoyl. See Insanity.

Melanchthon (me-langk’thon; Ger. me-langk’n-ton), Philip, a German reformer, born at Bretten, in the Palatinate, in 1497; died at Wittenberg in 1560. His father was an armorial, and his original German name was Schwarzer, which he Greekized into Melanchthon, or Melanthon. Both names denote 'black earth.' After having studied at Erfurt he removed to Heidelberg University, where he took his bachelor’s degree, and afterwards to Tübingen University, where he attained the degree of master, and became a lecturer. In 1518, at the instigation of Luther and Reuchlin, he was invited by Frederick, elector of Saxony, to fill the chair of Greek in the recently founded University of Wittenberg. In 1519 he accompanied Luther to Leipzig, in order to dispute with Dr. Eck, and in 1521 he published his famous Loci Communes, an exposition of Protestant dogmatics, which ran through some sixty editions in his lifetime, and was followed by other influential writings, such as the Epitome Doctrinae Christianae (1524). There is no doubt that many of the plans carried out by the reformers were the result of Melanchthon’s wise suggestions. His Greek scholarship and amiable and unselfish character (even to the point of sacrificing his health) were a decided advantage to Luther in his work of translating the Bible. In 1530 Melanchthon was appointed to draw up the general Confession which was presented to the emperor at Augsburg (hence known as the Augsburg Confession, which see), and he also wrote the Apology for it. Before Luther’s death, in 1546, a certain difference of view developed itself between the two reformers, and after that event Melanchthon lost in some measure the confidence of a section of the Protestants and was involved in painful controversies, being accused by one party of a too great leaning to Calvinism, by another of a similar leaning to Catholicism.

Melanesia (mel-a-ne’sh-ə), a group of islands stretching from the northeast of New Guinea to the tropic of Capricorn, and including New Britain Archipelago (with the Admiralty Islands), Solomon Islands, New Caledonia, Loyalty Islands and the Fiji Islands.

Melanism (mel’ən-izm), the condition of abnormal blackness, or a tendency to blackness, in the hair or plumage of animals. It is the opposite of albinism, or whiteness. Black squirrels, leopards, etc., are examples.

Melanite (mel’ən-ıt), a lime-iron variety of garnet, of a velvet black or grayish black, occurring always in crystals of a dodecahedral form. See Garnet.

Melanorrhoea (mel-an-or’ə-ə), a genus of very large Indian trees, belonging to the nat. order Anacardiaceae. It includes M. altissima, or black varnish tree—which yields when tapped a varnish much valued for lacquering.

Melanthaceae (me-lan-tha’se-ə), a nat. order of poisonous endogens, consisting of bulbous, tuberous, and fibrous rooted plants, with or without stems, and having parallel-veined leaves. There are about 130 species, natives of all parts of the world, some of which resemble crocuses and some small lilies. The most important species are medical plants, as colchicum, white hellebore.

Melaphyre (mel’a-fr), a compact black or blackish-gray igneous rock, consisting of a matrix of labradorite and augite, in which are embedded crystals of the same minerals, and sometimes uniaxial mica, hornblende and iron pyrites. It is essentially a basalt.

Melba (mel’ba), Mme. née Nellie Mitchell, Australian operatic soprano, born in Melbourne, capital of Victoria, Australia, in 1861. Her mother was from Spanish descent; her father, Scotch. She was educated at the Presbyterian Ladies’ College, Melbourne, and studied in Paris under Mme. Marchesi. She made her operatic début in Rigoletto at Brussels in 1887 and appeared in Lucia in New York in 1893. She was a favorite on the concert stage. In 1918 she was made a Dame Commander of the Order of the British Empire.

Melbourne (mel’burn), a city in the Commonwealth of Australia, capital of Victoria, on the Yarra-Yarra, about 2 1/2 miles (63 km) by water) from Port Philip Bay, upon which are the ports of Sandridge, or Port Melbourne and Williamstown, possessing large and commodious piers; while Hob-
son's Bay (the northern extension of Port Phillip Bay) and Port Phillip Bay itself affords unlimited anchorage for the largest vessels. Melbourne was founded in 1836 during the premiership of Lord Melbourne, after whom it was named. It was incorporated in August, 1842, and in 1849 erected into an episcopal see. The city and its suburbs occupy an extensive area, which is mostly hilly or undulating, with the Yarra winding through it, the city proper, on the north bank of the Yarra, being the central and most important business part of the whole. Here the principal streets are about a mile long and 99 feet wide, and run at right angles to one another, being lined with handsome and substantial edifices. Beyond the city proper are the far more extensive suburbs, such as Collingwood, North Melbourne, Fitzroy, Carlton, Brunswick, Prahran, Richmond, Hawthorn, St. Kilda, Kew, South Yarra, etc. The public buildings of Melbourne as a whole are handsome and substantial, and quite on a par with those of cities of like size in Europe. Among them the most remarkable are the houses of parliament, the treasury, the law courts, the free library, containing over 110,000 volumes; the mint, a very handsome quadrangle; the university, with an admirable museum attached; the Ormond Presbyterian college; the town hall, capable of seating 4000 persons; the post-office; the exchange; the athenæum; the theaters; the Anglican and Roman Catholic cathedrals and numerous churches, etc. There are several public parks, a finely laid-out botanical garden, and a splendid race course. There is access to the center of the city for vessels of considerable size by means of the river Yarra, the navigation of which has recently been much improved. The shipping trade is large, both in exports and imports, the chief of the former being wool, of the latter manufactured goods. Most imports are subject to a heavy duty. By its railway systems Melbourne is connected with all the principal towns of the Australian continent. The chief industrial products are leather, clothing, furniture, flour, ales, cigars, ironware, woolens, etc. The Australian centenary was commemorated at Melbourne in 1888 by an international exhibition. Here the first federal parliament was inaugurated by George V, then Prince of Wales, in 1901, Melbourne being designated as the temporary capital of the new commonwealth until the selection of a site for a permanent federal capital in New South Wales. Canberra is now the capital city, 429 miles from Melbourne. Pop. of Greater Melbourne 628,430.

Melbourne,

WILLIAM LAMB, VISCOUNT, an English statesman, born in 1779; died in 1848. Educated at Eton and Cambridge, he became a barrister, but relinquished the law and became a member of parliament for Leominster. During the ministry of Canning he was secretary for Ireland; in 1830 he became home secretary in the Grey administration, and succeeded to the premiership when it was overthrown in 1834 on the Irish question. He continued to lead the Whig party with varying success until 1843, when he resigned and retired from public affairs. His political career is chiefly remarkable for the wise counsel and judgment with which he guided the young Queen Victoria on her accession in 1837.

Melchites (mel'kitz), an Eastern body of Christians who, while adhering to the ceremonies and liturgy of the Greek Church, acknowledge the authority of the pope. The name is also given to such members of the Greek community as are Roman Catholics.

Melchizedek (mel-chiz'edek), a personage mentioned in Gen. xiv, 18, as king of Salem and a priest of the most High God. Referred to again Ps., cx, 4, and Heb., v, vi, vii. As to his personality and character nothing is known.

Meleager (me-lé-a'gar), in Greek mythology, the son of
Meleagris

Oeneus, king of Calydon. He distinguished himself in the Argonautic expedition and more particularly at the Calydonian hunt, killed the boar, and gave its skin as the highest token of regard to his beloved Atalanta.

Meleagris (me-le-ag'ris), the genus of birds to which the turkey belongs, type of the family Meleagridae.

Melegnano (me-le-nā'no). See Marenzano.

Meles (me-lēs), the genus to which the badger belongs.

Melì (mel'ē), a town of Southern Italy, province of Basilicata, or Potenza, on a lofty volcanic height, 75 miles E. N. E. of Naples, surrounded by dilapidated walls. Its chief trade is in an excellent wine. Pop. 14,549.

Melia (me-li'a), a small genus of trees, type of the nat. order Meliaceae, natives of tropical Asia and Australia. M. Azadaricha, the neem tree or margosa, is a native of the East Indies. Its bark yields a bitter used as a tonic, its seeds yield a valuable oil, and its trunk a tenacious gum. M. Azadarich, sometimes called Persian Lilac, pride of India, and bead tree, is a native of the north of India, now cultivated in the United States, as well as in southern Europe.

Meliaceae (me-lē-ā'sē-ē), a nat. order of polytelatal dicotyledons, distinguished by their stamens being united into a tube. See Melia.

Melilla (mē-lēl'ya), a rocky promontory on the north coast of Morocco, about 140 miles east of the Straits of Gibraltar, held by Spain since 1496, and now strongly fortified. In 1803 a conflict between the Spaniards and Rif-Moors around its defenses resulted disastrously to the latter.

Melilot (mel'ilot; Melilotos), a genus of leguminous plants, suborder Papilionaceae, differing from the clovers in having racemose flowers. White Melilot has been recommended as a fodder plant under the names of Cabul and Bokhora clover.

Melinda (me-līn'da), a seaport of Eastern Africa, on the Zanzibar coast, formerly a place of importance.

Melinite (mel'īnīt), an explosive prepared from picric acid and the solid residue from the evaporation of collodion.

Meliphagidae (mel-ī-fag'idē), the honey-eaters or honey-suckers, a family of birds which abound in all parts of Australia.

Melis'sa, Melitta, the genus of plants to which belongs M. officinalis, or common balm, used in medicine as a carminative, stomachic and corrector of flatulence.

Melita. See Malta.

Melkart (me-lkārt), the national god of the ancient Phoenicians, a god of the sun.

Mellite, Mellilite (me-lī'tē), honey-stone, a mineral of a honey-yellow or brownish color and resinous luster.

Melocca, Melucco (me-lo-kō'o), a genus of plants of the nat. order Basellaceae. M. tuberosa, a species of the genus, is cultivated in Peru, Bolivia and New Grenada, on account of its esculent tuberous roots.

Melocactus (me-lō-kak'tūs), a genus of plants of the nat. order Cactaceae, characterized by the flowers being produced in a hemispherical or cylindrical head at the top of the plant. The plants themselves consist of simple fleshy stems of a globular or conical form, with numerous prominent ribs armed with fascicles of stiff spines placed at regular distances.

Melodrama (me-lō-dră'mā), originally and strictly, that species of drama in which the declamation of certain passages is interrupted by music, but now the term has come to designate a romantic play, generally of a serious character, in which effect is sought by startling incidents, striking situations, and exaggerated sentiment, aided often by splendid decoration and music.

Melody (me-lō-di), in the most general sense of the word any successive connection or series of tones; in a narrower sense, a series of tones which please the ear by their succession and variety; and in a still narrower sense, the particular air or tune of a musical piece.

Meloe (me-ō'o), a genus of beetles belonging to the family Cantharidae; otherwise called oil-beetles.

Melon (mel'on; Cucumis Melo), a well known plant and fruit of the nat. order Cucurbitaceae or gourds. It is an herbaceous, succulent, climbing or trailing annual, cultivated for its fruit in hot eastern countries from time immemorial. There are many varieties, as the Cantaloupe, which is reckoned the best, the Egyptian, Salonica, and Persian melons, etc. The watermelon (C. Citrulina) is much cultivated in the warmer parts of the world on account of its refreshing juice, which, however, is less sweet than that of the common melon. The musk-melon is a variety of Cucumis Melo.
Melos (mel-os), now Milos or Milo, an island belonging to Greece, in the Grecian Archipelago, in the southeast of the Gulf of Argina, one of the Cyclades; area, 64 sq. miles. Pop. 12,774. In 1820 a peasant discovered here the celebrated statue known as the Venus of Milo, now placed in the museum of the Louvre at Paris.

Melpomene (mel-pom-é-ne), the muse who presides over tragedy, daughter of Zeus and Mnemosyne. She is generally represented as a young woman, with vine leaves surrounding her head, and holding in her hand a tragic mask.

Melrose (mel-röz), a town of Scotland, in the county of Roxburgh, 31 miles s. e. of Edinburgh. Its celebrated abbey was founded by King David in 1136; destroyed by Edward II in 1322; rebuilt by Bruce in 1326, and partly demolished by the English in 1545. Pop. 2195.

Melrose, a city of Middlesex Co., Mass., 7 miles N. of Boston. It has manufactures of rubber shoes. Pop. (1910) 15,715; (1920) 18,204.

Melrose Park, a village of Cook Co., Illinois, 12 miles w. of Chicago. Pop. (1920) 7147.

Melting Point. See Fusing-point.

Melun (mé-lü), a town of France, capital of the department of Seine-et-Marne, 27 miles southeast of Paris. It is regularly built, and has handsome quays and fine promenades. Pop. (1906) 11,219.

Melville (me’vil), Andrew, a Scottish reformer, born near Montrose in 1545; died at Sedan in 1622. He was educated at St. Andrew’s; studied at the University of Paris, 1564-66; became a professor at Poitiers, and afterwards at Geneva; returned to Scotland in 1574, where he was appointed successively principal of Glasgow and of St. Andrew’s universities. In 1582 he presented a petition to King James against the undue interference of the court in ecclesiastical affairs, for which he only escaped imprisonment by going into England. Returning in 1585 he resumed his duties at St. Andrew’s, and became moderator of the General Assembly in 1587, 1589, 1594. In 1606 he was summoned to London by the king to confer on church matters, but because of his outspokenness he was committed to the Tower, and there remained until 1611. He then retired to France, and became professor in the University of Sedan.

Melville, George Wallace, naval officer, born at New York in 1841. He entered the United States navy in 1861, rising through the various grades to that of chief of the Bureau of Steam Engineering. He engaged in Arctic discovery as a member of the Jeanette expedition of 1878, and the Hall and Greely relief expeditions, and headed the expedition which recovered the remains of the Jeanette party. He was appointed rear-admiral in 1899, retired in 1903, and then became engaged as an engineer in Philadelphia, where he invented an important method of gearing the turbine engine as to reduce the speed of the propeller. He died March 17, 1912.

Melville, Viscount. See Dunbar.

Melville Island. 1. An island in the Polar Sea, north of America. Captain Parry discovered it, and passed the winter of 1819-20 there.

2. An island off the north coast of Australia; area, about 1800 square miles.

Membrane (mem’brán), in anatomy, a texture of the animal body, arranged in the form of laminae which covers organs, lines the interior of cavities, or takes part in the formation of the walls of canals or tubes. Membrane is generally divided into three kinds, mucous, serous, and fibrous. The lining of the nose, trachea, esophagus, stomach, intestines, is of the first kind; the serous membranes form the lining of the sacs or closed cavities, as of the chest, abdomen, etc.; the fibrous membranes are
tough, inelastic, and tendinous, such as the dura mater, the pericardium and the capsules of joints.

Memel (məˈmel), a Baltic seaport in Prussia, at the north end of and near the entrance to the Kurisches Haff, 75 miles northeast of Königsberg. It has various manufacturing and other industries, but the great source of its prosperity is its trade, which is very extensive, and consists chiefly of timber, corn, flax, hemp, potatoes, linseed and colonial produce. Pop. (1906) 20,687.

Memling (məˈmĭng′), or Memling, Hans, a distinguished Flemish painter, born probably about 1480; died probably in 1495. He lived at Bruges, of which town he was a prosperous citizen, but little is known of his life. He was especially famous as a religious painter, and his works display a singular tenderness, ideality, and elevation. They are generally extremely well preserved.

Memmingen (memˈɪŋ-gən), a town of Bavaria, on the Asch, 41 miles southwest of Augsburg. Pop. (1905) 11,618.

Memnon (məˈnən), a mythological personage mentioned in the Homeric poems as the beautiful son of Eos (the morning), and in the post-Homeric accounts as the son of Thanatos and nephew of Priam, whom he assisted at the siege of Troy. He slew Antilochus, but was himself slain by Achilles. His mother was filled with grief at his death, which Zeus endeavored to soothe by making her son immortal. The name of Memnon was afterwards connected with Egypt, where it was given to a statue still standing at Thebes, being one of two known from their size as the Colossi. This statue, known as the 'vocal Memnon,' was celebrated in antiquity as emitting a musical noise every morning at the rising of the sun—perhaps through the craft of the priests, though some think it was owing to expansion caused by heat. Both statues seem originally to have been about 70 feet high.

Memorial Day. See Decoration Day.

Memory (məˈmər-), the power or the capacity of having what was once present to the senses or the understanding suggested again to the mind, accompanied by a distinct consciousness that it has formerly been present to it; or the faculty of the mind by which it retains the knowledge of past events, or ideas which are past. The word memory is not employed uniformly in the same precise sense, but it always expresses some modification of that faculty which enables us to treasure up and preserve for future use the knowledge which we acquire; a faculty which is opposed to the great foundation of all intellectual improvement. The word memory is sometimes used to express a capacity of retaining knowledge, and sometimes a power of recalling it to our thoughts when we have occasion to apply it to use, the latter being more correctly called recollection. See Mnemonics.

Memphis (məˈfīs), an ancient city of Egypt, on the left bank of the Nile, some 20 miles south of Cairo, said to have been founded by Menes, the first king of Egypt. It was a large, rich and splendid city, and after the fall of Thebes became the capital of Egypt. At the time of the conquest of Egypt by Cambyses (524 B.C.) it was the chief commercial center of the country, and was connected by canals with the Lakes of Moeris and Mareotis. With the rise of Alexandria the importance of Memphis declined, and it was finally destroyed by the Arabs in the seventh century. The pyramids of Sakkarah and the colossal statue of Ramesses II, now mutilated and thrown down, are the chief objects of antiquarian interest on the site.

Memphis, a city and port of Tennessee, see, capital of Shelby Co., on the Mississippi, just below the junction of Wolf River, 200 miles w. s. w. of Nashville. It stands upon a bluff about 30 feet above the river in its highest floods, and is fronted by a fine esplanade. Its rapid growth is due to its favorable position for trade, which is largely carried on by rail and river, chiefly in cotton. The river is here deep enough to float the largest vessels and the shipping trade is very large, this city being the leading interior cotton mart of the United States, also a large producer of cottonseed-oil and oil products. It is also a large lumber market and has extensive manufactures. The river here is crossed by a magnificent iron railroad bridge. The city has various interesting institutions, educational and others. Pop. (1900) 102,310; (1910) 131,105; (1920) 162,351.

Menado (məˈnädo), the capital of a Dutch residency of same name in the northeast peninsula of Celebes. The town has a population of about 18,000.

Ménage (məˈnäzh′), Gilles, a French man of letters, born in 1613 at Angers; died in 1692. After finishing his early studies he was admitted as an advocate, but, disgusted with that profession, he entered the church, and through the favor of Cardinal de Retz and Mazarin obtained several benefices. From this time he dedicated himself solely to lit-
Menai Strait. His principal works are *Dictionnaire Etymologique*, *Origines de la Langue Française*; *Origines de la Langue Italienne*; *Miscellanea*, a collection of pieces in prose and verse.

Menai Strait (mənˈeɪə), a strait about ½ mile across, between the island of Anglesea and the coast of Wales. For the bridges over it see Bridge.

Menam (mə-nəm), the chief river of Siam, rising in the Laos country, and flowing generally southward to enter the Gulf of Siam below Bangkok; length, about 900 miles.

Menander (mə-nənˈdər), a Greek writer of the new comedy, born at Athens in 324 B.C.; died in B.C. 291. He was the pupil of Theophrastus, an intimate friend of Epicurus, and wrote comedies to the number of 100, of which only a few fragments remain. Terence's comedies were adapted from Menander.

Menasha (mə-nəshə), a city of Winnebago Co., Wisconsin, at the north end of Winnebago Lake, and on the government canal, 88 miles N. N. W. of Milwaukee. There is here abundant water-power, utilized in the manufacture of iron and wooden wares, paper, woolen goods and flour, also in tanneries, pulley works, etc. Pop. (1920) 7214.

Mencius (mənˈshi-us), the Latinized name of Meng-tse, a Chinese teacher, who was born about 370 B.C., and died about 288 B.C. He was educated by his master with such success that the approbation contained in the phrase 'the mother of Meng' has become proverbial. Mencius was one of the greatest of the early Confucians.

Mendaiites. See Christians of St. John.

Mendelev (mənˈdɛl-əf), Dmitri Ivanovich, a distinguished Russian chemist; born at Tobolsk in 1834; died in 1907. He became professor of chemistry in the University of St. Petersburg in 1866. Of his many discoveries the most notable is his periodic law of atomic weights, one of the leading modern chemical theories.

Mendelssohn (mənˈdəl-sən), Moses, born of Jewish parents in 1729; died in 1786. He studied hard under adverse circumstances to acquire a knowledge of Jewish and modern literature; became bookkeeper to a Jewish silk manufacturer and tutor to his family. In 1764 he formed a friendship with Lessing, who made him the hero of his *Nathan the Wise*, while he in turn defended his friend from the attacks of Jacobi, who accused Lessing of being a Spinozist. The chief works of Mendelssohn are a treatise on metaphysics; *Phedon*, a dialogue on immortality (1767); *Jerusalem* (1783); and *Morgenstunden* (1785).

Mendelssohn-Bartholdy (mənˈdəl-sənˌbər-təldə), Felix, a distinguished composer, born at Hamburg in 1809; died at Leipzig in 1847. He was the son of a wealthy Jew, who, recognizing his son's talent for music, had him carefully trained. In his ninth year he publicly appeared in Berlin as a musician, and in his sixteenth year he produced the well-known overture to the *Midsummer Night's Dream*. In 1829 he began an extensive tour through England, Scotland, France, Italy, and on his return to Germany he became musical director in Düsseldorf. Here he tried to establish a theater, but without success; and when he left that city in 1835 he became conductor of the famous concerts in the Gewandhaus of Leipzig—a position which he maintained with several slight interruptions until his death. In 1841 he was appointed musical director to the King of Saxony; was afterwards summoned to Berlin by the King of Prussia to become director of music at the Academy of Arts; and journeyed repeatedly to England, where he conducted his own music at London and Birmingham. Of his musical compositions the best known are the oratorios *Elijah* and *St. Paul*; the overture to *Ray Blum*; and his *Songs Without Words*. He left unfinished the oratorio of *Christus* and the opera of *Lorlei*.

Mendès (men-ˈdɛs), Catulle, a French poet, born at Bordeaux in 1840. His lyrical drama, *Le Roman d'une Nuit*, led to his imprisonment. Other notable poems are *Hesperus* and *Le Soleil de Minuit*. He wrote several novels and plays, the latter including *Le Capitaine Fracasse*, *Le Châtiment* and *Piafette*. He died in 1898.

Mendicant Orders. (Religious).

Mendoza (menˈdəzə), a province of the Argentine Republic, in the w. central part of the republic, the w. section being occupied by the apex of the Andes; area, 50,000; pop. d. 187,842. Mendoza, the capital, at the foot of the Cordilleras, is a beautiful, well-built town; partly destroyed by earthquake in 1861. Pop. 60,000.

Mendoza, Drizgo Hurtado de (1500–75), a Spanish statesman and author. Besides some fine verse, he wrote a history of the insurrection of the Moors, *Guerra de Granada*. Reputed author of the *Laza de Lazaro de Torres*, dealing with the adventures of rogues.
